In Syro-Egyptian architecture, the sabīl is rarely isolated. It is placed at the corner of a mosque, a madrasa, or a monastery, on the ground-floor, and can be recognized by its two large square windows at right angles, closed with beautiful bronze railings and decorated with charming carvings. Above the sabīl is situated the *primary school* (*kuttāb* or *maktab*), which is rendered conspicuous at a distance by its elegant loggia, open on both sides, in rows of arches on small pillars. This graceful *motif* of the *sabīl-kuttāb* subsisted until the Ottoman invasion. At that time the sabīl became separated, first along with the kuttāb, and then quite alone. Its style has degenerated down to our time, when the fountain displays all the false taste of the modern Turkish school.

5. Mausoleums.—For the obscure dead a grave is sufficient. The illustrious dead, not content with a tomb, require a mausoleum. As far back as it is possible to go, the Syro-Egyptian mausoleum possessed its own peculiar architectural form: a cubical hall, square in plan, covered with a dome. Is this type a distant recollection of the ancient Egyptian *mastaba*? It seems to be more directly connected with a Christian type, the *kalybe* (καλύβη), some traces of which still survive in Syria. The problem of building the dome on a square plan, outlined in these old Syrian kalybes, receives in Muslim architecture the most varied solutions, which reflect the successive efforts and inventions of the Persians, Romans, and Byzantines. The transition between the square and the circle is built of bricks dressed or arranged in corbels, of beams covered with stucco, of hanging arches in semi-cupolas, or of beautiful stone pendants like stalactites. The materials, proportions, outline of the square, of the drum, and of the dome, the decoration—all, in a word, that constitutes the style—changed from age to age, but the general plan remained the same until the Ottoman conquest.

The classical name of the mausoleum is *turba*. But as the dome was its most conspicuous feature, the name of the latter (*qubba*) was extended to the whole building. In literature and the Syro-Egyptian inscriptions these two words are indifferently applied to the mausoleum as a whole, *i.e.* the architectural envelope of the tomb, which itself is called *qabr* or *madfan* or *marqad* or *ḍarīḥ*, the last an Arabic word of Aramaic origin.

The mausoleum is often built by itself, isolated in a cemetery. Sometimes there are several together in a single enclosure (*ḥōsh*), but not forming an organic whole. Frequently the mausoleum of a great person is placed in the corner of a religious building which he has founded. Like the great Italian *condottieri* of the Renaissance, the Sultans and Emirs, former slaves who had risen to fortune, and who were always uncertain of the future, took care to provide for their own tombs beforehand.

This association creates three chief combined types: the *mosque-mausoleum*, the *madrasa-mausoleum*, and the *monastery-mausoleum*. We may mention in Cairo: the mosque of the Sultan Shaiḫ (823 [1420]), the madrasa of the Sultan Qāyt-Bāy (879 [1474]), and the monastery of the Sultan Faraj (813 [1411]), popularly called the tomb of Barqūq.

We find also more complicated types, *e.g.* the *monastery-madrasa-mausoleum*. We may cite those of the Sultans Barqūq (788 [1386]) and Ināl (858 [1454]). All these combined types contain the sabīl-kuttāb *motif*, and unite one or several minarets to one or several domes. They do not have special names. The inscriptions of these huge buildings, agreeing with the literary texts, refer to them sometimes under one name and sometimes under another, according to the part of the whole that they wish to emphasize.

Like all the types of Syro-Egyptian architecture, the turba disappeared after the Ottoman conquest. The name continued in use, but it refers to tombs of any kind. Since the 16th cent. A.D., Egypt and Syria have not had any mausoleums worthy of their past.

6. Holy places and pilgrimages.—In spite of the express intention of its founder, Islām at an early date adopted the worship of saints, and the belief in miracles accomplished by their intervention. This cult was too deeply rooted in the Oriental religions for Muhammad to make it disappear. In Syria, especially, the old pagan cults connected with local gods, which had resisted Christianity, lay hidden under Islām, which had to tolerate while apparently assimilating them. The tenacity of these local traditions explains the manifold origin of Muslim saints. Some of them are pagan gods, transformed by an association of ideas, beliefs, or mere words into Muslim saints; others are the great personages in the Qur'ān, Muhammad, Jesus, and the Jewish prophets; others again are heroes of history, conquerors, or famous sovereigns; and others, ascetics, monks, or scholars, celebrated during their life and canonized by the common people with their irresistible inclination towards the supernatural. All these saints have their sanctuaries (*mashhad*). The belief in miracles wrought by their intervention makes these sanctuaries places of pilgrimage (*mazār*).

The mashhad has not created any special type of architecture. As it is almost invariably erected at the grave of the saint, it takes the plan of the

mausoleum. From the architectonic point of view it is simply a variety of the turba, perhaps the oldest. It is found in all sizes, from the small chapel with a little dome, whitened with lime (*marabut, shaiḫ, walī, nabī, maqām*), to the large classical mausoleum; all have the dome on the square plan. The only one of these buildings that departs from the traditional plan is the famous Dome of the Rock, the Qubbat aṣ-Ṣaḫra in Jerusalem, built by the Khalīf 'Abd al-Malik, in 72 (691), and many times restored since then. Its huge dome, on a circular plan, surrounded by a double octagonal enclosure, harbours, along with the famous rock, a whole cycle of Jewish and Christian legends. This circular-octagonal plan, which undoubtedly proceeded from that of the Christian building prior to the Qubba, is found again in a group of pre-Muslim Syrian churches (Bosra, Ezra, Qal'at Sim'ān, etc.). But apart from the Dome of the Rock and a few secondary buildings derived from it (Dome of the Chain in Jerusalem, mausoleum of the Sultan Qalāwūn in Cairo, etc.), it has not been adopted in Syro-Egyptian architecture.

Apart from the turba and the mashhad, the dome is used in only one instance in Syro-Egyptian architecture: a small dome, also called *qubba*, is erected in large mosques, at the back of the prayer-hall, in front of the *miḥrāb*. This ancient feature may probably again be a relic of the church, namely, the dome which certain basilicas erect at the crossing of the transept in front of the choir. This was the only place used for the dome in the great Mosques until the Ottoman conquest, which systematically introduced domes over the porticoes and the prayer-halls of the great Mosques, after the style of the Constantinople school.

MAX VAN BERCHEM.

ARCHITECTURE (Persian).—The account of the development of the architecture of Persia is almost synonymous with the land's own history. From the crude beginnings in early Median or pre-Median times, before the 7th cent. B.C., we may trace the evolution of the builder's art down to the Achæmenian period (B.C. 550–330), thence through the Seljuk and Parthian eras (B.C. 330–A.D. 224) and the following centuries of the Sasanian empire (A.D. 224–661). At the close of that period, in the 7th cent. A.D., Iran was completely changed by the Arab conquest and subsequent Muslim sway, from which epoch to the present time the history of Persian architecture forms a special branch of the study of the development of Muhammadan art.

1. **Early Iranian and Median period** (before B.C. 550).—Our knowledge of the architectural conditions during the early Iranian and Median periods is limited in extent, both because of the absence of historic remains surviving from that remote date, and because of the lack of definite descriptions in ancient texts that might serve to elucidate the subject. Nevertheless, from incidental allusions in the Avesta, from references in the Greek historians, and from chance statements in later writings from which deductions may be drawn, we are able to form some sort of a picture of the architectural status in ancient Media, or Western Iran, and in early Bactria, or Eastern Iran. Herodotus (i. 96–99) affirms that, down to the time of Deioces, the founder of the Median empire, the Medes used to live in villages, and that they were first gathered into cities by Deioces when he made Ecbatana his capital, and fortified it as his royal residence. From the conditions portrayed in the Avesta, so far as that work may be regarded as reflecting the age in question, and from the sight to-day of village after village of flat-roofed mud huts spread over much of the territory which once was ancient Media, we may infer that the primitive condition of architecture in that region of Iran was really represented by Herodotus' statement, and that the same was true of ancient Bactria. But this judgment must not be pressed too far; for, while the Avesta refers to habitations of so crude a sort that they might be removed or destroyed if a man died in them (*Vendīdād*, viii. 1–13), it also alludes to houses that were 'strong, well-built, lofty, handsome, shining and conspicuous, constructed with a special chamber, balcony, verandah, and enclosing wall, or erected with high columns, or with a thousand columns,' as we know from a number of passages from which the adjectives here given are drawn (cf. *Vend.* ii. 26; *Yasna*, lvii. 21; *Yasht*, v. 101). The columnar architecture referred to in the last two attributes anticipates by many years the pillared halls of the Persian kings at Persepolis.

The chief old Iranian terms for 'house,' apart from the Avesta *vaēsma*, 'abode' (*Yasht*, x. 86), and the old Persian *hadiš*, 'palace' (cf. the curious, though probably merely accidental, use of the linguistically cognate ἕδρανον to denote the palace of the Persian kings in Æschylus, *Persæ*, 4), are *nmāna* (Gāthic *demānā*) and *kata*, the latter, however, being the 'room' rather than the 'house' (the view that *kata* denotes 'underground house,' expressed, *e.g.*, by Geiger, is scarcely correct).

The houses, doubtless simple in construction, were built of wood (cf. *dāuru-upadarana*, *Vend.* viii. 1) or were sometimes mere felt-covered tents (cf. *nematō-aiwivarana*,' *ib.*), although the use of bricks and mortar, being mentioned in connexion with non-architectural construction (cf. *Vend.* vi. 51, viii. 8, 10), was doubtless common also in building houses. Besides the 'columns' (or 'pillars'), 'verandahs,' etc., already mentioned, the Iranian houses had both doors and windows (*Vend.* vii. 15, iii. 29, etc.), though how they were closed, we know no more than how the entire house was roofed. It may readily be supposed, nevertheless, that the roofs were of reeds or turf laid on beams, or even of simple sun-dried bricks, such as are still utilized in Iranian regions (cf. Geiger, *Ostiran. Kultur*, p. 219).

Turning from the Avesta to the description given by Herodotus (i. 98) of the fortified abode of Deioces at Ecbatana, we find a citadel that must have resembled an Assyrian or Babylonian *sikkurat*. Its massive walls rose tier above tier in seven circles, and were crowned by battlements of various colours, white, black, red, blue, and orange (probably coloured gypsum and glazed tiles), while the ramparts of the topmost fortifications, where the palace stood, were decorated respectively with silver and gold. This description is probably not overdrawn if we may judge from the account which Polybius (x. 27) gives of the magnificence and gorgeous decorations of the temple of Aena or Anaias at Ecbatana (the goddess Anāhita in the Avesta) in the 2nd cent. B.C.; and the fact that we have no remains of such splendour is due not alone to the vandalism of Alexander, Antigonus, Seleucus Nicator, and Antiochus the Great, as described by Polybius, but also to the circumstance that the Medes probably constructed their buildings largely of wood, sun-dried bricks, and clay, even though they were lavish in adornment.

As to the architectural style of their palaces, it is probable that the Medes, like the Persians after them, were largely influenced by Assyrian, Babylonian, and Chaldæan models. Regarding their religious architecture, we know practically nothing beyond the description by Polybius, just referred to; it is a fact, moreover, that Zoroastrianism does not appear to have been favourable to temple-building, for the Persians had no temples in the Greek sense, as Herodotus (i. 130) expressly states; yet it is equally certain that they must have had some sort of a sanctuary to protect the holiest of their sacred fires, and such shrines are presumed

by the Pahlavi writers of a later date to have existed in those early times (cf. *Pahlavi Bahman Yasht*, iii. 30, 37, 40; *Zāṭ-sparam*, vi. 22, xi. 8–10; *Būndahishn*, xii. 18, 34, xvii. 7, etc.), so that it is possible that the temple at Ecbatana, as described by Polybius, may have preserved some architectural features from ancient days. In the mortuary customs enjoined by their religion, moreover, the early Iranians, whether Medians or Bactrians, made use of temporary structures, called *dakhmas* (wh. see) in the Avesta (*Vend.* iii. 9, 13, vii. 54, vi. 44–51, etc.), on which to expose the dead, just as their modern representatives, the Parsis (wh. see) and Gabars (wh. see) still follow the custom in their 'Towers of Silence'; but what the shape of these receptacles may have been in ancient times is only a matter of inference.

2. Achæmenian period (B.C. 550–330).—With the victory of Cyrus of Persia over the Median king Astyages, the supremacy of N. Iran passed to S. Iran, and a new dominion, the sovereignty of the Achæmenians, or the combined rule of the Medes and Persians, came into being. The architectural remains, both religious and civil, which belong to this period are abundant, and they show the art of the builder in early Persia at its zenith. Terraced platforms of massive masonry and palaces of stone graced by halls with tall fluted columns, crowned by bull-headed capitals, were typical of the age.

Ecbatana, Pasargadæ, Persepolis, and Susa were the capitals of the Medo-Persian empire, and the chief seats, therefore, of architectural relics. The site of Ecbatana is now occupied by Hamadan; and there, or in its vicinity, are to be found portions of broken columns, and a few carved stones, remnants of walls that belonged to ruined structures, and may date back even to Median times. But as yet no systematic excavations have been carried on to determine their age, or tell whether extensive finds of a similar character may yet be made. If we leave Ecbatana out of account, the earliest remains of Achæmenian architecture are to be seen at Pasargadæ, the capital of Cyrus the Great, in the plain of the modern Murghab, between Iṣfahān and Shiraz. As we approach it from the north, we first pass the remains of a ruined platform on the crest of a range of low hills overlooking the plain. It was apparently designed to support an audience-hall of Cyrus, but was never completed. Spread over the surface of the plain itself traces of the royal city are to be seen. Nearest to the ridge is a single shattered wall of a massive stone building which must have been 40 ft. high by 10 ft. square, and which may have served as a shrine for the sacred fire, although some authorities (on less good grounds, it seems) believe that it was a princely tomb. A second group of ruins lies not far distant to the south, and comprises a high round column (not fluted), some angle-piers of an edifice that once surrounded a royal court, and a stone shaft consisting of three blocks, on the uppermost of which is inscribed in cuneiform characters, 'I Cyrus, the King, the Achæmenian.' A huge slab stands somewhat to the east of this group, and on its face is carved in low relief a winged representation of the Great King, above whose head was similarly inscribed the device of Cyrus just quoted, although the part of the stone containing it has been sawn off and lost within the last century. Still another collection of ruins lies somewhat to the south-east, and shows vestiges of pillars and stone door-sills grouped around a paved court that belonged to some edifice of Cyrus.

Most important of all the ruins is the tomb of Cyrus, which lies about a mile beyond in a south-westerly direction. It is known to be his mausoleum from descriptions in the classics. The structure resembles a small house, with a slightly pointed roof, and is made of a handsome white sandstone resembling marble. It stands high upon a sub-basement, built of the same material and consisting of a large foundation plinth, nearly 50 ft. long, 40 ft. wide, and 2 ft. high, surmounted by a series of six stone layers that form a pyramidal series of high steps approaching the mausoleum from every side. The mammoth blocks that make up the tomb itself were originally fastened together by iron clamps, but without the use of mortar; and so perfectly were they set that the structure still forms a compact whole, even though falling more and more into ruin. The sepulchre, measured from the outside, is about 20 ft. long, by 17 broad, and 18 high. A very low door in the western side serves as an entrance. The mortuary chamber measures 10½ ft. long, by 7½ ft. wide, and 8 ft. high (the exact measurements in metres may be found in Jackson, *Persia*, p. 288). It is needless to add that the chamber is now empty. In architectural style the tomb of Cyrus is thought to show Lycian influence, since somewhat similar burial edifices have been found in Asia Minor, the land first conquered by Cyrus after Media; but it may also be possible that the idea of such a vault for the dead may have owed something to the Avestan *kata*, 'house,' a temporary structure for the body before it was carried to the *dakhma*. Around the tomb, moreover, there once stood a decorative colonnade, as is clear from the fragments of columns still upright, and a few hundred yards beyond it are the vestiges of a platform on which was once erected a habitation for the Magian priests who were custodians of the tomb, as we know from Arrian (*Anabasis*, vi. 29. 7).

A single other vestige of Achæmenian architecture, religious in its character, is found at some distance to the N.W. in the same plain; it is in the form of the bases of two altars, used by the Magi in celebrating their sacrificial rites, as they did, in the open air.

Illustrations and descriptions of all the architectural monuments in the Murghab Plain are to be found in the works of Texier, Flandin and Coste, Ker Porter, Stolze and Andreas, Dieulafoy, Perrot and Chipiez, Curzon, and Jackson; and they convey a good idea of the architecture of Cyrus's capital.

Far grander than the ruined monuments of Pasargadæ are those of Persepolis, the capital of Darius, and Xerxes, and their successors. These tokens of a vanished empire are spread over a considerable area in the Plain of Murghab, some forty miles to the south of Cyrus's capital. The first vestiges of this important series are the traces of the lost city of Stakhra, indicated by some broken columns, remains of portals, and scattered fragments of building blocks at the site now called Stakhr or Istakhr. The southernmost point of this city is now marked by a small granite staging, some 40 ft. square and 7 ft. high, which the natives call *Takht-i Ṭā'ūs*, 'Peacock Throne,' or *Takht-i Rustam*, 'Throne of (the hero) Rustam.' A mile or so farther south rises the Platform of Persepolis itself, with its magnificent stairways and palace-crowned terraces, which the Persians call *Takht-i Jamshīd*, 'Throne of Jamshīd,' after the legendary king of that name, or *Chihil Minār*, 'Forty Pillars,' from the columns that remain standing. Although the site as a royal residence may date back to legendary times (cf. possibly *Būndahishn*, xxix. 14), we know from an inscription on the southern wall that it owed its origin as a stronghold to Darius I., apparently about B.C. 516–513, and it is generally believed that Greek designers were employed in its construction (see Justi, 'Gesch. Irans' in Geiger and Kuhn's *Grundriss*, ii. 448–449). Even when considered apart from the edifices that stood upon it, the platform is a remarkable piece of constructive

art. It measures over 1500 ft. from north to south, varying from 20 to 50 ft. in height, according to the elevation of the three main terraces, and it has an expanse running back eastward for nearly 1000 ft. until it merges into a low range of hills, called *Kuh-i Rahmat*, 'Mountain of Mercy,' the spurs of which have been partly cut away to furnish material for its construction. By the aid of inscriptions, and judging from the position of the different ruins, the columns that remain standing, and the arrangement of the bases of those that have fallen, as well as from the outlines of the walls, portals, stairway approaches, and sculptured pediments, we are able to identify each of the buildings that once occupied this site. Opposite the Grand Staircase of approach at the northern end, is the Porch of Xerxes; 50 yards to the south stand the relics of the Audience Hall of Xerxes; still farther southward, and near a mound, are the better preserved remains of the Palace of Darius; while a short distance southward again, across a ruined courtyard, are some traces of a Palace of Artaxerxes III. Ochus, identified by an inscription on the stylobate. Directly behind this is the Palace of Xerxes himself, with a minor edifice still farther back, while at some distance northward is the great Hall of a Hundred Columns, erected by Darius, with a portico near its south-western corner, showing in stone the king seated on his throne of state. The destruction of these gorgeous buildings is attributed to the drunken act of Alexander the Great, when he burnt the citadel after his victory over the last Darius; but though the hand of the conqueror destroyed the beauty of the edifices and left them a ruin for all time, it could not obliterate those traces that still in after ages bear witness to their ancient glory.

Some further remains of royal architecture are to be seen at Persepolis and in its vicinity; they are the rock-hewn tombs of the Achæmenian kings. Three of these sepulchres are cut in the hills, behind the great platform already described. They are believed to be the mortuary chambers of Artaxerxes II. Mnemon (B.C. 404–358), of Artaxerxes III. Ochus (B.C. 358–337), and of Darius III. Codomannus (B.C. 335–330), if we are justified in regarding the unfinished grave as that of the last of the Achæmenians. More imposing in their situation and older in point of time are the four tombs carved in the rocky front of the necropolis cliff of Naksh-i Rustam, on the other side of the plain, about 6 miles north-west of the platform. These sepulchres, which were the model for the three later ones, are each hewn in the shape of an immense Greek cross, and sunk deep in the face of the rock. They are elaborately carved in architectural style to represent a façade decorated with bull-capped pillars, two on either side of the doorway, and surmounted in each case by an entablature richly sculptured with a bas-relief of the king, his subjects, and Ormazd. An inscription shows that one of these tombs was the sepulchre of Darius the Great; the other vaults, it is believed, belonged to Xerxes, Artaxerxes I., and Darius II. A few yards distant from the tomb last named there is a square stone edifice which closely resembles the rectangular structure at Pasargadæ, already mentioned, but well preserved, and, like the latter, probably a fire-shrine rather than a tomb. Near the base of the necropolis hill, but hidden from the shrine by a spur of the cliff, are the remains of two altars, hewn out of the living rock and serving as fine examples of the stonecutter's work for religious purposes in Achæmenian times. To the same age may likewise belong some rude cuttings in the rocks on the crest of the cliff, apparently designed as repositories for exposing the bodies of the dead in accordance with the ancient Zoroastrian custom, but the date is not certain. To a later age, however, we must assign the seven sculptures cut in the rock beneath the tombs themselves, since their subjects prove them to be of Sasanian origin. The list of Achæmenian tombs is to be supplemented by several other sepulchres, somewhat resembling those of Naksh-i Rustam, but probably dating from an earlier period than they or the Persepolitan tombs, and without inscriptions or ornamentation, excepting one which has a crude bas-relief. These are found near the village of Sahnah, between Hamadan and Kermanshah, at Holvan in Western Persia, and Takhrikah in Azarbaijan, as well as elsewhere (see de Morgan, *Mission scientifique en Perse*, iv. 292–302, and Justi, *op. cit.* ii. 455, 456).

The fourth and last of the great Achæmenian capitals was Susa, whose remains were first made known by Loftus in 1852, and were excavated with very important results by Dieulafoy in 1884, 1885, 1886, followed by de Morgan in 1897, 1898, 1899. The site which they occupy was the winter residence of the Achæmenian kings and the old seat of government of Elam. The ruins extend over several *tells*, or hillocks, between the river Chaur, or Jaur, and the Kerkhah, in the vicinity of the modern Dizful and Shuster. Four principal groups of remains are distinguishable, according to the results of the explorations that have been mentioned: They are, first, the *tell*, called the Citadel; second, the Royal City, where stood the palaces of the successors of Darius; third, the traces of the city itself; and, fourth, the vestiges of the inhabited town along the river's edge. If we may judge from the elaborate finds made by Dieulafoy, the Citadel and the Royal City must have made an imposing spectacle in the days of their pristine glory (see the plates in Dieulafoy, *L'Acropole de Suse*); and the same investigator's researches have revealed, among other ruins, the remains of the *apadāna*, or throne-room, of Artaxerxes II. Mnemon, which was erected on a site earlier occupied by a palace of Darius I. which had been destroyed by fire. It was here that the archæological expedition, led by Dieulafoy and his wife, discovered the frieze of archers and a lion-frieze, together with the remains of an enamelled staircase and various other objects that enrich our knowledge of early Persian architecture and art. In point of style the Susian remains are quite like those of Persepolis, even as regards the character of the so-called 'Persepolitan column,' and, like the latter, they are thought to show traces of Greek influence combined with Assyro-Babylonian elements and other features already mentioned, although they are so thoroughly Persianized as to possess an individuality of their own.

The ruins of one other edifice in Persia may be referred to here as belonging possibly to the latter part of the Achæmenian period; it is the remains of the great temple of Anaitis (see ANĀHITA) at Kangavar, between Hamadan and Kermanshah. A portion of the N.W. wall of the stylobate on which the temple stood is still intact, and is crowned with the remains of a colonnade of pillars, while on the south-eastern side of the temple precinct there is a disordered mass of large granite blocks and columns, whose size conveys an idea of the vanished magnificence of the sanctuary which is now a mass of ruins. Owing to the presence of certain characteristics in the columns, which seem to show later Greek or Syro-Roman affinities, Dieulafoy and some others propose to assign this temple to the Parthian period; but, to the present writer, the evidence seems

stronger in favour of attributing its erection to Artaxerxes Mnemon or some other of the later Achæmenians. For the sake of completeness it should be added that Dieulafoy, on the contrary, assigns to the Achæmenian period some of the ruins at Firuzabad and Sarvistan in S.W. Persia; but other authorities, like Perrot and Chipiez, de Morgan, and Gayet, are better justified in assigning them to the Sasanian epoch.

3. Seljuk and Parthian periods (B.C. 330–A.D. 224).—The interregnum of seventy years occupied by the sway of Alexander's direct successors and the Seljuk rule exercised no appreciable effect on Persian architecture, unless it was to extend the sphere of possibility for Greek influence. The Parthians were Philhellenes, as is shown by their employing the Greek language and Greek devices on their coins; but they were not great architects, as is clear from the Parthian ruins—practically the only ones surviving—at Hatra and at Warka, although these are built with crude solidity, if not with beauty of design. The structure at Hatra, the modern *al-Ḥadhr*, in Mesopotamia, was either a palace or a temple, or possibly both combined in a single precinct, for which reason it is commonly spoken of as a palace-temple. The ruins show a brownish-grey limestone edifice, 366 ft. long, 210 ft. broad, and with thick walls proportionately high. The building consists of a series of seven large chambers arranged side by side, with several smaller rooms leading into them, and a large square hall—apparently a throne-room—added in the rear near the left-hand corner of the edifice. The front of the building was, for the most part, open, so that the light was good, and it was probably shaded by awnings. The walls of the greater apartments were strengthened by pilasters, and decorated by bas-relief sculptures and ornamental friezes, which added to the effect of the general architectural design. As to its date, the palace-temple at Hatra may be assigned with reasonable probability to the latter half of the Parthian period, or between the 1st and 3rd cent. of the Christian era, since the city was in a flourishing condition, and able to resist the siege of Trajan in A.D. 116, and of Severus in A.D. 198, but was a deserted ruin in the 4th century.

The second of the Parthian architectural remains is found at *Warka*, the ancient Erech, on the Euphrates, a city mentioned in Gn 10^{10}. This ruin consists of a sepulchral chamber built over a tomb in which was found a coffin of the Parthian period. The description which Loftus gives of this structure, with its bases of columns, capitals, cornices, friezes, and bits of painted plaster, shows that the Parthians in later times were not averse to decoration and artistic touches in their buildings, even if they had affected a rude simplicity in earlier times. This fact is further borne out by the account of the palace at Ctesiphon, as given in Philostratus' *Life of Apollonius* (ed. Olearius, i. 25). According to de Morgan (*Mission scientifique en Perse*, ii. 137 and plate lix.), there is a ruin of a Parthian palace or temple at Velazjord, near Kangavar, and mention has already been made of the view which would associate the ruined temple at Kangavar with the Parthian era. The scarcity of Parthian remains is probably to be accounted for, as in other cases, by the fact that brick was more largely used than stone in the construction of their buildings. As to originality in architectural art, it may be added that the Parthians are credited with the development of the arch- and tunnel-shaped roof, in contrast to the flat ceiling and square lintel of the Achæmenian period.

4. Sasanian period (A.D. 224–661).—The Sasanian monarchs, unlike their Parthian forerunners, were great builders, and distant architectural rivals of the Achæmenians. An enumeration of the places where monuments that date from their reign are found would take in a large part of Persia, as is clear from such a list as that given by Justi (*op. cit.* ii. 540–541). These remains show advances in constructive art over the Parthian period, more especially in the development of the dome, an outgrowth of the arched vault, and in the elaboration of the façade of such a palace as that at Ctesiphon, whose high recessed entrance, with galleried panels on either side, anticipates the sweeping curve of the grand portal and the panelled front which is typical of the mosque and madrasa architecture in Muhammadan times. The standard of royal magnificence under the Sasanians is shown in the ruins of Qaṣr-i Shīrīn, the castle built by Khusru II. Parvīz (A.D. 600), for his favourite, on the road between Baghdad and Kermanshah, and is evident in the sculptured grotto at Ṭāq-i Būstān, near the latter city. To about the same epoch belong the ruins at Mashito and at Ammān (the 'Rabbah of the children of Ammon' of Dt 3^{11}), as well as the palace called Aivan-i Khusru, not far from Susa. The religious architecture of the period is represented by the remains of numerous fire-temples, like the *ātash-Kadah*, near Iṣfahān, and that at Abarguh or at Jaur, in the district south of Shiraz; or, again, by a portion of the crumbling sanctuary of brick at Ṭāq-i Sulaimān, south-east of Lake Urumiah. The style of construction of a Sasanian caravanserai may be judged by the stone ruins, said to be the work of Khusru I., 'Anūshirvān the Just' (A.D. 531–579), at Aghuan, between Teherān and Meshed. Sasanian architectural engineering is illustrated by several bridges and dams, as at Dizful and Shuster, or the stone aqueducts, descriptions of which may be seen in the standard works mentioned at the end of this article.

5. Muhammadan period (from A.D. 661).—As already stated, the history of the Muhammadan period of Persian architecture forms a special branch of Muslim art, and the best examples of its development are found in the mosques, the religious edifices which supplanted the old fire-temples after Persia adopted Islām as its national faith, and which are characterized by towering domes (sometimes bulbous in shape), high façades with immense recessed arches, graceful minarets that give balance on either side, and ornamental exteriors decorated with glazed tiles and scroll-like arabesques. The architectural remains of the first period of the Khalifate, the Umayyads and Abbāsids (A.D. 661–847), have mostly been destroyed by the long series of wars that have devastated Persia from time to time; but the foundation of the mosque of Harūn al-Rashīd at Kazvin (A.D. 786) belongs to that epoch, and a mosque at Shiraz, built in the latter part of the 9th cent. by the Safarid Amr ibn Laith, is numbered among the older remains. To the early Ghaznavid age (10th cent. A.D.) may possibly belong the tower-like tombs at Rai and Hamadan, but it is more probable that they come from the later Seljuk era (roughly, 1030–1150) or from the Mongol age (1160–1260). The same is true of a crumbling mausoleum at Tus, near Meshed, as it is said to be the tomb of the poet Firdausi, who died in the year A.D. 1020; but although the poet's grave is actually near by, it is more likely that the structure is of Seljuk origin, since it closely resembles the mausoleum built by Sultan Sanjar at Merv about 1150. Good examples of the earlier Mongol period are to be seen in the tower-tombs of Jenghiz Khan's grandson Hūlāgū (d. 1265) and his queen at Maragha, the royal seat of the

Mongols in north-western Persia; while the mausoleum of Uljaitu Khodabandah (d. 1316) is of the later Mongol period. The best illustration of the architecture which flourished during the rule of the Tartars, after Timur's invasion, is the beautiful Masjid-i Kabud, or 'Blue Mosque,' erected in 1403 by Shah Jahan at Tabriz. Muhammadan architecture in Persia reached its height in the reign of Shah Abbās the Great (1585–1628), and is well illustrated by the Masjid-i Shah, or 'Royal Mosque,' erected in 1612 at Iṣfahān, and by the other imperial edifices of the same ruler. The architectural activity of Shah Abbās was not confined to his capital, however, or to palaces and places of worship, but was exercised in the construction of caravanserais, bridges, and other useful structures in many parts of Persia, so that his name is widely known throughout the land as the patron of the builder's art.

The cities which best show the different styles of Muhammadan architecture are those which had the honour at one time or another to be the royal capital, like Iṣfahān, Kazvin, Tabriz, Sultanīya, and Shiraz; but hardly of lesser fame are Kum, Kashan, Meshed, Būstān, and Ardabīl. Modern architectural tendencies are best observed in the present capital, Teherān, where it is possible to see even European elements combined with the most conservative features of the past. When viewed as a whole, it may be said that Persia's contribution to the history of architecture, if not distinctly original, is, nevertheless, considerable, and deserves the attention of the student of religious art as well as the architectural specialist.

A. V. WILLIAMS JACKSON.

ARCHITECTURE (Phœnician).—Worshippers of the powers of nature, it is not surprising that the Phœnicians, in the earlier stages of their national existence, should have discarded the work of the architect and builder, and taken to worshipping in the 'high places' so often referred to in the Old Testament. That these were natural eminences, and not artificial erections, like those of the Babylonians and Assyrians, is quite clear from the statements concerning them. They were within easy access from the cities, and thither the people resorted when assembling for worship. How common they were may be gathered from the fact that they were the customary places for worship among the Israelites until the 7th cent. B.C.* The oracle on Carmel, which, according to Tacitus and Suetonius,† Vespasian consulted, was possibly a sacred place of this kind. The god consulted had neither statue nor temple, but only an altar which was much reverced. This altar was probably of unhewn stones, like the one dedicated to Jahweh upon that same mount Carmel which Elijah re-built and consecrated anew on the day when he confounded the prophets of Baal.*

In all probability the Phœnicians would have continued worshipping in the same way, without temple and image, had it not been for foreign influence. The close relations, however, which the Phœnicians had with Egypt, brought them under the influence of that nationality, with its splendid temples and elaborate ritual, and the result was that they sought to imitate them, though they did so only to a certain extent, as far as our present knowledge goes.

The most perfect of the small imitations of Egyptian temples is that now called *al-Ma'bed*, 'the temple,' at Amrīt near Tartūs. This erection is built in a court, 52 yds. by 60, hewn in the rock and levelled, the S. wall being about 16 ft. high. If there ever was any wall on the N. or front side, as is probable, it has now disappeared, and is replaced by a hedge. Remains of columns near the corners of the court suggest that the walls were flanked by cloisters. The 'temple' is in reality a cella,† and stands on a square mass of rock more than 10 ft. high and about 18 square, being composed of three enormous blocks of stone covered with a monolithic roof. The blocks having been superimposed, the structure was apparently carved out in the form it now presents. The opening is towards the N.; and the plain cornice with which it is decorated is the usual Egyptian one, advancing in front over the anterior face of the rock. It is thought probable that the entablature was supported by columns of metal. The ceiling is vaulted. The flooring within is slightly sunken, and is flanked by narrow platforms or benches, graded and sloping upwards towards the back, possibly to render those taking part in the ceremonies more visible to the people outside.‡ Slots for a rod at the opening suggest that a curtain hid the interior from the passers-by when there was no public ceremony, and square sunken holes near the entrance seem to mark the positions of candelabra or, perhaps, sacred columns. Renan has suggested that the rock-hewn court may anciently have been covered with water from a spring near, when the wall on the N. was in existence; and the appearance of the surface confirms this. If that be the case, it resembled two other similar sanctuaries near *'Ain al-Ḥaiyāt*, 'the Serpent-Spring.' The more complete of these is a little monolithic chapel, now in ruins. It was rectangular in form, with a square opening in front, where it has an Egyptian cornice surmounted by uræus-serpents. It rested upon a rectangular block of stone about three metres thick by five wide, carried by a plinth of much smaller dimensions. On each side of the great rectangular stone are traces of a little stairway, which gave access to the platform formed by its upper surface.§ This shrine was about 5·50 metres high, and its slightly-vaulted ceiling was sculptured in relief with two great pairs of wings, one pair springing from the globe flanked by two uræi, and the other seemingly having as its centre an eagle's head.

Facing the chapel just described, and about 10 metres to the E., are the base and lower part of another chapel, nearly like it, but seemingly rather larger. There is hardly any doubt that they both formed part of the same architectural scheme, and it is possible that one was dedicated to a god and the other to a goddess, his spouse. They rise out of the water of a small lake or pond

* Hastings' *DB* ii. 881b.

§ Renan, *ib.* pl. 9; Perrot, *ib.* fig. 188.

supplied by the spring, and it is possible that this was also the case in ancient times. Backed by verdure, it must have been a secluded and sufficiently picturesque spot, and the difficulty of access to the shrines would naturally prevent their desecration.*

It is improbable, however, that these remains show the common religious architecture of their time, and the fanes of Astarte at Sidon and Melqart at Tyre were undoubtedly much more important and imposing structures, though Herodotus' description of the latter (ii. 44) does not enable any idea of its form to be gathered; to all appearance he was most struck by its two pillars (στῆλαι), 'one of pure gold and the other of an emerald stone of such size as to shine by night.' Another important shrine was that of Eshmûn on the left bank of the Nahr Auli, about an hour N. of Sidon. This was a rectangular erection built apparently on the side of the slope, remains of the walls and masonry of the terraces being still in existence. The slope looks towards the N., and it is possible that the sanctuary to Eshmûn was a shrine like that at Amrît, which has the same orientation. Large numbers of votive statuettes were found on the site. The stones of the shrine, however, seem to have been long ago carried away by the inhabitants of the country to build their houses with, and some, with holes, are used in olive-pressing.†

Of greater importance, perhaps, are the indications available for the architecture of the temple at Gebal, made known by coins of the Roman period.‡ On the left is shown a chapel, the front surmounted by a pediment. The whole front was open, flanked by pilasters supporting the pediment. At the top of the steps giving access to the interior was a tripod table, perhaps for offerings, and a strange emblem surmounted the point of the roof, which seems to have been decorated on each side with three rows of sunken panels.

Naturally the architecture of this building suggests Greek influence, and to all appearance it is a simple reproduction of the Egyptian shrine, but it may be noted that Babylonian architecture had something analogous (see p. 682), and may have been the true origin of the structure. What would seem to be due to Greek influence is the pointed roof.

The real ancient part, however, was probably the structure on the right, which shows a colonnade to which access was gained by a flight of steps, and a large court-yard, with columns—a kind of arcade—behind. The representation of this building was evidently altogether too much for the die-sinker, whose ideas of perspective were on a level with those of the Assyrians. Above the cornice of the colonnade is an erection of open work, behind which one sees a conical object towering high in the open—the emblem of the god of the place, corresponding with the sacred stones in which the divinity was supposed to reside.§

And here we again have the 'high place,' not formed out of the solid rock by the laborious quarrying of all the mass which was not needed, but by an enclosure of hewn stone, ornamented with a colonnade all round. This was naturally much more elaborate than the simple clearings in the open, and also more æsthetic than the hill-enclosures marked off by simple rows of tall stones.

But it will be asked: Were these two forms—the 'high place' and the chapel or mountain-shrine—the only architectural creations of the Phœnicians for the purpose of worship? All that can be said is that they are the principal forms found. It seems not improbable, however, that they had others, and, as is well known, the temple of Solomon at Jerusalem was built by workmen and material supplied to that king by Hiram of Tyre. If not in that king's structure, there is at least in the temple as described by Ezekiel (40^{1}–43^{27} etc.), according to Chipiez's restorations,* a certain likeness to the Phœnician temples as shown on the coins of Cyprus, which seem to have been erections of imposing architectural appearance.

In Cyprus the most famous temples were those of Paphos, Amathus, Idalium, and Golgos, in which places were Phœnician settlements, as also, probably, at Citium (now Larnaca), Salamis, and other sites. From Cypriote coins,† an idea may be gained of the celebrated temple at Paphos, dedicated to Venus or Astarte. It consisted of a central erection—a kind of pylon—in the form of two narrow towers connected, in the upper part, by a chamber or chambers furnished with three windows. Below this was the entrance, in which the spectator could see the sacred figure adored there—a conical stone surmounted by a naïve indication of a head, and two rudimentary arms. Perrot suggests that the size of the opening has been purposely exaggerated by the engraver in order to exhibit the divine image, which was, in reality, not at the entrance, but at the far end of the sanctuary. On each side of the pylon were porticoes or colonnades, flat-roofed, hardly more than half the height of the central portion, surmounted by images of the doves sacred to the goddess. Under these arcades objects like candelabra are shown, the upper part arranged either for the purpose of giving light or for the burning of incense. Above the upper structure, and between the two towers, are shown a star and the crescent moon—emblems of the goddess. The space in front of the building seems to be represented paved, and enclosed by a semicircular railing, provided with a double gate. Within this enclosure is a dove, apparently seeking food. The details vary somewhat in the different coins,‡ and it is to be supposed that the engraver had no intention of giving more than a general idea of the building, so that numerous accessories have been omitted. According to Di Cesnola, the body of the edifice was rectangular, 67 metres by 50, surrounded by a court-yard 210 by 164, more or less. As it is based upon actual exploration, it is to be preferred to the plan given by Gerhard after the indications of travellers who visited the site in the early years of the 19th cent.;§ but how the latter could have obtained the exceedingly probable details of the interior which he gives is difficult to understand. According to his plan, there were two enclosures, the first provided with four entrances, and surrounded by a colonnade. A doorway admitted to the second enclosure, in which was the temple. There we see the semicircular railing, the paved forecourt, the sites of the towers, the central portion of the building, divided into a vestibule, a large hall, and a sanctuary wherein was the sacred image; likewise the lateral structures, each with four chambers, to which admission was gained only

from the large central hall, and one (that at the end) which could be entered only from the sanctuary. The two plans are so different that one asks whether they could have been taken from the same remains. According to Tacitus,* the stone emblematic of the goddess was in the open air, indicating that the place where it stood had no roof; notwithstanding this, it is said never to have been wet with rain. This rather favours Di Cesnola's plan, which, however, does not agree with the picture on the coins. Probably further exploration is needed.

In the neighbourhood, but nearer to the sea, Di Cesnola† found two conical stones still in position, which, it is suggested, are all that remain of some sacred spot—perhaps the traditional landing-place of the goddess when she first visited the island. If this be correct, the site was the spot where the pilgrims to the sacred places on the island commenced their pious visits. Perrot suggests that this site is represented on another Cypriote coin,‡ in which two sharply-pointed cones are shown, one on each side of two columns, resembling the side posts of a doorway, standing on bases, and connected at a distance of about three-quarters of their height by joists, intended, to all appearance, to hold them in position. The whole seems to have been provided with some protective covering of the nature of an awning. Under this seeming doorway is a conical object on a plinth, surmounted by a flat top, on which stands a dove, the emblem of the goddess. In front is a semicircular enclosure with a single central gate. The whole shows a simple form of the temple at Paphos, without the lateral structures or aisles.

At Golgos the temple was a parallelogram,§ the roof supported by five rows of three columns each. There were two doors, one S., the other E. A large cone of grey stone found on the site implies that the building was dedicated to the goddess of Paphos. It resembles in form, but on a large scale, the terra-cotta cones found in such numbers at Telloh in S. Babylonia. Many figures of women holding or suckling their children, and cows suckling their calves, were discovered at many points on the site. Numerous pedestals, each of which anciently bore a statue, and some of them two, were found. Ceccaldi, who studied the objects disinterred there, has given a very vivid picture of the appearance of the temple when it was still standing. Its four walls were of sun-baked brick covered with white or coloured cement, and the pillars were of wood, with stone capitals, the two sides of the roof which they supported having only a very slight slope, forming a terrace, like the present Cypriote roofs. The roof was of wood covered with reeds and mats, upon which was spread a thick layer of earth beaten down hard. The exterior was therefore of a very simple appearance. The interior was lighted only by means of the large doorways, wherein one saw a motionless and silent crowd of stone-carved figures, their features and robes tinted with the colour of nature, surrounding the mystic cone as perpetual worshippers. Shrine-like stone lamps illuminated the grinning ex-votos hanging in recesses on the walls, which last were adorned with curious pictures. Strange sculptures adorned the circuit of the building, where the slanting rays of light were reflected on the white and polished tiling of the floors.

This is a vivid and probable picture, of which, however, some of the details require verification. Perrot suggests that this building was simply a treasury or museum belonging to the real temple.

A few underground buildings exist, the most noteworthy being the crypt at Curium,* in which were found many objects of value. Having descended the steps and passed along a short passage, one finds three successive bayed rooms, and at right angles with these, a fourth, with a further length of the passage. This interesting and well-built structure seems to have been used as a treasure-chamber, but whether it was originally intended for such is uncertain. That at Larnaca is known as the *Panaghia Phaneromini*. Enormous blocks, as well as small stones, have been used in this construction, which consists of a vestibule with a door leading to a small chamber, within which was found an old spring, probably some sacred source. The roof was formed of two large blocks of stone considerably arched on the under side. It has been thought to be a tomb; but in view of the existence of the spring, this is unlikely. It was probably a sacred well, much resorted to by the inhabitants and the people of the neighbouring port.

Far behind the perfection of the temples of Phœnicia and Cyprus are those of Malta and Gaulos (now Gozzo). Artistically and architecturally, a wide gap separates them from the structures of the Phœnicians, but the conical (sacred) stones found therein have caused them to be regarded as certainly Phœnician. Evans and others, however, are of opinion that these buildings are really Libyan. At Gozzo there are two temples,† side by side, and joined together by a wall, which forms a kind of rough façade. Passing through a narrow entrance, one reaches, in the case of the larger building, first a small and afterwards, continuing along the passage, a larger hall arranged at right angles thereto. The rear termination of the building is an apse in the form of a semicircle, and the whole suggests the arrangement of a church choir with deep bays. In consequence of its nearness, the smaller building has the first hall larger than the second, and the semicircular apse at the end is decidedly smaller; otherwise the arrangement is in both cases the same. In the various apses of which the building consists, the ground is made to mount by means of steps and sloping pavement. Barriers possibly railed off these raised bays, which then resembled the chapels in Catholic churches. It was in the right-hand bay, in the first hall, that the cone was found which gave the clue to the nature of these structures. Though symmetrically planned, the individual bays are not by any means regular in shape, and the stone supports for the furniture or sacred objects of the shrines seem to be placed without any attempt at orderly arrangement.

Still more irregular in shape and careless in arrangement is the temple of Hagiar Kim,‡ Malta, in which, moreover, the want of care and regularity extends also to the arrangement of the stones that form the walls, which are in some cases of enormous size.§ There are two entrances, giving access to two bays or apses on the E. and

§ *Ib.* figs. 219, 220.

four on the W., but the southernmost of each seems to have been separated from the rest, and partitions in the case of two others are shown on the plan. Stones decorated with spiral ornaments show that attempts at decoration were made; the ground upon which the spirals are carved is covered with a number of minute holes, emblematic, it is supposed, of the starry vault of heaven.* A striking altar,† with flutings, decorated with a representation of a growing tree, has the same ground-work, which covers also many of the great blocks of stone used in the building. Another altar, like a small table‡ with a thick central support—a type met with often in Syria—was found in one of the large bays.

Sculptures show that similar temples to those in Syria existed, in Punic times, in Sicily and Carthage. One of these was known under the name of *Erek Ḥayim*, 'Length of Lives,' and was dedicated to Astarte as goddess of longevity, whence the name of Eryx, given by the Greeks to the city where it was. It arose on the peak of a mountain, within that mighty wall which protected the summit. Judging from a stele found at Lilybæum (Marsala), a temple to Hammon existed there. The upper part of this monument§ shows a priest adoring before a candelabrum, or fire altar, behind which is the sacred cone with 'arms and head,' similar to the symbols found on the votive stelæ at Carthage. Inscriptions dedicated to *Ba'al Samaim*, 'the lord of the heavens,' *Astarte Erek Ḥayim*, 'Astarte length of lives,' *Eshmûn*, *Ba'al Ḥammôn*, and *Elat*, make it probable that Phœnician temples to these deities existed in Sardinia, where they were found. A shrine‖ in the Egyptian style, found at Sulcis (height 28 in.), has on the cornice a disc, and a row of uræi above. In another example from the same place,¶ carved with a goddess in Greek costume, we have a mixture of styles, Doric columns being introduced as supports of an entablature showing the Egyptian winged disc surmounted by a row of uræi.

Carthage and its dependencies have but little to offer in the way of religious architecture in the Phœnician style. At Ebba a lintel of a doorway** carved with two lotus-flowers, the sun with rays above them, and two crescent moons on each side, and at Jezza a capital of a column†† in modified Ionic, suggesting Cypriote influence, testify to buildings erected there. At Carthage itself the great temple of Eshmûn, demolished by the Romans, was re-built as the temple of Æsculapius; but nothing now exists of it, as the church of St. Louis and its dependencies at present cover the site.

The ornamentation of the Phœnician temples has been referred to from time to time in the preceding pages, but a few additional words thereon are necessary. The cornices are often plain, but when a row of uræi-serpents was added,‡‡ the effect was decidedly decorative. Exceedingly effective was the mixed style of the entablature of the temple at Gebal,§§ with its Græco-Roman decoration, including scrolls and flowers flanking a conventional Egyptian winged disc-emblem with uræi. The doorway at Um-al-Awamid,‖‖ being much more Egyptian in style, forms a striking piece for comparison. Egyptian influence is again manifest in the relief showing a sphinx, beautifully carved, found at Arad.¶¶

Apparently it was a favourite decoration with the Phœnicians, for it occurs also as the support of a throne in the decorative panel-relief showing a seated personage in the presence of the sacred fire (see below, p. 885 f.). Gradine ornaments,* such as are found in Assyro-Babylonian reliefs showing fortifications, occur on alabaster slabs from Gebal, now in the Louvre. They suggest the Assyro-Babylonian temple-tower, surmounting a decoration of flowers in squares over a band of laurel. This gradine-ornament is also applied to altars,† even of the Roman epoch. As in the case of the round tower-like monument of the tomb of Amrît,‡ however, the idea that it was really a battlement is lost by the material between the gradines being left; there are no openings. The great disadvantage to the modern student of their decoration, however, is that the remains are so scanty.

There is hardly any doubt that the architecture of the Phœnicians has had an influence on that of the nations around. Perrot and Chipiez cite the old mosques of Cairo, Amru, and Ṭûlûn, with their great rectangular courts surrounded on all four sides by rows of columns, the idol alone being absent. 'If one wish to have the type complete, one must go as far as Mecca, and enter into the Ka'ba, where even the triumph of the Qur'ân has not succeeded in ousting the primitive bethel, the black stone, which, set up in the sanctuary, has received the homage of the Arab tribes throughout many centuries' (*Phénicie*, p. 315 f.).

But perhaps these temples are not derived directly from Phœnician architecture. We have always to take into consideration the possibility of their having come down to the nations which produced them by some collateral line, and the likeness between them and the fanes of Phœnicia may be due to action and reaction. Whatever reservations may be made, however, the evidence of history and the monuments seems to show that the influence of Phœnicia preponderated.

T. G. Pinches.

ARCHITECTURE (Roman).—General characteristics.—If it be necessary in the case of Greece to point out that religious buildings were but a part of the architectural activity of the people, it is still more necessary in the case of Rome. Roman religious architecture plays a very small and comparatively unimportant rôle. Her baths, her palaces, her amphitheatres, and other public buildings were all upon a grander scale than her temples.

When Rome became mistress of the world, although she had at that time no architecture of her own, she made use of artists from all nations, and thus arose a composite style of the architectures of the world, in which Greece played by far the largest part. The origin of the Roman temples seems to have been partly Etruscan, partly Greek; but whatever part Etruscan architecture played in other branches of Roman architecture, the Roman temple in its final form was almost wholly Greek. The fact was that the great development of Roman architecture was almost entirely in the hands of Greek artists, and it is by no means easy to determine how much can really be considered Roman at all.

The true Greek style was trabeated, the arch, as has been shown, being only occasionally used. The style of the Romans, however, was a hybrid, partly arcuated and partly trabeated, and in their hands the fusion of the two elements never became complete. It is generally said that the arch in Roman architecture is the arch of the Etruscans: it is, however, doubtful whether it was not an introduction of the Greek artists of the East

* Perrot-Chipiez, *Phénicie*, fig. 77.
† *Ib.* fig. 78. ‡ *Ib.* fig. 95.

and Alexandria. In any case both the arch and the barrel vault date back to remote ages in the East, and the later Greek architects were more likely to be influenced by these traditions than by the comparatively obscure work of Etruria. At the same time, fine arches with large voussoirs were built by the Etruscans, as in the canal on the Marta at Graviscæ, supposed to date from the beginning of the 7th cent. B.C., or the Cloaca Maxima at Rome of the 6th. If, however, the Romans themselves had continued the tradition and built in a fine stone arched style, it at least seems probable that some remains, however scanty, would have come down to us. Indeed, we know that early Roman architecture was of brick, and brick vaulting with voussoirs occurs in Egypt as far back as B.C. 3500. Even the intersecting vault is found in a Greek example at Pergamos dating from the 2nd cent. B.C. The earliest surviving Roman building that had arches is the Tabularium, and it dates only from B.C. 78, long after the sack of Corinth, when Rome passed under the rule of Greece intellectually and artistically. Arches were in common everyday use in Greece, at any rate for structural purposes, as early as the time of Eumenes I. (B.C. 263–241), so there is no reason to suppose that Greek architects working for Rome were in any way necessarily indebted to the Etruscans for their conceptions. Even the triumphal arch—that ornamental form which we are wont to consider typically Roman—was built in Athens in B.C. 318. The earliest instance of such an arch in Rome is that of Scipio Africanus (B.C. 190), of which we have the record, but no remains. The most that can be said, then, is that it is not impossible that the Romans may have had a developed arcuated style derived from the Etruscans before they fell under the dominion of Greece; but there is no evidence of any kind, and, as far as existing remains are concerned, there are no new developments that precede Greek work. The attached column, for instance, sometimes spoken of as a Roman invention, occurs in the Arsinoeion in but slightly modified form, in the monument of Lysicrates in Athens, and at Phigalia, even if those of the Erechtheum were of Roman date.

With regard to their brick and concrete construction it is otherwise. The Romans were certainly great engineers. There is, however, not the same intellectual nicety about Roman work that there is in Greek work, and this was never acquired. When the Roman Empire was finally divided, the Greek or Byzantine portion at once began to develop a more scientific style in marked contrast with the ruder work of the West. Roman work was practical, rough and ready, often grandiose, but lacking in the finer artistic sense.

It is likely that we shall never be able to say what elements are Roman and what are Hellenistic, but it is possibly in the general planning that the Roman influence is strongest.

The Romans borrowed the Greek orders; or perhaps a more correct way of putting it is to say that the Greek architects working for Rome used their own orders, and by slow degrees trained a native school. The Doric order became very debased, and is found in a great variety of forms. The simpler of these forms are commonly grouped together as Tuscan, but they differ very much among themselves, and there is no historical evidence for any Tuscan origin. Vitruvius uses the term, but it is impossible to draw any clear dividing line between Tuscan and the debased Doric. The cause of the common error is that the Renaissance architects did make such a hard and fast division. The term as applied to Renaissance work has a definite meaning, but has no relation to anything in Rome. There was a Roman tendency to dispense with the fluting of Greek work both in Doric and Ionic, and occasionally in the Corinthian order, which greatly detracts from the strong refined vertical character of the shaft. Flutings were expensive to work, and were not showy enough to please Roman taste, which preferred monolithic shafts in hard brightly-coloured marbles in which flutings would have little effect. The column loses the sturdy proportions of Greek Doric, and tends to assimilate itself to the proportions of the other orders. In most of the existing examples of Roman Doric there is a base, but this is absent in early examples such as those at Pompeii, which are much more Greek in feeling. It has been suggested that the origin of the base is Etruscan, but its absence in early work is against this theory; and the part that Vitruvius would assign to Etruscan influence in architecture is not much more of a reality than the part assigned by Virgil to Æneas in Roman history. The contours gradually deteriorate, and the echinos of the Doric column speedily becomes a simple quarter round. In the almost unique early example of the Temple of Hercules at Cora the hyperbolic curve is found, and is obviously executed by Greeks. The architrave shrinks in importance, and the whole entablature is much shallower. There is a marked tendency for the intercolumniations to become wider. This is mainly the result of the fact that the order as such is not an essential part of the construction in Roman work. It does not govern the building, but is merely something applied afterwards, and has to suit its proportions to the available space. It is to this that we owe the introduction of the pedestal as a regular feature, which occurs only occasionally in Greek work. The architrave is set farther back than in Greek architecture, and the line of its face tends to fall within the base (fig. 1). The beautiful sculpture

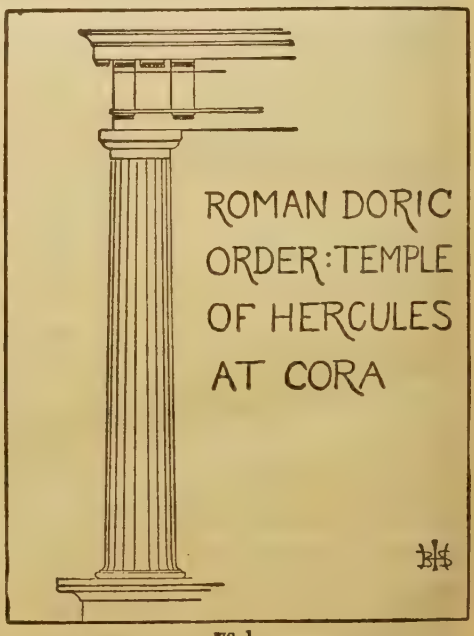

FIG. 1.

which was the glory of Greek buildings, and particularly of the Doric order, is absent, and its place is often taken by trivial conventionalities, such as wreathed skulls. The origin of this feature is probably to be found in the actual skulls of

victims hung upon the altars. The Ionic order remains the same in its principal features, but the

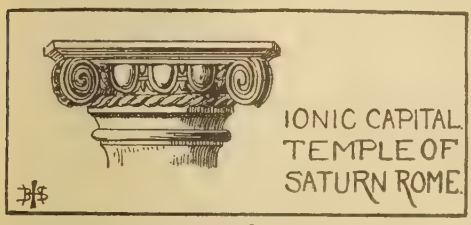

FIG. 2.

capital is not infrequently found with the volutes set anglewise (fig. 2). They are, however, comparatively rare, although the text-books speak of them as almost universal. This arrangement in Greek work at Phigalia has already been noted, and its first known occurrence in Italy is at Pompeii, where the refined carving marks it as the work of Greek hands. The volute in Roman Ionic projects very much less than in Greek examples, and the proportions are not at all satisfactory. There is generally a dentil course beneath the cornice as in Asiatic Greek examples: this occurs even in Roman Doric in the Theatre of Marcellus. The Roman dentils, however, are set much closer together and are shallower than in Greek work, generally with a fillet underneath.

The tendency throughout is towards greater enrichment, clearly seen in the choice of the Corinthian as the favourite Roman order. In Greek hands, as at Epidaurus, or the choragic monument of Lysicrates, this order, in spite of its richness, is yet restrained and most delicate in its refinement. In Roman work this is lost, and mere carving takes the place of the sculpture which is still found in the choragic monument. The foliage, too, loses its crispness, and the acanthus mollis takes the place of the acanthus spinosus (fig. 6 in ARCHITECTURE [Greek]). In some instances, particularly in triumphal arches, the small angle volutes are greatly enlarged, and may have helped to popularize the angle treatment of Roman Ionic. The capital then partakes of the nature of both Ionic and Corinthian, and the egg and dart molding is introduced above the acanthus. Thus treated, the order is sometimes called the Composite order, a name unknown to Vitruvius, and not at all necessary: it is in no true sense a distinct order, although the architects of the Renaissance en-

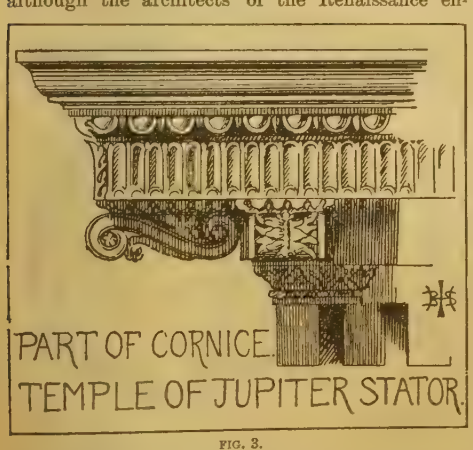

FIG. 3.

deavoured to make it so. The origin of the arrangement is as usual Greek, and in the temple of Apollo at Naucratis, the Erechtheum itself, and a capital in the forum of Trajan, we see it in its undeveloped form.

The entablature in Roman Corinthian work is very ornate. The architrave is divided by several moldings more or less enriched. The frieze is often decorated with continuous scroll work founded on the acanthus leaf, which is beautiful in itself although giving a restless effect as the result of over-ornamentation. Below the corona a new feature is introduced in the modillions—ornamental brackets which give an æsthetic sense of support (fig. 3).

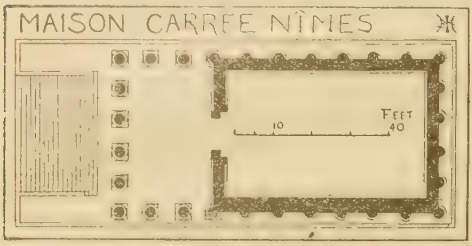
RELIGIOUS BUILDINGS.—Of course in most of the great secular work the arch plays an important part, and the orders are placed as ornaments in front of the real arched construction; but except in the case of the propylæa in the East before the sacred temenos, the arch practically plays no part in religious work. The vault, however, does occur (see below). The religious buildings of the Romans were of comparatively small importance, and the great *thermæ* are far more typical of Roman work than the temples. The temples, too, were used for many other besides religious purposes, just as was the case with the great mediæval cathedrals. The temple of Concord was not only an art museum of the spoils of the world, but was often used for meetings of the senate, as also was the temple of Mars Ultor. The public weights and measures office was in the temple of Castor. But the Roman temples, although in their main features simply modifications of the Greek, have certain distinctive marks of their own. It seems probable that the early Etruscan temples were often of three cellæ placed side by side, and, moreover, that it was the custom to erect them upon a lofty base, or podium.

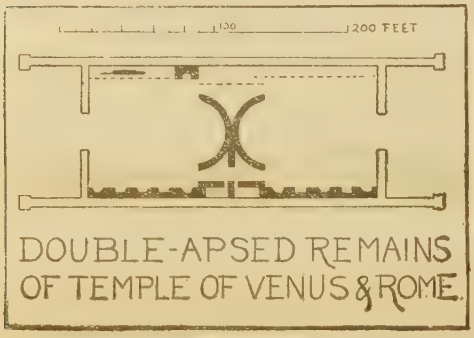
The Etruscan architecture apparently was largely of wood, and terra-cotta ornaments played a very important part, noticeably in a peculiar fringe of ornamented terra-cotta tiles hanging from under the eaves and apparently also from the main beam of the portico. These features can be traced in Roman work—the lofty podium with a great flight of steps approaching the main portico, the wide intercolumniations, and the use of terra-cotta ornaments—and even the three-celled temple may have had its influence in the great breadth of the Roman temple, or in the case of a triple temple such as occurs at Sbeitla in N. Africa. [See ART AND ARCHITECTURE (Etruscan and Early Italic), p. 863].

The ruins of the temple of Mars Ultor and three columns of the temple of Castor and Pollux (completed A.D. 6) are probably the earliest extant remains. There may, however, have been earlier examples, as Greece can be said to have begun its dominion over Rome in B.C. 146. The temple of Jupiter Capitolinus was possibly largely Etruscan. Generally speaking, the earlier the date the purer the work and the more marked the Greek influence. It has been observed that the Greek temple was orientated; but this was not the case with Roman temples, and we find them facing in all directions, generally planned in relation to their architectural surroundings. We find them all round the Forum Romanum, for instance, each facing into the forum. As in the case of Greece, the altar was not in the temple but outside, and the exact *raison d'être* of the temple itself is by no means so clearly defined.

The typical Roman temple, then, is a rectangular building with a cella very much wider than was usual in Greece. In the temple of Concord the width was greater than the depth. This may possibly have been the result of the earlier three-celled temple or of the many uses to which the

Roman temple was not. The architectural effect was always concentrated upon the front, and the back of the temple was often absolutely plain. As part of the same tendency we may notice that the temples were generally only *pseudo*-peripteral, with attached columns round three sides of the cella and an abnormally large front portico. The temple of Fortuna Virilis is a good early example; there is a very fine later temple known as the Maison Carrée at Nîmes (fig. 4).





FIGS. 4 AND 5.

The Roman temples within were apparently rarely divided into nave and aisles, so that a greater floor space was obtained, but the span was sometimes reduced by internal columns close against the wall, after the manner of the Greek temple at Phigalia. Occasionally there was an apse, as in the temple of Mars Ultor; and in the temple of Venus and Rome there was an interesting arrangement of a double temple with two cellæ and apses back to back (fig. 5). The whole in this case was surrounded by a court and stoa.

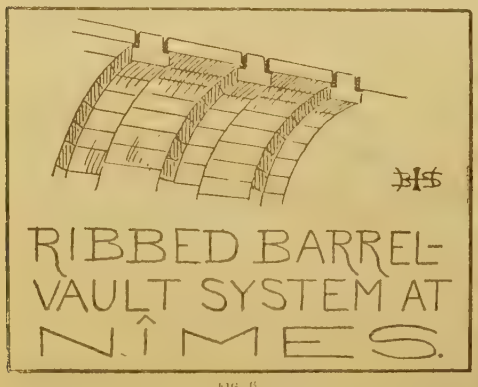


FIG. 6.

The roof appears to have been normally of wood, but certainly in a few instances a concrete or stone vault was employed, as in the above-mentioned temple of Venus and Rome, the temple of Neptune, the temple of Ceres and Proserpine, and the temple at Nîmes known as the Nymphæum or the Baths of Diana, which has a stone barrel-vault supported on stone arches which rested upon attached columns (fig. 6).

In front of the temple was a great flight of steps generally flanked by two projecting portions of the podium, the steps not extending the entire width of the building. In the temple of Minerva at Assisi the steps are carried between the columns which are raised on pedestals. This was probably from want of space.

A favourite form of temple with the Romans was the circular building which had become popular in Greece during the 4th and 3rd centuries B.C. It has been suggested that the Roman circular temple had an independent Etruscan origin. Even if this be the case with regard to the mere fact of the plan being circular, it has certainly nothing whatever to do with the actual form, which is simply a copy of Greek work. The lofty podium is generally found in Roman examples; but this, too, occurs in Greek examples of much earlier date. The picturesquely situate temple of Vesta at Tivoli is a fine example, of which the cella itself may even date back to the close of the 1st cent. B.C., although the Corinthian peristyle is later (fig. 7).

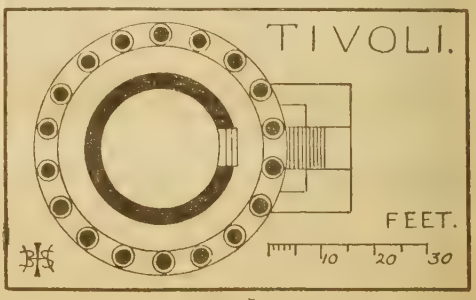

FIG. 7.

By far the most remarkable of the circular temples, and indeed of all the Roman temples, is the celebrated Pantheon (fig. 8)—a great building 142 ft. 6 in. in diameter, 2 ft. in excess of the domed reading-room of the British Museum. The exterior is plain, not to say ugly; but originally the brick was faced with marble up to the first string course, and above this with stucco, which may possibly have somewhat improved the general appearance although not actually affecting the building architecturally. It is approached by a great portico built from the spoils of Agrippa's temple, which

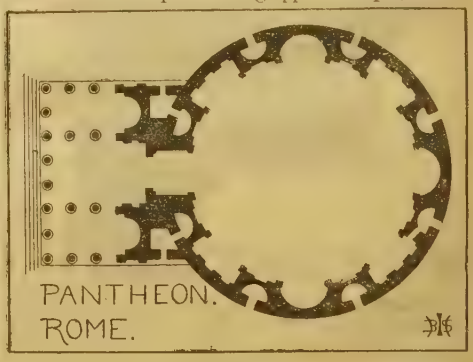

FIG. 8.

was taken down for that purpose. This fact was discovered in 1892, and is some consolation to those

who have always maintained that the portico is hopelessly out of place, and ruins the severe dignity that the plain circular building might otherwise have possessed. The date of the main building also has conclusively been proved to be A.D. 120–124, from the stamps upon the bricks of which it is constructed. This is a most important fact, as the assignment of the building to Agrippa has led to many wrong inferences with regard to the history of dome construction.

The building occupies the site of what was once an open circular piazza, the pavement of which has been found some 7 or 8 ft. below the floor of the present building. The walls are 20 ft. in thickness, containing eight great recesses three of which are apses: the highest faces the entrance on the main axis, and the other two are at the extremities of the diameter, at right angles to the main axis. The entrance itself is a great rectangular recess covered by a barrel-vault, and between these four recesses are four others, all of rectangular form. Except in the case of the entrance and the main apse opposite to it, all the recesses have two columns *in antis* in front. The dome is divided in its lower part by vertical and horizontal ribs into five ranges of thirty-two coffers. Above this it is plain, and the whole building is lit by a huge circular hypæthral opening 30 ft. across. Altogether the interior effect ranks very high among the great buildings of the world.

Under Roman rule many great temples were built in many other countries than Italy, but, save in those countries that had no architectural styles of their own, it is misleading to call them Roman. Particularly in the East we find many buildings that are practically simply a development of Hellenistic architecture. The great temples of Syria, for instance, are not placed at the end of the fora as in Rome, but in a temenos of their own as in Greece, with propylæa leading into them. With one exception too (Baalbek) they are orientated in the Greek manner. Of this type is the great temenos of the temple of the Sun at Palmyra. In most instances, just as at Athens, the propylæa have a wider intercolumniation in the centre, but it was spanned by an arch, round which the entablature is carried. The propylæa of Damascus (fig. 9), which may be dated

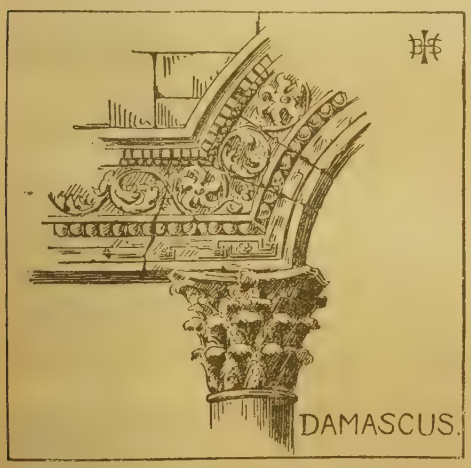

FIG. 9.

c. 110 A.D., or not much later, are probably the first instance, and a similar dated example occurs in the temple of Atil (A.D. 151). Baalbek (A.D. 160) and probably Palmyra were the same. The invention—if so it may be termed—appears to be that of Apollodoros, a Greek of Damascus, and seems a natural development of the arches of later Greek tradition already noted. It afterwards appears in Diocletian's Palace at Spalato, on the north-east coast of the Adriatic (*c.* 305 A.D.). It marks an important step, because hitherto the arch had always been carried by portions of walls or piers. On the other hand, the columns had never before carried anything but a horizontal entablature; and the piers and arches behind, with the columns and entablature in front, always remained two distinct and irreconcilable elements. Indeed, it was left for the Byzantine and Gothic architects to work out truly homogeneous styles of column and arch.

Of these Syrian examples the finest is that at Baalbek, which is built upon a great platform forming an acropolis. The general setting out is probably not Roman, and some of the substructure is pre-Roman in date. It was approached by great propylæa of Roman times, the restoration of which is largely conjectural. An interesting feature is the hexagonal court, surrounded by a double peristyle upon which the propylæa opened. The hexagonal court leads in its turn to a great square court, at the end of which, somewhat in the Roman manner, is the larger of the two temples. Apparently it was never completed. The other temple to the south, the temple of Jupiter, is a very fine piece of work. In some ways the building was a compound of Greek and Roman feeling. It was peripteral with two ranges of columns in the front, but the portico was very deep, and the central intercolumniation was wider than the rest. The interior had attached columns after the manner of the temple at Phigalia, except that the entablature was broken and carried round and back between the columns. It probably had a flat roof, except at the far end, where there was a small vaulted recess, about half the total width, approached by a flight of steps. A curious feature is a two-storey division into shallow niches between the columns, which has a very unpleasing effect. The lower one is arched, with a horizontal cornice, and the upper has only the cornice, but is surmounted by a pediment. The carving is bold and good, and shows the influence of Greek tradition.

Construction.—The Roman method of construc-

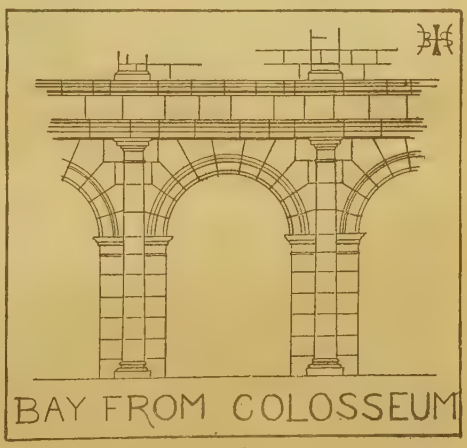

FIG. 10.

tion was very different from that of Greece. Whereas the Greeks generally built in large stone blocks bonding right through the wall, the

Romans built mainly in brick and concrete, and the finer materials were used only for facing. In Rome itself even brick was never used throughout, although in the provinces brick walls or courses of stone and brick alternately are not uncommon. Whether brick or stone was used in the core of the wall or not, the outer face was invariably covered with stucco or some finer material. When brick or stone occurs, its use is not easy to determine, as it would neither add to the strength of the wall, nor admit of its being built without planking to keep the concrete in position while setting. Bricks were of flat triangular shape, and stones pyramidal. 'Opus incertum' was work where the stones were more or less irregular in shape, and 'opus reticulatum' where they were dressed to a true square, and set diagonal-wise in the wall (fig. 11). In either case occasional courses of large flat bricks, 1 ft. 11 in. long, bonding through the wall, were used. A similar method was adopted with arches to prevent the concrete from spreading and settling down before it had set (fig. 11). The marble or other facings were secured to the wall by iron or bronze cramps running into the body of the wall (fig. 11).

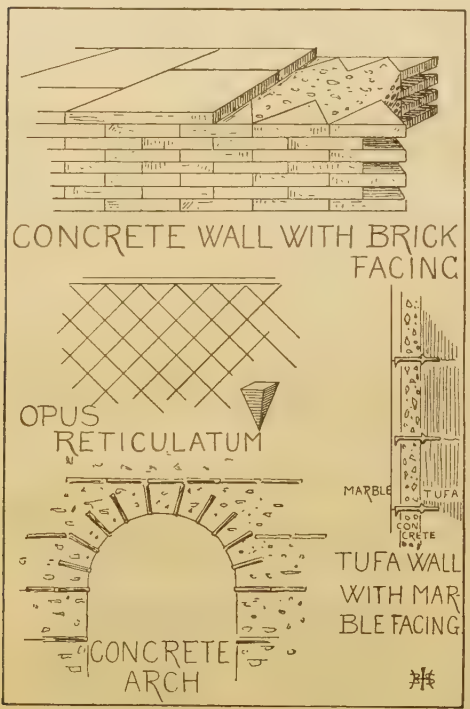

FIG. 11.

In vaults and domes, arches or ribs of brick were built upon light wooden centering, and cross bonding bricks dividing the whole into compartments were inserted at intervals. The concrete was then poured into these, and the whole set into one solid mass, exerting no outward thrust whatever. Stone vaults, instead of concrete, were occasionally built in later days, as in the Nymphæum at Nîmes, mentioned above.

Ornamentation.—The ornamental work of the Romans was not nearly so good as their construction, which was sound and workmanlike, and of great durability. One even regrets that they ever attempted ornament at all, as the bold and simple majesty of their great work is only spoilt by the applied ornament. After all there is very little Roman work, if any, more pleasing than the Pont du Gard at Nîmes; and it has no ornament at all. One of the most delightful of their more purely architectural works is the gateway at Trèves, which is practically devoid of ornament. The ornament used by the Romans was all derived from Greek sources, but there is a roughness and want of delicacy that shows an entire ignorance of the subtlety and refinement of Greek work. The profiles of the moldings are nearly always segments of circles, instead of the subtle parabolic and hyperbolic curves of Greek art. Moreover, the molding, as a rule, does not depend for its effect upon the subtle gradations of light and shade produced by its own contour, but upon the elaboration of the carving cut upon it. Somewhat similarly we find a preference among the Roman architects for the acanthus mollis with its rounded and less precise form, whereas the Greeks preferred the acanthus spinosus with its more crisp refined lines (fig. 6, ARCHITECTURE [Greek]). It is true that the acanthus spinosus badly drawn is less satisfactory even than the other, but this kind of thing is well known—the greater the height, the worse the fall. The carving, too, although vigorous in its way, is rougher and much more mechanical than that of Greece. Instead of the fine sculpture that adorned the temples of Greece, we frequently find endless repetitions of ox-skulls and hanging festoons of fruit and flowers between. There was a great tendency to use the ornament in such profusion that it stultified itself. Such an example, for instance, as the arch at Beneventum is so overloaded that there are practically no plain surfaces at all, and the whole effect is worried and unsatisfying.

Colour was used in their buildings by the Romans as by the Greeks, and the great fondness of the Romans for marbles of many colours gave their buildings an opulence in effect that was one of their most marked characteristics.

One of the most important adjuncts of Roman ornament was the mosaic, which, however difficult to work satisfactorily, is undoubtedly more in consonance with architectonic feeling than any mere surface pigment.

Adequately to appreciate Roman work, it would be necessary to study much more than the religious architecture. Rome's finest achievements were in the *thermæ*—the great baths, which were the centres of Roman life, where literature was read and discussed, and politics debated. In these magnificent buildings it was the interior that was the greatest achievement. It was in interior effects that the Roman architects made the real architectural advance, giving to them a magnificence hitherto undreamed of. Magnificence was the aim and end of Roman art; subtlety and refinement were beyond its comprehension. However, of existing remains, it is a religious building—the Pantheon—that gives us the clearest conception of what this interior magnificence was; and for us the Pantheon, with its fine interior and poor exterior, is the great typical example of Roman achievement, as the Parthenon, with its delicate subtleties and sculpture of unsurpassable loveliness, is of Greek.

J. B. STOUGHTON HOLBORN.

ARCHITECTURE (Shinto).—There are indications that the original Shinto place of worship was, like the Roman *templum*, not a building, but simply a plot of ground consecrated for the purpose. It was probably enclosed by a row of twigs of the sacred evergreen *sakaki* tree stuck in the ground. 'Spirit terraces' for Shinto worship are mentioned in the old records, and the common word for a Shinto shrine, viz. *yashiro*, means 'house-equivalent,' *i.e.* a make-believe house for the god—no doubt a plot of ground of this kind. Another word for a shrine is *miya*, which means 'august house,' and is applied alike to a palace and a shrine. Sir Ernest Satow says (*TASJ*, 1874):

'The architecture of the Shinto temples is derived from the primeval hut, with more or less modification in proportion to the influence of Buddhism in each particular case. Those of the purest style retain the thatched roof, others are covered with thick shingling, while others have tiled, and even coppered, roofs. The projecting ends of the rafters (called *chigi*) have been somewhat lengthened, and carved more or less elaborately.'

It appears from a passage in the *Nihongi* that the *chigi* were restricted to Imperial residences and to Shinto shrines. Another distinctive feature of the shrine is a row of cigar-shaped pieces of timber laid cross-wise on the roof-tree. The walls consist of planks: the pillars supporting the roof are round, and without bases. The shrine has a wooden floor, raised some feet above the ground. There is a sort of balcony all round, with a flight of steps up to the entrance. A certain amount of brass ornament and wood-carving is used in some shrines, but, generally speaking, they are characterized by great simplicity. The wood-carving and metal ornamentation of some of them are traceable to Buddhist influences, and were removed when the shrines were 'purified' after the restoration of the Imperial power in 1868. They are always of wood, without paint or lacquer, which, of course, limits their duration. The shrines of Ise are renewed every twenty years. Nor are they of great size. In the 8th cent. a 'greater shrine' had only fourteen feet frontage. At the present day the outer shrine of Ise—that in honour of the Goddess of Food—measures 34 feet by 19 feet. The great majority of Shinto shrines are very tiny edifices.

The more important Shinto shrines are surrounded by a cluster of subsidiary buildings, which serve various purposes. There is a small oratory, where the Mikado's envoy performs his devotions. No provision is made for the shelter of the ordinary worshipper. He remains outside in front of the shrine whilst he utters a brief invocation. The joint worship of a congregation of believers is a rare phenomenon in Shinto. Within the precinct there are usually a number of smaller shrines (*massha*) to other deities than the one worshipped in the main building. At Ise there were formerly more than a hundred of these. Sometimes there is an *emadō*, or picture-gallery, for the reception of *ex voto* offerings of this kind. A characteristic feature of Shinto architecture is the *torii*, or honorary gateway, which adorns the approaches to the shrine, sometimes in great numbers. These arches consist of two upright pillars leaning slightly towards one another. Near the top they are connected by a cross-beam or tie. Another beam rests on the upright columns, projecting a little on each side. It is often made to curve upwards slightly at each end. The *torii* is usually constructed of wood painted red, but may also be of stone, bronze, or even occasionally iron. The whole has a simple but graceful effect. Mr S. Tuke has shown that the *torii* is identical with the Indian *turan*, the Chinese *pailou*, and the Korean *hongsalmun*, which are similar in form and purpose. The name is probably Japanese. It means literally 'bird-rest,' *i.e.* hen-roost; and the gateways were so called from their resemblance to this familiar object.

ARCHITECTURE AND ART (of the pagan Slavs).—The pagan Slavs seem to have had only the most rudimentary ideas on the subject of art. The few monuments which are ascribed to them are very crude, and it cannot yet be asserted with absolute certainty that they are the work of Slav artists. There is no connexion between these monuments and the more or less grotesque descriptions given in some of the Chronicles of the Middle Ages. These chronicles we owe to the Germans, Adam of Bremen of the 11th cent. (*Gesta Hammenburgensis ecclesiæ pontificum*), Helmold of the 12th cent. (*Chronicon Slavorum*), Thietmar, Bishop of Merseburg (976–1011), Saxo Grammaticus the Dane (12th cent.) in his *Gesta Danorum*, and the biographers of Bishop Otto of Bamberg (12th century).

The majority of the Slavs seem to have worshipped only idols and in the open air, and to have been quite unacquainted with temples. The existence of temples among the Slavs of the Russian Empire is very questionable. Hilarion, a monk of the 10th cent., writes: 'We are no longer building *kapishta*, but churches of Christ,' from which we may infer that the *kapishta* (from *kap*, 'idol') were pagan temples. But the oldest Russian chronicles speak only of idols, and the word *kapishta* may mean simply idols. Among the Baltic Slavs we find the existence of temples attested by German writings, in which the descriptions are not always very plausible. According to the statements of Helmold, the temple of Svantovit in the Island of Rügen was the great sanctuary of the Baltic Slavs. It was built in the town of Arkona. Saxo Grammaticus gives a glowing description of it. 'It was,' he says, 'a very beautiful wooden temple. The exterior or inclosing wall of the building was ornamented with thin roughly painted sculptures representing various objects. It was entered only by a single door. The temple was surrounded by a double wall. Inside the building stood a huge idol.' He adds that the temple was decorated with purple cloth and wild animals' horns.

According to one of Otto of Bamberg's biographers, the god Triglav had at Stettin four temples called *continæ* (from a Slav word meaning 'building'). The most important of these *continæ* was marvellously decorated and ornamented with sculptures representing men, birds, and animals, so cleverly reproduced that one could have believed them living, and so ingeniously coloured that neither rain nor snow could injure them.

At Gostkov, according to one of Otto of Bamberg's historians, there stood sumptuous temples adorned with colossal idols. In the town of Riedgost (perhaps Rhetra [?]) Thietmar describes a temple built of wood and resting on animals' horns (though the statement seems rather curious). The outside walls were covered with wonderful carved representations of gods and goddesses. In the interior stood gods made by hand, with their names engraved, arrayed in armour and helmets.

It is not our duty to discuss here the question as to the characters in which the gods' names might have been inscribed. This point, upon which much has been written, is probably purely imaginary. 'As many districts as there are in these parts' (*i.e.* among the Baltic Slavs or Slavs of the Elba), says Thietmar, 'so many temples are there, and the images of demons are worshipped by the infidels. It is to the temple that they come

when on the point of making war; to it they bring gifts after a successful expedition.'

Did the Slavs themselves build those temples, which were probably very small? Did they call in foreign architects? We do not know. The Arab geographer Mas'ūdī (10th cent.) had heard of their temples, but he gives an absolutely imaginary description of them, which cannot be believed, and he places the people whom he is describing in districts no less fanciful (*Les prairies d'or*, ch. lxvi.).

We have practically no specimen of the architecture of the pagan Slavs; and no ruined temple is in existence. We know the names of a number of idols worshipped in ancient Russia and among the Baltic Slavs—Svantovit, Perunŭ, Triglav. The present writer has reproduced in his *Mythologie slave* (1901) illustrations of some of the idols which have been discovered in Germany and in Galicia (Austria). They are believed to be of Slav origin; but we are not absolutely sure, as we have no trustworthy information. German and Ancient Russian writings alone bear witness to the existence of these idols. When Christianity reached the Slavs, they adopted the architectural style of the neighbouring races, from whom the gospel had come to them—the Roman style prevailing among the Western Slavs, and the Byzantine among the Slavs of Russia, Bulgaria, and Servia.

LOUIS LEGER.

ARDASHIR I. (Artashīr, Artakhshathr, Artaxerxes).—Ardashir I. (A.D. 226–241), the founder of the Sasanian dynasty, was the son of Pāpāk, 'king' of Khīr (Chīr), south-east of Persepolis. Having made himself master of Persia and some neighbouring kingdoms, Ardashir killed the Parthian 'king of kings,' Artaban, in 224, and seems to have conquered the capital, Ctesiphon, two years later.

From the beginning Ardashir identified his political aims with the restoration of the Mazdayasnian faith, which, notwithstanding the superficial sway of Hellenism, had never lost its hold on the people. He thus secured a mighty ally—the Zarathushtrian priesthood, the 'race of the Magians'—and continued and accomplished a work already begun by Parthian monarchs. In his zeal for the national religion, he seems to have kept to familiar traditions—his grandfather Sāsān having been attached to the temple of the goddess Anāhita in Istakhr (Persepolis)—as well as to his personal feelings. 'He was devoted to the Magian rites, and he himself celebrated the mysteries' (Agathias, *Hist.* ii. 36). The Avesta texts, destroyed and scattered in the time of Alexander and the following centuries, were collected by Ardashir, and completed by his high priest Tansar (according to a tradition reported in *Dīnkarṭ*, iii.), who thus gave 'a faithful image of the original light.' Another passage, in *Dīnkarṭ*, iv., which corroborates the king's having called Tansar to his capital in order to gather the scattered texts, adds the important fact that canonical authority was attributed only to the collection of Tansar, all doctrines that did not originate from him being considered as heretical. The collection was not completed until the reign of Ardashir's successor Shāhpūhr I. (241–272). A different tradition, reported in the introduction to the Persian translation of *Arṭā Virāf Nāmak*, makes Ardashir collect the Avestan texts and the Zend commentaries from the memories of the priests summoned to the capital (Haug and West, *Book of Arda Viraf*, Bombay, 1872, pp. xv–xviii). The custom of reciting a chapter, called *išnād* (*Yasna*), dates, according to Mas'ūdī, from Ardashir's time. Hence we may perhaps conclude with Darmesteter (*Zend-Av.* iii. p. xxxii) that Ardashir and his Hērbad of Hērbads regulated the liturgy. The two chief facts of the restoration, viz. the collection of texts, legends, traditions, laws, and doctrines, and the monopolizing of true worship and of true faith by the king, are expressed in the letter from Tansar to Gushnasp, king of Tabaristān (south of the Caspian), preserved, with additions and alterations, in a Persian translation of an Arabic version of the Pahlavi original (Darmesteter, *op. cit.* xxv–xxx).

The pretended letter of Tansar is discussed in a most thorough way by L. H. Mills ('Tansar's alleged Letter' in *Zoroaster, Philo and Israel*, 21–76), who, in pointing out the peculiar elements of this document, especially a certain ascetic tendency evidently contrasting with the Zarathushtrian law, considers it 'as being in its present form a subtle political fiction.' He goes much further than Darmesteter in eliminating spurious parts and in reducing the remainder, but he expressly recognizes a historical nucleus.

Ardashir has immortalized his political and religious restoration by his theory of the mutual aid of the two powers, the State and the Church, if Mas'ūdī (*Les prairies d'or*, text and tr. by C. Barbier de Meynard and Pavet de Courteille, ii. 162) has correctly rendered his testament to his son Shāhpūhr: 'Religion and kingship are two sisters that cannot exist the one without the other, because religion is the foundation of kingship, and kingship is the protectress of religion.'

LITERATURE.—For the Dīnkarṭ passages see Haug, *Zand-Pahlavi Glossary*, Bombay, 1867, pp. xxxi–xxxviii; West, *SBE* v. 199, xxxvii. 414, xlvii. 85, 127; Darmesteter, *Le Zend-Avesta*, Paris, 1892–3, iii. pp. xxv–xxx; Geldner in *Grundriss der iran. Philologie*, ii. 83 f. In general, Justi in *Grundriss d. ir. N. SÖDERBLOM.

ARHAT (lit. 'fit,' 'worthy').—In its Pāli form, *arahat*, it is met with in the earliest Buddhist texts, and is used there in two senses, according as it is applied to the Buddhist *arahats*, or to those belonging to other communities. In the latter sense, which is exceedingly rare (*Vinaya*, i. 30–32; *Saṁyutta*, ii. 220), it means a man who has attained to the ideal of that particular community, to what was regarded in it as the fit state for a religious man. This sense is not found in pre-Buddhistic literature; but the usage by the early Buddhists makes it almost certain that the term was employed, before Buddhism arose, among the religious communities then being formed in N.E. India. In the more usual, the Buddhist sense, the technical term *arahat* is applied to those who have reached the end of the Eightfold Path, and are enjoying the fruits of it, the *maggaphalaṭṭhā*. They had perfected themselves in each of the eight stages of the Path—right views, aspirations, speech, conduct, mode of livelihood, effort, mindfulness, and rapture (*Saṁyutta*, iv. 51; *Puggala*, 73). They had conquered the three so-called 'intoxications' (*āsavas*) of sensuality, re-births, and ignorance (*Dīgha*, i. 84). In a list of punning derivations in *Majjhima*, i. 280, the *arahat* is said to be one from whom evil dispositions are far (*ārakā*). The first five disciples attained *arahat*-ship on perceiving that there was no sign of a soul in any one of the five groups of bodily and mental qualities constituting a sentient being (*Vinaya*, i. 14). Rāhula, the Buddha's son, claims to be an *arahat* because he has overcome the 'intoxications,' and will incur no re-birth (*Thera Gāthā*, 296; cf. 336). Every *arahat* has the *sambodhi*, the higher insight, divided into seven parts—self-possession, investigation, energy, calm, joy, concentration, and magnanimity.* There is extant in the Canon a collection of hymns, 264 of which are by men, and 73 by women, who had become *arahats* in the time of the Buddha. Fifteen of these claim also to have

* The question of *sambodhi* has been discussed at length in the present writer's *Dialogues of the Buddha*, Oxford, 1899, pp. 190–192.

gained the three *vijjas*, or 'sorts of knowledge': the knowledge of their own and other people's previous births, and of other people's thoughts. Laymen could become *arahats*. A list of twenty who had done so in the time of the Buddha is given in *Aṅguttara*, iii. 451. Every Buddha was an *arahat*. The word occurs in the standing description applied to each of the seven Buddhas known in the earliest documents (*Dīgha*, ii. 2). The *Jātaka* commentator says that the Buddha made *arahat*-ship the climax of his discourse (*Jātaka*, i. 114, 275, 393, 401). That is so far the case that either *arahat*-ship, under one or other of its numerous epithets, or the details of the mental and moral qualities and experiences associated with it, forms the climax of the great majority of the Dialogues. Thus the first Dialogue in the *Dīgha* deals with the first stage in the Path. The second is started with the question, by a layman, as to what is the use of the religious life. After a lengthy enumeration of various advantages, each nearer than the previous one to *arahat*-ship, the discussion of the question ends with *arahat*-ship. The third is on social rank, and ends with the conclusion that *arahat*-ship is the best. In the fourth the climax is that the *arahat* is the true Brāhman. The fifth discusses the question of sacrifice, with the result that *arahat*-ship is the best sacrifice. The sixth is on the aim of the members of the Buddhist Order, and ends with *arahat*-ship; and so on through the remaining seven Dialogues in that volume. Ten out of thirteen chapters, if we may so call them, lead up to this subject, the other three being concerned with it only incidentally. The proportion in the rest of the *Dīgha* is less, in the *Majjhima* it is probably about the same.

The last discourse of the Buddha to his disciples is summarized in *Dīgha*, ii. 120, as follows:—

'Brethren, ye to whom the truths I have perceived have been made known by me, when you have made yourselves masters of them, practise them, think them over, spread them abroad in order that pure religion may last long for the good and happiness of the great multitudes. . . . Which are these truths? They are these: the four modes of mindfulness, the fourfold struggle against evil, the four footsteps to majesty, the five moral powers, the five organs of spiritual sense, the seven kinds of insight, the noble eightfold path. These are they.'

In *Vinaya*, ii. 240, these seven groups are called the jewels of the *Dhamma-vinaya*, the doctrine and discipline, in whose ocean the *arahats* dwell. The total of the numbers in the seven groups amounts to thirty-seven. These are identified in the commentaries with the *Sambodha-pakkhiyā dhammā*, the qualities which are the 'sides,' that is, constituent parts, of the insight of *arahat*-ship. These are mentioned already in the canonical books (*Aṅguttara*, iii. 70, 71, iv. 351; *Saṁyutta*, v. 227, 239). But it would seem from the discussions on the use of this term by E. Hardy in his Introduction to the *Netti* (p. xxx ff.), and by Mrs. Rhys Davids in her Introduction to the *Vibhaṅga* (p. xiv ff.), that the commentators' interpretation of its meaning is later, and that it originally referred simply to the *sambodhi*, the seven divisions of which, already given above, form only the seventh division of the thirty-seven qualities. The term is so used in the *Vibhaṅga*, p. 249.

It would follow from this that in the later Pāli writers the conception of *arahat* was extended to include all the thirty-seven of these characteristics. So also the *Milinda* distinctly adds to the conception of *arahat*-ship the possession of the four *Paṭisambhidās*.*

As the meaning of the term was extended, so the reverence for the *arahat* increased. In the old texts we are informed of a custom by which, when a *bhikkhu* thought he had attained, he could 'announce his knowledge,' as the phrase ran. The 112th Dialogue in the *Majjhima* gives the six questions which should then be put to the new aspirant. If he answered these correctly, his claim should be admitted. By the time of the commentators this was obsolete. They speak of no *arahats* in their own day; and we hear of none mentioned, in any source, as having lived later than the 3rd cent. of our era. The associations with the word became so high that only the heroes of old were esteemed capable of having attained to it.

The Sanskrit form *arhat* has had a precisely contrary history. First used some centuries after the rise of Buddhism by those Buddhists who then began to write in Sanskrit, its use was confined to those who tended more and more to put the conception of *bodhisattva* in place of that of *arahat*, as the ideal to be aimed at. In the literature of this period *arahat*-ship has ceased to be the climax; it is not even the subject of the discourses put into the mouth of the Buddha. Neither in the *Lalita Vistara* nor in the *Mahāvastu* can the present writer trace the word at all, except when used as an epithet of the Buddha, or of the early disciples. In the *Divyāvadāna* (a collection of stories of different dates, put together probably some time after the Christian era), whenever the legend refers to personages who lived in the Buddha's time (pp. 404, 464) the term *arhat* is used very much in the old sense. So also in the story of Vītāśoka, the brother of Aśoka, we find at pp. 423 f. and 428 f. the term used in a manner that shows it was familiar to those who recorded this particular legend, in the sense of one who had reached emancipation in this life. It is used incidentally, in the midst of the narrative; and throughout the volume attention is directed to the edifying legend rather than to the discussion of this or any other point in Buddhist ethics. The word had survived; the interest in the doctrine had waned.

In the *Saddharma-puṇḍarīka* ('Lotus of the True Law'), *arhat* is used a score of times of a Buddha, and is, in fact, a standing epithet of each of the numerous Buddhas invented in that work. It is also used as an epithet of the early disciples, but with distinct depreciation. Thus at p. 43 of Kern's translation* *arhats* are called conceited if they do not accept the new doctrine. At p. 189 the stage of *arhat* is declared to be a lower stage. At p. 330 ff. the merit of one who hears a single word of the new doctrine is said to be greater than that of one who leads a vast number of men to become *arhats*. There is a similar argument beginning on p. 387. We find, then, in these works that *arhat*-ship is first passed over, or put on one side, and finally is openly attacked.

24. Concluding remarks.

The promulgation of the heresy of Arius, which followed the close of the contest between the Christian Church and the Roman Government by only a few years, may justly be regarded as the culmination of all the various controversies in the early Church concerning the relation of the 'Persons' of the Holy Trinity to one another.

1. The Christian consciousness recognized from the first the supreme necessity of maintaining the absolute Unity of God. According to one of the earliest apologists, Aristides, the worship of the Christians was more purely monotheistic even than that of the Jews (*Apol.* xiv., xv.). But, whilst acknowledging Unity to be the essential of Divinity, Christians of every description perceived the momentous consequences of the Incarnation. Whether Judaic, Pauline, or Gnostic, all who professed to follow Christ saw in Him the one means by which God the Father had been made known to man. 'Thus the Lord's divinity was from the first as fixed an axiom of Christianity as the unity of God' (Gwatkin, *Studies of Arianism*[2], 1900, p. 5). The earliest controversies about our Lord bore on the question of the reality of His sufferings and His humanity; and it was not till the old Docetic heresies had become comparatively insignificant that the nature of the Divinity of the Son and His relation to the Father occupied an important place in Christian speculation.

By the close of the 2nd cent. the conditions under which a theological question could be debated were practically the same as those which have prevailed down to the dawn of modern criticism. It was no longer a question of rival Scriptures, the majority of the books of the NT being already acknowledged as authoritative; the orthodox tradition of the Church had practically prevailed over all opposition; the question as to the recognition of the OT by the Church had been decided. There were already definite methods of exposition, and collections of Scripture proofs for use in controversy with Jews and pagans had been formed from a very early date. None of the facts of the Gospel story was disputed; Christian philosophy identified Jesus Christ with the Divine Logos; faith acknowledged His pre-existence, His miracles, His Resurrection and His Ascension as unquestionable facts. No doubts were raised as to the authorship or authority of those passages in the OT and NT which were accepted as the basis of the Christology of the age. The utterances of the Prophets, the words of David and Solomon in Psalm and Proverb, the doctrine of St. Paul and St. John, were all admitted to be the source and basis of Christian doctrine. It is of great importance to bear in mind the fact that the premises from which orthodox and heretic alike drew their conclusions in the 3rd and 4th centuries were different from what would now be accepted; and it is not always by the arguments used in this controversy that we must form our judgment in regard to the decision finally reached.

The problem was, of course, the reconciliation of the two apparently conflicting beliefs in the Unity of the Godhead and in the real distinction of Personality in the Trinity. The controversy naturally turned first on the meaning of the characteristic Christian doctrine of the Divinity of Jesus Christ. In attempting to maintain the Unity of the Godhead, the Christian teacher ran the risk of sacrificing either the Personality or the Divinity of our Lord. On the one hand, Praxeas, Sabellius, and their followers represented the appearance of our Lord as hardly more than a temporary means whereby God had been dramatically manifested to the world, making the Trinity an economy by which the Divine is revealed in different aspects. But the Christian conscience could not thus allow a personality of the Divine Master without real permanence. 'It is clearly impossible, on any Christian theory of the world and of the Divine economy, that God should exist even for a moment only in a single mode, or that the Incarnation should be only a temporary and transient manifestation' (Bethune-Baker, *Christian Doctrine*, 1903, p. 106). Equally impossible was it for the Church to assent to a practical reversion to the old Ebionite doctrine that Jesus was simply an ordinary human being deified by reason of His eminent virtue. Theodotus, Paul of Samosata, and others who held this view were not unnaturally ranked among the heretics. But the question was too difficult to be settled by the rejection of these alternatives, and it was further complicated by misunderstandings as to the significance of the terms employed to expound the mystery of the Trinity, as the correspondence between Dionysius of Rome and his namesake Dionysius of Alexandria abundantly testifies (Feltoe, *Letters and other remains of Dionysius of Alexandria*, 1904). These interesting letters reveal two opposite tendencies—that of the West, which so emphasized the eternal unity as to obscure the distinction of the Persons in the Trinity, and the teaching of the Easterns, who, under the influence of Origen, insisted on the theory that subordination explained the existence of the threefold Personality. Dread of the Sabellian Christology was especially potent in influencing the course of theological speculation throughout the East.

At the beginning of the 4th cent. the most famous Christian scholar was Lucian, who, after the deposition of Paul of Samosata, founded a theological academy at Antioch. He seems to have been looked upon at least with suspicion by three successive bishops—Domnus, Timæus, and Cyril; but his exemplary conduct, ascetic practices, and, above all, the fact that he was one of the last martyrs in the Diocletian persecution, caused him to be regarded with particular reverence by his disciples, who felt especially bound to one another by the memory of their common master. The school of Lucian numbered among its adherents the bishops Eusebius of Nicomedia, Menophantus of Ephesus, Theognis of Nicæa, Maris of Chalcedon, Leontius of Antioch, and Athanasius of Anazarbus, the sophist Asterius, and the presbyter Arius (Harnack, *Hist. of Dogma*, vol. iv. p. 3, Eng. tr.).

It is a matter of considerable doubt whether Arianism is to be traced to Antioch or to Alexandria, and also how far it is due to the teaching of Origen. Newman is of opinion that Arianism is the outcome of the grammatical literalism of Antioch as opposed to the more spiritual method of interpreting Scripture current in Alexandria (*Arians*, ch. i. sec. i.). Professor Gwatkin, on the other hand, points out (*Studies of Arianism*[2], p. 19) that though Antioch was undoubtedly Arian in the later days of the controversy, when Alexandria, owing to the influence of Athanasius, had become orthodox, it was not so at the beginning. The language of Arianism was borrowed from Origen, and especially from Dionysius, who speaks of the Second Person as ποίημα τοῦ θεοῦ, ξένον κατ' οὐσίαν, and says οὐκ ἦν πρὶν γένηται—phrases which were adopted into the terminology of Arianism. Arius, moreover, had a very strong party in Alexandria when he promulgated his heresy. Harnack (*op. cit.* vol. iv. p. 3) considers that Lucian continued the work of Paul of Samosata at Antioch, and gives credit to the statement of Alexander (Theodoret, i. 4), which Gwatkin rejects, that Lucian remained a long time outside the Church of Antioch. Lucian is called 'the Arius before Arius.' The high honour, however, in which his memory was held, as the Synod of Antioch in A.D. 341 testified by accepting one of its confessions of faith as 'the creed of Lucian the martyr' (Sozomen, iii. 5), makes it difficult to believe that he was ever considered as a teacher of heresy. The question of Origen's responsibility for Arianism is an extremely vexed one, and is admirably discussed by Bishop Robertson (*Prolegomena to Athanasius*, p. xxv f.). As Athanasius showed in his *de Sententia Dionysii*, the language of two theologians may be almost identical, whilst the spirit in which they employ it is quite different.

2. The years A.D. 318 and 319 found the Church of Alexandria in great confusion, distracted by the obscure Meletian schism and by a controversy between the bishop Alexander and the presbyter Arius (Ἄρειος) of the district of Baucalis. Alexander, in a charge to his clergy, impressed upon them the unity in the Trinity of the Godhead. According to the historian Socrates (i. 5), Alexander in this discourse somewhat exceeded the limits of discretion (*φιλοτιμότερον . . . ἐθεολόγει*) in insisting on what is, after all, a single aspect of the truth in the mystery of the Trinity. Arius forthwith accused his bishop of teaching Sabellianism, and proceeded to formulate his own scheme of doctrine.

Alexander's doctrine is summed up in the following words in the letter of Arius to Eusebius of Nicomedia: '*Ἀεὶ θεός, ἀεὶ υἱός, ἅμα πατὴρ ἅμα υἱός, συνυπάρχει ὁ υἱὸς ἀγεννήτως τῷ θεῷ, ἀειγενὴς, ἀγεννητογενὴς, οὔτ' ἐπινοίᾳ οὔτ' ἀτόμῳ τινὶ προάγει ὁ θεὸς τοῦ υἱοῦ, ἀεὶ θεός, ἀεὶ υἱός, ἐξ αὐτοῦ τοῦ θεοῦ ὁ υἱός* (Arius' letter to Eusebius *ap.* Theodoret, *HE* i. 4). Arius, considering that this definition detracted from the unique majesty of the Father and introduced confusion, maintained the complete distinction between the Father and the Son, and the subordination of the latter. Harnack (*op. cit.* vol. iv. p. 15) enumerates eight points of the view advanced by Arius—

(1) The characteristic of the One and Only God is solitude and eternity. He can put nothing forth from His own essence. He was not always Father, but only after He begat (*i.e.* created) the Son.

(2) Wisdom and the Word (λόγος) dwell within this God, but they are powers, not persons.

(3) To create the universe, God brought into being an independent substance (*οὐσία* or *ὑπόστασις*) as the instrument by which all things were created. This Being is termed, in Scripture, Wisdom, Son, Image, Word, etc.

(4) As regards His substance, the Son is a separate being from the Father, different from Him in substance and nature. Like all rational creatures, the Son is endowed with free will, and consequently capable of change.

(5) The Son is not truly God, but is only the so-called Word and Wisdom. He has no absolute, but only a relative, knowledge of the Father.

(6) The Son is not, however, a creature like other creatures. He is the perfect creature (*κτίσμα τέλειον*), and has become God, so that we may term Him 'the only-begotten God,' etc.

(7) Christ took a real body, but it was a *σῶμα ἄψυχον*, the Logos taking the place of the soul. From the Gospel record we see that this Logos is not an absolutely perfect being, but is capable of suffering.

(8) Amongst other created beings the Holy Ghost is to be placed beside the Son as a second, independent substance. According to Arius, apparently, the Spirit is the creation of the Son.

Such, then, was Arianism—a theory of the mutual relations of the Persons in the Trinity based nominally on the words of Scripture, but arrived at really by the methods of the heathen philosophers. It led either to polytheism by allowing the existence of the Logos as a secondary God, or to Judaic Unitarianism by denying His proper Divinity.

The Arian system never really commended itself to the general conscience of Christians, and, as was usually the case in the early days of Christianity, the heresy found its support among the clergy, whilst the less instructed laity remained orthodox. Its tendencies were essentially pagan. As Harnack points out, Arianism was a new doctrine in the Church, and was really Hellenism tempered by the constant use of Holy Scripture (*op. cit.* iv. p. 41). From a very early time the conception of the God of the OT and the Heavenly Father of the NT had tended to give ground before the Hellenic idea of an abstract unknowable Deity. Clement of Alexandria had paved the way for Arianism by his doctrine of God: 'Stripping from concrete existence all physical attributes, taking away from it in the next place the three dimensions of space, we arrive at the conception of a point having position.' 'There is yet a further step,' says Bigg, 'for perfect simplicity has not yet been gained. Reject the idea of position, and we have reached the last attainable abstraction, the pure Monad.' This, as he observes, is essentially a heathen conception, and can be developed consistently only on heathen principles. Clement has gone astray from the first by his mode of approaching the subject. He has propounded as his question, not What is Spirit? or What is Good? but What is the simplest thing conceivable? This he assumes to be the cause of all that exists. Nothing that is part of the effect can belong to the cause. . . . The result is a chimera, a cause divided by an impassable gulf from all its effects (*Christian Platonists of Alexandria*, pp. 63–65). This is really the Arian conception of the Father, the unknown and unknowable Cause, of whom the Son is a creature as incapable of knowing or revealing Him as any other creature. Arius deliberately severs all possible connexion between the created and the uncreated, the human and the Divine. Christ is no mediator, no saviour. As Dr. Harnack forcibly remarks (*op. cit.* iv. p. 42), Arius and his friends are nowhere in their theology concerned with communion with God. Rightly, therefore, does Schultz (*Gottheit Christi*, p. 65) say that 'the Arian Christology is inwardly the most unstable, and dogmatically the most worthless, of all the Christologies to be met with in the history of dogma.' But if unsatisfactory in its conclusions, and leading to the ultimate subversion of Christianity, Arianism was most difficult to refute, owing to the confusion of thought prevalent at the time of its appearance.

In the controversy which ensued, Alexander seems to have acted with some moderation, and even to have allowed his hesitation to proceed to such extremes as to be made an excuse for a schism. Arius had no scruples in forming a party of his own. He enlisted the support of two bishops, Secundus of Ptolemais in the Pentapolis, and Theonas of Marmarica, and also that of several presbyters and virgins. To secure popular favour, he put his opinions into doggerel verse, adopting the metre of the licentious poet Sotades, in order that the sailors and dock-labourers of Alexandria might sing at their work of 'How the Father was not always Father,' etc. His *Thalia*, as this strange collection of songs was called, popularized his system among the formidable proletariat of the capital of Egypt. But Arius' strongest support was his 'fellow-Lucianist,' Eusebius of Nicomedia, the most influential prelate in the East. In A.D. 321, Alexander held a Council at Alexandria; Arius was excommunicated and left the city (see the *Depositio Arii*, included in the Benedictine Edition of *Athanasius*, and claimed as his by Newman. It is translated in the *Nicene and post Nicene Fathers*, 'Athanasius').

3. Two years later, Constantine defeated Licinius (A.D. 323) and became sole master of the Roman world. Affairs in Alexandria had become very serious, and indeed the whole Eastern Church was in the utmost confusion. The question as to the keeping of Easter distracted the Christians as a matter of practice as seriously as Arianism was doing as one of doctrine. Accordingly the Emperor sent his episcopal adviser Hosius, bishop of Cordova in Spain, to Alexandria with a very remarkable letter to Alexander and Arius, begging them to lay aside their logomachies and co-operate with him in restoring peace to the distracted world. But an Imperial letter, 'though marvellous and full of wisdom,' as Socrates describes it, could not allay so embittered a strife, and Constantine decided to submit all matters in dispute to a Council of the whole Church, to assemble in the year A.D. 325 at Nicæa, on Lake Ascanius, in the north of Asia Minor. The first act of the Council as regards Arius was with practical unanimity to pronounce his doctrine heretical. That the Son had been created out of things that were not (*ἐξ οὐκ ὄντων*), that He was of another essence than the Father, that, even before time was, the Father was without the Logos, were on all sides regarded as blasphemous assertions. It was not till the question arose as to how the error should be refuted that there

was any serious difference of opinion. The Fathers had met to affirm the ancient faith of the Church against novelty; but when they wished to express what they meant in words, they found that none to which they had been hitherto accustomed were capable of escaping the evasions of such masters as the Arians in the art of making Scripture phrases assume a meaning contrary to the teaching of Scripture. In consequence of this, the Council, probably at the suggestion of Hosius, was induced to adopt the expression ἐκ τῆς οὐσίας τοῦ Πατρός and the word ὁμοούσιος, neither of which is to be found in the Bible.

ὁμοουσιος (*ejusdem substantiæ*) was a word which presented no difficulty to the Latins who followed the teaching of Tertullian, *adv. Praxeam*, and Novatian, *de Trinitate*. Dionysius of Rome in his correspondence with his namesake of Alexandria had protested against any undue separation (*μεμερισμέναι ὑποστάσεις*) of the Father and the Son, thus virtually insisting on the ὁμοούσιον. Tertullian had also, in his *de Anima* (c. 32), carefully distinguished *substantia* (οὐσία) from *natura*. The Latins and the anti-Origenists at the Council desired to press the unity rather than the equality of the Son with the Father; and to them the word was eminently acceptable. But the majority of the Greek-speaking bishops had a strong objection to both expressions, ἐκ τῆς οὐσίας and ὁμοούσιος, on the following grounds: (1) They had no Scripture warranty. (2) The Council against Paul of Samosata (A.D. 269) had condemned the use of ὁμοούσιος. (3) The idea of an οὐσία common to the Trinity might countenance Sabellianism. (4) The words might either imply an οὐσία prior to the Father and the Son, or countenance materialism (οὐσία being conceived as an equivalent to εἶδος or ὕλη) (Bethune-Baker, *Christian Doctrine*, p. 171 n.).

On this rock the Council nearly split; and Eusebius of Cæsarea, the trusted adviser of the Emperor, and by far the most learned man of his age, was especially mistrustful. Ultimately, however, Eusebius and the Origenist party accepted a creed containing the expressions in dispute, and Arianism was explicitly condemned.

Eusebius first offered the Council the baptismal creed of his own Church, perhaps a little amplified. In this the Lord Jesus Christ was declared to be the λόγος and God from God (θεὸς ἐκ θεοῦ), and also firstborn of all creation (*πρωτότοκος πάσης κτίσεως*, Col 1[15]) and only-begotten Son (*υἱὸς μονογενής*). Constantine himself, prompted no doubt by Hosius, suggested the ὁμοούσιον. The creed differs from our 'Nicene Creed' in its definition of the doctrine of the Son in several important points (see Hort, *Two Dissertations*, p. 61; Bethune-Baker, *Chr. Doct.* p. 168). After a bare profession of belief in the Holy Spirit, the creed concludes with anathemas of all the distinctive teachings of Arianism, (1) that there was a time when the Son was not, (2) that He was not before He was begotten, (3) that He came into being out of nothing, (4) that He is of a different essence (ὑπόστασις) or being (οὐσία) from the Father, or (5) that He is created or capable of change or alteration. It is generally agreed that at Nicæa οὐσία and ὑπόστασις, which afterwards were carefully distinguished, were practically synonymous.

4. Into the intrigues which culminated with the banishment of Athanasius, who became bishop of Alexandria on 8th June, 328, it is needless to enter, it being sufficient for us to inquire into the causes which prevented the Creed of Nicæa from being the immediate conclusion of the controversy. Few of the bishops, whilst abhorring the heresy of Arius, understood the exact merits of the question. They feared the error of Sabellius, and to this the *Homoousion* seemed to have committed them. Moreover, with the natural conservatism of men pledged to hold fast to the faith 'once delivered to the saints,' they distrusted words unsupported either by Scripture or by tradition. The Emperor himself, who to the end of his life believed himself faithful to the Creed of Nicæa, when he saw that its promulgation had failed to give peace to the Church, was less enthusiastic in its favour, and showed so much readiness to welcome back its opponents that he received Eusebius of Nicomedia not long after the Council, and, but for the sudden death of the heresiarch, Arius would, at his command, have been reconciled to the Church.

How new the phrases introduced into the Creed were as formulæ of belief is shown by Athanasius' defence of them in his *de Decretis* (sec. 25 ff.). He refers to similar language of Theognostus, Dionysius of Rome, and Dionysius of Alexandria. 'This anxious appeal to theological writers,' says Hort (*Two Dissertations*, p. 55), 'sets in strong relief the absence of authority derived from public creeds.' Eusebius's objections and his reasons for ultimately accepting the word ὁμοούσιος are set forth in his letter to his Church at Cæsarea. In this letter he discusses three expressions in the Creed, *ἐκ τῆς οὐσίας τοῦ πατρός, γεννηθέντα οὐ ποιηθέντα*, and ὁμοούσιος. He accepted the first on being assured that it meant that the Son was of the Father, but was not a part of Him. 'Begotten, not made,' passed, because 'made' was an appellative common to the other creatures which came to be through the Son, though the Son bore no likeness to them. As for ὁμοούσιος, Eusebius received it as implying 'that the Son bears no resemblance to the originated creatures, but that to His Father alone who begat Him He is in every way assimilated.' It is easy enough to see that Eusebius did not assent to the definitions of the Creed *ex animo*; and he is still more ready to explain away the anathemas. The letter is preserved in Athanasius, *de Decretis*, as an appendix, secs. 9, 10, being omitted by Socrates, *HE* i. 8.

5. On the death of Constantine (A.D. 337), his Eastern dominions passed to his son Constantius, who encouraged his bishops to draw up a creed to supersede that of Nicæa, to which all the Asiatic and Syrian Churches seemed opposed. The result of their labours is apparent in the five creeds of Antioch, which exhibit the tendencies of the different factions, whose only point of union seems to have been antagonism to Athanasius and the Nicene formula. These confessions of faith, together with the creeds drawn up at Sirmium and elsewhere, served only to show that there was no possible compromise between avowed Arianism and the *Homoousian* doctrine. The orthodox opponents of the language of the Creed of Nicæa, whom Professor Gwatkin terms 'the Conservatives'—men like Eusebius of Cæsarea, whom dread of Sabellianism and hatred of innovation drove into opposition to Athanasius—were being made use of by those who were at heart Arians to force an Arianizing creed upon the unwilling Church. The weak and unstable Constantius was always in the hands of those whom he believed capable of pacifying the Church by a new creed. He was in reality aiming at a comprehensive State-religion acceptable to all parties, and thought that a sort of modified Arianism would supply this want in the provinces over which he at this time bore rule. In A.D. 339, Athanasius was driven out of Alexandria, and in A.D. 341 the formal reaction against the Nicene doctrine began with the famous council assembled for the dedication of the Golden Church at Antioch.

Athanasius and Marcellus of Ancyra went to Rome to lay their cause before Julius, to whom the bishops assembled at Antioch wrote in A.D. 339. The Pope's answer is described by Professor Gwatkin (*Arianism*[2], p. 117) as 'one of the ablest documents of the entire controversy' (Athanasius, *Apol. contra Ar.* secs. 21–35; Socr. *HE* ii. 17; Soz. iii. 10).

In all probability, Dianius, bishop of Cæsarea in Cappadocia, presided at this synod, and there were also present Eusebius of Nicomedia, now bishop of Constantinople, who gave the name by which the opponents of Athanasius were at this time known, and Acacius, the successor of Eusebius Pamphilus in the see of Cæsarea.

The opponents of Athanasius were called *οἱ περὶ Εὐσέβιον*, or the *Eusebians*, as the words have been somewhat inexactly rendered. The term is used in two senses: (1) literally denoting the personal entourage of Eusebius, i.e. the court party, crypto-Arians all of them; (2) more generally the majority of the Asiatic bishops who were discontented with the Nicene Council. These latter ultimately became the Semi-Arian party.

Four creeds were put forward by this Council—all attempts to dispense with the objectionable word ὁμοούσιον. The most celebrated was the so-called second Creed of Antioch, to which the name of Lucian the martyr was attached. In this the Persons of the Trinity were said to be One by reason of the harmony existing between them—*τῇ μὲν ὑποστάσει τρία, τῇ δὲ συμφωνίᾳ ἕν*.

The honour in which the Council of Antioch was held in after days—St. Hilary of Poitiers speaks of it with great respect (*de Syn.* c. 32), and the canons were quoted by the popes themselves as authoritative (see Hefele, *Councils*, sec. 56)—is sufficient proof that the Church did not regard the bishops there as heretics. Yet they undoubtedly, by their endeavours to find some more acceptable substitute for the creed of Nicæa, played into the hands of the Arian party. The four creeds of Antioch were: (1) The first creed, which begins with a repudiation of

Arius: 'We have never become followers of Arius, for how shall we who are bishops follow a presbyter?' This creed was suspiciously like the confession which Arius himself had made before his restoration was ordered by Constantine. (2) The second creed, which became the watchword of the anti-Athanasian party. It declared the Son to be the unchangeable image (*ἀπαράλλακτον εἰκόνα*) of the Godhead, essence (*οὐσία*), counsel, power, and glory of the Father. It laid special stress on the reality of the Fatherhood and Sonship and on the office of the Holy Spirit—*τῶν ὀνομάτων οὐδὲ ἁπλῶς οὐδὲ ἀργῶς κειμένων ἀλλὰ σημαινόντων ἀκριβῶς τὴν οἰκείαν ἑκάστου τῶν ὀνομαζομένων ὑπόστασιν καὶ τάξιν καὶ δόξαν.* The anathemas were worded in such a way that an Arian could easily subscribe them. (3) A profession of faith by Theophronius of Tyana. At the conclusion the doctrines of Marcellus of Ancyra, as representing the Sabellianizing tendency of the Nicenes, as well as those of Sabellius and Paul of Samosata, are anathematized. (4) A decidedly Arian creed drawn up a few months later than the actual Council by certain bishops who met *δήθεν περὶ πίστεως*, as Athanasius bitterly remarks (*de Synodis*, sec. 25). These creeds are to be found in Athanasius' *de Syn.* secs. 22–25. See Hahn, *Bibliothek der Symbole*, pp. 153–156.

By A.D. 341 the parties at strife can be described almost in geographical terms. The Western Church, under the guidance of Rome, had ranged itself under the banner of Nicæa, whilst the Orientals rallied to the cry of 'No un-Scriptural terms in the Creed.' The leaders of the Arians, too prudent to show their hand openly, were content to allow the 'conservative' opponents of Athanasius to prepare the ground for them. As long as Athanasius was in exile, the Nicene theology had no foothold in the East. Circumstances, however, were preparing for a temporary triumph of the Athanasian party. After his death and the massacre of the collateral members of his family, Constantine's dominions were divided between his three sons—Constantine II. at Trèves, Constans in Italy, and Constantius in the East. The two former supported Athanasius.

6. When Constantine II. was killed in A.D. 340, his dominions seem to have passed under the sway of Constans, who was thus ruler over the greater part of the Roman world. As he supported Athanasius, Julius, and the party of the Nicene council, the *ὁμοούσιον* was upheld by the more powerful of the two remaining Emperors. The result of this state of affairs was that Constans, the patron of Athanasius, was able to insist in A.D. 343 on a joint meeting of the Eastern and Western bishops to re-try the case. The place selected was Sardica, the modern Sophia in Bulgaria, near the frontier of the dominions of Constans and Constantius; but when the bishops arrived, it was evident that no mutual understanding was possible. The Westerns insisted upon Athanasius and Marcellus of Ancyra taking their seats in the Council, and confirmed the Creed of Nicæa. The Orientals withdrew to Philippopolis, where they subscribed the Arianizing fourth creed of Antioch, and specially condemned Marcellus of Ancyra. Envoys were sent from Constans to his brother at Antioch, and a truly diabolical plot was hatched by Stephen the bishop to discredit them. The Eastern bishops had enough sense of rectitude to depose Stephen at a Council held at Antioch in A.D. 344, where a creed was drawn up called from its prolixity the Macrostich (*μακρόστιχος ἔκθεσις*), or fifth creed of Antioch. In it Marcellus and his disciple Photinus were expressly condemned. Constantius now seemed disgusted with the failure of the anti-Nicene party, and in the autumn of 346 Athanasius was allowed to return to Alexandria.

The Council of Sardica revealed the fundamental difference between the Western and Eastern Churches at this time. It is noticeable that up to this time the Eusebians had not directly attacked the Creed of Nicæa or even the doctrine of Athanasius (Harnack, *op. cit.* iv. 64), the accusations against the bishop being purely personal. The object of the Eusebians was to get the *Homoousion* set aside and to substitute a less controversial creed for that of Nicæa, and also to attack Athanasius through his friend Marcellus of Ancyra (Harnack, p. 67; see also Zahn's *Marcellus von Ancyra* and Eusebius of Cæsarea's two books against him). Hosius took the lead at Sardica, and, according to Athanasius (*ad Antiochenos*, 5), a fruitless attempt was made to supplement the Creed of Nicæa. A creed, however, was drawn up by Hosius and Protogenes of Sardica, which though it did not emanate from the Council (Hefele, § 63), expressed the theological teaching of the West. It is found in Theodoret, ii. 8, and a Latin translation has been discovered. It declares there is but one substance in the Trinity (*μίαν ὑπόστασιν* [Lat. *substantiam*], *ἣν αὐτοὶ οἱ αἱρετικοὶ οὐσίαν προσαγορεύουσιν*), and its doctrine of the Son is such that we can well understand how the Westerns refused to condemn Marcellus (Harnack, *op cit.* iv. 60). Athanasius, when he was asked his views on the orthodoxy of Marcellus by St. Epiphanius, would only smile, showing that he had an equally poor opinion of his friend as a theologian and of his inquirer as a man of sense (Epiph. 72. 11). The tendencies of the West inclined to Sabellianism, and those of the East to Arianism, and before orthodoxy could be satisfied each had to be checked. The infamous plot of Stephen of Antioch against the two Western delegates Vincentius of Capua and Euphrates of Cologne is related by Athanasius (*Hist. Arian.* c. 20).

7. During the next ten years (A.D. 346–356) the two parties were outwardly at peace, but yet busily arming for the conflict. At Alexandria, Athanasius, who had been welcomed back with surprising enthusiasm, maintained his influence undiminished, and set a seal upon the loyalty of his church to the Creed of Nicæa. The monastic movement was in all the vigour of its first enthusiasm, and the ascetics, recognizing the earnestness of the bishop, became his firmest supporters. At Antioch, Leontius, whose early indiscretion was similar to that of Origen (*Hist. Arian.* 28), though an Arian at heart, had managed to maintain the peace by his cautious policy. This wise old prelate, however, knew well that the tranquillity his discretion had secured was only temporary, and in allusion to his death he would pathetically touch his grey hairs and say: 'When this snow melts, there will be much mud.' At Rome, Photinus of Sirmium, whose indiscretion outran even that of Marcellus, had been sacrificed for his Sabellian teaching; but the death of the wise and politic pope Julius in A.D. 352 was a serious loss to the cause of orthodoxy. His successor Liberius lacked both his firmness and his wisdom. Political events were also precipitating the crisis. Athanasius' faithful friend, the Emperor Constans, was killed by the usurper Magnentius. From the end of A.D. 350, when he was at or near Sardica on Dec. 25, to the close of A.D. 359, Constantius spent his time in his Western dominions, being most frequently to be found at Sirmium or Milan (Gwatkin, *Studies of Arianism*[2], App. ii. 'Movements of the Eastern Emperors'). Sirmium, not Antioch, was destined henceforward to be the scene of creed-making.

8. Many of the original disputants in the controversy had already passed away, and a new generation had arisen. Parties were becoming more and more defined. As their system was developed, stern logic forced the Arians to become more Arian than their founder. Some of the old conservatives were drifting towards Arianism, whilst others shrank back in dismay at its encroachments. The general tendency favoured the obliteration of the old party landmarks and the rise of new factions. The place of Eusebius of Nicomedia as Imperial adviser had been taken by Valens, bishop of Mursa in Pannonia, the province bordering on Illyricum, to which Arius had been exiled after the Council of Nicæa. Valens, with his friend Ursacius, bishop of Singidunum, was a most uncompromising Arian, and his policy was not, like the old Eusebians, to fight Athanasius by means of conservative prejudice, but to force an Arian creed on the Church in place of that of Nicæa (Robertson, *Athanasius*, p. liv). Valens had won great influence over Constantius, who believed that the bishop had received from an angel the news of the victory of Mursa (A.D. 351), and from this time an organized campaign was conducted against Athanasius, which culminated in the *coup d'état* at Alexandria, when the bishop was expelled by military violence (A.D. 356). Valens' ablest assistants in the East were Acacius,

the successor of Eusebius Pamphilus in the see of Cæsarea, and Eudoxius, bishop of Antioch and Constantinople successively. In A.D. 357 there appeared from Sirmium the first really Arian creed, called by Hilary of Poitiers 'the blasphemy of Sirmium.' Other formulæ of belief were promulgated from the same place, notably the 'dated creed' in which the consuls of the year are mentioned, a fact of which Athanasius is not slow to take advantage in his *de Synodis*. The Arians, supported by the Emperor, did not hesitate to push their claims; and finally, at the great assemblies of Westerns at Ariminum and Orientals at Seleucia, an Arian creed was accepted as the official doctrine of the Empire. Thus in A.D. 359 it seemed as though the Nicene profession of faith was repealed and Arianism was triumphant.

The creeds of Sirmium are as follows. The 1st was drawn up against Photinus in A.D. 347. The 2nd (A.D. 351)—but commonly known as the 1st—is identical with the fourth creed of Antioch (ὅθεν περὶ πίστεως). The 3rd (A.D. 357), called the 'blasphemy,' (*a*) distinctly denies the true Divinity of the Son; (*b*) forbids the use of the terms οὐσία, ὁμοούσιον, ὁμοιούσιον as un-Scriptural, maintaining that it is impossible to declare the Nativity of the Son, because it is written *generationem eius quis enarrabit*; (*c*) in opposition to the teaching of the creed proposed but not accepted at Sardica (see above), makes the Divine nature of the Son as contrasted with that of the Father passible (see Bethune-Baker, *Introd.* p. 181 n.). This extreme teaching startled the bishops of Asia Minor, and under the presidency of Basil of Ancyra a synod was held at that place in A.D. 358. At this synod the extreme Arians, Eudoxius, Aëtius, and others, were excommunicated with anathemas condemning all who will not acknowledge the complete likeness (ὁμοιότης) of the Son to the Father, as well as the terms ὁμοούσιον and ταὐτοούσιον (Anathema xix. [Hahn, p. 201]). The result of the stand made by Basil and his friends was an attempt to compromise, *i.e.* to allow that the Son was *like* the Father. The 4th, or 'dated creed' (A.D. 359), composed by Mark, bishop of Arethusa, declared the Son to be ὅμοιον τῷ γεννήσαντι αὐτὸν πατρί with the addition 'according to the Scriptures,' which allowed the Arians to put their own sense on the words. It was this *Homœan* Arianism that was accepted under Imperial pressure at Ariminum Seleucia.

9. Already, however, a reaction had begun. In the first place, the Arianizers were divided among themselves. Logical and consistent Arians, like Aëtius and his disciple Eunomius of Cyzicus, were prepared to push the teaching of Arius to its ultimate conclusion. If the Son was not God in the same sense as the Father, He could not be like Him, for there can be nothing like God. Their argument, different as was the inference drawn from it, was the same as that used by Athanasius himself. 'Like is not predicated of essence, but of habits and qualities; for in the case of essences we speak not of likeness, but of identity' (*de Synodis*, 53). From their denial of the likeness of the Son to the Father this class of Arians were called *Anomœans*. But the majority of Arians were men of compromise and evasion, having no other idea than to insinuate their opinions under the guise of apparently innocuous phraseology. These, led by the dexterous Acacius of Cæsarea, allowed that the Son might be acknowledged to be *like* the Father, and were consequently called *Homœans*. Lastly, there was the party headed by Basil of Ancyra, the successors of those conservatives who had opposed Athanasius. These men, who constituted the strength of the episcopate of Asia Minor, were as hostile to Arianism as Athanasius himself, and were ready to accept the term *οὐσία* in their definition of the Godhead. Fearing that Sabellianism underlay the use of *ὁμοούσιον*, they rejected the Nicene test word, but were ready to admit that our Lord was like in substance (*ὁμοιούσιος*) to the Father. This formidable combination was known as the party of the Semi-Arians (*q.v.*). At heart most of them were orthodox, and this the two great champions of the Nicene faith, Athanasius and Hilary, bishop of Poitiers (who had been exiled by Constantius to Asia Minor), had the wisdom to perceive. After their triumph at Seleucia and Ariminum, the Arians and Homœans had the folly to attempt to crush these Semi-Arians at the Synod of Constantinople (A.D. 360), and thereby drove them in self-defence into the arms of the Nicenes. It needed only the rise of the great Cappadocian Fathers, Basil of Neo-Cæsarea, Gregory of Nyssa, and Gregory of Nazianzus, to complete the triumph of the Nicene Christology.

The Semi-Arians and the Cappadocian Fathers are subjects of separate treatment in this work; and it is unnecessary to do more here than allude to the important dispute as to the final settlement of the Arian controversy. The question at issue is whether the *Homoousion* was ultimately accepted in the sense of *Homoiousion*. This Dr. Harnack maintains to have been the case. His contention is very ably disputed by Mr. Bethune-Baker in *The Cambridge Texts and Studies* ('The meaning of Homoousios'). Attention should be paid to Professor Gwatkin's most instructive survey of the importance of Asia Minor to the Eastern Empire, which 'as long as that was unsubdued, remained upon the whole the strongest power on earth' (*Studies of Arianism*[2], p. 94). With true historic insight Gwatkin points out that in the Arian controversy Asia really played the part of the deciding factor. Disliking the *Homoousion* because it was an innovation, the steady conservatism of Asia accepted it when it was proved to be the only means of averting worse evils. 'Even the later Cappadocian orthodoxy,' he adds, 'rested on a conservative rather than a Nicene basis.' One of the chief representatives of Semi-Arianism is Cyril of Jerusalem (see Hort, *Two Dissertations*, p. 84).

10. The Arian party in A.D. 360 'was in a position too plainly artificial to be permanent' (Bright, *DCB* i. 197[a]), and the death of Constantius on 3rd Nov., 361, revealed its inherent weakness. Rome and the West at once returned to adherence to the Nicene faith, as though the Council of Ariminum had never assembled. Just before the Emperor's death, Meletius was, at the instigation of Acacius, elected bishop of Antioch, and his dramatic declaration of his faith at his installation showed the strength of popular feeling against Homœan Arianism. Constantius demanded that the new bishop should preach on the text *κύριος ἔκτισέ με*, 'The Lord created me,' *i.e.* wisdom; for so Pr 8[22] is translated by the LXX, and on this the Arians based their doctrine that the Son was a *κτίσμα*. To the delight of the people, always at this time more orthodox than the bishops, Meletius declared that the word *ἔκτισε* was a mistranslation of the Hebrew קנה, 'possessed,' and gave a decidedly Nicene interpretation to the text (the sermon is preserved by Epiph. *Hær.* 73. 29–33). 'This bold confession,' says Professor Gwatkin, 'proved to be the first effective blow at the Homœan supremacy' (*op. cit.* p. 187 f.). But perhaps the most crucial point was the return of Athanasius to Alexandria under Julian, when he held a small but very important Council at Alexandria, the great work of which was to clear up the misunderstanding due to the employment of such words as *οὐσία* and *ὑπόστασις*. It was agreed that there might be a fundamental agreement between those who employed these terms in different senses, but that the language of the Nicene Council was the safest which could be made use of. This paved the way for a reconciliation between the conservatives, with their dread of Sabellianism, and the Athanasian and Western Christians, who clung to the importance of the Unity of the Divine essence. As Bethune-Baker says, 'By the 4th cent. it was becoming clear that the only solution of the problem was to be found in a distinction inside the divine unity . . . it was necessary to revise the idea of divine personality and to acknowledge not three individuals but three eternal aspects of the Divine' (*Chr. Doct.* p. 157 n.). This was done when the distinction in meaning between *οὐσία* and *ὑπόστασις* was agreed upon, and the ambiguity of the Latin and Greek terminology removed.

In the early days of the controversy the terms *οὐσία* and *ὑπόστασις* were used interchangeably. The confusion caused great misunderstanding, because, whilst one part of Christendom spoke of *τρεῖς ὑποστάσεις* in the Trinity, the other acknowledged only one. By distinguishing between *οὐσία* and *ὑπόστασις*, and explaining the mystery of the Trinity as *μία οὐσία τρεῖς ὑποστάσεις*, the ambiguity was removed. This was the work

of the Cappadocian Fathers, but it really began with the Council of Alexandria. In Latin legal language *substantia* means property, and *persona* a being with legal rights, a 'party' in an action at law. Thus a *persona* might own several *substantiæ*, and a *substantia* might belong to more than one *persona*. Tertullian uses *substantia* in the sense of essence, or 'substance,' of which Father, Son, and Holy Ghost partake; but he seems to hesitate to use *persona* if he can avoid it. He takes the word from the Old Latin Bible *quotidie oblectabar in persona eius* (Pr 8^{30}), and *Spiritus personæ eius Christus dominus* (see Bethune-Baker, *op. cit.* pp. 139, 235, 'Meaning of Homoousios,' p. 21; Bigg, *op. cit.* pp. 163, 164; Harnack, *op. cit.* iv. 83; Gwatkin, p. 209 ff.). The Council of Alexandria forecasts the future development of doctrine by implicitly condemning Apollinarism (*q.v.*) and the denial of the Divinity of the Holy Ghost which subsequently became characteristic of Semi-Arianism.

11. But though Arianism may justly be described as collapsing with the death of Constantius, it remained, in its *Homœan* form, the official religion of the eastern half of the Roman Empire down to A.D. 378. On the death of Jovian (A.D. 364), Valentinian was chosen as emperor by the army on Feb. 26, and associated his brother Valens with him on the 29th of March, taking upon himself the government of the Western provinces, and assigning the Eastern to Valens. The stern but just Valentinian pursued a rigidly impartial policy in matters of religion, and though Milan, the governmental capital of Italy, remained under an Arian bishop, orthodoxy generally prevailed in Italy, Gaul, Spain, and Africa. Valens, on the other hand, supported the Homœans, thereby forcing the Semi-Arian party to open negotiations with Liberius, bishop of Rome, and his successor Damasus. The Homœan supremacy lasted down to the defeat and death of Valens at Adrianople (Aug. 9th, 378). Valentinian had died three years earlier, and his son Gratian had the magnanimity to appoint Theodosius, son of a distinguished official who had been put to death under Valentinian and Valens, as his colleague in the Eastern provinces. Theodosius, an orthodox Spaniard, cleared the Roman territory of victorious Goths, and, being afflicted with sickness in the year following his accession (A.D. 380), accepted baptism at the hands of Ascolius, bishop of Thessalonica. Theodosius took the faith of Rome and Alexandria as the norm of Christian belief in a law commanding all to follow the faith 'committed by the Apostle Peter to the Romans, and now professed by Damasus of Rome and Peter of Alexandria' (Cod. Theod. xvi. 1, 2). He allowed Gregory of Nazianzus to establish himself in Constantinople and to preach the doctrine upheld so strenuously by his friend Basil, bishop of Neo-Cæsarea (d. 379), in the evil days of Valens. The room in which Gregory delivered his discourses against the Arians became the Church of the Anastasia, the Resurrection of the Faith. In 381 the comparatively insignificant assembly, afterwards known as the Second General Council, met at Constantinople to confirm the faith of Nicæa. Further overtures were made to the Arians in the ensuing years; but in A.D. 383, Arianism was finally proscribed, and ceased to be legal for Roman citizens to profess.

Of the interval between the Councils of Alexandria (A.D. 362) and Constantinople (A.D. 381), though extremely important in the history of dogma, it is not necessary to treat at length in an account of Arianism, whose very triumph in the last days of Constantius made its ultimate downfall only a matter of time. In the present article it is only requisite to mention a few landmarks, referring the reader to the articles CAPPADOCIAN THEOLOGY and SEMI-ARIANISM. The Semi-Arians were at first favoured by Valens and allowed to assemble at Lampsacus, where they declared the Son to be ὅμοιος κατ' οὐσίαν to the Father, and cast out the Homœan Eudoxius and Acacius. Eudoxius, however, gained the Emperor's ear, and Valens expelled the Semi-Arians from their sees for refusing to communicate with the Homœans. One of their most distinguished leaders, Eleusius of Cyzicus, complied with the Imperial demands and acknowledged Eudoxius, but he repented bitterly of his action. Then came the negotiations with Rome, culminating in the Synod of Tyana (A.D. 367). The Semi-Arians were not really disposed to accept the Nicene faith in its entirety; and under the name of Macedonians many refused to acknowledge the proper Divinity of the Holy Spirit (Hefele, *Hist. of Councils*, § 88). The work of Basil and his friends, hampered as it was by the unfortunate schism at Antioch, was directed to a real reconciliation of those who were at heart orthodox to the Homoousian doctrine. For the question as to which creed was accepted by the Council of Constantinople in A.D. 381 see Gwatkin, *The Arian Controversy*; Burn, *Introduction to the Creeds*; and, above all, Hort, *Two Dissertations*.

12. Arianism may be defined as an attempt to determine the relations of the Persons of the Trinity on a basis of distinction and subordination. Despite all the efforts of Arius to popularize his opinions, they never found favour with the people. The movement was clerical rather than lay; the difficulties it sought to overcome were those of Origenist theologians perplexed by philosophical doubts and seeking an explanation where none was possible. Nor did Arianism pure and simple ever fail to arouse a strong feeling of indignation: the creed of Arius at Nicæa, the Sirmian 'blasphemy,' the opinions of Aëtius and Eunomius, all caused a storm. It was only by insinuating itself in the plausible guise of Scriptural phraseology that Arianism ever obtained a hearing. Nor could it be otherwise. An Arian Christ, a created Logos unable to reveal an unknown God, could never be the Christ acknowledged by Christians as the Incarnate Word, the sole Mediator between God and man, the supreme Sacrifice for the sin of the world. All who acknowledged this adhered at heart to the Nicene doctrine, however they might object to the language in which it was expressed. The great merit of Athanasius was his ability to recognize this truth; and he and Hilary were ready to make any concessions to those who shared the spirit, though they might not adopt the phraseology, of Nicæa. The test word *Homoousios* hardly appears in the works of Athanasius.

Arianism does not seem to have sprung from any strong ethical impulse. Its philosophy was pagan, and the object of its leaders was political rather than religious. 'Arius tried to interpret the Christian revelation in such a way as to render it acceptable to men whose whole conception of God and of life was heathen' (Bethune-Baker, *op. cit.* p. 156). His heresy was, in short, a symptom of the disease of the Church in the 4th cent. induced by the desire of ingratiating itself with the civil power. What the Roman government required when it invited the Christian Church to enter into alliance with it was that the Faith should cause as little disturbance as possible to the existing order of society. Arianism promised to provide this, in the form of a creed offering an easy and almost imperceptible transition from paganism to Christianity. By the edict of Milan, Christianity, the religion of the minority, had been virtually accepted by the Roman government, which thereby had committed itself to the policy of making it the religion of the majority. Arianism, by surrendering the chief characteristic of Christianity, the proper Divinity of Christ, made the new faith less hard to accept; and for this reason the Emperors, though from time to time encouraging the Nicene theology, were naturally disposed, especially in the Eastern provinces, towards Arianism. But, as the long controversy showed, the Arian doctrine led not merely to an accommodation to pagan theology, but also to an approach to pagan morality. For though some, especially of the extreme Arians, were faithful to their opinions, the majority of the party were dexterous politicians ready to serve the interests of the corrupt court of Constantius. Bishop Robertson sums up the character of many of the Arian intriguers when he says of Acacius of Cæsarea: 'The real opinions of a man with such a record are naturally not easy to determine, but we may be sure that he was in thorough sympathy

with the policy of Constantius, namely, the union of all parties in the Church on the basis of subserviency to the State' (*Athanasius*, p. liv). The men most opposed to the rapid secularization of the Church which characterized the 4th cent. were almost uniformly opposed to Arian teaching.

13. None the less, the Arian controversy was not wholly unreasonable; indeed, it was the inevitable outcome of the tendencies of the age. A Sabellian Christology would have been as fatal to Christianity as that of Arius, since it would have robbed the Incarnation of its reality, making it little more than a phase in the revelation of God, and depriving the Church of an ever-present Divine Master. Eusebius of Cæsarea was only reasonable when he demanded at Nicæa that the creed should not be perverted to encourage this error; and the views propounded by Marcellus of Ancyra and Photinus served to justify his action and that of the conservative and Origenist bishops of the East. It was not indeed till the Creed secured the adherence of Asiatic Origenists like the Cappadocians, Basil, Gregory of Nyssa, and Gregory of Nazianzus, that it was really accepted. The episcopate of Basil, the eloquence of Gregory of Nazianzus, and the philosophy of Gregory of Nyssa were alike instrumental in inducing the bishops of Asia and Syria to accept the *Homoousion* as the one and only safeguard of the Divinity of the Son against the specious teaching of the Arians.

14. But though the Arian controversy virtually ended with the Council of Constantinople in A.D. 381, it was fruitful in new disputes destined to distract and divide Christendom. As early as the time of his banishment to Phrygia (A.D. 356), Hilary of Poitiers was able to foretell the approach of a heresy concerning the Divinity of the Holy Spirit (*de Trin.* lib. ii. and viii.; Swete, *Hist. of the Doct. of the Procession of the Holy Spirit*, p. 112). In 358 the rise of the Tropici caused St. Athanasius to enter, in the *Letters to Serapion*, upon the subject of the Divinity and Procession of the Spirit (Swete, *op. cit.* p. 91; see also pp. 47–49). The subject was also considered at the Council of Alexandria (A.D. 362); and about the same time Macedonius, the Semi-Arian bishop of Constantinople, deposed by the Homœan Synod in A.D. 360, was elaborating the theory (which was afterwards known by his name) that the Son was like, and the Holy Spirit unlike the Father. Though the controversies caused by this question never roused the world like those on the Divinity of the Son, the consequences were even more serious, the question of the Procession of the Holy Ghost being the pretext of the schism between Eastern and Western Christendom. Even more fruitful in divisions was the problem raised by Apollinaris of Laodicæa, one of the chief opponents of Arianism, concerning the relations of the Manhood to the Godhead of Christ. See APOLLINARISM.

The principle for which Athanasius contended so nobly, and which he asserted in early youth before the appearance of Arianism, was the union between God and man brought about by the Incarnation (*de Incarnatione*). But the zeal with which the Divinity of the Son was asserted tended, as Harnack truly says, to obscure the historical Jesus (*op. cit.* iv.); and theology occupied itself with the dogmatic aspect of the Divine rather than with the practical example of the human Christ.

15. It is a remarkable fact that one of the results of the great dogmatic controversies in the early Church was that the defeated party displayed conspicuous zeal in missionary effort; and, without sparing condemnation of the self-seeking and unscrupulous spirit of the political Arians, we have also to remember that some later Arians, like the heresiarch himself, were ready to condescend to instruct the simple. Possibly Arius believed that by re-stating the theology of the Church in terms suited to his age he was doing good service in rendering the faith acceptable to the heathen; and his followers found ready converts among the Teutonic invaders of the empire. The exile of Arius to Illyricum resulted not only in the appearance of those two champions of his heresy in the West, the bishops Ursacius and Valens, but also, if we are to judge from results, in the conversion of the neighbouring Goths, and through them of the Teutonic nations, to Christianity of an Arian type. For long years the dividing line between the Roman and the Teutonic invader of his territory was that of religion rather than that of race. It is our misfortune that we have little or no information concerning the labours of the unknown Arian apostles of the Goths, Vandals, Lombards, and Burgundians. The fact that Cyrila, the Vandal bishop or pope of Carthage, knew Latin very imperfectly (Victor Vitensis, lib. ii.), and the appearance of the famous Gothic version of the Scriptures, would seem to indicate that the barbarians were taught the doctrines of Christianity in their own languages, in which case their Arianism must have differed much from the refined subtlety which distinguished that of the schools of the Empire, and is perhaps expressed in the blunt refusal of the Burgundian Gundobald to worship three Gods (Avitus, *Ep.* xli.). But there seems little doubt that the transforming effects of the Christianity which the barbarians adopted were genuine. Both Salvian and Orosius praise the virtues of the Arian conquerors of Roman territory, and Augustine (*de Civitate Dei*, i.) relates how moderately the Visigothic Arians who captured Rome under Alaric treated the inhabitants of the city, and what respect they showed for the sanctity of the Christian Churches. The long reign, moreover, of the Arian Theodoric in Italy, and his impartial government, extort, as Milman remarks, 'the praise of the most zealous Catholic' (*Latin Christianity*, bk. iii. ch. iii.).

Ulfilas is mentioned by Socrates (ii. 41, iv. 33), Sozomen (vi. 37), Theodoret (iv. 33), Philostorgius (*HE* ii. 5), and Jordanes (ch. 51), but the most important document is the fragment of his pupil Auxentius, Arian bishop of Dorostorus (now Silistria), discovered by Waitz (*Ueber das Leben und die Lehre des Ulfilas*, 1840). Auxentius made remarks in the margin of a copy of the Acts of the Council of Aquileia (A.D. 381), at which the Catholics were led by St. Ambrose against the Western Arians under Palladius and Secundianus. In the course of his criticisms of the *Acta*, Auxentius makes mention of his master Ulfilas, who brought him up both physically and spiritually as his son in the faith. The facts of the life of Ulfilas seem to be that he was born of noble Gothic parentage, or, according to Philostorgius, he was the descendant of Cappadocians who had been carried captive. According to Socrates, he was a Christian from childhood, a pupil of Theophilus, the Gothic bishop present at Nicæa. He was ordained a reader, and about A.D. 340 he was sent on an embassy to Constantinople. In the following year he was made a bishop at the Council of the Dedication by Eusebius of Nicomedia. He laboured among his people in Dacia, but owing to a persecution he led the Christian Goths into Mœsia, at the foot of Mount Hæmus, where they were allowed by the Emperor Constantius to settle. These *Gothi minores* are described by Jordanes. Both Philostorgius and Auxentius compare Ulfilas to Moses; and if a more modern instance is permissible, we may recall the work of John Eliot, the Puritan of Jesus College, Cambridge, among the Algonquin Indians in the 17th century. Like Ulfilas, Eliot gave his converts the Bible in their vernacular. Ulfilas on his deathbed declared his belief, which is given by Auxentius, who comments in a decidedly Arian fashion on it. In this creed the Divinity of the Holy Spirit is expressly denied. Harnack (*op. cit.* vol. iv. p. 44, Eng. tr.) says it is the only Arian creed which is not polemical. It is found in Hahn, § 198. Theodoret says that Ulfilas was persuaded by Eudoxius that the controversy was unimportant; but from the statement of Auxentius he seems to have been a convinced Homœan Arian (see C. A. Scott, *Ulfilas*, 1885).

16. In the Western provinces of the Empire during the 5th and part of the 6th cent., Arianism was the religion of the conquerors, and orthodoxy that of the conquered. Nor did the Catholic faith triumph by force or worldly power so much as by persuasion, since at one time there was not a single orthodox ruler in the Empire or among the barbarians. It

was then that the belief of Rome, and the Churches in communion with her, won its most signal triumph in the conversion of Clovis and the Salian Franks (A.D. 496). The strength of the organization of the Church of the fallen Empire stands in remarkable contrast to the weakness of the less disciplined national churches of its Arian invaders. As Dr. Hodgkin remarks, 'The Arian bishops took their fill of court favour and influence while it lasted, but made no provision for the future. They stood apart from one another in stupid and ignorant isolation. Untouched apparently by the great Augustinian thought of the world-encompassing city of God, they tended more and more to form local tribal churches, one for the Visigoths, another for the Vandals, another for the Burgundians. And thus in the end the fable of the loosened faggot and the broken sticks proved true of all the Arian monarchies' (*Italy and Her Invaders*, vol. iii. p. 345; see also Gwatkin, *op. cit.* p. 272).

The events which followed the conversion of Clovis showed the immense political power of the Catholic-Nicene Church of the West. The important Visigothic kingdom of Toulouse, which lasted for nearly a hundred years, and reached the acme of its power under Euric (A.D. 466–484), fell before the Frankish arms at the decisive battle of Vouglé (A.D. 508). The war of Euric against Auvergne, in defence of which Ecdicius and the bishop Sidonius Apollinaris played so valiant a part, was one of Arian against Catholic; and the triumph of the former was followed by severe measures of repression, which have been termed a persecution. (For a discussion of these measures see C. A. Scott, *Ulfilas*, p. 185; and *DCB*, art. 'Euric,' by Mrs. Humphry Ward, who quotes the letter of Sidonius [*Ep.* vii. 6]). Mrs. Ward suggests that Gregory of Tours has misunderstood Sidonius' allusion to the natural death of bishops, to whose vacant sees Euric refused to permit a successor to be chosen, and imagined that they were slain by Euric. After the conversion of Clovis the Catholics had their revenge; that astute prince realized the value of their assistance, and made the expedition against Alaric, the son of Euric, a holy war. 'Valde moleste fero' were his pious words, 'quod *hi Ariani* partem teneant Galliarum, eamus cum Dei adjutorio, et, superatis eis, redigamus terram in ditionem nostram' (Greg. Tours, ii. 37). In the case of the Burgundian Gundobald, the Catholic spokesman Avitus, bishop of Vienne, held out, as an inducement to him to embrace orthodoxy, that he would be protected against Clovis (Avitus, *Ep.* v. 17, quoted by Hodgkin, *Italy and Her Invaders*, vol. iii. p. 347). The fall of the Visigothic kingdom in Italy is an even stronger proof of the political strength of orthodoxy. The admirable rule of Theodoric, his fairness and toleration, were of no avail to save his dynasty; directly an orthodox Emperor was on the throne at Constantinople, the Church intrigued against him and his family. 'Totila,' says Professor Gwatkin, 'was a model of barbarian justice; yet even Totila could never venture to arm the provincials against the orthodox oppressor' (*op. cit.* p. 272).

Mr. C. A. Scott, in his useful monograph on Ulfilas, gives the secret of the broad distinction between the Arianism within and without the Empire. He explains the fact that the Christian Romans who adopted the opinions of Arius showed from the first a tendency to moral deterioration, whereas the barbarians improved in every respect under the influence of a creed which relegated the Son to a lower position than the Father, by reminding us that, whereas in the case of the Arianizing clergy in the days of Constantius, there was a fall from a higher to a lower conception of Christianity, the Teutons were making a distinct advance in substituting an Arian Christianity for heathenism (*Ulfilas*, ch. viii.).

In the same chapter (p. 172 ff.) Mr. Scott gives some useful hints about the few traces of Arian Church organization among the barbarians—a subject on which we are almost entirely in the dark.

17. It may be that the northern invaders found in Arianism an easy transition from polytheism to Christianity (Hodgkin, *op. cit.* p. 88); and their firm adherence to the doctrines which they had been taught, though they can have understood only imperfectly the subtle distinctions between *Homœan* and *Homoousian* Christianity, is very remarkable. But, despite Professor Gwatkin's assertion that the victory of Clovis over the Visigoths was an evidence of the inferiority of the Arian theology of the barbarians to the Nicene doctrine accepted by the Franks (*op. cit.* p. 273)—a view which the present writer himself formerly held (*Cambridge Theological Essays*, p. 500)—we are convinced that the Arianism of the Visigoths, Lombards, Vandals, etc., was no more than a phase in the ecclesiastical struggle between the Teutonic and the Roman conception of Christianity. The barbarians desired to have their own national Church, and when they found a form of Christianity which kept them separate from the despised provincial and independent of the clergy of the Empire, they held to it with the proud firmness of a conquering race. Their natural reverence for Roman civilization made them as a rule nobly tolerant of the religion it sanctioned; and when they are said to have been persecutors, the motive must have been mainly political. Euric's 'persecution' in Toulouse has been compared with the *Kulturkampf* in Germany, and it bears an even stronger resemblance to the more bitter struggle between Church and State in France, where the reason given for depressing the former is the determination not to submit to any external interference.

The inherent weakness of the barbarian occupants of the Roman territory was their incapacity for organization, whilst the strength of the Romans in both their civil and their ecclesiastical polity lay in a system tested by the experience of centuries. The Arian churches were as little able to maintain themselves as the short-lived Teutonic kingdoms, and their clergy had ultimately to surrender at discretion to the better disciplined church of the Roman provincials. The destruction of Arianism as a rival system is one of the most important factors in the genesis of modern European civilization; for, had the barbarian conquerors professed one form of Christianity and the weaker race another, no progress would have been possible. Oppressive as the unregulated feudalism of the dark ages was, it would have been intolerable if the conquerors had not had the claim of a common Christianity to encourage consideration for their vanquished subjects.

The chief authorities for the history of Arianism among the Teutons, besides those already cited, are St. Gregory of Tours (especially vi. 43, the story of the interview between Gregory and Opila, the Spanish ambassador to Chilperic. When examined as to his creed, Opila said, 'Credo patrem et filium et spiritum sanctum unius esse virtutis.' 'In that case,' answered Gregory, 'why will you not receive the communion with us'? 'Quia, inquit, gloriam non recte respondetis, nam iuxta Paulum apostolum nos dicimus Gloria deo patri per filium; vos autem dicitis, Gloria patri et filio et spiritui sancto,' etc.). See Sidonius Apollinaris, *Epistles*, bk. vii. The ninety-one letters of Avitus, bp. of Vienne, should be consulted; see also Gibbon, *Decline and Fall*, ch. xxvii.; Revillout, *Arianisme chez les peuples germaniques*; Maimbourg, *Hist. of Arianism*, bk. x.; Hodgkin, *Italy and Her Invaders*.

18. Every barbarian kingdom ultimately abandoned Arianism, or else, as in the case of the Ostrogoths in Italy and the Vandals in Africa, Arianism proved one of the causes of national ruin. The principal Arian nations were the Burgundians, the Visigoths, and the Lombards; and each in turn, after a severe struggle, abandoned the form of Christianity in which they had been instructed for the Niceno-Roman faith. As the chief reasons for their conversion were political, the reader is referred to the history of the period; all that is possible in this article is to give the main features of the struggle with the orthodox prelates, in which each of the three nations mentioned eventually succumbed. The Burgundians do not seem to have been originally Arians; indeed, if we are to believe Socrates, who wrote in the reign of Theodosius II. (*c.* A.D. 430), they were originally Catholics (*HE* vii. 30); see also *DCB*, artt. 'Gundicarius,' and 'Orosius.' It would seem that the Burgundians were never entirely Arian, though the majority of the nation at the time of Clovis were

of that persuasion. It is an open question whether Gundobald, the contemporary of Clovis, was Arian or orthodox (Greg. Tours, *Hist. Franc.* ii. 34, iii. prologue; Avitus, *Ep.*). His son, the unfortunate Sigismund, was certainly orthodox, whilst the next king Godomar (also a son of Gundobald) was an Arian. In A.D. 534 the Franks subdued Burgundy; but Arianism seems to have continued to drag out an obscure existence till the end of the century (Revillout, *op. cit.* p. 218).

19. After their defeat by Clovis, the Visigoths were gradually driven out of all Gaul except Septimania, the coast from the Pyrenees to the Rhone, being otherwise confined to the Spanish peninsula. In their dominions as elsewhere the Roman provincials remained orthodox, and in the seaport towns the influence of Constantinople was still considerable. Spain, however, was the great stronghold of Arianism, which made a long and obstinate struggle before it gave way to the orthodox belief of the Empire. In A.D. 569 the able Leovigild became king of the Visigoths; and, after a series of successful campaigns, reduced his people to almost complete submission to his authority. His son Hermenigild was married to Ingunthis, daughter of Sigibert and Brunichildis of Austrasia. The bride (she was only thirteen years of age) was expected to become an easy convert from Frankish orthodoxy to Visigothic Arianism. She proved, however, very firm in her faith, and absolutely refused to be re-baptized by the Arians, though her grandmother Goiswintha, the wife of Leovigild, treated her with great brutality. To prevent further trouble in his family, Leovigild made his son king, and gave him a separate establishment at Seville. There, it is said, by the influence of his uncle, the famous bishop Leander, and that of his wife, Hermenigild became a Catholic. The young prince soon rebelled against his father, and with the assistance of the Catholic provincials and the Byzantines his party became very formidable. To conciliate his subjects, Leovigild visited the churches, and professed that his belief was Catholic save for his denial of the Divinity of the Holy Spirit, for which he was able to find no Scriptural warrant. He also made a remarkable concession to the prejudices of his subjects, by allowing them to go from the *Roman* to the *Catholic Church*, for so the Arians denominated their body (*de Romana religione ad nostram catholicam fidem*), without any repetition of the baptismal rite, but merely by imposition of hands and saying the *Gloria* in the Arian form, 'Patri per Filium in Spiritu Sancto.' The rebellion of Hermenigild was suppressed, and Leovigild is said to have persecuted the orthodox faith with severity. The unfortunate Hermenigild was put to death, and received, on somewhat doubtful authority, the honours of canonization at the hands of Pope Urban VIII. (1623–1644). Leovigild died in A.D. 586, and was succeeded by his son Reccared. One of the first acts of Reccared was to declare himself in favour of the Catholics, and, according to Gregory of Tours (ix. 15), he arranged a disputation in A.D. 587 between the adherents of the two creeds, after which he embraced the Nicene faith; but this Synod is passed over in all collections of Councils save Mansi's (Hefele, *Councils*, sec. 286). Two years later, Reccared held the famous third Council of Toledo, at which 67 bishops and only 5 nobles were present. The leading bishops were St. Leander of Seville, uncle to the king, and Massona of Emerita. Twenty-three anathemas were pronounced against Arianism, the most interesting of which are *the third*, which declares the procession of the Holy Ghost from the Father *and the Son*; *the seventh*, against those who maintain that the Son is ignorant of anything; *the ninth*, against declaring that the Son in His Godhead was ever visible; *the fourteenth*, prescribing the correct form of the *Gloria*; *the sixteenth*, condemning the 'abominable treatise which we composed' to seduce the provincials into the Arian heresy, *i.e.* at the Arian Synod at Toledo (581); and *the seventeenth*, against those who refuse to condemn the Synod of Ariminum (A.D. 359). 'The holy creed' (the Niceno-Constantinopolitan) was ordered to be recited before communion after the manner of the Greek Fathers; and, as is well known, the creed to which Reccared and his queen Badda, together with the bishops including eight Arians, subscribed, contained the fateful addition of the *Filioque*. Arianism, however, was not suppressed by Reccared without force, as many of the Gothic nobles held out for some years.

For fuller particulars concerning this Council see Gams, *Kirchengesch. von Spanien*, vol. ii. pt. i. secs. 6–16; also Dahn, *Urgeschichte der german. und roman. Völker*, p. 515. The native chronicler is Johannes Biclarensis (Migne, *Patrol. Lat.* vol. lxxii.). It is noteworthy that from Spain proceeded the one important Western heresy concerning the person of the Son—the Adoptian (see ADOPTIANISM), promulgated by Elipandus, metropolitan of Toledo, and condemned at the Council of Frankfort (A.D. 794).

20. The Lombard conquerors of Italy were Arians down to the close of the 6th cent., and, even in the days of St. Gregory the Great, Autharis, their king, forbade any of his Lombards to give their children Catholic baptism. But shortly before his death Autharis married the Bavarian princess Theodelinda, who had been brought up in the Catholic faith. So great an impression did her wisdom and beauty make on her people, that, when she became a widow, the dukes of the Lombards begged her to select her own husband and continue to reign over them. She chose Agilulf, and by her persuasions the new king was gradually reconciled to the Catholic faith. It was to Theodelinda that Gregory addressed that most interesting revelation of the credulity of his age, the *Dialogues*. Traces of Arianism remained among the Lombards down to the middle of the next century, and it is not at all certain by what means the whole nation was induced to abandon the heresy. The Roman pontiffs regarded them always with the greatest apprehension and abhorrence. For the correspondence between Gregory and Theodelinda see Hodgkin, *Italy and Her Invaders* (1899), vols. v., vi., and Homes Dudden, *Gregory the Great* (1905).

The whole subject of the transition of the Teutons from Arianism to Catholicism is one of great obscurity, and deserves careful investigation. Of the Churches nothing seems to have survived, and, except Ulfilas' translation, there is no literature which has come down to us. The three important factors in the destruction of Arianism were the power of the Franks enlisted on the side of orthodoxy, the weight of influence which the subject Roman provincials were able to throw on the side they favoured in any struggle between rival barbarians, and the part taken by the wives of the kings and chieftains in bringing their people over to the religion of the Romans. Teutonic Arianism was at best a semi-barbarous Christianity; and it is interesting to observe that a form of Christianity, which began with the highly educated bishops of the East as a speculative creed, ended in the West as the national religion of ignorant barbarian warriors. But the struggle between Catholicism and Arianism in Western Europe was no less critical and far more protracted than in the eastern provinces.

21. During the Middle Ages there seems to have been little if any revival of Arian opinions properly so called, the tendency being perhaps in the direction of Sabellianism rather than otherwise, though the drift of Christian thought led men to speculate more on the nature of the Church, and eventually on the position of the Virgin Mary in the hierarchy of heaven, than on Christ (Dorner, *Doct. of the Person of Christ*, Div. II. vol. i. [Third Section]).

'Subordinationism, on the contrary,' says Dorner, 'durst no longer raise its head in the form of naked Arianism within the bosom of the Church; it was, however, permitted to conceal itself beneath a species of Tritheism, as in the case of Roscellin or to unite itself with Sabellianism, as in the case of the Abbot Joachim of Floris, whose view is suggestive of Tertullian's trinity

of the three ages of the world. But they touched Christology merely at a few points.'

It was not till more freedom in theological speculation became possible and theology was subjected to criticism in a rationalistic spirit that anything resembling Arianism made its appearance, and then in a shape different from the opinions of Arius and his adherents. After the Reformation the term 'Arian' was frequently misapplied to those who really held Unitarian views; and before discussing the later developments of those opinions which derogated from the supreme Godhead of the Son, it may be well to explain the difference between the position assumed by the Arians of the 4th cent. and their more modern followers. The Arian controversy proper concerned the Nature of the Divine Logos rather than the historic Christ of the Gospels. Arius and all his disciples acknowledged the pre-existence of our Lord, and concerned themselves but little with His Humanity. Indeed, Arius practically denied the manhood of our Lord, by teaching that His human body was animated by the Logos. But this Logos, though the creative principle by which all things were made, was, according to his teaching, not really of God, but a demi-god called into being to create the world, and, in the Incarnate Christ, to save mankind. No serious attempt was made to renew this heresy at the time of the Reformation.

Unitarianism started, on the other hand, with the denial of the pre-existence of Christ, who was declared to be no more than man, though miraculously born of the Virgin Mary and actually raised from the dead. The first Unitarians were Italians, and the majority took refuge in Poland, where the laxity of the laws and the independence of the nobility secured for them a toleration which would have been denied to their views in other countries. They were divided into two main parties: those who declared that worship ought to be paid to Christ, and those who held that to adore Him, a creature, was idolatry. The leader of the former party was Faustus Socinus (Sozzini), and those who followed him are often termed Arians to distinguish them from genuine Unitarians like Blandrata and Francis Davidi. These opinions, however, must be considered apart from Arianism proper, which is the subject of the present article.

See Toulmin's *Memoirs of Faustus Socinus*. In his introduction this author says that some of the Unitarians adopted Arian notions, and he distinguishes these from the followers of Socinus (see Liddon's *Bampton Lectures*, Lect. vii.). In mentioning Legate, the unfortunate heretic who was burned at Smithfield in the reign of James I., we observe that most Church historians style him 'an Arian.' According to Fuller (*Church History*, x. iv. 9), Legate held that Christ had no existence before His conception by the Virgin. Milton has been charged with Arianism on account of his representation of the sending of the Son by the Father to pronounce sentence on Adam and Eve (*Paradise Lost*, x. 55):

> 'But whom send I to judge them? whom but thee,
> Vicegerent Son? To thee I have transferr'd
> All judgement . . .'

But even if it is fair to judge a poet for words evidently dramatic, this subordinationism is not Arianism in its strict sense. Compare the expressions in the fragment, *In illud omnia*, attributed to Athanasius by Bp. Robertson, *Athanasius*, p. 87. In the tract *de Doctrina Christiana*, published by the Camden Society and in Bohn's *Prose Works of Milton*, the theological views of the poet are put forward. He opposes the teaching of the Calvinists on Free Will, and works out from the Bible a Christology of a Semi-Arian character. He does not appear to have been deeply read in the Fathers (*Dict. Nat. Biog.*, art. 'Milton'). For Sir Isaac Newton's views of Athanasius, which were decidedly hostile to the bishop and favourable to Constantius, see Sir David Brewster's *Life of Newton*, vol. ii. p. 342; Hallam's *Literature of Europe*, vol. iv. p. 36.

22. In the 17th cent. there was a tendency towards Arian opinions, due partly to the arguments advanced by the learned Jesuit Petavius in justification of the claim of the Roman Church to prescribe fresh articles of belief; for, though Sandius, a Unitarian, accuses Petavius of secretly holding Arian opinions, Bull was charitable and acute enough to see that the drift of his thesis, that the Anti-Nicene Fathers did not hold the doctrine of the Council, was completely different, and that he had the cause of the Papacy rather than that of Arius in his mind ('pontificiæ potius quam Arianæ causæ consultum voluisse,' *Def. Fidei Nic.* Prœm. § 8). Bull's famous treatise in defence of the faith of Nicæa appeared in 1684; and ten years later he wrote his *Judicium Ecclesiæ Catholicæ* in answer to views similar to those of Petavius advanced by the Remonstrant Episcopius, an amiable and learned man, whose object was not so much to attack the Trinitarian position as to maintain its comparative insignificance as an essential of Christianity ('frigidum nimis tantæ veritatis vindicem se ostendit,' *Introd.*; see also Nelson, *Life of Bull*, ch. lxvi.). The *Judicium*, as is well known, was highly commended by the great Bossuet, bishop of Meaux, and the clergy of the Gallican Church (*Life*, ch. lxvii.). The opponents of Bishop Bull were not, as a rule, Englishmen, anti-Trinitarian opinions in Britain having as yet no prominent advocates, but rather, as Bp. Van Mildert styles them in his *Life of Waterland* (p. 37), 'importers of foreign novelties.' Perhaps the best known English work advocating Arianism in the 17th cent. was the *Naked Gospel*, by Dr. Bury, rector of Exeter College (Oxford, 1690). In the same year, Dr. Sherlock, dean of St. Paul's, published his *Vindication of the Doctrine of the Holy and Ever-blessed Trinity*, in which, following some suggestions made by Cudworth, he maintained views which were denounced by South with his customary vehemence as countenancing Tritheism. Sherlock's opinions were condemned by the Vice-Chancellor and heads of houses at Oxford, who declared that it is 'false, impious, and heretical, contrary to the doctrine of the Catholic Church, and especially of the Church of England, to say "that there are three infinite, distinct minds and substances in the Trinity, or that the three Persons are three distinct infinite minds or spirits"' (Appendix to Dorner, by Patrick Fairbairn).

23. Professor Gwatkin in his *Gifford Lectures* ('Knowledge of God,' ch. xvii.) says incisively: 'Arianism is one of the most modern of the old heresies strangely English in its impatient common sense.' And it was in the England of the 18th cent. that the controversy revived.

'A variety of circumstances combined to give this turn to religious thought in England. The reaction from Puritanism, now that the tide of fortune had set in so powerfully against it and scope no longer existed for mental energy in that direction, was alone sufficient to account for it. . . . Partly springing, too, from the same reaction, and inspired by other influences, a philosophy came into vogue, heralded by Cudworth but properly founded by Locke, which in its bearings on morals and religion was peculiarly cold and rational. . . . Reason with this school of philosophical divines was placed in a sort of antagonism to faith; as the one element rose the other fell. . . . With those who still maintained a certain belief in Christianity, the prevailing spirit chiefly operated in disposing them to rob it of its more distinctive features, and, as regards the specific subject of our Lord's Person, led them either to reject altogether the doctrine of His divinity, or, with the Arians, to hold it but a quasi-divinity—something of an essentially subordinate nature to that of the Father' (Appendix to Dorner, *Person of Christ*, p. 350 ff.).

The two English divines properly deserving of the name of Arians were William Whiston, who succeeded Sir Isaac Newton in the chair of Mathematics at Cambridge, and his friend Dr. Samuel Clarke. Whiston was a man of high attainments, marred by many eccentricities. His study of Christian documents led him to place the *Apostolical Constitutions* on a par with the Gospels, and to choose Eusebius of Nicomedia as the exponent of the true tradition of Christian doctrine. He repudiated the name of Arian, but his outspoken utterances caused him to be deprived of his professorship. His more cautious friends, among them Benjamin Hoadly, rose to the highest and

most lucrative positions in the Church of England (Abbey and Overton, *The English Church in the Eighteenth Century*, vol. i. p. 490 ff.). Dr. Samuel Clarke, Rector of St. James's, Piccadilly, London, in 1712 published his *Scripture Doctrine of the Trinity*, in which no fewer than 1257 texts were cited and examined, with the result that the Father was declared to be alone Supreme, the Son Divine only so far as Divinity is communicable by the Supreme God, and the Holy Spirit inferior to the Father and the Son, not in order only, but also in dominion and authority. This avowed Arianism (for it was pointed out that of the fifty-five propositions advanced by Dr. Clarke there was only one to which an ancient Arian could not have subscribed) was the signal for an important controversy in England. The chief supporters of the new Arianism were Dr. Whitby and Mr. John Jackson, rector of Rossington and vicar of Doncaster. Clarke's work was condemned by Convocation in 1714; but the dispute was not thereby silenced, and in 1719, Dr. Waterland, archdeacon of St. Albans, published an answer to Jackson in his *Vindication of Christ's Divinity*. In the long war of pamphlets which followed, Waterland was conspicuous alike for basing his doctrine on Scripture alone and for the respect he showed for the Fathers. The Arian dispute in England marks, indeed, the close of the age when the Fathers were confidently appealed to in theological disputes. Nor was the Church of England alone disturbed by the question, since from the time of Emlyn's condemnation in Dublin (1702) and his expulsion from his church, the Nonconformists were disturbed by the presence of Arianism, which culminated in the Salters Hall Conference in 1718 between Presbyterians, Baptists, and Congregationalists. The Arianism of the early 18th cent. was succeeded by anti-Trinitarianism; and the subordinationist theories of the first decades gave way to more distinctly Unitarian doctrines, the discussion of which is scarcely within the scope of the present article.

For English Arianism see Nelson, *Life of Bull*, 1713; Van Mildert, *Life of Waterland*; Whiston, *Memoirs*, 1749–50; the Appendix to Dorner's *Person of Christ* (Eng. tr. 1865–68); Abbey and Overton, *English Church in the Eighteenth Century*, 1878, ch. viii.; Sykes, *Anti-Trinitarian Biography*; Dale, *History of Eng. Congregationalism*[2], 1907.

24. As a philosophy of religion, Arianism struck a blow not only at the root of the Creed, but at the whole principle of Scriptural revelation. 'Is,' asks Harnack at the beginning of his chapter on the subject (*op. cit.* vol. iv. Eng. tr.), 'the Divine, which appeared on the earth and has made its presence actively felt, identical with the supremely Divine that rules heaven and earth? Did the Divine which appeared on earth enter into a close and permanent union with human nature, so that it has actually transfigured it and raised it to the plane of the eternal?' The OT teaches that the One True God revealed Himself, in part at any rate, to Israel; and the NT supplements this by showing that humanity is made one in the Christ (ὁ Χριστός), and by this is brought into complete harmony with the God and Father of All. Arianism declared God to be unknowable, and the Son completely detached from Him. Humanity can therefore never be brought by Christ to the truly Divine, but only to a sort of pseudo-divinity created in the Son by the Father. Such an evacuation of the purpose of the Christian revelation has always been repudiated whenever the doctrine is presented in its crude form. But we must carefully distinguish between the logical results of such a system as Arius propounded and the opinions of those who have upheld it. Arius himself, in his dread of Sabellianism, may have advanced a theory of the Trinity without consideration of all that it involved. As a matter of fact, he was ready in later life to subscribe to a creed approximating to that of Nicæa. Of his opinions the famous Unitarian Dr. Priestley rightly says in his *Church History* (vol. ii. p. 139): 'Nay, the proper opinions of Arius, viz., that the Son was made out of nothing, and that there was a time when He did not exist, were really adopted by very few. So that what we call Arianism arose much later and spread much less rapidly than has been generally imagined.' The Arian Controversy resulted, however, in bringing forward two conclusions of which Christians had to choose one. If Jesus Christ existed from eternity, and is Head of a Kingdom which shall have no end, if He is indeed to be worshipped and received as God, then the Nicene doctrine is true, and He is of one substance with the Father. Otherwise, Christians have been mistaken from the first in their conception of Him, and He is not Divine, but a creature; not eternal, but belonging to time: either, as Arius suggested, a second God, using the term 'God' in its looser polytheistic sense, or, as the Unitarians maintain, a mere man eminent for goodness, but subject to human limitations, and unable to bring those who trust in Him to peace and communion with the Father. It is not without significance that Socinus expressly denied the doctrine of atonement through Christ.

F. J. FOAKES-JACKSON.

ARISTOTLE, ARISTOTELIANISM.—1. Life.—Aristoteles—son of Nicomachus, friend and physician of Amyntas, king of Macedonia—was born B.C. 384 at Stagira or Stagirus, a city of Chalcidice. In his eighteenth year (367) he came to Athens and joined the Academy, of which he continued to be a member, learning and teaching, during twenty years. Tradition relates that he taught rhetoric in opposition to Isocrates. That is to say, whereas at this time the school of the politico-rhetorical sophist Isocrates and the Academy, the school of Plato, were rival colleges, Isocrates was professor of rhetoric in the one, Aristotle in the other. In 347, when Plato died and his nephew Speusippus succeeded him as scholarch, Aristotle and Xenocrates, on the invitation of Hermias, lord of Atarneus and Assos, who was himself an Academic, betook themselves to his court. After a three years' residence there, Aristotle removed to Mitylene; and about this time, after the death of Hermias, he married Pythias, a near relative of his friend. In 343 Aristotle received and accepted a call to the Macedonian court to undertake the education of Alexander, then thirteen years old. This task occupied him during three years (343–340). A stay at Stagira followed; and it was not till Alexander had ascended the throne, and was about to start on his Asiatic expedition, that Aristotle finally left Macedonia. Meanwhile, in 339, Speusippus had died, and Xenocrates, after a contest with Heraclides Ponticus and Menedemus, had succeeded him as head of the Academy.

In 335 Aristotle returned to Athens and founded a school of his own in the gymnasium known as the Lyceum. There he spent twelve busy years, teaching in the morning a select class of advanced students, and in the afternoon a larger audience. From his habit of walking to and fro as he discoursed, the members of the school were called Peripatetics (Περιπατητικοί). Towards the end of this period of twelve years he lost the favour of Alexander, whose jealousy of Antipater and suspicion of Callisthenes prejudiced him against their friend and correspondent. Nevertheless, when Alexander died in 323, the anti-Macedonian party at Athens vented their spite against Aristotle in a charge of 'impiety.' The accusation based upon a

hymn to virtue, in which he was alleged to have represented Hermias as a god, was plainly frivolous; but Aristotle prudently left Athens and retired to his house near Chalcis in Eubœa. There he died in the summer of the following year (322). The story that he committed suicide by drinking hemlock or by drowning himself in the Euripus appears to have no foundation. Dr. Waldstein in 1891 opened a tomb near Eretria which he supposes to be that of the great philosopher.

2. Writings.—Cicero extols 'the golden stream of Aristotle's discourse'; Quintilian, its 'grace and fertility'; and Dionysius of Halicarnassus, its 'force, clearness, and grace.' These praises must needs refer to Aristotle's published writings, and, in particular, to his *Dialogues*, of which only fragments have come down to us. The philosophical writings, upon which his fame rests, are wholly deficient in literary quality. The style is curt, abrupt, jejune. The language is careless and conversational. The exposition is sometimes incomplete, sometimes redundant, sometimes inconsistent. There are reminders, recapitulations, revisions. Arguments are sometimes indicated without being worked out; inquiries which are promised are sometimes tacitly dropped. In a word, these writings, which have so profoundly impressed the thought of many centuries, would seem to be neither completed and published works nor text-books for use in the school, but informal records of oral teaching addressed to a few advanced pupils. In this way, and perhaps in this way only, are explicable the rough and ready terminology, the diagrams and examples, the references to the furniture and the decorations of the lecture-room and to members of the class, the occasional sentences which have no beginning, and, in one instance, the peroration addressed to an audience. But if these are records of oral teaching, some of them more completely finished than others, by whom were they prepared? Are they Aristotle's notes made with a view to his lectures? Are they notes of his teaching made by his hearers? Are they compilations made by an editor who had before him both Aristotle's notes for lectures and his hearers' notes of them? In the opinion of the present writer the treatises which have come down to us are in the main the notes of Aristotle himself. If they were the notes of pupils, and, *a fortiori*, if they were compilations, much of the roughness and the obscurity would have disappeared.

For example, in *Metaphysics*, A iii. 1069^b 35 and 1070^a 5 the words *μετὰ ταῦτα ὅτι* would not have survived, and in A ix. 990^b 11–15 we should not find indications of three Platonic arguments and Aristotle's objections to them packed into four lines. It would seem that Aristotle's notes, made for his own use and supplemented and corrected by himself, but never revised for publication, were treasured in the school; so that we possess, not indeed always his last thoughts, but at any rate his thoughts; and the inconsistencies which trouble us prove only that his thinking was progressive.

The chief of the so-called 'acroamatic' treatises attributed to Aristotle may be classified under their mediæval titles as follows:—

i. Logic: the *Organon*, including *Categoriæ*, *de Interpretatione*, *Analytica Priora*, *Analytica Posteriora*, *Topica*, *de Sophisticis Elenchis*.
ii. Physics: *Physica* or *Physicæ Auscultationes*, *de Cœlo*, *de Generatione et Corruptione*, *Meteorologica*.
iii. Biology: *Historiæ Animalium*, *de Partibus Animalium*, *de Incessu Animalium*, *de Generatione Animalium*, *de Anima*, *Parva Naturalia*.
iv. Philosophy: *Metaphysica*.
v. Ethics and Politics: *Ethica Nicomachea*, *Ethica Eudemia*, *Magna Moralia*, *Politica*, *Œconomica*.
vi. Literature: *Rhetorica*, *Poetica*.

It is not possible to speak with any certainty about the chronology of these writings; for there can be no assurance that references from one to another are Aristotle's and not the additions of editors. But we know that the collection of treatises from which we gather Aristotle's ontology was early placed after the treatises on Natural History: for this, and no more, is implied in the title *τὰ μετὰ τὰ φυσικά*, whence we derive our convenient misnomer 'metaphysics.'

Besides the 'published works' (*ἐκδεδομένοι λόγοι*), and the 'lectures' (*ἀκροαματικά*), there were also 'memoranda' (*ὑπομνήματα*). Under this last head may perhaps be placed certain summaries of the teaching of philosophers, the *προβλήματα*, and the *πολιτεῖαι*, *i.e.* notices of the constitutions of 158 political communities. The recently discovered *Ἀθηναίων πολιτεία* appears to have contained (1) a brief constitutional history of Athens and (2) a citizen's handbook; but the want of proportion obvious in the former of these two sections suggests that it was a compilation, made by some member of the school, from extracts and documents which Aristotle had casually collected.

Strabo and Plutarch relate that Aristotle's library, including his own writings, became the possession of Theophrastus, and after his death passed into the hands of Neleus of Scepsis in the Troad; that his heirs, for fear of the lords of Pergamos, hid them in a cellar; that about B.C. 100 Apellikon bought them and brought them to Athens; and that in 86 they came into the hands of Sulla, and so became known to the grammarian Tyrannion, whose copies were the basis of an edition prepared about 70 by Andronicus of Rhodus, the eleventh scholarch. This curious story is probably true; but it must not be taken for granted either that the school had no philosophical library or that its library did not contain copies of Aristotle's principal writings.

3. Philosophical system.—We have seen that Aristotle entered the Academy and continued to be an active member of it during twenty years. In later life he still regarded himself as an Academic; for even when he is criticizing certain of Plato's tenets, he speaks of them as doctrines which *we* hold. Indeed, it would appear that, had he been at Athens in 339, he might have succeeded Speusippus as head of the School; for in the list of scholarchs, it is expressly noted that when Xenocrates was elected, 'Aristotle was in foreign parts.' But though an Academic, Aristotle cannot be regarded as a Platonist. The master and the pupil differed fundamentally in their attitude towards inquiry, Plato taking his departure from that which is eternal, Aristotle from that which is actual in time and space. Yet, in spite of this disagreement, they were at one in resting their schemes of scientific research upon the assumption that there are in Nature determinate kinds of species, which may be studied in their resemblances and their differences. After all, Aristotle had more sympathy with Plato than Speusippus, a biologist who assumed the existence of natural kinds without attempting a metaphysical explanation of them; and more appreciation of Plato than Xenocrates, a moralist, who, when he ventured into Platonic metaphysics, was soon out of his depth; and whereas Speusippus dropped the theory of Ideas, and Xenocrates blended it with Pythagorean fancies, Aristotle was, at any rate, careful to formulate his dissent. In a word, Plato propounded an idealist ontology and rested upon it a theory of natural kinds, which should be the basis for the study of cosmic existences; Aristotle, rejecting the idealist ontology, proceeded to restate the theory of natural kinds, resting it upon an ontology of his own. The criticism of his master's idealism is indeed Aristotle's starting-point, and for this reason it will be convenient, in the present account of Aristotle's system and encyclopædia, to give precedence to 'First Philosophy' (*πρώτη φιλοσοφία*) or 'Theology' (*θεολογική*).

(1) *First Philosophy.*—There are, thought Aristotle, four principal lines of inquiry, having for their ends the discovery of four causes (*αἰτίαι*) or principles (*ἀρχαί*). These causes or principles are the *material* cause (*ὕλη*), the *essential* cause (*οὐσία*, *τὸ τί ἦν εἶναι*), the *moving* cause (*ἀρχὴ τῆς κινήσεως*), and the *final* cause (*τὸ οὗ ἕνεκα*, *τέλος*). Apart from

accidents or attributes which are not common to all the members of a natural kind, each of its members is, in thought though not in fact, resolvable into a specific soul or life, which is its form, and an appropriate body, which is its proximate matter. But again, the body is resolvable, in thought though not in fact, into organs and constituents. Further, these constituents are compounds of the four elements—fire, air, water, and earth. Finally, fire, air, water, and earth have for their ultimate matter a purely indeterminate potentiality which is the recipient of four primary qualities—hot and cold, wet and dry: fire is the combination of hot and dry; air, that of hot and wet; water, that of cold and wet; earth, that of cold and dry. The ultimate matter of the member of a natural kind is then a potentiality, in virtue of which that member exists in time and space: its form is the sum of its specific characteristics, in virtue of which it is what it is. What we can know of the member of a natural kind is its specific characteristics. Anything which is peculiar to an individual member or to individuals is not known but perceived.

Such is Aristotle's analysis of the particular member of the natural kind. It may serve as a statement of the aims which he has in view in his classificatory researches; but it leaves the adaptation of body to soul, the organization of body, and the differentiation of species wholly unexplained; and when he tells us vaguely that 'Nature' works always to an end and 'does nothing at random' (*οὐδὲν ἀτελὲς* [or *μάτην*] *ποιεῖ ἡ φύσις*), it is plain that 'Nature' is no more than a *deus ex machina*.

For the proximate moving cause, by which the particular member of a natural kind is brought into existence, Aristotle looks, not to any transcendental cause eternally operant, but to a previous member of the species which in its maturity transmits the specific characteristics to its offspring. This principle is expressed in the formula 'man generates man' (*ἄνθρωπος ἄνθρωπον γεννᾷ*). The final cause, the end sought, is the maintenance of the species. For though, under the influence of the sun as it approaches and recedes in its apparent progress through the signs, the life of the particular animal or vegetable waxes and wanes and ultimately ceases, Nature is 'careful of the type.'

It is necessary, however, to account not only for the existence of the animal and vegetable kinds, but also for that of the earth and the heavenly bodies, and for their motions, especially if, as the use made of the sun suggests, animal and vegetable life is to be dependent upon them. For this purpose Aristotle postulates (*a*) a prime unmoved movent (*πρῶτον κινοῦν ἀκίνητον*), eternal, existent, essentially operant, exempt from matter, and (*b*) other unmoved movents (*κινούμενα ἀκίνητα*). The prime unmoved movent, with the other unmoved movents, attracts (*κινεῖ ὡς ἐρώμενον*) the material universe, and so causes to rotate the spheres which are necessary to account for the motions of the earth and the heavenly bodies. Of such spheres Eudoxus had postulated 26, Callippus 33; Aristotle finds 55, or at any rate 47, necessary. The prime unmoved movent is mind (*νοῦς*), which, with itself for object, thinks continually (*ἐνεργεῖ ἔχων*), and is conscious of its thinking (*ἡ νόησις νοήσεως νόησις*). The other unmoved movents, though Aristotle does not say it, must needs be the thoughts of the prime unmoved movent. For, at the end of Metaphysics Λ, criticizing Speusippus on the ground that his system makes the universe 'episodical,' Aristotle adds epigrammatically: 'Real existences refuse to submit to a bad constitution: as Homer says, a plurality of kings is bad; let us have one king.' Plainly Aristotle supposes himself to escape this condemnation: and so he does, if the other unmoved movents are the thoughts of the prime unmoved movent; for 'mind and its thoughts are one and the same' (1072^b 21, 1075^a 3).

Such is the substance of Aristotle's *First Philosophy*. But *First Philosophy* is also a 'Theology.' The mind, the prime unmoved movent, which, with its thoughts, the unmoved movents, originates and maintains the orderly motions of the earth and the heavenly bodies, is emphatically described as God; and, simple as his language is, Aristotle seems to be moved beyond his wont when he writes: 'It is wonderful that God should have always an excellence which we have sometimes: that he should have a greater excellence is still more wonderful. But so it is.' 'God is perfect: he has life, continuity of existence, eternity of existence; that is what God is.' 'He is one; and therefore the firmament which he sets in motion is one.' 'The belief in a Divinity which invests the whole of Nature goes back,' Aristotle adds, 'to remote antiquity; but, for the persuasion of the many and in the service of the law, an anthropomorphic mythology has been built upon it. Strip away the accretions, and then "first existences are gods" is a divine word.'

The lacunæ in the system here described are obvious. In particular, we desiderate an explanation of the part played by 'Nature'; and the omission is the more startling because we find Aristotle endeavouring to bring his scheme of unmoved movents into relation with the contemporary astronomy. His chief care was perhaps to show the possibility of resting the theory of natural kinds on a metaphysical system other than that of Plato. According to Plato, everything is directly or indirectly the thought of universal mind. Fire, air, earth, and water are its geometrical conceptions of space. The stars are modes of life implanted by it in fiery spheres. Animals and vegetables are modes of life, conceived by universal mind, but combined by the stars with bodies appropriately fashioned out of the elements. The particular member of an animal or vegetable species is a phenomenal copy or reflexion, in appropriately corporealized space, of the transcendental idea. Aristotle's immanent form received from the previous member of the species corresponds to Plato's phenomenal copy or reflexion of the Idea; Aristotle's Nature's design corresponds to Plato's Idea. The truth is that there is little difference between the two analyses when once it is understood that Plato emphasizes the transcendental idea at the expense of the immanent reflexion, and that Aristotle emphasizes the immanent form at the expense of Nature's design. But the fact always remains that, whereas Plato regarded matter also—that is to say, space—as the creature of universal mind, and so was a monist, Aristotle distinguished matter—that is to say, potentiality—from supreme mind, and was therefore a dualist.

In the *Metaphysics*, Aristotle's answer to the question, What is the primarily existent (*τὸ πρώτως ὄν*)?, is to the following effect. It is not the receptive substratum called 'matter,' because, being purely potential, matter is not actually anything. It is not a mere universal (*καθόλου*), for the common characteristic or characteristics by which species are artificially combined in a genus, and particulars within a species are artificially combined in a group, *make* the genus or the group, and are not resemblances and differences discovered by comparison of species made by Nature. It is not the particular in which form and matter are combined, for with matter come in accidental attributes peculiar to individuals. It is the form and nothing but the form; that is to say, it is the sum of the charac-

teristics of the species to which the particular belongs. Such is the doctrine of *Metaphysics* Z. Nevertheless, in the *Categories*, primary existence is ascribed to the particular or composite of form and matter. The inconsistency is one of terminology and not of thought. For the specific form which is the primary existence of the *Metaphysics* exists only in the members of the species; and the primarily existent particular of the *Categories* is known only in so far as it represents the species to which it belongs. Aristotle coined many technical terms; but he allowed himself a large licence in the use of them, and he was not always careful to harmonize the terminology of one treatise with that of another. In this case, the terminological discrepancy is unfortunate; but, in the opinion of the present writer, it is a mistake to infer from it either confusion or vacillation.

(2) *Psychology*.—The conception of mind, exempt from matter, reappears in the *Psychology* (περὶ ψυχῆς). In this treatise Aristotle begins with a review of previous and existing opinion, from which it appears that some had regarded soul exclusively as the organ of motion, others exclusively as that of sensation and cognition. For himself, he proposes to include under this name all activity, which, whether manifested or not, is implicit in living body, and distinguishes living body from body which is lifeless. (Perhaps this is all that Aristotle meant in the first instance by defining soul as 'the first actuality of a natural organized body' [ἡ πρώτη ἐντελέχεια σώματος φυσικοῦ ὀργανικοῦ]; but when he adds that, while soul is actuality of body, body is not actuality of soul, the definition becomes a declaration of soul's supremacy.) Having thus widened the scope of psychology, Aristotle proceeds to enumerate the faculties of soul. Nutrition (together with generation), sensation, appetition, locomotion, intellection, follow one another in this order; and the possession of a higher faculty implies that of all the faculties below it. The soul of plants is nutritive only. The soul of animals is not only nutritive, but also sensitive, appetitive, motive. The soul of man has all the faculties of animals, and is intellective also. In sensation the form of the sensible, without its matter, reaches the sense through an intervening medium; and the sense perceives the sensible in virtue of the change which the advent of the sensible brings about in it. Hence, when subject and object are in the like condition, there is no sensation; and when the sensible is in excess, the organ may be deranged or disabled. Touch is the primary sense. Besides the five special senses, Aristotle recognizes a common or central sense, which (*a*) is conscious of sensation, and (*b*) distinguishes and co-ordinates the impressions received by the special senses. Its organ is the heart. So far we have been dealing with faculties which man shares with the animals. Passing next to reason—the faculty which belongs distinctively to man—Aristotle distinguishes a passive reason (παθητικὸς νοῦς), which receives from the senses their impressions, and an active, constitutive reason (ποιητικὸς νοῦς), which provides forms of thought for the interpretation of the impressions received from the senses. Such is the function of the active reason in the individual; but it and it alone of the psychical faculties may exist apart from soul and from body. When it exists apart, 'independent of external objects, having no inessential attributes, essentially operant,' and 'only when it so exists,' it is immortal and eternal. Now the active reason, as thus conceived, is the prime unmoved movent, the God, of the *Metaphysics*. In so far as man possesses this reason, it comes to him from without. Plainly the passive reason is interposed in order to bring the recepta of sense into relation with the divine faculty.

(3) *Logic*.—Of all Aristotle's achievements the greatest was perhaps the invention of *logic*. The group of treatises known as the *Organon* includes a formal logic, a theory of scientific research, a treatise on disputation, and a classification of fallacies. The formal logic comprises an enumeration of categories or heads of predication; a study of the quality, quantity, and conversion of propositions; a detailed investigation of the syllogism and its figures; and a careful discrimination between *adduction* (ἀναγωγή), or generalization from known particulars in regard to those particulars, and *example* (παράδειγμα), or inference from known particulars in regard to unknown particulars, effected by ascent to an imperfectly certified *general* and subsequent descent from it. Within the limits of the *Organon*, Aristotle takes account at once of *dialectical debate*, by which the premises of demonstration are provisionally justified, of *demonstration*, by which the consequences of given premises are ascertained, and of *sophistry* or *eristic*, pursued irrespectively of truth with a view to argumentative success.

(4) *Science*.—While the formal logic still holds its ground, Aristotle's scientific writings were no more than stepping-stones. His physical speculations occupied the field for eighteen centuries; but they were never more than stop-gaps; and the time came when, by reason of his great name, they were positive hindrances to progress. His biological works are still praised for the observation, the insight, and the knowledge, of which they afford conclusive evidence.

(5) *Ethics and Politics*.—In the *Nicomachean Ethics* and the *Politics*, Aristotle raises and discusses anew the old question, What is man's chiefest good (τὸ ἀνθρώπινον ἀγαθόν)?, regarding it in the one, as the end sought by the individual, and in the other, inasmuch as man is a social animal and cannot realize himself except as a citizen, as the end sought by the city-State (πόλις). Thus the two treatises are contributions to the architectonic science of Politics (πολιτική); but the one (ἠθικά) is concerned with the 'character' of the individual, the other (πολιτικά) with the 'constitution' of the State.

All are agreed that man's good or end is well-being (εὐδαιμονία), that is to say, well-living (εὖ ζῆν) or well-faring (εὖ πράττειν); and man's well-being—the term 'happiness' should be avoided—is the satisfactory performance of those functions which are distinctively human. In a word, 'man's chief good or end is a psychical activity characteristic of an excellence (ἀρετή), or, if there are more excellences than one, characteristic of the best and completest of them, such activity being continued during a complete period of existence.' Setting aside nutrition and growth which man shares with plants, and sensation which he shares with animals, we find that man's distinctive functions are reason, reasoning, and the rational control of appetition, under which head are included desires and passions. What, then, are the excellences of these functions? And which of the excellences is the best and the completest? There are two sorts of excellence—moral excellence, the excellence which the appetitive part of soul displays when it is duly obedient to the rational part, and intellectual excellence, the excellence of the rational part. Moral excellence (or virtue) is 'a deliberate habit which enables the individual, with the help of his reasoning faculty—subject to an appeal to the man of practical wisdom—to attain what is for him the mean between vicious extravagances.' The principal moral virtues are courage, temperance, liberality, munificence, magnanimity or self-respect, gentleness, justice. The intellectual excellences are practical wisdom or prudence (φρονησις), the excellence of that subdivision of the rational part of soul which controls

the appetitive part, and speculative wisdom (*σοφία*) the excellence of that purely intellectual part which is called reason (*νοῦς*). Practical wisdom and the moral virtues must be developed *pari passu*. Now, reason is obviously the best part of the soul, and therefore its excellence, speculative wisdom, is the best of excellences. This best of excellences has for its activity (*ἐνέργεια*) study (*θεωρία*). Consequently, the completest well-being of the individual is to be found in the life of the student (*θεωρητικὸς βίος*), who, however, must loyally do his duty as a member of the city and the family. This completest well-being brings with it the highest of pleasures. Next to the life of the student ranks the practical life of moral virtue. For the production of excellence, three things are requisite: first, natural aptitude; secondly, instruction, for its guidance; thirdly, habituation, to establish the habit. Inasmuch as well-being implies not merely the possession of a habit, but also its exercise, we require for the realization of well-being those external goods upon which the exercise of the habit depends. The doctrine that well-being implies the exercise of a habit and not merely the possession of it, and the corollary that external goods are indispensable conditions, distinguish Peripatetic from Academic ethics.

As in the *Ethics* Aristotle is concerned with the well-being of the individual, so in the *Politics* he is concerned with the well-being of the community. The city (*πόλις*) is a complex organism, developed out of the village (*κώμη*), which again has its origin in the patriarchal family (*οἰκία*). Right polities (*ὀρθαὶ πολιτεῖαι*) are those in which the sovereign (*κύριος*)—whether one, few, or many—rules for the benefit of the community; perversions (*παρεκβάσεις*) are those in which the sovereign—whether one, few, or many—uses power for personal advantage. The right polities are aristocracy, monarchy, polity proper; the perversions are democracy, oligarchy, and tyranny. The best of cities would be one in which absolute power was exercised for the benefit of all the citizens by one person, or more persons than one, superior to the rest in mind and in body. But we cannot hope to find rulers thus exceptionally qualified, and accordingly monarchy and aristocracy must be regarded as unattainable ideals. Thus of the three right polities one alone remains, namely, polity proper, in which all free men are admitted to a share in the administration and at the same time submit themselves to the 'passionless intelligence' of law. Of all polities this is, in Aristotle's estimation, the most stable; for inasmuch as all in turn rule and are ruled, the middle class has a preponderant influence. For the maintenance of polity proper, Aristotle would rely, as Athens did and as the United States do, upon supreme or constitutional laws (*νόμοι*), alterable only by special formalities, to which supreme or constitutional laws, upheld by courts of justice, all ordinary enactments (*ψηφίσματα*) must conform. Of the three perversions—democracy, oligarchy, tyranny—democracy, which has the smallest power for evil, is the least bad; tyranny, in which such power is greatest, is the worst. Tradition places at the end of the treatise a fragmentary scheme for a perfect State; but, unlike Plato, Aristotle had no hope of its realization. In the intervening books, on the strength of a careful study of known constitutions, Aristotle inquires what sorts of constitution are suitable to given sorts of people; how a constitution may be established and maintained in accordance with given assumptions or conditions; what is the best constitution for the generality of States; what circumstances tend to change, to overthrow, and to maintain the several constitutions. The reader of the *Politics* must not forget that, on the one part, the citizen population of a Greek State was very small, so that Aristotle knew nothing of representative government; and that, on the other part, the number of slaves was, in comparison with the number of free men, very great, so that what he calls a democracy was in some sort an aristocracy.

In these two treatises, the *Nicomachean Ethics* and the *Politics*, Aristotle is an acute and judicious student of human nature. They have a Shakespearean quality which makes them perennially interesting. But it must be clearly understood that they do not pretend to offer a theory of morality. Aristotle says nothing about the Good, about Duty, about the distinction between Right and Wrong; and very little about the faculty which discriminates them. Moreover, inasmuch as he concentrates his attention in the *Ethics* upon the well-being of the individual, and in the *Politics* upon the well-being of the State, the relations of man to man and of citizen to citizen are insufficiently handled. Indeed, they find a place, and that a subordinate place, only in so far as the particular virtues of justice and friendship are concerned with them. In a word, Aristotle works upon the lines of Plato's *Republic*.

In the *Eudemian Ethics*, which is now generally regarded as a summary prepared, *mutatis mutandis*, by Aristotle's disciple Eudemus, the line of argument is similar to that of the *Nicomacheans*. But (*a*) Eudemus chafes under the limitations of the inquiry, and would fain seek an explanation of moral differences; (*b*) regarding pleasure, not as the concomitant of an energy, but as identical with it, he sees in *εὐδαιμονία* the best of pleasures; and (*c*) abandoning the distinction drawn in the *Nicomacheans* between the activity of the student and the activity of the man of the world, he finds man's well-being in a life of culture (*καλοκαγαθία*) which combines both. It would appear that Aristotle himself, when he was writing the *Politics* (see IV. [VII.] iii. 1325^{b} 14), had learnt to regard statesmanship as a proper subject for scientific study. In the opinion of the present writer, Books v. vi. vii. of the *Nicomacheans*, which appear also as Books iv. v. vi. of the *Eudemians*, belong to the *Eudemians*, which they resemble both in their doctrine and in their style.

(6) *RHETORIC, ETC.*—In the *Rhetoric*—a treatise on oratory and style, apparently framed on lines marked out by Plato in the *Phædrus*—and in the fragmentary *Poetics*, Aristotle shows himself a literary critic of a high order. In particular, his appreciations of the tragedians have a permanent value. Perhaps no literary judgment has given rise to more controversy than the remark that tragedy, 'by raising pity and fear, purges the mind of those passions.' This theory of the 'homœopathic purgation' effected by tragedy (see Milton's Preface to *Samson Agonistes*) is Aristotle's answer to Plato, who in the *Republic* condemns tragedy as an incentive and stimulus to mischievous emotions.

The greatness of Aristotle was not fully understood until the Middle Ages, when the Church borrowed from him the framework of its theology, when the whole of civilized Europe saw in his encyclopædic writings the summary of the sciences, and when Dante hailed him as 'the master of those who know.' In the present article no more has been attempted than to describe in outline the philosophy upon which the schoolmen built, and to indicate the scope of Aristotle's labours. See, further, SCHOLASTICISM.

LITERATURE.—The following editions of Aristotle's writings deserve special mention: Bekker, *Opera Omnia*, 5 vols., Berlin, 1831–70; Pacius, *Organon*, Frankfort, 1592; Waitz, *Organon*, 2 vols., Leipzig, 1844–6; Aubert and Wimmer, *Historia animalium*, 2 vols., Leipzig, 1868; Hicks, *de Anima*, Cambridge, 1907; Bonitz, *Metaphysica*, Bonn, 1848–9; Bywater,

Ethica Nicomachea (text), Oxf. 1890; Stewart *Ethica Nicomachea* (commentary), Oxf. 1892; Newman, *Politica*, 2 vols., Lond. 1887; Spengel, *Rhetorica*, 3 vols., Leipz. 1853–6; Cope, *Rhetorica*, 3 vols., Camb. 1877; Butcher, *Poetica*[2], Lond. 1898; Bywater, *Poetica*, Lond. 1898. For Aristotle's philosophy see Zeller, *Die Philosophie der Griechen*, Eng. tr., Costelloe and Muirhead, 2 vols., Lond. 1897; Gomperz, *Griechische Denker* [Eng. tr., *Greek Thinkers*, Lond. 1901]; Ueberweg's *Grundriss der Geschichte der Philosophie* (Eng. tr., Smith and Schaff), contains, together with a useful summary of Aristotle's system, a very valuable bibliography. The Clarendon Press is now bringing out a series of English translations of Aristotle's writings.

The writer of the present article has occasionally used in it sentences and phrases borrowed from a sketch of the history of Greek philosophy down to Aristotle, which he contributed to the Cambridge *Companion to Greek Studies*.

HENRY JACKSON.

ARK.—In an inquiry into the nature and use of sacred arks, our interest centres chiefly in that which is familiar to us from the OT, the so-called Ark of the Covenant.

This name, which occurs in the Deuteronomistic literature, is not, however, the earliest one, older designations being apparently 'Ark of Jahweh,' 'Ark of God,' and 'Ark of our God.'* But the word 'God' (*'ĕlōhīm*), when used in the genitive, may have two meanings; *i.e.* it may be either possessive or adjectival, in the latter case denoting connexion not so much with the one true God as with the class or order of supernatural beings, the supernatural world. Accordingly the expression 'ark of God' may mean either 'God's ark' or 'ark connected with the supernatural world,' *i.e.* 'sacred ark.' In order to decide which of these two renderings is the correct one, we must inquire what name the writer uses to denote the Deity. If, like the author of Gn 1, he habitually uses the word *'ĕlōhīm*, then the phrase *'ārôn hā-'ĕlōhīm* may mean 'God's ark.' If, however, he habitually uses the name *Jahweh*, the only possible translation of the phrase is 'the sacred ark'; for a Hebrew, unlike an English writer, does not attempt to vary his style by the use of synonyms. In the case of an ark associated with the worship of Jahweh, the mere mention of the name of Jahweh would be sufficient to show the sacred character of the ark, and the simple phrase *'ārôn Jahweh*, *i.e.* 'Jahweh's ark,' would naturally be used.

To this theory the objection may be made that in two passages (1 S 3[3] [and] 4[11]) *'ĕlōhīm* seems to be used as a *possessive* genitive, for an indefinite expression is not to be thought of in 4[11], and would scarcely be natural in 3[3]. But the interchange of *'ĕlōhīm* and *Jahweh* as synonymous names of the Deity is so un-Hebraic that it is scarcely possible to imagine that the text has in these instances come down to us as it left the hands of the original writer. It is noteworthy that the messenger who in 1 S 4[17] tells Eli the events previously recorded in 4[11], says *'ārôn hā-'ĕlōhīm*; it is therefore not impossible that 4[11] is a late addition by a writer to whom *'ĕlōhīm* and *Jahweh* were interchangeable synonyms. Ch. 3 has undergone considerable editorial modification, for neither the dimness of Eli's eyes nor the fact that the lamp had not yet gone out has anything to do with the theophany to Samuel. In any case we are certainly not justified in setting aside a well-marked rule on the strength of these two passages.

What purpose would such an Ark or chest serve? Strange to say, there is no explicit statement on the subject in any very early passage of the OT, the assertion that the Ark was the receptacle of the Tables of Stone being first found in Dt 10. On the one hand, the oldest documents of the Pentateuch, J and E, in describing the Tables of Stone, make no mention of any receptacle for them; and, on the other, the oldest passages outside the Pentateuch which mention the Ark give no hint that it was regarded as a receptacle for a sacred Law, but imply rather that it was regarded as containing the symbol of Jahweh Himself. Thus, to quote Cheyne, 'the Ark was not a symbol of the revealed Law, but the focus of Divine powers.' The formula given in Nu 10[35. 36], and similarly the account of the capture of Jericho, imply that the Ark was regarded as the visible symbol of Jahweh's presence. Still more striking is the narrative of the capture of the Ark by the Philistines. On hearing of its arrival in the camp of Israel, the Philistines exclaim (1 S 4[8]), 'Who shall deliver us out of the hand of these mighty gods?' and the natural interpretation of 1 S 6[3] implies the virtual identification of the ark with Jahweh (cf. 6[14]). Similarly, the language of 2 S 7[2], where David's dwelling in a house of cedar is contrasted with the dwelling of the Ark within curtains, appears more natural if the Ark was regarded as localizing the Deity* than if it merely contained the tables of His Law. It is noteworthy also that David's dances before the Ark is described as performed 'before Jahweh' (2 S 6[14]).

Professor Cheyne (*EBi* i. 302) considers it probable that in the earlier form of the story of the Tables of the Law, as originally given in JE, the shattered tables were not renewed but whether this be so or not, the uncertainty which prevailed as to the code inscribed on the tables (cf. Ex 34 with Dt 5 and Ex 20), coupled with the absence of any mention in JE that the tables were placed in the Ark, or in any other book that they were ever taken out of it, makes it extremely probable that the statement in Dt 10 is merely an inference drawn by the Deuteronomic writer, who supposed, reasonably enough, that, an empty box being meaningless, the sacredness of the Ark must have been due to the sacred character of its contents. In this connexion, since his religion forbade him to think of any idol, the objects which would naturally occur to his mind would be the sacred Stone Tables.

It has been suggested that the Tables of Stone were originally *bætyls*, possibly meteorites, or, according to Professor G. F. Moore (*EBi* col. 2155), more probably 'a stone from the "mount of God," by taking which with them the Israelites were assured of the presence and protection of Jahweh when they wandered away from His holy mountain.' But of such *portable* stones we have no other example in Israel. Moreover, the difference between *tables*—*i.e.* hewn stones—engraved with a code of laws and *fetish stones* is so great that it is difficult to suppose that the latter could be the only basis for the story of the former. A discussion of the original form of the 'Ten Words' would be out of place in the present article; but it is by no means improbable that in early times the Law of Israel was summed up in ten sayings, and that these sayings were inscribed on two tables. The *form* of the sayings varied from time to time, the Decalogue of Ex 34 being superseded by that of Dt 5, and again by that of Ex 20; but the traditional number, ten, was retained. Since even the Decalogue of Ex 34, with its prohibition of idols, cannot be the earliest code, it is at least possible that subsequently to the reforms of Hezekiah, when the tables containing the earliest code were broken up by the iconoclastic zeal of 'Moses,' two fresh tables were hewn like unto the first, whereon was engraved a Decalogue (viz. that which forms the basis of the Law in Ex 34), similar to that which was on the first tables, but amended in harmony with the growing hatred of images.

But since there is nothing in any early document to connect the Ark with the stone tables, and since, when the first passage which does so connect it (Dt 10) was written, the Ark itself had long disappeared, we may safely disregard this comparatively late tradition, and seek in the earlier writings of the OT some indication of the purpose of the Ark.

There is no mention of the Ark in the inventory of Temple furniture carried off by Nebuchadrezzar—an omission which cannot be due to lack of interest in the Ark, as is evident from Jer 3[16]; it seems, therefore, necessary to suppose that it had disappeared before the destruction of the Temple. But, such being the case, we cannot but inquire the cause of its disappearance. It may, indeed, have been carried off in one of the invasions of Jerusalem, such as that of Shishak (1 K 14[25f.]), or of Hazael (2 K 12[17f.]), or of Sennacherib. But, great as are the gaps in the historical records of the OT, it is difficult to account for such an omission. The omission of the account of the destruction of the Temple at Shiloh is not quite parallel; for the editor who incorporated in his book an account of the capture of the Ark may have deemed it unnecessary to describe what, in his eyes, must assuredly have been of less importance, viz. the destruction of the sanctuary which had contained the Ark. At any rate, considering the fairly consistent tradition concerning the Ark in the books of Samuel and Kings down to the time of its deposition in the Temple of Solomon, and the utter absence of any mention of it thereafter till the 7th cent. references in J and E, which seem to imply that the exact nature, at all events, of its contents had been forgotten, we may fairly argue that it had disappeared in the interval, for it is surely unnecessary to assume a 'pious fiction' on the part of the Deuteronomic writer.

The precise description of the Ark given in the Priestly Code is not a proof that any of the sons of Zadok who were carried captive to Babylon had actually seen it. At the same time, there is no difficulty in believing that tradition had preserved a general description of its form, which was eventually idealized in the same manner as the Tabernacle itself and its furniture.

Attention has already been drawn to the fact that the early references to the Ark imply that it contained some symbol of Jahweh, and it is now

* See Cheyne's art. 'Ark of the Covenant' in *EBi* i. 300.

* The phrase יֹשֵׁב הַכְּרוּבִים (*e.g.* 1 S 4[4]) suggests that the Ark was regarded as being in some way the abode or throne of God.

freely admitted that idol images of Jahweh were formerly common in Israel. It is natural, therefore, to regard the Ark as the portable shrine or receptacle of some such image, which upon this supposition must have been deposited by Solomon in the Temple of Jerusalem.* Have we any indication of the existence of such an image? The golden calves are not to be thought of, for there is no evidence that Jahweh was ever worshipped under this form among the Leah tribes; since it must be remembered that the original image at Dan, if it really was in the form of a calf—which is doubtful—was made not by Jonathan the Levite, but by Micah the Ephraimite.

But at Jerusalem there was an image of Jahweh to which sacrifice was offered, viz. the bronze seraph, or, to call it by the name by which it is generally known, the brazen serpent, which in the age of Hezekiah was believed to have been made by Moses (2 K 18[4]; cf. Nu 21[8. 9]), and may therefore be supposed to have been as old as the Ark. It is therefore a not unlikely inference that it was for this image that the Ark was made. It is noteworthy that these are the only two objects, traditionally connected with the worship of Israel in the wilderness, of the existence of which there is any evidence in the period of the Kings.† The traditions which assigned the making of the first golden calf and the brazen serpent to Aaron and Moses respectively are of the utmost importance; for the fact that the essential part of these traditions—viz. that images were made—survived even the iconoclastic commandments shows how deeply rooted must have been the traditions themselves. And if, as will be generally admitted nowadays, the narrative of Nu 21[8. 9] is the attempt of a later age to explain the origin of an object which seemed inconsistent with its iconoclastic law, and if the brazen serpent really was an image coming down from the time of Moses, or at least from the days of the Israelite conquest of Palestine, it is reasonable to suppose that the history of the brazen serpent was identical with the history of the Ark. But if the brazen serpent really existed in such an early period of Israelitish history (and both Nu 21[8. 9] and 2 K 18[4] agree in this respect), it must either have been carried off by the Philistines with the Ark or have been preserved by the priests who fled from Shiloh to Nob.‡ Of the latter alternative there is not the slightest hint; and it would have been strange if David had celebrated so joyfully the recovery of the Ark, and had disregarded an image which to subsequent ages, and presumably to David's own age, was an object of adoration.

If, as seems probable, we are right in concluding that the Ark and the brazen serpent shared the same vicissitudes, or, in other words, that the Ark *contained* the brazen serpent, we are at once able to explain both the existence of the latter in the days of Hezekiah, and the veneration shown to the former in the narratives of Joshua, Samuel, and Kings. And if the iconoclastic zeal of the reforming party in the days of Hezekiah destroyed the brazen serpent, the Ark, if this was the shrine of the serpent, would have shared the same fate.

Objection may perhaps be made to this theory, on the ground, first, that the narrative of Nu 21 implies an image which could not have been contained in the Ark; and, secondly, that it is the Ark itself which is always spoken of as sacred, no reference being made to its contents.

In answer to the first objection, it is sufficient to say that the conventional representation of the brazen serpent as twined about a pole is not necessitated by the language of Nu 21[8. 9], which merely states that, in order that the serpent might be visible, it was placed upon a standard (*nēs*, which is not necessarily a 'pole'; in Ex 17[15] it is used of an altar).

The second objection appears more serious; but when we remember the awe with which serpents in general, and the brazen serpent in particular, were regarded, it is by no means unlikely that men spoke of the Ark because they shrank from mentioning the sacred object within it.

But the question may still be asked, Why should a box have been necessary at all, since there existed a tent in which to keep the idol? In the case of a large image (and the writer of 1 S 19[13ff.] evidently thought of the *teraphim* as being the size of a man), a box would perhaps not have been necessary, though it might have been convenient for carrying the image about in time of war; moreover, the size of the Ark, of which the later tradition gives the dimensions as $2\frac{1}{2} \times 1\frac{1}{2} \times 1\frac{1}{2}$ cubits, would have been unsuitable to such an image. A comparatively small object, however, such as we must suppose the brazen serpent to have been, would certainly have needed some sort of case to preserve it when being carried about. But it is not improbable that the origin of the Ark may be due to another cause. The worship of a brazen serpent doubtless had its origin in the worship of a living serpent, for which some sort of receptacle would, of course, have been necessary. The conservatism of religious ritual would preserve this, even after the substitution of a metal serpent for a live one.

It is not necessary to suppose that a live serpent was reverenced in the time of Moses. The substitution of the metal image for so primitive a god may have taken place long before the age of Moses. There are, however, parallels which seem to point in this direction. Thus, on an amphora in the British Museum (*B. M. Cat.* E 418) there is a representation of the story of Erichthonios, which is reproduced by J. E. Harrison (*Prolegomena to the Study of Greek Religion*, 1903, p. 183): 'The sacred chest stands on rude piled stones that represent the rock of the Acropolis, the child rises up with outstretched hand, Athene looks on in dismay and anger, and the bad sisters hurry away. Erichthonios is here a human child with two great snakes for guardians, but what the sisters really found, what the maidens really carried, was a snake and symbols like a snake.' Additional evidence for the same practice of carrying snakes in sacred chests is to be found in the class of coins known as *cistophoroi*, of which a representation is given by J. E. Harrison (*Prolegomena*, p. 400).

For the existence of snake-worship in Palestine, there was, until recently, no evidence apart from the OT. But in 1903 Mr. R. A. Stewart Macalister, in the course of his excavations at the Canaanite 'High Place' of Gezer, came across a circular structure '13 feet 8 inches in diameter at the floor level . . . surrounded by a rude wall now standing to a maximum height of 6 feet.' Within this structure, among a number of broken pieces of pottery, there 'was found a small bronze model of a cobra, rudely but unmistakably portrayed' (see 'Report on the Excavation of Gezer,' *PEFSt*, July 1903, p. 222). Although the discovery at Gezer did not include anything of the nature of an ark, it is not impossible that it may throw light on the *raison d'être* of the *prototype* of the Ark. Mr. Macalister's discussion of the place of the discovery is so suggestive that it may be quoted *in extenso*. 'The structure in which the serpent was found completely puzzled me, but an ingenious suggestion was made by Mr. J. Stogdon, of Harrow, when on a visit to the excavations—namely, that it was possibly a pit for keeping live serpents. The building is as suitable for such a purpose as the pits in which bears and other animals are kept in a modern zoological garden. In such a case the fine broken pottery and the bronze model might be in the nature of votive offerings. We are reminded of the practice of keeping live snakes at certain Greek shrines, notably at the temple of Æsculapius at Epidaurus, where they were in some way instrumental in effecting the miracles of healing there wrought (see Rouse, *Greek Votive Offerings*, pp. 193–205; see also p. 209). It is not inconceivable that among the orgies or rites which were celebrated in the high places of Palestine some form of snake-charming was included, and that the snakes required for the purpose were kept in this enclosure—perhaps specially prepared poisonous serpents with the fangs extracted. The tricks of modern holy men with serpents, which, if I be not mistaken, were described by Mr. Baldensperger in the *Quarterly Statement* some years ago, may be a survival of such rites' (*PEFSt*, July 1903, p. 223).

It is possible, however, that objection may be made to the view here put forth, that the Ark contained the bronze serpent, on the ground that the method of carrying the Ark is at variance

* On the other hand, it is urged by Schwally (*Semit. Kriegsaltertümer*, p. 10) that it is not necessary to suppose that the Ark contained anything.

† The mention of the holy vessels and the tables of stone in 1 K 8[4. 9] is due to the Deuteronomic editor.

‡ The only other alternative is to regard the brazen serpent as a distinctively Judæan idol, which existed in Judah long before David gained possession of the Ark. It is, however, to be noted that the story of the making of the brazen serpent is plausibly assigned to the Ephraimite writer E (see Carpenter and Battersby, *Hexateuch*, vol. ii. p. 222), while the reference to the Ark in Nu 14[44] appears in its original form to belong to J.

with any such supposition. It is a safe inference from 1 S $6^{7ff.}$, 2 S $6^{3ff.}$ that the recognized method of carrying the Ark in early times was in a sacred cart (*i.e.* a cart that had been used for no other purpose) drawn by cows or bulls.* The use of horned cattle might possibly denote that the Ark was in some way connected with lunar worship; in any case, however, they probably imply that the god contained in the Ark was regarded as the god of fertility (see Frazer, *Adonis, Attis, Osiris*, pp. 46, 80).† At first sight it is difficult to suppose that a serpent could ever be regarded as a god of fertility, but whatever the origin of serpent-worship may be—and we need not assume that it has been everywhere identical—there can be little doubt that in some cases, at all events, it is celebrated with a view of ensuring fertility thereby. On this point the statement of the scholiast on the *Hetairæ* of Lucian, quoted by J. E. Harrison (*Prolegomena to the Study of Greek Religion*, pp. 121, 122), is very suggestive: *ἀναφέρονται δὲ κάνταῦθα ἄρρητα ἱερὰ ἐκ στέατος τοῦ σίτου κατεσκευασμένα, μιμήματα ὄφεων καὶ ἀνδρῶν σχημάτων.*

But whether the view here advocated that the Ark of Israel originally contained the brazen serpent be correct or not, it is at any rate certain that the Ark was the shrine or feretory of some object which symbolized Jahweh to His worshippers. On this point the evidence which we possess concerning similar arks among other peoples is conclusive (cf. Schwally, *Semit. Kriegsaltertümer*, p. 10). And as the sacred object was certainly not in every case a live serpent, we naturally inquire why it should be placed in a box, and not rather set on a pedestal or throne in a temple. The answer to this question is to be found in the conception of the god which prevails among primitive peoples, in whose minds the fetish or image is so identified with the spirit which is supposed to animate it that the two are indistinguishable. In times of need or danger man requires a god that is near, and not a god that is far off. It is by no means a primitive conception which we find in the dedicatory prayer put into the mouth of Solomon (1 K $8^{44ff.}$), that, if people go out to battle against their enemy, and they pray to their God towards the house which is built to His name, He will make their prayer and supplication heard to the heaven in which He really dwells.* Primitive warriors wanted to have their gods in their midst. Of what use was the Divine Father (see Nu 21^{29}) at home, when his sons were in danger in the field? It was but natural, therefore, that the gods should be carried out wherever their help was needed (2 S 5^{21}; cf. Polyb., VII. ix. 2; Schwally, *op. cit.* p. 9).

Man is slow to give up idolatry. In the course of the ages, indeed, he modifies his primitive conceptions of God; the inanimate fetish gives place to the bestial form, and this again to an anthropomorphic representation, tending more and more towards the spiritual. But the truly spiritual conception of God, enunciated alike by the prophet Jeremiah ($23^{23.\ 24}$) and by our Lord (Jn $4^{21f.\ 24}$), which is incompatible with local presence, seems ever to have been beyond the comprehension of the majority of mankind. Jeremiah's warning (3^{16}) has been disregarded even by those who have called themselves Christians. At any rate, in the minds of many ignorant folk, the place of the gods of heathenism has been taken by the Saints, and the shrines containing relics of these have been venerated as being virtually dwelling-places of divinity. Between the mediæval reliance on the protection afforded by holy relics and the primitive Israelite trust in the Ark, there is but little real difference. In theory the mediæval Christian denied that his shrine contained a god, but his practice too often gave the lie to his theory.

R. H. KENNETT.

* The idea that the Ark could legitimately be carried only by hand may have arisen from the fact that it was so carried into Zion (2 S $6^{13ff.}$). There is no mention on that occasion of any priest other than the king himself. The account of the carrying of the Ark in the Book of Joshua belongs to a later development of the religion of Israel.

† A moon god and a god of fertility are not, however, incompatible conceptions (see Frazer, *Adonis, Attis, Osiris*, p. 297 ff. and cf. Dt 33^{14}).

ARMENIA.

ARMENIA (Vannic).—The present article deals with Proto-Armenian religion as revealed in the Vannic or 'Khaldian' cuneiform inscriptions. The Indo-European Armenians, who are described by Herodotus (vii. 73) and Eudoxus (*ap.* Steph. Byz. *s.v.* 'Αρμενία) as immigrants from Phrygia, did not become masters of the Armenian highlands till the close of the 7th cent. B.C. Kretschmer (*Einleit. in die Gesch. der griech. Sprache*, pp. 209–11) brings them from Ormenion in Thessaly by way of Armenê, near Sinôpê (cf. Hirt, *Die Indogermanen*, 136; Prášek, *Gesch. der Meder und Perser*, i. 147). The name Armenia (Old Pers. *Armina*, New Sus. *Arminiya*) is first met with in the Bab. and Pers. cuneiform inscriptions of the Achæmenian age, and may be connected with the Vannic *armani*, 'written tablet.' The country had been previously known to its southern neighbours as *Urarṭu* (Heb. *Ararat*), which the Babylonian scribes explained as a compound of *Ura-Urṭu* or 'Highlands.' *Urṭu* is the name of the district near Lake Erivan in a Vannic inscription of Sarduris II. (Sayce, lxxxii. 6), though in the bilingual inscription of Topzawa *Urarṭu* is the Assyr. representative of the Vannic *Lulus*. The usual title assumed by the Vannic princes was 'king of Biainas' or 'Bianas,' the district in which their capital Ṭuspas (Tosp), the modern Van, was situated. Biainas is the Buana of Ptolemy (v. 13), now Van.

The Vannic inscriptions, which extend from about B.C. 840 to 640, are written in the cuneiform characters of Nineveh, but in a language which is neither Indo-European nor Semitic, and is believed by some scholars to be related to Georgian. It seems to have been spoken over the larger part of the later Armenia, and to have been connected with that of Mitanni in Northern Mesopotamia. Like the language, the religion of the Vannic population was peculiar, and is difficult to correlate with that of any other people.

At the head of the pantheon was Khaldis, whose children the Vannic kings and people regarded themselves as being in a special sense. Hence they called themselves 'the Khaldians,' a name also applied to the numerous local deities who were 'children of Khaldis.' But though Khaldis was the national god, he could be localized like the Semitic Baal, and we hear of a 'Khaldis of the north (?)' and a 'Khaldis of the south (?),' while a dedication is sometimes addressed to 'all the Khaldis-gods.' Along with two other divinities, Teisbas the Air-god (Assyr. Hadad-Ramman) and Ardinis the Sun-god, Khaldis was the member of a triad which occupied the supreme place in the

* The phrase לִשְׁמֹעַ הַשָּׁמַיִם אֶת־תְּפִלָּתָם וְגו׳ has long been a crux to grammarians. We venture to emend the passage by pointing לִשְׁמֹעַ (as *Pi'el*), and understand הַשָּׁמַיִם as the accusative of direction (*cf.* v. 30). The writer believes, like the prophet of Is 66^{1}, that 'heaven is God's throne,' but trusts that the prayers offered at the earthly sanctuary will be, as it were, made audible by the Lord at His heavenly throne. The quaintness of the expression is due to the writer's attempt to combine the phraseology of more primitive religion with his own spiritual faith.

Vannic divine hierarchy, and the conception of which may have been borrowed from Babylonia. Below the triad came the multitudinous deities of inferior rank, including even the 'Khaldis-gods,' or local forms of Khaldis. A long list of these, with the offerings to be made to them, is engraved on a rock called Meher Kapussi, two miles east of Van (Sayce, v.). Among them is Selardis the Moon-god, as well as the gods of various cities and countries incorporated into the Vannic kingdom by conquest or otherwise. Most of these deities were merely deified States, and consequently had no individual names of their own; it was only when they were within the limits of the district originally inhabited by the tribe whose supreme god was Khaldis that they properly became forms of the national god, and could be called 'Khaldians.' As the Vannic kingdom extended, however, and the idea of a common nationality grew stronger, the deified State, even if originally outside 'the land of Khaldis,' tended to pass into a Khaldis; thus the deity called at Meher Kapussi 'the god of the city of Ardinis' (the Muzazir of the Assyrians), became, a century later, in the time of Sargon, himself a 'Khaldis.' Only one goddess is mentioned in the inscriptions, and since her name, Saris, seems to have been borrowed from the Assyrian Ištar, it is possible that she was of foreign origin. The later (Armenian) legends which bring Semiramis into the plain of Van are possibly an echo of the fact.

How far Vannic religion, as it comes before us in the inscriptions, may have been influenced by Assyria or Babylonia it is impossible to say. Teisbas, however, who was afterwards united into a triad with Khaldis and the Sun-god, appears originally to have been the god of a tribe or nationality which was distinct from that of the Vannic 'Khaldians,' while among the neighbouring Hittites each city had its Sun-god, who was identified with the deified State. The conception of gods in the Assyro-Babylonian sense may have been due primarily to contact with the cultured lands of the south, like the titles 'lord of multitudes' and 'faithful shepherd of mankind' given to Khaldis. At all events, underneath the divine hierarchy of the official cult we find clear traces of an earlier phase of belief, in which the material fetish takes the place of the god. Sacrifices were made not only to Khaldis and his brother deities, but also to 'the gate of the land of Khaldis,' 'the gate of Teisbas in the city of Eridias,' 'the gate of the Sun-god in the city of Uisis'—all of which are carefully distinguished from 'the Khaldis-gods of the door' or 'the Khaldis-gods of the chapel'—as well as to 'the shields of the land of Khaldis,' and even to 'the foot-soldiers of the land of Khaldis' and 'the foot-soldiers of Teisbas' (Sayce, v. 13). These foot-soldiers were the temple-guards, armed priests, and attendants, who were called Seluians, Urbikans, etc. A prominent object of veneration was the vine, the sacred tree of the Vannic people, which was sometimes planted by the side of the temple of Khaldis (*ib.* v. 30, 31, lxxxvi. 10), sometimes in a sacred enclosure of its own. Sar-duris II., in one of his inscriptions (*ib.* li.), describes his endowment of one of these vines, which he had consecrated and named after himself on the north shore of the lake of Van. The vine was often planted in the middle of a garden which was attached to the temple. Spears and shields, specimens of which from Toprak Kaleh are now in the British Museum, were hung up on either side of the entrance to the temple, large basins of bronze or terra-cotta, on stands, being placed in front of the shrine for the purpose of ablution.

The endowments made to the temples usually took the form of provision for the sacrifices and offerings, which were numerous and plentiful. The great inscription of Meher Kapussi gives a long list of the sacrifices to be offered to each deity and sacred object recognized in the vicinity, on every day of the month. Thus 6 lambs were to be offered to the Vannic triad, 17 oxen and 34 sheep to Khaldis, 6 oxen and 12 sheep to Teisbas, 4 oxen and 8 sheep to the Sun-god, 1 ox and 2 sheep to the gate of the land of Khaldis, 2 oxen and 4 sheep to the foot-soldiers of the land of Khaldis. Libations of wine were also to be poured out, the wine being made, it would seem, from the fruit of the consecrated vines. Comparatively few, however, of the vast herds of oxen and sheep presented to the gods could actually have been offered in sacrifice; according to the inscription of Kelishin (Sayce, lvi.), when 'the gate of the land of Khaldis' was dedicated to Khaldis, 112 oxen, 9020 sucklings and lambs, and 12,490 sheep were presented to the god. Most of these must have been intended to serve as a source of income. Similarly the prisoners who were devoted to Khaldis would have been given as temple slaves. In the case of victory, the share of the god, we are told, was a sixtieth of the spoil (*ib.* xliii. 16). The temples, of which there were several varieties, probably possessed festival halls, since we hear of sacred feasts in honour of the gods.

LITERATURE.—Sayce, 'The Cuneiform Inscriptions of Van Deciphered and Translated,' in *JRAS*, 1882, 1888, 1893, 1894, 1901, 1906; C. F. Lehmann, *SBAW* xxix., 1900; Belck and Messerschmidt, *Anatole*, i., 1904. For the history of the kingdom of Ararat and the Khaldi see Prášek, *Gesch. der Meder und Perser* (Gotha, 1906), 54.

A. H. SAYCE.

ARMENIA (Zoroastrian).—The sources of our information for the earlier epoch of Armenia's religious history are the Urartic or Vannic inscriptions (see preceding art.). For the Indo-Germanic period down to Christian times the most important native sources are Agathangelos (5th cent., ed. Venice, 1862), Moses of Chorene's *History and Geography of Armenia* (5th cent., ed. Venice, 1865), Faustus of Byzantium (5th cent., ed. Venice, 1889), Eznik (5th cent., ed. Venice, 1826), Anania Shiragaci, (7th cent., ed. Patkanean, St. Petersburg, 1877), and (for names) the ancient Armenian version of the OT. We also gather short but valuable notices from Xenophon's *Anabasis*, Strabo's *Geography*, and the works of Dio Cassius, Pliny, and Tacitus. Considerable as the material is, it is but incidental to the main purpose of these ancient authors, and is, therefore, very fragmentary. We may, however, hope for important additions to our knowledge of Zoroastrianism in early Armenia from the critical study of Armenian folk-lore and popular superstitions, when enough shall have been collected for the purpose.

Originally there was nothing in common between the Iranian races and the ancient inhabitants of Armenia, who were probably connected with the Hittites in the West and the Caucasic races of the North (Jensen, *Hittiter und Armenier*, Strassburg, 1898; Messerschmidt, *Die Hittiter*[2], Leipzig, 1902, p. 10; Winckler, 'Westasien' in Helmolt's *Weltgeschichte*, Leipzig, 1901, iii. 125 ff.; Hommel, *Grundriss der Geog. und Gesch. des alten Orients*, Munich, 1904, pp. 37 ff.; Prášek, *Gesch. der Meder und Perser*, Gotha, 1906, i. 57, 65). But Armenia, owing to its geographical position, was destined to come into contact with Iranian politics and civilization when the Medes began their political career. Towards the end of the 7th cent. B.C. the Vannic, or Khaldian, kingdom (see preceding art.) fell before the invading hordes of Cimmerians and Scythians, and during this period of anarchy the Armenians seem also to have entered the country which was henceforth to bear their name (Hirt, *Die Indogermanen*, Strassburg, 1905–07, p. 138). Meanwhile the Medes had begun

their national career not long before 935 B.C. (Justi, 'Gesch. Irans' in Geiger-Kuhn's *Grundriss der iran. Philologie*, Strassburg, 1904, ii. 404–406), and the Median empire had been founded, probably in 678–677 B.C. (Prášek, *op. cit.* i. 108). From that time Iranian influence was strongly felt in the politics, language, and social organization of Armenia, and the Iranian religion, with its terminology, names of divinities, and many folk-beliefs, permeated Armenian paganism. How far the resultant religion may be treated as Zoroastrianism will become clear from a more detailed study of the material available, which may most conveniently be arranged under the main rubrics of Zoroastrian theology.

I. *CELESTIAL HOSTS.*—1. **Ahura Mazda.**—The chief deity of ancient Armenia was Aramazd, the Zoroastrian Ahura Mazda (see ORMAZD). In Agathangelos, the historian of the conversion of Armenia, King Tiridates calls him 'the maker of heaven and earth; father of all the gods, especially of Anahit, Mihr, and Nanē; giver of abundance and fatness' (Agathangelos, pp. 58, 61, 106, 590, 591, 593); while Moses of Chorene incidentally remarks: 'There is no such thing as Aramazd; but among those who would be Aramazd, there are four who bear the name, and one of them is Kund Aramazd' (*Hist. of Armenia*, i. 31). It is uncertain whether this refers to the Greek Zeus or to the Iranian Ahura Mazda. In the first case it might mean 'the bald (φαλακρός) Zeus'; in the second, *kund* might be translated 'brave,' 'strong' (Stepanē's modern Armenian translation of Moses of Chorene, p. 395). In fact, 'great' and 'brave,' or 'strong,' are frequent epithets of the Armenian Ahura Mazda (Agathangelos, pp. 52, 61, 106).* The name *Aramazd* reminds us of the *Auramazdā* of the Old Pers. inscriptions, rather than of the Avesta or Pahlavi forms *Ahura Mazda* or *Aūharmazd*, *Ohrmazd* (cf. Armen. *Ormizd*). There is another important passage in Agathangelos (p. 623) about Aramazd, which may be tentatively translated thus: 'In the season of the god of the New Year, (who is) the bringer of new fruits, of the festivities of the hospitable god.'

The later Greek translation reads: καὶ τὰ μνημόσυνα τῶν ἐνεχθέντων ἔταξεν εἰς τὴν μεγάλην πανήγυριν τῆς λεγομένης Διασωμπῆς, τῆς ματαίως εἰς τιμὴν τῶν παλαιῶν σεβασμάτων γενομένης ἀπὸ τῶν καιρῶν τῶν νέων εἰς τὰς ἀπαρχὰς τῶν καρπῶν, ξενοδόκτων θεῶν λεγομένης τῆς πανηγύρεως, ἣν ἐπιτελοῦσιν ἐν τῷ τόπῳ ἐκείνῳ εὐφραντικῶς ἀπὸ τῶν ἀρχαίων καιρῶν ἐν ἡμέρᾳ τῆς πληρώσεως τοῦ ἐνιαυτοῦ, 'And he ordered the commemoration of the (saints) brought in on the great feast of the so-called Diapompe, which was vainly held in honour of the ancient gods from the new seasons unto the first fruits, this being the festival called that of the hospitable gods [mistranslation of *dik'*, 'god'], which they joyfully celebrate in that place from olden times, on the last day of the year.'

This translation shows that the Gr. supposes a different, but none the less obscure, Armen. recension. The text must have become corrupt in early times, and yet St. Clair-Tisdall (*Conversion of Armenia to the Christian Faith*, London, 1896, p. 50) sees in it a new deity Amenabel, who had for a title Amanor ('New Year'). Others recognized Vanatur, 'hospitable,' as a separate deity, and explained it as 'deus hospitalis' (Gelzer, *Zur Armen. Götterlehre*,† pp. 133, 146) or 'Lord of Van' (Hommel, *op. cit.* p. 39). Moses of Chorene, however, in his allusion to this festival (ii. 66), treats *Amanor* simply as a common noun; nor does anything in the text of Agathangelos as it stands, either here or elsewhere, make it necessary to take either Amanor or Amenabel as the name of a deity. As for Vanatur, the only other time we find it mentioned (Armen. tr. of 2 Mac 6^2 LXX, Διὸς Ξενίου, Vulg. *Iovis hospitalis*), it is used as an adjective qualifying Aramazd. We can, therefore, fairly infer that it is simply the Greek Ζεὺς Ξένιος (see also Alishan, *Ancient Faith of the Armenians*, Venice, 1895, p. 256), whose functions were transferred to Aramazd under the Hellenizing influence of the Seljuks, or of Tigranes the Great and his successors. Very probably the festival of Amanor or Navasard, which is poetically described as a *fête champêtre* (Grigor Magistros), was celebrated in honour of Aramazd, who was the lord of the New Year, quite as the six days' celebration of the Zoroastrian New Year began on the day Aūharmazd of the month Fravartīn in honour of the creation of the world in six days by Ahura Mazda (Mar. 15; cf. al-Bīrūnī, *op. cit.* pp. 199–204). Navasard fell, according to the later calendar of pagan Armenia, in August, when the new fruits began to be gathered; and the Armenians still perpetuate the memory of this early autumn celebration by distributing and eating fruits on New Year's day.

The most prominent sanctuaries of Aramazd were in the ancient city of Ani in Daranali, the burial-place of the Armenian kings (Agathangelos, p. 590), as well as in the village of Bagavan in Bagravand (*ib.* p. 612), and on Mount Palat or Pashat ('The coming of the Rhipsimean Virgins' in Alishan's *Hayapatum*, Venice, 1901–02, p. 79).

It is not easy to determine what the Armenians understood by the fatherhood of Aramazd, as no goddess is mentioned as his consort, not even Spandaramet. It is through sheer ignorance that a late martyrology (quoted by Alishan, *Ancient Faith*, p. 260) calls Anahit the wife of Aramazd, she being rather his daughter (see below). The fatherhood of Ahura Mazda, however, is not altogether foreign even to the Avesta, which represents him as both the father and the husband of Spenta Armaiti (*Yasna* xlv. 4, xxxiv. 10; *Yasht* xvii. 16), as well as the husband of other female divinities (according to the Pahlavi commentary on *Vendīdād* xi. 5, of the Fravashis; cf. also *Yasna* xxxviii. 1; *Visparad* iii. 4), and the parent of Asha Vahishta (*Yasna* xlvii. 2), Sraosha, Rashnu, Mithra Ashi (*Yasht* xvii. 16), Atarsh (*Yasna* xxxvi. 3, etc.), Haoma (*Yasna* xi. 2), and, indeed, of all the Amesha Spentas (*Yasht* xvii. 2). On the whole, one may affirm that the Armenian Aramazd agrees quite well, in the little that we know about him, with the Avesta Ahura Mazda. In the Armenian of the 5th cent. *Ormizd*, the variant form of Aramazd, generally refers to the later form of the Zoroastrian Ahura Mazda; but the adjective *Ormzdakan*, 'Ormazdian,' may also have been used in reference to the Armenian Aramazd and the Greek Zeus.

2. Amesha Spentas.—Of these Zoroastrian archangels (see art. AMESHA SPENTAS), only Spenta Armaiti is unmistakably present in the Armenian pantheon. Her name appears in two forms, *Spandaramet* and *Sandaramet*, with a difference of meaning, the latter term denoting 'abyss,' 'Hades' (cf. Hübschmann, *Armen. Gram.*, Strassburg, 1897, i. 73–74); but *Spandaramet* never occurs in the abstract theological meaning that the Avesta attached to the Indo-Iranian spirit of the earth and the keeper of vineyards (cf. the Pahlavi *Shāyast-lā-Shāyast*, xv. 5; Gray, *ARW* vii. 364–371). It is owing to this latter function of Spenta Armaiti, however, that the Armenian Christian writers of the 5th cent. used her name to translate Διόνυσος in 2 Mac 6^7, although, by a strange inconsistency, they translated the same name by *Ormzdakan gad*, 'Ormazdian,' in 2 Mac 14^{33} and 3 Mac 2^{29}. *Spandaramet* in the form of *Sandaramet*, as already noted, came to be a synonym of Hades, and was very frequently referred to in theological books and in the Church

* Cf. such common Avesta epithets of Ahura Mazda as *mazišta* ('most great'), *sevišta* ('most mighty'); *e.g. Yasna* xvi. 1.

† *Berichte der. königl. sächs. gesellsch. der Wissensch. phil.-hist. Classe*, 1896, pp. 99–148.

hymnary. This sense is not altogether foreign to the Avesta itself, where, from being the genius of the earth, Spenta Armaiti gradually becomes the earth itself, with the dark, woeful under world. 'The darkness of Spenta Armaiti' (*Vendīdād* iii. 35) is a well-known expression of the Avesta, which has this in common with the Bab. cosmology, that the earth is also identical with the Hades which it contains, and that the powers of Hades have something to do with the fertility of the ground and with agriculture (Jeremias, *Hölle und Paradies bei den Babyloniern*, Leipzig, 1900, p. 19; for references to Spandaramet see Lagarde's *Purim*, Göttingen, 1887, p. 42).

Besides Spandaramet, we probably see the traces of the Amesha Spentas Haurvatāt and Ameretāt ('health' and 'immortality') in the Armenian *haurotmaurot*, the name of a flower (*hyacinthus racemosus Dodonei*), first mentioned by Agathangelos, p. 480 (cf. Abeghian, *Armen. Volksglaube*, pp. 62–63).

In the Qur'ān, ii. 96, Hārūt and Mārūt are mentioned as the names of two angels in Babel, who, according to Muslim tradition, having shown themselves impatient with human sinfulness, were sent down to earth by God to assume human flesh and to live in human circumstances. They could not, however, resist the temptations of lust, and were condemned to stay on earth, where they thereafter taught witchcraft. In the Arabic story of Bulūqyā, incorporated with the story of Ḥasīb Karīm-ad-Dīn in the *Arabian Nights* (tr. Payne, v. 72–73; cf. Horovitz in *ZDMG* lv. 523), Ḥillīt and Mīlīt, or, in Tha'labī's *Qiṣaṣ al-Anbiyā*, Jiblīt and Timlīt, are mentioned as the first inhabitants of hell. Burton and Eb. Nestle (*ZDMG* lv. 692) identify these with Hārūt and Mārūt, which have long been recognized as the Pahlavi Horvadaṭ (or Khūrdāṭ) and Amerōdaṭ (or Amūrdaṭ), or the Avesta Haurvatāt and Ameretāt. The Muhammadan legend in regard to these fallen angels has many parallels in Rabbinical literature, and the whole is, ultimately, a Rabbinical elaboration of the intermarriage of the sons of God and the daughters of men (Gn 6[4]; cf. Geiger, *Was hat Mohammed aus dem Judenthume aufgenommen?* Bonn, 1834, pp. 105–106; Hirsch in *JE* v. 333). How the Zoroastrian archangels were drawn into this Rabbinical legend of the Qur'ān, and by what curious accident, instead of the later Pahlavi forms, we have *Hārūt* and *Mārūt*, which find their parallel only in the Armenian name of a flower, is very problematical. Either *Hārūt* and *Mārūt* are Parthian, or even Syrian, corruptions of the archangels' names, and found their way both to Armenia and Arabia, or they are purely Armenian forms, and reached Muhammad from the north. At all events, Hārūt and Mārūt were not remembered in Armenia as angels. We know, on the other hand, that the two Zoroastrian archangels in question were protectors of the vegetable world (Darmesteter, *Haurvatāt et Ameretāt*, Paris, 1875, *passim*), and two flowers were respectively consecrated to them—the lily and the *camba* (*Bundahishn*, xxvii. 24; perhaps the *Michelia Champaca*, or Champak); so that Haurvatāt and Ameretāt may once have been known in Armenia as tutelary deities of plants.

According to Strabo (p. 512), Omanos (Vohu Manah) and Anadatus (Ameretāt), with Anaïtis (Anāhita) as a chief deity, formed a triad in Zela—a cult which has not yet entirely disappeared (Gelzer, *ZA*, 1875, 14 ff.). This peculiar cult, however, had probably spread northward from Cappadocia, where there was a purer type of Mazdaism than in Armenia (Cumont, *Les mystères de Mithra*[2], Brussels, 1902, ch. i.).

3. Yazatas.—The Zoroastrian *yazatas*, or angels, are better represented in the Armenian religion than the Amesha Spentas. We shall discuss them in the order adopted by Jackson in *Grundriss der iran. Philologie*, ii. 640–645.

(1) *Atar, or fire.*—We cannot tell whether fire-worship was a part of the ancient cult of the Urartian period, or was first introduced in Iranian times. Moses of Chorene (ii. 77) mentions a fire-altar in Bagavan, upon which Ardashir, after the conquest of Armenia,* commanded that the fire of Ormazd be kept unquenched. Anania Shiragaçi, in his discourse on the Cross, speaks of a *hurbak* in Armenia, which Hübschmann (*Armen. Gram.* i. 181) rightly interprets as a loan-word from the Pahlavi *frōbāg* (Avesta **hvarenō-baya*, '[fire of] divine glory'), a fire established, according to Iranian tradition, in Chorasmia, and later removed to Kabul (*Bundahishn*, xvii. 5–6). In the hagiography called the 'Coming of the Rhipsimean Virgins' (Alishan, *Hayapatum*, p. 79), wrongly ascribed to Moses of Chorene, we read that on the top of Mount Paλat (?) there was a house of Aramazd and Astλik (Venus), and on a lower peak, to the south-east, there was 'a house of fire, of insatiable fire, the god of incessant combustion.' At the foot of the mountain, moreover, there was a mighty spring. The place was called Buth. 'They burnt the Sister Fire and the Brother Spring.* In the caves of the rocks dwelt two dragons, devilish and black, to which young men and young virgins were sacrificed. And the devils, gladdened by this bloodshed, produced, by means of the altars of the fire and the spring (?), terrible sights, lights, and rolling thunder; and the deep valley was full of snakes and scorpions.' Elsewhere we read: 'Because they called the fire sister, and the spring brother, they did not throw the ashes away, but they wiped them with the tears of the brother' ('Story of the Picture of the Holy Virgin' in Moses of Chorene, *Works*, ed. Venice, 1865).

This form of fire-worship in a volcanic region has hardly anything in common with Zoroastrianism, though we have a true remnant of fire-worship, even in modern times, in the annual bonfire kindled everywhere by Armenians on the festival of Candlemas, or the Purification of the Blessed Virgin Mary (Feb. 13=2), when the fire is kindled from a candle on the altar. It is an occasion of rejoicing and good augury. The festival is called in popular language *Tērntaz*, and in the Church calendar the commemoration is called *Teaṙnedaṙaj*, 'Presentation of the Lord' (Abeghian, *op. cit.* p. 72).

It seems that the ashes of the sacred fire were also honoured, and the Christian writers love to remind their readers of the times when their ancestors were ash-worshippers (Agathangelos, p. 77; Anania Shiragaçi, *Praise of the Cross*, quoted by Alishan, *op. cit.* p. 45 ff.); while Thomas Artsruni applies this name to the Zoroastrians (*Hist.* i. 9–10). Nevertheless, vestiges of ancient fire-worship are still to be found among the Armenians of the interior (Abeghian, *op. cit.* pp. 66–74).

It is quite possible that two types of fire-worship existed among the Armenians—one, older and more primitive, in which fire was a feminine principle, and stood in close association with water, as a masculine principle; the other type similar to the Zoroastrian.

(2) *Water.*—Water was honoured in Armenia as a masculine principle. Many rivers and springs were sacred, and endowed with beneficent virtues. According to Tacitus (*Annals*, vi. 37), the Armenians offered horses as sacrifices to the Euphrates, and divined by its waves and foam. Sacred cities were built around the river Araxes and its tributaries. Even now there are many sacred springs with healing power, and the people always feel a certain veneration towards water in motion.

Transfiguration Sunday in the Armenian Church was amalgamated with an unmistakably pagan water-festival, during which the people amused themselves, as they still do, with throwing water at each other. A similar custom connected with New Year's Day is reported of the Persians (Alishan, *op. cit.* p. 305; al-Bīrūnī, *Chronology*, pp. 199, 203). The Armenian water-day, or feast of the Transfiguration, is called *vardavaṙ*, or 'rose-festival' (from *vard*, 'rose'). It falls in the last days of the year, according to the ancient Armenian calendar (Alishan, *op. cit.* pp. 283, 305).

* Shapur, not Ardashir, actually took possession of Armenia about A.D. 250.

* On water and fire as brother and sister see Abeghian, *op. cit.* p. 67. Lazar of Pharpe says (ed. Venice, p. 203): 'They took the (sacred) brazier and dashed it into the water, as into the bosom of its brother, according to the saying of the false teachers of the Persians.'

The great Zoroastrian water-*yazatas*, however, do not seem to be connected with water-worship in Armenia, even when they have a place in the Armenian pantheon. Of these *yazatas* we perhaps recognize Apām Napāt in the name of *Npat*, the Νιφάτης of Strabo, a sacred mountain of Bagravand, Npat being also the designation of the 26th day of the Armenian month, which was consecrated to the mountain.

(3) *Anahit.*—This goddess, doubtless an importation from Persia, was the most popular deity of Armenia. In Agathangelos she is called 'the great lady [queen] Anahit, the glory and life-giver of our nation' (p. 51) 'through whom the country of the Armenians exists and has life' (p. 61), and she is 'the mother of sobriety, the benefactress of all mankind, and a daughter of Aramazd' (p. 52). She is invoked, in an edict of Tiridates, to protect and watch over the country (p. 106). She was also called the golden mother (p. 607), and statues of massive gold were consecrated to her (pp. 591, 607), one of which (at Erēz ?) was captured by the soldiers of Antony (Pliny, *HN* xxx. 24). With this may be compared the description of Ardvī Sūra Anāhita in the Avesta (especially *Yasht* v. 64, 78, 101–102, 123, 126–129), 'who purifyeth the seed of all males; who purifyeth the wombs of all females for birth; who maketh all females bear with ease; who giveth all females meet (and) timely milk' (*Yasna* lxv. 2 = *Yasht* v. 2), besides multiplying herds and lands (*Yasht* v. 1.). Although the Iranian texts nowhere consider her the daughter of Ahura Mazda, she is 'his only water' (*Yasht* v. 5); and the epithet 'golden' of Agathangelos is paralleled by her Avesta attributes, 'laced with gold' (*Yasht* v. 64), 'wearing a golden kerchief' (*ib.* 123), 'with square golden earrings' (*ib.* 127), and 'with a golden diadem' (*ib.* 128; for further details, cf. Windischmann, *Die pers. Anâhita oder Anaïtis*, Munich, 1856). While the sacrifices offered to Anāhita as described in the Avesta (*e.g. Yasht* v. 15, 21) are quite conventional, the Armenians offered her green branches and white heifers (Agathangelos, p. 49). Lucullus (Plutarch, *Lives*) saw in Yashtishat (?) herds of these heifers, which were used only for sacrifices, at all other times 'wandering up and down undisturbed, with the mark of the goddess, a torch, branded on them.' Anahit was sought also in cases of great sickness (Moses of Chorene, ii. 60).

Three elements are to be distinguished in the Avesta Anāhita. She is a planet (Venus), a goddess of the fertilizing waters, and a female deity presiding over the birth and nursing of children, and the increase and maintenance of all things. The Armenian Anahit is pre-eminently a goddess, with no reference to a planet or water. The fact that in Erēz this goddess admitted of obscene forms of worship, such as are generally associated with the orgiastic nature-cults of Asia Minor, must be explained by the proximity of Akilisene to Asia Minor, as well as by the part which the Avesta Anāhita plays in human conception. Strabo says of this special cult (p. 532):

'Both the Medes and the Armenians honour all the sacred matters of the Persians; but above everything the Armenians honour Anahit, to whom they erect temples in other places, and specially in Akilisene [Ekeaeaç]. There they consecrate to her servants, male and female,* and this is not surprising; but the most illustrious men of the nation give to her their virgin daughters, who, according to custom, give themselves up to fornication for a long time near the goddess, after which they are given in marriage, and none thinks it unworthy to live with them.'

We have absolutely no proof, however, that this sacred prostitution was characteristic of the Armenian Anahit throughout the country, especially as native Christian writers do not mention it, although they might have used it to great advantage in their attacks upon the old religion.

Besides the great sanctuary in Akilisene, which was also called the Anahitian district (Dio Cassius, xxxvi. 38), Anahit had temples in Artashat (Artaxata) (Agathangelos, p. 584) and in Yashtishat (p. 606); while a mountain, now difficult to identify, was called the throne of Nahat (Faustus of Byzantium, v. 25), probably owing to the presence of a great sanctuary of the goddess there.

An image of Anahit is said to have existed in the district of the Anzavatzis near the 'Stone of the Blacksmiths,' where, as in Buth, there was a mixed worship of fire and water, along with magical practices (Alishan, *Hayapatum*, p. 50).

The great festival of Anahit was celebrated, according to Alishan (*Ancient Faith*, p. 269), on the 15th of Navasard with processions and rejoicings. The 19th day of every month was also consecrated to her (Tcherpet, 1820, quoted by Alishan, *Ancient Faith*, p. 143).

(4) *Sun and moon.*—Moses of Chorene makes repeated allusions to the worship of the sun and moon in Armenia. In oaths the name of the sun was almost invariably invoked (ii. 19), and there were also altars and images of the sun and moon (ii. 77). Of what type these images were, and how far they were influenced by Syrian sun-worship, we cannot tell. Agathangelos, in the alleged letter of Diocletian to Tiridates, unconsciously bears witness to the Armenian veneration for the sun, moon, and stars (p. 125). But the oldest witness is Xenophon, who notes that the Armenians sacrificed horses to the sun (*Anabasis*, iv. 5. 35; Weber in his *Dis kathol. Kirche in Armenien*, Freiburg, 1903, p. 28, understands this ἥλιος as Mithra). The eighth month of the Armenian year and, what is more significant, the first day of every month, were consecrated to the sun and bore its name, while the first day of the Persian month was assigned to Ahuramazda, the eleventh day being given to the sun in the Zoroastrian calendar. The twenty-fourth day of the Armenian month was consecrated to the moon, as was the twelfth in the Avesta system. The Armenians, like the Persians and most of the sun-worshipping peoples of the East, prayed towards the rising sun, a custom which the early Church unconsciously adopted, so that to this day the Armenian churches are built and the Armenian dead are buried toward the east, the west being the abode of the devil (see below). As to the moon, Anania Shiragaçi says in his *Demonstrations* (ed. Patkanean, p. 66): 'The first fathers called her the nurse of the plants,' an idea which has its parallel, and probably its source, in the short *Māh-yasht* of the Avesta, particularly in that vegetation grows best in the time of the waxing moon (*Yasht* vii. 4; al-Bīrūnī, *Chronology*, p. 219). Ohan Mantaguni (5th cent.) combats the general belief that the moon prospers or mars the plants (*Discourses*, Venice, 1860, pp. 198–199). The Armenians also shared the superstitions about the eclipse of the sun and moon current among the Persians, who held that these phenomena were caused by two dark bodies,* offspring of the primeval ox, revolving below the sun and moon, and occasionally passing between them and the earth (*Dāṭistān-ī-Dēnīg*, lxix. 2; *Shikand gūmānīg Vijār*, iv. 46). It was, moreover, a popular belief that a sorcerer could bring the sun or moon down from heaven by witchcraft (Eznik, *Refutation of Sects*, p. 217), though this does not find a parallel in the extant Zoroastrian writings.

No doubt the Persian worship of the sun and moon found a similar worship of long standing in Armenia, that of the Urarṭians (see preceding

* Cf. the male and female temple-prostitutes of the ancient Semites, adopted by the Cappadocians as well as by the Armenians.

* The modern Armenians still speak of an 'evil star' which causes the eclipses.

art.), and could do little more than influence it to a certain extent.

It has been suggested, with some plausibility, that the famous hymn to Vahagn, quoted by Moses of Chorene (i. 31), sounds like a sun-hymn:

'The heavens travailed; the earth travailed;
Also the purple sea travailed;
And in the sea
The red reed travailed.
From the stem of the reed there arose a smoke;
From the stem of the reed there arose a flame;
From the flame ran forth a young man.
He had fiery hair;
He had a beard of flame;
And his eyes were suns.'

Both sun- and moon-worship have left deep traces in the popular beliefs of the present Armenians (see Abeghian, *op. cit.* pp. 41–49; Tchéraz, 'Notes sur la mythologie Arménienne,' in *Transact. of 9th Internat. Congress of Orientalists*, London, 1893, ii. 823 ff.).

In the Armen. writers from the 11th to the 14th cent. we meet with a sect or tribe called 'the Sons of the Sun,' first mentioned by Grigor Magistros (11th cent.), who says, placing them between the Armenian Paulicians and Thondracians: 'Behold, some of the Persian Magi of the Mage Zoroaster and the sun-worshippers envenomed of them, called Sons of the Sun, many of whom live in Mesopotamia, call themselves Christians, but we knew how viciously and abominably they conduct themselves.' When, however, David, son of Alauk, says, a little later: 'The Paulicians or Euchites are the tribe of the Sons of the Sun,' he is evidently confusing three distinct things. From the letter of Nerses Shnorhali (12th cent.) about the 'Sons of the Sun' we learn that they wished to be received into the flock of Christ, so that, in his opinion, they were Armenians both in language and in nationality, who had remained unconverted in the times of Gregory the Illuminator, but now abjured their errors and their evil ways. Nerses gives special instruction about their reception into the Christian Church, about their moral life, and about giving up their magical practices, especially among women. 'Teach them to abstain,' he writes, 'from mixing impure things in the food and drink of the Christians for the purposes of their own diabolical love.' Nerses also mentions their worship of the sun and their reverence for the poplar. Later the Catholicos Mkhit'ar, in a letter to the pope, says: 'At that time (middle of the 14th cent.) there were Sons of the Sun in Manazkert'; and in the same century, Mkhit'ar Aparaneçi writes: 'There are some Armenians by birth and language who worship the sun, and are called Sons of the Sun. They have neither writing nor literature. Fathers teach children by tradition what they have learned from the Mage Zoroaster, the chief of the fire-temple. Whithersoever the sun goes, they worship him in that direction, and they reverence the poplar, the lily, the cotton plant, and the other plants which turn towards the sun. They make themselves like those flowers in faith and action, high and fragrant. They offer sacrifices for the dead, and they pay taxes to the Armenian priests. Their chief is called Hazrbed, and twice or oftener every year all of them, men and women, sons and daughters, gather in a very dark pit.' In another place we read:

'A woman feels no disgust towards
A Son of the Sun;
Nor towards a Turk or an Armenian;
Whomsoever she loves, he is her faith.'

In the 14th cent. Thomas Mejop'eçi tells us that Timurlang came to Mardin (Mesopotamia) and destroyed four villages of the Sons of the Sun—Shol, Shemeλaç, Safari, and Maraλ; 'but by the machinations of the devil they multiplied in Mardin and Amid.'

These quotations are drawn from Alishan's *Ancient Faith of the Armenians*, and from Grigor Vantzian's art. in *Handēs Amsoria*, 1896, p. 13 ff. Some of them are evidently of little value. Vantzian tries to prove that the Sons of the Sun were not Armenians, because (1) they had no literature, (2) they were not persecuted fanatically by the Christian Armenians. Moreover, he finds it difficult to identify them with the ancient Zoroastrians, because they had no magi or fire-worship. These conclusions disregard the best contemporaneous authorities on the subject. Even Grigor Magistros interposes them, in his allusion to them, between the Armenian Paulicians and the Thondracians. They spoke Armenian and called themselves Armenians. If they were not persecuted, this may well be due to the fact that the Christian Church has always shown more animosity against its own heresies than against heathenism, even within the boundaries of the national Church. There is, of course, no evidence of an organized Zoroastrianism or of a sacred fire among the 'Sons of the Sun'; but they might very well have been the remnants of a scattered community which had lost its magi and sacred fire. They may possibly have belonged originally to some district of Eastern Armenia, or they may have been descendants of Armenian converts during the strong Zoroastrian propaganda of the 5th cent. in Armenia. This, however, must still remain an open question, although it should be noted that they have lately been found to have some points of contact with the Yezidis (*q.v.*).

(5) *Tishtrya.* — Another important *yazata* of Zoroastrianism is Tishtrya (Sirius), the 'bright and glorious star' (*Yasna* i. 11, xxvii. 8, etc.), who assumes the form of a bull with golden horns (*Vendidād* xix. 37), and again, as a white horse with yellow ears and golden bridle, fights against the demon Apaosha (drought) and pours upon the earth the fertilizing rain and the seeds of all plants (*Yasht* viii. 18–33; *Bundahishn* vii. 4–13). He is the chief of all the stars (*Yasht* viii. 4; Plutarch, *de Iside et Osiride*, 47), or at least of the stars of the East (*Bundahishn* ii. 7); and the eighth *Yasht* is devoted to his praise. Besides Tishtrya there was also Tīr, the genius of the planet Mercury, to whom, according to the *Bundahishn* (v. 1), Tishtrya was opposed.

In Armenian mythology also we find a Tīr or Tiur, who has often been wrongly identified with Tishtrya, but who is, in reality, another divinity altogether. The Armen. Tiur (which Jensen, *Hittiter und Armenier*, pp. 186–187, endeavours to derive from Armen. *dpir*, 'writer,' 'scribe,' which would be a title of the Bab.-Assyr. Nabu, who was both the scribe of the gods and the planet Mercury [Orelli, *Allgem. Religionsgesch.*, Bonn, 1899, pp. 185–186]) is undoubtedly identical with Tīr, whose name is so often used in such theophorous compounds as Tiridates and Tiribazus (cf. Nöldeke, *SWAW, phil.-hist. Classe*, cxvi. 417–420; Justi, *Iranisches Namenbuch*, Marburg, 1895, p. 325 ff.), and who was widely known and honoured as an independent deity, being probably identified with the planet Mercury, although Tīr is not found in Armenian with this meaning.

Both in Cappadocia and in Armenia the fourth month was consecrated to this Tīr; and this was also true of the Parsi calendar, although, for theological reasons, the Parsis later made Tīr the equivalent of Tishtar (cf. *Bundahishn* xxv. 3, with *Āfrīngan* iii. 8).* The Armenian Tīr was famous as 'the interpreter of dreams,' as the tutelary deity of arts and learning, and as the scribe of Ormizd (Agathangelos, p. 584). Among the Armenians of modern times 'the writer' (very probably Tīr) has much to do with human fate and death. 'The writer take him!' is a common imprecation.† Tīr is, therefore, the Armenian Nabu, and there can be little doubt that the description given of him by Agathangelos whose Greek translator equates Tīr with Apollo (Lagarde, *Gesammelte Abhandlungen*, Leipzig, 1866, p. 294), agrees, in the main, with the general belief among other Oriental nations about Tīr.‡ In fact, the planet Mercury also is known among the Persian poets as 'the writer' (Stackelberg). The expression 'Scribe of Ormizd' applied to Tīr in Agathangelos has a Persian tinge, for the Armenians very seldom used the name Ormizd for their own Aramazd.

(6) *Mithra.* — Last, but by no means least, among the Zoroastrian *yazatas* is Mithra, the genius of the light of the heavens, and the god

* The Zoroastrian calendar also devotes the thirteenth day of each month to Tishtrya (Avesta) or Tīr (Pahlavi) (cf. *Sīrōza*, i. 13, ii. 13; *Yasna* xvi. 4, with *Bundahishn* xxvii. 24). That Tīr here refers primarily to the planet Mercury, and not to Tishtrya (Sirius), is confirmed by al-Bīrūnī's statement, in his account of the Tīragān, celebrated on the day Tīr of the month Tīr (*Chronology*, pp. 205–206): 'The name of this day is Tīr or Mercury, who is the star of the scribes.' The difficult problem of the replacing of Tīr by his opponent Tishtrya (cf. Spiegel, *Avesta Uebersetzt*, Leipzig, 1852–1863, iii. Introd. 21–22; Nöldeke, *loc. cit.*) is perhaps best explained by Justi, *op. cit* p. 325: 'Da die Planeten später als feindliche Wesen galten ward Tīr als Schutzgenius des 4. Monats und des 13. Monats tages durch den Tištrya (seinen Gegner) ersetzt; im Alterthum galt Tīr als guter Genius, wie die Eigennamen, deren ersten Theil sein Name bildet, beweisen.' The derivation of Tīr, 'Mercury,' is uncertain.—[Louis H. Gray].

† Cf. also Abeghian on the Groλs, or the 'writers,' as spirits of disease (*op. cit.* pp. 122–123). The words *Tīr* and *Tī* were also used as exclamations: '*Tīr*, forward!' Their relation to the deity's name, however, is not quite certain.

‡ In Egypt this god had his parallel in Thot, the moon-god of Chemun (de la Saussaye.† 207)

of truth and faithfulness, whose praises are especially celebrated in the tenth *yasht*. Derzana was the centre of Armenian Mithra-worship, and he also had a famous temple in the sacred village of Bagayarinj (Agathangelos, p. 515), although we have no proof whatever that Mithraism had obtained any foothold in Armenia proper. Mihr, the Armenian Mithra, was specially called the son of Aramazd (Agathangelos, p. 593; cf. *Yasht* xvii. 16); but, owing to the strong worship of the sun and Vahagn among the Armenians, he does not seem to have become as prominent in Armenia as in Persia, his place seeming, indeed, to be usurped by Vahagn (see below). Nevertheless, his name occurs frequently as a component part of many proper names of persons, such as *Mihran*, *Mihrdat* (Mithridates), and *Mehružan* (Hübschmann, *Armen. Grammatik*, i. 52–54), while the Armenian *mehean*, 'pagan temple, idol, altar,' has also been traced to the same source (cf. Hübschmann, *op. cit.* i. 194). The seventh month of the year and the eighth day of each month were his; and in the Zoroastrian calendar the seventh month and the sixteenth day were consecrated to him. We know nothing, however, of the functions or other duties of the Armenian Mithra.

(7) *Fravashis.*—Chief among the Zoroastrian *fravashis* (lower angels), is Verethraghna, the genius of victory, to whom the Avesta consecrates the fourteenth *yasht*. Like Mithra, he is of Indo-Iranian origin. In Pahlavi times his name was thinned down to *Bahrām*, often used by Persian kings, and in Armenian to *Vāhrām* and *Vŕam*. It is also very possible that Vŕt'anēs, the name of the second son of Gregory the Illuminator, reflects the Parthian form for *Verethraghna*. Since Lagarde, there has been a strong tendency to identify the Armenian Vahagn, probably the god of war and victory (Agathangelos, p. 106), with Verethraghna. According to Armenian phonetic laws, this is quite possible, although the termination *-agn* and the complete disappearance of both *r*'s constitute a difficulty. There was, moreover, a noble family called the *Vahevunis* (Elisæus, pp. 70, 127, 160, 173); while the list of the Armenian nobles in Mesrop's *Life of St. Nerses* gives *Vohevuni* (p. 33), but further below it adds the *Vahuni* (p. 34) as a different family. Moses of Chorene (i. 31, ii. 8, 12, 88) knows a priestly family of the name of *Vahnuni*, whom he makes descendants of Vahagn. Probably in all these cases Vahagn was the tutelary god, and the first syllable of his name was treated as independent.

Although in the ancient Armenian triad of Aramazd, Anahit, and Vahagn (Agathangelos, p. 106), Vahagn has the place of Mithra in the Old Persian triad (Art. Sus. a, 5; Ham. 6), he must be interpreted, despite the minor phonetic difficulties already mentioned, from the Avesta Verethraghna. Essentially a deity of victory, the latter fittingly declares: 'I will conquer the malignancies of all the malignant: the malignancies of demons and men, of wizards and witches, of oppressors, *kavis*, and *karaps*' (*Yasht*, xiv. 4), while the very form of his name recalls its Sanskrit equivalent *vŕtrahan*, the Vedic epithet of Indra as the slayer of the cloud-demon Vŕtra. The reflexion of his career in the Avesta is seen in the statement that 'Vāhrām the victorious is the stimulator of the warlike' (*Shāyast-lā-Shāyast*, xxii. 20), although the Iranian texts preserve no tradition of his conquests over dragons in the strict sense of the term. On the other hand, in Hellenic times Vahagn was compared with Herakles, and called the dragon-killer (Agathangelos, p. 606), while the Greek Agathangelos translates *Vahagn* as Ἡρακλῆς, and, reversing the process, the Armen. version of 2 Mac 4[19] renders Ἡρακλῆς by *Vahagn*. Ancient Armenians told, moreover, of Vahagn's stealing straw from Barsham (the Syrian god Ba'al-Shemīn, 'Lord of Heaven'), which he let drop on the way, thus forming the Milky Way (Anania Shiragaçi, p. 48; cf. Abeghian, *Armenischer Volksglaube*, pp. 49–50). The Vahagn-song, the parallelism of Vahagn with Herakles, and his relations to Mithra and Barsham, tend to create the presumption that he was also a sun-god. The most famous temple of Vahagn was in Yashtishat in Taraun* (Faustus of Byzantium, iii. 14; Agathangelos, pp. 606–607), where he was also known as the lover of Astłik, the Syrian Aphrodite (Agathangelos, p. 607; Moses of Chorene, p. 88).

II. *INFERNAL HOSTS.*—1. Ahriman.—Ahriman (Armen. *Arhmn*) is never referred to in connexion with ancient Armenian paganism; but the absence of his name may be easily understood when we remember that, while Christian writers had a reason for arguing against the ancient deities, Ahriman (*q.v.*) and his retinue naturally coincided with Christian demonology. Other Zoroastrian evil spirits were known among the Armenians, however; and Ahriman could hardly fail to be known as their chief. Alishan (*Ancient Faith*, p. 210) suggests, with some plausibility, that he was known under the name of Çar, 'the evil one,' a word which is frequently found in that sense in Armen. theological writings and old popular spells. Besides *Arhmn*, the forms *Haraman(i)* and *Kharaman(i)* were also current in Armenia, *Haraman* being apparently the older (Arsacid) and *Arhmn* the younger (Sasanian) form (Hübschmann, *op. cit.* i. 26–27); so that the pagan Armenians possibly used *Haraman* to denote the Ahriman of their religion. Haramani is used as an epithet of snakes by Abraham of Zenag, a 5th cent. writer.

2. Demons.—Of the six Zoroastrian archdemons there is no mention. The *Asmodæus* of the Book of Tobit (3[8] etc.) was transliterated by the Armenians as *Azmod*, which plainly shows that the name suggested nothing familiar to them.† The word *dev* (Avesta *dæva*), 'demon,' was current among the Armenians, although they had also native words like *ais*. The *devs* preferred stony places (Moses of Chorene, iii. 55) and ruins (Eznik, p. 98). They appeared as serpents (Faustus of Byzantium, v. 2) and in many other monstrous forms (Eznik, p. 98); some of them were corporeal, others incorporeal (*ib.* p. 97).

The *družes* were lying, perjuring, harmful spirits, probably believed to be feminine, like their Avesta counterparts, the *drujes*. What the Avesta says in regard to their third mode of self-propagation—by the semen emitted in the *pollutio nocturna* (*Vendīdād* xviii. 45–52)—seems to have been a current belief among the Armenians (Eznik, p. 178; Abeghian, *Armen. Volksglaube*, pp. 35–36). The *yātus*, 'sorcerers' of the Avesta, who were able even to slay men (*Vendīdād* vii. 3), are well known and much feared among the modern Armenians as *jatuks*. The *pairikās* (Armen. *parik*), destructive female demons (cf. *Yasna* xvi. 8; *Yasht* viii. 54, xiii. 104; *Vendīdād* i. 9, xi. 9), were also believed in, but Eznik (p. 97) classes them with such chimeras as the *yuškapariks* and *hambarus* (see below).

3. Monsters and chimeras.—Aždahak (Avesta *Aži Dahāka*) and Višap, especially the latter, occupied a large place in ancient Armen. superstition; and Moses of Chorene (i. 30) states that

* This temple was called the 'eighth sanctuary' (Agathangelos, p. 606), possibly because Vahagn-worship, and specially this temple, rose to importance long after the seven main sanctuaries (Agathangelos, p. 34) had established themselves.

† It should be noted that the divergences between the Jewish אשמדאי and the Avesta *aēšma*, '(demon of) wrath,' are so grave that the usual view that the two are identical is not free from suspicion (cf. Ginzberg in *JE* ii. 219).—[Louis H. Gray].

Aždahak is, in Armenian, the same as Višap. The latter word is, it should be noted, a loan-word from the Avesta *ārəš λεγόμενον višāpa*, 'whose saliva is poison,' used as an epithet of *uži*, 'serpent,' in *Nīrangastān* 48. The story of the war between Aždahak of Media and Tigranes I. (i. 24–30) probably contains traces of an old dragon-legend. In a later chapter Moses states that Aždahak was fettered and imprisoned in Mount Dembavend by Hruden, escaping only to be recaptured and guarded by his conqueror in a cave of the same mountain; just as, in Zoroastrian legend, Aži Dahāka, after a reign of 1000 years, was enchained by Thraētaona (Armenian, Hruden; Pahlavi, Frēṭūn) under Dimāvand, whence he is to arise at the Last Day and be slain by Sāma Keresaspa (*Bundahishn* xxix. 9; *Dāṭistān-ī Dēnīg* xxxvii. 97; *Dīnā-ī Maīnōg-ī Khraṭ* xxii. 38–39; *Dīnkarṭ* vii. 1, 26). Moses likewise records that Aždahak was kissed on the shoulders, and that from this kiss sprang serpents, which were fed on human flesh.* Though the extant Avesta does not note this, Aži Dahāka there being 'three-mouthed and three-pated' (*Yasna* ix. 8), the *Dāṭistān-ī Dēnīg* (*loc. cit.*) alludes to it in describing Dahāk, 'on whom most powerful demons and fiends in the shape of serpents are winged.' The legend is further elaborated by Firdausi in the *Shāh-Nāmah* (ed. Vullers-Landauer, 28, 99–30, 144; 35, 12–14), according to whom the kiss was bestowed by Iblīs. The legend of Aži Dahāka was also treated at length in the twentieth section of the lost *Sūṭkar Nask* of the Avesta (*Dīnkarṭ* ix. 21).

The *višaps* (Eznik, pp. 102–107) were corporeal beings which could appear both as men and as serpents, and could soar in the air by the help of oxen (?). They were fond of carrying the grain away from the threshing-floor, either by assuming the shape of mules and camels, or by real mules and camels of their own. In such cases, the Armenians called '*Kal ! kal !*' 'Stop ! stop' (Eznik, p. 103). They also sucked the milk from cows (Vahram Vartabed [13th cent.], quoted by Alishan, *Ancient Faith*, p. 172). The *višaps* went hunting on horseback; they had houses (Eznik, pp. 104, 107; cf. also *Yasht* xv. 19, and Darmesteter's note, *ad loc.*, on the palace of Aži Dahāka). They kept royal princes and heroes captive (Eznik, p. 104), among whom were Alexander the Great and Artavazd, king of Armenia (p. 105). They sometimes appeared enormous, and compelled men to worship them (p. 105). They entered into human beings; their breath was poisonous (p. 107). There was a whole colony of them at the foot of Masis (Moses of Chorene, i. 30), with whom Vahagn fought (*ib.* i. 31; Agathangelos, p. 607), and who later stole the child Artavazd and left a *dev* in his stead (Moses of Chorene, ii. 61; cf., further, on the *višap*, Abeghian, *op. cit.* pp. 78–83).

Closely connected with the *višaps* were the *nhangs* (Eznik, pp. 102–107)—a term borrowed from the Pers. *nihang* 'alligator, crocodile.' They lived chiefly in the rivers (Eznik, p. 106). According to Eznik, both *višaps* and *nhangs* appeared in deceptive forms, but the former were 'personal' (spirit-like), while the latter were not so (p. 102), so that he specifically declares: 'There is no personal *nhang*' (pp. 103, 107). Although they could assume different forms, they had no body (p. 102). Preferably they appeared as women (mermaids ?) in the water (p. 106); but at other times they became seals, and, catching the swimmer by the feet, dragged him to the bottom (*ib.*). An unpublished manuscript of the *Geography* ascribed to Moses of Chorene in like manner reports the general belief that there were *nhangs* in the Araçani, a tributary of the Euphrates, as well as in the Euphrates itself. They used their victims for their lust, and then sucked their blood and left them dead. The Armen. translators use the word *nhang* for 'hippopotamus' and 'crocodile.'

The *šahapets*, or 'protectors' (cf. Avesta **šōiθ rapaiti*, 'protector of the homestead,' Skr. *kṣetrapati*, 'lord of a field'), are mentioned in Agathangelos as the protecting genii of graves (p. 56). They appeared in the shape of men or serpents, like the *višaps* (Eznik, p. 106), and kept the vineyards and olive trees, according to the ancient Armen. tr. of St. John Chrysostom on Isaiah.

Another class of fabulous monsters which seem to have a Persian origin is that of the *hambarus*. According to von Stackelberg, *hambaruna* in Persian means 'genius of houses,' but we know little as to how the *hambarus* were imagined. In the Armen. tr. of the LXX Is 34^{13} the word is used to render *σειρήνων* (Vulg. *draconum*). They were female beings, had a body, and were probably thought to live on land. 'They were born and they died,' says Eznik (p. 97), who mentions them along with *yuškapariks* and *pariks*. The *yuškapariks*, or 'ass-*pariks*' (cf. Pers. *vušk*, 'ass'), used to render *ὀνοκένταυροι* in LXX Is 13^{22} $34^{11.\ 14}$, lived chiefly in ruined places (Eznik, pp. 97–98), while the *pariks*, to whom allusion has been made above, were seductive female demons, living not only in the water, but also in forests and meadows, as well as on the banks of streams. They are, primarily, water-deities, and correspond closely to the European mermaids, whom they also resemble in their frequent intrigues with mortal lovers. This erotic trait is an evident reminiscence in Armenia of the seductive *pairikās* of Zoroastrianism (see above; cf. also Abeghian, *op. cit.* pp. 103–104). Eznik (p. 99) likewise mentions the *covaçuls*, or 'sea-bulls,' which lived in lakes, propagating through kine, they themselves being born of cows. He also alludes to *pays*, which were born of men (pp. 98–99), and must doubtless be distinguished from the *pariks*. All these beings, as well as the *arłēz*, were held to be generally invisible, though occasionally they were seen of men (Eznik, p. 99). There are, moreover, other classes of demons in Armenian faith, such as the *yaveržaharsunks*, *k'ajk's* (husbands of the *pariks*), *mardagails* ('werwolves'), *als* (corresponding roughly to Lilith), the 'evil eye,' and disease-demons of various sorts (cf. Abeghian, *op. cit.* pp. 102–110, 116–127). Another clear survival of Armen. Zoroastrianism is the horror felt towards snakes, frogs, and ants (Abeghian, *op. cit.* pp. 30–31; cf. *Vendīdād* xiv. 5, and Darmesteter's note, *ad loc.*; Herodotus, i. 140), while the cat is an uncanny object, as in Parsi belief (Darmesteter, *loc. cit.*; *SBE* xviii. 419, where a demoniac father is attributed to it).*

III. *DEATH AND THE FUTURE LIFE.* — The abode of evil spirits and of the wicked dead was called *Džokhk'* (Pers. *Dūzakh*), and perhaps also *Sandaramet* (see above). We have absolutely no description of the Armen. Hades or Paradise; and the Avesta *garō-nmāna*, 'house of song, paradise,' appears in Armenian in the loan-word *gerezman*, 'grave.' After death, the soul lingered around the body until the corpse was buried, after which it remained in the vicinity of the grave or of its former dwelling for a year, though in later Armenian belief it passes to the future world within a day after burial (Abeghian, *op. cit.* p. 18). On its way, as in Iranian eschatology, the soul had to

* Faustus of Byzantium also (v. 22) tells a similar legend of King Pap.

* On the other hand, the Armenians lack the extreme veneration for the dog which is so characteristic of the Avesta (cf. *Vendīdād* xiii., xv. 5–6, 19–51; *Dīnkarṭ* viii. 23), so that *šun*, 'dog,' is also used in the sense of 'adulterer.'

cross a hair-bridge; if righteous, it reached the opposite shore in safety; if sinful, it dropped down into the stream of hell-fire. There was a middle place for those that were neither good nor bad (Abeghian, p. 20).*

We find absolutely no trace, however, of *dakhmas*, or 'towers of silence,' or of the custom of exposing bodies. On the contrary, there were great mausoleums for kings in the ancient city of Ani, and graveyards outside the cities. We also know that the Achæmenian kings did not obey the Avesta injunction concerning the exposure of dead bodies; while, according to Herodotus (i. 140), the Persians covered the corpse with wax and then buried it.

The Armenian burial-customs seem to have been more akin to the ancient Babylonian (Jeremias, *Hölle und Paradies bei den Babyloniern*, p. 10 ff.). The friends and relatives of the deceased came to the ceremony of wailing (Faustus of Byzantium, iv. 15); and at the funerals of the rich, professional mourners were employed (Moses of Chorene, ii. 60), led by the 'mother of the dirge,' who sang the story of the life and death of the deceased, while the nearest relatives tore their garments, plucked their hair and screamed (Faustus of Byzantium, *loc. cit.*). They cut their arms (?) and faces (*ib.* v. 31). During the funeral they had music, produced by horns, violins, and harps. Men and women danced facing each other, and clapped their hands (*ib.*). Johannes Garneçi (quoted by Alishan, *op. cit.* p. 413) says: 'Forbid wailing (over the dead) . . . cutting of the hair, and (other) evil things.' When the deceased was a king or a great personage, servants and slaves committed suicide over his grave (Moses of Chorene, ii. 60). Ancient gravestones are found in the shape of horses and lambs, perhaps symbolic of sacrifices for the dead. The modern custom of distributing bread and raisins and strong drink after the burial, moreover, is probably a survival of an ancient sacrificial meal (cf. Abeghian, *op. cit.* pp. 20–23). To this day it is quite customary to make two holes on the gravestones.

Death was a decree of fate (Eznik, p. 153), inevitable (p. 161), and foreordained (p. 162). In fact, the whole life of man was thought to be led by Fate (Ohan Mantaguni, quoted by Alishan, *op. cit.* p. 411). Later Armenians also spoke of Hogëar, the 'soul-taking' angel, who is frequently identified with Gabriel (Abeghian, *op. cit.* p. 17).

There is little to be said about the eschatology of the Armenians, although they certainly believed in resurrection and immortality.

There is an ancient Armenian legend about the end of the world. Artavazd, son of king Artashes, seeing that many people committed suicide over his father's grave, said, 'Thou didst depart, and tookest with thee the whole country. Shall I rule over ruins?' Thereupon his father cursed him, saying:

> 'When thou goest a-hunting
> up the venerable Masis,
> May the *K'ajk's* seize thee and
> take thee up the venerable Masis!
> There mayest thou remain and see no light!'

Artavazd is said to have perished, while on a hunting party, by falling with his horse from a high precipice. One Armenian legend says that he is chained in a cave of Masis, and two dogs, gnawing at his chains, try to set him free in order that he may bring the world to an end. The chains become very thin about the season of Navasard (New Year's festivities in August). Therefore, on those days the blacksmiths used to strike a few blows with their hammers on their anvils in order to strengthen Artavazd's chains and save the world, a custom which was continued even into Christian times (Moses of Chorene, ii. 61; Eznik, p. 105). This legend seems to have some affinity with that of Biurasp Aždahak, which Moses of Chorene gives at the end of the first book of his *History of Armenia* (see above).

* The belief that the soul remains on earth for a year seems to be Muhammadan (Wolff, *Muhammed. Eschatol.*, Leipzig, 1872, pp. 78–79; cf. Rühling, *Beiträge zur Eschatol. des Islam*, Leipzig, 1895, p. 43); while the Iranians held that it journeyed to the place of first judgment at dawn of the fourth day after death (*Yasht* xxii. 7, 25; *Dâtistân-i-Dênîg* xx. 2–3; *Dînâ-i Maînôg-i Khrad* ii. 114–115, 161; *Artâ-i Virâf* iv. 9–16). The bridge in Armenian belief is obviously the *činvat*-bridge of the Avesta—which is fully described in *Dâtistân-i-Dênîg*, xxi. 3–7, and which occurs not only in Iran but in India, mediæval Europe, and elsewhere (Scherman, *Materialien zur Gesch. der ind. Visionsliteratur*, Leipzig, 1892, pp. 102–110, 117–119; Becker, *Contribut. to Compar. Study of the Mediæval Visions of Heaven and Hell*, Baltimore, 1899, pp. 18, 44, 76, 83, 90, 97), as well as in Muhammadanism (Rühling, *op. cit.* pp. 62–63). The 'middle place,' moreover, finds its Iranian source in *Hamêstagân*, 'ever-stationary' (*Artâ-i-Virâf* vi.; *Shayast-lâ-Shâyast* vi. 2; *Dînâ-i Maînôg-i Khrat* vii. 18–19, xii. 14; *Dâtistân-i-Dênîg*, xxiv. 6, xxxiii. 2), where dwell the souls of those whose good and evil deeds exactly balance each other.

IV. *WORSHIP AND CEREMONIAL.*—There were probably temple-books which Christianity systematically destroyed. The temples were numerous, both in the country and in the cities; and there were also special temple-towns, such as Bagavan and Yashtishat, containing several important sanctuaries. Christian churches and monasteries succeeded both to the wealth and to the veneration belonging to the ancient sacred sites. Of ancient open-air worship we hear nothing, but there were sacred places on mountain tops, like the throne of Nahata (Faustus of Byzantium, v. 25). Besides the ordinary temples, the Armenians boasted, like other neighbouring and distant nations, seven main sanctuaries (Agathangelos, p. 34), which were often the scenes of great concourses of people gathered there for worship and religious festivities. Treasure-houses were connected with the great sanctuaries (*ib.* pp. 586, 591, 594; Moses of Chorene, ii. 48; Thoma Arṭsruni, i. 7), as they now are associated with the churches. Tiridates and Gregory plundered many of these on behalf of the poor and of the Church, during their campaign against the pagan sanctuaries of Armenia; and images and statues of deities were common, at least in later pagan times (Agathangelos, *locc. citt.*; Moses of Chorene, ii. 14).

Agathangelos (p. 34) describes the sacrifices of Chosroës after his return from victorious incursions.

'He commanded to seek the seven great altars of Armenia, and he honoured the sanctuaries of his ancestors, the Arsacids, with white bullocks, white rams, white horses and mules, with gold and silver ornaments and gold embroidered and fringed silken coverings, with golden wreaths, silver sacrificial basins, desirable vases set with precious stones, splendid garments, and beautiful ornaments. Also he gave a fifth of his booty and great presents to the priests.'*

In Bayazid (the ancient Bagravand) an old Armenian relief was found with an altar upon which a strange animal stands, and on each side a man clothed in a long tunic. One is beardless, and carries a heavy club. The other has a beard. Their head-gears, Phrygian in character, differ in details. Both of them raise their hands in the attitude of worship (Alishan, *op. cit.* p. 161).

The prevalent word for a pagan priest in Armenian, *k'urm*, is a loan word from the Syriac *kûmrâ*, 'priest,' although *mog*, 'magian,' may also have been used. The place of sacrifice was perhaps called *spandaran* (connected with Avesta *spenta*, 'holy'), a word which is now current only in the sense of 'slaughter-house.' This makes it possible that originally slaughtering had a sacrificial character. Christianity did away with all impure rites and human sacrifices which were of a local character, but animal sacrifices survived the fall of paganism (Conybeare in *AJTh* vii., 1903, p. 63).

In many of the sanctuaries, which, like the modern monasteries, were also places of religious hospitality, particularly in the country, sacrifices were distributed to strangers (Moses of Chorene, ii. 66). Besides animals, flower-wreaths and green twigs (the *barsom* of the Avesta?) were offered (Agathangelos, p. 49), and probably also fruit and money.

The priesthood must have been hereditary in a well-organized caste. There was a high priest, sometimes of royal blood (Moses of Chorene, ii. 53, 55), and the *Vahunis* are mentioned as a priestly family by Moses of Chorene (ii. 8), while another priestly family was perhaps that of the *Spandunis*. The priests were probably very numerous in temple-towns, and they certainly possessed great wealth and extensive lands and villages, which were later confiscated for the benefit of the Christian Church (Agathangelos, pp. 586 ff., 590, 594, 610). Of native Armenian magi as a caste

* Sacrifices were occasions of great rejoicing, and it would seem that not only the flesh of the animals, but also their blood, was consumed (Agathangelos, pp. 73–74; Faustus of Byzantium, iv. 4).

we have no record, although we read of magians (Moses of Chorene, ii. 48). The existence of priestesses in ancient Armenia is not absolutely certain, although we have the old compound *krmanuish* meaning 'priestess.'

A critical study of the Armenian Church calendar and ceremonies would probably reveal much that could be referred to the pre-Christian ritual. During Lent, for example, the morning service is opened with an abjuration of the devil and all his works—an elaborate formula, which is recited while the whole congregation turn their backs to the altar and look towards the west, with arms hanging rigidly at the sides. Although the abjuration is usual in the baptism of all ritualistic churches, this particular form may well have been derived from the ancient cult of the country. Evidently the Armenians considered the west as the abode of the devils, for Eznik says in his aphorisms (p. 313): 'Honey is sweet, but it harms a diseased body. Good counsel and rebuke are useful, but they do not benefit those who have set their faces westward.'*

The old Armenian calendar also bears traces of ancient Persian influence. *Trē* (Tīr), *Mehekan* (Mithra), *Ahekan* (Atarš), and *Hrotiç* (Pahlavi *Fravarţigān*) are common also to the Persian year (cf. art. CALENDAR [Persian]). The other months of the ancient Armenian calendar have names of Armenian and perhaps also two of Caucasic (Georgian) origin (Hagopian, 'Armenian Months,' in *Banssēr*, 1900; Gray, 'On certain Persian and Armenian Month-Names as influenced by the Avestan Calendar,' in *JAOS* xxviii.). The names of the days of the month, as given by Shah Tchrped (Alishan, *op. cit.* p. 143), have but few points of contact with the Zoroastrian (*Yasna* xvi. 3–6; *Sīrōza* i.–ii.; *Bundahishn* xxvii. 24; *Shāyast-lā-Shāyast* xxii.–xxiii.; al-Bīrūnī, *Chronology*, p. 53).

The Armenians shared with the Persians some of the characteristic superstitions and usages of the Avesta. One of them is the evil eye (*Vendīdād* xx. 3, 7, xxii. 2; *Bundahishn* xxviii. 33, 36). In Moses of Chorene, ii. 47, we read that king Ervand had so powerful an evil eye that he could break stones asunder by looking fixedly at them. The general belief is that people upon whom the evil eye is cast pine away without knowing the cause of their ailment, and nothing is safe from it. There are special prayers and ceremonies to break the spell of the evil eye (Alishan, *op. cit.* p. 385; Abeghian, *op. cit.* pp. 123–127). The modern Armenians have the same abhorrence for parings of nails and hair as the Avesta (cf. *Vendīdād*, xvii.); nor may fire and water be defiled (Abeghian, *op. cit.* pp. 57–58, 66). These superstitions of the later Armenians, like many other beliefs noted above, were probably imported in ancient times. Among the greatest requirements of the Avesta we find next-of-kin marriages (cf. Justi in *Grundriss der iran. Philologie*, ii. 434–437; Jackson, *ib.* 682, and the references there given). The only well-known instance of this in Armenia is the marriage of Tigranes III. with his sister Erato, a few years before the Christian era, although it seems to have been frequent among the nobles (Moses of Chorene, iii. 20; Faustus of Byzantium, iv. 4).

V. *CONCLUSIONS.*—Our study suggests the following reflexions:—(1) Great as is the mass of Zoroastrian material in Armenian paganism, it has also serious gaps. Was it ever complete? (2) We find the existing material in a quite uncertain shape. The substantial deviations from Zoroastrianism are considerable, as in the case of Anahit and in the worship of fire and water. The Zoroastrian angels are full-fledged deities in Armenian paganism; but primitive traits are not lacking, as in the case of Spenta Armaiti. (3) There is no trace of a highly developed system of theology, ritual and legalistic observance, as in Zoroastrianism. Abstract beings, the personifications of ideas, virtues, and vices, are quite absent. We find no theological systematization of the heavenly army, no developed dualism, no caste of magi, and no widely spread fire-altars. (4) There is no record of any Zoroastrian propaganda in Armenia, or of any religious fellowship between Persia and Armenia. When the Sasanians persecuted Christian Armenia, about A.D. 450, they said nothing about a return to the ancient faith, nor did the Armenians ever call their paganism Zoroastrian. (5) It is probable that Zoroastrianism gradually penetrated Armenia under the Achæmenian kings and under the Arsacids, but we have no exact knowledge as to when or how. (6) The study here presented must not be regarded as a complete picture of Armenian paganism. Both the pantheon and the world of minor spirits contained other non-Zoroastrian names and beliefs which have been omitted; but the old religion of Armenia was mainly Iranian, and may be described as Zoroastrianism of a corrupt type.

It is probable that the ancient Armenians themselves conceived their pantheon as containing the following deities: Aramazd, as chief god; Anahit, as chief and favourite goddess; Vahagn, as the national god of war and heroism; the sun and the moon; Mihr; and Tīr as the god of human destiny, whose relation to learning and eloquence has a Greek flavour. Deities of a lower magnitude of importance disappeared more easily from the popular memory. Along with these Persian deities, there were also an Elamitic goddess Nanê (the Babylonian Nanâ, cf. also the 'Persian' goddess Nanæa of 2 Mac 1[13]), the Syrian Astâik (Venus), and the Syrian Barsham (Ba'al-Shemin). These three must have migrated into Armenia during post-Alexandrian times, perhaps *Doppelgänger* of some of the native deities, though whether they formed a group, Barsham-Astâik-Nanê, corresponding to Aramazd-Anahit-Vahagn, as Jensen (*Hittiter und Armenier*, p. 181 ff.) suggests, is a less plausible hypothesis. At all events they soon asserted themselves as independent and separate deities, so that Astâik could become the paramour of Vahagn and have a temple in the sacred town of Yashtishat, where Anahit also had a sanctuary. After Alexander, and especially in Roman times, the Armenians came under strongly Hellenistic influences, and began to seek parallels between the Greek and their own deities. It would also seem that during this period the worship of the sun and the moon became somewhat neglected. Otherwise, we cannot understand why Agathangelos makes so little of them. The ancient Armenians were also very much given to divination and witchcraft (Moses of Chorene, i. 30, ii. 66; Ohan Mantaguni, *op. cit.* xxvi.; Alishan, *op. cit.* pp. 360–409).

M. H. ANANIKIAN.

ARMENIA (Christian).—I. *THE BEGINNINGS OF CHRISTIANITY.*—The national legends and traditions of Armenia are rich in information regarding the introduction of Christianity into the country.

* In the Avesta the north is the dwelling-place of evil spirits (*Vendīdād* vii. 2, xix. 1; *Arţā-ī-Vīrāf* xvii. 11).

In particular, it is said to have been preached by Apostles or disciples of Apostles, such as St. Bartholomew and St. Thaddæus. But it has been proved that these legends did not appear till late in the literature of Armenia, and that they were borrowed largely from the literature of Greece. Christianity certainly penetrated to Armenia, as elsewhere, by means of the living voice. The Apostles and their successors had early formed the habit of visiting the Churches founded by them; and the teaching of the gospel was continued and propagated in the Christian communities long before written documents came into use; but the names of these first preachers have not come down to us with any certainty. Yet, however meagre the information furnished by history may be, we are quite entitled to maintain that Christianity reached Armenia through Antioch, before the time of Gregory the Illuminator. The first Christian documents that the Armenians made use of were written in Syriac, and this language was used in the Armenian liturgy till the reform of Gregory the Illuminator. After Antioch we might mention Edessa and Nisibis as centres from which Christianity spread into the different provinces of the kingdom of Armenia.

LITERATURE.—The works, in Armenian and in translation, of Armenian writers: Koriun, Elisæus the Teacher (*Vartabed*), Eznik, Agathangelos, Lazarus of Pharpe, Sebeos, Zenobius of Klag, Faustus of Byzantium, Moses of Chorene. A. Lipsius, *Die apokr. Apostelgesch. und Apostellegenden* (Brunswick, 1883–1890); A. Carrière, *La Légende d'Abgar dans l'histoire d'Arménie de Moïse de Khoren* (Paris, 1895); H. Gelzer, 'Die Anfänge der armen. Kirche' in *Berichte der königl. Sächs. Gesellschaft der Wissenschaften*, phil.-hist. Classe (1895); Petit,* fasc. vii. col. 1892–1893.

II. *EXTENSION OF CHRISTIANITY IN ARMENIA.* — St. Gregory the Illuminator. — Gregory the Illuminator belonged to the royal race of the Arsacids. When quite young he escaped the massacre of his family (A.D. 238), and took refuge in Roman territory. He studied at Cæsarea, and returned to Armenia when the kingdom was re-established under Tiridates II. (A.D. 261). After being persecuted for his faith, he attained to honour, and baptized the king and a large number of his subjects. He went again to Cæsarea, where he was consecrated bishop by Bishop Leontius, thus forming the link of spiritual connexion between the Cappadocian metropolis and the young Armenian Churches. When he was made bishop, Gregory fixed his residence at Yashtishat, and had a church and an episcopal palace built there. He substituted Armenian for Greek as the language of the liturgy, in order to have easier access to the masses of the people, and created twelve episcopal sees, at the head of which he placed, as titulars, converted pagan priests. He instituted ecclesiastical offices, making them hereditary in the sacerdotal families, and he created in his own family the supreme office of *Catholicos*. At first this title designated only the principal bishop of the country; later it came to mean an independent patriarch. The Gregorian and national Armenian Church, founded afterwards, lived its own autonomous life, while recognizing for some years a sort of supremacy in the mother Church of Cæsarea.

LITERATURE.—Mgr. Ormanian, *Le Vatican et les Arméniens* (Rome, 1873); von Gutschmid, *Kleine Schriften* (Leipzig, 1892); H. Gelzer, 'Die Anfänge der armen. Kirche' in *Berichte der königl. Sächs. Gesellsch. der Wissensch.*, phil.-hist. Classe (1895); Petit,* fasc. vii. col. 1893; S. Weber, *Die katholische Kirche in Armenien* (Freiburg, 1903); Malan, *Life and Times of St. Gregory* (Eng. tr. 1868).

III. *THE GREGORIAN ARMENIAN CHURCH.*— 1. Doctrine.—The creed of the Armenian Church is identical with the pseudo-Athanasian Creed which was introduced into Armenia by the Syrians, and in the 6th cent. took the place of the Nicene Creed. In the 14th cent. another creed was much in use in the Armenian Church. It was a compilation of formulas borrowed from various creeds, and was current until the middle of the 19th century. The religious heads of the Armenian Church several times formulated *professions of faith* intended to complete, explain, and fix the meaning of the Armenian Creed. We must mention the profession of faith addressed in 1166 by Nerses Shnorhali to Manuel Comnenus; that presented to pope Pius IV. by Abgar, the Ambassador of the Catholicos Michael of Etchmiadzin (1562–1563); that of the Catholicos Azarias of Sis (1585); that addressed in 1671 by David, the Armenian archbishop of Iṣfahān, to Louis XIV.; those addressed to the same king by Stephen and James, the Armenian archbishops at Constantinople (1671), and by Gaspar, the Armenian bishop of Cairo. On the other hand, the Roman Curia imposed on the Armenian Church two professions of faith: (1) the constitution of Eugenius IV., *Exultate Deo*; (2) the creed of Urban VIII., intended for all the Christians of the East.

LITERATURE.—Le chevalier Ricaut, *The Present State of the Greek and Armenian Churches, A.D. 1678* (London, 1679); E. Dulaurier, *Histoire, dogmes, traditions et liturgie de l'église armén. orientale*[2] (Paris, 1857); A. Balgy, *Historia doctrinæ catholicæ inter Armenos* (Vienna, 1878); Aršak Ter-Mikelian, *Die armen. Kirche* (Leipzig, 1892); J. Catergian, *De fidei symbolo, quo Armenii utuntur observationes* (Vienna, 1893); F. Kattenbusch, *Das apost. Symbol* (Leipzig, 1894); Hahn, *Bibliothek der Symbole und Glaubensregeln der alten Kirche*[3] (Breslau, 1897); Macler, Nos. 141, 145.

The following are the chief points of doctrine on which the creed of the Armenian Church differs from that of other Christian communities. As regards the Procession of the Holy Spirit, after much hesitation and even much indifference, the Gregorian Armenians profess that the Holy Spirit proceeds from the Father, and reject the *Filioque*. The Armenians reject the decisions of the Chalcedon Council relative to the Incarnation; they call themselves Monophysites, admitting only one nature in Christ. The Gregorians, in reciting the *Trisagion*, retain the addition *qui crucifixus es pro nobis*, while some Catholic Armenians have rejected it. The Gregorians deny *purgatory*, but they pray for the dead like the Catholics, consecrating to this devotion the day after Epiphany, Easter, the Transfiguration, the Assumption, the Exaltation of the Cross, and the day of the holy Vardanians.

There is diversity of opinion among the Armenian doctors regarding the primacy of the Pope. The patriarchs, being equal in power, are *co-ordinate* the one with the other, and not *subordinate* to a superior patriarch. The Churches were founded by the Apostles and their disciples. These were sent by Jesus Christ, not by Peter; thus nothing enjoins the primacy of the Pope as a fundamental dogma of the Christian Church. The Armenians *baptize* by immersion, repeated at the name of each of the Divine Persons; hence a triple immersion. The anointing is with holy oil, and the person baptized receives the name of the saint whose festival is celebrated on the day of the baptism. Only the priest can baptize, and baptism may be administered even to a child already dead. *Confirmation* follows very soon after baptism. The anointing is done on the forehead, the eyes, the nostrils, the ears, the mouth, the shoulders, the breast, the hands, and the feet. Each anointing is accompanied by a special formula. The Armenians make use of unleavened bread and of wine unmixed with water as elements for the Eucharist. They make confession principally on the occasion of the great festivals, preferably at Epiphany or at Easter. They admit in theory the sacrament of *Extreme Unction*, but they never

* In this art. the foll. abbrevv. are used:—Petit = L. Petit, 'Arménie' in *Dict. de théol. catholique* (Paris, 1902); Macler = F. Macler, *Catalogue des manuscrits arméniens et géorgiens de la Bibliothèque Nationale* (Paris, 1908).

administer it. The Gregorians have a hierarchy of orders very carefully organized, including the office of precentor and reader; then the inferior orders of porter, reader, exorcist, and candle-lighter; and the superior orders of sub-deacon, deacon, and priest. The consecration of bishops is reserved for the Catholicos. Marriage is permitted to the inferior clergy, rigorous celibacy being enjoined only on the vartabeds and the bishops. Women are not excluded from the functions of the deacon. In Anatolia the Catholic Armenian priests are generally married; elsewhere they observe more freely the law of celibacy, which is not obligatory on them. When a priest has to say Mass, he passes the preceding night in the church. When a priest who is already married has to receive ordination, he spends forty days in the church; then there is a social repast, during which the wife of the priest sits on a stool, and keeps her mouth, her eyes, and her ears shut, as a sign of the reserve which she exercises with regard to the functions of her husband.

Issaverdenz, *Rites et cérémonies de l'église arménienne* (Venice, 1876); Petit, fasc. vii. col. 1950–1958.

2. Councils.—Besides the councils common to Christianity, the Armenian Church has national councils, of which the following are the most important. Setting aside the traditional accounts relative to the first councils, the authenticity of which is more than doubtful, we must mention the Council of Yashtishat (*c.* 365 A.D.), held under Nerses the Great. Regulations were laid down regarding the laws of marriage, fasting, hospitals, and the schools where the young were taught Greek and Syriac. The laws for the monastic orders were there determined. Later, Sahak is said to have promulgated in A.D. 426, at a Council of Valarshapat, a certain number of rules intended to regulate the observance of festivals, funeral feasts, and the conduct of the clergy and priests. The canons of the Council of Shahapivan (A.D. 447) have for their special aim the refutation of the heresies which invaded Armenian Christianity and threatened to extinguish it. This was also the aim of the Council of Yashtishat (A.D. 449). At the Council of Valarshapat (A.D. 491) the Armenians made common cause with the Georgians and the Albanians in condemning the Council of Chalcedon; and this decision was maintained and affirmed still more definitely at the Council of Tvin (A.D. 525), where the two festivals of Christmas and Epiphany were fixed for the 6th of January. In A.D. 596 another Council of Tvin condemned the Chalcedon decrees. At the Council of Karin (*c.* 633 A.D.), Heraclius summoned the Greeks and Armenians, and had the union between these two nations proclaimed; the festivals of Christmas and Epiphany were fixed for different days, and the formula *qui crucifixus es pro nobis* was removed from the Trisagion. Another Council of Tvin (A.D. 645), condemned once more the Council of Chalcedon. John of Odzun, who is said to have summoned the Council of Manazkert about A.D. 719, gathered into a volume the canons of the Fathers and of the councils previous to the 8th century. About A.D. 770 the Synod of Partav fixed the books of the Old Testament which the Armenians regarded as authentic, and made rules relating to certain details of ecclesiastical discipline. At the Council of Shirakavan, held in A.D. 862, the Armenians accepted the decrees of the Chalcedon Council, anathematized the Councils of Manazkert, settled the articles of their faith in fifteen canons, and made peace with the Greeks. In the reign of Manuel Comnenus, several attempts were made to bring about a union between the Greeks and the Armenians. They resulted in the Council of Rom-Kla (A.D. 1179), at which Nerses of Lambron delivered a discourse on conciliation which is still famous. At the Council of Tarsus (A.D. 1196), Nerses of Lambron delivered another discourse with a view to the union. The Council of Sis (A.D. 1243) laid down rules regarding the election and nomination of priests, bishops, etc.; the Councils of A.D. 1307 and 1316 ratified the preceding ones, and furnish a complete profession of faith of the Armenian Church at this time. In A.D. 1439 the Armenians took part in the Council of Florence.

Along with these principal councils there were a number of special councils and synods, for the decrees of which we refer our readers to the works which deal specially with them.

3. Festivals.—The Armenian Church celebrates five principal festivals: Christmas, Easter, Transfiguration, Assumption, and Exaltation of the Holy Cross. The day before these festivals is devoted to the Church, the day after to the commemoration of the dead.

The day before Christmas the poor boys of a village or town go from door to door, or from terrace to terrace, holding in their hands lanterns made from gourds, sing a Christmas carol, and receive fruit and cakes as a reward.

The festival of the Transfiguration (*Vardavar*) is called the Festival of Roses, after an old heathen festival which was celebrated on the same day. On the day preceding this festival, the commemoration of the Tabernacle of the Jews is held. On that day people sprinkle each other with water when they meet in the streets; and in certain provinces of Armenia pigeons are set free, either in recollection of the Deluge, or as a symbol of Astlik, the Armenian Venus.

On the day before the Assumption, the vision of Gregory the Illuminator is commemorated.

According to the canons of the Armenian Church, the priests are allowed to receive as offerings the skin and the right shoulder of the animals sacrificed in the churches on the days of the great festivals, in commemoration of the souls of the dead, or in honour of some great saint.

Other festivals play an important part in the religious life of Armenia. The day before *Candlemas* (Presentation in the Temple), fires are lit in the courts of the churches, and the people dance round them, jump over them, and so on.

The festival of *Vičak* (Fate) is one of the principal Armenian festivals, and one of those which seem to be relics of pagan times. It begins on the day before Ascension Thursday, and lasts till the

Sunday of Pentecost. The day before Ascension the young girls of the village meet together and choose several of their number to organize the festival. The members of this committee take a pitcher made of baked clay, fill it with water drawn from seven fountains or seven wells, and close the mouth of the pitcher with flowers gathered from seven fields; then each of the girls throws some object into it (bracelet, ring, button, bead from a rosary, etc.), wishing at the same time some good wish for her father, brother, or sweetheart. They have to shut their eyes while throwing the object into the pitcher and meditate deeply on their wish. On the Wednesday or Thursday night they hide the pitcher in the corner of a garden in the open air, to expose it to the influence of the stars, and they watch that it is not taken by the boys, who prowl about there all night, and try to discover it and carry it off. If the young men succeed in taking it, they give it back to the girls only in exchange for a large quantity of eggs and olive oil, which they have to offer. If, on the other hand, the young men do not succeed in getting possession of the pitcher, the girls sing songs in which they are made fun of (A. Tchobanian, *Chants populaires arméniens*, pp. 57–59; M. Abeghian, *Armenischer Volksglaube*, Leipzig, 1899, pp. 62–66.

Marriage, baptism, and burial are family festivals which are the occasion of special ceremonies and customs in Armenia.

(*a*) *Marriage.*—'Among the Armenians, children are betrothed from their earliest youth, sometimes when only three years old, sometimes as soon as born. When the mothers on both sides have agreed to marry their son and daughter, they propose the union to their husbands, who always sanction the choice of the wives. The mother of the boy then goes to the friends of the girl, with two old women and a priest, and presents to the infant maiden a ring from the future bridegroom. The boy is then brought, and the priest reads a portion of the Scripture, and blesses the parties. The parents of the girl make the priest a present, in accordance with their means, refreshments are partaken of by the company, and this constitutes the ceremonies of the betrothals. Should the betrothals take place during the infancy of the contracting parties, and even should twenty years elapse before the boy can claim his bride, he must every year, from the day he gives the ring, send his mistress at Easter a new dress,' etc. (Jones, *Finger-ring Lore, historical, legendary, anecdotal*, Lond. 1877, p. 312 f.).

It frequently happens that the bridegroom-elect does not see his betrothed during the engagement. On the marriage day a priest and a sub-deacon go to the house of the bride. The bridegroom arrives there with great pomp, and receives for that day the title of *king*, while the bride is called *queen*. The latter is then veiled, the priest says some prayers and blesses the young husband and wife, and then they set out for the church, where the nuptial blessing is pronounced and Mass is celebrated. The priest places on the head of each a crown, which they retain from three days to a week. The company sing wedding hymns on the way to and from the church. After a few days the priest goes and receives back the crowns, and then the young people's married life begins. Marriage cannot be celebrated during fasts or the dominical festivals, of which there are about 260 in the year.

(*b*) *Baptism.*—A short time after the birth of a child, the parents and the god-father carry him to church. They stop at the entrance, and the priest recites some prayers, after which they go into the church, making as many genuflexions as the number of days of the child's life, and the god-father makes confession. Then the infant's clothes are taken off, and he is immersed three times, his head turned towards the west, his feet towards the east, and his face towards the sky. After the baptismal water the priest anoints the child's head several times with holy oil, and clothes him in a linen robe. The child is then made to adore the Cross, and is taken home in state.

(*c*) *Burial.*—The day before that on which the body is to be carried to the church, the relatives, neighbours, and friends of the deceased meet in the house, each bringing a lamp with three or seven wicks, which they arrange, all lighted, round the coffin, and then they begin to sing in turn some funeral hymns. On All Souls' days (Christmas, Easter, Assumption, Transfiguration, Invention of the Cross) the families invite a popular poet to sing over the grave at the cemetery the praises of the person who has just died (A. Tchobanian, *op. cit.* p. 119). For some days after the funeral ceremony the priest goes to visit the relatives of the deceased; then on the Saturday of this week of mourning the relatives and friends meet and take part in a social repast, the remains of which are distributed among the poor.

LITERATURE.—E. Boré, *Arménie* (Paris, 1838); J. Issaverdenz, *Rites et cérémonies de l'église arménienne* (Venice, 1876); Petit, fasc. vii.; A. Tchobanian, *Chants populaires arméniens* (Paris, 1903), *Les Trouvères arméniens* (Paris, 1906), p. 130; F. C. Conybeare, *Rituale Armenorum* (Oxford, 1906).

4. Saints of the Armenian Church.—A glance at the Armenian Menology will suffice to show that the Armenian Church has adopted a large number of the saints of the Greek and Latin Churches. It has, besides, its national saints, for whom it has naturally great veneration. The principal of these are St. Rhipsime and St. Gaiana, who fled from Rome to avoid the carnal desires of the Emperor, and took refuge in Armenia, where their blood was shed for the cause of the gospel; the saintly translators, Moses of Chorene, David the Philosopher, Eznik of Kolb, Elisæus the Vartabed, St. Mesrop; and St. Sahak, St. Leo, St. Nerses Shnorhali, St. Nerses of Lambron, St. Gregory the Illuminator, and St. Nerses I. the Great. St. Vardan is the national saint and patriot *par excellence*. When Armenia was struggling in the 5th cent. against Persia and the introduction of Mazdaism, Vardan Mamikonian became the moving spirit in a general insurrection and in the struggle of Armenian Christianity against the Zoroastrian religion. He perished at the battle of Avarair; but the agitation for independence started by him continued for many years. St. Sarkis (Sargis or Sergius) is the saint invoked by prisoners, captives, those with difficulties to face, and especially by young girls in order to obtain a handsome sweetheart. If it snows at the festival of St. Jacob or St. James, it is said that the beard of the saint is falling on the earth. St. Karapet (John the Baptist) is regarded in Armenia as the most influential of the saints. His seat is at Mush, where his relics are found in the church named after him, which is one of the principal places of pilgrimage of the Armenians. Women are forbidden to enter the enclosure within which is the tomb of the saint, because it was women, Herodias and Salome, who caused John the Baptist to be beheaded. Young girls give a needle to friends going to kiss the tomb, begging them to rub it against the tombstone, so that they may be able with this sanctified needle to produce marvellous embroidery. Young women cannot go and kiss the tomb unless they make a vow never to marry. Those who have made this vow are allowed to sing with the choir during Mass (A. Tchobanian, *Chants populaires arméniens*, p. 149, n. 1). According to John Mamikonian, a very pious Armenian princess who was determined to enter the sanctuary was almost immediately smitten by Heaven as a pun-

ishment for her presumption (V. Langlois, *Collection des historiens anc. et mod. de l'Arménie*, i. 348, 362 f.). St. Karapet is the patron of the bards (*trouvères*), who go on pilgrimage to ask him to heighten their poetic imagination.

LITERATURE.—H. F. B. Lynch, *Armenia, Travels and Studies* (London, 1901); A. Tchobanian, *Les Trouvères arméniens* (Paris, 1906); 'Zenob de Klag' and 'Jean Mamikonian' in V. Langlois, *Collection des historiens anc. et. mod. de l'Arménie* (Paris, 1867), t. i.

5. Sects.—Armenian Christianity, in the course of the centuries, has had to struggle against the assaults of different sects and heresies in order to preserve its homogeneity. Gnosticism penetrated into Armenia in the 2nd cent.; Marcionism also crept into the Armenian Church and was refuted by Eznik (*Des Wardapet Eznik von Kolb, wider die Sekten*, tr. by Joh. Michael Schmid, Vienna, 1900, p. 172). About the same time are found traces of the Borboriani and the Messalians, of which sects the Paulicians seem to be a continuation through the Middle Ages. Mention is made also of the existence of Adoptianist churches as early as the 3rd century. The most important sect of the Middle Ages was that of the Paulicians, famous for their struggle against the worship of images. It has been established by Conybeare that they were Adoptianists. They believed that Jesus was born a man, and that He became Christ at the moment of His baptism; but they did not regard Him as equal to God the Father. The Paulicians practised adult baptism. The Thondracians, a sect founded about A.D. 820 by Smbat, rejected infant baptism, the worship of the saints, of the Virgin and of images, purgatory and the hierarchy. There still exist in the Caucasus some adherents of this sect. The Arevordians ('Sons of the Sun') are met with in the 12th cent.; their doctrine recalls the old ideas of Armenian paganism.

Aucher (Venice, 1834); Karapet Ter-Mkrttschian, *Die Paulikianer im byzantinischen Kaiserreiche und verwandte ketzerische Erscheinungen in Armenien* (Leipzig, 1893); 'Die Thondrakier in unsern Tagen' in *Zeitschr. für Kirchengeschichte* (1893); F. C. Conybeare, *The Key of Truth, a Manual of the Paulician Church of Armenia* (Oxford, 1898); Petit, fasc. vii. col. 1900; S. Weber, *Die katholische Kirche in Armenien* (Freiburg, 1903).

6. Superstitions and Peculiarities.—The Armenians, although Christians, have, like other Christian peoples, popular beliefs and superstitions which have passed down through the ages. The peasant women believe that there exist three *spirits of childbirth*—the spirits of the evenings of Tuesday, Thursday, and Saturday. The first two are virgins and sisters, and the third is their young brother. If the wives have not spent the evenings of Tuesday, Thursday, and Saturday with their husbands, these spirits aid them in childbirth. The Sunday spirit remains near the door of the birth-chamber and fulfils all his sisters' orders; he carries water and eggs, makes the fire, etc. The two sisters take the child, bathe it and prepare the omelet for the mother; and sometimes they present a gift to the newly-born child. But these spirits are also vindictive; and when a woman does not respect them, they avenge themselves by tormenting her, and sometimes by killing the baby (*Revue des traditions populaires*, x. [1895] 2). Each child has from its birth a guardian angel who protects him against evil spirits. This angel's duty is to cut the child's nails and amuse him with the golden apple which he holds in his hand. When the child is old enough, the guardian angel goes back to heaven. The child smiles to him and stretches out his little arms (*ib.* x. 4). The Armenian peasants believe also that *spirits of disease* exist. They are small in stature and wear triangular hats; and they hold in their hands a white, a red, and a black branch. If they strike any one with the white branch, he will fall ill, but will soon recover; if it is with the red, he will have to stay in bed for a long time; but if it is with the black, then it is all over with him, and nothing will cure him. The spirits have books in which are written the names of the men who must die or fall ill, and the appointed days; and the spirits act according to these books. The people believe also that there is a spirit called the 'Writer' (*Grol*), who writes men's names and the date of their death in a book called the 'book of the non-existent.'

The *devs* are tyrants possessing seven heads. They can throw the largest rocks a great distance. Their wrestling is like the shock of mountains, which causes lava to pour forth. The female *dev* is about the size of a hill; she throws back her left breast over her right shoulder, and her right breast over her left shoulder. The *devs* prefer to dwell in very thick forests or deep caverns. They are very rich in gold and silver, and possess horses of fire which enable them to cover great distances in the twinkling of an eye. *Devs* covet the company of young women of the human race, to whom they grant everything they ask. The young men are continually at war with the *devs* in order to get back the women, who show the men how to carry out ruses by which they may become the masters of the *devs*, who are ignorant, cowardly, boastful, and narrow-minded (*RTP* x. 193–196; Grikor Chalatianz, *Märchen und Sagen*, Leipzig, 1887, pp. xiv–xx). The witches are old women who have a tail which is not visible during infancy, but which develops with age. They can become invisible when they wish, enter anywhere, and cross the world in a few minutes. They mount on earthen jars, take in their hands a serpent which serves as a whip, and, flying to the seventh heaven, pass over all the universe. They act chiefly in love intrigues. Their ordinary business is to enchant the heart of a young man or woman, carry off a young girl in spite of her parents, and kill the irreconcilable rival or make him fall asleep (*RTP* x. 196). There are also good sorcerers, who are quite disposed, with the aid of supernatural powers, to render service to human beings (G. Chalatianz, *Märchen und Sagen*, p. xxxi ff.; F. Macler, *Contes arméniens*, Paris, 1905). The Armenians believe also in the existence of dragons, and possess numerous tales and legends which refer to these supernatural beings. The Armenians, especially those of Eastern Armenia, make great use of *rolls of prayers* containing magical or talismanic formulas, intended to protect them against the evil eye, slander, the anger of enemies, against sorcerers and enchanters, false love, and the bite of serpents, to conciliate lords, kings, generals, and the great, and to exorcize demons and other impure beings. These rolls of prayers are called *kiprianos*, or rather *girpaharan*, because they include prayers attributed to St. Cyprian. They are generally ornamented with vignettes, which belong to somewhat rudimentary art, but are very much used by the people (see 'Amulette' and 'Cyprianus-Buch' in P. Jacobus Dashian, *Catalog der armenischen Handschriften in der Mechitharistenbibliothek zu Wien*, Vienna, 1895; Macler, Nos. 97–102).

LITERATURE.—M. Abeghian, *Armenischer Volksglaube* (Leipzig, 1899); G. Chalatianz, *Märchen und Sagen* (Leipzig, 1887); H. von Wlislocki, *Märchen und Sagen der Bukowinaer und Siebenbürger Armenier* (Hamburg, 1892); A. G. Seklemian, *The Golden Maiden, and other Folk-Tales and Fairy Stories told in Armenia* (Cleveland, Ohio, 1898).

IV. ARMENIAN CATHOLIC CHURCH OR ARMENIAN CATHOLICS.—There have been in almost all times Armenians who recognized more or less the supremacy of Rome. But it was recognized

only in a sporadic and casual way until the time of the Crusades, when the Armenians of the kingdom of Cilicia, or Lesser Armenia, were in constant contact with the Crusaders, and consequently with the Roman Curia. Later, in the 14th cent., Dominican missionaries founded influential communities of disciples in Armenia. These were the class of native missionaries known as 'Uniters' (*unitores*), and had as their first superior John of Kerni (or of Khrna). He had a translation made of the works of Bartholomew of Bologne, who was sent to Armenia by Pope John XXII. in 1318 (Macler, No. 149). Subsequently, especially in the 17th cent., other orders established missions among the Armenians, particularly among the Armenians of Persia: the Augustinians at Iṣfahān, the Jesuits at Iṣfahān, Julfa, Erivan, etc. The French Lazarists settled at Tauris and at Iṣfahān. Soon all the communities extended their ramifications into all the principal Armenian centres of the East—Iṣfahān, Ormuz, Shiraz, Banderabbas, Hamadan, Shamakia, Erzerum, Trebizond, etc.

Until the middle of the 18th cent., Catholic Armenians did not form an autonomous community; now they have a hierarchy of their own, a recognized religious autonomy, and a patriarch who resides at Constantinople. These results have sprung from the dissensions which occurred between 1737 and 1740 in connexion with the catholicate of Sis in Cilicia. The Catholicos of Sis was deposed, and he retired to Lebanon, where he founded the convent of Bzommar and a new religious order. This new state of things caused intestine quarrels between the Catholic and the Gregorian Armenians. We may note especially the quarrel of the Hassunists and the publication of the Bull *Reversurus*.

LITERATURE.—Galano, *Conciliatio Ecclesiæ armenæ cum romana* (Rome, 1690); E. Scrosoppi, *L'Empire ottoman au point de vue politique vers le milieu de la seconde moitié du xixe siècle* (Florence, 1875); A. Balgy, *Historia doctrinæ catholicæ inter Armenos* (Vienna, 1878); A. Boré, *L'Arménie* (Paris, 1838); L. Alishan, *Sisacan, contrée de l'Arménie* (Venice, 1893), an art. devoted to the 'United Brethren' in the cantons of Erinjak; de Damas, *Coup d'œil sur l'Arménie* (Paris, 1888); J. B. Piolet, *Les Missions catholiques au xixe siècle* (Paris, 1900); H. F. B. Lynch, *Armenia, Travels and Studies* (London, 1901); Petit, fasc. vii.; S. Weber, *Die katholische Kirche in Armenien* (Freiburg, 1903). For the disputes which have arisen over the subject of Avedik and Aghtamar see *Bibliographie analytique des ouvrages de M. Marie-Félicité Brosset* (St. Petersburg, 1887); Dashian, *Catal. der arm. Hndschr. in der Mechitharistenbibl. zu Wien* (Vienna, 1895); F. Macler, *Catal. des manuscrits arm. et géorg. de la Bibliothèque Nationale* (Paris, 1908).

V. *PROTESTANT ARMENIANS.*—The work of the Protestant missions among the Armenians dates from the beginning of the 19th century. It was specially prosperous from the day on which the Sublime Porte granted independence to the Protestant community. The Protestant missions in Armenia belong, on the one hand, to the Missionary Societies of England and America, and, on the other, to those of Basel. They have stations in the most important centres of Turkey in Asia, and some in Persia (Tauris, Teherān, Iṣfahān), and in Russia (Shusha, Tiflis). There are nearly 200 pupils in the Robert College at Constantinople; the college at Scutari is reserved for girls.

LITERATURE.—E. Scrosoppi, *L'Empire ottoman au point de vue politique vers le milieu de la seconde moitié du xixe siècle* (Florence, 1875), pp. 78–81; H. F. B. Lynch, *Armenia, Travels and Studies* (London, 1901); Petit, fasc. vii. col. 1920.

VI. *MUSALMĀN ARMENIANS.*—The attachment of the Armenians to Christianity is well known, and when they are abroad their religion stands to them in the place of nationality. In spite of this love of their religion, some Armenians, persecuted by the Musalmāns, have adopted Muhammadanism. Thus, two or three centuries ago, the Armenians of Hamshen, to the east of Trebizond, after some bloody massacres, accepted in thousands the law of Islām. They are therefore Turks, but they speak a dialect which betrays their Armenian origin. The Kurds, it is said, are ancient Armenians who have passed under the law of Islām.

About 1751, a certain Chalabi, who was very fanatical, associated himself with the Persian Musalmāns, and conceived the plan of massacring the Armenians if they would not be converted to Muhammadanism. He tortured them first, cutting off their ears so that they might not hear the singing in church, cutting out their tongues so that they might not speak their mother language, and putting out their eyes to strike fear into the other Christians. Chalabi inflicted these tortures on the poor, and granted honours and titles to the rich to impose silence on them. By this means thousands of Armenian families became Musalmāns, especially in the province of Oudi. In this province above all, the Muhammadans destroyed the churches and Christian sanctuaries, so that the Christians might the more quickly forget their original religion. In the province of Oudi many names recall their Armenian origin; at Gis is found a much venerated sanctuary of St. Elisæus. The Musalmāns as well as the Christians make pilgrimages to it, light candles, and address very fervent prayers to the saint; and in several villages in the neighbourhood of this sanctuary the Musalmān Armenians swear by St. Elisæus. They have preserved some old Christian customs. For example, when a mother is putting her child to sleep, she makes the sign of the cross over it, and murmurs the name of Jesus. When the paste is prepared, a young Armeno-Musalmān wife makes a cross on it with her fore-arm before putting it into the oven. The Armeno-Musalmān villagers of the province of Oudi are very bigoted and very suspicious; they distrust all foreigners, and never speak of matters of religion.

In Lasistan, also, several Armenian villages have become converted to Islām, from fear of tortures and massacres. There are found among them the same traces of Christianity as among their brothers of Oudi and elsewhere.

LITERATURE.—*Aghouanits erkir tev dratsikh* (Tiflis, 1893); *Loys*, Calendar for 1905 (Tiflis, 1904), pp. 191–196 (both in Armenian).

VII. *ARMENIAN COLONIES.*—There are Armenian colonies spread over all parts of the world; for example, in Europe: Poland, Sweden, Denmark, Holland, Russia, Turkey, Bulgaria, Transylvania, Roumania, Lower Danube, Macedonia, Greece, Dalmatia, France, Italy, Spain, Portugal, etc.; in Asia: Persia, Afghanistan, India, Japan, Palestine, China, etc.; in Africa: Egypt, Ethiopia; in America: United States; the English and Dutch Indies, Batavia, etc. These colonists generally lose their nationality, and adopt that of the country in which they are living; but they remain faithful to their religion, which is now the bond of the Armenian nation, since they no longer have a political autonomy.

LITERATURE.—L. Alishan, *Sisacan* (Venice, 1893).

FRÉDÉRIC MACLER.

ARMINIANISM.—1. Occasion of Arminianism.—Arminianism was a revolt against certain aspects of Calvinism, of far-reaching importance in the history of the Reformed Theology. It took place in the dawn of the 17th century. Against the Catholic absolutism of the external Church, Calvinism had set the absolutism of the eternal decrees. The situation was rigid with a new dogmatism. A recoil was inevitable. Many symptoms of dissent were manifest before Arminianism arose as a definite reaction. After Calvin's death, the more rigorous Calvinistic divines, including Beza, asserted that the Divine decree to salvation, being antecedent to the Fall, required for its

accomplishment the decree to sin. Sin was ordained not as an end, but as a means; it is here because there was something that God could not accomplish without it. What is first in the Divine intention is last in the Divine execution.* The primal purpose was the decree to save. But if man is to be saved, he must first be lost. Hence the Fall was decreed as a consequence of a decreed salvation. Those who held this position were Supralapsarians. It is doubtful whether Calvin himself held it. More moderate exponents of Calvinism connected the Fall with the permission of God, instead of with His foreordination. The Divine decree takes the existence of sin for granted, deals with man as fallen, and elects or rejects him for reasons profoundly indifferent to human judgment. This was the Infralapsarian position. An unequal rivalry between the exponents of these two schools was the immediate occasion of the rise of Arminianism. In Holland, which, in the 17th cent., owing largely to the immigration from France of Protestant theologians of distinction, had become, more than Switzerland, the centre of theological activity, the extreme views of the Supralapsarians found much favour. An acute and effective criticism was directed against them by James Arminius (Jacobus Arminius or Jakob Harmensen or Van Herman; also known as Veteraquinas, from *Veteres Aquæ* or Oudewater, the name of his birthplace). Arminius, who was born in 1560 and died in 1609, was a scholar of considerable reputation. He had studied at Leyden, resided at Geneva, and travelled in Italy; he was a learned and popular preacher at Amsterdam, with a pastoral career marked by fidelity and heroism; eventually he became, in 1603, professor of theology at Leyden. Even his enemies testified to his blameless and noble character. He was a consummate controversialist and a lucid expositor, with a remarkable gift of method. Trusted by the Supralapsarian leaders, he was requested in 1589 to answer Theodore Koornhert, of Amsterdam, who had attacked the high Calvinistic doctrine of Beza and the Genevan school, of which Arminius had been a distinguished disciple. Others had already replied to Koornhert, who were disposed to surrender Beza's extreme position in favour of one equivalent to Infralapsarianism. In preparing his reply, a process of doubt culminated in Arminius embracing the tenets he had undertaken to refute. He clearly perceived that the doctrine of the absolute decrees involved God as the author of sin; that it unworthily restrained His grace; and, leaving myriads without hope, condemned them for believing that for them there was no salvation either intended or provided in Christ. He saw, moreover, that it gave to those who believed themselves to be the elect a false security based upon no sufficient ethical principle. Arminius' conversion was succeeded by cogent criticism; and criticism by prolonged controversies, during which he was led by successive and careful stages to a luminous and impressive constructive exposition of those theological positions antagonistic to Calvinism which have since been associated with his name. Though it is probable that Arminius himself was less Arminian than his followers, yet the most distinguished of these, Episcopius (his successor at Leyden), Uyttenbogaert (his close friend), Limborch and Grotius, who most ably elaborated his positions—all men of great talents—only carried his conclusions to issues which the early death of Arminius probably prevented him from reaching. Arminianism spread amongst the clergy. Political differences and difficulties confused the purely doctrinal issue. Great statesmen, like Olden Barneveld, advocated Arminianism and Republicanism, as Calvinists preferred Supralapsarianism and Maurice, Prince of Orange. The martyrs for Arminianism probably suffered for political rather than for doctrinal heresy. From the beginning the Arminians were greatly outnumbered by their opponents. Their main strength lay in the genius and learning of their leaders. Dialectically they were victors; ecclesiastically and politically they were vanquished. With their defeat came many disabilities and some temporary persecution.

* *Cambr. Mod. Hist.* ii. 717.

2. **Doctrinal positions.**—The creed of the Arminians was set forth in the Five Articles of the Remonstrance addressed in 1610 to the States-General of Holland and West Friesland, from which fact its adherents received the name of Remonstrants. The articles were drawn up by Uyttenbogaert and signed by forty-six ministers. The Remonstrance is first negative, stating the five Calvinistic articles in order to reject them, and then positive, stating the five points of the Arminian position. Briefly summarized, the following are their positions. The first asserts conditional election, or election dependent on the foreknowledge by God of faith in the elect and of unbelief in those who are left in sin and under condemnation. The second asserts universal atonement in the sense that it is intended, although it is not actually efficient, for all. The third asserts the inability of man to exercise saving faith, or to accomplish anything really good without regeneration by the Holy Spirit. The fourth declares that the grace of God is indispensable in every step of the spiritual life, but that it is not irresistible. The fifth asserts that the grace of the Holy Spirit is sufficient for continual victory over temptation and sin; but the necessity of the final Perseverance of all believers is left doubtful. This last article was afterwards so modified by the followers of Arminius as to assert the possibility of falling from grace.

Gomarus, the university colleague of Arminius, but his chief antagonist in personal controversy, now engineered a counter-Remonstrance drawn up in less moderate terms. Negotiations for peace failed. An embittered controversy became involved with political intrigue. The famous Synod of Dort was assembled (1618–9) more to exercise ecclesiastical discipline than to reconcile the disputants. The Arminian theologians were excluded, and the Synod constituted itself accuser and judge. The Arminian articles were condemned, their preachers deposed, and recalcitrants banished. The Synod promulgated five heads of doctrine of its own, which present Calvinism in its unadulterated but not in its extreme form. Within the Arminian system processes of development set in, all moving in the direction of liberalism and comprehension. These will be noted in their place. Our present interest is with the leading principles of Arminianism. These are: (*a*) the universality of the benefit of the Atonement; (*b*) a restored freedom of the human will as an element in the Divine decrees and in opposition to the assertion of the absolute sovereignty of God. Apart from these and kindred questions involved in the problem of predestination, Arminianism has no definite theological distinctness. It attempts no fresh statement of the doctrines of God and man. These were accepted as they stood in the recognized creeds and confessions of Christendom; its general theological system was that of the orthodox Protestant Churches. But its specific contribution was of sufficient importance to rank it amongst the few really outstanding and permanent developments in theological thought. The three fundamental terms of theological definition and discussion—God, Man, and the essential re-

lations between them—are represented in the three great controversies of historical theology by the names of Athanasius, Augustine, and Arminius. Athanasius represents the movement which gave specific definition to the Church's doctrine of the Divine nature. Augustine stands as the great exponent of the inner moral significance of human nature and of the relation of the individual to the race. Arminius found his place as the interpreter of the ethical relations between God and man. His system recognized and expounded the developed doctrine of God and of man, which the Church had long accepted as established positions, but which her theologians had never satisfactorily related. Calvin had revived Augustinianism, and had pushed it to further logical issues. He made much of God, as Pelagius had made too much of man. Both gave isolation and distance to terms that could be completed only in mutual relations. Neither provided a scheme of reconcilation. The aim of Arminius was to express with dialectic vigour the only doctrinal position consistent with the necessary relations between God and man. This relation within the sphere of the provision and administration of redemption provided the points of controversy between his system and that of Calvin. The mission of Arminianism was to show how God could be what the Church taught He was, and man what the Church declared him to be, at one and the same time. The mode of re-adjustment of the disturbed and abnormal relations of man to God by justification was the central point of Protestant theology generally; the announcement and the ethical interpretation of the significance of the mutual relations between God and man in that adjustment was the contribution to theology offered by Arminianism. Its system is a *via media*; it strove to avoid sources of inevitable and historical error arising from the tendency to magnify either of the related terms by the virtual or formal suppression of the other. The exaltation of the Divine agency to the complete suppression of the human in that adjustment issued in simple Determinism; the exaltation of the human in complete suppression of the Divine in the same sphere led to the extreme positions of Pelagianism. Arminianism claimed to have stated, for the first time, with scientific care a balanced judgment on those relations of God and man in which their harmony and mutual recognition could be stated as a working principle, verifiable and verified by experience.*

To appreciate the *theological* value of Arminianism, it is important to review and interpret the points which differentiate it from Calvinism. To estimate its influence philosophically, it is needful to state and illustrate its two great principles—its ethical recognition of justice, and the emphasis it lays upon the human in the redemptive relations between God and man.

3. Criticism of Calvinism.—Arminianism regarded the Calvinistic position as open to attack on two sides—the side of God and the side of man. Its treatment of these was considered to be disproportioned and ethically unfair. The sphere in which God exercised His will was the soul of man. That will, therefore, concerned man and his acts. If such acts were performed solely because God had so determined, two consequences followed:—the acts would reveal the quality of the will, and man would not be consciously free; he would know himself as an instrument rather than as an agent. The criticism was urged therefore as much in the interest of man and of morality as of theology. In fact, Arminianism was at the bottom an attempt to formulate a protest against Calvinism from an ethical standpoint. It used much circumspection in the attempt. It carefully rejected, with Calvinism itself, the pagan leaven, which had lingered in the old Church, in the form of reliance placed upon human nature alone. But it renewed the sense of reality to human responsibility, and emphasized the moral conditions of reward and penalty. At the same time it sought to give psychological consistency, especially by its great doctrine of prevenient grace, to the common Protestant principle that man is entirely dependent, in all that concerns his salvation, upon the grace of the Spirit of God. The task undertaken by Arminianism was to re-state what was regarded as the primitive and Scriptural view, held by the Church before Augustine, concerning the relation between God and man in the work of salvation; and in this view the sole responsibility of man for his own damnation was evident. The criticism of Calvinism, therefore, found centres of attack in the following five points:—

(1) *Predestination.*—This the Calvinist held to be absolute and unconditioned. The decree to elect was without foresight of faith or of good works. In its operation the Divine will was unmotived from without, moved only from within, either by the grace or by the necessity of the Divine nature. The decree to reprobation was conditioned by no specific demerit of the reprobate. He was not distinguished in or by his personal sin. His reprobation was simply because of sinfulness of nature or habit, which, being common to all men, involved all men in equal guilt and penalty. No ethical difference was discernible between elect and reprobate. The Arminian criticism insisted on the ethical incompleteness of this view. The principle of the election of grace is maintained. The Divine will is absolutely supreme. But its supremacy is moral. God is not more bound to punish than to forgive. The Divine decree, whether elective or reprobatory, is conditional throughout. God elected to salvation or to reprobation only those whose faith or final disbelief He foresaw. The Divine foreknowledge logically precedes the Divine volitions; it is not an inference from them; it is intuitive, but not necessitative. What God knows, though its issue is absolutely certain, is not necessitated by that cognition.

(2) *Atonement.*—The Calvinist held the Atonement to be strictly limited. Its relation to the non-elect was incidental; its intention was for the elect alone. For them its efficacy was absolute. It so satisfied Divine justice on their behalf that they could not fail to be saved. For were any lost, the penalty of sin would be twice inflicted—once upon Christ and again on the sinner for whom He had died. This was a thing impossible to Divine justice. The Arminian held that the Atonement was universal. It was of infinite value, designed for all, accomplished for all. It made the salvation of no man actual, but rendered the salvation of all men possible, the result being in every case conditioned by faith. Christ died for all, but only believers receive the benefit.

The character of Arminian theology is illustrated in one of its most important writings, the treatise of Grotius on the *Satisfaction of Christ*, written in opposition to Socinianism. He develops the doctrine towards an issue not strictly in harmony with the position of Arminius, by stating what is known as the Governmental Theory. Both aimed at mediating between the rigorous Anselmic view of a satisfaction which is the substitution of a strict equivalent for the penalty due to sin and the Socinian rejection of all vicarious intervention. They agree that the atoning reparation satisfied not the rigorous exaction of Divine justice, but chiefly the just and compassionate will of God, emphasizing the love rather than the justice of God as honoured in the Atonement. The death of Christ is not the payment of a debt to a creditor, but a substitution counted sufficient by God the Father for a judicial penalty. Grotius emphasized the relation of God to man as a Ruler, and carried out the Arminian conception of 'the wrath of God' as His goodness regulated by wisdom. He regarded the motive of the Divine government as the desire and provision for the happi-

* *Amer. Meth. Qtly. Rev.* (1857) 346.

ness of the governed. In this rectoral relation the ruler has a right to remit a penalty, provided the end for which the penalty was appointed is otherwise attained. This end is the preservation of order and the prevention of future transgressions. The death of Christ as a 'penal example' secures this end, showing impressively what sin deserves and what the penalty would be were it actually inflicted on the transgressor. It is a manifestation of the Lawgiver's hatred of sin. It is not actual punishment, but rather the symbol of it. As it is not the literal penalty, God may freely determine what other conditions for bestowing pardon are suitable. In the light of the Calvinistic view of the absolute sovereignty, this rectoral theory was a surrender of the theory of satisfaction. But the Arminianism of Arminius laid much stress on the inflexibility of God's righteousness, which consists, according to Episcopius, in maintaining His truthfulness in attaching a penalty to His commandments. Episcopius himself, however, still held to a modified Anselmic position by regarding the sacrifice of Christ as a price; because God is willing so to regard it. Limborch is a closer representative of Arminianism. He asserted that Christ suffered as a Divinely appointed sacrifice, and reconciled God to man as if the sinner had suffered himself. Arminianism generally renounces the commutative theory of exact and mutual compensation, since some perish for whom Christ died.*

(3) *Depravity.*—The Calvinist held this to be total, involving bondage of the will and inability to any spiritual good. By the Fall the nature of man was poisoned at its inmost core, and original holiness and righteousness changed into absolute depravity. No distinction was made between imputed guilt and inherent depravity. Arminianism held that depravity was a bias, which left the will free and man responsible for his own destiny through the choice of faith or unbelief. The Adamic unity of the race was preserved, but its inherited tendencies to evil were met and neutralized by the free and universal grace communicated to the race in Christ—the second Adam. Absolute reprobation cannot therefore be based upon the doctrine of original sin. Arminianism denied that the sin of Adam is imputed to his posterity in the sense of their being guilty of, and chargeable with, the sin Adam had committed. A clear distinction is made between actual and original sin. The free gift of grace to the whole race in Christ is the foundation of the entire Arminian system. Its great contribution to the discussion of sin was the decisive assertion of the doctrine of prevenient grace, due to the universal diffusion of the influences of the Holy Spirit, and consequently the acceptance in every age of those who strove after natural uprightness. Grace, therefore, though not the solitary, is yet the primary cause of salvation. To this primary cause is due the co-operation of freewill; for upon its stimulus by grace prevenient depends the co-operation of the will with grace efficient.

Later Arminianism declined in some degree from this position. Less exalted views of the original state of man were current. To preserve intact the original freedom of the will, the conception of a primitive state of perfect holiness was discounted. A state of primitive innocence must have been allied with primitive ignorance. It was also doubted whether immortality originally belonged to the nature of man. With milder views of original sin greater stress was laid on the physical impurity of human nature; it was also denied that its corruption had in it the true characteristics of sin. The inclinations to evil inherited from Adam are not in themselves blameworthy; they are only different in degree from the same appetites in Adam. It is only consent to them that becomes real guilt. The 'innate liberty of the human will' was regarded as able to co-operate of itself with the Divine law. The Arminianism of Methodism reverted to the earlier position, holding that whatever power there is in the human will—in its ability or its choice—is the issue of redemption. No ability remains in man to return to God. The co-operation of grace is of grace. The Augustinian idea of 'common grace' is rejected in favour of the co-ordinating of the universality of grace with the universality of redemption. No man is found in a state of mere nature; nor, unless he has finally quenched the Spirit, is he wholly devoid of the grace of God. The virtues of unregenerate man are not *splendida vitia*, but works of the Spirit. Such virtues are a universal experience of the race. If Adam brought a universal condemnation and seed of death upon all infants, so Christ brings upon all a general justification and a universal seed of life.

(4) *Conversion.*—Both Calvinist and Arminian regard this as the work of the Holy Spirit. But Calvinism maintained the grace of God to be irresistible. The calling of God was both effectual and efficacious, and due to the immediate operation of the Spirit of God upon the soul. The Arminian asserted that the Divine action was mediate, through the truth, and thus moral and persuasive, as distinguished from physical and necessitating. Moreover, the grace which is effective to the processes of repentance and renewal may be finally resisted. The firm maintenance of universal redemption by Arminianism naturally affected its theory of justification at many points. Whilst holding, in common with the Reformed standards generally, that Christ's obedience is the only meritorious cause of justification, and faith its sole instrumental cause, and that good works have no kind of merit, Arminianism did not distinguish between the active and passive obedience of Christ. Gradually also it denied the direct imputation of Christ's righteousness. Faith came to be regarded as justifying, not as an instrument uniting the soul to Christ, but as an imperfect righteousness, which is mercifully accepted by God as if it were perfect. Whilst repudiating the view that works merit salvation, the Arminians asserted that the faith which justifies is regarded by God as a faith which includes obedience. This is the position both of Arminius himself and of his followers. It is allied with a tendency, distinctly marked, to define faith in terms of intellectual assent rather than as trust. It became a simple reception of the doctrines and laws of revealed religion. The influence of grace was by no means merely of a moral nature. It wrought in and accompanied the word of God. Its influence therefore, whilst supernatural in its character, was in its mode of operation analogous to the natural power of all truth. This tendency to invest faith with merit as a means of justification was suspected of approaching ultimately the Roman doctrine of merit by works on the one side, and of favouring the antinomian tendencies which had been condemned as inherent in Calvinism, on the other. A fair criticism of its attitude applied to it the term *Neonomianism*, because of its supposed introduction of a new law—the law of grace—according to which the legal righteousness for ever impossible to man finds a human substitute in an evangelical righteousness accepted of God, though imperfect, for Christ's sake. The title detected the perilous tendency, which the later history of Arminianism did not escape, of the notion that Christ has lowered the demands and standard of the moral law.

Methodist Arminianism met these tendencies in two ways:—(1) It declared that, though God requires faith, it is also His gift. He does in Christ pardon the imperfection of the good work wrought by faith, but He does not repute it as perfect so far as concerns our justification. This would be the imputation of righteousness to the believer himself. It is the faith of the ungodly which is reckoned for righteousness, even before it can produce its first act towards good works. (2) There was the definite insistence in Methodist theology upon the necessity as well as the possibility of entire sanctification. This teaching formulates and urges the demand that faith must be justified by works. It protests against the distinct imputation of the active obedience to man, whilst it clings to the imputation of Christ's righteousness generally. The Methodist teaching on entire sanctification was quite in harmony with the main contentions for which Arminianism stands, and ought to be regarded as a supplement to the views of the early Arminians, who wrote much on the question of Christian perfection. They left its principles and processes, however, largely indefinite. Compelled by their theological convictions, they maintained that such holiness as God reputes perfect may be attained in this life. If grace is free, it will be full. They distinguished between a first perfection of the beginning of Christianity, a second of the unimpeded progress of regeneration, and a third of established maturity of grace. Of the means, assurance, and limitations of the last stage they made no positive declaration. Perfection is proportionate and progressive. It is not sinlessness, but the 'expulsive power of a new affection,' excluding the habit of sin. Arminianism exhibits its doctrine more in opposition to the Roman works of supererogation or Calvinistic antinomianism than in its profound relation to sin and

* Pope, *Compp. Christ. Theol.* ii. 312.

love, and to evangelical perfection. Arminius writes: 'While I never asserted that a believer could perfectly keep the precepts of Christ in this life, I never denied it; but always left it as a matter to be decided' (*Works*, i. 608). The vital question of the abolition of sin was never, either by Arminius or his successors, decided upon. His protest against ultra-Calvinism was taken up by the German Pietists, and, in purer form, by the English Platonists, who prepared the way for the Methodist modification of doctrine on this subject, which was both mystical and ethical. Its chief contribution was the emphasis laid upon entire sanctification of the believer, as a provision of the covenant of grace, directly administered by the Holy Spirit, in response to faith—a faith working by love, and retained by constant union through faith with the living Christ (see METHODISM).

(5) *Final Perseverance.*—The Calvinist held the indefectibility of the saints. Men unconditionally elected, absolutely purchased by the death of Christ, and irresistibly called out of their depraved and lost estate by the direct operation of the Holy Spirit, could not possibly fall from grace. The Arminian criticism hesitated at first to meet this position by a direct negative. But such a position was speedily seen to be inevitable. And, as a result of its other doctrinal positions, the possibility of a true believer falling from grace was declared. This found warrant also and verification in examples and personal experiences that could not easily be mistaken. Moreover, as the Arminian method revealed a growing distrust of the authority of the Symbolical documents, it was easy to assert that the Calvinistic position professed not so much to be based upon direct Scripture support as to rest upon the necessary principles of the so-called Covenant of Redemption. The provisions of this imaginary covenant between the Father and the Son, before time began, in respect of the certain number to be redeemed and given to the Redeemer, as the reward of His atoning submission, had produced the idea of a fixed and unalterable division of mankind. To this canon every Scripture must be made to conform. It was easily shown that no Scripture evidence of such an unconditional covenant existed. It was less difficult still to urge against it the criticism that its ethical issues provided reasons against its provisions.

Theologically, Arminianism is a mediating system throughout. Its most characteristic feature is conditionalism. Absolutism is its persistent opposite; moderation, the mark of its method. The failure to appreciate this position accounts for the frequent and grave misunderstanding of Arminianism, and for the natural ease with which its delicately balanced judgment has declined, in the hands of some of its exponents, towards theological positions with which it had no true affinity. These have been chiefly Socinianism and Pelagianism—systems due to an over-emphasis upon the human. Much that in certain periods passed for Arminianism was really a modification of one or other of these systems, which a true Arminianism justly repudiates. In Holland, Arminianism, gliding by almost imperceptible degrees, ultimately reached a position with little to distinguish it from Socinianism. In England, where there was a presage of Arminian thought long before the time of Arminius and his system, its principles found an interesting development, and their profession an unusual environment. The influence was seen in the ambiguity or comprehensiveness of the Articles of the English Church. Latimer and Hooper, Andrewes and Hooker might with propriety have been called Arminians, if Arminianism as a system had been in vogue when they wrote. Arminian teaching by Baro, Professor of Divinity at Cambridge, gave rise to the Lambeth Articles also. But Arminianism became a political question, with the singular result that, through the influence of Laud and Juxon, it became allied with the side of the King, whilst it was the Calvinists, with the distinguished exception of John Goodwin, one of the ablest defenders of Arminianism, who stood by the Parliament. But the Arminianism of Laud was not the Dutch Arminianism. Arminius would have denounced its sacramentarianism as superstition With the issues of the Civil War, Arminianism suffered eclipse, but it returned with prelacy at the Restoration; and for more than half a century its influence was supreme in the Anglican Church. But the later divines of this school depreciated the doctrines of grace, dwelling more upon the example of Christ than upon His atoning work, and the Arminian principle persisted mainly as a negation of Calvinism. Cudworth, Jeremy Taylor, Tillotson, Chillingworth, Stillingfleet, Burnet, Pearson, Whitby, and others, down to Copleston and Whately, were Arminian theologians of eminence in the Church of England. The positive temper of Arminianism, however, suffered under their treatment of the system. Its fine balance between Calvinism and Pelagianism was lost. It was blended with tendencies to Latitudinarianism and Rationalism; and became a negative rather than a constructive or mediating system. It was from this setting, however, of Arminianism in its non-juror environment and atmosphere, that the restored Arminianism of Arminius, with its emphasis on the grace of God, emerged into strength in England in the Evangelical Revival of the 18th century. The Wesleys came of a sturdy Arminian stock of this type. And probably the ablest expositions in English of the Arminian system are to be found in the writings of John Wesley, John Fletcher, Richard Watson, and William Burt Pope, the Wesleyan theologians. Methodists throughout the world, with the exception of the Calvinistic Methodists in Wales, who represent the Calvinistic attitude of Whitefield, who withdrew from co-operation with the Wesleys on this ground, are convinced Arminians, who profess to adhere to the original Arminianism of Arminius and his followers of the earlier type before it approximated to the rationalistic temper of Socinians or Latitudinarians, or was merged in the prevailing tendencies of Restoration theology or American Unitarianism. The Wesleyan type of Arminianism, with its Evangelical note, is at present the most influential. It has spread widely throughout the British Empire and America, and is based upon the conviction that the Calvinistic positions are incompatible with Divine equity and human freedom, whilst its loyalty to the doctrines of grace is the best vindication of Arminianism from the common charge of Pelagianism and Socinianism. Lacking the doctrinal loyalty and the Evangelical vitality of the Arminianism of Methodism, Dutch Arminianism is a dwindling force. The inclination towards freedom of speculation, the rejection of all creeds and confessions, a preference of moral to doctrinal teaching, Arian views respecting the Trinity, the virtual rejection of the doctrines of Original Sin and imputed righteousness, and the depreciation of the spiritual value of the Sacraments, have resulted in the gradual reduction of Arminianism in Holland to a negligible theological quantity, and to the dimensions of an insignificant sect, numbering only some twenty congregations.

4. Underlying principles.—The supreme principle of Arminianism is conditionalism. It provides a philosophical *via media* between Naturalism and Fatalism. As an active criticism of Calvinism it is based upon two positions—the restless and dominant demand for equity in the Divine procedure, on the one hand, and such a reference to the constitution of man's

nature as will harmonize with the obvious facts of his history and experience, on the other. It sought to construct a system which should be dominantly ethical and human throughout. It contended, therefore, that moral principles and laws consistently condition the manward activities of the Divine will, and set human limits to the Divine action. The Calvinistic conception of justice was based altogether on the supremacy or rights of God; Arminianism so construed justice as to place over against these the rights of man. Sin, it declared, had not so transformed human nature that man had become a mere vessel of wrath or of mercy, a creature who was reprobate because of guilt he had inherited, or saved by a grace which operated without rational distinctions and without regard to foreseen faith or good works. In equity the worst criminal had his rights. A fair trial before a fair tribunal was one which sin did not invalidate. The consideration of these rights did not cease because the judge was God, and the accused, or even the condemned, was man. The Creator owed something to the creature He had fashioned, because of the manner of His fashioning; and these obligations did not cease because the first man had sinned. In a perfectly real sense sin had only increased the obligation of God to be just. If original sin was what Augustine had stated it to be, and what Calvinism had maintained it was, then it would be truer to the facts it involved to speak of it as a radical wrong from which man unjustly suffered. The race had not been consulted by the first man; in no true sense was he the representative of the individual members of the race; for they had no voice in his appointment, and no veto upon his acts. By every law of justice, therefore, they were to be regarded as objects of commiseration rather than persons to be blamed for what they had suffered, since they suffered as the consequence of the first man's sin, altogether apart from their own voluntary acts of kindred disobedience. And although Arminianism retained the federal principle, and held that the federal relationship had resulted in a weakened will for the individual, and had afflicted him with a bias towards evil, it urged that it was difficult to conceive anything more nearly approaching infinite injustice than allowing such a relation, of itself, to involve millions of men of every age and in every age in eternal death. If all had sinned, all had an equal right to be considered in the provision and administration of any redemptive processes that might be operative. The introduction into these relations of the Arminian principles resulted in a criticism that seemed irresistible; for the moment the idea of equity was admitted to a place in the consideration of the relations of man and God, the old absolute unconditionalism became untenable. If justice reigned, and its principles were common to God and man, it meant that God must be just to man, even though man was disobedient to God; and justice could not tolerate the condemnation of man for a sin which was committed without his personal knowledge or responsibility, any more than it could approve of a salvation which had no regard for the personal will or choice of its recipient.

Arminianism was always most successful when its argument proceeded upon principles supplied by the moral consciousness of man. This recognition of the value of the testimony and of the entire contents of human consciousness was the correlate in Arminianism to the idea of equity; its exposition of the idea of man provided the second of its two main principles. It regarded man as free and rational; sin had not destroyed either his reason or his freedom. By the one he had the ability to believe, by the other the ability to choose. Even if the racial connexion had weakened or perverted these faculties in the individual, the result was not incapacity to act, because the racial connexion with the second Head was intact and operative in the communication of the energy of prevenient grace. In justice, therefore, God must deal with man as possessed of such abilities. On their co-operation with the Divine activity the results in salvation or reprobation depended. Thus the free will of man was regarded as conditioning the absolute will of God. In the realm of nature His physical attributes ruled; His omnipotence was unconditioned. In the realm of mind and will His love and moral attributes governed, and their rule was conditioned. Man was not a part of physical nature merely, or a mechanism involved in the impersonal or unmotived motion of non-moral creatures. His destiny could not therefore be deduced by logical processes from the premise that God is the Sovereign Will, which can do as it chooses; for He has chosen to create man free and responsible; and His attitude and conduct towards man will consequently be conditioned by the nature He has made. If it has been His good pleasure to create man moral, it will not be His will to deal with him as if he were merely physical. If Creator and creature are alike moral in character, it follows that necessitating action on the one side, and necessitated action on the other, are both excluded. By His own voluntary act God has limited the range and exercise of His physical attributes, and so the terms which express His relations to man must be those of reason and freedom, not those of will and necessity. Arminianism offers no disparagement to grace in general, and deepens the emphasis on prevenient grace in particular. But whilst the peculiarity of Calvinism is found in holding fast to the absolute idea of God in opposition to all 'idolatry of the creature,' the centre of gravity of the Arminian system is found in the sphere of anthropology. Its doctrine of man probably differentiates it more definitely from Calvinism than its doctrine of God.*

5. **Theological and philosophical influences.**—The twofold emphasis of Arminianism on the ethical and human elements in its system declares the sphere and defines the source of the modifying influences it exerted on subsequent theological and philosophical thought. These influences were essentially mediating; and they were mostly indirect. They reached the sphere of philosophical speculation chiefly through theology. But the leading principles of Arminianism were potential in both spheres, in the succeeding periods of intellectual revival. It is well to keep in mind the fact that, in the history of European thought, the 16th cent. was great in theology rather than in philosophy, and that the 17th was great in philosophy rather than in theology. But without the religious thought of the earlier century, the later would have been without its problems, and therefore without its thinkers. The pre-eminence of the one in religion involved the pre-eminence of the other in philosophy. In this influence of theology upon philosophy, and, later still, upon more distinctly ethical thinking, Arminianism had a considerable share. Although questions directly upon ultimate philosophical principles were, on the whole, not in the spirit and thought of the age of Arminianism, yet Arminianism, as more generally true to the whole of the facts of existing problems, was distinctly more open to the access and authority of the modern spirit than Calvinism. By its underlying principles of equity and freedom it was more perfectly fitted than its rival system for a period of intellectual transition. It became the form of Re-

* Fairbairn, *Christ in Mod. Theol.* p. 170.

formation theology which most easily allied itself with the advance of knowledge and with the humanism of the new learning. The Cartesian philosophy, which was bringing about a gradual transformation of theological views, especially in the Netherlands, where already a liberal spirit was showing itself in general uneasiness under the yoke of the Symbolical documents, found especial favour with the Arminians. They had also within their ranks many eminent men, who were progressive thinkers and leaders of thought outside a distinctly theological circle, who exerted a beneficial reaction upon Protestant theology by their thorough scientific attainments and the mildness and toleration of their views. Arminianism stood generally for the strengthening of the scientific temper and for the principle of moderation, which represented dawning methods of far-reaching importance in the intellectual life of the modern nations. On the other hand, this attitude favoured the growing tendency towards Rationalism and Latitudinarianism into which Arminian theology frequently drifted. But that this drift represented any necessary effect of the Arminian movement is disproved by the fact that it was the Arminian system of thought which lay at the theological sources of the great Methodist revival in the United Kingdom and America during the 18th cent., whose leaders re-stated Arminianism in modern theology in its purest form, and vitalized it with the warmth of religious emotion and the joyous assurance of the Evangelical spirit. Arminianism in the glow of the spiritual enthusiasm of the early Methodist evangelists has been truly described as 'Arminianism on fire.'

The Arminians were the fathers of toleration. Amongst its earliest representatives are found stalwart advocates of religious freedom, who were willing to suffer for their views. Within the sphere of opinion Calvinism did not spontaneously incline to toleration; it was inflexibly dogmatic; its instincts and ideals were aristocratic rather than democratic in relation to ethical authority. It is curious to note, however, in spheres more purely political, that an interesting reversal of the natural order of the two systems occurs. As in England the Laudians were Arminian, and the Parliamentarians Calvinistic, so in France the Jansenists were Calvinistic, and the Jesuits Arminian. The natural tendencies of Arminianism to toleration may be instructively traced in the Latitudinarian teaching of the Cambridge Platonists, who were greatly influenced by the writings of Arminian scholars, particularly by those of Episcopius. They pleaded for liberty of conscience, and studied to assert and examine the principles of religion and morality in a philosophical method; they declaimed equally against superstition on the one hand and enthusiasm on the other. Moderation was the first law. They were conspicuous for their advocacy of freedom of inquiry, their toleration of diversities of opinion in non-essentials, their genial temper in controversy, their effort to bring about a reconciliation between theology and philosophy, their recognition of religion as less a doctrine or a ritual than an inward life, and their strong purpose to establish a rational theology, which should avail as a reply to the atheistic polemic. Arminianism, however, made common cause with all religious parties in resisting the dogmatism of the philosophy of common sense, which was declaring open war against the belief in the positive authority of Revelation. And the association of Arminianism with Deism and Naturalism, because of a supposed common fundamental ground in the appeal to reason, may be regarded as an unwarranted exaggeration of the Arminian emphasis on the human. Arminianism could be under no necessity to deny or depreciate the supernatural. By the time the age of speculative criticism and of the antagonism between faith and knowledge was reached, Arminianism as a distinctive doctrinal position had been established and its peculiar contribution made to Systematic Theology. Its influence on such later controversies is only indirect. That the influence was real cannot well be doubted, because of the emphasis on moderation and the more genuine welcome afforded to the products of modern speculation by Arminianism. Whether its influence, through its demand for the recognition of the authority of reason in the theological sphere, affected the philosophical thinking which resulted in the rationalism of Kant, or in its reaction in the subjective theories of Herder, or in the theology of Jacobi or Schleiermacher, it is difficult to say. Certainly Kant's doctrine of the Practical Reason, with its claim for the recognition of the ethical constitution of human nature, was developed in obvious harmony with the Arminian emphasis upon the authority of the moral consciousness as a factor in the interpretation of the relation of God to man. Schleiermacher's doctrine of absolute dependence had definite relation to Calvinism. Only in the place he gives to religious feeling is affinity with the Arminian principles likely to show itself.

With the distinct problems of modern speculative thought—'creation,' 'immanence,' 'mind and matter'—Arminianism, like the other Protestant theologies, had comparatively little concern. The theistic position of the creative act, with its implications, was generally accepted; there was no sufficient evidence, from the scientific study of nature, to suggest irreconcilable differences from the traditional view. In one point, however, Arminianism was peculiar. It laid special stress on creation being the work of the Father as distinct from the equal creative activity of the three Persons in the Trinity. The movement of Arminian thought was set in a framework of political, social, and economic changes which cannot be dissociated from its influences without missing their complete significance; but these are obviously beyond the scope of this article. One fact of importance ought, however, to be noticed. When the problems of 'natural rights' and the distinction between *jus naturale* and *jus gentium*, which had been raised by the philosophers and jurists of antiquity, passed, as a result of the Renaissance, from the region of academic speculation into that of practical politics, the transition was accomplished through an Arminian channel. Grotius was the first to start the question of the distinction between natural and conventional rights, and was thus the father of the modern exponents of the 'Philosophy of Law.' How profound was the influence of this transition upon the course and character of modern systems of Ethics will be obvious. It is here that we come into the presence of one of the less appreciated, but influential services rendered by the Arminian definition and advocacy of its fundamental principles—equity and human freedom. These principles represent the prevailing tendency of the leading ethical theories of the present. Without them the advance beyond the ethics of Scholasticism would have been impossible. Calvinism missed them, and, in doing so, missed the opportunity and the possibility of becoming the basis of an intellectual statement of ethical obligation satisfactory to the modern mind. Although the Calvinistic conception of the Church, as being based upon the individual rather than upon the institutional principle, was essentially different from that of Rome, the Calvinistic ethics is, nevertheless, based upon outward authority—

the authority of a truly organized Church and of the Scriptures truly interpreted by such a Church. This position was not accidental; it was of set purpose. Calvin deliberately subordinated ethics to dogmatics. From the Protestant point of view this was fundamentally reactionary; it was Scholastic in method and aim. The true ethics, and the only ethics consistent with the essential Protestant principle, must be based upon the inward compulsion of conscience, not upon any external authority. External authority could result only in casuistry. This was the Roman method and practice. The ethics of Thomas Aquinas and of Ignatius Loyola expounds a closed system given in the teachings of the Church; the ethics of Calvinism expounds a closed system given in the written Word. 'For true ethical development there is no more room in logical Calvinism than in logical Romanism.'* Ethically, Calvinism and Jesuitism have a common foundation in that they depend upon external standards and sanctions. On this account Calvinism has not, as a matter of history, contributed to the development of ethical theory in any degree commensurate with its magnitude as a religious force. It is beyond question that, as an inspiration to high ethical endeavour, Calvinism has produced types of sacrificial devotion to right conduct which have frequently touched a lofty heroism in the lives both of individuals and of communities in which its doctrinal system has been dominant. Yet it must be acknowledged that the influence of Calvinism, as a system, in the philosophical re-construction of modern ethics has been reactionary. The expansion, on the other hand, of the fundamental principles of Arminianism has wrought harmoniously with the processes of ethical development, which are based upon the manifold ideals and constraints of the moral consciousness of the individual. It was the plaint of the aggrieved moral nature, quite as much as the philosophic intellect, that was articulate in the Arminian protest. The deterministic depreciation of the rights of human nature to the value of a mechanical movement in the presence of the Divine will was the ethical weakness of Calvinism in which Arminianism found its advantage. This stress on the place and functions of human nature in the interpretation of, and co-operation with, the Divine mind was the distinction consistently maintained between the rival systems.

Arminianism was the medium by which the humanistic spirit of the Renaissance was translated into the theological and exegetical sphere. Its great men — Grotius, Episcopius, Limborch, Brandt, Le Clerc—are all men of literary faculty and humanistic temper. In Calvinism the spirit is more distinctly speculative and scholastic, and the intellect deductive and constructive. Its great men—Calvin, Zanchius, Gomarus, Twisse, Rutherford—are all men of speculative genius. It thus easily happened that the tendencies of Arminianism were often—and sometimes rightly—suspected of affinity with Pelagian and Socinian views. These affinities were strengthened by the mingling with the Arminians of Socinian scholars returning from exile; and in many cases Arminianism merged its identity in these phases of thought. It is well known that the exaggeration of Subordinationism by the Remonstrant divines, especially by those of the later age of Arminianism, glided by subtle degrees into the Socinian position. They denied the aseity of the Son, which Calvin had taught. His subordination to the Father, as the Spirit is subordinated both to the Son and the Father, was urged. It was held that, though the Divine nature belongs to the Son and the Spirit, the Father is first in dignity and power. Arminian leaders also favoured the Nestorian conception of the Person of Christ. The agency of the Logos was regarded as a 'special influx' or 'operation' of the Divine nature. It is an assistance of God, involving a communication of Divine powers so far as a creature can receive them. Much more recently the influential Unitarianism of America has succeeded the lingering Arminianism of the New England States, as a one-sided development of prevailing ethical principles respecting the responsibility of man and the enthusiasm for his prerogatives.

Arminianism arose historically in the great age of Protestant Symbolism, which succeeded the period of the earlier expositions of the Reformation theologians, who had based their authority more simply upon the appeal to spiritual experience and its warrant and confirmation in the Scriptures. It was the age of Protestant dogmatics, of which the characteristic was the substitution of creeds and the compulsion of confessions in place of the personal contact of the individual mind with the immediate sources of truth accessible in the writings of inspiration. Arminianism strove to emancipate exegesis from the thraldom of dogmatics. It resisted the tendency to erect everywhere a formulated creed into the position of a supreme arbiter of truth. The formal principle of authority was denied the first place. Ecclesiastical theology had tended to become dominant over Biblical. The Bible was looked upon as an authoritative text-book from which doctrines and proofs of doctrine were to be drawn with little or no discrimination as to the use to be made of the different sacred books. The Word of God and the Bible were identical. No critical distinctions were tolerated. Divines had not to reason their systems, but to unfold them from certain fixed and unquestioned postulates. In the Reformed Church predestination was accepted as the initial principle for the systematic exposition of the Christian religion. Dissent upon any point was treated as heresy. There was no antagonism in Arminianism to the formal principle of Protestantism—the immediate relation of the religious consciousness to Christ—or to the ultimate authority of Scripture. What Arminianism suspected and resisted was the prevailing tendency, which was far from the intention of the original authors of the Symbols, to assign to the Symbolical books of the Protestant Churches the same authority over faith which had been ascribed to tradition in the Roman Church. The Arminians sought to preserve a moderate and less dogmatic orthodoxy, and to introduce generally milder features into the prevailing hard cast of doctrinal systems. At the same time Arminianism, although apparently less intensely antagonistic than Calvinism to Rome, because of the emphasis it laid upon the value of the human in religion, was more truly Protestant in rejecting the Roman principle of the authority of tradition in its Protestant guise of authoritative Symbols. For similar reasons Arminianism was a protest against the mystical principle of interpretation which insisted upon the supremacy of the internal word as a sufficient exponent and infallible judge of the external. Constantly discounting dogma and mysticism alike, the Arminian divines appealed to the analogy of faith, to experience, to reason, to the aid of the Holy Spirit, as essential elements in the interpretation of Scripture. Authority was composite, and involved the whole contents of consciousness. A statement is not true because it is found in the Bible, but it is found in the Bible because it is true of itself. This position—that the Scriptures contain the truth, but are not of themselves the truth—gave considerable impulse to the

* *Hibbert Journ.*, Oct. 1907, p. 180.

speculative treatment of theology, and, through the writings of Grotius and Episcopius, issued in methods of theological discussion which gradually extended to the whole Evangelical Church.

The Arminian effort to meet 'the idolatry of Scripture' by the exaltation of the authority of the moral consciousness occasioned the charge against Arminians of laxity in views of inspiration. Their position was confused with the Socinian method of subordinating the authority of Scripture to that of reason, and of making its interpretation depend upon the so-called truths of reason. Here again, however, pure Arminianism is the mediating position. Whilst disagreeing with Luther's position that reason is blind in spiritual things, it resisted the Socinian extreme, as it resisted the rigid and narrow adherence to the letter of Scripture which marked later Protestant theologies. Some of the later Arminians added the canon that Scripture cannot contradict reason. The general position, however, was that reason must be followed in interpretation; that the foundation of religion, on its intellectual side, should be in personal thought and investigation; that neither antiquity nor universality was a proper or sufficient ground of belief; and that every passage of Scripture must be considered separately and in its historical setting and limits. This appeal of Arminianism from the Symbolic methods to the critical treatment of the text and substance of Scripture was a precursor of the methods of careful exegetical study now current, and of their issue in the restoration to authority of Biblical as distinguished from Systematic and Dogmatic Theology.

The reaction from the hardening processes of the Lutheran and Calvinistic divines upon the views, generous for their time, of Luther and Calvin, respecting the human and fallible element in Scripture, which were illustrated in the terms of the Helvetic Formularies and in the Buxtorfs' irrational contention for the inspiration of the Hebrew vowel-points, was inevitable. It was initiated by the Arminian writers, who reserved the direct action of the Holy Spirit for matters of faith, and left historical research and the memory of human writers to their fallible functions. Arminianism thus asserted positions in Biblical interpretation which have proved a basis and authority for the methods now known as the Higher Criticism. Sanctions were also provided for the science and practice of Textual Criticism through the access afforded by Arminian principles to an atmosphere of freer inquiry into the preservation and historical growth of the received texts of the OT and NT.

The Arminian principles of human freedom and personal responsibility, with the humanitarian spirit they tended to evoke, gave a new impulse to the awakening movement towards Foreign Missions, which succeeded the era of rationalistic influence in the Protestant Churches. If the Atonement was universal, and the salvation of the whole race possible, then the sense of responsibility for making known the conditions of salvation to the race was deepened, and a note of urgency was added to the claim for the expansion of Christianity. Moreover, the weak place in the great Protestant confessions had been the anthropological. One of the many effects of this deficiency was seen in the judgment of the Church in respect to the heathen races, which was obviously prejudicial to aggressive enterprise. Calvinistic thought had strengthened this judgment. The application of Arminian principles was amongst the earlier signs of the dawn of the new light upon the nature and history of the races of mankind, and upon their religious possibilities, which has since broken in the ethnic results of the kindred sciences of Anthropology and Comparative Religion. And the system, amongst the Protestant theologies, least discredited by the new light, is Arminianism.

Reference must be made finally to a great service Arminianism has rendered to theological thought generally. This is discovered in the subtle influence it has exerted in the gradual softening and humanizing of the harsher forms of theological definition. As a separate and separable system, either ecclesiastically or theologically, its reign was brief; as a genial and vitalizing influence, suffusing itself through all the discussions of the relation of God to man, its authority is ageless. It has wrought, often secretly and unacknowledged, towards the approximation of the position of modern theology respecting Predestination to that which was held by Catholic Christendom before the age and teaching of Augustine. Substantially the Churches of East and West were united, before his time, in holding the primitive and Scriptural view of the relations between God and man in the work of salvation, and of the sole responsibility of man for his own damnation, which it was the effort of Arminianism to restore. How far the disturbance of the thought of the Church on these relations, brought about by the revived and intensified Augustinianism of Calvin, has been redressed by the influence of Arminianism, is at present only partially discernible. It is, however, certain that it has greatly modified the specific views which were the objects of its original contention, as they are now held by Calvinistic theologians; it has also become a dominant factor in the current re-statement, to the present generation, of the doctrines of grace. The reduction of the area of Calvinistic influence, and its partial disintegration in communities where it had long been established, are facts that cannot fail to challenge attention. When Arminianism arose, very early in the 17th cent., the Calvinistic creed prevailed largely in Bohemia and Hungary; it was supreme in Switzerland, Holland, the Palatinate, and in the Protestant Churches of France, Scotland, and England, where, until the close of Elizabeth's reign, it was the prevalent theological influence; and shortly afterwards it grew to strength in the Puritan settlements of America. Over all these areas a steady disintegration of its force may be traced. Many factors have co-operated in this result. But of those which may be regarded as theological and ethical, the active principles upon which Arminianism insisted have been prime causes.

In France an early and interesting illustration of the modifying influence of Arminianism occurred in the theology of the school of Saumur, associated particularly with the name of Amyraut (see AMYRALDISM), and later with that of Pajon. Amyraut endeavoured to mitigate the harsh repugnance of the Calvinistic doctrine of election by his theory of hypothetic universal grace, which was substantially equivalent to a doctrine of universal atonement. God, in some proper sense, wills or desires that all men should repent and be saved. In case all should repent, no purpose of God would stand in the way of their salvation. But the indispensable means of repentance—regenerating grace, following election—is not bestowed upon them. In the order of nature the decree of election follows the decree providing the atonement. The main peculiarity of Pajon's attempt to blunt the edge of Calvinistic particularism was his conception of regenerating grace. The Spirit uses the truth of the Gospel as its instrument in effecting the antecedent intellectual change; but He also uses all the circumstances

and providential environment of the individual. To this aggregate of objective influence, which is not the same in different individuals, regeneration, where it takes place, is due. It is the act of God because the antecedent circumstances are the effect of God's ordering, and are adapted by Him to produce the result. Pajonism aroused wide-spread interest in the French Church.

In Germany the strength of Lutheran influence was already in sympathy with the Arminian movement. Its influence was also strong, though silent, in the bosom of the Reformed Church itself; and by the time of the Wolfian movement, the Reformed dogmatics were moving from the doctrine of the absolute decrees. Amongst the English-speaking peoples, in addition to the influences, already referred to, which strongly modified the theology of the great school of Anglican divines, the influence of Butler became a powerful ally of Arminianism. His doctrine of probation was not the Calvinistic doctrine of the probation of the race, but the Arminian insistence on the probation of the individual in his unshared and unshareable responsibility.

In the Methodist revival Arminianism became aggressive. Associated with the renewed vitalities of personal godliness, the Arminian theology, carried by singers and preachers, passed swiftly across the Atlantic, and accompanied the earliest settlers as they moved, from east to west, across the continent. In the newer British Colonies at the Antipodes a similar influence has wrought, until, at the present day, Arminianism, as understood and taught by Methodist preachers, dominates what is probably the largest Protestant Church in the world, reckoning some thirty millions of adherents. In America the matchless intellectual gifts of Jonathan Edwards were consecrated to the task of checking and devitalizing the forces of Arminian doctrine. But the ultimate results were disappointing to Calvinistic theologians. The New England theology, where it has not passed under Unitarian influences, has revealed a persistent modification of the Calvinistic position. The distinctively Calvinistic formularies of faith in Great Britain and America have undergone revision, mostly at those precise points which were the objective of the Arminian attack.

Modern theology in general has tended to forsake the harshness and absolutism of doctrinal statement, without surrendering the deeper significance of the ultimate supremacy of the Divine will. And this position was the original idea and ideal of Arminianism. There is a deep and almost universal dissatisfaction with the declaration and issues of a limited Atonement, which was a main element in the Arminian objection to Calvinism; and a strong conviction prevails that the salvation of the non-elect is an object of sincere desire to the mind of God. Yet it will be obvious that it is not the doctrine of Predestination *per se*, in which Calvinism has enclosed the realms of nature and providence in a network of teleology, that excites the strongest repugnance to the system against which Arminianism rose to protest.* For Determinism in philosophy and Selection in biological science are still acceptable and popular equivalents for Election in the realm of grace. Differentiation is a basal principle in each of these spheres; but differentiation involves inequality; and inequality involves preference; for it is admitted that the differences are original, so far as individuals are concerned. Biology posits differences in the single cell. Psychological ethics starts the career of individual character with differences *ab initio*. Popular inferences assume that the difference between Cain and Abel, or between Esau and Jacob, is an illustration of the same principle that differentiates the hawk from the dove or the hart from the swine. It is rather towards the Calvinistic eschatology that the antagonism is most keenly felt. The aspect of injustice and cruelty which this element in the Calvinistic system wore to the early Arminians, it wears to the modern mind. The humanity of God has become an element in the standard of judgment applied to the Divine activity. Fatherhood has dispossessed Sovereignty. Immanence has modified transcendence. When to such tendencies is added the momentum of the critical and exegetical methods which prevail in the modern interpretation of Scripture, to which Arminianism gave countenance and impetus at their origin, it may be possible to show some justification for the claim, made by the advocates of Arminian principles, that they possess the requisite possibilities of adaptation for the re-statement of the doctrines of grace demanded by the appeal to the conditions of modern thought. Moreover, the persistence and prevalence of Arminian principles presage a place of prominence for them among the contributory forces which appear to be making for an inter-confessional and international theology, based upon critical exegesis and upon a philosophy which includes the whole facts of human nature, whilst yielding reverent allegiance to the mystery and reality of the Divine Sovereignty.

The religious art of savage and barbarian races constitutes a field of inquiry the limits of which are exceedingly difficult to trace with any accuracy. There seems to be no doubt that among some tribes religion dominates almost the whole of individual as well as of social life. The Pueblo Indians in Arizona and New Mexico may be quoted as an example of such thoroughly religious peoples. The better the customs of these Indians have become known, the more evident it has become that even the apparently most trivial actions are to them associated with religious feelings and ideas. From birth to death the Pueblo Indian is, passively or actively, partaking in an almost continuous act of religious worship. In the art production of such tribes the religious purposes are naturally apt to become almost exclusively predominant.

It is true that the Pueblo tribes appear to be quite exceptional in their inclination towards pious practices. But if the word 'religion' be taken in its widest sense, as including magical ideas and superstitious beliefs, there might easily be found many other tribes among whom religion exercises an all-predominating influence on art production. And the field of religious art becomes further widened if, as has been done by several authors, traditionalism is included under the head of religion. Among almost all uncivilized nations, everything that has been transmitted from ancestors to descendants is treated with a respect which closely resembles religious feeling. And in art, even if the products we meet with be of recent origin, the methods employed in production have almost everywhere been transmitted from earlier generations.

It is only natural, therefore, that several authors should have been led to consider all ethnic art as essentially religious. This opinion is represented by some of the most eminent German ethnologists. According to Dr. Gerland, the distinguished continuator of Waitz's *Anthropologie der Naturvölker*, dances, pantomimes, and dramas, however meaningless they may now appear, have always originally been connected with religious ceremonies. The articles of dress and ornament with which primitive man decorates his body are, by ethnologists of this school, interpreted by preference as magic signs or religious symbols. And in works of art, such as rock paintings and engravings, the sacred and serious meaning has been taken for granted.

Against this line of thought, however, a reaction has set in among other German ethnologists. In his remarkable essay on petroglyphs (*Ethnographische Parallelen*) Andree has branded as a learned bias the general tendency to look for some sacred meaning in all ancient drawings, many of which may have had their origin simply in the impulse of the idle hand to scratch lines and figures on inviting surfaces. Other ethnologists have pointed out how easily the simplest dances and songs are to be explained as outbursts of an emotional pressure, which in itself has nothing to do with religious feeling. And it has been urged that the religious sanction, which traditionalism confers upon all ancient customs, does not in itself give us any information as to the real origin of these customs.

However sound in its principle, the reaction against the religious interpretation may, nevertheless, easily lead to a too radical scepticism. The case of the carved ornaments of the Hervey Islanders is most instructive in this respect. Notwithstanding the deriding strictures originally passed, in the name of common sense, on the symbolic interpretations of Stolpe and Read, an unbiassed examination can lead only to the conclusion, that in these apparently meaningless figures we really meet with a symbolic art which is full of religious significance (Stolpe in *Trans. of the Rochdale Lit. and Scientif. Soc.* 1891).

By such examples it is proved beyond question how impossible it is to uphold any *a priori* assertions as to the religious or non-religious character of primitive works of art. In order to estimate with exactness the influence exercised by religion on the earlier stages of æsthetic development, it would be necessary to examine in detail and from a philosophical point of view the artistic productions of all tribes of mankind. Such an examination has as yet been undertaken with regard to only a few tribes: the Hervey Islanders, the inhabitants of the Torres Strait regions, the Dayaks of Borneo, the Pueblo Indians, and some others. In an article for an Encyclopædia, there could in no case be any question of endeavouring to supplement these gaps in our knowledge. The only thing therefore that can safely be done is to interpret, at the risk of incompleteness, such works and manifestations alone as display their religious character on the surface. And it will be necessary, in order to keep the survey within reasonable limits, to exclude all works the origin of which is to be found in an exclusively magical purpose. Thus the various kinds of dramatic rain-making rituals, and the magically-medical cures, although generally executed by the religious profession, will not be treated of in this connexion (see Magic).

1. **Dramatic art.**—The simplest of all forms of religious art, from a theoretical point of view, are those dances and songs which are resorted to in order to bring about exaltation. The ceremonies of the Muhammadan dancing and howl-

ing dervishes and of many other well-known sects, might be quoted in proof of the fact that, among civilized as well as among barbarous peoples, a highly strung emotional state, even if produced by purely physical agency, is considered as a religious feeling. And it is significant that the only form of artistic manifestation that has been observed among the lowest of all savages—the wood Veddahs of Ceylon—consists of an exalted dance, which has justly been compared with the antics of the Siberian shamans and with the performances of the howling dervishes. As to the exact purpose of this ceremony, travellers do not all agree. Some take it to be intended as a kind of propitiation, addressed to the divinity of the arrow—an arrow being always stuck in the earth in the centre of the dancers. According to others, the dance might be explained as a kind of thanksgiving; others again see in it a rite, aiming at the expulsion of demons. But however much these interpretations may differ, the religious character of the ceremony has been taken for granted by almost all the different authorities. And their descriptions of the 'arrow dance' coincide at all important points (P. and F. Sarasin, *Naturwiss. Forsch. auf Ceylon*, iii.; Emerson Tennent, *Ceylon*; Hoffmeister, *Travels*; Deschamps, *Au Pays des Veddas*; Schmidt, *Ceylon*).

The participants in the dance are all men. At the outset, they advance slowly around the arrow without touching each other. Every dancer turns round on one foot, whilst performing some spasmodic movements with the free leg. The arms describe circles in the air, and the head is thrown backwards and forwards, to make the long, entangled hair stand out like a brush from the crown. The music is a simple melody, which is sung, or rather howled out, by the dancers. The time is marked by strokes of the hand on the nude belly. All this is begun in relative tranquillity. But gradually the time grows quicker, the movements become more violent, and the howling louder. Thus the dancers work themselves up to the utmost frenzy, and finally, one after another, fall to the ground in exhaustion. Some of them lie on their backs 'as stiff as a fallen tree,' whilst others, continuing the howling, tremble in convulsive vibrations.

This 'arrow-dance' is typical of a large class of dance-performances, examples of which are met with amongst most of the lower races, sometimes as mere amusements, but more often as religious rites. The means employed in order to bring about the exaltation and the convulsions may, indeed, be more complicated than those resorted to by the Veddahs. Thus, among some North American Indian tribes (cf. Schoolcraft, *Indian Tribes*, v.) the dancers prepare themselves for their performance by some days of fasting, and increase their state of exaltation during the dance by partaking of drugs or inhaling poisonous smoke. The clappings on the nude belly are, at higher stages of culture, replaced by the sound of some instruments capable of a greater suggestive power. But the spirit of the performance is none the less the same all over the world. Whether the dancers belong to the Ainus, to some of the aboriginal tribes of India (Aquis, Kurs, Santals), or to some South- or West-African race (Basutos, Tshi-speaking peoples on the Gold Coast), their chief endeavour is always to throw themselves, by violent movements and sounds, into a state of exaltation, which borders upon, or really passes over into, insensibility and unconsciousness; and it is the same endeavour which characterizes the celebrated shamanistic performances of the tribes of Northern Asia (cf. *e.g.* Radloff, *Sibirien*; Mikhailovski in *Journ. Anth. Inst.* xxiv. 62, 126).

In the shamanistic rites, however, we meet with one important feature that is not represented in the Veddah dance. In this example, the frantic scenes seem to be over at the moment unconsciousness is attained. In the higher developments of the arrow-dance type, however, it is from this moment that the real performance begins. And what follows, far more than the dance itself, is apt to give a religious character to the rite.

It is well known that on the lower stages of culture lunatics are generally considered as possessed by some divinity, and are consistently treated with a kind of religious respect. It is only natural that the same attitude should be upheld in those cases where the mental disorder is acute instead of chronic. And the shamanistic psychosis is the more liable to be interpreted in a supernatural way, since the shamans, in accordance with the traditionally-fixed programme of their performances, invariably astonish the bystanders by jugglery and feats of insensibility, such as eating fire, lacerating themselves with knives and needles, etc., made possible by their exalted and anæsthetic state (see SHAMANISM). The sudden change in the voice and behaviour of the convulsive dancer, together with the apparently supernatural power he exhibits, must necessarily lead the primitive spectators to the inference that a divine personality has taken hold of the shaman, while he himself is endeavouring by all means in his power to confirm the spectators in this belief. He delivers oracular utterances in a mystic voice, which is taken to be the voice of the god, or he keeps up long dialogues with the divinity, who is supposed to be visible to him, but is audible only to the bystanders. We have not in this connexion to decide whether these representations are wholly fraudulent, or whether they may have their origin in some visual and auditory hallucinations of the shamans. The important fact, from our point of view, is that in either case the orgiastic and, so to say, lyrical dance, which forms the beginning of the shaman performance, has passed over into something which, in its effect, if not in its intention, is to be considered as a work of dramatic art.

2. **Pictorial art.**—In these dramatic representations we meet with an expression of the belief—which may partially have been prompted by the facts of shamanistic possession—that the priests are, or may for a time become, inhabited by the divinity. If, as primitive peoples seem to believe all over the world, the priest really is a kind of 'god-box' (to use the picturesque expression of the Polynesians), then it is evident that the actions he is representing must impress his pious spectators as an eminently religious drama. But even if there had been no belief in a particular class of 'god-boxes,' dramatic representation would still have acquired a religious importance, on the ground of the belief in the magical effects which imitations of things and movements are supposed to exercise upon the things and movements that have been imitated. According to this belief, the god may be conjured to take up his abode in the body of the performer, who imitates what are believed to be his appearance, movements, and behaviour. And the artistic production, which has been called into existence by this principle of sympathetic magic, does not restrict itself to the department of dramatic art. It has attained a great importance within the domain of pictorial imitation.

The transition from dramatic to pictorial art is marked by those masks which, in many tribes, such as the Bellacoolas, the Melanesians, etc., are worn by the dancers in religious dances (cf. Boas, Dall, Woldt, on the Bellacoolas; Haddon and Cod-

rington on the Melanesians). The effect produced on the spectators by these painted faces is partially dependent upon the dramatic acting—the singing and the movements—of the performers. But the masks themselves are, no doubt, apt to awaken feelings of terror and awe. And among all primitive tribes they are regarded as sacred things, scarcely less holy than the religious paintings and statues venerated by more developed nations.

Among the most primitive tribes, however, one scarcely meets with any pictorial representations of the deity. This, probably, has less to do with the technical inability of the lowest savages than with the deficient anthropomorphism in their notions of the deity. Where a god is imagined as some vague and formless being, certain rude and shapeless fetishes may be considered as satisfactory representations or vehicles of the Divine power. But as soon as a god has taken the form of animal or man, pictorial art will be resorted to as a means of facilitating—by virtue of sympathetic magic—communications between man and the divinity.

The images and statues of primitive man must not, however, be interpreted as in any way similar to those pictorial representations of which barbarous—or sometimes even civilized—men avail themselves in order to bring about some effects of magic or illusion. It seems, on the contrary, as if similarity and lifelikeness had not even been aimed at in the idols and ancestral statues of the lowest savages. And what we know about the way in which these statues are made gives us reason to believe that their supposed efficacy rests only partially upon the principle of a magical connexion between similar things. A most instructive example has been quoted by Ellis in his description of West African fetishism. When the Negroes wish to transplant the wood deity from his original home to their towns and villages, they construct a wooden doll of branches taken from the tree in which he is supposed to live. The god is, no doubt, believed to feel a special temptation to take up his abode in the idol made in his own likeness; but it is evident that the material link established by the choice of the wood is thought of as being of no less, perhaps even of greater, importance than the resemblance (cf. Ellis, *Yoruba Peoples*, p. 278; *Tshi Peoples*, p. 81).

When the personality to be represented is not a nature-god but an ancestor, it is still easier to bring about a material connexion between him and the image. Thus the Melanesian religious masks often consist of a part of a human skull which has been painted in glaring colours. And among Melanesian, Malay, and West African tribes the skull of the dead is often inserted in the head of the statues which are made in their likeness (De Clercq in Schmeltz, *New Guinea*; Brenner, *Kannibalen Sumatras*). When the cannibals of Sumatra prepare their celebrated richly-sculptured magical staffs, they always enclose in the head of the uppermost figure of the staff the brain of a young boy, who has been killed for the purpose (Brenner, *l.c.*, cf. also the author's *Origins of Art*, p. 291). It is probable that whatever power such images are believed to possess is given to them chiefly by their material contents. The worship and respect shown to the statues are developed out of a worship of skulls, and the statues themselves have originally been considered, not as images of the body, but as receptacles for some part of the body itself. The more, however, the form of these receptacles has been elaborated, the more there must also arise a subjective illusion, which to the primitive spectators brings the image into connexion with the imitated reality. The crude character of savage statuary is no obstacle to such an illusion, as in primitive peoples the want of technical ability is counterbalanced by a naïve suggestibility. And as soon, on the other hand, as the image itself—as image—has acquired a magical or religious efficacy, there will also appear an endeavour to heighten the suggestive effect by increasing the lifelikeness and the resemblance of the statues. Thus superstitious and religious motives will tend gradually to increase the artistic value of the religious images. The religious statues of the Melanesians and the idols of the West African Negroes, for instance, undoubtedly owe something of their wild and fantastic lifelikeness to an attempt to awaken as intense an impression as possible of the divine powers which they are intended to represent. At somewhat higher stages of evolution, on the other hand, as, for instance, among the Pueblo Indians, religious motives tend to restrain the impressiveness of pictorial representation within some traditionally-fixed limits.

However crude and simple an idol may be, it will none the less, by virtue of its mere existence, bring about some important changes in man's attitude towards his god. By the idol a divinity, who has originally been considered as distant or vaguely localized, becomes concentrated in an approachable vehicle. The pious adorers thus acquire a fixed object for their worship. And the holiness of this object makes it necessary to shelter it from the environment. Thus, around the idol, there naturally arises a temple.

Among the lowest savage tribes these temples have no qualities entitling them to be enumerated among works of art. But at a somewhat higher stage of development, the house of the god is often decorated in a most gorgeous way. The ancestral houses—which are temples in the literal sense of the word—display, especially among some Malaysian and Melanesian tribes, a wealth of ornamental art (see TEMPLES). [See, further, 'Note on the Use of Painting in Primitive Religion,' following this article].

3. **Propitiation in art.**—In order completely to explain the motives which have led to these architectural constructions and decorations, it is not sufficient to appeal to those philosophical and superstitious ideas which have hitherto been mentioned. In the foregoing we have devoted our attention exclusively to man's endeavour to create, by dramatic or pictorial art, a representation of the god—a receptacle, so to say, of the divine spirit—by means of which he may enter into relations with the divinity. Alongside of this endeavour, however, there can always be observed another tendency, which has been of scarcely less importance for the history of art—the effort to flatter and propitiate the divinity. This effort has naturally become more and more marked the more the idea of God has become localized, fixed, and vivified through artistic representation. Thus the ornamental art which is lavished on the decoration of primitive temples may in most cases be interpreted as homage to the god who is believed to inhabit the temple or to visit it. But the tendency to flatter and propitiate is by no means dependent upon the degree of development reached by the idea of God. It manifests itself among tribes who conceive their divinity as a vague, unlocalized, and impersonal being, as well as among tribes who have adopted anthropomorphic or zoomorphic religions. Those of its manifestations, however, that are most important from a general point of view cannot possibly be treated of in this connexion. For there is nothing artistic in the various forms of *materiai* sacrifice—with the exception, perhaps, of the sacrificial vessels, which, in virtue of their religious purpose, may be elaborated and decorated with a

greater care than ordinary vessels. On the other hand, the *dramatic* and *poetic* forms of sacrifice—prayer and homage—afford us an ample store of examples which exactly fall within the scope of the present article.

A kind of sacrificial purpose may indeed be discovered even in those shamanistic dances which to the superficial observer appear to have their only motive in the desire to bring about a state of exaltation. As every effort is taken to be agreeable to the divinity, the dancers may in many cases nourish a hope of softening the hard heart of their god by their violent exertions. And this seems the more probable since the dances are often connected with self-tortures, *e.g.* scarifications, devouring of disgusting things, etc. But, on the other hand, these feats of endurance may as well be explained either as a means of imposing upon the spectators, or as immediate results—analagous to the self-woundings of hysterical and hystero-epileptic patients—of the pathological insensibility which has been brought about by the exaltation.

It is easier by far to interpret those less exalted dances, songs, and dramatic performances which tend only to provoke, or to express, a state of mild, pleasurable feeling. For the purposes of explanation it is advantageous to make a distinction between those artistic manifestations through which man aims intentionally at flattering or amusing the divine spectator, and those manifestations in which the expression of man's own feelings of thankfulness or happiness appears to be the chief motive. It is to be remembered that these two classes of religious art, which are to be differently analyzed and interpreted, may in reality often be blended together.

The most instructive examples of the first class are to be found among the melodramatic representations given at the tomb of the deceased. As the spirit of the dead man is considered to be a divinity, these performances are undeniably of a religious character. But as, on the other hand, the deceased are believed to preserve all the tastes and likings of the living, the means employed in order to amuse or flatter their spirits will closely resemble the various forms of secular art. As a matter of fact, there is no difference between, *e.g.*, the dances performed before a living king or chief, and the dances performed before the invisible spectator in the tomb. Yet the motives may in some cases give a peculiar character to the manifestations of funeral art. While the performances before a living spectator tend chiefly to produce in his mind an æsthetic pleasure, the funeral dramas and dances may often fulfil a magical purpose. In some cases the dances and songs aim at a stimulation of the spirit, which certainly needs an increase of force in order to surmount all the hardships and the weary wanderings of its transitional life. In other cases, funeral art is evidently intended to produce some terrifying effects upon the invisible enemies of the dead, who are believed to endeavour to possess themselves of his body. Sometimes one may even believe that the survivors try to frighten the spirit itself away from their homes by terrifying dances and pantomimes. Lastly, it is probably in the endeavour to exert a sympathetic influence upon the combats which the deceased has to undergo before he can attain his peace and rest, that survivors hold magic war-dramas (*e.g.* sham-fights and tugs of war) over his grave.

When—as has probably been the case in some tribes—the cult of some individual ancestor is transformed into a cult of a general divinity, and, in consequence thereof, the small spirit-house above the grave is replaced by a temple, some of the ancient funeral performances may still be kept up as religious observances. Although their original purpose is forgotten, their character will scarcely become changed. When magical ideas have died out, magical ceremonies will still survive as a means of religious homage. And when, at a later stage of development, the notion of a divine spectator has been forgotten, the same ceremonies may still be performed as mere amusements, for which the religious tradition offers a welcome justification. Thus it is more than difficult to decide in individual cases whether the artistic manifestations fulfil a religious, a magical, or a purely æsthetic purpose.

The same difficulty meets us when we have to do with purely lyrical dances and songs, through which the performers express their gratitude and devotion to the god. Psychologically there is an easy transition from the feeling of joy—when it is pure and complete—to the feeling of loving thankfulness. The fulness of the emotion seeks expression, and the expression seeks some one to whom it may address itself. Thus in happiness we experience a desire to imagine a god who may receive our gratitude. And among peoples who consider every happy occurrence as a benefit which has been especially accorded to them by the divinity, pleasure will easily cause some manifestations which embrace both emotions in one common expression. As the most typical and best known example of this kind of religious art, we may quote the song and dance of the Israelites after having passed the Red Sea (Ex 15). It is true that in this case the poetic and orchestic hymns were called forth by an exceptional and unique occurrence. But there are always some regular events of happy importance in the life of primitive man which will tend to make thanksgiving ceremonies a fixed institution. Thus the return of the spring will be saluted with dance and song among the nations that have been suffering from long and hard winters, *e.g.* the Eskimos, the Chukchis, etc. Among agricultural nations the occasion of a bountiful harvest will give rise to some joyful festivals, in which the participants amuse themselves at the same time as they pay homage to their divinity. Such festivals seem to be especially frequent among the North American Indians.

The dances performed at these ceremonies, as has already been mentioned, closely resemble the manifestations of pure and simple joy. But there are some gestures which, although originally connected immediately with the expression of this simple feeling, may gradually become peculiar to the honorific ritual. Thus hand-clappings (which, as is well known, accompany states of great joy both among savages and among children) have, among Polynesians as well as among the ancient Egyptians, acquired the sense of a pious and reverential gesture, by which the adorers manifest their love and thankfulness towards the god.

4. Ethical instruction in art.—The facts hitherto quoted have referred almost exclusively to an art which, while it addresses itself chiefly to the divine spectator, aims at bringing about an immediate relation between him and his adorers. This indeed appears to be the prominent purpose of religious practices among the most primitive tribes. But it must not be thought that savage and barbarous religions were entirely devoid of a didactic and moralizing side. Even the shamanistic dances may, as has already been pointed out, pass over into small pantomimes, by which the spectators are initiated into the transactions between the shaman and the god. And however much magical ideas may have to do with these dramatic and pictorial representations of the divinity, the theurgic purposes will soon combine themselves with the intention of explaining and illustrating the facts of religious history. In such dramatic representa-

tions as, for instance, the great Kachina dance of the Zuñi Indians, this didactic tendency seems to be especially prominent. In masquerades of the type represented by the Mumbo Jumbo dance in Central Africa and the 'Kinas' of the Fuegians, we meet with the moral, or pseudo-moral, motive of terrorizing women and children into subjection by showing them the awful aspects of the gods. Finally, in the dramas, songs, and dances at the initiation of boys and girls into maturity, magical, didactic, and moralizing purposes have all combined to create the most marvellous manifestations which are to be met with in the department of primitive art. It is true that the instruction conferred at these ceremonies refers chiefly to practical utility. But even among peoples at so low a degree of development as the Australian aborigines, religious and, one might say, philosophical doctrines are expounded to the young men. Thus in a kind of miracle play, to which some curious analogies have been found among the Fijians and the East Africans, the old men enact before the boys a representation of death and resurrection. Although less elaborate in dramatic detail and stage-management, the fragmentary dramas in which the American Indian shaman-novitiates are supposed to be killed and recalled to life present to us a scarcely less interesting illustration of the same great thought. There are indeed, especially in this last example, good reasons for assuming that the simulated death and resurrection are supposed to effect, in a magical way, some kind of spiritual regeneration in the novices on whose behalf the drama is performed. But while admitting this, we may nevertheless take it for granted that an endeavour to elucidate the doctrines of the priesthood may be combined with the magical rite in question. And similarly with regard to analogous ceremonies in other tribes, we feel justified in assuming the presence of a didactic purpose. The more the dogmatic system becomes fixed and elaborated, the greater need will there ensue of affording these doctrines a clear expression in the objective forms of art.

It is evident that poetry more than any other art is fitted to serve such a purpose. And, in fact, among several tribes at the stage of higher savagery and barbarism there have been found some more or less complete mythical poems. These songs, however, will be more properly treated of under the headings MYTHOLOGY, CHARMS, and HYMNS.

LITERATURE.—In addition to the works mentioned above, the following books may be consulted with advantage:

On DECORATION and ORNAMENT in connexion with religion: Henry Balfour, *The Evolution of Decorative Art*, London, 1893; A. C. Haddon, *Evolution in Art, as illustrated by the Life Histories of Designs*, London, 1895; A. Hamilton, *The Art-Workmanship of the Maori Race*, Dunedin, 1896 *f.*; A. R. Hein, *Die bildenden Künste bei den Dayaks auf Borneo*, Vienna, 1890.

On MUSIC, DRAMA, and POETRY in connexion with religion: C. Letourneau, *L'évolution littéraire dans les diverses races humaines*, Paris, 1894; Posnett, *Comparative Literature*, London, 1886; R. Wallaschek, *Primitive Music*, London, 1893.

On the general ÆSTHETICS of primitive man: E. Grosse, *Die Anfänge der Kunst*, Freiburg i. B. 1894; Yrjö Hirn, *The Origins of Art*, London, 1900.

YRJÖ HIRN.

NOTE ON THE USE OF PAINTING IN PRIMITIVE RELIGION.—Besides the realistic and symbolic representation of his divinities or of his religious conceptions and aspirations by means of various art methods—images or statues, carvings, sacred dances, sacred hymns and chants—painting has occasionally been brought into the service of religion by primitive or savage man, as well as by his more civilized successor. The purpose of this note will be sufficiently fulfilled by reference to such painting in the Stone Age, among the rudest savages, and with a semi-barbaric people. In all alike the ends aimed at are precisely the same as those intended by the image or carving—the obtaining of power over or from the being represented, the vivid depicting of the worshipful object or person so that the worshipper, by means of the picture or symbol, may have his religious sense re-awakened, or may also be brought into contact and communion with the divinity. In the first example to be referred to—that of the Palæolithic cave-artists—the paintings are not those of divinities but of animals. Even if these had no totemistic significance, the pictures played a highly important part in the magico-religious ceremonies which, *ex hypothesi*, were performed before them.

Within recent years, French archæologists have discovered the existence of engravings and paintings of animals on the walls of caverns in Périgord and the Pyrenees. Similar paintings were, almost simultaneously, found in grottoes at Altamira in Spain. They are executed on rocks in the darkest part of the caves, far from the entrance. Artificial light must therefore have been employed in designing them, as is proved by the discovery of a stone lamp ornamented with an incised figure of a reindeer, and thus dating from the Reindeer age of the Palæolithic epoch—the age of simple engravings with which the great Glyptic period of Quaternary times terminated. Probably these wall engravings and paintings belong to this closing period also. The animals represented are mammoths, reindeer, bison, oxen, horses, goats, saigas, etc. Some of these are engraved; others, besides being engraved, have the outlines filled in with reddish-brown colour, or, in some cases, bluish-black, exactly as totemic grave-posts used by the American Indians have incised figures painted over with vermilion; in others the engraving lines are accentuated by a thin band of colour. Frequently a design is outlined in black, and the surface covered with red ochre. We are yet ignorant how the colour was applied; it may have been daubed on by means of some primitive brush, or blown from the mouth, as is the case with some Australian rock-paintings. The interest of these paintings, for us, consists in the theory regarding their purpose enunciated by a French *savant*, M. Salomon Reinach. He notes regarding these paintings as well as Quaternary art in general, that *motifs* borrowed from the animal world are the most numerous, and that the animals represented are those which form the food supply of a nation of hunters and fishers. They are *desirable* animals; others, not represented, *e.g.* the lion, tiger, jackal, etc., are undesirable, and this, he believes, is not the result of chance. Among modern savages it is not uncommon to find that the image of a creature or object is held to give its author a *prise* over the object or creature through a process of mimetic magic. Hence many savages object to be drawn or painted. In the same way pantomimic and dramatic exhibitions have for their purpose the actual result of what is thus imitated symbolically (rain-making, animal-dances). Among the Central Australians, in order to cause a multiplication of such a totem-animal as the witchetty-grub, the members of this totem clan assemble before a rocky wall on which are painted great representations of the grub, and there they sing in chorus, invoking the insect to multiply and be fruitful (Spencer-Gillen, *Native Tribes of Central Australia*, 170). Similar ceremonies, including the depicting, more or less symbolically, of the desired animal, are employed by other clans, *e.g.* the emu clan. The blood of some members of the clan is shed on the ground, and on the reddened surface is painted with coloured earth and charcoal an emu, along with yellow and black circles representing its eggs. Many other totemic designs, mainly of a symbolic

character, are painted on rocks, and are tabu to women and children.

M. Reinach notes the fact that the Quaternary paintings are executed on the walls of caves far from the entrance and at the end of corridors difficult of access, as if with a view to secrecy. Not only so, but the caves are in total darkness, and, as has been said, the paintings must have been executed and looked at by means of artificial light. Hence the impossibility of assuming that they were executed for mere pleasure. They must have had a religio-magical character, and their purpose was to secure, 'by magical practices, the multiplication of the game on which depended the existence of the clan or tribe. Ceremonies, in which adults alone took part, were performed with that end in the darkest part of the cavern, entrance to which was forbidden to the profane.' These paintings formed the object of the cult, addressed not to the individuals represented, but to the species, over which the worshippers had influence by reason of the individual being thus depicted. The animals, as a result of these ceremonies, would multiply and would frequent the neighbourhood. The various sculptures and engravings of the Reindeer age may have had such a purpose also, while the so-called *bâtons de commandement* doubtless played their part in magical and totemistic ceremonies, as M. Bernardin had already suggested in 1876 (*Revue Savoisienne*, Feb. 1876). Thus the art of the period was neither a luxury nor an amusement, but the expression of a rude yet intense religion, based upon magico-religious practices having for their object the attainment of the food supply. While we cannot admit that Palæolithic man's artistic powers were used only for magico-religious purposes—the beauty of some of his designs, and the care in reproducing exactly what he saw, suggesting the artist pure and simple—it could not fail that they should be frequently employed in such ways as M. Reinach has suggested. Everywhere else this has occurred, and art has been freely enlisted in the service of both religion and magic.

In the times of transition to the Neolithic age, though the brilliant art production of the earlier period is unknown, art was again used in the cult. This, already shown by the symbolic engravings and markings on rocks, megalithic monuments, etc., is further suggested by the painted pebbles found by M. Piette at Mas d'Azil. Some of the designs represent numbers, others are alphabetiform signs corresponding to the letters of the later Ægean and Cypriote syllabaries; others are pictographs, with or without a symbolic meaning. It is in these last that we may find the use of painting as an accessory to the cult. Among them are the cross by itself or within a circle, a circle with a central dot (solar symbols, some of which occur as engravings on the megalithic monuments of the Neolithic age), the serpent, tree, etc. All are painted with peroxide of iron upon white pebbles. Later, the carved symbols of the Neolithic period, *e.g.* the symbolic axes and female figures (divinities) on the walls of the grottoes of La Marne, etc., show traces of having been covered with colour, like the carved images of later ages.

For the cave paintings see *L'Anthropologie*, 1902; *Revue mensuelle de l'école d'anthrop.* 1902. M. Reinach's paper will be found in *L'Anth.* 1903, p. 257. See also his *Story of Art throughout the Ages*, ch. i. M. Piette's discoveries are described in *L'Anth.* vi. 385, xiv. 643 f. For the symbolic carvings of La Marne, see Cartailhac, *La France préhistorique*, 240 ff.; Baron de Baye, *L'Archéologie préhistorique*.

Some Australian instances of the use of painting for magico-religious purposes have already been referred to. Among the Northern tribes of Central Australia similar paintings are used in the totemic ceremonies. The men of the Thalaualla or Black Snake totem, when they perform the Intichiuma rites for the purpose of increasing the numbers of this snake species, paint partly symbolic and partly imitative designs on the ground with red ochre and other coloured earths and charcoal. These depict the mythic history of the ancestral snake, which is also dramatically represented (Spencer-Gillen, *Northern Tribes of C. A.* 302, 737). Similar ground paintings are used in the Wollunqua snake totem ceremonies. Each one represents, 'or rather was associated with, the various spots at which the animal stood up, performed ceremonies, and left spirit children behind him' (*op. cit.* p. 239). In this case the paintings are entirely symbolic, and consist of concentric circles and curved lines outlined in white dots on a ground of red or yellow ochre, painted on the surface of the earth previously prepared for the purpose. Spencer and Gillen describe at some length the sacred rock-drawings of the Central Australian tribes. These, which are usually executed in red ochre, are mainly conventional geometrical designs, all of which, however, have a definite meaning to the natives who use them. They are seen only by the men who have been initiated, and are painted on the rocks near the place where the sacred *churinga* of the clan are deposited. Among other Australian tribes, drawings and paintings on the ground or on trees are also found in connexion with the *bora*, or sacred initiatory ceremonies, and are shown only to the initiated. Sometimes gigantic figures of divine beings—Baiamai, Gunnanbuly, etc.—are outlined in the turf or formed out of a heap of earth; in other cases sacred figures are cut in the bark of trees. Similar figures are also painted with red ochre and pipe-clay on trees, or on sheets of bark, which are then hung up on or rested against the trees. The rock-paintings, which may or may not have a religious or mythic significance, are either stencilled by the object to be depicted being placed against the rock, which is moistened and upon which the colour is blown or applied with a kind of brush; or painted in outline, the inner space being sometimes filled in with the same colour, or shaded by strokes of some different colour.

With the symbolism of the painted pebbles of Mas d'Azil may be compared the designs painted or incised on Australian *churinga*. The *churinga* is a piece of wood or stone of long oval shape supposed to have been dropped by a spirit ancestor as he, for the purpose of re-incarnation, entered the body of a woman. The child thus born becomes the owner of the *churinga*, which is deposited, along with those of the other members of his totem clan, in a sacred place. The design has in each case a distinctive meaning, connected with the totem-beliefs of the people, and generally illustrating some incident of the mythic history of the totem ancestor. Among the designs are concentric curves and circles, parallel lines, etc. These exactly resemble designs painted on the pebbles, which also resemble the *churinga* in shape, as well as those incised on the megalithic monuments of the Neolithic age. It has been suggested that the Azilian pebbles may have been the *churinga* of a pre-historic totemistic people (A. B. Cook, *L'Anthropologie*, xiv. 655). In any case, the analogy of Australian sacred art shows that they had a religious value.

For Australian art see Spencer-Gillen, *Northern Tribes of Central Australia*, p. 696 ff., and *Native Tribes*, p. 614 ff.; Stirling in *Report of Horn Scientific Expedition*, 'Anthropology,' pt. iv.; R. H. Mathews, *JAI* xxv. 146 ff., 299 ff.

Among the more cultured tribes of the North American continent—Zuñis, Tusayans, South Californians, and Navahos—a curious kind of painting is used as an adjunct to certain religious ceremonials whose purpose is usually the healing of disease, and which are characterized by great elaborateness

and length. As practised among the Navaho Indians, the ceremony continues for nine days, and is conducted by a theurgist and several assistants. Every part of the ritual has a special significance, and must be performed with the strictest attention to traditional detail, lest fatal consequences should ensue from the least infringement of it. Several men personate the gods and goddesses and take part in the ceremonies; each day's proceedings include pantomimic action, symbolism, offerings to the gods, singing of sacred chants, and prayers, and the whole ends with an elaborate dance. The whole ceremony is known as *yebitchai*, a word meaning 'giant's uncle,' and, as in several Australian mysteries, it is used to awe children, who, on the eighth day, are initiated into the ceremony, and discover that the men personating the gods are their fellow-tribesmen. The paintings are made with dry sand and pigments of various colours sprinkled on a ground of yellow sand with the thumb and forefinger of the operator. The colours used are yellow, red, white, black, and a blue prepared from a mixture of charcoal with white, red, and yellow sands. These colours, as well as the pictures themselves, are made according to instructions given by the gods, as the Navaho myth of 'The Floating Logs' relates. All the paintings represent gods and goddesses, usually about three feet in length, and depicted in a somewhat conventional manner. Face, arms, and legs are carefully done; the body is long and narrow; each divinity is usually depicted with various emblems; a god is denoted by a round head, a goddess by a rectangular head. Considering the method in which the colours are employed, the resulting picture is a marvellous piece of art work, full of minute details, while many of the colour lines in the dress and sash decorations of the divinities are like threads. The first sand-painting is made on the fifth day of the ceremony, and represents three divinities; in the painting of the sixth day, there are four pairs of divinities, male and female, each sitting on the limb of a cross, with their appropriate emblems; outside the painting are four gods, one on each side, and the whole is surrounded by the rainbow goddess. The seventh day's painting represents fourteen divinities in two rows, again surrounded by the rainbow goddess, 25 ft. in length. Twelve divinities are shown in the eighth day's painting; in their midst is a huge picture of a corn-stalk, the main subsistence of life; a square base and triangle represent clouds, and three white lines the roots of the corn. The rainbow goddess again surrounds this picture. A detailed account of this last picture will show its symbolic nature. The divinities are the Zenichi, who live in a rock, represented by a long black parallelogram. Those parts of their bodies and faces which are painted red, denote red corn; black signifies black clouds. Zigzag lines on the bodies mean lightning; certain black lines round the head, zigzagged with white, are cloud baskets holding red corn.

All these paintings are arranged on the floor of a medicine-lodge in which are assembled the invalid, the theurgist and his assistants, and certain privileged spectators. In each case the sick man is seated on the central figure of each painting, having previously sprinkled the design with sacred meal. Several ceremonies, chants, and prayers follow, during which one of the representatives of the gods touches the feet, heart, and head of each figure respectively with his right hand, each time touching the corresponding parts of the invalid's body. This appears to be the vital part of the ceremony, bringing the sick man into relation with the gods through their pictures and by their representative, thus transferring their power to him so that his disease may be overcome. This seems to be certain, as, before the pictures are obliterated at the end of the day's proceedings, the people crowd round to touch them, and then, having inhaled a breath over their hands, rub their bodies so that they may be cured of any malady, moral or physical, by the divine effluence. The sacred pictures thus exercise the *quasi*-sacramental power of the idol, fetish, or symbolic image, wherever found. Being like the gods, and made, as is believed, according to divine directions, they have all the power of the gods themselves. So the colours used in other American Indian ceremonies are believed to have been originally given by the divine *manitous* (see *BE*, Fourteenth Annual Report, p. 91).

James Stevenson, *Ceremonial of Hasjelti Dailjis and Mythical Sand Paintings of the Navajo Indians*, with illustrations of the paintings, in *BE*, Eighth Annual Report, 1891.

Reference may also be briefly made to: (1) Zuñi religious paintings on vessels, representing the Creation and other myths current among the people. The colours themselves are symbolic (see Cushing, *Study of Pueblo Pottery*, 1886; J. W. Fewkes, *Journ. of Amer. Ethnol. and Archæol.* ii. 1892).—(2) Painting or tatuing the body (*a*) for magical purposes, as among the Aracan hill tribes and Burmese (St. John, *JAI* ii. 235; Symes, *Embassy to Ava*, p. 312, and others); (*b*) with totem designs, *e.g.* the tribes of Malacca (Haddon, *Evol. in Art*, p. 252 *f.*); (*c*) on certain ceremonial occasions, as with the Australians (Spencer-Gillen, *op. cit.*); (*d*) for mourning.—(3) Painting the bodies or skeletons of the dead, usually with red, but occasionally (Andaman Islanders) with yellow—a custom which, beginning apparently in late Palæolithic times (grottoes of Baoussés-Rousses, Mentone), occurred frequently in the Neolithic period, and is found among various savages—Australians, American Indians, etc. (Cartailhac, *La France préhistorique*, 105, 292, 302; *L'Anthropologie*, vi. 4; *BE*, First Report, p. 107; Grosse, *Anfänge der Kunst*, p. 42).—(4) Painting totem-designs on weapons, furniture, houses, totem-posts, and grave-posts (Frazer, *Totemism*).—(5) The use of pictographs to illustrate chants used in religious mysteries and as mnemonic symbols among the American Indians (*BE*, Fourteenth Report, p. 107); see also TATUING, TOTEMISM.

These various examples show that, like every other branch of art, painting, realistic or symbolic, has been used by man to set forth his religious beliefs, to represent or symbolize his divinities, or, in accordance with his religio-magical theory of the universe, to gratify his wishes, to act as a protection, or to transfer the power of the person or object depicted to himself. 'Art for art's sake' was not unknown to primitive and savage man, but on the whole he made it subserve a useful purpose, *e.g.* in bringing it under the sway of religion. It is thus scarcely correct to say, as Grosse does (*Anfänge der Kunst*), that the art of primitive peoples is not connected with religion. Whatever be its origin, whether arising from some instinctive impulse to imitate the things man saw around him, or from some other cause, art soon lent itself to enhance and satisfy man's needs. At the same time, the purely æsthetic pleasure on the part of the artist in making an artistic object or design which was to be used for religious or other purposes must not be overlooked.

J. A. MACCULLOCH.

ART (Primitive and Savage). — Before the acquisition of the art of writing by any people, the only method of recording facts or ideas, except by word of mouth, is by means of some kind of graphic representation. The carving or drawing may be intended to be realistic, though, even so, the realism may be imperfect; but one frequently finds that a suggestion of an object answers all the purpose of a representation of the whole object. Thus, an animal may be indicated by a limb, a zigzag may stand for the wings of an insect, bird, or bat; in other words, a convention may thoroughly satisfy the need of expression. When an object is decorated with conventional designs, these may be so remote in form from their original that they are usually described as 'geometric,' and

consequently they stand the chance of no further interest being taken in them; whereas, if information be obtained from the designers, it is nearly always found that they have a significance that cannot be discovered by inspection alone. Experience has proved that designs which have frequently been regarded as merely decorative have an import that could not otherwise have been predicated for them. Hence, the futility of an endeavour to elucidate the significance of designs without an adequate investigation in the field.

At the outset it must be acknowledged that all the designs of a 'primitive' people are not necessarily significant. The æsthetic sense which manifests itself in symmetry, balance, and decoration seems to have been present, to a greater or less degree, from the earliest times of which we have any record; and it is often quite marked among the less advanced peoples of the present day. It is useless to try to read a meaning into simple patterns unless we are sure of the key, as they may very well be nothing more than an expression of the artist's feeling for beauty as he experiences it, or as limited by his skill or by the materials at his disposal. For example, it appears useless to attempt to extract significance from the patterns engraved on bones by Palæolithic man, or from most of the designs of other pre-historic folk. The same applies to the decorative art of other peoples; indeed, the greater part of the decorative art of present-day civilization is meaningless; but it may for all that satisfy an artistic craving, or at all events it is an acknowledgment of an æsthetic need. The particular designs, however, may be suggested to the artist by what he sees around him, and he may apply them without relevancy, merely to please himself. It seems fairly certain that it is only among the culture-folk that inventive fancy has full play. The nature-folk may produce intricate or complicated designs, but these are nearly always found to be modifications or groupings of simple motives, and these latter are generally those which lie ready to hand. For example, mat-making and basketry are of universal occurrence where the materials exist for their manufacture; the plaits of the former and the weaves of the latter are limited in number, but the various sequences give rise to patterns. By means of differently coloured strips in the original foundation or applied thereto, or by pigments or other devices, these patterns can be emphasized, or new ones produced; but these are practically confined to straight and angled lines, chequers, and the like. These patterns are always before the native eye, and it is no wonder that they are transferred to clubs, wooden bowls, or pottery. The designs are incidental to the technique of plait-work, but are inappropriate to most of the other objects to which they are applied, although they satisfy the artistic craving. The same applies to lashings and various kinds of string- and thong-work; sometimes carved representations of string or braid may be expressions of an antecedent fastening together of separate parts, but more often they are merely decorative.

Artistic representation may be solely for the purpose of *depicting objects*, or for *recording events*, or for *giving information*, as in the case of much of the interesting graphic art of the Eskimos, or of the ruder attempts of certain Siberian tribes. Probably to this category belongs the pictorial art of the ancient cave-dwellers of Western Europe, who painted in caves or engraved on bone the animals that were daily before their eyes, as did the Bushmen of recent times; but the latter frequently depicted hunting scenes, and even fights with Zulus. The pictographs on the buffalo robes of the Dakotas, the most famous of the 'winter counts,' as they are termed, indicate the most salient incident of the previous year, and thus a pictorial history is painted which in this case extended for about seventy years (Mallery, *Fourth* and *Tenth Ann. Rep. Bureau Eth.*). The pictorial blazings or notice boards of the Alaskans gave definite information to friends and travellers (Mallery, *l.c.*).

Apart from the foregoing and the utilization of decorative art as an exhibition of wealth or for social distinction, we find that *magic* and religion have exercised a preponderating effect on the artistic impulse; nor is this surprising, considering the vast importance they play in the life, thought, and feeling of mankind. From the nature of the case that aspect of sympathetic magic known as 'homœopathic' lends itself to artistic treatment rather than does the 'contagious.' The representation of an object is as effectual as the object itself; and as there is virtue in words and power in a name, so there is efficacy in a pictograph, which, after all, is a graphic as opposed to an oral or written expression. According to von den Steinen (*Unter den Naturvölkern Zentral-Brasiliens*, 1894), certain designs on a Bakaïri paddle represent various kinds of fish, some of which are drawn within the meshes of a net; and the author believes that the object of this decoration is simply to bring fish close to the paddle so that they may be caught in the fisherman's net. Many other examples of simple magical pictography might be cited, but the most elaborate examples are those recorded by Vaughan-Stevens from the Semang and Sakai of the Malay Peninsula. These are hunting jungle-folk who undoubtedly come under the unsatisfactory designation of savages. The English reader will find the fullest account of their extraordinary designs in Skeat and Blagden's *Wild Tribes of the Malay Peninsula*. There has been a good deal of uncertainty concerning the *bona fides* of Vaughan-Stevens, but these authors are inclined to credit in the main the explanations given by him of the engravings on combs and bamboos which he undoubtedly collected from the natives. Some of the Sakai bamboo designs represent diseases, and the whole design on a bamboo is intended as a prophylactic against a specific disease. One bamboo design represents the swellings caused by the stings of scorpions and the pricks of centipedes; these creatures also are engraved together with an Argus pheasant. The significance of this bamboo is that, as the Argus pheasant feeds on centipedes and scorpions, its help is invoked against them by striking the bamboo against the ground. The decoration of one bamboo is a charm for rain; one is a pictographic formula to enable a man who wishes to build a house to find easily the necessary materials; one is supposed to protect the harvest and the plantations round the house from injurious animals; another helps women to catch fish, and also protects them from poisonous ones. The Semang women possess numerous combs, which are decorated with various designs, each of which is a prophylactic against a particular disease. When a woman goes into the jungle, she inserts at least eight of the combs horizontally in her hair, so that the disease-bearing wind-demon, who is the emissary of Kari, the thunder-god, on meeting the protecting pattern may fall to the ground; but should the woman not wear a comb with the appropriate pattern, the disease is deposited on her forehead, whence it spreads over the body. In a recent paper, Dr. Westermarck (*JAI* xxxiv. 211) has demonstrated the use of designs in averting the malign influences of the evil eye in Morocco. Silver amulets and numerous objects of everyday use are decorated with crosses, and

groups of five knobs or two intersecting squares; all these indicate the five fingers or finger-tips, which are employed in a gesture to throw back the harmful gaze of those who possess an evil eye. Similar designs and representations of eyes, often as triangles, decorate saddle-cloths, pottery, money-boxes, leather pouches, etc., and are embroidered upon or woven into the garments of the people, so that at all times and from all points they, their animals, and their personal effects may be protected from premeditated or casual harm.

Professor Maspero says of the decorative art of Ancient Egypt: 'The object of decoration was not merely to delight the eye. Applied to a piece of furniture, a coffin, a house, a temple, decoration possessed a certain magical property, of which the power or nature was determined by each word inscribed or spoken at the moment of consecration. Every object, therefore, was an amulet as well as an ornament' (quoted by Goodyear, *The Architectural Record*, iii.). The lotus is the parent, writes Hamlin (*Architect. Rec.* viii.), of a greater number and variety of ornament-forms than any other *motif* known. It was the most conspicuous and beautiful flower known to the Egyptians, and its intrinsic decorative value, as well as its importance in their mythological symbolism, gave it an extraordinary vogue as an ornament. Associated as it was with Horus and Osiris, with the idea of Nature's reproductive power, with the life-giving Nile, and with all the solar elements of Egyptian mythology, it was in constant and universal use as a symbol and amulet, both in its natural or concrete form, and in decorative representations of the flower. Whether or not its symbolic use as an amulet preceded or accompanied from the outset its decorative use as an ornament, it underwent the operation of that universal law by which ornament forms lose in time their original significance and receive new and diverse applications. Hamlin also states that symbolism alone does not sufficiently account for the fact that four-fifths, perhaps nine-tenths, of the ornamental patterns of Egyptian art are based upon the lotus; the real reason for the extraordinary vogue of this single *motif* is to be found in the decorative possibilities of the type itself. The lotus seems to have been symbolic of the sun. It was also largely employed in funeral rites, and also symbolized the resurrection; but this latter idea was associated in the Egyptian mind with reproductive power. As the intensely religious mind of the ancient Egyptians was permeated with the problems of death and elevated by the prospect of immortality, it is not surprising that the flower which symbolized the resurrection should be depicted in such profusion in their tombs and elsewhere. How the Grecian artists borrowed this motive and transfigured it, how it was still further modified by the Romans, and how it spread to the British Islands through Celtic and Scandinavian channels, has been described by Goodyear (*Architectural Record*, ii. iv., 'The Grammar of the Lotus'), Hamlin (*loc. cit.*), Coffey (*Journ. Roy. Soc. Ant. Ireland*, 1894–1895), and Haddon (*Evolution in Art*).

Whereas, for our present purpose, magic may be regarded as a direct action by means of which man endeavours to accomplish his desire, *religion* is the recognition of some outside power or entity who can give aid directly or indirectly, or with whom an emotional relationship has been established; though it is not always easy to distinguish between magic and religion. In a paper on the decorative art and symbolism of the Arapahos, who are typical Plains Indians of the W. Algonquin linguistic stock, Kroeber informs us (*Bull. Am. Mus. Nat. Hist.* xviii. pt. 1 [1902]) that the closeness of the connexion between the symbolism and the religious life of the Indians cannot well be overestimated by a white man. Apart from the decorative symbolism on ceremonial objects, the making of what have been called tribal ornaments is regularly accompanied by religious ceremonies. Some styles of patterns found on tent-ornaments and *parfleches* ('rawhide bags') are very old and sacred, because originating from mythic beings. A considerable number of objects are decorated according to dreams or visions. Finally, 'all symbolism, even when decorative and unconnected with any ceremony, tends to be to the Indian a matter of a serious and religious nature' (Kroeber, *loc. cit.* p. 150).

While totemism is largely a social factor, it has a religious aspect which is often not far removed from magic. When a people is in the totemic stage, the human members of the kin or clan are prone not only to carry about with them portions or emblems of their totem, but to mark their body by paint, scarification, or tatu with realistic or conventional representations of their totem. Not only so, but they may decorate their personal belongings with their totem (cf. Spencer and Gillen's *Native Tribes*, and *Northern Tribes*, and the *Reports of the Camb. Anth. Exped. to Torres Straits*, vols. iv. v. vi.). The Western Torres Straits Islanders frequently engrave on bamboo, tobacco pipes, drums, and other objects, representations of their respective totems; almost without exception the latter are animals. Not only the totem animals are pictured, but in a few instances others as well, of which there is no evidence that they ever were totemic. In this case it would seem that the habit of animal-drawing has been extended from totems to a few other forms. On the adjacent mainland of New Guinea we find plant totems associated with animal totems, and they too appear in the decorative art. At the mouth of the Fly River, plant totems greatly preponderate, and certain pipes and drums brought from some little distance up that river are decorated solely with plant motives. It is only when we come to the opposite extremity of British New Guinea—the Milne Bay district—and the neighbouring archipelagoes, that we again meet with animal forms, more especially birds, frequent in decoration, carved realistically and conventionally, and modified into a wealth of scrolls, curves, and circles; and once more we find totemism as a living cult (cf. Haddon, 'Dec. Art of Brit. New Guinea' in *Roy. Irish Acad.* 1894). Also in parts of Melanesia, where there is totemism, frequent representation of animals occurs (Stephan, *Südseekunst*, 1907). It would be safe to say that where totemism exists there is usually an expression of the cult in decorative art; but it would be very rash to assume totemism wherever we find representation of animals or plants.

Throughout the greater part of America the belief in guardian spirits has led to representations of the *manitou*, *wahubi*, *okki*, *sulia*, *nagual*, or by whatever name it may be termed. More especially is this the case along the North-West Coast, where blankets, boxes, hats, spoons, pipes, as well as the so-called 'totem posts,' are decorated or carved with representations of the guardian spirit of the owner or those of his ancestors. These highly esteemed and jealously guarded crests and emblems originated among the Salish, according to Hill-Tout (*Trans. Roy. Soc. Canada*, sect. ii. 1901), from two sources. The crest springs from pictographic or plastic realization of the *sulia* [or 'dream-totem']. The totemic (*sic*) emblems and insignia are symbolic records of some event or adventure more or less mythic in the life of the owner or of his ancestors from whom he inherited them. In neither case do they regard themselves

as descendants of their 'totems.' Speaking of the more northern of the North Pacific group of peoples, Boas says (*Rep. U.S. Nat. Mus.* 1895–1897) that each man acquires a guardian spirit, but he can acquire only such as belongs to his clan; thus a person may have the general crest of his clan, and besides use as his personal crest such guardian spirits as he has acquired. This partly accounts for the great multiplicity of combinations of crests on the carvings of these people.

Totemism frequently gives way also before an ancestor- or a hero-cult, and thus the human form makes its appearance in religious art. In the Papuan Gulf district the great bulk of decorated objects are ornamented with representations, sometimes highly conventionalized or degraded, of the human face (cf. *Dec. Art Brit. New Guinea*). In this district, at the initiation ceremonies, masks are worn to simulate the ancestral gods, and bull-roarers are whirled; these and other ceremonial objects, as well as the carved wooden belts that only warriors may wear, are decorated with faces or figures of the same apotheosized ancestors. It is highly significant that this is the only region of British New Guinea where 'gods' have been evolved (Holmes, *JAI* xxxii. 426 ff.); and at the same time it is the only district where the human form or face enters at all prominently into the decorative art of the natives, but here the human face is the dominant motive. It is worthy of note that, while animal forms are common in art in the extreme west and east of British New Guinea where totemism is rife, and the human face in the Gulf district where there are 'gods,' in the central district, where, so far as is known, there is no religion as defined above, the decorative art is devoid of animal or human representations, and is characterized by 'geometric' designs. While an ancestor-cult may develop into the worship of gods, the same result may be arrived at by other roads. In Torres Straits a hero-cult, presumably introduced from New Guinea, had invaded the original totemism, and we can trace the amalgamation of the old cult with the new, and its final disappearance and replacement by the higher religion. In the intermediate stage we have a strange confusion of the totem animal with the human hero. In the ritual this was symbolized by the wearing of masks of animal form, or of part animal and part human form. The same occurs also in the Papuan Gulf district, and occasionally these masks are represented pictorially. There does not appear to be any record of a totem animal actually becoming metamorphosed into human form. It may have occurred, but, judging from the Papuan evidence, it is more probable that a substitution took place owing to contact with an ancestor- or hero-cult, and during the transition the demi-god would partake of his double ancestry. In this way we can explain the beast-headed divinities of ancient Egypt. That a part of the religion of ancient Greece had its origin in totemism may be admitted. The ox, the mouse, wild beasts and birds, and similar associates of the Olympian hierarchy, whatever they were to the enlightened pagans who endeavoured to rationalize and even to spiritualize them, are to us milestones which mark the road traversed by Hellenic religion; the Egyptian had been petrified at an earlier phase. When gods had been evolved, it was very important for men to retain the remembrance of those family ties between them and mankind which were in danger of being snapped through the length to which they were drawn and the degree of attenuation which consequently ensued. The statements of tradition as to the descent of mortals from gods are reinforced by the representations of artists of the unlettered races, just as they are enshrined in the written cosmogonies of more cultured folk, the main difference being that anybody may understand the one if he knows the written characters, whereas the other is practically a pictograph, and requires the interpretation of the natives who have the traditional knowledge of the symbols. We are probably justified in assuming that very early in time the custom existed (still widely spread among backward peoples) of carving or painting the pedigree of the man from the god, of the human from the divine, as at a still earlier time the reverse process had taken place. Gill states that significance is 'invariably attached to ancient Polynesian carving' (*Jottings from the Pacific*, 223). Several investigators have studied the peculiar wood-carving of the Hervey Islanders (Haddon, *Evolution in Art*), and many of the designs can be shown to be modifications of the human figure. Stolpe says: 'Ancestor-worship is a characteristic feature of Polynesian religion. The souls of the departed become the guardian spirits of the survivors. Their worship demanded a visible form . . . it appears to me that the peculiarly hafted stone adzes of the Hervey Islands have a religious signification, that they are especially connected with ancestor-worship, and that they were probably the very symbols under which this worship was performed' (*Ymer*, 1890, 232, 234). Colley March first suggested that the carved shafts of the sacred paddles and adzes were pedigree-sticks, the patterns being 'the multitudinous human links between the divine ancestor and the chief of the living tribe' (*JAI* xxii. 324). This seems to be a probable explanation of these beautiful carvings, which thus illustrate the origin of man from his god, and his continued connexion with and dependence upon him. What more can religious art teach?

Symbolism is a universal method of religious expression, and most of the decoration in connexion with shrines and altars has this significance. Primitively this was entirely the case, as may be seen from the researches of Cushing, Fewkes, Voth, Stevenson, and others on the religion and ceremonies of the Pueblo Indians of New Mexico and Arizona (*2*, *15*, *21*, and *33 RBEW*; *Field Columb. Mus.*, Anth. Ser. iii.; *Journ. Am. Eth. and Arch.* i.–iv.; *Am. Anthropologist*, and *JAFL*, various vols.). The sand-paintings, decorated tablets, and other ornamented ceremonial objects appear to be not merely representations of the desires of the worshippers, or pictures of the gods and their attributes, but many may be regarded as actual pictorial prayers. The Huichol of Mexico also spends a great part of his life at ceremonies and feasts, many of which are for making rain. Very important in the religious life of the Huichols is the use of the *hikuli*, a small cactus known in the south-western United States as 'mescal buttons.' The plant is considered as the votive bowl of the god of fire, who is the principal god of the Huichols, and it has to be procured every year, or there will be no rain. Hence conventional representations of this stimulating, colour-vision-producing plant are placed on ceremonial objects or painted on the face. There are numerous other gods. Religious feeling pervades the thoughts of the Huichol so completely that every bit of decoration he puts on the most trivial of his everyday garments or utensils is a request for some benefit, a prayer for protection against evil, or an expression of adoration of some deity. As Lumholtz says (*Unknown Mexico*, 1903, ii. 204 ff.), the people always carry their prayers and devotional sentiments with them in visible form. Girdles and ribbons, inasmuch as they are considered as rain-serpents, are in themselves prayers for rain and for the results of rain, namely, good crops, health, and life; also the designs on these objects may imitate the markings on the backs of the real reptiles. Of

similar significance are patterns composed of representations of conventionalized or vestigial double water-gourds, or of the fire-steel which represents the great god, or of the toto flower which grows during the wet, corn-producing season, and therefore becomes a prayer as well as a symbol for corn. The eye is the symbol of the power of seeing and understanding unknown things, and 'god's eyes' are commonly combined with other designs in woven patterns, in order that the eye of the god may rest on the wearer (Lumholtz, *Memoirs Am. Mus. Nat. Hist.* iii.). Thus these people are literally clothed in prayers.

LITERATURE.—General subject: H. Balfour, *The Evolution of Decorative Art*, Lond. 1893; A. C. Haddon, *Evolution in Art*, Lond. 1895 (with numerous references); F. Boas, 'The Dec. Art of N. Am. Indians' in *Pop. Sci. Monthly*, Oct. 1903; *Bull. Am. Mus. Nat. Hist.* ix.; 'Prim. Art' in *Am. Mus. Journ.* iv.; Flinders Petrie, *Egyptian Decorative Art*, Lond. 1896. Few of these deal with the relation of religion to art.

A. C. HADDON.

ART (American). — The art of the American Indians, like their architecture, is of many varieties and many grades. The chief forms are weaving, basketry, pottery, carving and sculpture, painting, metallurgy and jewellery, and mosaics, which may be taken up in the order named.

1. Weaving. — The art of weaving is found among many North American Indian tribes, particularly in the south and west, although some, such as the Apaches, are unacquainted with it. The material for the loom is very divergent in character. The Menomonis, an Algonquian stock, form their thread from the inner bark of young basswood sprouts, while the southern and south-western tribes use cotton, and the Kwakiutls of the north-west coast employ wool, hair, and even birds' feathers. The fabrics produced by the looms of the Western American Indians are woven with extreme closeness, and the colours are very gaudy, although the blankets for ordinary use are dark blue and white, or black and white, or are even left the natural colour of the wool. The figures, both in the Navaho blankets and in the closely related Hopi work, are frequently elaborate, and the effect is pleasing. It is among these two tribes, indeed, that weaving is best developed in North America. The native colours of the Navahos, who are able to make blankets that are impervious to rain, are red, yellow, and black, but here, as in the Orient, chemical dyes have largely impaired the excellence of native workmanship. Most of the weaving is done by the squaws, who make up their designs, which are largely in angles and straight lines, as they go along, occasionally tracing model patterns in the sand. Considerable symbolism attaches to the designs. The square with four knit corners represents the four quarters of heaven and the four winds, thus corresponding to the use of the *swastika* in America; while the *tau*-cross is a symbol of protection and a prayer to the Great Spirit. A spiral is said to typify the purified soul and a double spiral the struggles of the soul. The colours, in like manner, have a religious significance; so that black is the symbol of water (also indicated by wavy lines), or the female principle, and red the sign of fire, the male element. The Chilkat blankets of the Alaskan coast, woven in elaborate and artistic figures, with a warp of cedar-bark twine and a woof of mountain-goat wool, are also important in this connexion. The designs on these blankets, as might be expected, are very like those on the totem-poles and other carvings of the north-west coast. The natives of the Antilles were also acquainted with weaving, and even made cotton puppets in which the bones of the dead were placed. Among the Aztecs weaving was highly developed, a conspicuous part of the adornment of the warriors being mantles of woven feathers, decorated with the art which was a national characteristic of this marvellous people. The most striking remains of ancient American Indian weaving, however, which even include lace and drawn work, are those preserved in the great Peruvian necropolis of Ancon, near Lima, where the elaboration of the designs and the richness of the colouring surpass all other examples of American textile art (see W. Reiss and A. Strübel, *The Necropolis of Ancon in Peru*, tr. by A. H. Keane, 3 vols., Berlin, 1880–1887).

The general course of development of weaving designs among the Peruvians is thus summarized by Wiener (*Pérou et Bolivie*, p. 636 *f.*): 'Les étoffes les plus simples ont pour ornements de simples lignes droites parallèles, d'autres des lignes croisées. . . . Cependant ces dessins se développent, le méandre remplace d'abord les lignes croisées, et puis petit à petit nous trouvons la reproduction de fruits, de poissons et d'animaux, pour nous élever finalement à la représentation de l'homme. Cependant les difficultés techniques empêchaient le libre développement de la ligne. La courbe est toujours remplacée par une ligne cent fois brisée et se mouvant suivant des angles droits. C'est ainsi que le crâne devient une pyramide à gradins, que l'œil devient un rhomboïde, le nez un triangle, la bouche un quadrilatère.' Yet, despite the restrictions necessarily imposed on the Peruvian artists, their figures of men, animals, and other objects have a distinct charm, and frequently suggest in many respects the products of the Orient.

Mention should also be made, in connexion with weaving, of the bead-work of the American Indians. The primitive basis of this form of art may well have been pebbles, seeds, nuts, claws, teeth, and similar objects of adornment, which continued to be employed side by side with the more artistic beads. 'Beads of marine or fresh-water shells were made by grinding off the apex, as in the case of dentalium, or the unchanged shells of bivalves were merely perforated near the hinge. Pearls were bored through the middle, and shells were cut into disks, cylinders, spheres, spindles, etc. In places the columellæ of large conchs were removed and pierced through the long diameter for stringing. Bone beads were usually cylinders produced by cutting sections of various lengths from the thigh or other parts of vertebrate skeletons' (Mason, in Hodge, *Handbook of American Indians*, i. 138). Ivory and amber beads were used by the Eskimos, while turquoise was carved into ornaments in the south-west, in Arizona, and in New Mexico. The principal uses of beads were personal adornment, the decoration of vessels and of articles of dress, as insignia of office, as records of intertribal treaties and other important events, and as money. In the last two uses the strings of beads are known as *wampum*. The value of beads naturally varied considerably. Pink shells were especially prized, while in New England dark purple wampum was made from the small round spot in the inside of the quahoy shell. The northern Pacific tribes affected dentalium shells. But here, as in blanket weaving, the invasion of the whites brought modifications, and glass beads and silver coins (the latter particularly among the Navahos) are now extensively worked up into ornaments. Woven beadwork is found among the Sioux, Winnebagoes, Apaches, and other tribes, the Sioux preferring geometric designs, while the Winnebagoes and others are noted for their designs of flowers and animals. Closely akin to beadwork is quillwork, especially among the Plains Indians (now done in its purity by few except the Eskimos, the tribes of the north-west coast, and the northern Athapascans), which, in its turn, is supplemented by featherwork, the latter carried, as already noted, to its highest perfection among the Aztecs.

2. Basketry.—Like weaving, basketry is largely the work of women among the American Indians. Its forms are classified by Mason ('Aboriginal American Basketry,' in *Report of the United States National Museum for 1902*, pp. 222–258) into

woven and coiled. The former is subdivided into checker-work, twilled, and wicker-work, wrapped, and twined, the latter further occurring as plain twined, twilled twined, crossed or divided warp with twined work, bird-cage weaving, and various forms of three-strand twining. Coiled basketry included the following: coiled work without foundation, simple interlocking coils with foundation, single-rod foundation, two-rod foundation, rod-and-splint foundation, three-rod foundation, splint foundation, grass-coil foundation, and Fuegian stitches (the buttonhole stitch). The forms of American baskets are equally various, ranging from flat trays, as among the Tulares of Central California or the Hopi food trays, which are little more than woven mats, to the elaborate water jugs of the same Hopis. The baskets are richly adorned with shells, beads, feathers, and the like, as well as coloured with dyes and painting, and interwoven with materials of different colours.

Basketry is used in America for the most varied purposes, as for transportation, cradles (especially on the Pacific coast), armour (as among the Massawomekes of Chesapeake Bay), clothing (particularly the basket hats of the Thlinkets, Haidas, and Hupas of the west coast), preparing and serving food, building (as among the Pomos of north-western California), furniture, trapping, general receptacles, and in burial. Baskets likewise play an important part in the ceremonial of the Hopis, as in the 'basket-dances,' the same tribe also including among its masks some made of basketry. The decoration on North American basketry is reduced by Mason (*op. cit.* p. 295) to the following *motifs*: lines in ornament, squares or rectangles, rhomboidal figures, triangles, polygonal elements, and complex patterns. Here the type of weaving adopted necessarily conditions the general style of decoration, the simplest being that obtained from checker-work, and perhaps the highest being such coiled basketry as that of the Salishans and Tulares. The decoration thus obtained may be heightened by the use of colours and by the addition of feather-work, bead-work, shell-work, and the like. But to convey an idea of the vast variety of design and colour of American Indian basketry without several hundred illustrations would be impossible, and reference can therefore only be made to the monograph of Mason already cited and to the bibliography given by him (*op. cit.* pp. 545–548), as well as to his *Indian Basketry* (2 vols., London, 1905).

Allusion has been made to the fact that basketry is employed in ritual, particularly in the Hopi women's festivals, celebrated in September and October respectively, of Lalakoñti and Owakülti (Fewkes, in *21 RBEW* pp. 22 f., 58). Symbolism in American Indian basketry is now confined to the western part of the continent; yet, even among those tribes and stocks which now show merely decorative designs in their basketry, symbolism still exists, 'for with Algonquian, Siouan, Kiowan, the substitutes for basketry, rawhide receptacles, as well as moccasins, cradles, and objects in three dimensions, are covered with idealism in painting and embroidery' (Mason, *op. cit.* p. 318). The chief modern symbolic basket-makers are the Hopis, the Thlinkets (cf. the similar designs on the Chilkat blankets), the Salishans, and the tribes of northern California and southern Oregon. It must be borne in mind, however, that the same design may represent totally different concepts among different tribes, and that the conventionalization is carried to such an extreme that only the makers themselves can truly interpret them, for 'to appreciate symbolism fully one must know the sign, hear the story, and then study the skies, the landscape, and the social environment. To attempt to discover an alphabet in this primitive art would be useless, for each tribe adapts old and new standard forms to its own concept myths' (Mason, p. 315). From the wealth of symbolic baskets allusion may be made to representations of the Corn Maiden (*Palahiko mana*) on Hopi basketry, and to the four birds of the cardinal points on trays of the same marvellous people, as well as to Navaho baskets with four crosses which give a double symbolism of the four cardinal points. Here the colours also are symbolic, and it is interesting to note, in this connexion, that the Pomos of north-western California have, according to J. W. Hudson (quoted from MS. by Mason, *op. cit.* p. 328), the following colour symbolism: red, bravery, pride (personified by the woodpecker); yellow, amatory success, gaiety, fidelity (lark); blue, demoniac cunning, perfidy (jay); green, astuteness, discretion, watchfulness (duck); black, conjugal love, beauty (quail); and white, riches, generosity (wampum). The *swastika* and labyrinth *motifs* are also found.

The relative perishability of basketry is obvious; and it is equally evident that its use was far more wide-spread in America than the extant remains would imply. It existed, for example, among the Pequots of Connecticut and the tribes of Virginia; fragments are found in the mounds of Ohio; and the means of re-constructing its designs in the Mississippi valley will be noted in the following section. Baskets were likewise known, according to the early explorers, among the Antilleans, some of them so interwoven with leaves as to be waterproof. Not only were baskets used in many religious ceremonies, but, like the Orinoco tribes, the Antilleans often preserved the skulls of the dead in baskets made specially for the purpose.

Throughout South America basketry is found. Thus, the Indians of Guiana make excellent baskets, which they adorn, as in North America, with geometrical figures. Along the Amazon the baskets receive their ornamentation primarily from the rectangles formed in weaving—another interesting proof of the influence of the older on the younger art. These designs, it should be noted, are extended to painting and drawing, and are apparent even in the drawings of men, fish, and birds made by the Indians of this region (Schmidt, *Indianerstudien in Zentralbrasilien*, Berlin, 1905, pp. 330–418), while some of the wooden masks of the Amazonian Indians have in their ornamentation obvious analogues with the more primitive woven masks. Of Peruvian basketry many specimens are known, particularly from the great necropolises, but they present scarcely any features not already known from North America.

3. **Pottery.**—The first utensil for holding water, grains, etc., at least in some cases, was the gourd, which was often slung in basketry for convenience, or reinforced with reeds or grasses, later still with earth or clay. It is not impossible that when these clay-covered gourds were left in the sun, the gourds were found to crack, while the clay became hardened. For a time pottery was accordingly made by covering gourds and basketry with clay, the former being destroyed by heat, and the latter retaining, in its hardened form, its original shape and the markings of its former mould. Still later, the mould was no longer used, since clay containing sand or particles of shell could easily be formed into the familiar shapes, and then be baked to the requisite firmness. It is significant, in this connexion, that the Navahos still term earthenware pots *kle-it-tsa*, or 'mud baskets,' thus recognizing the fact that American pottery is a direct development of basketry. In the further course of development, resinous gums were put on the

clay vessels while still hot, thus forming a glaze which enabled the otherwise porous receptacles to hold liquids. As pottery gradually evolved, moulds were dug in the ground, and clay ovens were constructed in the hill-sides. The coiled basketry, noted above, also finds its application in pottery, as among the Hopis, who both coil ropes of damp clay around a wicker nucleus and construct similar vessels by freehand modelling. It has already been stated that basketry was more wide-spread in America than the extant remains would indicate, and proof of this is afforded by many specimens of the pottery of the Mississippi valley, where casts taken of the clay vessels reveal the pattern of the basket shell on which they were constructed. There is, however, no decisive evidence that the potter's wheel was known in aboriginal America.

Pottery was primarily used for storing, cooking, and transporting food and water, later being used in religious ceremonial, and formed into various fancy figures, as masks, gaming implements, and even toys. Burial urns are also found in the Mississippi valley, and clay pipes are common, particularly among the Iroquois. In general, it may be said that the pottery of North America decreases steadily, in both quality and quantity, as one goes toward the north, until among the Eskimos it is represented only by lamps of the rudest description. The farther south one proceeds, on the other hand, the more abundant and excellent the pottery becomes, thus further exemplifying the fact that the peoples of Mexico, Yucatan, and Peru stood at the acme of all pre-Columbian American civilization. Pottery is a characteristic, moreover, of a sedentary people, and would thus find less use among the comparatively nomadic stocks and tribes of the northern parts of the American continent.

The shapes of the pottery of North America are numerous and, in many cases, artistic. Vases, dishes, and cups occur with especial frequency, either plain or with handles, the vases being both completely open and partially covered at the top. Bottles have also been found, as in Arkansas, and early writers on America relate that they saw earthenware drums in use, these being now represented in part by the earthenware rattles used in the ritual, as by the Pueblo tribes. At least one case of earthenware burial-caskets is known from Tennessee, and funeral jars with obvious death-masks are not uncommon in the Mississippi valley. The anthropological value of the latter form of pottery needs no comment. Frequent and most interesting forms of pottery are the figurines of fish, turtles, birds, and animals. It is noteworthy that these figurines are restricted to Pueblo Indians, who, indeed, represent the zenith of American pottery north of Mexico. It would be impossible within reasonable limits to give any detailed account of the forms of either construction or decoration of American pottery, whether in the northern or the southern continent. In the most primitive specimens of North American pottery there were merely the marks of the wicker mould. The early ornament of the coiled clay vessels was, as might be expected from their form and model of construction (see above), a direct imitation of the patterns of the basketwork vessels. With further progress the impress made by the fingers of the designer gradually came to have regular modifications, which resulted in producing artistic patterns of more or less regularity. The rope coils, at first pinched involuntarily, were later purposely thus modified into regular designs, a Pueblo pot, for example, having the pinch marks so obliterated as to leave rows of triangles attached to each other at the corners. Various tools were likewise employed, pointed ones for incising and gouges for scraping, as well as many varieties of stamps for impressing designs upon the clay before baking. Examples of fictile ware have been found, especially in Arkansas, engraved, after being burned first, with designs of true artistic merit.

The most common mode of decorating pottery, however, was to give the vessel a wash of fine clay, which was painted in various colours and designs, as well as polished, before the pottery was finally burnt. This was particularly the case among the Pueblo and Arkansas Indians. There is a wide range of colour, especially white, black, red, brown, yellow, and green. The designs are so numerous as scarcely to admit of classification; but as the material of baskets led most easily to the production of right-angled decoration, so in the pottery circles and curves form a prominent feature. At the same time, angular designs are not uncommon, doubtless derived from basket patterns; and both angular and curved decorations appear with great frequency on one and the same specimen. While many of the patterns are purely ornamental, and while representations of birds and animals seem, at least in many cases, to be simply decorative, other figures on Pueblo pottery possessed religious symbolism. The three 'lines of life' occur, for instance, on a food bowl from Chevlon, which site also shows raincloud symbols on another bowl. The raincloud symbol, indeed, is well-nigh as important on Pueblo pottery as in the ritual of the Hopis and kindred tribes. The chief raincloud symbols in the modern Hopi ritual are the rectangle (usually appearing as a stepped triad), the semicircle (also usually in triads), and the triangle. These and similar symbols occur frequently in ancient Pueblo pottery, as on a food bowl from Four-mile Ruin; and on another bowl from Homolobi the *swastika* (typifying the four cardinal points), on a red ground, is surrounded by a slate-coloured margin, each arm of the *swastika* pointing to straight red lines representing rain, and the intervening sub-quarters being occupied by three wavy red lines each. These few examples may serve to indicate the wealth of symbolism which may be traced on Pueblo pottery. Nor must it be forgotten that many designs which at first blush seem merely decorative are in reality fraught with deep religious symbolism. Here, in connexion with the pictures of birds and other living creatures, the investigator will do well to bear in mind the words of Fewkes: 'In all these representations of mythical animals the imagination had full sway. It was not the bird with which the artist was familiar through observation, but a monstrous creation of fancy, distorted by imaginations — real only in legends — that the potter painted on the vessels. Hence, we cannot hope to identify them, unless we are familiar with the mythology of the painters, much of which has perished. The comparatively large number of birds on the ancient pottery indicates a rich pantheon of bird gods, and it is instructive to note, in passing, that personations of birds play important parts in the modern ceremonies which have been introduced into Tusayan from the south' (*22 RBEW*, pt. 1, p. 146 f.).

Numerous specimens of pottery have also been found in Porto Rico, Santo Domingo, St. Kitts, Grenada, Trinidad, etc. This is, in general, coarse, unpainted, and rude. The most usual decorations are incised lines or relief figures, the former being preferably lines (especially parallels), triangles, spirals (rare), and circles. There are no traces of either painting or slip. The pottery of Porto Rico and Santo Domingo is distinctly characterized by an indentation of the extremity of each line in rectilinear decoration by 'a shallow pit that

was apparently made with the same instrument as the line itself; or it was sometimes slightly separated from the end of the line' (Fewkes, in *25 RBEW* p. 180). Pottery from St. Kitts, on the other hand, shows red ware with a fine superficial polish and incised lines filled with white pigment.

The art of painting pottery is also known among the South American Indians of the central Amazon and Guiana, the latter tribes adorning their pottery with juices extracted from the bark of various trees, thus making crude designs of animals or geometric figures in red, brown, black, and other colours.

North of the Isthmus of Panama pottery was carried to its highest development among the Aztecs, Zapotecs, Mayas, and kindred peoples. There not only vessels of various exquisite shapes and of a noteworthy degree of finish were made, but also elaborate funeral jars and water-pipes, and life-size figures of terra-cotta. Some of the Zapotec funeral urns are 20 inches in height, and are fashioned in the conventional forms of the sculpture of this region—a feat all the more difficult when the material used for the modelling is borne in mind. In South America the most elaborate fictile ware is found in Peru. Dishes and vases of all shapes, some of them of great intricacy of design and decoration, are found in large numbers. The forms of various fruits, animals, birds, reptiles, and fishes are represented with much fidelity, and clay vessels in human shape abound. The most important of the latter class are those which represent the head only; and while many are evidently conventional, others are plainly intended for portraits, and are thus valuable for a study of ancient Peruvian physiognomy. Groups were also represented; and fidelity to nature, which was the aim of the ancient potters of Peru, was increased by making some of their vessels a kind of mechanical toy, which could give a sound imitating the cry of the animal or bird represented, similar figurines also being found in Central, and even in North, America. A noteworthy form of Peruvian pottery was the water-jar, an article of prime importance in so arid a country. One of the chief forms is the twin bottle; and it has been suggested that one reason for the intricate shape of many Peruvian jars was the desire to prevent insects, etc., from finding their way into the interior. The pottery was often painted or engraved just as it was drying, after the clay itself had first been mixed with powdered ashes, carbon, or graphite, while in more common ware chopped straw was also employed. The decoration was, for the most part, purely conventional, although important exceptions are not lacking. The symbolism, which may well have existed, is not as yet worked out.

4. Carving and sculpture. — The carving and sculpture of the American Indians are still more limited than pottery in territory. This is but natural, in consideration of the fact that wood and stone are far less tractable substances than the clay of the potters. Excepting on the north-west coast, sculptured figures are rare, although a few rough heads have been found as far east as New Jersey. Among the so-called 'mound-builders' the tobacco-pipe attains a considerable degree of artistic development, and among the Eskimos rude carvings on ivory, copied in the scrimshaws of the whalers, frequently represent the forms of animals and other objects with remarkable fidelity. In the Mississippi valley carved shell gorgets have been discovered, which, in some cases, are curiously similar to Aztec work. Rude shell masks are also found, some as far east as Virginia. The most important specimens of North American Indian carving, however, are found among the tribes of the north-west coast, such as the Haidas, Thlinkets, and Kwakiutls, who are also skilful engravers on slate and metal. The totem-poles of these tribes are most elaborate, and are sometimes covered almost to their full height, which frequently reaches 50 feet, with representations of totemistic animals, birds, or fish. In addition to the totem-poles, the posts of the houses on the north-west coast are also elaborately carved, and both they and the totem-poles are gaudily painted in red, yellow, black, and other primary colours. Here, too, belong the wooden masks of the same tribes, which, like the totem-poles and the carved posts supporting the main rafter of the house, have religious significance, and suggest in design the basketry of the region and the Chilkat blankets. The Haida canoes are also elaborated, carved, and decorated with totemistic and other religious designs. The Pueblo Indians, so advanced in other respects, were singularly deficient in carving and sculpture, and there is a wide extent of territory from the Haidas to the Aztecs (except for a few stone whale-killer figurines among the Santa Barbara Indians of the southern California coast) before any real examples of these arts are found. It is only among the Aztecs, Toltecs, Zapotecs, and Mayas, moreover, that any carving or sculpture is found actually to be artistic. The elaboration of the Aztec calendar stone and of the sculptures of Palenque, Chiriqui, and Copan are unsurpassed in any part of the American continent, being far superior even to Peruvian art. Individualistic statues, likewise, occur in these regions, and the walls of temples are elaborately sculptured. The close connexion between sculpture and painting is exemplified in the resemblance of the carved figures to the pictures in Aztec and Maya manuscripts. Carving in wood was known in ancient Mexico, but naturally few examples of it have survived. Large stone figures are found from Mexico to Nicaragua, terminating, towards the south, in the idols of Zapatero and Pensacola and elsewhere, some of them 12 ft. high. They are, however, rude in structure, and far inferior to the polished productions of the Mayas. The archæological remains of Porto Rico and the neighbouring islands, which have become known from the researches of Jesse W. Fewkes in 1902–1904 (contained in his 'The Aborigines of Porto Rico and Neighboring Islands,' in *25 RBEW* pp. 3–220), give some striking contributions to American art from a region hitherto imperfectly explored. The remains are rude artistically, yet they serve to supplement our knowledge of the Orinoco tribes, with which he justly holds Antillean civilization to be connected. Here mention may first be made of stone pestles, chiefly from Santo Domingo, adorned with rude heads and figures of animals, birds, and men, the type being unlike any found in any other part of America. Besides objects more or less familiar elsewhere, such as beads, pendants, stone balls (perhaps used as roof-weights or fetishes), small stone heads and discs with human faces, stools (recalling the forms in South America), pillar stones (generally with rough and grotesque attempts to represent the human form), and rude wooden idols (some possibly imported by the Spaniards from Africa for the negro slaves), there are three classes of sculpture which are apparently peculiar to this region. These are three-pointed stones (either plain or with faces of birds, beasts, reptiles, or men, restricted thus far to Porto Rico and the eastern end of Santo Domingo), stone 'collars,' and 'elbow stones.' The first are regarded by Fewkes (*op. cit.* p. 131) 'as clan idols or images of tutelary totems,' fastened to some unknown object; and the third class may have been connected with the 'collars' (*op. cit.* pp. 172–174). There thus remain the 'collars,' which are either massive ovals or slender ovates, and either partially decorated or plain.

Their use is entirely problematical (cf. Fewkes, *op. cit.* pp. 167–172); but similar objects have been found in Totonac ruins in eastern Mexico. They are accordingly held by Fewkes (*25 RBEW* pp. 251–261) to be connected with the Aztec 'sacrificial yokes,' which he seems inclined to regard as fertility symbols (cf. the more conventional view advanced, perhaps incorrectly, by the present writer in art. ALTAR [American], above, p. 336). At all events, the problem of the real meaning of these 'collars,' which measure as high as 19 by 17 in., can as yet scarcely be said to be solved.

Turning to South America, one finds rough carvings on trees among the Indians of Central Brazil, while their chairs are made in the shape of birds, and they have vessels in the form of various birds, bats, fishes, and tortoises. On the Chaco, on the other hand, art consists only in scratching natural objects roughly on gourds and making rude topographical scenes (Grubb, *Among the Indians of the Paraguayan Chaco*, London, 1904, p. 98). Among the most remarkable sculptures, if such they may be called, of the South American Indians are those of the natives of Guiana. One of the most typical of these is on Temehri Rock in the Corentyn river, and measures 13 feet in length by 5 feet 7 inches in width. The carving represents a number of figures of men, monkeys, snakes, and the like, and also has simple combinations of two or three curved lines. The figures are in all cases extremely rude, and those of less importance are sometimes painted instead of carved. Some of these carvings are of comparatively recent date, for one at Ihla de Pedra in the Rio Negro represents a Spanish galley (cf. Im Thurn, *Among the Indians of Guiana*, London, 1883, pp. 391–410). The sculptures of the ancient Peruvians, although naturally superior to any others of the South American continent, were, as already noted, far inferior to the work of the Aztecs and their neighbours. Expert cyclopean architects though they were, they were but indifferent sculptors, and even the few specimens of wood carving which are still extant are but rough work. Like the Central Brazilian Indians, the Peruvians paid considerable attention to their chairs, and specimens have been preserved which are supported by figures of some artistic merit. Chairs of similar form are also found in Nicaragua and Porto Rico. A few admirable granite heads have been found, as at Pashash; and the fountain of Quonnacha is, at least at first sight, a remarkable work of art. Nevertheless, the rudeness of the head of a porphyry idol, now at Collo-Collo, and the shapelessness of the granite statues of Tiahuanaco, when contrasted with the Maya sculptures of Copan, bespeak most clearly the inferiority of the Peruvians in this form of art. The elaborate sculptures on the buildings, moreover, are far less frequent than among the Aztecs and their congeners.

5. **Painting.**—This art, at least in its crude forms, doubtless prevailed through most of the North American continent; but the best modern examples are to be found among the Indians of the West. The tribes of the north-west coast, where, as just noted, carving in wood is relatively highly developed, paint their totem-poles, canoes, chests, batons, and other objects in gaudy colours, while the Hopis and other Pueblo peoples are also acquainted with this art, as is shown by the masks, often of leather or basketry, and garments used in the personations of the gods in the great winter festivals. In like manner, much of the pottery discovered in the 'cliff-dwellings' is painted, frequently in conventional designs of pleasing effect and with the general systems of symbolism noted above (p. 829[b]). Among the Aztecs and related peoples the manuscripts still extant are painted with considerable skill, but with the high colouring characteristic of so much of early art. As if to atone for their somewhat curious deficiency in painting, however, the inhabitants of ancient Mexico were noteworthy for their skill in making pictures of trees and flowers, and even copies of European paintings, in mosaics of feathers, with a degree of excellence which aroused the admiration of the Spanish invaders (see above, § 1; and cf. Mason, in Hodge, *Handbook of American Indians*, i. 455 f., and the bibliography there given). The Peruvians also possessed the art of painting; but among them, as among the Aztecs, it was undeveloped as compared with their achievements in other departments of art. Their representations of the human form, however, as is clear from their vase-paintings, were far superior to those of the Aztecs, and the same statement holds true in general with regard to all ancient Peruvian painting. The problem of symbolism here, as elsewhere throughout America, must be solved together with the interpretation of the pottery, basketry, and kindred arts. Outside the empire of the Incas painting seems scarcely to occur in South America. It must be borne in mind, however, that painting is pre-eminently a sessile art, and one which requires a considerable degree of civilization before it can be acquired with any measure of real merit. It is less utilitarian even than carving and sculpture, and arises at a later period, while it is still more tardy in development as compared with weaving, basketry, and pottery, and for a like reason.

Certain special forms of painting among the American Indians call for notice in this connexion. Of these the first is 'dry-painting,' which is practised especially by the Navahos, Apaches, and the Pueblo tribes of Arizona and New Mexico, and in ruder form by the Cheyennes, Arapahos, and Siksikas. These paintings are used exclusively in religious ceremonies, as in the Hopi altars (see ALTAR [American], p. 336), and seem to be most highly developed among the Navahos. Here the paintings are sometimes 10 or 12 ft. in diameter, and are, of course, filled with symbolism representing deities, natural phenomena, and living beings of sacred import. The sand is laid to a depth of 2 or 3 in., and the colours are white, yellow, red (these made of powdered sandstone), blue (really grey, being a mixture of black and white sand), and black (pulverized charcoal). Working generally from the centre and according to the plan prescribed by the ritual (except in a few definite cases), the artist, in applying the pigments, 'picks up a small quantity between his first and second fingers and his opposed thumb and allows it to flow slowly as he moves his hand. . . . When he makes a mistake he does not brush away the coloured powder, but obliterates it by pouring sand on it, then draws the correct design on the new surface. . . . When it is finished, ceremonies are performed over it, and then with song and ceremony it is obliterated. When no semblance of it remains, the sand of which it was made is gathered in blankets and thrown away at a distance from the lodge. In the ceremonies of the Pueblo Indians a picture is allowed to remain several days' (Matthews, in Hodge, *Handbook of American Indians*, i. 403 f.). The Hopis, unlike the Navahos, begin their dry-paintings at the periphery, commencing with the north; and when the painting is effaced, pinches of the sand used in its composition are deposited in certain spots prescribed by the ritual.

A sort of heraldry was perpetuated by means of painting, particularly among the Plains Indians. This applied especially to the *tipis* and shields

and involved certain tabus, while the basis of the design was drawn from the visions obtained by the young braves (cf. COMMUNION WITH DEITY [American Indian]). As in many other lands, the painting of the face and body was and is common among the American Indians. This may be purely decorative in intent, or it may have symbolism relating to religion, war, or social status. Thus, the Mandans often painted their bodies reddish brown and drew red or black figures on their arms, while their faces were coloured vermilion or yellow. These designs, being merely ornamental, might be varied at pleasure; but the transition from the ornamental is shown by the practice of the same tribe of painting the entire face jet black after performing an exploit (Maximilian von Wied-Neuwied, *Travels in the Interior of North America*, London, 1843, pp. 340–386). Hearndon (*Exploration of the Valley of the Amazon*, Washington, 1853, i. 201) describes a Conibo dandy as 'painted with a broad stripe of red under each eye; three narrow stripes of blue were carried from one ear, across the upper lip to the other—the two lower stripes plain, and the upper one bordered with figures. The whole of the lower jaw and chin were painted with a blue chain-work of figures.' Ritualistic face-painting is exemplified among the White Earth Ojibwas of Minnesota, the first degree of their Ghost Society being indicated, according to Hoffmann (*American Anthropologist*, 1888, pp. 209–229), by a red stripe across the face from near the ears over the tip of the nose; the second by a similar stripe plus another across the eyes, temples, and root of the nose; the third by painting the upper half of the face green and the lower half red; and the fourth by painting the forehead and the left cheek green and impressing four vermilion spots on the brow and four on the cheek. The 'war paint' of the American Indians is, in general, either red or black, or a combination of both; and the same colours are frequently used for mourning (cf., in general, on American Indian face-painting, Mallery, in *10 RBEW* pp. 619–634).

Allusion should also be made to the pictographs which are scattered over North, Central, and South America. Since these are in great part mnemonic, chronological, or historical in purpose, or are intended to convey messages, notices, and the like, they will more properly be discussed under the head of WRITING (American Indian). Here, however, it may be noted that the artistic powers evinced in these pictographs (which are mainly petroglyphs) are decidedly primitive. Their interpretation, when they are not mere ornaments or idle *graffiti*, is often problematical, and requires, in many cases, a knowledge of traditions, local surroundings, and the like. An important class of pictographs is given in the representations of tribal designations (cf. the list in Mallery, *10 RBEW* pp. 377–388; and see in general on the subject his 'Pictographs of the North American Indians' in *4 RBEW* pp. 13–256, and 'Picture-Writing of the American Indians,' in *10 RBEW* pp. 25–822; supplemented for Porto Rico by Fewkes, in *25 RBEW* pp. 148–159). They likewise symbolize personal names (Mallery, in *10 RBEW* pp. 442–460), and religious symbolism is also prominent, being found not only in the Micmac pictographs from Kejimkoojik Lake, Nova Scotia, but also among the Ojibwas, Menomonis, Dakotas, and Haidas (Mallery, pp. 461–512). More than this, there are well defined pictographic signs for the *swastika*, the sky, the heavenly bodies, day and night, lightning, eclipses, and meteors, and representations of *tipis* and even *pueblos* are also found (Mallery, pp. 694–735). The older American pictographs are naturally on stone and uncoloured; but bone, skin, gourds, copper, wood, and textiles also bear like figures, frequently in colours.

6. **Metallurgy and jewellery.**—The Indians of North and Central America were acquainted with copper, silver, gold, iron, galena, lead, and tin, knowledge of the last two being restricted to the Aztecs, Toltecs, and Mayas. Nevertheless, the use of metal in personal adornment was comparatively rare in North America, shells, beads, and the like being used instead, although bracelets of copper were frequently worn and were highly valued, in view of the difficulty of mining the metal in pre-Columbian days. The metals were worked chiefly by cold-hammering and grinding, but there is no evidence of a knowledge of casting. Silver is now worked with considerable elaboration among the Navahos, and bells of copper have been found in Tennessee, while elaborate sheet copper *repoussé* figures occur in the Etowah mounds, Georgia, and the Hopewell mounds, Ohio; and the copper 'tokens' of the north-west coast are famous in many ceremonies. The Aztecs and other Mexican peoples were expert metallurgists, and their gold vessels and adornments were the marvel of their conquerors.* They imitated the forms of animals and birds, and manufactured personal jewellery, often enhanced in beauty by gems. They likewise possessed the art of making an amalgam of copper and tin, thus forming a bronze of considerable hardness, while specimens of copper plating are known from the mounds of Florida, Alabama, and Ohio. Gold ornaments are also known from Florida and the West Indies. The metallurgical remains of the Peruvians include silver bracelets and collars; gold, silver, copper, and bronze vases; and animals and birds, such as jaguars, deer, monkeys, and parrots, in copper, bronze, and silver, as well as human figures. Apart from this, however, South America falls behind the northern continent in the amount and excellence of metallurgical products and jewellery, as it does in nearly all other requisites and tokens of human progress in civilization.

7. **Mosaics and minor arts.**—The art of making mosaics was known especially in the Pueblo regions of Arizona and New Mexico and among the Aztecs. The modern products of the former region are much inferior to the ancient specimens, 'which consist of gorgets, ear pendants, and other objects. . . . Turquoise was the favourite material, but bits of shell and various bright-coloured stones were also employed. The foundation form was of shell, wood, bone, and jet and other stone, and the matrix of gum or asphaltum. Although the work is neatly executed, the forms are simple and the designs not elaborate' (Holmes, in Hodge, *Handbook of American Indians*, i. 947). Rude mosaics have been found in graves in southern California. One of the most interesting mosaic objects north of Mexico is a shell used as a pendant and found by Fewkes at Chaves Pass, Arizona, in 1896. This is a frog formed by imbedding turquoises in pitch on the shell of a *Petunculus giganteus*, with a small rectangle of red jasper set in the centre of the back (cf. Fewkes, in *22 RBEW*, pt. 1, p. 86 f.). Mosaics from Mexico have long been known, particularly a knife with a blade of semi-translucent chalcedony, the handle being a crouching man, clothed in an eagle's skin, his head issuing from the beak (cf. Bancroft, *Native Races*, iv. 557–559). Of these mosaics some twenty-three are thus far known; and for comparison with the Chaves Pass frog, allusion may be made to a

* The gold was an alloy of copper, varying from almost pure gold to almost pure copper. When the baser metal was used, it was frequently coated (plated?) with pure gold. The technical processes used were exceedingly skilful, but what they were is uncertain.

double jaguar now in the Berlin Museum für Völkerkunde. This is described by Lehmann (in *XV^e Congrès international des Américanistes*, Quebec, 1907, ii. 340–344) as follows:—The figure is carved of tough reddish brown wood, 32 cm. long and 10 cm. high at the head at each end, one of which is turned towards the spectator and the other averted. The belly, which has no mosaic work, is painted with black and bluish green. The bed for the mosaics is a dark brown resin 3 or 4 mm. deep, and the stones themselves are chiefly green or greenish-yellow turquoise and blue malachite, their shapes varying between polyhedrous, rectangular, and round, and all carefully polished. The neck and the extremities are almost covered with turquoises, and rosettes of the same material are evidently intended to represent the jaguar's spots. Rows of turquoise alternate with rows of obsidian on the body, and the ornamentation is enhanced by mother-of-pearl and bits of white, yellow, red, and violet mussel-shells. It would also seem that the eyes and nose were originally covered in part with gold-leaf (see in general on Mexican mosaics, *Globus*, 1906, pp. 318–322).

The account thus given of American Indian art, like that of the architecture of the same peoples, cannot pretend to be exhaustive. Besides the large categories here outlined, there were other arts, such as bark-work. This was used for cord, mats, receptacles of all kinds, dishes, canoes, and houses; for cradles and for burial; for clothing and for writing-tablets; and for religious dance regalia and masks (cf. Mason, in Hodge, *Handbook of American Indians*, i. 130–132, and the literature there cited). Among the more northern tribes and along the Pacific coast bone is almost as important as bark, being used not only for personal adornment and as household utensils, toys, and fetishes, but even for weapons and in the construction of dwellings, canoes, and the like. Bones were elaborately carved, and were also inlaid by the ancient Pueblo Indians, while even a copper-plated bone has been found in a Florida mound (cf. the summary of Holmes, in Hodge, i. 159 f.). Horn was likewise sometimes employed, as for dishes among the Salishan tribes.

LOUIS H. GRAY.

ART (Assyro-Babylonian).—The religion of the Babylonians and Assyrians, which, according to the received opinion, was animistic in its origin, may be regarded as going back to between 4000 and 5000 years B.C. This long period, added to the nature of their faith, has supplied us with an enormous amount of material illustrating their religious art, which the student can trace, in all its variant styles, through the ages of its existence, noting the changes in religious thought which it reflects, and the reaction of its influence on the people themselves.

Before B.C. 4500 (as far as is at present known) no monuments exist, so that there is practically no record of that animistic period in which the religion of the Babylonians had its origin. A wide gulf must therefore exist between the religious conceptions of the simple-minded savages of early Sumerian and Semitic times and those of the men of even the remotest civilization of Babylonia when works of art are found.

Babylonian religious art therefore comes before us only when it had attained a certain measure of perfection. It is true that a number of comparatively rude examples have come down to us, but such are a speciality of no particular age, and at all periods excellent examples, principally in stone, exist, among them being numerous engraved seals, mostly cylindrical. Many good bronzes, too, have been found, some of them being as early as the 3rd millennium B.C.

In all probability the art of Babylonia is best divided into periods, though the schools of the various States (Ur, Erech, Akkad, Babylon, Lagaš, etc.) could also be taken into account if we had sufficient material. With our present knowledge, however, it is often difficult to place the examples, and even the question of date is not without its difficulties, as the chronology does not admit of a clear line of demarcation in the matter. The divisions, therefore, can be only roughly determined, somewhat as follows:

1. Babylonia.
   (1) From the earliest period until the time of the Dynasty of Babylon (*c.* 2000 B.C.—Lagaš, Niffer).
   (2) Until the end of the dynasty of the Land of the Sea (*c.* 1700 B.C.—Babylon, Sippar, Erech).
   (3) The Kassite period (*c.* 1700 B.C.—*c.* 1100 B.C.).
   (4) From *c.* 1100 B.C. until the downfall of the Babylonian empire (B.C. 538).
2. Assyria.

The artistic period may be regarded as extending from the 9th cent. or earlier (we await the results of the German excavations at Aššur) until about B.C. 606.

Though, like the art of Egypt, that of Babylonia comes before us only when it had attained a certain amount of perfection, it is, in a way, more interesting than that of Egypt, in that it shows a much greater variety of styles; and the Assyrian school, when it comes into existence, has a distinct stamp of its own. We have also to distinguish, besides the perfect and artistic, the amateurish (which is sufficiently rare) and the rough and unfinished—generally cylinder-seals 'dashed off' by the hand of one accustomed to do such work, and probably to be regarded as cheap productions for the poorer classes, who naturally needed things similar to those required by the well-to-do, though they could not pay the price. At all times these classes of religious artistic productions had existed, and among the perfect and artistic are now and then to be found things of noteworthy beauty of workmanship, due, doubtless, to the presence of artist-workmen of wonderful talent.

1. **Babylonia.**—(1) Among the best of *the earliest examples* of Babylonian religious art are the very interesting cylinder-seals impressed upon tablets found at Tel-loh (Lagaš) in S. Babylonia. They show a man and a woman, nude, the former struggling with a stag, and the latter with a bull, whilst two lions, whose bodies cross each other symmetrically (a common device of Assyro-Babylonian engravers) attack the two animals at the same time. Various mystic emblems appear—a bat or bat-headed bird, an animal's fetlock and hoof in outline, and a young bull—whilst beneath the name of the owner are two bull-men whose bodies cross each other, as in the case of the lions. The wide-open mouth of the man, and the closed mouth and the large ear of the woman, suggest that we may have here primitive representations of the deities Nebo, 'the proclaimer,' and Tašmêtu, his spouse, 'the hearer'; but the crown with points which the woman wears is rather against this identification, on account of analogies elsewhere. Concerning the art here revealed, a few words may be said. The

animal-forms, especially the heads, are good, and the manes of the lions are well treated, but the human forms are less satisfactory, the body of the man being thick, and the arms in both cases abnormally thin. The head of the man regards the spectator, and, though too large, is more successful than that of the woman, which has the same defect, to which must be added the fronting eye in the profile face, fitting, as it were, into the somewhat pointed nose, which makes the figure grotesque. The close-shut mouth (the line of the lips is invisible in the impression) and the abnormally large ear, taken in conjunction with the wide-open mouth of the man, shows that the design has a deeper meaning than appears at first sight. This seal belonged to En-gal-gala, the superintendent of the women's house during the reigns of Lugalanda and Uru-ka-gina, about B.C. 4500.*

Scenes similar to this are common, though no woman is shown as one of those struggling with the animals. From the same site, Tel-loh, the de Sarzec expedition † obtained a very fine seal showing a bearded man struggling with a bull, and a bearded and crowned personage struggling with a lion. These animals cross each other like the lions in the other design, and the bull-men beneath the inscription of En-gal-gala's cylinder are replaced by two human-headed bulls, one of which is held by a nude bearded man, a bird, probably intended for an eagle, occupying the space between them. If the short inscription *Nin-in* or *Ni-in*, close to the crowned personage, refers to him, it probably represents the ancient deified king Ninus, who, with Semiramis, is said by Diodorus (ii. 8, 6) to have been represented on the walls of Babylon in enamelled brick, hunting the leopard and the lion.‡ The objects here described suggest that there was not only a legend referring to the goddess Nina, patron of Nina on the Euphrates and of Nineveh in Assyria, but also a male deity of similar name. Semitic influence, with its veneration for the male, is probably the cause of the substitution of the male deity for the hearing but silent female.

The occurrence of these early designs on cylinder-seals reminds us of an important fact in connexion with Babylonian art, namely, that in Babylonia there is neither building-stone nor even blocks in any number suitable for sculpture either in relief or in the round. It is therefore not impossible that the earliest works of art were primitive attempts at engraving, first as charms, and afterwards as charms and seals combined, on the cylindrical beads which were for many centuries the favourite form of seal in Babylonia and Assyria, and which afterwards travelled to the extreme west of Asia and Egypt.

Presenting a large surface in a small space, these cylinder-seals became suitable for all kinds of pictures, and we find engraved thereon the Babylonian idea of several of the legends with which we have become familiar from the tablets. Thus it happens that, in a scene showing a nude bearded figure struggling with a bull which is being also attacked by a lion, we see a representation of a boat and a personage within rowing,§ which is generally supposed to show the Babylonian Noah in the ark. Several copies exist also of that exceedingly interesting scene which shows Etanna riding in the air upon an eagle, whilst people on the earth below interrupt their daily work to gaze upon them.* Another noteworthy example is well known as a possible Babylonian picture of the Fall. It shows two personages seated one on each side of a palm-tree bearing fruit, and stretching forth their hands as if about to grasp it, whilst behind the figure apparently representing the woman a wavy serpent raises himself. The work is rough, but implies some technical skill.†

Noteworthy are the early engravers' attempts to cope with the scene representing the overthrow of the dragon Tiamat by Merodach. The best is one figured by Hayes Ward, in which the head of the Babylonian pantheon is seen striding or running along Tiamat's wavy body, and thrusting his weapon into her mouth as she turns her horned head towards him. Two of Merodach's helpers seem to follow behind. Another picture of the same, which is apparently of late date and Assyrian workmanship, shows the dragon with a long and straight, but apparently scaly, body, erecting herself at an angle where the feet spring forth. She does not turn her head towards him, and the god attacks her with thunderbolts, striding along on her body behind, followed by two of his helpers.‡ Other scenes, possibly from legends, occur, but have not as yet been identified. Thus a cylinder-seal in two divisions shows, on the right, a deity (the sun-god) dividing food, of which the owner of the seal, standing before him, seems to partake; and on the left another deity bending down a tall thin tree apparently to conceal a goddess and a (? child-) deity coming forth from its trunk (cf. the classical story of Adonis [Ovid, *Metam.* x.]). All the figures on this cylinder-seal (except that of the owner) wear the horned hat indicating divinity.§

The design in the right-hand division, which shows the owner of the cylinder before the god whom he worshipped, is probably, in its various forms, the commonest found, especially in the period preceding 2000 B.C. The deity is generally seated, and often holds a cup in his right hand. Before him is sometimes a vase, and the worshipper (the owner of the seal) is led into his presence by a divine personage.‖ A divine attendant sometimes brings up the rear.¶ The worshipper is generally bare-headed and clean-shaven, the latter peculiarity probably indicating his priestly office.** Variants of this oft-repeated design are found; one, which is regarded as exceedingly ancient, is a fragment of a bas-relief †† showing a seated deity holding a cup in his right hand, and wearing on his head a hat with two horns, one at the front and the other at the back, instead of one or more on each side, as in the later designs. The work is rough and primitive, the artist having apparently found his material not altogether satisfactory (it is a calcareous limestone, probably of sufficient hardness to make its working difficult).

* See the *Amherst Tablets*, vol. i. p. 2. The woman's crown appears in the reproduction published by M. N. de Likhatscheff, St. Petersburg, 1907.

§ *Découvertes en Chaldée*, pl. 30 *bis*, 17*b*. It is not exactly known why the Babylonians and Assyrians represented their deities wearing horned hats. In the primitive design described above (p. 533), the demons or bull-men have horns placed directly upon their heads. Perhaps this is an artist's device to show who, among the figures in the picture, are gods and who are men, just as the star placed before the names of deities in the inscriptions is not an indication that all the deities are stars (though some of them were so regarded), but simply means that the gods belonged to the place where the stars are, namely, the heavens.

‖ Numerous representations of this kind will be found in the *Amherst Tablets*, vol. i. pp. 40, 63, 83, 141, 158, 196, etc.

¶ *Ib.* pp. 80, 170.

** A very fine but fragmentary relief, showing Gudea (*c.* 2500 B.C.) brought before his god by two introducers, is given in Meyer's *Sumerien und Semiten in Babylonien* (Königliche Preuss. Akad. der Wissenschaften, 1906), pl. vii

†† *Découvertes en Chaldée*, pl. 1, No. 1.

The deities at this period are represented wearing mantles which recall, in a measure, the Roman cloak wound round the body, and thrown over the left shoulder, leaving the right shoulder and arm bare. These garments seem sometimes to be represented as made of the skin of some animal, such as the goat (which seems to have been a sacred animal), sewn together in long strips giving the appearance of flounces. This costume distinguishes divine personages, or those who claimed divine kinship. A squat little figure in alabaster, standing with folded arms, and wearing a dress of this kind, the head bound round with a fillet crossing behind the long carefully-arranged hair,* may be a divinity, or the priest of a god.

It is noteworthy that though, in the archaic fragment above described† and on the cylinder-seals, the deities are represented in profile, in bas-reliefs of somewhat later date they are often shown front-face. Whether front- or side-face, however, the horns on their hats, which vary from two to eight in number, are shown as if the front of the head-dress were towards the spectator.‡ Goddesses are shown dressed similarly to the gods, in horned hat and robe of skin, but the right shoulder is covered as well as the left. One small fragment§ shows a goddess wearing a hat with a single horn on each side. Her hair descends in graceful curves upon her shoulders, necklaces adorn her neck, upon which is also a triple row of beaded work which disappears beneath the low-cut neck of her goat-skin robe, over which, from each shoulder, descends a beaded stole. She holds in her hands a vase from which flows a twofold stream of living water. Here we have something really good and artistic—almost æsthetic. The work is so dignified, the idea intended to be conveyed (that of a beneficent goddess bearing the water of life) so well expressed, that the spectator realizes that he has before him the work of a people who knew what they wished to express, and had skill to express it.

After that, the picture of a god,‖ apparently of the same period, is disappointing, though even this has its excellences. Its shortcomings are probably due mainly to the damage which the stone has received. A deity, front-face, bearded, and holding what seems to be a staff or symbol, is seated on a low-armed chair with a high and slightly bent back. He wears the usual robe of skin, and hair falling upon his shoulders. In spite of the damage to the stone, the dignity of the face is striking. Reliefs in terra-cotta, apparently produced from moulds, also occur. A very good example¶ shows a male figure nearly nude, wearing a horned hat, and plaited hair descending to each side of his longish beard, where it ends in two tightly-arranged curls.

The bronzes, though not numerous, are excellent of their kind. They represent *canephoroi* (priestly rulers as bearers of gifts to the temple), human figures and seated bulls, on a kind of tang for insertion in a socket, and the well-known kneeling figures in horned hats holding inscribed cones (regarded by some as the god with the fire-stick). They are of the nature of votive statuettes,** and were used as the bearers of stone inscriptions detailing the building of temples.

(2) *With the advent of Semitic influence* (c. 2100 B.C.) there is a change in the representation of certain of the deities. The horned hats and the skin robes are found, but, in the case of what may be regarded as the warrior-gods, short tunics and thick-brimmed hats appear, and the deity grasps in his right hand a short weapon, held close against the body. The beard also spreads over the breast. Sometimes the thick-brimmed hat is combined with the long flounced robe of skin. The cylinder-seals of this period are often very finely engraved, especially those of hæmatite. The bas-reliefs follow the style of the cylinder-seals, but seem to keep more to the old costumes. A very good specimen of the lapidary art of this period is the representation of Ḫammurabi before the sun-god Šamaš, at the top of that king's Code of Laws.* Ḫammurabi has flowing robes reaching to his feet, and a thick-brimmed hat. His right shoulder is bare, and his hand is raised as if addressing the deity. The sun-god, heavily bearded, wears a flounced robe without any indication whatever of a hairy surface. Upon his head is a pointed hat, with four horns curving upwards in front—eight in all. Wavy rays proceed from his shoulders. His seat has four superimposed recesses, such as are often found both in bas-reliefs and in designs on cylinder-seals. His right shoulder is bare, and in his hand he holds a staff and a ring, emblematic of his endless course and his authority as judge of the world. The work is good and well finished, but wanting in lightness and detail. The bronzes of this period seem to have maintained the excellence which those of the preceding period show. One, probably now in private hands, is a good reproduction, in the round, of one of those divine attendants so often shown in the cylinder-seals as a graceful female figure in a horned hat and wearing a robe of skin, holding up her hands with the palms facing each other. When the deity and the owner of the seal are absent, these attendants are sometimes shown in the same attitude of adoration before the divine name contained in the inscription.

(3) *In the Kassite period* we meet with another style for the cylinder-seals, the work being exceedingly plain and flat, and wanting detail. The designs are, moreover, confined to single figures, either sitting or standing, and accompanied by some emblem—a cross, one or more birds, etc.; and in one case even a fly, suggesting that the deity may have been the Babylonian Beelzebub. These designs probably form the transition to the later Babylonian style of art, in which the robes are likewise very plain; but the work, which seems to fall off somewhat during the Kassite period, later assumes remarkable accuracy and finish.

It is to the Kassite period mainly, however, that the boundary-stones which have come down to us belong. These objects (generally inscribed with grants of land) are sculptured with 'the signs of the gods' as a protection against the wrongful alteration of the boundary or changing the conditions of the deed, etc. Those found by the de Morgan expedition at Susa† are of special value, as they have sometimes short inscriptions which enable the signs upon them to be identified. The sun is represented by a disc having a flaming star within; the moon by a crescent; Venus by a star; Nusku ('the light of fire') by a lamp; Gula, goddess of healing, by a female figure in horned hat and robe of skin, etc. We see on them also the fish-goat, the scorpion, and the bull emblematic of Addu (Hadad). The signs vary on each stone, and the work is seldom really well finished, that of Nebuchadrezzar I. in the British Museum being in all probability the finest specimen.‡

(4) Comparatively early in *the latest period* (c. 900 B.C.) comes that magnificent specimen of Babylonian art, the sun-god stone, found beneath the

pavement of the temple of the sun at Abu-habbah by Mr. H. Rassam. It shows a design derived from the early cylinder-seals. The sun-god sits in his shrine, wearing horned hat, robes of skin, and long beard. In his right hand he grasps his staff of justice and the circlet of his everlasting course. At the top of the shrine two little figures, personifying righteousness and justice, guide with cords the great disc of the sun erected on the table below. A divine personage leads Nabû-âbla-iddina, the king who had the stone sculptured, into the presence of the god, and a divine attendant in the usual attitude of veneration follows behind. The ground consists of wavy lines (the waters above the firmament) with stars below, pointing to the probability that the scene is laid in heaven. The figures are a little too broad, but the work is excellent, and may be regarded as maintaining all the traditions of Babylonian art.*

Figures of deities during this late period are rare, but there is evidence in the antiquities found that they did exist. On the cylinder-seals emblems similar to those found on the boundary-stones of the preceding period often take their place, such as the sun's disc and the moon's crescent mounted on a tall object set on square corniced and panelled plinths. A burly clean-shaven priest stands before the emblems in an attitude of adoration. The fish-goat and other deities copied from the boundary-stones also appear.

2. Assyria.—But it is Assyria, from about B.C. 885, that furnishes us with the greatest wealth of material for the study of Assyro-Babylonian religious art. In the sculptures of that date (time of Aššur-naṣir-âpli) the king is represented as the great high priest. Assyria being a country possessing stone, the sculptors were not dependent on such chance fragments as they could get, and magnificent bas-reliefs indicate what her artists were capable of. The examples from Nimrûd (Calah) show us the king, clothed in garments splendidly embroidered with representations of all kinds of mystic emblems and ceremonies,† himself engaged in ceremonial acts, surrounded by his eunuchs and drinking from the sacred cup, while winged genii offer him the divine pine-cone, or something of similar shape. In other sculptures we see him worshipping before the sacred tree, above which hovers the winged disc representing Aššur, the chief god of the Assyrians.‡ Familiar to all are the reliefs showing the adoration of the sacred tree,§ and the winged figures carrying offerings of flowers and young animals.‖ An admirable example of religious art is the sculpture from the entrance of the temple of Ninip, representing the expulsion of the dragon of evil from the building, which was repeated on the other side of the doorway.¶ As a testimony to the divine status of the king we have the image of Aššur-naṣir-âpli on an arch-headed monolith, and the sacrificial altar which stood before it at the entrance to the temple.** Though the figures are too thick-set, the work is excellently finished, and the details carefully indicated. This applies also to the winged bulls and lions of this reign, though they are wanting in vigour.†† The effect is somewhat marred by the long inscriptions which are carved across the sculptured work of this reign.

Based upon these or similar models are also the religious sculptures of Tiglath-pileser III., Sargon, Sennacherib, Esarhaddon, and Aššur-banî-âpli; but though they belong to the same school, the improvement in style can easily be traced, until we reach the delicate perfection of many of the sculptures of the last-named. Whilst the sculptures of Aššur-naṣir-âpli give us the Assyrian idea of the sea-god Ea (Syncel. *Chron.* 28; Euseb. *Chron.* 5, 8), who was clothed with a fish's skin,* Dagon, according to a sculpture of Sargon from Khorsabad, was shown as a deity with a horned hat, carefully-curled hair and beard, and a close garment reaching to his waist, where the scaly lower part, ending in a fish's tail, begins† (cf. 1 S 5[4] ['the stump of] Dagon,' AVm 'the fishy part'). Noteworthy, though clumsy, are the statues of Nebo standing in what is regarded as an attitude of meditation.‡ On a cylinder-seal, apparently of the time of Aššur-banî-âpli, and bearing a dedication to Nebo, is shown a divine figure holding two winged bulls by one foreleg, whilst they incline their heads gracefully towards him. If this be Nebo, and the design have a symbolical meaning, it may typify the power of the wise to overcome the strong.§ Turning to the bas-reliefs of Aššur-banî-âpli, we may note the scene where, to the sound of zithers, the lions which the king has killed in the chase are brought home, and before a sacred emblem and a table with viands he pours out an offering of wine over the beasts lying on the ground.‖ This is in the best Assyrian style; the figures of Aššur-banî-âpli ¶ and his brother of Babylon as basket-bearer at the restoration of the temple Ê-zida there, though good, fall somewhat short of the sacrificial scene.

Whether it is votaries or ministering spirits in the form of Ištar or of Mah (Merodach's spouse as she who presided over births) who are represented by Aššur-naṣir-âpli as making offerings before the sacred tree,** is uncertain—probably the latter. Ištar is apparently represented on a cylinder of the British Museum as a goddess in warlike guise, armed with bow and arrows, and standing upon a lion, which turns its head to lick her feet. A eunuch-priest stands before her, and the design is completed with the palm-tree and rearing goats whose bodies cross symmetrically. It is a gem of Assyrian religious art.††

The sculptors of that time likewise give us an idea of the spirits, evil and otherwise, in whom the Assyrians believed. Besides the four-winged genii, demons with snarling lion-heads, ass's ears, and eagle's claws, are shown. Sometimes they threaten each other with dagger and mace,‡‡ at other times they raise their weapon menacingly against a person unseen. But they are powerless in consequence of the protecting spirit in the form of a man in front, who with mystic sign casts an unseen spell. In some cases there is also a bearded and ringleted spear-bearer behind, similar to the nude figures on the Babylonia cylinder-seals of B.C. 2500, showing how long these things persisted.

No artistic remains from Assyria later than the reign of Aššur-banî-âpli are known.

There is hardly any doubt that the high level of Assyro-Babylonian art is due to the deep religious feeling of the two nations. Their sincerity is re-

flected in their work, which, if the nations producing it had continued to exist, might have attained a perfection which would have rivalled even the art of Greece and Rome. How far the influence of their art extended, it is difficult to say. Connexion with that of Phœnicia may be traced, the most striking instance being Esarhaddon's clay seal (referred to on p. 884).

ART (Buddhist).—See artt. on BURMA, CENTRAL ASIA, CEYLON, CHINA, INDIA, JAPAN, JAVA, SIAM, TIBET, and art. TEMPLES (Buddhist).

ART (Celtic).—The article 'ART (Christian)' is designed to bring into view the various forms in which art in the modern era has been made the expression of religious feeling. Special attention is there given to that phase of Christian art in which there is little or nothing of the representative element, but on the other hand a lavish display of taste and skill and care, all consecrated to the production of a worthy offering of beauty for the service of religion. Celtic art represents this form of artistic expression perhaps more perfectly than the art of any other time or people, and this is one of the reasons why it here receives a special treatment. The spirit of monastic craftsmanship, in all its single-minded devotedness, is nowhere seen in such purity as in the ornamentation of Celtic manuscripts, or the exquisite ecclesiastical metal-work that had its home in the Ireland of the early Middle Ages.

Definition and scope.—By Celtic art is meant, of course, Celtic ecclesiastical art,* and this is related to Christian art in general just as Celtic Christianity is related to the whole religious system of the West. In each case we have to deal with a distinct province, the characteristic features of which are the outcome of special historical and geographical conditions. The Celtic religious area was practically un-Romanized, and it differs in this from all the other regions of Western Christendom. Part of the area lay entirely outside the Roman Empire, and other parts were only dubiously within it, while, on the other hand, after the area had received Christianity, it developed its church life and institutions in complete independence of the Roman ecclesiastical system. In like manner, the art of this same area differs from Christian art in general in that it is far less dependent on Roman tradition and models. Some of the forms of ornament which the Celtic Christians employed in the service of the Church were drawn, not from the familiar *répertoire* of classical motives developed and used by the Mediterranean peoples, but from a stock of forms of hoary antiquity that existed in Central and Northern Europe from a time before the beginning of distinctive classical culture in Greece and Italy. In connexion, therefore, with Celtic art, we are brought into contact with fresh and interesting artistic motives that we hardly meet with elsewhere in the wide domain of Christian art in general.

A word may be said on the local setting of Celtic church life, and of the art which was its outcome and its adornment. At the time of the introduction of Christianity the Celtic peoples in Eastern and Central Europe had yielded place to tribes of Teutonic descent, but they were still in possession in Gaul and in the British Isles, where they had developed, on Central European traditions, some elaborate and beautiful forms of decorative art. The conquest of Gaul and of Britain up to the Forth and Clyde Romanized to a considerable extent these Celtic lands. Christianity was probably introduced into Gaul, not from Rome or from Italy, but from Greek-speaking lands in the wake of Massiliote or Narbonnese commerce, and spread thence into the isles of Britain at a time and by agencies that cannot now be clearly determined. That the Gallic Church was the mother Church of those in Great Britain and Ireland is sufficiently established; and, so far as all these lands were included in the Empire, the Roman municipal and provincial system furnished the Church with a ready-made framework for its organization—an organization which we know existed in Britain on Gallic lines as early as the beginning of the 4th century. This Gallo-British Church, however, pushed its missionary activity into regions entirely outside or only nominally within the limits of the Empire, and here there were no effective Roman institutions to provide this framework. Church organization here, so far as it existed, was quite different from what it was in Romanized lands. It was not territorial or civic, but tribal and personal; that is to say, the bishop, the chief ecclesiastical functionary, was not bishop of a Roman *civitas*, i.e. a town with its surrounding district, but of a tribe, and was largely dependent on the personal support of the tribal chieftain. In other respects also the differences were equally marked.

Representatives of this missionary activity were Ninian, who looked to St. Martin of Tours as his exemplar, and soon after A.D. 400 evangelized the Southern Picts of Scotland; later on, Kentigern, who laboured in Strathclyde and Wales; and, most important of all, Patrick, who, a little later than Ninian and a century before Kentigern, stamped the impress of his personality so deeply on Ireland that he has remained ever since the patron saint of the island. We can gather from Patrick's own writings that Gaul, where he had received instruction and orders, bounded his ecclesiastical horizon, and he was clearly a missioner of the same type as the others just mentioned, who was working independently on the lines laid down by the social conditions of non-Romanized Celtic lands. Under the guidance of these single-minded evangelists, Celtic Christianity in these lands was free to evolve and maintain its own special ecclesiastical character, and this was especially the case in Ireland.

This exceptional character which attaches to the outward apparatus of Christianity in Ireland was further emphasized by the fact that after the island had received the new religion it was cut off from the rest of Christendom for a century and a half by the Saxon conquest of England, which interposed a barrier of paganism between the Christian West generally and this outlying province. Direct intercourse between Gaul or Spain and Ireland, which had existed from early times, was also checked owing to the political convulsions due to the Gothic and Frankish invasions. Hence it came about in certain ecclesiastical matters that, while changes were worked out in Western Christendom generally, Ireland, in this way isolated, preserved her more primitive forms, some of which had once been common to all provinces of the Church alike.

One of these forms, which had once been common but afterwards became conspicuous for its singularity, was the monastic settlement consisting in a number of separate cells and of small churches or oratories. This was everywhere in Christendom the earliest form of the monastery, because the hermit's cell answered to the primal impulse in the votary's mind of retirement from the world. The reputation for sanctity of the first recluse drew others about him, and so a community of considerable size might be formed, numbering possibly, as Bede tells us of the British monastery at Bangor near Chester on the Dee, as many as two thousand souls. The members of such a community, whether few or many, lived beside each other but not together. The arrangements for life in common, which English and Continental ruined monasteries have made so familiar to us—the cloistered court, the common refectory and sleeping-room—were all absent. These were Benedictine features, and did not come into use till the 6th or 7th cent., from which time onwards they were gradually introduced all over the Romanized West. Eastern Christendom, which Benedictinism hardly affected, and the Celtic regions outside the Empire, or on its north-western border, remained faithful to the older system.

Monastery the home of ecclesiastical art.—Celtic monasteries of the kind indicated existed not only in Ireland but in Scotland, in Wales, and in other parts; but it is in the first-named country that they have left the clearest monumental evidence of their character. Even as early as the time of Patrick—the first half of the 5th cent.—Irish men and women were devoting themselves with ardour to the religious life, and the sites of ancient settlements are almost innumerable. Those in the remoter and less accessible regions, such as the islands and rocky headlands of the indented western coast, are, as a rule, the best preserved, and we may take as an example the settlement on the most retired spot of all, the rock of Skellig Michael, an isolated peak about 10 miles out in the Atlantic, off the coast of Kerry. Here, at the height of some six hundred feet above the sea, we find on a terrace, sustained by a magnificent retaining wall of dry, *i.e.* uncemented, stone-work,

* For pre-Christian Celtic art see CELTIC RELIGION.

half a dozen or so of hermits' cells and two or three tiny oratories used for service and private prayer. The cells, and all other structures except one of the oratories, are constructed of the same dry stone-work, and according to methods that carry us back directly to pagan times. The terrace wall is of precisely the same construction as the vast ramparts that form the successive *enceintes* round the stone forts of unknown date and origin on the headlands and islands of Galway or Kerry. The cells are round or oval in plan, and are of a beehive form, the layers of flat stones of which they are composed gradually narrowing their circles till a dome-like finish terminates the whole, an opening being left at the summit for the egress of smoke. This method of construction also is pagan, and may be found in the central stone chambers of the great pre-historic burial tumuli at Newgrange, Dowth, and other places beside the Boyne. That the cells on Skellig Michael are Christian is proved by the fact that over one of the doorways white quartz stones have been set in the form of a cross. The smallest of the little oratories is one of the most interesting of early Christian structures. Its interior length is only about eight feet, and it has a door at one end and a window over the altar at the other end, which is turned towards the east. The construction is similar to that of the cells, but the plan is rectangular, and the walls are made to converge till they meet in a ridge at the top. The little oratory stands apart from the rest of the structures of the settlement, on a jutting corner of the terraced platform, and we may well fancy it a place where the worshipper might tarry awhile and meditate, in this almost inaccessible eyrie between sea and sky.

Such meditations availed much for Christendom at large, for these Irish hermit monks were at the same time the most indefatigable of missionaries. That passion for solitude which drew the Celtic Christians away from the world was only one of the tendencies in their emotional piety, and is balanced by quite the opposite passion for wandering and evangelistic enterprise. To carry on this work effectively they seem to have needed to submit themselves from time to time to certain spiritual influences, which should act on their inner nature and charge them as it were with an electric force that radiated with irresistible potency when they journeyed forth as missioners. It was in places of solitude and retirement, like Skellig Michael, that the fire was kindled and fanned till it burst into the proselytizing fervour of a Columba, an Aidan, a Columbanus. We are here at the source of a stream of Christian influence that flowed with beneficent effect over all the land of Britain and far across the Continent of Europe. Ireland gave Columba to Scotland, Scotland Aidan to Northumbria, and from Northumbrian Lindisfarne proceeded the effective conversion of the Angles, while some of the greater Continental centres of the religious life looked to Celtic missionary saints as their founders.

The foregoing details are germane to the purpose of this article, for we have to note that the arrangement and the life of the Celtic monastery had great influence on the forms and æsthetic character of Celtic ecclesiastical art. It is not pretended here that all the artistic activity of the early mediæval period was centred in the monastery. The monastic craftsman plays a predominant part in the artistic history of the time, but he had no monopoly. Among the northern peoples in the pagan period, the fabrication and adornment of weapons, implements, and objects of personal wear, gave employment to artistic workmen whose skill and taste are in their way unsurpassed, and there is no reason to believe that the introduction of Christianity broke this tradition. In Ireland the Tara brooch, in Scotland the Hunterston brooch, dating about the 8th cent., are pieces of secular art, and we need not credit them to the monks. On the other hand, as the mediæval period advanced, sacred art undoubtedly preponderated over secular, and sacred art was specially cultivated in the cloister. In time, as Mr. Romilly Allen has remarked (*Celtic Art in Pagan and Christian Times*, 1904, p. 171), 'The priest took the place of the warrior as the patron of the fine arts, and monopolized all the available time of the metal-worker and enameller in making beautiful vessels for the service of the Church.' In periods of political unrest, such as on the Continent followed the breaking up of the Roman provincial administration, the convent offered conditions more favourable to artistic activity than were to be found outside, while certain forms of art in great demand at the time, such as the writing and adornment of books, were practically in the hands of the religious. The Celtic monastery may accordingly be regarded as the home of almost all the artistic production of the time that had an ecclesiastical purpose, and it will lend force to this statement to quote the nearly contemporary record as to the making and putting forth of one striking monument of Celtic art, the so-called *Gospels of Lindisfarne* or *of St. Cuthbert*, a manuscript dating from the end of the 7th or beginning of the 8th cent., and now one of the treasures of the British Museum. In an Anglo-Saxon colophon of the 10th cent. appended to St. John's Gospel, we are told that 'Eadfrith, bishop over the church of Lindisfarne, wrote this book in honour of God and St. Cuthbert, and all the company of saints in the Island; and Ethelwald, bishop of Lindisfarne, made an outer case and adorned it, as he was well able, and Billfrith the anchorite, he wrought the metal-work of the ornaments on the outside thereof, and decked it with gold and with gems.' The fact that Billfrith is called the anchorite ('se oncra') shows that fine metal-work with the setting of gems was carried on by the solitary recluse in his cell. The extreme minuteness and elaboration of this is, in fact, just what we should expect in work executed under these conditions; and this applies with even greater force to the manuscripts, wherein ingenious planning of ornamental schemes and faultless execution of multitudinous convoluted detail must have made the lonely hours pass lightly away.

Celtic ecclesiastical art in general was of a kind that could be carried out single-handed and in small interiors. Work that needed the co-operation of many hands and large spaces was little in vogue. In the Benedictine monasteries of the Continent the dominant art was architecture, and vast buildings for the accommodation of communities were devised, planned, and sometimes actually achieved by the inmates in person. Romanesque architecture is in the main monastic, and the great abbey church is its crowning achievement. In Ireland and other Celtic areas early conventual buildings were, as has been seen, smaller and simpler; and though they may possess great constructive interest, little pains have been taken with their ornamentation. From the traditional dry-stone building, illustrated on Skellig Michael, there were evolved on the one hand certain striking features in the framing of openings, etc., and on the other some interesting forms of vault construction. The single-celled oratory was enlarged by the addition of a second cell, also rectangular, forming when smaller than the first a presbytery or chancel, and when larger a nave: and this type of church plan, differing from the type with apsidal termination which belonged to the Roman tradition, appears in England after its conversion by the Celtic evangelists, who may thus have contributed towards the establishment of our insular preference for square-ended churches. The most striking peculiarity of Celtic church architecture in early mediæval times is the detached round tower, abundant in Erin, though represented by only a few stray examples in other parts of these islands. These towers are always connected with religious establishments, and it is now acknow-

ledged that they were primarily designed as towers of refuge, though also employed as belfries. The dangers against which they furnished temporary security were the Viking inroads with which from the beginning of the 9th cent. onwards the country was scourged. It is stated by Miss Stokes in her *Early Christian Art in Ireland* (ii. 57), that, in the entries in the Irish annals,

'regarding the attacks of the Northmen from 789 to 845, it is recorded that the clergy fled for safety into the woods . . . but in the year 950, and for two centuries later, we read of the "cloicethech," house of a bell, as a special object of attack to the Northmen.' A record relating to Brittany (quoted *ib.* p. 56) speaks of the erection near a church in that Celtic region of a 'little round tower . . . wherein to deposit the silver-plate and treasure of the same church, and protect them against the sacrilegious hands of the barbarians, should they wish to pillage it.'

The construction of the extant round towers bears out this evidence of their origin and intention, for in almost every instance the doorway of access to them is at a substantial height above the ground, and was accessible only by means of a ladder, which could be drawn up when the temporary garrison was housed within it. The interiors had wooden floors at different stages reached by ladders, and in the uppermost was the place for the bell.

The features here described are specially but not exclusively Irish. In other Celtic regions which were practically outside the Empire, and to which the influence of the ecclesiastical Rome did not penetrate till a later date, we find specimens, or at any rate relics and traces of them. Scotland, especially in the north and west, is well supplied; for example, the 'Isle of the Saints,' *Eilean na Naoimh*, not far from Mull, has a group somewhat similar to that on Skellig Michael; but Wales and Cornwall have very little to show in the way of structures that are prior to the Norman Conquest. In Ireland such structures are at once more numerous, more clearly marked, and better preserved than they are elsewhere. The plainness of these early Irish structures has already been noticed, and is remarkable in a country where the arts of ornament were flourishing in the Pagan period, and were destined to develop for Christian service into forms so elaborate and beautiful. The rude stone building gave place to cut stone-work, and to the use of the arch and of lime mortar; but the same character of plainness prevailed till about the year 1100, when a rich and somewhat fantastic style of architectural embellishment came into vogue, with which was soon mingled the undoubtedly Norman element of the chevron, or zigzag. With the development of this so-called Irish Romanesque, Celtic architecture loses that special character it had derived from the primitive methods of dry-stone construction, and comes into line with the other local styles of Western Romanesque. The subject need not therefore be further pursued.

i. STONE-SLABS, CROSSES, etc.—If the earlier Celtic masons did not carve ornament on the stones of their religious buildings, they made up for this by considerable activity in sculpture of another kind. The reference is to the incised or carved stone-slabs and crosses, a monumental form of Celtic art represented by abundant examples in all the Celtic and also in the Teutonized parts of the British isles. No complete comparative survey has yet been made of the whole body of monuments, but there exist monographs on the various groups, the most complete and elaborate of which is the ponderous volume issued in 1903 by the Society of Antiquaries of Scotland under the title, *The Early Christian Monuments of Scotland*. The subject is a very large one, for the monuments in question in the Scottish area alone number about five hundred, and it can, of course, only be touched on here.

In the matter of distribution, we may distinguish the following provinces in which the monuments occur in groups large or small. (1) Southern, eastern, and midland England. The monuments here are sporadic, and some regions are bare of examples, though in other parts, such as Derbyshire, they are well represented. (2) North-eastern England and the same side of Scotland up to the Forth, the region forming the ancient kingdom of Northumbria. Here the monuments are very numerous and of great artistic merit. In point of art they show a combination of Celtic elements with those derived from classical sources, and exhibit inscriptions partly in Roman letters and partly in runic characters derived from Scandinavia. (3) Galloway or south-western Scotland, the scene of the ministrations of Ninian to the southern Picts, represented by some interesting early monuments of a Gallo-Roman type. (4) Cumberland and the Isle of Man, and in part Lancashire, where the art of the stones betrays a Scandinavian influence. (5) Eastern Scotland north of the Forth and south of the Moray Firth, known to historians as the ancient 'Kingdom of the (northern) Picts.' The stones here exhibit certain devices peculiar to this region that are for the most part unexplained, though probably Christian in significance, but in the main their art is of the Celtic type. (6) Central, northern, and western Scotland, where Celtic art prevails with a certain Scandinavian admixture. (7) Wales, a region specially well represented by monuments of this class, in which the art is Celtic, the epigraphy partly Roman, and partly in *ogham* characters, that is, in a native Celtic style of writing answering to the Teutonic runes. (8) Cornwall and Devon, the monuments of which on the whole resemble those of Wales. (9) Ireland. This region, with parts of northern and western Scotland, was, as we have seen, entirely un-Romanized; and here the art, with the language, and to some extent also the epigraphic character, of the inscriptions, is almost wholly Celtic.

Of these provinces all but the first and second are entirely, or, to a preponderating extent, Celtic, for the 'Pictish' element in (5), though very remarkable, does not affect the general character of the monuments. The ancient Northumbria, (2), was Teutonic in government and (with of course the admixture of older races) in population, though its art was preponderatingly Celtic. That this region was effectively Christianized by Celtic missionaries from Lindisfarne has already been noticed, and it is highly significant that one of the most important of all monuments in the recognized Celtic style of manuscript illumination was produced and ornamented there by Anglian hands at a time when the Celtic monks had already retired from the island. The existence of this datable monument, noticed in this article on p. 838[b] (the *Gospels of Lindisfarne* or *of St. Cuthbert*), shows that we might expect the same Celtic style in other monuments of the region; and this we accordingly find, mingled with other elements, in the early sculptured stones now under consideration. This may be fairly held to show great vitality in Celtic art, as well as an attractiveness for the Teutonic population. In view of it, it will not be surprising to find that the monuments scattered over the rest of England, (1), exhibit also a prevailing Celtic character, which reminds us that it was influenced in almost every part by Celtic missionary activity. We are therefore justified in regarding the whole body of these monuments as so far Celtic that they cannot be excluded from any general survey of Celtic art.

It is with the art of the stones, not their epigraphy, that we are here concerned; but the inscriptions cannot be entirely disregarded, for they often afford valuable evidence of the nature and provenance of the monuments. The questions that

have to be considered concern (1) the character, (2) the form, (3) the ornamentation of the stones.

1. Character.—The inscriptions show that the majority of them are sepulchral, and as such they represent a form of monument that has been in use since Neolithic times. At the single site of Clonmacnoise in Ireland, there are nearly two hundred of these tombstones, all inscribed, and many ornamented. This religious establishment beside the Shannon, a place of surpassing interest, was founded by St. Ciaran in the middle of the 6th cent., and an Irish poem thus celebrates 'the peaceful clear-streamed place':

> 'Ciaran's city is Cluain-mic-Nois,
> . . . .
> Nobles of the children of Conn
> Are under the flaggy, brown-sloped cemetery;
> A knot, or ogham, over each body,
> And a fair, just, ogham name.'

Of ogham inscriptions on these stones only one has been known in modern times, and the rest are in Roman minuscules. Among the names that can be read upon them is that of Suibine, son of Maelhumai, of the latter part of the 9th cent., celebrated as one of the most learned Churchmen of his time. Inscriptions, however, also show that many sculptured stones were not sepulchral but commemorative, or devised for other purposes. Thus at Kells in Co. Meath there is a cross with the inscription, 'The cross of Patrick and Columba,' which was erected centuries after the death of the saints whose names it celebrated. Most of the so-called 'High Crosses' of Ireland—elaborately sculptured stone monuments of the 10th cent.—were apparently of this commemorative character. In Northumbria we know, from Simeon of Durham (*Hist. Reg.* § 36), that two sepulchral crosses stood at Hexham at the extremities of the grave of Bishop Acca, who died in 740, but the Ruthwell Cross is shown by its inscription to have been a memorial of the sacrifice of Christ. We are told in the *Life of Kentigern*, by Joceline of Furness (late, but based on older materials), that the saint was accustomed to erect 'the triumphant standard of the cross' to commemorate any marked successes in conversion; and in Wessex we have evidence (*Acta Sanctorum*, Jul. 11, p. 502) that 'the sign of the Holy Cross' was set up to mark a place of Christian assembly before the building of a church. Again, some crosses were terminal, that is, they defined a boundary by a landmark which religion made inviolable. An Irish pillar stone at Killnasaggart, Co. Armagh, proclaims that the place which it marked was under the protection of St. Peter, while one of the interesting early stones at Whithorn in Galloway, Ninian's missionary centre, is inscribed 'The Place of St. Peter,' and was evidently a boundary mark.

2. Form.—In the matter of form, the earliest class of stone monuments are pillars unshaped by the tool, after the fashion of the pre-historic menhirs, and correspond to the rude stone building of the early Celtic Christians inherited from their pagan forefathers. These pillars have on them inscriptions in one or other of the languages and characters noted in the enumeration of the provinces, and sometimes incised crosses or sacred monograms. These last, though in themselves, from the æsthetic standpoint, negligible, become of importance as the origin of the form of the shaped free-standing crosses of later times. In Galloway there are upright pillar-stones with Latin inscriptions, and the Chi-Rho (☧) monogram in different forms which are early, but probably not so early as the time of Ninian himself. This monogram appears within a circle, in which we may see a reminiscence of the wreath that enclosed it on the original *labarum*, or standard of Constantine, described by Eusebius; and this wreath, or circle, becomes later the stone ring, which in the well-known 'Celtic' form of the monumental cross is seen connecting the arms. The Chi-Rho monogram changes into the form of a cross by the addition of a horizontal bar across the upright stem of the original Rho (P), and the arms of the cross, though originally enclosed within the circle, come afterwards to protrude beyond its circumference. This transformation can be seen in progress in a half-developed cross at Penmon Priory in Anglesey.

The untooled pillar-stone does not of course itself change directly into the free-standing cross, though the incised monogram it bears has influenced the development. The actual process was as follows: The pillar-stone corresponds, as we have seen, to the rude stone building. When this gives place to the construction with cut stone and cement, the former is similarly changed to a dressed monument, which may be recumbent, in the shape either of a flat slab, which is *par excellence* the Irish type as represented at Clonmacnoise, or of a 'coped' or 'hog-backed' stone, such as occurs chiefly in the north of England, and is more probably of Anglian or Scandinavian than of Celtic origin; or else may be upright, in the form of a smoothed slab like a modern tombstone. The flat recumbent Irish slabs are adorned with incised crosses, the upright slabs with crosses in relief. From these latter were developed the free-standing crosses by the following stages. When a cross head contained within a circle is carved in relief on a slab, the upper part of this may be rounded off to follow the curve of the circle, as on a stone from Papil by Shetland, in the Edinburgh Museum of Antiquities. Next, the part of the slab below the head of the cross is cut in a little to correspond with the form of the comparatively slender shaft, and we obtain the shape known as the 'wheel cross'—a shape confined to the Isle of Man, Wales, and Cornwall. The background may now shrink in still further towards the outline of the shaft, while, by a contrary process, the arms of the cross are allowed to protrude beyond the circle which has enclosed them, and the final step is taken when, as it has been said (Romilly Allen, *Celtic Art*, p. 186), 'the portions of the background of the cross between the quadrants of the ring and the arms are pierced right through the slab, thus giving us the "four hole" cross of Cornwall and the typical High Cross of Ireland,' in which the outline of the stone corresponds with the outline of the Cross.

3. Ornamentation.—The subject of the ornamentation of the slabs and crosses cannot be discussed without reference to Celtic decorative art in general. The forms in which this expresses itself, apart from the carving on the stones, are practically confined to fine *metal-work* and the *illumination of manuscripts*, for in extant specimens of the Celtic Christian period, productions in other materials, such as wood, ivory, or textiles, are so rare as to be in the meantime negligible. On stone, metal, and the parchment of books, Celtic artistic feeling externalized itself in elaborate and varied ornamental patterns, the design and technical execution of which have excited the wonder of all subsequent ages, from the time of Giraldus Cambrensis in the 12th cent. downwards. The same patterns and methods of application appear in all three forms of art, and some of the best authorities treat the stone carving as later in date than the similar work in the other materials. It is a curious fact that certain details of the Irish High Crosses have no meaning in stone-work, while there is a technical reason for them in work in

metal, and this would indicate the priority of the latter. Again, the similarity between richly decorated cross-slabs, of which Scotland is the home, and the emblazoned pages of ornament in Celtic manuscripts, cannot fail to strike the observer. Hence it is maintained that the styles of artistic treatment which are in question here were first evolved on the pages of books or in metal, and then transferred to stone; and Mr. Romilly Allen believes (*Celtic Art*, p. 171) that the book-work was prior alike to that on metal and on stone. At first sight this seems contrary to natural likelihood, for there is much elaborate and beautiful Celtic metal-work of pagan date and also a certain amount of decorative carving in stone, whereas manuscript writing and illumination came in as a totally new form of craftsmanship with the introduction of Christianity. Irish experts converted to the new faith could continue for Christian service their metal-work or stone-carving, while it would take them a long time to learn the new art of caligraphy and illumination. The first books used in Christian worship would be imported, and would only very gradually be supplanted by those of native production. Hence we should expect to find Christian metal-work and stone-carving earlier than the same art applied to books.

Here, however, we are met by rather a curious fact. Christianity at its first introduction did not seem to inspire the Celtic artist, but rather to repress his activity, so that, as Romilly Allen states, 'before about A.D. 650 there was no distinctively Christian art existing in this country' (*op. cit.* p. 165). He accounts for this on the theory that the introduction into the British Isles of Christianity itself was much later than is generally supposed, and suggests A.D. 450 as the date of this. The negative evidence of the dearth of really early Christian monuments in this country had so impressed him that he has called the significant and quite unquestioned notice of the presence of three bishops of Roman towns in Britain at the Council of Arles in A.D. 314 one of 'the vague and unsatisfactory statements of the mythical period' (*op. cit.* p. 164). Archæological evidence, however, must be weighed along with literary, and not allowed to supersede it. To take an instructive parallel, if we were left only to literary evidence for the condition of the earliest Christianity at Rome, we should probably believe that art was at that time tabued. Monumental evidence, however, as shown in the article 'ART (Christian),' is conclusive that the earliest Christian Church at Rome not only accepted art as part of its external dress, but soon began to use it for definitely Christian purposes. Conversely, if we were left to monumental evidence alone for Christianity in early Britain, we should believe that it hardly existed, for Romano-British Christian monuments are extremely rare, and those belonging to the 5th or 6th centuries are few and artistically simple and even rude; yet the Romano-British Church had progressed so far by the early part of the 5th cent. as to have established the flourishing Pelagian heresy, and after the Saxon conquest it is clear that the large and active Christian community in Wales was this Romano-British Church, and not a new foundation in the 5th cent. from Gaul. Why it was that the earliest Celtic Christianity did not at once employ the native artistic resources available is a question which cannot be entered on here; it is a fact, however, that the Celtic ecclesiastical art on stones and in metal and books, which flourished from the middle of the 7th cent. onwards, used motives that were not all originally Celtic, but are found also in 'Merovingian' work in Gaul and in that of the period of the Teutonic migrations in general, and hence it is reasonable to refer the great unfolding of Celtic artistic activity in this period to the impulse which came in from England and the Continent as soon as the conversion of the pagan Saxons opened the door once more to intercourse between Celtic lands and Western Christendom.

The following are the ornamental motives that occur in the decoration of the carved stones, the objects in metal, and the manuscripts: (1) the human figure, (2) leaf-ornament, (3) animals, (4) geometrical ornament, consisting in: (*a*) step- and key-patterns, (*b*) interlacing- or knot-work, and (*c*) spirals.

(1) Celtic art proper has no place for the *human figure*; and where this is treated in native fashion, as in some of the Irish manuscripts, it is reduced to a decorative pattern with no more resemblance to nature than have the figures on court-cards. Wherever the figure is reasonably well drawn or modelled, there influence from the side of classical tradition is at work. The best figures on monuments of at any rate partly Celtic character are those on the Ruthwell and Bewcastle Crosses, and they are accompanied here by vine-foliage enclosing animals which is of distinctly classical type. The High Crosses of Ireland, which date from the 10th cent., exhibit a remarkable display of figure-work which is all due to Continental inspiration, and need not here be described.

(2) *Leaf-ornament* is also foreign to the Celtic style proper. There is hardly a trace of it in the manuscripts, but it occurs very occasionally on the stones in the purely Celtic areas of Ireland, Wales, and northern Scotland. In the ancient Northumbria, on the other hand, it is abundant, and is clearly of classical origin, for the vine is almost always the motive employed. The vine scrolls on some so-called 'Anglian' crosses, such as that of Acca, now at Durham, and the one at Bewcastle, are as charming as any decorative foliage in existence.

(3) *Animals.*—Like the human figure, animals, such as the horse, the deer, the dog, occur, naturalistically treated in some abundance; and it is of course a well-established fact that the unsophisticated artist is always better at animals than at men. There are hunting and battle scenes on some of the crosses or their sculptured bases, and on a certain class of sculptured stones in Scotland animals are represented truthfully in a very telling and artistic fashion. There is nothing here, however, that is specially Celtic. On the other hand, the conventional treatment of animal forms for ornamental purposes is a very important element not only in Celtic, but in all northern decoration. There is no attempt in this to give the animal its specific character, or even to preserve elementary truth in anatomy and proportion. The creatures barely preserve so much zoological character as resides in the possession of a head and limbs, and their bodies are elongated and flattened till they are nothing but bands. All parts that can be extended, such as a limb, a tail, an ear, a tongue, a lip, are drawn out and twisted into elaborate convolutions, and are intertwined as if the artist wished only to produce the effect of complex knot-work. Though birds are sometimes introduced, the beast is generally intended to be a quadruped; but it is drawn out to such a length and tenuity as to justify the epithet 'lacertine,' or lizard-like, which is generally applied to it. There is no question which has been more discussed than that of the origin and history of this form of ornament among the Teutonic and Celtic peoples. The latest and most elaborate work on the subject, Bernhard Salin's *Altgermanische Thierornamentik* (Stockholm, 1904), favours the view that the animals in northern art are ultimately derived from classical models, but that the northern

peoples generally made the motive their own, and worked it out with extraordinary ingenuity and patience. A close comparison of the animal ornament in Irish manuscripts and metal-work and that on objects of Teutonic provenance indicates that Celtic zoömorphic forms are of Germanic origin. These forms are very rare in the Celtic decoration of the pagan period, and do not occur in Ireland, so that a foreign origin is in accordance with likelihood.

(4) In the *geometrical ornament*, in all its forms save the spirals, the same derivation seems now accepted.

(*a*) 'Step' patterns occur in the *cloisonné* settings of Teutonic jewels. Moreover, these patterns in the manuscripts, such as the *Book of Durrow*, are shown in white lines on a dark ground, and the background has been laboriously filled in so as to leave the lines the colour of the light vellum. There may be in this somewhat artificial process an attempt to imitate the damascening in lines of silver on iron, common on buckles and similar objects found in Germanic graves. 'Key' patterns, that is, patterns of a kind of which the Greek fret is typical, are very abundant both on the sculptured stones and in the manuscripts, but are not much used on metal. They are unknown in pagan Celtic work, and their prevalence in that of Christian date is probably due to Continental influence. The Celtic artist, however, showed his originality in that he turned these patterns obliquely, so that their lines are sloping instead of vertical or horizontal.

(*b*) The interlacing- or knot-work is so characteristic of Celtic decoration in Christian times, and is developed therein to such an incredible variety of forms, that it has been popularly regarded as a Celtic speciality. The work in question does not, however, occur in the decoration of the pagan period (or only in one or two doubtful examples), and in the Christian it is so far from being a Celtic speciality that it is the most widely diffused of all the forms of geometric ornament in the early Christian and early mediæval centuries. As Salin remarks,

'In the 7th and 8th centuries the general taste seems to have turned in this direction, for we find the work everywhere from Constantinople to Ireland, and find it, moreover, represented in the most diverse forms of art, in architecture, painting, the industrial arts. It even flourished in Asiatic and African lands wherever European culture had found admittance' (*op. cit.* p. 340).

The origin of the style is still a matter of controversy, and some derive it from basket-work, while others see in it the offspring of the plait or guilloche ornament, which is very common on the Roman mosaic pavements that were to be seen in all parts of the Empire. It is also a moot point whether the style of ornament, whatever its ultimate origin, was developed independently in different centres, or spread from one centre where its capabilities had at first been discerned. In any case the Christian Celtic peoples showed that they had a special affinity for the work, which they carried much further in artistic development than was the case elsewhere. It is especially abundant on the carved stones and in the manuscripts, as the motive is not so suitable for metal, especially when treated by the *repoussé* process.

(*c*) In the *spirals* we come to a form of ornament that is in a special sense Celtic, and is inherited by Christian Celtic art from that of the later pagan times. It is not classical save in ultimate derivation, nor is it Germanic in the broad sense, though it is very finely developed among the northernmost representatives of the Teutonic stock in Scandinavia. On the pagan metal-work of late Celtic times, in Britain, in Gaul, and in Ireland, it was treated with much artistic feeling for beauty of sweeping lines and for composition, and retains these same qualities when adopted for Christian use. Spiral ornament, however, as used in late pagan and early Christian Celtic art, is not quite a simple matter. On one side it is of immemorial antiquity. Spirals occur in Egyptian decorative art from about B.C. 2700 (if not much earlier), and were adopted from this source into the art of Mycenæan Greece, where we find them in Crete and at Orchomenus, Mycenæ, and other places in the second millennium B.C. At least as early as this they appear in southern Central Europe, as at Butmir in Bosnia, and thence the motive journeyed up the valley of the Danube and down those of the Oder and Elbe to Scandinavia, where we find it developed in the Bronze Age to the utmost possible perfection. From Scandinavia it is thought to have passed over North Britain to Ireland, where it appears carved on a great stone at the mouth of the pre-historic royal burial-place at Newgrange by the Boyne. In all these cases we have to deal with regular closely-coiled spirals, which look as if they were derived from the coiling of metal strips or wire, though there is evidence that they were first developed on stone. Now, in the later or Iron Age of Celtic art, spirals of a different and more elaborate kind become the predominant ornamental form, and produce what are sometimes called 'trumpet' patterns. These are formed by double lines which are coiled round each other and then diverge, so as to produce a shape like the mouth of a trumpet. These coils and expanded offsets are ingeniously connected together, so that they can be made in combination to fill with ornament any given space. It has been argued very forcibly by Dr. Arthur Evans that these late Celtic scrolls, which are sometimes called 'flamboyant,' are in fact derived, by a process of conventionalizing, from the 'honeysuckle' patterns or acanthus scrolls of Græco-Roman classical foliage. As used in Ireland and Scotland in early Christian times, the spirals are partly closely coiled and partly flamboyant, and we may regard them as representing a combination of these classical derivatives with the far older and more severe forms of the Bronze Age spirals, the origin of which can be traced to Mycenæan Greece and to Egypt. The use of this primeval motive for the purposes of Christian decoration is a fact of much interest, to which attention was called in a previous part of this article.

We are not concerned with archæological questions of origin so much as with those of the æsthetic use made of these various motives, and of the place of this artistic activity in the life of the Celtic Church as a whole. It has been well said by Dr. Joseph Anderson:

'From whatever source or sources the different elements of the composite style of decoration of the Celtic Christian period may have been derived, the style itself belongs specially to the period of the early Celtic Church in Scotland, Ireland, and Wales, with distinctively characteristic developments in each of these separate areas, and a modified extension into the area of the early Saxon Church, especially in Northumbria. In each of these areas it produced a remarkable development of monumental sculpture; and whether we regard the whole series of their manuscripts, metal-work, and monuments collectively as one great comprehensive manifestation of Celtic ornamentation of the early Christian period, or take them separately as national developments of a common style, it is equally true that, considering the work and the time, it presents a manifestation of artistic culture altogether unparalleled in Europe' (*The Early Christian Monuments of Scotland*, ci.).

The first point to notice about the artistic use of this decoration is the method of its distribution over the surfaces to be adorned. The ornament does not meander at will, but is confined to strictly defined spaces; and these spaces, which may be termed panels, are themselves arranged in a carefully thought-out scheme of composition. The finest examples of this are the pages devoted to ornament in the Irish manuscripts, and the large

cross-slabs which are best represented in Scotland.

ii. MANUSCRIPTS.—Of the Irish manuscripts now extant, the earliest is probably the *Book of Durrow*, and the most elaborate is the *Book of Kells*, both in the Library of Trinity College, Dublin; while the *Gospels of Corpus Christi College*, Cambridge, comes next in age to the former, and the *Gospels of Lindisfarne*, in the British Museum, is only second in beauty to the latter. This book, moreover, possesses the unique element of value that it is dated, and it supplies in this way a fixed point round which other examples not only in illumination but in metal-work and carving can be grouped. It was written within a few years of the date A.D. 700, and is earlier in style than the *Book of Kells* though not so early as the other two. Hence the *Book of Durrow* may be assigned to a date in the 7th, the *Book of Kells* to one in the 8th cent.; and it is satisfactory to know that Bernhard Salin endorses these dates as a result of his elaborate and detailed comparative study of the ornaments which occur in them. The decoration in these books is not more sumptuous and minute in its execution than it is clear and bold in its distribution. Leaving out of sight the figure-work, such as the representations of the Evangelists in front of their Gospels, in which classical models have been, however distantly, followed, and taking only the ornament, we find that the first word or two of each Gospel occupies a page, the initial letter spreading from top to bottom of it, and the rest of the letters of the first word filling up a good part of the folio. A border is designed to combine with the initial in framing the whole composition. If this page be a *recto*, the *verso* of the previous folio, which faces it as the book lies open, is treated as a sheet of pure ornament, the object being that the book shall present a sumptuous and beautiful appearance when placed open at the beginning of a Gospel on a reading-stand upon the altar. The scheme of design for such a page is generally based upon the form of a cross, which appears as the centre and support of a composition of variously-shaped panels filling the rest of the sheet. These panels, as has already been explained, are themselves filled in with patterns of the kinds above enumerated, while a border encloses the whole. As has been well shown by Mr. Johan Bruun, the general arrangement of these show-pages of initials or pure ornament provides spaces or panels varying in shape. Those which decorate or serve as complementary fillings for the big initial letters are often of curved outlines, while those connected with the cross opposite are commonly rectangular, or at any rate symmetrical in contour. In the decorative enrichment of these different fields, patterns of various kinds are selected.

'Spirals' (and we may add zoömorphic patterns) 'were chiefly used to fill in the irregular sections of the body of the letter and its curvilinear enclosed spaces, where, owing to a certain freedom in fixing the centres and making volutes of varying size, they were easily adapted and in keeping with the flowing outline of the margin. Interlacements were less easily adapted, but could be made to suit an irregular space, for instance, by forming a chain of knots of varying size and intricacy; whereas fret patterns were even more rarely used outside of the square or oblong panels, for which they were naturally suited. Thus the disposal of the various designs was ruled by taste, and effected the combination of contrasting elements in a graceful scheme' (*An Enquiry*, etc. p. 29).

We may connect this decision and self-control, in the matter of planning out and distributing enrichment, with the severity of the monastic discipline that prevailed in the Celtic monasteries, where this work had its home. The spirit of order and obedience to rule was as strong in the Celtic establishments as in those organized on the Benedictine plan, and the Irish regulars were not only among the most learned, but among the best-living in Christendom. And if we discern their mental rectitude and respect for law in these well considered and justly balanced schemes, in the actual execution of the ornament we are brought into contact with their intensity of devotion to the allotted task, and the infinite patience to which they were schooled by the seclusion and monotony of their daily existence. The little cells where once they sat at work are places as holy to the pilgrim of art as to the religious devotee, and we can realize there how this element of dainty loveliness in line and hue, this ingenious scheming, this minute accuracy in measurement, must have humanized and brightened spirits that might otherwise have become numbed in ascetic rigour, while an education of conscience must certainly have resulted from their scrupulous logic and exactness in pattern making. Prof. Westwood and other experts have examined Irish manuscripts with a glass 'for hours together, without ever detecting a false line or an irregular interlacement.' In the interlaced work, Mr. Romilly Allen reports that

'every cord laps under and over with unfailing regularity . . . and all the cords are joined up so as not to leave any loose ends. All the details of the spiral-work are executed with the minutest care, and there is never a broken line or pseudo-spiral. In the zoömorphic designs the beasts are all provided with the proper number of limbs and are complete in every respect down to the smallest detail' (*Celtic Art*, p. 256).

No mere description can give any idea of the variety, minuteness, and unfailing consistency of this decoration, which can now be judged of in accessible photographic reproductions, such as those in Stanford Robinson's *Celtic Illuminative Art*. As regards colour a word may be said, because it is noteworthy that the Irish scribe produced the effect of sumptuous splendour on his enriched folios without any use of gold, on which the Continental miniaturist so largely depended. This is at first sight surprising, for Ireland produced a good deal of gold; and this was not only used in her native metal-work, but, it is believed, exported to other lands such as Scandinavia. Trinity College, Dublin, possesses a magnificent and weighty gold fibula of native metal and workmanship, but the manuscripts in the library are destitute of gilding. The colours employed are not numerous, but yellow is largely used, and might have suggested to the scribe the substitution of gold. The reds, greens, blues, and purples are bright, clear, and harmoniously blended, but the best effect is gained by the free use of black, of which the scribe fully realized the artistic value. We may conclude on this subject with some words of Dr. Anderson, in which he speaks of the 'profusion of spiral, linear, and zoömorphic patterns arranged in symmetric and rhythmic designs shown up by contrasts of colour, and all carried to an extent of elaboration so bewildering, and yet so charming in the perfect balance and finish of its parts, that the more the result is studied, the deeper becomes the impression of its inimitable originality, grace, precision, and skill.'

iii. METAL-WORK.—The fine Celtic metal-work was, as we learn from some special cases, also a monastic craft in the hands of ecclesiastics. It was applied to the enhancement of the value of the manuscripts either at once in the form of covers, such as that adorned by Billfrith at Lindisfarne, or later on in that of the shrine or box, called in Ireland *cumdach*, made to contain and preserve the precious volume (p. 838[b]). These cumdachs are peculiar to Ireland. Shrines of a similar kind, also of a later date than the objects they were to protect, were made for the early hand-bells connected with the names of famous saints, which are in themselves objects of the highest interest, and may in some cases really have belonged to the saints with whom they are traditionally associated.

Their simplicity and even rudeness agree with an early date. The most primitive are four-sided, and made of plates of iron riveted at the corners. The later ones are of the same shape but of cast bronze, and these are sometimes ornamented. There are early bells of the kind in Scotland and Wales as well as Ireland, and Scotland has two bell-shrines, the rest being Irish. Celtic metal-work of early Christian date is perhaps most largely represented by the enriched penannular or annular brooches, of which the Tara brooch in Ireland and the Hunterston brooch in Scotland are the finest examples. As this article is concerned rather with things ecclesiastical, it may be sufficient to refer to four fine examples in this class, the Ardagh Chalice and the Cross of Cong in Ireland, and the Monymusk reliquary and crozier of St. Fillan in Scotland. They are all works of great interest either from the historical or the artistic side, and the first named is one of the most beautiful and elaborate examples of fine metal-work extant anywhere in the world.

The Monymusk reliquary is described by Anderson as 'a small wooden box' (it is about four inches long), 'hollowed out of the solid, and plated with plates of pale bronze and with plates of silver. . . . Its ornamentation is that peculiarly Celtic form of interlacing zoömorphic decoration, united with coloured designs of diverging spirals and trumpet scrolls, which are the principal varieties of the decorative art of the Celtic manuscripts and memorial stones of the early Christian time. It is jewelled and enamelled, and its engraved and chased designs are characterized by such excellence of execution that it must be early in date' (*Scotland in Early Christian Times*, p. 249). The special historical interest connected with the reliquary resides in the fact that there is some reason to believe it a relic of St. Columba, and a *vexillum*, or battle charm, which, like the Ark in ancient Israel, was borne out to battle with the Scottish host. It is preserved at Monymusk House, Aberdeenshire. The crozier of St. Fillan is an example of a specially Celtic form of ecclesiastical object. It is really a shrine of fine metal-work, made in the shape of, and enclosing, the head of the pastoral staff of wood traditionally belonging to an early saint. The form of the crozier is exclusively Celtic, and differs from the form that such objects take on the Continent, and in the case of that of St. Fillan authentic history shows that it was employed as a relic on which oaths of a peculiarly solemn kind could be taken, while it is surmised that it was borne as a *vexillum* into battle at Bannockburn. It is preserved in a damaged condition in the Museum of Antiquities at Edinburgh.

The Cross of Cong, at Dublin, is the one surviving example of a processional cross of the early Celtic Church. It measures 2 ft. 8 in. in height by 1 ft. 6⅜ in. across the arms, and is 1¾ in. thick. It is constructed of oak, and was supposed to contain at its centre, under a boss of rock crystal, a portion of the true cross. On the exterior it is all covered with metal plates of copper which are adorned with silver mouldings and plaques, with panels of fine gold work and gilded bronze, and with bosses of coloured enamel. The panels are ornamented with gold filigree work and zoömorphic patterns, and the effect of the whole is rich and artistically pleasing. It can be dated in the first half of the 12th cent., and is a striking proof of the long survival of fine artistic taste in characteristically Celtic work in Ireland. As a rule the later objects, such as the cumdachs and the bell-shrines, though the style of the enrichment remains the same, are comparatively coarse in execution, but the Cross of Cong has fine technical qualities.

Lastly, in the Ardagh Chalice we come back to the period of the most perfect design and workmanship, of about the 8th cent., and to a masterpiece of unique value. It is a large two-handled bowl on a low stem, and will hold as much as three pints of liquid. In its construction and ornament are employed no fewer than 354 distinct pieces, and the materials are gold, silver, bronze, lead, enamel, glass, amber, and mica; and the ornamental patterns include interlaced-work, step-patterns, key-patterns, spirals, zoömorphs, and scrolls, arranged in panels after the fashion represented in the manuscripts, and of the finest period of the style. What is chiefly remarkable about the chalice is not the elaboration or variety of its detail, but the almost classic nobility of its general design. As a rule, in all barbaric enrichment, whether Celtic or Teutonic in origin, the tendency is for the ornament to cover practically the whole surface of the object under treatment, while it is only very rarely that we find that contrast between plain and richly adorned passages on which so much of the effect of classical decoration depends. The chalice, like some other objects of the pagan period in the collection of the Royal Irish Academy, has an imposing largeness of style, due to the simple contours of the plain polished silver bowl, in contrast with the bands and medallions filled in with panels of delicate ornament and studded with bosses of variegated enamel. Not the least beautiful part is the flat plate on the under side of the base, which would be visible when the chalice was raised to the lips of a communicant.

Conclusion.—It has been seen that in the manuscripts all the kinds of ornament already enumerated are used freely in conjunction, while in the metal-work zoömorphs are conspicuous, and interlacing patterns are less used than the others. Turning now to the sculptured stones, we find interlacing patterns most prominent of all, so that they sometimes form the sole decoration of a monument. As the forms of the slabs or crosses differ in the various Celtic or Celticized districts, so do the kinds of ornament with which they are adorned. Decoration in tastefully distributed panels is everywhere the rule, and in Kells churchyard, Ireland, there is an unfinished cross, on which the panels are marked out and carefully squared, though there is no carving on them. The panels, however, are differently filled according to the localities. In Ireland, where the erect crosses are comparatively late, these show figure subjects greatly preponderating over ornament; and the same may be said of the free-standing Scottish crosses of the same type, though the subjects in Ireland are more generally Scriptural than in Scotland, where hunting scenes and the like are more common. In Wales and Cornwall, on the other hand, figure sculpture of all kinds is subordinate to ornament. In the matter of ornament, spirals of good design and zoömorphs are frequent in Ireland and Scotland, but are very rare in Wales and Cornwall, and, as far as spirals are concerned, in the Isle of Man. The Irish and Scottish stones have also as a speciality that kind of knot work where curved lines are most in evidence.

The varieties of interlacing patterns in Scotland and Wales are astonishing, and these have all been analyzed with extreme ingenuity and care by Romilly Allen in *The Early Christian Monuments of Scotland*, where the subject occupies 150 quarto pages. Since these slabs and crosses were, as we have seen, not so strictly ecclesiastical in character as the manuscripts and much of the metal-work, it is not necessary to postulate the monastic craftsman as in their case the sole executant. Yet the loving care and the single-minded devotion to a laborious task of which they give evidence are just the qualities which the monastic life developed in its votaries; and though the designer of some of the

elaborate cross-slabs of Scotland may have helped himself by appropriating compositions and motives from the manuscripts, yet he could never have carried out the work with such perfect execution had not his whole nature been brought into accord with the spirit that inspires it. Celtic art, as the expression on the æsthetic side of the fervour and intensity of a wonderful religious life, without which the Christian Church would have been greatly poorer, was a possession of the people at large, and is a democratic art practised alike by the unlettered mason and by the most learned scholars in Christendom.

LITERATURE.—For the whole subject, J. Romilly Allen, *Celtic Art in Pagan and Christian Times*, London, 1904, *Early Christian Symbolism in Great Britain and Ireland*, London, 1887, and *The Monumental History of the Early British Church*, London, 1889: for Ireland, Petrie, *The Ecclesiastical Architecture of Ireland*, Dublin, 1845; M. Stokes, *Early Christian Art in Ireland*, London, 1887: for Scotland, Joseph Anderson, *Scotland in Early Christian Times*, Edinburgh, 1881, and 2nd ser., Edinburgh, 1881. The art of the manuscripts can be studied in Westwood, *Facsimiles of the Miniatures and Ornaments of Anglo-Saxon and Irish Manuscripts*, London, 1868; Stanford Robinson, *Celtic Illuminative Art*, Dublin, 1908; and Johan Adolf Bruun, *An Enquiry into the Art of the Illuminated Manuscripts of the Middle Ages*, pt. i., Edinburgh, 1897. The best works on the carved stones of the various localities are, for England generally, *Journal of the British Archæological Association*, vol. xli.: for Northumbria, Greenwell, *A Catalogue of the Sculptured and Inscribed Stones in the Cathedral Library, Durham*, Durham, 1899: for North Riding of Yorkshire, *Yorkshire Archæological Journal*, vol. xix.: for Cumberland, Calverley, *Notes on the Early Sculptured Crosses, etc., in the Present Diocese of Carlisle*, Kendal, 1899: for Lancashire, Taylor, *Ancient Crosses of Lancashire*, Manchester, 1902: for the Isle of Man, Cumming, *Runic Remains of the Isle of Man*, London, 1857; Kermode, *Manx Crosses*, London, 1907, and *Catalogue of Manx Crosses*, Ramsey, 1892: for all parts of Scotland, Romilly Allen and Anderson, *The Early Christian Monuments of Scotland*, Edinburgh, 1903; Stuart, *Sculptured Stones of Scotland*, Aberdeen, 1856: for Wales, Westwood, *Lapidarium Walliæ*, London, 1876: for Cornwall and Devon, Blight, *Crosses of Cornwall*, London, 1858; Langdon, *Old Cornish Crosses*, Truro, 1896: for Ireland, O'Neill, *Sculptured Crosses of Ancient Ireland*, London, 1857; Petrie, *Christian Inscriptions in the Irish Language*, Dublin, 1872.

G. BALDWIN BROWN.

ART (Christian).—**Introduction.**—The limits of this article permit of the treatment of the subject only in one or two selected aspects. There can be no attempt to enumerate the various forms of Christian art, still less to trace out their history. For several of these, provision is made elsewhere in the Encyclopædia. The noblest and most important form of Christian art, architecture, furnishes the subject of a distinct article. Illuminated manuscripts are dealt with in next article. For an account of minor forms of Christian art, such as ivories, or ecclesiastical metal-work, information will be found in Dictionaries of Christian Antiquities, or in compendia like Dom Leclercq's recent *Manuel d'Archéologie Chrétienne*.

(*a*) *Scope.*—The scope of the present article must necessarily be a narrow one, and the main object of it is to take the most characteristic forms of Christian art as we meet with them in successive ages, and consider how far each of them expressed the religious ideal. In connexion with these historical phases we shall keep in view the two main questions: (1) that of the relation of art and the element of beauty generally to the religious life, and (2) that of the actual attitude of the Church at large, and of sections of it, towards art and beauty.

(*b*) *Definition.*—It is necessary to understand at the outset what is meant by 'Art.' To the majority of people a work of art means a picture or a piece of sculpture, and such works are generally regarded from the points of view of their resemblance to nature, and of the intrinsic character of the person or scene or object delineated. Art is, however, something far wider, and it is taken here to embrace the element of beauty wherever this appears in the works of man. The tasteful embellishment of buildings and of objects of utility is just as much art as the painting of a picture, and such decoration can be in the highest degree artistic even though the representation of nature plays little or no part in it. Where the representation of nature does form an important element in the effect of a piece, this may be a very beautiful and precious work of art, though the aspect of nature it presents is comparatively trivial, whereas a markedly inferior work of art, like some modern religious pictures of the 'Doré' type, may have for its theme a subject of the highest import. In this article the subject and the religious intention of a work are not reckoned as in themselves competent to give it its rank, and only those works are regarded as illustrating the subject of Christian art that express Christian ideas in an adequate and beautiful artistic form.

(*c*) *Misconceptions concerning Christian art.*—These considerations may help us to get rid at the outset of certain popular misconceptions, such as the notions that in early Christian days pagan art was deeply tainted with impurity; that the Christians were in consequence opposed to art, and that the earliest manifestations of Christian art assumed a symbolic or didactic character as a sort of apology or disguise. We must remember that there was an immense amount of art in the pagan world of a decorative kind that filled life with beauty, but did not obtrude upon notice any special representations of mythological personages. In cases where these personages were actually in evidence, there was, as a rule, nothing in the way they were displayed that would necessarily offend the eye. As a fact, the works of the Greek and Roman chisel and brush are so far from being tainted with impurity that it would be difficult to pick out from existing galleries of antique sculpture more than one or two works that are in any way suggestive or ignoble. Antique works compare quite favourably in this respect with those that figure yearly in European exhibitions of contemporary art. It is true we are told of some great painters of antiquity that they exercised their skill occasionally on licentious themes, but this is a fact also about certain prominent Italian painters of the Renaissance. As regards extant works of painting, apart from a few examples that were never meant for public view, we find nothing displayed on the plaster of Pompeiian walls that is not perfectly innocent. There is a class of Greek vase paintings that are marked by lubricity, but they were specially executed to suit the taste of the Athenian *jeunesse dorée*, and any one can see that thousands upon thousands of painted vases on view in the museums of Europe are as chaste as a child's picture book. A false impression arose when the Christian Fathers applied somewhat uncritically the OT category of 'idol' to the classical gods and goddesses, and were prompt to note the scandalous appearances these made in pagan literature. As the early Greek philosopher complained, the poets made the gods commit all the disgraceful acts repudiated among men, but the artists steadily refused to lend themselves to any such degradation of the religious ideal. In sculpture and painting the behaviour of these mythological beings is in almost every case exemplary. In their persons and conversation the artists exhibit nothing but what is ethically noble. Hence the spirit of pagan art, liberally interpreted, was not anti-Christian; and its forms might be adapted to Christian purposes without any marked incongruity.

Again, the existence of a vast number of works of art, often of an elaborate kind, dating from all the Christian centuries, is enough to show that there has been no general opposition to art in the

minds of Christians. There are, it is true, statements in the Fathers which have been interpreted as implying a condemnation of all forms of art. The statements are, however, primarily concerned with the making, embellishing, and setting forth of images connected with the pagan religion. This sort of work was naturally forbidden to the Christian, and Tertullian goes so far as to cavil at the making of the similitude of any natural object, on the plea that it might conceivably become an object of adoration. On the other hand, he points out (*de Idolatria*, ch. viii.) that the Christian artificer could properly exercise his craft on work which had no connexion with the pagan religion; and the 11th Canon of St. Hippolytus allows the craftsman to supply ordinary social demands for artistic work. Hence there is no reason to doubt that Christian houses were as pleasingly adorned, to the measure of the means and the taste of their owners, as pagan ones; but the art thus applied was of a light and decorative kind, not depending on formal pictures or statues, which probably would not make their appearance at all.

I. *EARLY TIMES.*—1. Before Constantine.—The earliest existing examples of Christian art are applied not to houses but to burial-places, wherein the classical fashion is followed of giving them the same sort of adornment as the abodes of the living. The earliest known of these are decorated in much the same fashion as contemporary Roman tombs, such as the well-known ones on the Via Latina. The style is bright and cheerful. Pure landscapes are not unknown. Wreaths of fruit and flowers play a considerable part, and there occur also figure motives of a classical kind, in the form of winged genii, often engaged in vintage operations, personifications of the seasons, Cupids and Psyches, and the like, wherein the innocent classical convention of the nude is not wholly repudiated. To these purely decorative shapes there were added from the first certain others of a religious significance. The simplest of these is the Orant, a female figure with arms raised in an attitude of adoration. In the case of more distinctive personages, as the Canon of the NT was at the time only in process of formation, the representations are drawn mostly from the OT. Jonah is the favourite, and is evidently accepted, in the spirit of Mt 12^{40}, as the type of Christ. Moses striking the rock, Noah, Daniel, the youths in the fiery furnace, and Susanna, also occur, and the choice seems determined by lists of typical worthies of the Old Dispensation such as those in the Epistle of Clement of Rome to the Corinthians, or in liturgical documents such as the *Commendatio Animæ quando Infirmus est in Extremis.*

The figure of Christ appears early, but in a disguised form as the Good Shepherd, or as Orpheus who exercised a controlling charm over all living creatures. Occasionally He is presented in His own person, and the artist for preference chooses those scenes in which He appears as worker of wonders. The 'Raising of Lazarus' is specially favoured. Save in one exceptional scene of the 'mocking,' the suffering Christ does not appear, and still less the Christ crucified. Such are the characteristic subjects in the 1st and 2nd centuries, while occasionally in the 2nd, and more often in the 3rd, we meet with representations of a more or less doctrinal kind, such as the faithful round the table of the Lord, on which is placed for food the mystic fish, the symbol of Christ. It is remarkable, however, that historical representations from the actual life of the Church, especially scenes of persecution and martyrdom, are wholly absent.

About all this work we have from the present point of view to note: (1) that it is in the main decorative, the artist being more concerned to cover bare spaces and to dispose symmetrically his representations than to inculcate by them any doctrinal lesson; and (2) that classical influence remains strong, even when we have passed from the earliest period of almost exact correspondence between pagan and Christian decorative schemes. As Dom Leclercq has recently shown, many of the OT and NT figures are modelled on pagan types, while the earliest and best plastic representations of Christ as the Good Shepherd not only reproduce the familiar classical motive, but show a grace and elasticity in form and pose not unworthy of a fairly good period of classical art. Moreover, when Christ appears in His own person, He is represented as youthful and beardless, with something of the attractive comeliness of an Apollo. It is impossible in face of these facts to believe that there was any general sympathy among the early Christians with the extreme view expressed by Tertullian when he objected to any representation of figures or natural objects; or that there was any reason why Christians should turn with repugnance from the classical art that was all about them.

The OT and NT scenes that begin to appear in the catacomb frescoes of the 3rd cent. are repeated on the carved sarcophagi of the 4th and 5th. On some of these we find the same idyllic scenes of genii vintaging, the vine being, of course, in this case the True Vine, and the same semi-classic decorative motives which we meet with in the earliest frescoes; but the OT and NT scenes form the staple subjects of sarcophagus art, and Jonah, Abraham, Moses, and Daniel are seen side by side with Christ raising Lazarus, healing the blind, or touching with a magic wand of power the waterpots of Cana. If the crowning scenes of His life are touched at all, there is no attempt to deal with the deeper Christian mysteries of suffering and sacrifice. The march to Calvary becomes a triumphal procession, with the Cross borne forward as a banner; the crowning with thorns is envisaged as a royal honour.

2. After Constantine.—The next epoch of Christian art, after the time of Constantine, introduces us into quite a different atmosphere. Christianity has become the religion of the State, and confronts the world as a regularly constituted power. The artist needs no longer to hint but can assert, and there is demanded from him a certain amplitude and majesty in his work.

(*a*) *Mosaic art.*—The characteristic form of artistic expression for this period is the monumental mosaic. The artist's operations are no longer confined to the narrow limits of a burial chamber or the side of a sarcophagus. He has to cover with decoration the vast interior wall surfaces of the great basilican churches and the stately though much smaller baptisteries. His style changes with his task. If the bright unpretending catacomb pictures seem to have a literary counterpart in the personal expression of the lyric song, the severe and imposing mosaics possess a certain epic grandeur. The subjects of the mosaics are not, as a rule, historical or directly doctrinal, and there is the same reticence in the avoidance of those Passion scenes in the life of Christ in which He is represented as suffering or in humiliation. The aim of the mosaic artist is to present in majestic and simple forms the heroes of Christianity. It is not the adventures of the saints that attract him so much as the dignity of their presence as they stand forth triumphant after suffering—lords in heaven and earth. It is the Presence of Christ, rather than His mortal deeds and sufferings, that he strives to bring before the spectator.

The early Christian mosaics from the 4th to the 6th cent. at Rome and Ravenna are as great in their illustration of the principles of design as in

their technical excellence and their artistic beauty. They adopt in the main the principle of the world-famous frieze of the Parthenon at Athens, and offer an ideal presentation of actual scenes of which the building they adorn was the theatre. One of the earliest and quite the finest of the mosaics, that in St. Pudentiana at Rome, is in respect of its main scheme canonical. In the apse of that church the stately form of Christ enthroned as teacher occupies the central position, while on a lower level and on both sides of Him sit the twelve Apostles. The arrangement transfers to the heavenly sphere the appearance of the apse of the church at service time, when the presiding official occupied the throne in the centre behind the altar, with the attendant priests on the stone bench round the curve of the apse on either side of him. Christ, behind whom in the mosaic rises a jewelled cross on a hill in the midst of a city, Jerusalem, is the invisible ideal president of the daily assembly; the spirit of the Apostles is ready to inspire the clergy. The work, which may date within the 4th cent., is notable for the classical feeling in the characterization of the Apostles, reminding us of the heads in some of Raphael's cartoons. Equally dignified, equally well chosen, is the scheme for the decoration of the Baptistery at Ravenna of about A.D. 450. Here in the centre of the dome is a noble picture of the ideal consecration to ministry, the Baptism of Our Lord, at whose feet the gaunt but imposing forms of the twelve Apostles are preparing to lay down their crowns. More extensive is the display in St. Apollinare Nuovo at Ravenna, where the worshipper on entering sees represented in mosaic, on the side walls of the nave above the arcades, on the one side a portion of Ravenna itself, and on the other the suburb Classis, the port of the Imperial city. From each there issues a procession of saints, male on the right, female on the left, who are represented advancing towards the altar end of the church, bearing crowns which they will lay at the feet of an enthroned Christ and an enthroned Mary with the Child, at the end of the nave. Here again is idealized the bodily movement of the actual worshippers from the door of the church to its altar, or from their city homes to the heavenly mansions prepared for them afar, as well as the spiritual movement of the heart from earthly to celestial preoccupations. Above these processions, between the clerestory windows, stand single figures of white-robed saints, which carry out better than any others that could be named the idea before noticed of the monumental presentation of heroic forms of epic simplicity and grandeur. Highest of all comes on each side a series of historical pictures in mosaic from the life of Christ —the first example of such representations that Christian art has to show. On the one side there are scenes from the miracles and discourses, very simply but effectively designed, and showing the protagonist of the youthful Apollo-like type met with in catacomb art and on the sarcophagi. On the other side is what would be called in later mediæval times a Passion series, but the actual scenes of the final tragedy are as a fact selected on early Christian principles, with a truly classical avoidance of anything painful, or of any situation in which the Lord would be shown as suffering humiliation.

Thus there is no scourging, no crowning with thorns, no crucifixion, no taking down from the cross or burial, and the scene in which Christ, a heroic figure, is making a sort of triumphal progress towards Calvary, is followed immediately by that of the Marys at the empty sepulchre. In the pictures of this second series Christ is represented as older and is bearded, and the marked difference in His personality in the two closely related sets of pictures is enough to show that there can have been no authentic tradition of His actual physiognomy.

(*b*) *Historical or symbolic representation.*—From this same period of the 5th and 6th centuries we can date the beginning of the most conspicuous but not always the most artistic form of Christian art —the historical or symbolic representation, of an edifying and often a didactic character. There is an often quoted saying based on Quintilian, which occurs in many early Christian writings, to the effect that pictures are the books of those who cannot read. To the ecclesiastical mind this gave a religious justification for the pictorial embellishment of the walls of public buildings, which had previously been a matter of tradition inherited from classical practice. In the middle of the 5th cent. we find St. Nilus laying down the principle that the inner walls of a church should be covered with scenes from the Old and New Testaments from the hand of a first-rate artist, in order that those who are unable to read may be reminded of the Christian virtues of those who have served aright the true God, and be inspired to emulate them. In the 6th cent. Gregory the Great recommended the use of paintings in churches in order that the illiterate might behold upon the walls what they were not able to read in books. On this idea was based a scheme of decoration which remained in use throughout the mediæval period. At the altar end of the church was displayed the figure of Christ glorified, as teacher or judge, and the faithful were to be inspired by the sight to strive for the joys of Paradise. Along the side walls were exposed historical pictures from OT or NT or from the lives of saints, in which instruction as well as edification was provided for the unlettered convert. The subjects would be chosen, and the figures, actions, and details as a rule settled not by the artist himself, but by the ecclesiastical authorities. Gregory of Tours gives us a charming picture of the wife of a bishop of Clermont in the 5th cent. sitting with her Bible in her lap in the church, and directing the operations of a company of painters who are frescoing the walls. The western or entrance wall was not at first included in the scheme, but from about the 10th cent. onwards it was utilized for a display complementary to that of the glories of Paradise over the altar. This was the Last Judgment, often with the connected scenes of the separation and after-disposition of the souls of the just and of the unjust. In the later mediæval period the Inferno was made especially prominent, with the avowed intention of affecting the souls of the worshippers by salutary terror as well as by hope. Of the subject of Christ in glory the finest examples by far are in the early Christian mosaics, but the historical scenes were not displayed in adequate artistic form till the development of the Italian schools of mural painting in the 15th century. The most impressive rendering of the scene of the Last Judgment is in the 14th cent. fresco of the subject in the Campo Santo at Pisa, which used to be ascribed erroneously to Orcagna. The treatment here is truly dramatic and moving, and is marked by a fine reticence. Later representations of the theme, such as the famous ones by Luca Signorelli at Orvieto, offend through their over-insistence on the terror of the scene, and especially on the physical torments inflicted by the demons on the lost spirits who fall into their clutches. The ecclesiastical authorities may have thought it well thus to daunt the sinner and to harry the feelings of the impressionable, but the artistic result is nothing less than deplorable. Both in these scenes, and in the representation which became very popular of Christ suspended in suffering on

the Cross, the painters of the 12th and 13th centuries, especially in Italy, offend against all laws of good taste and of beauty, and prostitute art to the service of a gloomy religiosity.

From these false ideals representative art in the West was saved by certain religious revivals, embodied in Italy in the person of St. Francis of Assisi, and in Germany in the mystics of the school of Cologne. In both cases pictorial art showed itself responsive to the religious impulse, and the artistic revivals connected with the names of Giotto of Florence and Meister Wilhelm of Cologne have a distinct basis in the changed religious thought of the times. Before discussing the effect of these revivals of the 13th and 14th cents. on Christian art and on the life of the Church, we must turn back more nearly to early Christian times.

II. *MIDDLE AGES.*—The mediæval period had no sooner opened than the controversy on images (A.D. 726–842) divided the East and the West.

1. Controversy between East and West.—The opposition to all graphic and plastic representations of sacred personages on walls, panels, or portable objects, with which some of the Byzantine emperors identified themselves, was partly, no doubt, inspired by Islāmite examples, and was carried to such fanatical lengths as to involve the destruction of numberless treasures of early Byzantine art. The controversy ended in a compromise, according to which representations in colour or relief of Christ, the Virgin, angels, and saints were once more permitted on walls and on portable objects, though religious sculpture of a monumental kind never afterwards flourished in the Byzantine empire. For these representations, schemes were drawn up, and these were crystallized into books of artistic recipes, which have governed the practice of Christian art in the lands of the Greek Church all through their later history. The best known of these handbooks is that brought by the French archæologist, Didron, from the cloisters of Mount Athos, and published by him in 1845. It is known as the *Hermeneia* or *Book of Mount Athos*, and gives an impression of that fixity, not to say lifelessness, which characterizes representative religious art in Eastern Christendom, in such striking contrast to the mobility and variety of the forms of Christian art in the West.

It would be a mistake, however, to suppose that the Byzantine iconoclasts were opposed to the use of art in connexion with religion. What they revolted against was the religious reverence paid to sacred effigies, which became in a sense idols. As Woltmann has remarked, 'images had been introduced into churches first for ornament, teaching, and edification; but image-worship soon crept in unawares. The reverence for the Divine and spiritual being was transferred to the image, which was honoured with incense and obeisance' (*Hist. of Painting*, p. 195). Now, this reverence or idolatry was only a further extension, to the limit of an abuse, of the didactic idea, which the Church as a whole began in the 5th and 6th centuries to attach to representative art. Some of the Byzantine emperors most inimical to image-worship, such as Constantine V. and Theophilus, embellished the churches with decorative art in sumptuous materials, and in the simple conventional forms of the earlier catacomb period. In the West, moreover, it must not be supposed that the use of subject pictures with a view to edification was the only fact of importance concerning Christian art in the early mediæval epoch. No doubt the Fathers and bishops, who patronized pictures as the books of the illiterate, thought they had accomplished a good work in moralizing art and in setting it to ecclesiastical service. They believed that they had avoided by these means the danger latent in art in respect to those who might be tempted by the lust of the eyes, and they were at the same time apparently unconscious of the danger on the other side of reverence for these sacred effigies passing into the idolatry of which the iconoclasts accused the Christians of the West. These Fathers and bishops, in the view they thus adopted about works of art, were not regarding the matter from an æsthetic, but rather from a doctrinal standpoint; but we are fortunate in possessing mediæval productions that do not depend for their artistic value on anything that they represent, and also expressions of mediæval opinion that are more satisfying to those æsthetically minded.

2. Theophilus on Art.—Among the most interesting documents that have come down to us from the Middle Ages is a certain technical treatise on artistic processes, written about the year A.D. 1100, by a German Benedictine monk whose name in religion was Theophilus. The author, a practical expert in fine metal-work and other artistic processes and materials, has prefixed to the three books into which his treatise, called *Schedula Diversarum Artium*, is divided, Introductions in which he discourses at large on the whole question of art and the cultivation of the beautiful as a part of the religious life. The view Theophilus advances is almost startling in its breadth and sanity, and gives the modern reader a very pleasing impression of monastic culture, which he will probably have been taught to believe was slavishly narrow and ascetic.

Theophilus bases his apologia for the practice of the arts on the part of those vowed to the religious life on a view of human nature that can be thus paraphrased:

Man was made in the image of God, that is, as Theophilus implies, in the similitude of the Divine Artist who fashioned the world, and he is bound to make his resemblance to the Divine as real and effective as he can. It is true that by the machinations of the evil one this Divine image in man was obscured at the Fall, but it was not so far effaced that man cannot through care and thought win back something of the ancient heritage of art and of learning. 'Wherefore,' he writes, 'the pious devotion of the faithful should not neglect the knowledge which the prudent foresight of our predecessors has handed down to us, but should embrace it as an inheritance from the Almighty.' As such it is not the private possession of any one individual, but is a trust from God, which the skilled person holds for the benefit of his fellows. For which reason, Theophilus declares, he is ready to offer to all who desire humbly to learn, as freely as he has himself freely received it, all the gift of the Divine grace—this gift being the knowledge of the technical processes of the arts which he then goes on to unfold. In another place he discourses in the same strain, and urges the artist to 'believe that the spirit of God has filled his heart, and will direct him by the seven gifts of the Holy Ghost.' He then explains that these seven gifts embrace the special qualities of skill and taste and industry which are requisite for the practice of the arts. The spirit of Wisdom teaches that God is the creator of all things, and without Him there is nothing—this is the primal lesson. Next, the spirit of Understanding gives to the mind the capacity for discerning the right order, measure, and distribution of parts which should be applied to the work in hand. The spirit of Counsel teaches us not to hide the talent which has been given us by God, but to display it openly, with all humility, in word and act before those who are desiring to learn. Through the spirit of Might the craftsman will throw off all the torpor of idleness, and will begin his work with vigour and carry it through with all his energy and power to the end. The spirit of Knowledge, which has been granted to him, has filled his mind with abundant stores, over which he presides, and which he must produce with all boldness before his fellows. By the spirit of Piety he will rightly judge upon what object, for whom, and when, and how much, and in what manner he shall spend his labour, and will guard against the insidious inroads of avarice and greed by a most scrupulous moderation in estimating the value of what has been done. Finally, as the great lesson of the whole, the spirit of the Fear of the Lord will remind him that he can do nothing of himself, that all he possesses or desires comes from God, and that he must ascribe to the bountifulness of the Divine mercy all that he knows, or is, or hopes to be.

3. Art in the monasteries.—The existence of artistic practice as an institution of the cloister may in itself surprise, for it seems to us moderns to belong to a side of life from which the ascetic recluse would turn rigidly away. We may, how

ever, repeat here what was intimated in connexion with the fact, to some almost equally surprising, that artistic practice existed among the earliest Christians. Art, regarded as an element of beauty attaching itself naturally to the works of men, and touching life at every point, the modern cannot readily understand, because with us this element of beauty is something artificial and extra, for which we have to make a special effort. This was not the case in old time, when it would have needed a special effort, not to *procure*, but to *exclude* this element. The earliest Christians decorated their tombs, the Christians after Constantine their churches, because not to do so would have been a forced act, for which, as we have already seen, there was no real reason. The artistic tradition, thus maintained from the first by the Church at large, was in Eastern Christendom never broken, and the Greek Church, while stereotyping the forms of its expression, has held it continuously in honour. In the West the Teutonic inroads broke up the fabric of antique culture; but though the classical tradition in art was thus in a measure severed, the barbarians were in their own way just as artistic as the Greeks or Romans, and the mediæval civilization of the West, partly classical and partly barbaric, derived its art from both these sources. Hence, when communities of monks and nuns were formed, alike in the Celtic and the once-Romanized parts of the West, the arts quietly made their appearance within the hallowed enclosures. A monastery, it must be remembered, was in theory self-supporting, and all sorts of operations in husbandry and in the mechanical crafts had perforce to be carried on by the inmates, whose bodily and mental health was greatly improved by the exercise. Of the Celtic monastery at Bangor, near Chester, Bede tells us that the two thousand inmates all lived by the labour of their hands. The rule of St. Benedict, in the 6th cent., provided that when artizans entered the Order they were to be allowed to continue working at their crafts, though they were not to take any personal pride in their productions. The quiet and order of a monastery must have been congenial to the artist, and Ordericus Vitalis tells us that, when the founder of a certain monastery in the 12th cent. invited all who joined it to continue the practice of the arts to which they were accustomed, 'there gathered about him freely craftsmen both in wood and iron, carvers and goldsmiths, painters and stonemasons, and others skilled in all manner of cunning work' (*HE* viii. 27).

The mere practice of the various crafts, artistic as well as utilitarian, in the mediæval convent is, however, one thing, and the religious enthusiasm with which Theophilus seems to regard artistic pursuits is quite another. It is this that constitutes for us the interest of the *Schedula*. The religion of the writer was evidently sincere and fervent, and it seems to him to find a natural, even a Divinely ordained, outcome in art. Though Ruskin and other eloquent modern writers have descanted on the praises of art from the moral and religious standpoint, there is a breadth and dignity about the thought of the 11th cent. monk that puts him above them all. There is, indeed, no more effective apology for the cultivation of art than this simple reminder that the love of what is beautiful is a part of human nature, or, if we take still higher ground, the more august assertion that the creation of what is beautiful is part of the law of the universe at large.

'Look around you,' we can hear Theophilus saying in effect to his hearers, 'and survey the fabric of creation. It is the work of an artist, of the Supreme Artist who has made all things beautiful in their season. He has gifted you too with a portion of His own nature and has formed you an artist, and you are bound in service to Him to exercise your creative power and make the most of your affinity with what is beautiful. In the name of religion take up the brush and tongs and mallet, and spare not cost or labour till the House of God that you build shall shine like the very fields of Paradise.'

These last words are used by Theophilus in a passage in which he foreshadows the concrete realization of the creative effort in the microcosm of an Abbey church, which is an image of the vast macrocosm of the universe. The church, he says, is to be so decorated on ceiling and walls as to present the appearance of the Heavenly Garden. It will seem to be blooming with all kinds of flowers, and green with leaves and grass, like the celestial fields where the blessed ones receive their crowns. The ceiling will be flowered like an embroidered robe, the wall resemble a garden, the windows send in a flood of variously coloured light. After the decoration of the fabric will come the provision of fittings and apparatus, including all the vessels for the service of the sanctuary, the construction and varied embellishment of which he describes in the technical chapters in the body of his treatise. There, in the workshop and among the appliances and tools which the monkish craftsman has to build and fashion for himself, we are invited to see the gold and silver and bronze, the coloured earths, the glass stained with metallic oxides, all taking shape in dainty and beautiful forms, till the mere matter, the raw material, has become spiritualized through its consecration, in a shape of beauty, to the service of the Most High. For with Theophilus the preoccupation always is with the technical manipulation of the material so as to compass an effect of beauty. From end to end of his treatise there is comparatively little about art as representative. The art he contemplates is decorative. It is not the kind of art that corresponds to the more prosaic vision of the Fathers and bishops, to whom the lessons to be drawn from the presentation of holy persons and scenes make up the chief value of art. He is, of course, aware that the beautiful forms he conjures into life under the hammer or by the glass-kiln represent something in nature, or have, at any rate, some symbolical import; but these considerations trouble him little, and, after describing some technical process, he often tells the worker to make with it 'what you will.'

The representative element in mediæval art must not, however, be ignored. Theophilus decks the walls and ceiling and windows of his church with the gaiety and colour of a garden, but he has in his mind the regular scheme of figure design for a church interior. On the walls will be displayed, he suggests, the Passion of the Lord, touching the heart of the worshipper, or the suffering of the saints will be movingly depicted. If the joys of heaven are displayed at one end of the building, and at the other the torments of the regions of the lost, the spectator will take hope from the thought of his good actions, and be terrified at the remembrance of his sins.

Though Theophilus troubles himself little about symbolism, there was no doubt a symbolical intent in many of the decorative forms employed in mediæval art. On this subject a word must be said, because it is one that is often misunderstood. There is no mystery about Christian symbolism, because it is almost entirely based upon Scripture. We are familiar in the OT and NT with figures in which animals and plants stand for personages and qualities, and know that there is little consistency in the use of these. Thus the lion is at times a type of Christ, as the 'lion of the tribe of Judah'; but at other times he may represent the evil one, who, 'as a roaring lion, walketh about, seeking whom he may devour.' In plastic or graphic art the lion may conceivably stand either for the ideal of good or the ideal of evil; but there is commonly, too, a third alternative, that the creature is purely ornamental, and may have been copied as a mere decorative motive from some indifferent source, such as an Oriental figured stuff. The whole subject of SYMBOLISM is dealt with in another article, and it is mentioned here only for the sake of warning the reader against imagining that it played any but a secondary part in mediæval design. The fact is that in every age the artist, as artist, has little care for these intellectual refinements, and it is because Theophilus is so true an artist that he troubles his reader but little with this subject. The artist's instinct is to make his work tell out at once with directness and force, and he does not desire to give the spectator the trouble of spelling out obscure allusions. The artist, however, as we have seen, often worked under the orders of theologians or of those who took a religious and literary interest, rather than a purely artistic interest, in the works produced. Such patrons might prescribe schemes of symbolism which the artist was quite willing to carry out.

The difference was that, while the theologian saw, in the shape, say, of a dragon, a reference to some allusion in the Apocalypse, the artist took a disinterested pleasure in the creature because its wings and tail were so effective for filling awkward spaces in the field of his design. Again, the persons here in view, in studying works of art already done, would find out all sorts of recondite suggestions in details which, in their origin, had probably a purely artistic purpose. In this way there came into existence in the 13th cent. the extensive work of Durandus, bishop of Mende, called *Rationale Divinorum Officiorum*, in which an elaborate symbolical interpretation was given of all the parts and fittings of the church and the apparatus of the altar. In this way, too, beast forms in art were credited with moral and religious meanings that were interpreted according to schemes of beast symbolism embodied in the so-called *bestiaria*. That beast forms in mediæval art were commonly symbolical is, however, rendered extremely unlikely by the fact that reforming churchmen of puritanical tendencies are found inveighing against such motives as barbarian and frivolous. The *locus classicus* occurs in the writings of St. Bernard, in the 12th cent., who protests against the foolish and wasteful display of these monsters on carved capitals and friezes, without any suggestion of their supposed religious significance. A later writer draws a distinction between pictures of the sufferings of Christ and the martyrs, which he praises as 'books of the laity,' and animal representations, for 'what have lions to do in a church, or dragons, or all the rest of these beasts?' (Schnaase, *Geschichte der bildenden Künste*, iv. 272).

These passages draw attention to the fact, which must not be passed over, that within the monastic system itself there was not perfect unanimity in regard to this lavish display of art in connexion with religion. There was a puritan vein in monasticism that led to protests against what was regarded as over-exuberance in the use of the element of beauty in the furnishing forth of sacred structures. The so-called reformed Benedictine Orders, beginning with the Cluniacs of the 10th cent., took, as a rule, this view, and a striking illustration of its working is to be found in the attitude of the Cistercians towards stained glass. The magnificent display of colour and imagery in the noble French storied windows of the 12th and 13th centuries, such as those at Chartres, they considered too sumptuous for the House of God, and substituted geometrical patterns in grey and yellow. Figure sculpture on the façades of their churches they also repudiated. It is, however, significant of the hold that art had obtained over the religious community in this advanced mediæval period, to note that there was no real opposition to art even among the severest of the reformed Orders, for Cistercian architecture, as the ruined abbeys of England sufficiently prove, though sparingly adorned, is of extreme beauty, and its ornamentation, with conventional foliage, of the utmost delicacy and grace.

4. Gothic Architecture.—We find, then, in the *Schedula* of Theophilus the conception of Christian art as a display of beautiful things carefully and cunningly wrought, that were offered as the homage of the mortal artificer to the great Artist of creation. This conception was actually realized, with a completeness and splendour of which a monk of the 11th cent. could have no idea, in the fabric and fittings of the French Gothic cathedral of the age of St. Louis. This is the most perfect embodiment of Christian art that the world has seen, because the representative element, though present and recognized as it was by Theophilus, was subordinate to direct artistic expression, first in the forms of the architecture, and next in the sumptuous display of detail and colour in the stone and wood carvings, the gilt and enamelled shrines, and, above all, in the 'storied windows richly dight' that are the glory of the Gothic fane. The subject of Christian architecture receives separate treatment, and it is necessary here only to emphasize the natural and obvious symbolism of the forms of Gothic architecture, which raises the soul in aspiration, while the sense of mystery, of the beyond, is instilled by its multitudinous elusive details, its perspectives, its magic of light and shade. Of the general artistic effect of these vast structures at the time of their glory, when the interiors, often now so cold and bare, were glancing with gold and colour, and were hung with gorgeous Eastern stuffs, we can form but an imperfect idea; but it is probable that nothing more artistically beautiful has ever been seen. The spirit of the work was still the spirit of the earlier religious decorative art of which we read in Theophilus; that is to say, it was impersonal work, unmarred by any touch of personal display so common in Italian art, simple and sincere in intent and in execution, and offered in an act of devotion for the service of the sanctuary. The representative element was at the same time present in the art, but it kept its place as on the whole subordinate to the general decorative effect. For that very reason we find in it a charm which more advanced representative work has often lost. It is the charm of *naïveté* and freshness due to the artist's unsophisticated delight in nature, and at the same time to the clearness of his mental vision, which gives him ease and assurance.

The decorative figure sculpture on the great French cathedrals, such as Chartres, Amiens, and Rheims, is really one of the most perfectly satisfactory forms of Christian art. It is a direct expression of the thought and feeling of the Gothic epoch, as they were embodied in the character and work of St. Louis, the typical man of his age. In St. Louis mediæval religion took on a new character, for his was no cloistered sainthood, of what may be termed a professional type, but the sainthood of a man versed in secular affairs though viewing them always from the standpoint of a childlike but cheerful piety. The forms of Christ and of Mary, of the Apostles and prophets, of saints and of angels, that cluster about the spreading portals, or take their stand in niches and on pinnacles on the upper stages of the buildings, are so fresh in their naturalness, so graceful and elastic in pose, so full of brightness and tenderness in expression, so pure and holy of aspect, that we feel that we never met with a company that seemed to realize better what is meant by 'the body of Christian fellowship.' On the intellectual side we trace in the figures and reliefs the working of ideas beyond the mental horizon of the carvers who actually achieved the work. At Amiens, for example, the subjects in the reliefs on the pedestals that support the noble figures of the Jewish prophets, on the western front, are drawn from the prophetic writings, and evince a knowledge of the Vulgate text that betokens the trained theologian; but if we take the sculpture as a whole, we cannot doubt that the minds of the carvers were just as alert as their hands, and that the qualities in the work which we most admire are due not to the ecclesiastical directors of the undertaking, but to the devotional feeling, the sense of beauty, and the freshly kindled love of nature, that in the France of that favoured epoch were so widely diffused throughout the community of artificers. It needs hardly to be said that the same qualities mark Gothic sculpture in other lands, and they are very apparent in the beautiful recum-

bent effigies in stone or bronze in which English craftsmen of the 14th cent. achieved so much success. The 'Queen Eleanor' of Westminster Abbey and the 'Edward II.' at Gloucester are among the best of these. English and German churches of the period are adorned with beautiful decorative sculpture, but the display is on a far smaller scale than is the case in central France.

We turned away from representative art in the West at a time when it was dominated by a somewhat gloomy view of religion, and exercised itself largely on subjects which, like the crucified Saviour, laid stress on physical suffering. This applies chiefly to Italy, where in the early part of the 13th cent., while French and English Gothic art had unfolded itself in forms so varied and beautiful, little was being produced but unattractive and coarsely executed pictures, on which the historians of Italian painting lavish all the terms of depreciation they can muster. The Gothic spirit is one of humanity and brightness, and it was the spread of this from central France to Italy that led to the revival of art in the Peninsula. This Gothic spirit became incorporated in St. Francis of Assisi. As Sabatier puts it:

'St. Francis is the friend of nature; he is the man who sees in all creation the work of the Divine goodness, the effluence of the eternal beauty . . . hence at the voice of the Umbrian reformer Italy began to recover herself; she found again her sound sense and her good humour: she put away those ideas of pessimism and of death as a healthy organism gets rid of the principles of disease. . . . Lifting himself as by the stroke of the wing to the religious life, Francis caused suddenly to shine forth before the eyes of his contemporaries a new ideal, in presence of which there disappeared all those strange and perverted sects, as the birds of night fly before the first rays of the sun' (*Life of St. Francis*, London, 1907, p. 45).

The beneficent influence of the genial creed of St. Francis on the revival of Italian painting is well understood, and in Giotto and Simone Martini, who at Florence and Siena respectively represent the coming in of the Gothic spirit of humanity and tenderness, we find this influence at work. It is worth noting also that a similar influence at a rather later date was exercised upon painting in Germany, and led to the beautiful art of the early school of Cologne. German representative art has often shown a tendency towards what is grotesque and terrible, and the popular early Dances of Death, or of the dead, are proof of this. In marked contrast to this tendency we find at Cologne in the last part of the 14th and beginning of the 15th cent. a school of painting marked by the most delicate idyllic grace and tenderness, and by a pure devotional feeling that few Italian pictures can match. The art is really inspired by the so-called German mystics or 'Gottesfreunde,' a body of men who without forming any sect or order felt themselves impelled to a religious life of more intense zeal than was shared by their fellows. Still remaining, like the early Franciscans in Italy, true sons of the Church, they sought to make religion consist in a more intimate personal relation between the soul and God. When this relation was established, the soul became entirely filled with an ecstatic love that was not only the love of God but also the love of one's neighbour, so that the perfectly holy man, it was said, might desire the Kingdom of heaven for his fellow-man even before himself. In this mood the mystics were visited by visions, but visions that presented only forms of beauty. The fantastic and the grim, which have exercised such fascination over the Northern imagination, seldom appeared before the eyes of Heinrich Suso or his fellow-seers, but their dreams were of lovely sights, of flowers, and even of celestial maidens to whom they were fain to offer adoration. Schnaase was perfectly right in connecting with this religious revival of the 'Gottesfreunde' the Cologne school of idyllic religious painting associated with the names of Meister Wilhelm, Hermann Wynrich, and Stephen Lochner, the painter of the famous 'Dombild.'

5. Development of Christian art from the 13th to the 16th century.—We thus see in Italy and in Germany alike that the artistic revivals of the late 13th and 14th cents. were preceded by and based upon certain religious movements that set in in the direction of humane and tender feeling. The influence was essentially the same as that which formed the inspiration of Gothic art in France in the century before; but whereas Gothic art is mainly decorative, we begin at the end of the 13th cent. to watch the development of painting and sculpture on their representative sides till they become capable of expressing the deeper emotions with dramatic force and verity. Up to this period the artist had never disposed of adequate means for the representation of nature. However pure in feeling, however devotional, had been the art of the catacombs, or of the monastery, or of the Gothic church, however noble the single forms, however lively in action the groups, in the mosaics or in the historical pictures from the lives of Christ or of the Saints, the delineation was always summary, the rendering of light and shade and perspective crude or faulty. From the time of Giotto onwards two centuries are occupied with the development of painting and sculpture on the technical side, till they become in a true sense mirrors of nature and clear expressions of artistic thought. This is the epoch of what would be called *par excellence* Christian art, and lies between the end of the 13th and the close of the 16th cent. in Italy, between the end of the 14th and the middle of the 16th in Germany and Flanders. From Giotto to Tintoretto in the one case, from the early Cologne masters to Quinten Massys of Antwerp in the other, painting and sculpture are Christian, in the sense that religious themes are preponderant, and that spiritual ideas are conveyed in a more or less distinct and convincing form. It would be a mistake, however, to use the term 'Christian' of this art in too absolute a sense, for the power which the artist gradually obtained over his materials he exercised on a realistic rendering of nature that resulted in a progressive secularizing of the spirit of the art, while the influence of the classical Renaissance of the 15th cent. acted potently in the same direction. All through the periods indicated, however, art that was in a strict sense Christian was being produced, though not by every artist, nor, with certain exceptions, by any artist at every time.

The lives and works of the leading representatives of art in the periods indicated are so familiarly known that it will be sufficient for the purpose of this article to indicate in a few sentences the most prominent instances in which these artists embodied distinctly Christian ideas in their productions.

(*a*) *Italian Schools.*—The artists of the school of Florence, with the exception of one or two of pronounced devotional feeling, such as Fra Angelico and Luca della Robbia, with others like Lorenzo di Credi and Fra Bartolommeo who were directly influenced by the revivalism of Savonarola, took their subjects as a rule from the human side, and are noted for characterization and for the dramatic presentation of scenes of interest rather than for pious preoccupations. These scenes are of a sacred character, but they are generally envisaged in their human aspects, as is notably the case with the greatest of the early Florentines, Giotto and Masaccio. Some of Giotto's scenes from the Passion of Christ at Padua, and Masaccio's magnificent designs in the Carmine at Florence, are in the truest sense spiritually elevating; but the effect is that of the sublime in art generally, and they are com-

parable with fine scenes in Shakespeare or Æschylus rather than with religious discourses. The same applies to some of the technically perfect achievements in religious art of the masters of the 16th cent., who bowed before Masaccio's genius in creation though they disposed of far more advanced technical science in execution than he could pretend to. The most notable of these works from this ethical standpoint are Leonardo da Vinci's 'Last Supper' at Milan, Michelangelo's frescoes on the roof of the Sistine Chapel at Rome, some of Raphael's less academic compositions, numerous religious pieces by Titian and by Giovanni Bellini, and the largest part of the work of Tintoretto. The single figures by these masters have the epic grandeur of those in the finest Christian mosaics, though we see them no longer in monumental repose, but alert and mobile and actuated by noble passion. The sacred scenes in which they figure are re-constructed on an intelligible scheme, though the deliberate intention of all the actions and details is often so much in evidence that we are chilled by a certain made-up look in the composition. The Venetians are more successful than the Florentines or Raphael in giving to these scenes a convincing air of reality, because they see them from the first as a whole instead of building them up piece by piece in conscious fashion. Perhaps the best of all these masterpieces for its direct religious impression is Titian's comparatively unpretending picture at Dresden known as the 'Tribute Money.' Christ, tempted with the insidious query about the lawfulness of paying tribute to Cæsar, has asked to see the penny, which is brought to Him by His interlocutor, and the painter has emphasized the contrast between the noble, and at the same time tender and sympathetic, lineaments of the Lord and the screwed-up cynical features of the weather-beaten Pharisee who peers cunningly into His countenance. The hand of Christ, one of the most beautiful in art, contrasts effectively with the gnarled paw that is holding out the penny at which He points. The realization of the Christ of the Gospels and the creation of the adequate and beautiful type represent one of the triumphs of pictorial art. The imaginative power shown in some of Tintoretto's vast sketches in oil, from religious themes, in the Scuola di San Rocco at Venice, has never been equalled, and Raphael's cartoons are in comparison cold and academic. The great 'Crucifixion' of the former artist at San Rocco, and the 'Christ before Pilate' opposite to it, are sublime creations.

The Italian painters of the first rank may be said to transcend the limits of an art that may technically be termed 'Christian,' and to present the sublime of human nature in such a way as insensibly to raise the mind of the spectator to Divine things. There were, however, many artists of the second order whose devout feelings found a more direct expression in works to which the adjective just used may with strictness be applied. The typical artist of this order was Fra Angelico, but the same spirit that animates his holy and beautiful paintings runs through the productions of the early Siennese and early Umbrian schools as a whole. Angelico's religious frescoes in the cells of the dormitory at San Marco, Florence, afford us the most perfect example of an art wholly devoted to the purpose of lifting the soul of the beholder on the wings of aspiration. Every figure, every composition, was a warning to leave the scenes of earth, and to join the celestial company around the Risen Christ, whose visionary form he constantly portrays. There is more power, more intensity, in his work than in that of the Sienese and early Umbrian painters, who in purity of soul and in simple piety are his counterparts. To match the religious design of Angelico, we must pass over a generation of artistic advance in technique, when we find in the fully accomplished painting of Francia and of Luini a devoutness equal to his own, joined with powers of execution to which he could lay no claim. The well-known 'Pietà' by Francia, in the London National Gallery, is a perfect piece of religious art, while the fragments of Luini's frescoes have filled the corridor of the Brera with some of the loveliest shapes of virgin and saint and angel that Christian art has to show.

(*b*) *German and Flemish Schools.*—Turning now from the religious art of Italy to the work of the early German and Flemish schools of the 15th cent., we find the fresh and innocent idyllic design of the early school of Cologne soon beset and overcome by the realism and the ugliness to which northern art has all along been ready to surrender itself. Out of this at the beginning of the 16th cent. Albrecht Dürer with difficulty fought his way, and created an art in which deep feeling and philosophical thought triumphed over the characteristic defects of Teutonic design. Many of Dürer's religious pieces, especially those representing the suffering Christ, are profoundly impressive, and were recognized by the Italians of his day as possessing qualities in design superior to those of their own productions. Dürer's finest works, however, such as the picture of the four Apostles at Munich, and the world-famed engravings 'Melancolia' and 'The Knight and Death,' are, like Michelangelo's 'Prophets' in the Sistine chapel, ethically great but not inspired by any sentiment that is distinctly Christian. It is worth notice that though Dürer remained all his life a mediævalist and a faithful son of the old Church, he held strong views about Papal abuses, and expressed the greatest admiration for Luther and some others of the Reforming party. We find proof of this in his writings as well as in some of his paintings. Once he addresses Erasmus as the 'Knight of Christ,' and bids him 'ride on by the side of the Lord Jesus.' There is a reference here, no doubt, to the figure in his own 'Knight and Death.' We find it hard to imagine Erasmus in mail and on a war-horse, and Luther's would have been a better name to invoke! The 'Four Apostles,' in the exaltation of Paul and John over Peter, betrays Lutheran prepossessions. In much of Dürer's work the German infatuation with the weird and terrible interferes with our æsthetic pleasure in its contemplation, but his woodcuts from the Apocalypse, where these qualities were in place, are charged with imaginative power. The pictures of the early Flemish religious painters, on the other hand, though in artistic rank they do not equal the masterpieces of Dürer, perpetuate in some degree the idyllic charm and tenderness of the early Cologne masters, while in the work of Rogier van der Weyden and some others there is distinct devotional intent. With regard to the founders of the school, the brothers van Eyck, we are in this difficulty: the known pictures of the younger, Jan, are on the whole realistic and secular, but there is a deeper note struck in the great altar-piece in which both brothers collaborated, the 'Adoration of the Lamb' at Ghent; and whether or not this is due to the profounder nature of the elder brother, Hubert, is one of the unsolved problems of modern painting. This school culminates and ends with the work of Quinten Massys of Antwerp, who died in 1530, and whose two fine triptychs, in the Museums of Brussels and Antwerp, exhibit the one a charming idyllic feeling, and the other, in the representation of the subject of the 'Pietà,' a dramatic power and pathos that make it a worthy last word of the early religious schools of painting north of the Alps.

Before passing on to the subject of Christian art under Protestantism, a few words may be said as to the later developments of religious painting on the older or pre-Reformation lines. We have seen that such painting in the Italy of the culminating period of the art tended to assume the form known as 'Academic,' in which sacred scenes and personages are represented in a somewhat 'made-up' fashion, and fail to impress us with any sense of reality and power. This form of religious art maintained itself through the 17th and 18th cents., especially, of course, in Catholic countries, but not in these alone. In Spain, though the greatest master of the age, Velazquez, rarely exercised his genius on religious themes, painting of an ecclesiastical kind was necessarily much in evidence, and Murillo (1618–1682) is a very prolific and, on the whole, sympathetic representative of this form of art, on a somewhat popular plane. In the Catholic Netherlands, Vandyke, who is more refined in his characterization than his master Rubens, painted some very good religious pictures of the conventional type, while his contemporary Eustache le Sueur in France (1617–1655) is one of the best of many artists of the second rank who exercised their talents on the familiar themes. Even in England religious pictures of the kind were painted, in the 17th cent. by Isaac Fuller, and in the 18th by Hogarth, who covered some very large canvases with religious compositions, the best of which is the 'Pool of Bethesda' on the staircase at St. Bartholomew's Hospital, London.

A somewhat remarkable development of art of a decorative kind was indirectly the result of the Reformation. This is the art of the so-called counter-Reformation largely engineered by the Jesuits. In the Jesuit churches, the most famous of which is the Gesù in Rome, built by Vignola in 1568, there was displayed decoration of the most sumptuous possible kind, embodying a protest against the Puritanism which had obtained a footing in the Church of the Reformation; and this same style in decoration spread to other church interiors of the 17th cent., with a result which visitors to Rome, Ravenna, and other places never cease to deplore.

Anton Springer has well characterized the style as one that 'robbed architecture of its fitting repose, and by the introduction of figures posed in startling attitudes, aroused or convulsed by agency unseen, of curves instead of straight lines, of pillar plied upon pillar, substituted a turbulent unrest. Not,' he says, 'that the style' (called generally 'Baroque') 'was without striking and artistic effect. An undoubted vigour in the disposition of detail, a feeling for vastness and pomp, together with an internal decoration which spared neither colour nor costly material to secure an effect of dazzling splendour: such are the distinguishing attributes of the Baroque style as in Rome it is to be seen on every hand.'

It is interesting to compare the spirit of ecclesiastical decorative art of this artificial kind with that of the sincere, unpretending, though in its way equally elaborate art offered by the mediæval monkish craftsman for the embellishment of his beloved fane. On a superficial view the motives may be held to be the same, but how immeasurable the difference! It is this substratum of ethical interest belonging to the history of the arts that gives this subject its importance to the student of the successive phases of human culture. It is noteworthy how much more is made of the evidence of art in historical and sociological studies on the Continent than among ourselves. The British mind is unfortunately prepossessed with the idea that the arts are merely separable accidents, detachable ornaments of human life, and not, as was really the case in the past, modes of intimate expression in which the ideas of an age or a community found embodiment.

III. *POST-REFORMATION PERIOD.*—It was inevitable that the Reformation should bring about a considerable change in the forms and the character of Christian art. Assuming the least possible alteration, let us see what would necessarily follow from the rejection of the Roman ecclesiastical system. We will suppose that the Protestant continued to recognize, as he recognizes to-day, the value of the element of beauty in human life, and the suitability of art as a form for the expression of religious ideas. The Saints would none the less all but disappear from view, and with them would go their altars and altar-pieces, as well as the picturesque and varied stories which had supplied artists for centuries past with unnumbered themes. In some respects the situation of the iconoclastic period would be repeated, and representations, such as that of the crucified Saviour, or the enthroned Madonna, which had attracted something like worship, would be banished at once from the churches. The cessation of any demand for the large scenic paintings of the Last Things may at first sight seem surprising, because in some of the reformed churches the doctrine of heaven or hell became of paramount importance. Wall paintings in churches, however, had become so closely associated with doctrines and rites now repudiated that they were generally abandoned, and with them went the pictures of the Inferno that might otherwise have proved dear to Calvinistic hearts. This limitation of the artist's range of possible subjects would, however, cause the subjects that remained to stand out in greater prominence. The person and life of Christ became of far greater relative importance under Protestantism, which refused to recognize the competing claims of Mary and the Saints. As the Bible was freely perused, the literary treasures of the Old Testament became more familiar possessions, and the prospective artist would in this way find ready for him in the bosom of the Reformed Churches a range of noble subjects of an absorbing religious interest. It must be noticed at the same time that, though sacred altar pieces and mural pictures went out of fashion, a new form of religious art grew up in the Germany of the Reformation period and spread to other lands, in the shape of the engraved plates which were abundant in the earliest printed Protestant Bibles and Testaments and in pious books of other kinds. Lucas Cranach illustrated Luther's Bible; and Holbein, who in this aspect of his art was a child of the Reformation, has left us classical examples in the 'Icones Historiarum Veteris Testamenti'—a series of Bible illustrations—and plates such as the 'Christ the True Light,' of 1527. This was a very cheap and popular form of art, and made up to some extent for the loss of the monumental works. In all these Protestant designs it would be natural, though not inevitable, for the subjects to be approached from the human side. So much had been made of the mystical element in religion in the older system, that the Reformers, though untouched by rationalism, might be disposed to keep the miraculous in the background.

It follows that under an enlightened Protestant régime there might be as much expenditure in architecture and on decoration as before, and the meeting-house of the Reformed congregation would have just as much right to 'shine like the fields of Paradise' as the monastic fane of four centuries earlier, while representative art possessed in the life of Christ upon earth, and in the doings of the Old Testament worthies, a range of subjects the value of which has just been indicated. The words of Luther are in this connexion very significant, when he said that he wished to see all arts, especially music, in the service of Him who had created and had granted them to men, and repeated the old arguments in favour of pictures

as more suitable for the instruction of simple folks than discourses. As a fact, however, the alteration brought about at the Reformation was far greater than we have just assumed. In Switzerland, for instance, in Luther's time pictures were condemned and banished as idolatrous; while in Great Britain, to take another example, the reaction of the Reformation period went so far that under the title 'monuments of superstition' artistic treasures of indescribable beauty and perfect innocence were ruthlessly destroyed. Between the first onslaught upon ecclesiastical property on the part of Henry VIII. and the edicts of Elizabeth that tried to put a stop to further vandalism, the loss to art was incalculable, and from this point of view those years of desolation and waste are among the darkest in our national annals. So richly equipped, however, were our English churches, and so well established had been the pre-Reformation tradition of beauty in the apparatus of worship, that, as in doctrine so here, a compromise was arrived at, and Christian art still recognized the Episcopal churches and cathedrals as its home, where, at any rate, it could dwell in peace till the Gothic revival of the early part of the 19th cent. fostered in it a new growth.

It was among the non-Episcopal sects in England, and especially in Scotland, that religious art fared worst. Like everything else in these churches, it was brought to the test of the letter of Scripture, and those parts of Scripture that were held at the time in special honour had little to say for it. A Biblical justification for art had always existed in the accounts of the Jewish temple and its ritual, and to these the lovers of art in mediæval days had appealed. Now, to the Presbyterian and the Independent, descriptions of temples and altars and priestly vestments and all the apparatus of ritual did not appeal, for all these things they could not away with, while of specially Christian or NT justification of art there was but small trace to be found in the Gospels. Their teaching, however broad it may be, ignores almost completely this side of life, which indeed would not naturally appeal to the Founder of Christianity in the temporal conditions under which His life was passed. His justification of the use made of the 'alabaster cruse of ointment of spikenard very costly' (Mk 14^3) is in this respect notable, as it can be worked into the service of artistic theory. Some of the recorded sayings of Christ encourage a feeling for the beauty of natural objects, but the only one in the Synoptic Gospels bearing definitely on art is of rather the opposite character. 'And as he went forth out of the temple, one of his disciples saith unto him, Master, behold, what manner of stones and what manner of buildings! And Jesus said unto him, Seest thou these great buildings? there shall not be left here one stone upon another, which shall not be thrown down' (Mk 13^1). The going forth from the Temple, if the tradition is a genuine one, was past the immense and splendid Hellenistic triple portico of Herod—the finest, Josephus says, in the world—and out under the vast substructures of the Temple area; so that the pride of the disciple in these glorious structures must have been not a little disconcerted at the response. It was thus possible at the Reformation to find Scriptural justification of a negative kind for a starved and narrow view of art and beauty, as well as for one comparatively broad and liberal, and it is interesting to note that the following out of the first view led to the extremes of rigid Puritanism, best to be studied in the Scotland of the 17th and 18th centuries; while on the second was based, as we shall see, in Holland, a phase of religious art that is one of the glories of Protestantism.

1. Narrow view of art.—Edicts for the destruction of works, which the early Reformers, like the Byzantine iconoclasts, stigmatized as 'idolatrous,' were not confined to Great Britain, but were necessary consequences everywhere of the revolt from Rome. How far they were in each land actually carried out in practice depended on many causes. The destruction has been comparatively thorough in Scotland, but it must be remembered that south of the Forth, at any rate, this pulling down and breaking was due quite as much to the constant English ravages as to Scottish iconoclasm. The views of the first Scottish Reformers may be gathered from the so-called *Buke of Discipline* of 1560, where under 'The Thrid Head, tuiching the Abolissing of Idolatrie,' we read as follows:

'As we require Christ Jesus to be trewlie preached, and his holie Sacramentis to be rychtlie ministerit; so can we not cease to requyre Idolatrie, with all monumentis and places of the same, as Abbayis, monkeries, freireis, nunreis, chapellis, chantreis, cathedrall kirkis, channounreis, colledges, uthers then presentlie are paroche Kirkis or Sculis, to be utterlie suppressed in all boundis and places of this Realme. . . . As also that Idolatrie may be removed from the presence of all personis of quhat estait or conditioun that ever thai be, within this Realme. . . .

'By Idolatrie we understand, the Messe, Invocatioun of Sanctis, Adoratioun of Ymagis, and the keping and retenying of the same: and finallie all honoring of God, not conteaned in his holie Word' (*The Works of John Knox*, ed. David Laing, Edinburgh, 1848, ii. 188).

In accordance with the principles thus laid down, we find that, on July 25, 1567, the Lords of the Council, after receiving the abdication of Queen Mary, affirmed certain articles of the Kirk, amongst which was their intention 'to rute out, distroy, and allutirlie subvert all monumentis of ydolatre, and namelie the odious and blasphemous mess' (*Register of the Privy Council of Scotland*, i. 536). That this intention was not at the time fully carried out we may judge from the 'Acts of the General Assembly' under date July 29, 1640, where at a meeting in Aberdeen there was passed an 'Act anent the demolishing of Idolatrous monuments' that is worded as follows:

'Forasmuch as the Assembly is informed that in divers places of this kingdome, and specially in the North parts of the same, many idolatrous monuments, erected and made for religious worship, are yet extant, such as crucifixes, images of Christ, Mary, and saints departed, ordaines the said monuments to be taken down, demolished, and destroyed, and that with all convenient diligence' (*Acts of the General Assembly*, Edinburgh, 1643, p. 44).

It is to be remembered that in Scotland it was not a question merely of the Reformation, but of a long continued and embittered contest against everything that savoured of Popery, and in the course of this a good deal that might well have been saved was suffered to perish. Thus, the Ruthwell Cross was thrown down and broken in 1642.

2. Broad view of art.—It was noticed above that on a broad and liberal Protestantism was based a phase of religious art that is among the glories of Reformed Christianity. The reference is to the Scriptural pictures produced in the Holland of the first half of the 17th cent., especially by Rembrandt and some of his scholars. Holland is the one country that developed a national art as an immediate sequel to its adoption of the principles of the Reformation. Protestant Germany might have done the same, but, owing to wars and the impoverishment of the country, art after the time of Dürer ceased almost to be cultivated, and Dürer's younger contemporary, Holbein, left his native country for England, which on her part, by her contented utilization of his services, showed her own indifference to the work she was paying him to do. In Holland, a country both wealthy and energetic, art was national and at the same time Protestant, and in the latter aspect it was incorporate in Rembrandt.

A very large number of the drawings, etchings, and pictures by this master are on religious themes,

drawn from both the Old and the New Testaments. Many of these, such as the 'Passion' series at Munich, are treated in a cold, almost academic fashion, though by no means on the conventional Italian lines; but, on the other hand, there exists a body of his work on these subjects that is as fresh, as warm, as dramatic in feeling as it is rich and masterly in execution. Rembrandt, whose work in this kind, it must be confessed, stands almost alone, has shown us here how it is possible to treat the person and the acts of Christ in a spirit as far removed from mysticism on the one side as from rationalism on the other, so that His Divine majesty is as convincingly apparent as His homely aspect, His friendliness, His intimate sympathy with human joys and sorrows. The writer may be allowed here to quote a sentence or two from a work of his own on the master.

'It is instructive to take the central figure of the Christian story, and to note the different situations, idyllic, epic, and dramatic, in which Rembrandt has portrayed the figure of Christ. We see with what warmth of human feeling he has invested those scenes in which the Saviour, an infant or a growing youth, makes holy by His presence the simple incidents of family life; how he rises to the height of epic dignity when Christ moves, a mature and heroic form through the acts of His earthly ministry; with how intimate a sympathy he withdraws the veil from the scars of agony, and displays the Man of Sorrows a sublime though pathetically human figure in the tragedy of His Passion; and finally, how he invests the Risen Form with a power and grace that have been made perfect through weakness and suffering, and completes the picture by embodying the eternal love that Christ revealed, in the father of the Prodigal' (*Rembrandt*, London, 1907, p. 279).

There is no need for any extended description of these masterpieces by Rembrandt, which we must remember are as fine in colour or light and shade and in technical execution as they are in the intellectual and ethical qualities of their design. A word may be said on one of the less known pieces, the 'Christ and Mary Magdalen' at Brunswick. We all know the 'Noli me Tangere' by Titian in the London National Gallery. It is a fine picture, but how unconvincing! There is no mystery, no appeal to the imagination. The figures, while sympathetically rendered, are posed for purposes of composition; the scene is full of daylight, and there is a village close by on the hill. In the 'Christ and Mary Magdalen' at Brunswick, in the mysterious garden where the Risen Lord meets with Mary amidst the gloom of rocks and trees, a touch of light on the clouds above heralds the coming morn, but the shadows of night cling about the form of Christ, whose body emits a faint ghostly radiance. His hand plucks away the robe to which the adoring Magdalen would cling; but the tender though reserved inclination of the head towards the woman, and the sympathetic gesture of the other hand, are loving-kindness embodied. We are there in the garden with the pair, and they both live before us. This, we feel, is how they looked and acted. In the Louvre picture of 'Christ at Emmaus,' where He is known in the breaking of bread, an equally imaginative treatment invests the figure with an unearthly charm, that drew from the great French critic Fromentin some of the most eloquent sentences he ever penned:

'Has any one ever yet imagined Him thus, as He sits facing us there and breaks the bread as He broke it on the night of the Last Supper, so pale and so thin, in His pilgrim's robe, with those darkened lips on which suffering has left its traces: with the large soft brown eyes whose full gaze He has directed towards . . . a living, breathing being, but yet one who has assuredly passed through the gates of death? The attitude of this divine visitant with that intense ardour in a face whose features are hardly to be discerned, and expression is all in the movement of the lips and in the eyes—these traits inspired from what source one knows not, and produced one cannot tell how, are all of value inestimable. No other art has produced the like; no one before Rembrandt, no one after him, has made us understand these things' (*Maîtres d'Autrefois*, Paris, 1890, p. 331).

The homely warmth of feeling in Rembrandt's 'Holy Families,' and in OT or Apocryphal pieces, such as those from the story of Tobit, of which he was especially fond, is just as satisfying in its way as the imaginative power just illustrated. There is also an intellectual side to his religious art, and we have the sense in looking at some of his pieces that he has thought out the subject and consciously arranged it, though this never results in that academic coldness which is the fault of so many accomplished Italian designs. The chief example is the famous etching called the '100 Florin Plate' or 'Christ Healing the Sick.' This is one of Rembrandt's greatest masterpieces, and is well known though not always rightly interpreted. Sick persons, it is true, figure in the plate, but Christ is not healing them. The truth is that there is a great deal more in the piece than the descriptive title suggests. It is really an illustration of Mt 19, and brings together a number of distinct persons and incidents, a unity being secured for the whole by the commanding dignity and beauty of the central figure. The words at the beginning of the chapter, 'and great multitudes followed him; and he healed them there,' are the motive for the introduction on the right of the etching of that wonderful throng of the maimed and feeble and sickly that Rembrandt has rendered with such pathos and intimacy. The next verse, 'and there came unto him Pharisees, tempting him,' accounts for the company of the well-to-do on the left, whose shrewd and cynical faces and expressions of inquiry suggest the insidious queries with which they have come prepared. Christ, however, in the centre is attending to neither group, but is holding out His hand in encouragement to a woman before Him who clasps a child in her arms, while Peter, by His side, is seeking to thrust her away. This is, of course, the 'Suffer the little children, and forbid them not,' of the middle of the chapter; while in the richly clad figure of a youth, who sits musing with his face partly hidden by his hand, we recognize the young man 'that had great possessions.' The justice of the characterization throughout the piece makes it a real commentary on the passages illustrated, and the actual situation is brought before us in the lifelike impressive groups.

It may cause surprise to find that Rembrandt's treatment of these sacred themes is so broad and genial, because the Holland of his day was strongly Calvinistic, and religion wore generally a garb of austerity. Now, we possess a contemporary notice, according to which Rembrandt was a member of the religious sect called Mennonites; and as the best of these Mennonites were on the whole Broad Churchmen of the Arminian persuasion, Rembrandt's upbringing may have given him liberal views on theology which will account for the comprehensive charity which breathes from all his scriptural pieces. His very last picture, a large and solemn canvas at St. Petersburg, represents the 'Return of the Prodigal Son,' and in this moving presentment of the tattered and weary wanderer as he buried his shame-stricken face in the bosom of the father whose compassion fails not, we read the artist's belief in an all-embracing Divine love. The effacement of the personality of the hapless truant has concentrated all the interest of the scene on the father, who presses him to his heart and gazes down on him with infinite pity and tenderness. He is not only the father of the parable, but the Eternal Love incorporate; and Rembrandt's art becomes in the best sense an embodiment of the higher Christian thought.

We may accordingly regard Rembrandt's design as more satisfying to the religious sense of the liberal Protestant than that of any other artist, and with this as our standard may pass on to a brief critical survey of religious art as it has been

revived in various experimental but interesting forms nearer our own time.

IV. *Modern Times.* — The last part of the 17th and the whole of the 18th cent. produced practically nothing in this style that was not a mere bloodless simulacrum of the academic art of the Florentine and Roman schools. An exception may be found at the close of the 18th cent. in the work of William Blake, who had genius enough in art and literature to have achieved true greatness, had that genius been trained and directed aright. Blake was exceptional, in his art a romanticist before his time, and belonging to the century of Coleridge rather than of Pope. Earlier in the same century, it is worth notice that even Hogarth in his religious pieces did not attempt the homely intimate style in which he might have succeeded, but adopted the conventional types of the Italianizing figure painters of the time. The revived religious art of the 19th cent. is the child of the romantic movement. This was a reaction against the predominant classicism of the latter half of the 18th cent., and took the form partly of a return to nature in which Rousseau and Robert Burns were pioneers, and partly in a revived interest in what was mediæval, which began in Germany and spread to Great Britain and to France. In Germany mediævalism was a natural product, for her traditions of past greatness were rooted in the Middle Ages, and even a classicist like Goethe paid homage to these romantic bygone glories. A curious result in the sphere of religious art of this return to the Middle Ages has made itself seen in our own time in the pictures from the life of Christ by Eduard von Gebhardt, in which the costumes and the *mise en scène* are taken from the Germany of the 15th century. What we know in our own country by the name of the 'Gothic Revival'—a movement that led to the restoration of mediæval features in innumerable English churches and to the establishment of something like a cultus of the romantic in art—was at the basis of the very interesting artistic experiment known as pre-Raphaelitism, while the earlier religious painting of the German so-styled 'Nazarenes' was founded rather on the national self-consciousness of the German people firmly braced by the struggle against Napoleon; mediævalism, at any rate, played no part in it, for the Nazarenes lived and worked in Rome. Both these artistic movements, the German and the English, were sincere and earnest, even to the extreme of fanaticism, but the æsthetic result was in neither case wholly satisfactory.

1. Nazarenes. — The name 'Nazarenes' was applied in good-humoured banter to a company of young German painters who in the early years of the 19th cent. settled in Rome in an abandoned monastery, where they sought to re-constitute the life and work of the painters of the earlier religious schools. They were romanticists of the type that surrenders itself to idealism but recognizes no attraction in nature and the things of the real world. Hence their art draws its motives not directly from nature, but at second hand from the works of the older masters. This secured a certain look of style in the compositions; but, on the other hand, the figures lacked individual character, and the colouring was pale, flat, and conventional. One good piece of work the Nazarenes accomplished early in their career, which has laid modern art under an obligation. In 1815 they re-introduced the technique of fresco painting, which had been abandoned since the death of Raphael Mengs in 1779, and with the aid of one of Menge's old journeymen executed successfully in the true process a series of paintings in a room of the Casa Bartholdi on the Pincian at Rome. These paintings are from the story of Joseph, and have been removed to the National Gallery at Berlin, where they are in a good state of preservation. Cornelius, Overbeck, Schadow, and Veit collaborated, and the works are among the best from an artistic point of view produced by the school. Modern German monumental wall-painting, which has flourished through the century, had here its origin.

Of the Nazarenes, Friedrich Overbeck (1789–1869) was the most characteristic figure. A devoted adherent of the Catholic Church, like most of his associates, he was intensely devotional, and his pictures breathe the same spirit of quiet and retiring devoutness that we have come to know in the early schools of Sienna and of Cologne. 'Art is to me,' he wrote once, 'a harp on which I would fain hear always sounding hymns to the praise of the Lord.' The comparative absence from his works of the qualities of colour, light and shade, and handling, which are essential to the beauty of a modern picture, makes it unnecessary from the point of view of this article to consider them further. Cornelius (1783–1867) was a far stronger artist than Overbeck, and covered vast wall spaces in Munich and elsewhere with compositions marked by learning and vigour, but lacking in warmth of feeling or æsthetic charm. His great fresco of the mediæval subject of the 'Last Judgment' in the Ludwigskirche at Munich, painted in 1840, may count as his masterpiece.

On the same plane of art as the Nazarenes are a once esteemed painter of religious themes, the Netherlander Ary Scheffer, and the accomplished Frenchman Hippolyte Flandrin, a pupil of Ingres, who executed beautifully drawn figure compositions on religious themes on the walls of Parisian churches, which are, however, tame in effect and wanting in charm of colour. Of all this set of artists no one had in him so many elements of true greatness as the Aberdeen painter, William Dyce. Had he been born in a time and in surroundings favourable to the development of monumental figure painting, he would have been a great artist, for there is in his design an originality and an intimacy of feeling, in his execution a firmness, that strike us at once as exceptional in this phase of art. Born in 1806, he met and was influenced by Overbeck in Italy, and Richard Muther in his *Modern Painting* reckons him 'with the Flandrin-Overbeck family,' though he notes that 'where the Nazarenes produce a pallid, corpse-like effect, a deep and luminous quality of colour delights one in Dyce's pictures. He is finished in grace, and with this grace he combines the pure and quiet simplicity of the Umbrian masters. . . . There is something touching in his madonnas. . . . A dreamy loveliness brings the heavenly figures nearer to us' (iii. 5). The 'St. John leading the Madonna to his Home,' in the Tate Gallery in London, is a good specimen of his art.

2. Pre-Raphaelites. — The religious art of the 19th cent. received a contribution of some value from the English pre-Raphaelites. Shortly before 1850 three or four young artists in London found themselves drawn together by something of the same feeling in art that had actuated the Nazarenes. They revolted against the academic conventions with which the name of Raphael was specially connected, and discerned salvation for art only in a return to the sincerity and simplicity of the 15th century. Unlike the Nazarenes, however, they had a strong feeling for nature, and it was from the first one of their principles that every part of a picture should be painted with the most scrupulous care directly from the living person or the natural object. The title 'Pre-Raphaelite Brotherhood' and the mystic initials 'P.R.B.' which appeared after their signatures on their paintings, were the outward signs of a union which

ultimately included seven members, and the fact that two or three were writers explains the fact that the movement was from the first as much literary as purely artistic. The three original members, Dante Gabriel Rossetti, Holman Hunt, and John Everett Millais, are the only ones who need be mentioned here. Their intense earnestness, combined with their study of the early Italian masters, led them to religious themes, though these were not exclusively their objective. Indeed, they were before all things romanticists, and may be claimed by the Gothic Revival as its spiritual offspring. They were devoted to the poets, and some of the best things they accomplished in art are the illustrations to Tennyson's *Poems* published by Moxon in 1857. In Rossetti this tendency was particularly marked, and he ultimately confined himself as a painter to the romantic field, in the cultivation of which he was followed by Edward Burne Jones. This romantic and poetic vein kept their devotion to the facts of nature from falling into mere realism, so that in their pictures we discern a curiously matter-of-fact rendering of accessories, while the whole scene may be a fairyland of a poet's creation.

Of the distinctly religious pictures of the school, the best were some of the earliest. In 1849 and 1850 Rossetti exhibited the quaint but fascinating 'Girlhood of the Virgin Mary,' where the figures are portraits of the painter's nearest relatives, and the 'Ecce Ancilla Domini' which has now happily found a home in the national collection. For *naïveté* of feeling and poetic charm it is one of the loveliest pictures ever painted, and in its transparent sincerity it might have shamed into nothingness the commonplace conventional painting in vogue in the England of the time. The early Millais of 1850, 'The Child Christ in the Workshop of Joseph,' a far more ambitious piece, is perhaps, artistically speaking, the best religious production of the school; for Millais, as his after career showed, was far more highly endowed as a practician than any of his associates. Holman Hunt's universally known 'Light of the World' appeared in 1854, and this artist has maintained throughout his long and honourable artistic career the same religious earnestness, combined with the pre-Raphaelite faithfulness in details. 'In the whole history of art there are no religious pictures in which uncompromising naturalism has made so remarkable an alliance with a pietistic depth of ideas' (Muther, *Modern Painting*, iii. 12).

From the artistic point of view it should perhaps be pointed out that the plan of copying nature in a picture detail by detail does not really secure the truth aimed at, and with the pre-Raphaelites its adoption was due to intellectual rather than to purely artistic considerations. The experiment was of value in its time as a protest against the vague conventional rendering of nature with no true knowledge behind it, which was then the fashion in the English school, and to the non-artistic the principle will always seem attractive because of its ethical sound, but, as Horace says in the *Ars Poetica* (line 31):

'In vitium ducit culpæ fuga, si caret arte,'

and the way to represent nature truthfully in the artistic sense is not to copy bit by bit, but to render the general aspect of things in their true relations of tone and colour. This is the real difficulty of painting, and an impressionist study that secures absolute truth in these relations is at once far more difficult, and far better as art, than the most elaborate rendering of individual details with meticulous exactness. An English painter, possessed of a shrewd wit, tried the pre-Raphaelite method about 1850, but gave it up, saying, 'This cannot be right, it is too easy!' Hence it has come about that many a pre-Raphaelite painter who has carried out this principle of work has been, as Horace goes on to say:

'Infelix operis summa, quia ponere totum | Nesciet.'

Moreover, exact piece-by-piece rendering leads too often to a hardness in delineation that is destructive of pictorial effect, and when this is combined with crude and inharmonious colouring, the result from an æsthetic point of view may be disastrous. At the same time, though pre-Raphaelite pictures vary greatly in their artistic value, they are always to be respected for their earnestness and sincerity, and some of those on Biblical themes will ever remain prominent and justly-honoured representations of an interesting modern phase of Christian art.

3. **Modern experiments.** — One last phase of Christian art remains to be noticed, bringing us quite to our own day. The reference is to certain endeavours to secure convincing verisimilitude in the pictorial representation of Biblical scenes by the abandonment of all the time-worn conventions of academic design, and by the use of local types, costumes, accessories, and setting. This experiment has been tried in various forms, and always with sincerity and devout feeling. So far as these qualities are concerned, the works already noticed of the German von Gebhardt, whose 'Last Supper,' painted in 1870, is well known in this country through reproductions, are equal to the best; but his curious convention of a 15th cent. *mise en scène* gives them a position apart. One form which this work has taken is to place the events of the life of Christ in an Oriental setting, carefully elaborated from a study of the Palestine of to-day. The idea was first started earlier in the 19th cent., when the attention of artists was turned for the first time to Oriental subjects. Horace Vernet, on his Eastern tour in 1840, had noticed that the scenes of the Bible stories were laid in the East, and should be represented in Oriental settings. This was actually attempted by Holman Hunt, who painted religious pictures in Jerusalem and by the shore of the Dead Sea. Some German artists sought the same end by the adoption for the NT characters of the types of modern scions of the Hebrew race; but it has been reserved for a French and a Scottish painter of our own time to work the idea out with completeness. Both James Tissot, a French artist known first for his pictures of modern fashionable life, and William Hole, of the Royal Scottish Academy, conceived the idea of portraying the various incidents of the earthly ministry of Christ as they might happen in the Palestine of to-day. The lighting and colour of the landscapes, the forms of nature and of buildings, the attitudes of the figures and their costumes, the furniture, the accessories, are all drawn from actual life, as it can be studied to-day on the Mount of Olives, by the Sea of Tiberias, or at Bethany. The resulting pictures, made accessible by popular reproductions, are full of interest, and at every turn furnish some new suggestion that makes us realize and interpret better the familiar scenes. They are, however, in both cases comparatively small water colours and do not aim at greatness of effect. Indeed, the elaboration of the interesting detail often interferes with the general impression of a scene in its ethical or religious aspects. They are, nevertheless, valuable contributions to the religious art of our day.

An experiment in quite another direction has been made, also in our own day, by one or two German artists, of whom the most important is Fritz von Uhde. Von Uhde is probably the best painter of all those who have given themselves in this latest epoch to Scriptural themes, and his work has more of the quality we have learned to

admire in Rembrandt than that of any of the other moderns. There is no attempt here at archæological correctness, and the idea of an Oriental setting never crosses the artist's mind. On the contrary, he takes the actual scenes in town or village or country of the Germany of his own day, and imagines Christ introduced into them, and dealing with those He meets as He dealt with His fellow-countrymen in Palestine. In 'The Sermon on the Mount' Christ is seated on a modern wooden bench in the fields, and is discoursing to a group of German peasant women and children, on the outskirts of which hang the men who are going home from their work, with their tools over their shoulders. 'Suffer little children to come unto me,' at Leipzig, shows us the interior of a modern schoolroom in a small town, where the master stands in the background, while a group of children of all ages are gathered somewhat timidly near the chair on which a stranger, who has just entered, has taken his seat. This stranger is Christ, and we are made to see that He is gradually drawing the little ones to Himself by the magnetism of His personality. In other pieces we see Christ entering a peasant home, or sitting at meat with His friends, as at the Last Supper; or, again, with a frank acceptance of the mystical, the artist has given us the scenes of the Annunciation or the Nativity. The pictures are always serious, devout, and at the same time warm with human feeling, and often touched with idyllic charm. Their quality as works of art gives them an equally high place with that which they claim as achievements in religious design.

The name of Rembrandt was mentioned above in connexion with these homely renderings of sacred scenes. Rembrandt, like von Uhde, in the best of his pictures took the setting from his own surroundings, though he indulges not seldom in Oriental vestments and in Jewish types. These surroundings are, however, in the first place, very much generalized, so that they might almost do for any age and country; and, in the second place, they are as unfamiliar in the eyes of 20th cent. Britons as if they were genuine Oriental transcripts. Hence the setting of Rembrandt's pieces takes them to that distance from us which is necessary in order to let the imagination have free play. In the paintings of our own time, on the other hand, both the Oriental backgrounds and the modern ones are too real and too familiar, and the appearance against them of Christ and the Apostles seems forced and almost theatrical. If we recognize who the sacred personages are, they do not appear to live in these surroundings, but to have come in in a disguise, and we half expect their interlocutors to be finding them out. On the other hand, if we accept them as modern Orientals or modern Europeans, we cannot readily realize their unique character and greatness. They have been brought down too effectively from the ideal to the actual sphere.

Summary.—In the foregoing an attempt has been made to describe and to analyze, from the points of view indicated at the beginning of this article, the chief phases of religious art as they have manifested themselves through the Christian centuries. There have been two sides to the activity of Christian artists, each of which may here suitably receive a final word.

(1) On the one hand, their activity has been essentially *decorative*, and their spirit has been that of the monkish craftsman of the 11th, the Gothic mason and carver of the 13th centuries; all they could make or do they were zealous to offer on the altar of Christian service. Theirs was the gift of beauty to the Creator of all beauty—a grateful rendering back of the boon so lavishly bestowed, the gift of skill and care to the Lord of the inventive brain and cunning hand. How far, we may ask, can we in these modern days enter into the spirit of those mediæval craftsmen, and turn any artistic gifts we may possess to this high service? Unlike the men of old, we have in these days almost to justify the bare existence of the cult of beauty and of art, for these are not a natural and necessary part of our lives. We have seen how the practice of the arts in early Christian and monastic surroundings followed inevitably from the fact that life without this element of art was in those days impossible. With us it is something extra, and is as a consequence challenged to give an account of itself. That idea of an opposition between the life of art and the practical life of service to one's fellows, which underlies Tennyson's 'Palace of Art,' is not justified by the facts of the world. It is perfectly possible, as we can learn by looking around us, to combine the practical with the contemplative life, and to exercise the æsthetic faculties without any withdrawal from the sphere of the actual. It is true that there are those who do so withdraw themselves, but it does not follow that they are tempted away by the allurements of the imagination. It may very well be that they are morbid and self-absorbed, and if a field of activity did not offer itself in the æsthetic sphere, their life might decline to a much lower level. The pleasures of art are, at any rate, innocent, and if they do not necessarily ennoble the character, they at least refine the taste.

We saw that the mediæval artist-monk exalted the practice of the crafts that produce beautiful things as not only a function of human nature but a law of the universe at large. There is a narrow religiosity that is afraid of a human nature so amply endowed, and would confine its activity within much closer limits. In the churches of to-day, however, this timid creed is already an anachronism, and most of those which have Puritan traditions at their back accept to-day the broader view to which, at any rate, the student of the history of Christian art must feel himself forced. And if this energy of art is not only wholesome, but even in a sense enjoined, in what can it be more fittingly expended than in that service to which we have seen it devoted through the centuries? The time is now past when the square barn-like meeting-house, the bare walls, the homely fittings, could satisfy the cultured worshipper.

It is true, and must never be forgotten, that the outward show is as a mere nothing to the 'truth in the inward parts,' which is demanded as much from churches and congregations as from individuals; and if worship were less sincere in a beautiful and richly adorned fane than in a simple room, it is the art that would have to be sacrificed. It is true also that in parts of our own country a sacred tradition of unselfish piety, of heroic endurance, clings to these whitewashed walls that for generations past have looked down on the defenders of a creed for which they were ready at any moment to give up their possessions or their lives. The Church at large could ill spare the Puritan spirit, and must strive to retain what is best in this, while contesting some of its negations. The introduction of instrumental music into the act of worship, and of the element of art and beauty into its material apparatus and its home, is in principle conceded almost everywhere in Christendom, and there is every reason why the mediæval tradition should be revived, and these things not merely accepted as a fashion, but embraced with the godly joy and pride of the older days.

(2) On the other hand, the activity of Christian artists has been exercised not merely on the

creation of what is beautiful, but on representations of sacred scenes and personages, or symbolic shows that had a *didactic* purpose. This work, as we have seen, has taken several different forms. We may distinguish here: (*a*) the liturgical, doctrinal, or allusive composition, which began, as we saw, in the catacombs, and flourished greatly, in the form especially of the pictures of the Last Things, in the later mediæval period; (*b*) the devotional picture, represented centrally in the work of Fra Angelico, in which the specially Christian virtues of humility, devotedness, self-abandonment, are brought to view and their practice inculcated; (*c*) the historical representation from the life of Christ or of OT or NT worthies—a form of art that we have come across in many shapes, and in which at one time the mystical, at another the human, element is most apparent; and (*d*) the great work of art in which a supreme master like Michelangelo has created types that are profoundly ethical, though not in the distinctive sense Christian.

How is each of these forms of religious art related to the Christian thought of enlightened Protestantism?

(*a*) The first kind of picture has ceased for Protestants to have any didactic or specially religious significance, and is regarded rather from the intellectual point of view as an embodiment of poetic thought. The designs of William Blake are of this kind, and a good modern instance may be found in the allusive symbolical designs which, with charming decorative feeling, Mrs. Traquair has executed in the 'Song School' of St. Mary's Episcopal Cathedral and the Catholic Apostolic Church in Edinburgh, as well as in other buildings. Such works belong more to the domain of poetry and mysticism than to that of religion in the strict sense of the term. They answer to a special phase of artistic feeling both in the creator of them and in the spectator, and, in fact, they repel some sincere lovers of art just as strongly as they attract others. So long as there are artists and lovers of art, the temperament of some of these will turn them in the direction of works of the kind. This phase of religious art is illustrated also by some of the productions of G. F. Watts, an artist of genius who was meant to be a great painter, but was drawn aside from the direct course by the copiousness and insistence of his intellectual ideas.

(*b*) The time will never come when we shall cease to take delight in the purity and devoutness of the devotional pictures of the early schools of religious art in Germany and in Italy. In so far as they express the specially Christian temper of humility and dependence, and reveal to us innocence and love and the spirit of service embodied in the Virgin mother, in saint, and in angel, they will always have a message for those religiously susceptible. The harsh theological words 'Hagiology,' 'Mariolatry,' and the like need not disturb our contemplative enjoyment of these simple and sincere expressions of a faith which in the great essentials was the same as our own. The works are, at the same time, removed into the historical region by the fact that the whole religious *milieu* which conditioned them at their forthcoming is so different from ours. We regard them with interest and affection, but recognize them as not belonging to our own time or our own range of religious ideas.

(*c*) The historical treatment of the life of Christ or of the scenes of the OT is a matter that concerns us in these days and in Protestant surroundings far more nearly. It corresponds with the modern interest in the facts of the past, and with the (partly rationalistic) tendency to emphasize the human side of Christianity. Notice has been taken in what has gone before of the many attempts which have been made in art, throughout post-Reformation times, to bring home with convincing force to the spectator the personality, and the significance of the acts, of Christ. The difficulty has always been, on the one hand, to avoid what is mystical, with all the other conventions of the professed religious schools; and, on the other, to prevent such a modernizing of the *mise en scène* as may destroy the air of remoteness from the ordinary world and of ethical supremacy, which should belong to the person of the protagonist. Rembrandt, as we have seen, has succeeded here where many have failed; and when, the whole body of his work on religious themes is placed in accessible form before the public, as has been proposed, he will probably be recognized by all as the greatest religious artist of whom the history of painting bears record.

(*d*) The impression of the Sublime, when conveyed either by the appearances of nature or by those of art, is always in one sense a religious impression, for it implies a chastening, and, in the Aristotelian sense, a purifying, of the individual emotions by the recognition of what is transcendently great. This greatness is not hostile or terrifying, for the æsthetic impression of the Sublime is destroyed when the being is shaken or cowed through fear, but it represents, as it were, a challenge, to which we respond by bracing up the powers, and by measuring ourselves with it in the strength of free intelligence and in a certain confidence that does not preclude humility. So the human spirit, in the contemplation of the Divine, is not crushed, but raised and strengthened. Now, of all the functions that the arts of form can exercise for the higher service of man, none is greater than that of presenting human nature before us in aspects of such grandeur that we feel in a measure brought into contact with the Divine. The ordinary levels of human greatness are transcended by these exceptional creations of art, and our spirit is uplifted in response. The impression thus produced is religious, but it is quite apart from any particular creed. It takes us into a region where all creeds are merged in the one all-embracing conception of the Godhead, supreme in goodness as in power. It follows from this that all art which rises to this ethical level is religious art, whatever the creed of its creator; and from this point of view the masterworks of the Hellenic sculptor may claim a position by the side of the designs of a Michelangelo, or of any other creative artist of the Christian period. The impressiveness of a great work of art depends largely on the simplicity as well as the force of its message, and it is not by inculcating any special doctrines of religion but by raising the whole being into communion with the highest that art may best serve the spiritual needs of mankind.

LITERATURE.—For the whole subject up to the end of the mediæval period, the standard work is Schnaase, *Geschichte der bildenden Künste*², Düsseldorf, 1866, etc. See also Woltmann, *History of Painting*, Eng. tr., London, 1880, vol. i. Baum-Geyer, *Kirchengeschichte für das evangelische Haus*², Munich, 1902 (illustrated), gives a very good view of the bearing of the phenomena of art on the life of the Church at different periods. The following are more special works: for Early Christian Art, H. Leclercq, *Manuel d'archéologie chrétienne*, Paris, 1907; for monastic, Theophilus, *Schedula Diversarum Artium*, ed. Ilg, Vienna, 1874; for Gothic, Gonse, *L'Art gothique*, Paris, 1891; Mâle, *L'Art religieux du xiiie siècle en France*, Paris, 1902; for Italian, Venturi, *Storia dell' arte italiana*, Milan, 1901, etc.; for Flemish, Crowe and Cavalcaselle, *Early Flemish Painters*, London, 1872; for the engraved work of the Reformation period, Woltmann, *Holbein und seine Zeit*², Leipzig, 1874; for Rembrandt, Baldwin Brown, *Rembrandt: a Study of his Life and Work*, London, 1907; for modern developments generally, Muther, *History of Modern Painting*, Eng. tr., 2nd ed., 4 vols., London, 1907, with full bibliographies of the various artists and schools.

G. BALDWIN BROWN.

ART IN MANUSCRIPTS (Christian).*—There is no form of Christian pictorial art that has come down to us from the Middle Ages in such abundance, in such variety, and in such a genuine and unaltered condition, as the art of miniature-painting for the illustration and decoration of manuscripts. Isolated examples dating from the 4th cent. to the 8th may be found scattered through the great libraries of Europe, while others from the 9th cent. onwards exist in considerable numbers, not only in public libraries but in many private collections—and this in spite of the enormous destruction that has taken place through their being little cared for, or liturgically out of date, or the objects of fanatical hatred. There is no doubt that the manuscripts thus destroyed must be numbered by hundreds of thousands. At the same time, it must not be concluded that the majority of these, or even a large percentage, were as attractively written and illustrated as the precious volumes exposed in our museums. A glance at the contents of any considerable mediæval library, like those of Hereford Cathedral and some of the Colleges of Oxford and Cambridge, shows us how commonplace and dull and full of tiresome contractions was the everyday scholar's book, and that in nine cases out of ten the loss of them would not be a matter for artistic regret. The richly painted manuscripts on the whitest vellum were done either as furniture for lectern and altar, in keeping with the other splendours and adornments of a great church, or for the use of wealthy laymen and ecclesiastics, who sometimes read them as little as a modern student reads the *éditions de luxe* that he buys of poems that he has learned to love in a homely setting. St. Jerome, in his preface to Job, makes light of such possessions. 'Let those who care for them,' he says, 'own books that are old, or written with gold and silver on purple skins. All I need is a good text.' This sentence shows that the spirit of the fastidious book-lover was already abroad in the 4th century. It is perhaps a matter for congratulation that not every one had so austere a taste as St. Jerome.

The earliest examples of painted books that have survived in Europe are two Vergils of the 3rd or 4th cent. in the Vatican Library; but these do not come within the scope of the present article, which deals only with this branch of art in relation to Christianity. As might be expected, nearly all the earliest Christian manuscripts that exist are either Bibles or portions of Bibles, beginning with the Vienna Genesis of the 5th cent., which contains eighty-eight miniatures, and leading to the Ashburnham Pentateuch, written at Tours in the 7th cent. and adorned with nineteen large pictures. This is now in the Bibliothèque Nationale at Paris. Of the same century is the famous copy of the Gospels known as the *Book of Kells* at Trinity College, Dublin. This book, which is at once the earliest and the finest of the Celtic manuscripts, was written by a scribe or scribes of the utmost accomplishment, and ornamented with initials and other larger decorations of miraculously interwoven lines. The Irish decorators, however, while gifted with a sureness of hand that is almost beyond belief, were totally lacking in the higher qualities of imagination, and when confronted with a subject like the Crucifixion, showed as lamentable an inability as the veriest savage to draw and compose the human figure. Next after the Book of Kells the best-known example of this style is the *Lindisfarne Gospels* at the British Museum (fig. 1, p. 890), which, though not executed in Ireland, belongs to the same Celtic tradition and to approximately the same date. All subsequent examples, which do not owe a new development to external influences, show a falling off from this high standard. There was, in fact, in the system of the Celtic draughtsmen no human element or element of growth, and when once they had achieved the mathematically perfect, only decadence and repetition lay before them. Nevertheless, their consummate skill in ornamental design gives them a unique place in the history of book decoration, and was not without some effect on later schools in other countries, though always in subordination to the more emotional impulses derived from Rome and Constantinople.

Pictorially the Roman school, best exhibited in the paintings of the Catacombs, bequeathed but little that we can admire to the book-decorators of the Middle Ages, though as late as the 10th cent. books were illustrated with pictures, usually dead both in colour and expression, that differed scarcely at all from their classical prototypes. The Byzantine pictures in copies of the Greek Gospels and Lives of Saints written at Constantinople, full of Oriental blendings of gold and brilliant colour, and with a seriousness of intention quite absent from most of the classical figure-work, had a far wider and more vivifying influence on the art of the West. Under Roman and Byzantine influences, either separate or combined, a series of sumptuous books, usually copies of the Latin Gospels, and some of them written entirely in letters of gold, were produced on the Continent between the 8th and 12th centuries. By the latter century, Byzantine art, having reached an academical stage which allowed of no further evolution, was, as it were, frozen and crystallized into forms which in Russia survive unaltered to the present day.

Meanwhile, in England, and especially at Winchester, a notable school of book-decoration had arisen. The most famous example of this school is a *Benedictional* belonging to the Duke of Devonshire, which was written at Winchester for Bishop Æthelwold between the years 963 and 984. A similar *Benedictional*, written a few years later for Archbishop Robert of Jumièges, is now in the public library at Rouen. The British Museum is rich in productions of this school, beginning with *King Edgar's Charter of Hyde Abbey* (fig. 2, p. 890), written entirely in gold in 966 and enriched with a beautiful frontispiece, in which the figures are drawn with much animation and clad in the fluttering draperies characteristic of the English miniaturists of the 10th and 11th centuries.

During these centuries and for some time longer, it is not too much to say that English book-illustration was the finest in Europe. Until the end of the 13th cent. Italian pictorial art was much less inventive and energetic than that of England and France, while Germany was likewise under a weight of enervative Byzantine tradition, which seems to have prevented its producing more than a trifling number of books of notable merit between the 12th cent. and the time of the invention of printing. In the monasteries of Flanders, Hainault, and Artois, many stately books were written and illuminated, but in the reign of St. Louis the fame of the University of Paris attracted scholars and artists from all Christendom, who thenceforth made Paris the intellectual centre of Europe. In their train came a body of writers and illuminators, independent of the monasteries, who shook off the Byzantine fetters before Giotto and Cimabue were born, and produced work of an extraordinary and almost feminine refinement of execution, which is no less attractive than the manly vigour which is more especially English (fig. 3, p. 891). For a while the two countries ran an even race, but by the middle of the 14th cent. the French illuminators had gone far beyond their English rivals, and in the second half of the 15th

* Art in MSS (Jew.) see p. 872ᵇ.

cent. English patrons were so ill-served by their countrymen that they had to send to Bruges and Paris for their painted prayer-books and romances.

To the Italian scribes of the 15th cent. belongs the distinction of having discarded the Gothic or black letter, which by that time had reached a cramped and ugly stage, in favour of the more rounded and legible forms of the 11th and 12th cents., *littera antigua* as it was called when re-introduced, 'Roman letter' as we now call it (figs. 4, 5, pp. 891, 892). This revival was soon seen to be a reasonable one, and was adopted in all literary countries except Germany, which is only now coming into line with her Western neighbours. It was under the influence of the Renaissance that the finest illuminated books were produced in Italy. These were largely copies of the Latin classics; but many exquisite prayer-books were written, especially in Florence, Naples, Ferrara, and Venice, for members of the great families. Of Spanish illuminated books not many have survived, and these usually owe nearly everything to artistic influences from Naples or Bruges. In the latter city enormous quantities of dainty prayer-books were manufactured towards the end of the 15th century. The chief features of these books are the use of sprays of natural flowers and foliage in the borders, and the delicacy of the landscape backgrounds to the pictures. Dutch books are remarkable at once for great dexterity of execution and for a bluntness of conception which prevents their ever being in the first rank as works of art.

And now as to the types of manuscripts that were most frequently illustrated. With few and mostly fragmentary exceptions, all liturgical books earlier than the 13th cent. have perished, having been worn out, or cast aside on account of changes of fashion and of textual arrangement. It is certain that none of them were habitually so richly decorated as the early copies of the Gospels already referred to. These were always adorned with four frontispieces, usually representing the Evangelists in the act of writing, opposite the four opening pages of the Gospels, on which the text was written in large ornamental letters within an elaborate border. The principal liturgical books of a later date, of which there are many illuminated examples, are Pontificals, Missals, Breviaries, Graduals, and Antiphoners. The great choir-books, such as are shown in the Convent of St. Mark at Florence and in the Duomo of Siena, have survived in quantities in Italy and Spain, where they may still be seen in use. These often contain initials painted by artists of note, but they are for the most part not earlier than the 15th century. Choir-books of Northern origin, especially those of the fine period, are exceedingly rare. The best that exists is an Antiphoner in three volumes written in 1290 for the nuns of the Cistercian Abbey of Beaupré near Grammont (fig. 6, p. 892). This formerly belonged to John Ruskin, and is now (1908) in the collection of Mr. Yates Thompson.

The Vulgate Bibles that have survived from the 12th cent. are usually large folios in two or three volumes, with historiated initials at the beginning of each book, and decorative initials to the numerous prologues. One of the finest examples, a book of surpassing beauty, is in the library of Winchester Cathedral. In the 13th cent. the size of Bibles was reduced, and they were written in enormous numbers and with astonishing skill in France, England, and Italy (fig. 7, p. 893). The entire Bible, including the Apocrypha and perhaps a hundred and fifty painted initials, was often on so small a scale and on vellum of such astonishing thinness as to fit comfortably into the pouch or pocket of the Dominican and other itinerant preachers of the day. So great was the output at this time, that it seems almost to have sufficed until the invention of printing, as Bibles written in the 14th and 15th cents. are comparatively rare. Besides plain texts, portions of the Bible with extensive marginal commentaries were often finely written and illuminated for purposes of monastic study; and in England especially there were produced in the 13th cent. a number of splendidly illustrated copies of the Apocalypse, either in Latin or in French, and usually with an Exposition taken from the writings of Berengaudus. It is easy to see how the strange visions of St. John kindled the imaginations of the creative artists of this time, and with what zest they sought to interpret them (fig. 8, p. 893). In France, at the same period, a type of sumptuous picture-book was evolved, known as the *Bible moralisée*, in which the text is altogether subordinate to the almost countless illustrations. Two copies are in the Imperial Library at Vienna, while a third is divided between the Bodleian Library, the Bibliothèque Nationale, and the British Museum (fig. 9, p. 894).

From an early period the chief book of private devotion was the Psalter. In the 12th and 13th cents. every rich and devout layman seems to have possessed his own copy of the Psalms, to which were invariably added certain Canticles, the Athanasian Creed, the Litany, and a small number of Collects, sometimes followed by the Office of the Dead. It was on these books that the miniaturists, in what was certainly the culminating period of their art, lavished their utmost skill. To the more elaborate copies it was usual to prefix a series of illustrations of the Old Testament, from the creation of the world to the coronation of Solomon, and of the New Testament from the Annunciation to the Last Judgment, which series varied in length according to the wishes and purse of the individual who gave the commission; while the initials of certain Psalms—in early Psalters only Psalms 1, 51, and 101, marking the three divisions into fifty Psalms, and in later Psalters also Psalms 26, 38, 52, 68, 80, and 97, being (with Psalm 1) the first Psalms of the Office of Matins on the seven days of the week, and Psalm 109, being the first of Sunday Vespers—are invariably larger than the rest, and usually historiated with a more or less fixed sequence of subjects. Early in the 14th cent. Psalters of great size and magnificence were written in East Anglia. Among these must be named the Psalter of Robert of Ormesby, monk of Norwich (fig. 10, p. 895), now in the Bodleian Library, and two superb Psalters, both connected with Gorleston, near Yarmouth, one in the Public Library at Douai, and one in the library of Mr. Dyson Perrins.

As early as the 11th cent. certain private offices, the most important being the Hours of the Virgin, the Hours of the Trinity, and the Hours of the Passion, were added to a few Psalters. Later, these accretions came to be written separately, probably in the first instance for the use of women. Their portability and general convenience in this detached form led to their being adopted in place of the Psalter as the devotional book of the literate layfolk; and although there are but few separate Books of Hours of the 13th cent., and not many of the 14th cent., they were produced in enormous numbers in the 15th cent., and copiously illustrated with pictures which in the main illustrate the text (fig. 11, p. 894), but not seldom seem to have been calculated to withdraw the thoughts of the owner from the contemplation of heavenly things. The popularity of these painted prayer-books, of which the greatest number were written in Bruges, Paris, and Florence, was so great that they continued to be produced until long after the invention of printing.

SYDNEY C. COCKERELL.

ART (Egyptian).—The religious aspect of art in Egypt includes almost all that is known of it. The earliest sculptures are tombstones and tables of offerings for the benefit of a deceased person; the earliest statuary is of figures in which the soul of the deceased might reside, made as lifelike as possible, in order to give him satisfaction; the figures of servants with offerings, or of serfs to cultivate the ground, were for service in the next world; the whole of the tomb sculptures, paintings, and furniture—carved coffins, canopic jars, tablets, and all else—resulted from the religious theories of the future life. The buildings that remain to us are nearly all temples; the colossi which stand in them were habitations for the many *ka*-souls of the king; and even the battle scenes on the walls are all part of the display of religious fervour, and culminate in the triumphal processions of captives dedicated to the god, or led by the god as his appanage to be entrusted to the king's administration. The civil life of the lay Egyptian has almost vanished, the palaces and towns are nearly all below the plain of Nile mud; and it is only the sepulchral and religious remains that—being placed on the desert—have thus been preserved to us. Here we must notice only the main principles and examples of religious ceremonies. The page of examples given (p. 896) will illustrate the more important points.

1. Symbolism.—This begins with the rise of the art, as seen on the slate palettes. The various tribes engaged in the conquest of the country are designated by their emblems, the hawk, lion, scorpion, jackal, or pelican. The actions of the tribe are represented by the animal holding a pick and digging through the walls of a town, or by a human arm projecting from the standard on which the animal is, and clutching a cord or grasping a bound captive. The king is represented as a strong bull—as he is called in later times—trampling down his enemies; or the figure of a fish, used to write the name of a king, has two arms grasping a stick to smite his enemies; or the royal hawk has a hand which holds a cord put through the lip of the captive. In these instances it is seen how early symbolism was established as an elaborate means of historic expression. It is not surprising that in the subsequent times it should be commonly used. The kings are shown as being conducted by the gods, who also 'teach their hands to war and their fingers to fight,' standing behind the king and holding his arm in drawing the arrow; the gods place the crown on the king's head, and pour purifying water or blessings over him (see figure of Ramessu IV.); the goddess Hat-hor, as a woman or as a cow, is shown suckling the young king; and Setkhet-abui, the goddess of literature, writes the king's name on the leaves of the Persea tree. The limits between symbolism and dogma pass the critical stage altogether in the Tombs of the Kings, and a state is reached in the other world in which there is no distinction possible.

Special emblems of ideas became so common that they were used almost mechanically, like the cross in Europe. The sun and wings are noticed under ARCHITECTURE (Egyptian), 'Decoration.' And groups of hieroglyphs, such as the *ankh* for life, the *uas* for power, the *sad* for stability, the girdle tie of Isis, and other emblems, were carved as fretworks to stiffen furniture or form a trellis to windows.

2. Divine forms.—The compound theology of sacred animals and deities resulted in a variety of strange combinations. The animal element is always the head, placed upon a human body for a deity; a human head upon an animal body is used only for a sphinx, emblem of a king, and for the *ba*-bird, emblem of a soul. The combination of animal heads on human bodies is found in the second dynasty (Set, on seals of Perabsen) and the fourth dynasty (Thoth, on scene of Khufu); and it became very usual in later times. The combination is skilfully arranged, so that it scarcely seems monstrous; see the scene given (p. 896) of Horus and Thoth, where the short neck of the hawk fits directly on to the human shoulders, while the long neck of the ibis is backed by an immense wig, which after all has no possible support. Yet the effect is far better than could have been expected from such a difficult combination. The forms best known are the ram-headed Khnumu and Hershefi, lion-headed Sekhmet, cat-headed Bastet, jackal-headed Anubis, crocodile-headed Sebek, ibis-headed Thoth, and hawk-headed Horus and Mentu. Besides these, there were many compounded divinities in Ptolemaic and Roman times, formed of a deity and three or four animal parts; usually it is Ptah-Sokar who is thus elaborated. These combinations have none of the convincing dignity of the early animal-headed gods.

3. Dress.—The gods are usually clad in the oldest form of close-fitting waist-cloth; it is always older forms of dress that are thought appropriate for religious or artistic purposes, and in Babylonia the oldest figures of worshippers are entirely nude. The gods never wear the projecting peaked waistcloth common in the Old and Middle Kingdoms. Another primitive piece of costume was the animal's tail, hung at the back from the belt. This is shown as a bushy tail, like a fox's, on the archaic hunters, carved on a slate palette. It appears on all kings from the first dynasty onward (see the figure of Ramessu IV. [fig. 2, p. 896], and the kneeling Hatshepsut, where it is brought forward). And it gradually becomes almost universal for gods after the early ages. Here it can be seen on the figures of Horus and Thoth, in the long form, and thinner than usual.

The principal religious dress was the leopard skin, as on the priest in the scene of sacrifice (fig. 1, p. 896). It was worn from before the first dynasty (Narmer), and is seen not only on scenes, but also on statues in the eighteenth dynasty. It is shown on the priests when seated, or standing giving directions, or making offerings; it might be worn over a short kilt or over a long muslin dress.

4. Ceremonies.—The four chief ceremonies selected for illustration (p. 896) are Sacrifice, Offering, Laying on of Hands, and Purification.

(*a*) *Sacrifice*, as among the Semites, was the ceremonial killing of an animal for food; but there is no trace of the burning of the fat, or of the other form of whole burnt-sacrifice. In the early sculptured tombs the sons of the deceased are shown as trapping the birds, and sacrificing the ox, for the festival in their father's honour. It is rare to find representations of sacrifice later, such as this example of the nineteenth dynasty. Burnt-sacrifice was a foreign importation, and is only known in picture at Tell el-Amarna (eighteenth dynasty), and in description at the Rameseum (twentieth dynasty).

(*b*) *Offering* is the most usual religious subject. The offerings are heaped together on a mat, a slab on the ground, or a pillar-table; in this case a mat is represented, bound with thread at the middle and the two ends, a form which originates in the third dynasty or earlier. Upon the mat is a layer of round thin cakes, much like the modern flap bread, with two circles of seeds stuck in each. A layer of joints of meat (?) follows; then three wild ducks; above, a row of gazelle haunches, upon which are three plucked geese. The whole is covered with a bundle of lotus flowers and a bunch

of grapes. The queen is pouring out a drink-offering from a small spouted vase in the right hand. Such drink-offerings were of a great variety of wines and beers, as also milk, and water. In her left hand she holds an incense-burner. The Egyptian never burnt incense on an altar, but always in a metal censer held in the hand. It was a long metal rod, with a hand holding a cup for the burning incense at one end, and a hawk's head at the other end; in the middle of the length was a pan or box in which the pellets of incense were kept ready for burning. The heat requisite to light it was obtained by using a hot saucer of pottery placed in the cup, on which the resin fused. When the incense was burnt, the saucer was removed and thrown away, and thus no cleaning was required for the metal cup.

(*c*) *Laying on of hands* was represented as being done by the gods, in order to impart the *Sa*. This was a divine essence which the gods drank from the heavenly 'lake of the Sa,' and which the earthly images of the gods could impart to beings and to priests who knelt before them. The benefit was not ceaseless, but required renewal from time to time. The same form of laying on of hands was used, as in our illustration, for conferring the kingship; the inscription reads, 'giving of the kingship of both banks of the river, the complete office, to his daughter, Maat-ka-ra' (Hatshepsut).

(*d*) *Purification* was a very important idea to the Egyptian. A whole class of priests were devoted to the purification of places and things; and it was always represented by a stream poured out. Personal cleanliness was strictly observed by the priests; and the purifying of the king was performed symbolically by the gods, as shown on p. 896. Each god holds a vase from which he pours out a stream over the king. It is stated that Ramessu 'is purified with life and power.'

5. Furniture.—The main object in a temple was the sacred boat of the god, one of the best examples of which is shown on p. 896. The boat was a model intended to be carried on the shoulders of the priests; it rested, therefore, on two long poles, and when stationary was placed upon a square stand, so as to allow of the priests taking their station beneath the poles (see ARCHITECTURE [Egyptian], § 5, where the boat and shrine are described). This boat was probably made of wood, plated over with sheets of electrum or gold. The extent to which gold was used is hardly credible to us, who see only an excessively thin film used for gilding. Even in the 11th cent. the Countess of Sicily had the mast of her ship covered with pure gold; and the Egyptian often describes large objects as covered with gold, which was usually of considerable thickness. The reliefs were usually worked in hard stucco and then thickly gilded and burnished. The art of high burnishing upon a stucco base was kept up till Roman times. The sets of vases for the purification ceremonies and further libations of wine were kept on wooden stands, as shown below the boat. At the side of them is a stand with water jars, covered with lotus flowers, and with bunches of grapes placed below it. On another stand at the extreme left is a figure of the king kneeling, offering a large *ankh*, or sign of life; this is crowned with flowers, and has convolvulus and vine growing up beneath it. Another stand at the extreme right has a figure of the king offering a large bouquet of flowers. A main part of the religious art was spent on these statuettes of the king making a great variety of offerings. Unhappily all this wealth of figures has perished, and only a few fragments remain to give reality to the innumerable pictures of the temple riches shown upon the walls.

W. M. FLINDERS PETRIE.

ART AND ARCHITECTURE (Etruscan and Early Italic).—One can hardly speak of Italic art in connexion with the rude products of the Stone Age, even though some of the Neolithic weapons and implements in polished stone show a high degree of perfection in their way; the beginnings of a higher civilization appear more or less simultaneously in the whole country, varying in type according to the different races that inhabited the peninsula. The chief types are as follows:

1. *The 'terramare' of northern Italy.*—These are villages built upon platforms supported by wooden poles sunk into the muddy earth, a type of dwelling created for marshy districts, and frequent upon the shores of the lakes of Central Europe. From there the type spread not only down the marshy valley of the Po and its tributary rivers, but also farther south to the confines of the Emilia, and even, if we may judge by an isolated example, as far as Tarentum. What had originally been a method of building called for by the conditions of the soil was preserved and followed with religious care even in dry and mountainous regions. An invariable rule, evidently sanctioned by the religion of these 'terramaricoli,' in whom we may see the first Italic race on Italian soil, regulated the shape of these villages—a trapezoid space enclosed by a rampart of earth and by a moat, carefully orientated, accessible by a single bridge; the round huts inside were disposed in blocks, intersected by two main paths running at right angles to each other and to the ramparts, while, on the eastern side of the village, a rectangular space was reserved, evidently for the dwelling of the chief and the sanctuary or altar of the gods. The close resemblance of these arrangements to the shape and disposition of the Roman military camps is evident, and speaks for community of race; but the 'terramare' are many centuries older. The refuse accumulated under the huts contains rude pottery, numerous stone and bone implements, but only a few rare objects of bronze, which was evidently far from common at that time. The bronze fibulæ, found occasionally, allow us to assign to these primitive villages, roughly speaking, a date between 1500 and 1000 B.C. The cemeteries are simply reduced imitations of the living tribe's dwelling—miniature villages guarded by moat and rampart—rude earthen jars filled with the ashes of the dead taking the place of the huts. We find abundant traces of agriculture, a little commerce, and, if the 'terramare' of Taranto is really akin to the northern settlements, evidence of relations with the Ægean, in the shape of Mycenæan sherds and clay idols. No trace of writing has been discovered.

2. At about the same time, a more highly developed civilization was spreading through *Sicily and southern Italy*. We know these tribes, the Sikels, chiefly through their tombs, which are usually small chambers cut into the living rock. They often reproduce the shape of the living man's dwelling, either round or oval huts or square houses of wood or bricks and stone. Remains of some stone houses and even of a large building, evidently the seat of some powerful chief (at Pantalica west of Syracuse), have been discovered; and as the tombs were abundantly furnished with the necessaries of life—clay vases often delicately painted, weapons and implements of stone and bronze, and even some ornaments and jewellery of bronze, silver, gold, and ivory—we are able to re-construct, to a certain extent, this Sikelian civilization through several periods of its development. The presence of Mycenæan vases in some of the tombs fixes their date approximately. But the Sikels have no connexion with the contemporary, very much ruder, civilization of the 'terramare.' The

advent of the Greek colonists, after the decline of the Mycenæan sway, early in the first millennium B.C., almost stifled the local art of southern Italy and Sicily, which may be considered, after the 8th cent., simply as a province of Greek civilization.

3. An analogous development of local handiwork appears in *the rock-cut tombs of Sardinia*. Only here it is Phœnicia, not Greece, whose colonies modify the old order, at about the same period. But Sardinia always retains one distinctive feature of architecture, the 'nuraghe,' curious buildings of bee-hive shape, made of roughly hewn stones, sometimes well fortified and of considerable size, with internal rooms and winding passages in several storeys. The date of these buildings has never been sufficiently cleared up, nor is it decided whether they served as dwellings or tombs, or perhaps for both uses. It is, however, undoubted that the older 'nuraghe' must be placed rather early in the first millennium B.C.

4. In northern and central Italy the 'terramare' disappear towards the beginning of the first millennium B.C., and are replaced by *villages of rude huts without poles or ramparts*. We know the civilization of this period merely by its cemeteries, the first of which was excavated at Villanova near Bologna, and has given its name to this civilization. The ashes are buried in clay vases, as in the 'terramare'; but not only are these ossuaries, with their incised geometric ornaments, far more elaborate than the rude pots of the 'terramare'; they also contain, besides smaller vases, a number of weapons, implements, and ornaments far in advance of anything yet known in those parts of the country. Stone implements disappear; iron is used besides bronze—an immense step forward on the path of technical development; amber and ivory ornaments proclaim commercial relations with the north and east. Instead of the usual ossuaries, we often find the ashes of the dead buried in small clay imitations of the living men's huts, which appear to be considerably larger and better built than the primitive dwellings of the 'terramare.' But, in the older Villanova period, there is not yet any trace of writing, or of stone buildings, or of Greek vases. These appear among the natives a few generations later, with the advent of the first really developed civilization in Italy, the Etruscan.

5. The origin of *the Etruscans* is shrouded in mystery. Following the tradition almost universally accepted by ancient authors and corroborated by the archæological evidence, we assume them to have reached Italy by sea, about the 9th cent. B.C., subduing the native races of central Italy, especially the Umbrians, and founding a number of fortified towns, whose confederacy formed a powerful State. An entirely new era begins with them. The villages of rude huts are superseded by strongholds on the hills, protected by strong walls of polygonal or isodomic masonry, which are still standing on many Etruscan sites. These mighty walls of Cære, Cosa, Vetulonia, Volterra, Perugia, and other towns, belong to different periods, the oldest dating back as far as the 8th–7th cent. B.C. They have been constantly repaired in the course of the ages, and at a later date have occasionally, as at Volterra and Perugia, been provided with vaulted gates adorned with sculptured heads or the figures of tutelary divinities in relief. Within the walls, the houses were built mostly of wood, and have therefore perished. But the tombs give us a faithful representation of them. During the first century or two of Etruscan sway in central Italy, the ancient shape of the round hut still forms one prototype of the tombs. But, like the Mycenæan 'bee-hive' tombs, whose influence they seem to show, these Etruscan sepulchres are spacious cupolas of stone, provided, not for the ashes of a peasant, like the rude Villanova (Umbrian) ossuaries, but for families of wealthy warriors and merchants, whose corpses were buried in state, unburnt and surrounded by all they needed in the under world. The finest of these cupolas are found at Vetulonia, south of Pisa—one of the oldest and richest Etruscan cities—at Volterra, and one specially good specimen at Quinto Fiorentino. Other tombs of the same period, instead of the cupola, consist of rectangular vaulted chambers, either built of huge stones or cut out of the living rock, The most famous of the former is the Tomba Regulini Galassi near Cære, whose astonishing wealth of gold jewellery, precious vases and implements, is in the Vatican Museum. A fine example of the rock-hewn tomb was discovered near Veii; it is adorned with the oldest frescoes we know in Italy. These graves are doubly important. They are the earliest monuments that we can *prove* by their inscriptions to be undoubtedly Etruscan; by the Egyptian and Phœnician and Greek objects found in them, their date is fixed in the 8th–7th cent. B.C. The rectangular chambers give us an idea of the Etruscan house of wood or sun-baked brick, and a slightly younger type (7th–6th cent.) introduces us to roomy mansions. These latter tombs are always cut into the rock, and their central hall and side-chambers, with their beamed roofs and carved doorways, with couches and chairs hewn out of the rock, give a vivid conception of what an elegant Etruscan dwelling of the time looked like. Nay, in some cases, at Cære, for instance, we find two storeys above each other. The tombs built of stone blocks are simpler in design, consisting of one, rarely of two rooms, and occasionally, as at Orvieto, grouped in streets and blocks, just like real towns. The architectural forms and mouldings are of the simplest, and betray the imitation of wooden houses in stone. One detail—the doorways narrowing towards the top and surrounded by a rectangular moulding—seems to denote Egyptian influence.

These tombs are without sculptured decoration inside, except for occasional low reliefs upon the doors or the ceiling (chiefly at Corneto, the reliefs showing animals, fabulous creatures and hunters; and some funeral statues in a tomb at Vetulonia); but the mound or tumulus which covers the grave usually bears either a sculptured ornament or a stone stele with the image of the deceased in relief (standing upright in armour or reclining at a banquet), mostly accompanied by an inscription. Lions carved in stone often guard the entrance to the tomb. The walls of the sepulchral chambers are often gaily painted, and these frescoes demonstrate the development of Etruscan art, from the 6th to the 2nd cent. B.C. They and the sculptured sarcophagi also show the preponderant influence of Greek art over Etruscan; for the commercial relations between the two nations were continuous, and the Etruscans, who do not seem to have possessed a strong individual artistic genius, not only bought Greek vases and bronzes by the thousand, so that no tomb, however poor, is without its Greek objects, but also copied these imported works, more or less freely and successfully. Thus, the frescoes of the oldest painted tomb of Veii, mentioned above, show the meaningless medley of animals, fabulous creatures, and human beings which the Greek vase-painters of the 7th cent., especially in Corinth, had borrowed from the contemporary carpets and tapestries. The 6th cent. frescoes of Cære and Corneto show banqueting and hunting scenes, with an occasional marine monster and once a mythological scene, conceived in the style of Ionic art. The same art, debased by provincial Etruscan painters, appears

upon some terra-cotta slabs with paintings of sacrificial and funeral rites, which adorned the walls of a tomb at Cære. Occasionally, towards the end of the 6th cent., the banquets (they are the Elysian banquets of the happy dead) are replaced by frescoes showing funeral rites, dances, mourners, games, and fights, in which local Etruscan customs are rendered in a debased Greek style. These frescoes, especially those of a tomb at Chiusi, are full of interesting details—wrestlers and acrobats, dwarfs and tame animals. Early in the 5th cent. Attic models take the place of the Ionic or Corinthian ones; Attic vases of the red-figured style illustrate this new fashion in Etruscan painting. Banqueting and funeral scenes continue to be in vogue. In the 4th cent., still under Attic influence, the frescoes take more to religious subjects. A tomb of Corneto shows us the trembling soul in Hades, amid the terrific images of the famous sinners of Greek mythology, bearing their eternal torments. The kinder artist of a tomb of Orvieto lets the dead partake of a sumptuous banquet in the very palace of Hades, who presides with Persephone, before a sideboard laden with golden vessels. The gods and heroes are Greek, even to their names, which can easily be recognized in their Etruscan travesty; the style is wholly Greek, and it is only in certain ritual details, in the winged Fates (Lasa) who call the dead to Hades, in the curious monstrosity of Charun (=Charon), the infernal boatman, that the Etruscan artists have abandoned their slavish imitation of Hellenic imagery.

The same dependence is apparent in the sarcophagi which contain the corpses, where these are not simply stretched upon rock-hewn benches. In the 6th cent., some terra-cotta sarcophagi from Cære bear the figures of the dead man and his wife reclining together on their couch at dinner, according to Ionic custom, and in a style copying the Ionic. A century later, upon a stone sarcophagus from the Chiusi district (in the Florentine Museum), we see the same couple, Attic in style, the wife sitting at the feet of her reclining husband, as was the custom for a proper Attic lady. The old Umbrian custom of burning the dead, which had been in abeyance, though it never disappeared entirely, during the first five centuries of Etruscan sway, again became nearly universal with the end of the 4th cent.; the long sarcophagi for the outstretched corpse are replaced by short square urns sufficiently large for a handful of ashes. And while the figures reclining upon these urns are merely hideously deformed pieces of provincial work, the reliefs which adorn the front copy Attic paintings, of which little sketches must have been brought to Etruria in great numbers; this explains the contrast between the fine composition and the rough execution, so noticeable in the reliefs of these urns, and also the preference for Greek mythological scenes, some of them local Attic myths, which neither the Etruscan 'artist' nor his clients can have understood. The painted tombs grow very rare in this late period, but the shape and disposition of the chambers remain almost unchanged, as is proved by two excellent examples —the Tomb of the Volumnii near Perugia, with its fine architectural moldings and good stone urns, and the Tomba dei Rilievi at Cære, decorated with brightly painted reliefs of various implements and weapons. Both these tombs have Roman inscriptions combined with Etruscan ones, and belong to the last period of Etruscan art—the 2nd–1st cent. B.C. After this period, the Etruscan civilization was entirely flooded by the Roman.

The tombs have helped us to re-construct the Etruscan temple; the sites of several have been found, but as they were built of wood, it would have been impossible to divine their shape without the architectural analogies of the rock-hewn tombs, of which some, at Castel d'Asso and Norchia near Viterbo, show fine façades, with columns crowned by sculptured pediments. A couple of cinerary urns in the shape of small temples or chapels are equally important witnesses; but the most precious are the numerous terra-cotta figures and reliefs which decorated these wooden temples. The oldest, from Cære, Falerii, and Conca [the two latter places are in the lower valley of the Tiber outside Etruria proper; but Latium at this period was artistically under the sway of the higher Etruscan civilization], date back as far as the 6th century. They are antefixes (outer roof-tiles) decorated with reliefs, heads of nymphs and satyrs, of Herakles and the cow-horned Io, groups of dancing mænads and satyrs—all in the same Ionic style which we noted in the frescoes. And the same fashion is apparent in the terra-cotta slabs with friezes of warriors and chariots, of animals and hunters, of banquets, or merely of fine palmetto and lotus chains; these slabs protected the wooden rafters, the upper line of the wooden wall, against the rain. The decorative terra-cottas follow the development of the frescoes, in their style, from the 6th to the 3rd century. In the latter half of this period, pediment sculptures in terra-cotta are added to the antefixes and friezes. Some very fine 4th cent. figures of youths and maidens came from the Faliscan region (now in the Villa di Papa Giulio in Rome). The death of Amphiaraos and the flight of Adrastos before Thebes are given in a pediment from Telamone near Pisa, with very numerous small figures (3rd cent., now in Florence); and the pediments from Luni, also in Florence, appear to render the myth of the Niobids, in their large, admirably modelled figures. Altogether, these terra-cottas are the finest works of art that Etruria has produced, again following in the tracks of Greece. We cannot make sure of the appearance of the Etruscan temples in all their details; but we may safely say that they were mostly of modest size and simple decoration, consisting of a wooden house, oblong, with one or two rooms, and an open porch supported by wooden columns, the whole resembling the Greek 'templum in antis,' yet different in style. We may imagine the walls painted; and the terra-cottas, also brightly coloured, must have produced a rather gaudy effect. The description of the Etruscan temple by Vitruvius helps us also. But our materials for actually re-constructing these buildings in their original shape are too scanty as yet.

In the minor arts, as in painting, the influence of Greece was predominant. Among the very numerous bronze statuettes found in Etruscan tombs it is often difficult to distinguish between imported Greek originals and local imitations. The same doubt obtains concerning bronze statues like the Capitoline wolf. But it would be going too far to attribute only the inferior work to Etruscan artists; they seem to have been largely dependent upon Greece for inspiration, but their skill was nevertheless recognized in Athens itself, where Etruscan bronzes adorned the houses of the richest patrons of art (Pherekrates *ap.* Athenæus, xv. 700c; Kritias, *ib.* i. 28*b*). Etruscan bronzes were famous in Greece, and, we may say, justly famous, judging by a number of really fine works of a greater realism than is usual in Greece. Here again the Ionic style is paramount in the older work—the statuettes, vases, and implements of the 7th–6th centuries. The first merchants who traded with Etruria hailed from the Ionic colonies of Asia Minor, and their intimate connexion with the Phœnicians explains the presence of numerous Syrian and Phœnician objects—vases, ornaments,

and scarabs—in the oldest Etruscan tombs, since no direct connexion between Phœnicia and Etruria has been proved. In the later period, Attic influence again predominates, and is especially noticeable in the very numerous engraved mirrors and circular cists (toilet boxes) of bronze, some of them very beautiful, which are most nearly akin, in their style, to the reliefs of the later cinerary urns, though superior to these. Etruscan jewellery, at least in its older stages, is a great deal more independent. In fact, Greece offers nothing comparable, in technical skill and delicacy, to the wonderful gold ornaments, the gossamer filigree work, the microscopic granulations, of the bracelets, necklaces, ear-rings, and fibulæ of the oldest Etruscan tombs. The more recent ornaments show a stronger Hellenic influence, and a less perfect workmanship. Ceramic art is always more or less subservient to the more valuable metal vases. Thus, the shapes of Etruscan clay vessels reproduce bronze models, and as these models are more or less copied from Greek originals, the same imitation is apparent in the cheaper terra-cotta ware. But the technique of these vases is more independent; they are fashioned in black clay, called *bucchero*, adorned with incised or relief ornaments or figures; and though this technique is not infrequent in Greece, and again more especially in the Ionic colonies of Asia Minor, yet its predominance in Etruria is so great that only a slight Greek influence upon a strong local industry may here be granted. Painted vases are rare in Etruria, and are no more than poor copies of Ionic, Corinthian, or Attic originals; but *bucchero* may be claimed as mainly a native achievement.

Very little can be said of decorative work in ivory, or of engraved gems. Here again foreign, and chiefly Oriental, influence predominates, and the Etruscan artists have added little of their own. Even the types of their coins are merely derivatives from the superior Hellenic art.

Etruscan art and science were paramount during the earlier centuries of Roman history, throughout the whole of Latium, and even as far south as Campania. When the Greek colonies of Magna Græcia grew strong enough to hold their own, and the Etruscans were driven from Campania, towards the end of the 5th cent. B.C., their intellectual sway over Rome diminished steadily as the Greek influence increased. After the league of the Etruscan cities had been subjected to Rome, their peculiar civilization dwindled and disappeared rapidly, and it would be difficult to find a characteristically Etruscan work of art later than the 1st cent. B.C.

LITERATURE.—I. *GENERAL*: H. Nissen, *Ital. Landeskunde*, 2 vols. 1883–1902; O. Montelius, *La Civilisation primitive en Italie*, 4 vols., Stockholm, 1895–1904; several articles in the *Atti del Congresso di Storia*, vol. v. 'Archeologia,' Rome, 1904.

II. *TERRAMARE*: W. Helbig, *Die Italiker in der Poebene*, Leipzig, 1879; a series of articles in the *Bollettino di Paletnologia italiana*, by L. Pigorini and his pupils; L. Pigorini, in *Monumenti antichi dei Lincei*, i. (1892).

III. *SICILY, SIKEL CIVILIZATION*: F. v. Andrian, *Prähistor. Studien aus Sicilien*, Berlin, 1878; a number of exhaustive articles by P. Orsi in the *Bollett. di Paletnol. ital.* and the *Monum. ant. d. Lincei* (vol. ii. [1893], vi. [1896], ix. [1899]); 'Un villaggio siculo presso Mattera nell' antica Apulia,' by G. Patroni in *Monum. ant. d. Lincei*, viii. [1898].

G. KARO.

ART (Greek and Roman).—The history of Greek art, in relation to religion, passes through three phases which correspond more or less to its three periods of rise, perfection, and decadence. During the first period, art is subjected to religious influences, and frequently trammelled by religious conservatism; during the second, the two act in co-operation, art drawing its highest inspiration from religion, and itself contributing to the dignity of religious ideals, so that it was said of the Olympian Zeus of Phidias, 'cuius pulcritudo adiecisse aliquid etiam receptæ religioni videtur'; during the third, religion supplies numerous themes to the artist; but these often tend to be regarded, mainly or in part, as affording an opportunity for his skill in characterization or execution; and even when this is not the case, he often repeats the conventions of earlier artists rather than creates a new embodiment of a religious idea. It follows that the history of art in Greece is, throughout the course of its development, closely bound up with the history of religious thought—more so, perhaps, than in the case of any other nation, but the relations of the two vary considerably at different periods.

1. **Pre-Hellenic Art.**—Before dealing with Hellenic art, it is necessary to say something of the art which preceded it in Greek lands, and which is conveniently named Ægean, so as to include Crete and the Archipelago, as well as the mainland of Greece. Our knowledge of the Ægean religion (*q.v.*) is gained almost entirely from the remains of early art in these regions. The chief branches of this art consist of gem-cutting, the art of the gold- and silver-smith; painting on terra-cotta coffins and vases, and in fresco on the walls of houses and palaces; and sculpture, or rather modelling in terra-cotta and other materials, including life-sized coloured reliefs in *gesso duro*. Early Ægean art in all these branches shows a strong and characteristic native development, though it owes something also to foreign influences, notably to that of Egypt. It is marked by much naturalism in detail, especially in plant and animal forms, together with a curious conventionalism, especially in the treatment of the human figure, which has an unnaturally slim waist and elongated limbs. The article ÆGEAN RELIGION shows what subjects are treated in the art of the time. We find representations of shrines and altars, and of aniconic symbols of worship, such as the double axe and the horns of consecration, and an almost realistic rendering of landscape in the representations of sacred mountains and trees. Grotesque animal forms and monstrous combinations are a favourite subject, especially on gems. We also find figures which are probably to be regarded as representations of divinities, though the skill of the artist is not sufficient to indicate any difference between these and human figures, except by signs or attributes. Rudely-fashioned images of terra-cotta, which are almost certainly to be regarded as figures of deities, are found in Crete, and are also common at Mycenæ and elsewhere in Greece.

2. **The 'Dark Ages.' Art in Homer.**—Between this early Ægean art and the rise of the art which may properly be called Hellenic there is a long interval of time; nor is it possible, except in a limited degree, to trace any direct connexion between the two. The two chief qualities of the earlier work are beauty of decorative design and a close observation of nature, within certain limits. In both these respects its facile and even decadent

quality, in its later examples, offers the strongest contrast to the uncouth but promising beginnings of Hellenic art. Without discussing the complicated question of the racial changes that had taken place in the interval, we may admit that the innate artistic genius, of which we see the products in early Ægean art, may, after lying dormant for a time, have contributed its part to the later development, but in conjunction with new elements which entirely transformed its character. In this connexion it must be remembered that the rise and earlier stages of the development of early art in Crete and the Ægean islands go back to at least the third millennium before our era, and that the flourishing period of Cretan art ends with the destruction of the palace at Knossos about B.C. 1400, though at Mycenæ and elsewhere on the mainland of Greece a kindred art survived for two more centuries in vigorous condition, and considerably longer in a decadent stage. The rise of a strong and independent Hellenic art cannot be dated earlier than about the 7th cent. B.C. The five centuries or so which intervened are sometimes called the 'dark ages' of Greece—a time of invasions and migrations, when the old civilizations were overwhelmed, and the country relapsed for a time into comparative barbarism, so far as the external surroundings of life were concerned. It was during this time that the Homeric poems were composed; and in them there is no certain reference to any work of sculpture in the round, whether representing human personages or gods, with the exception of a doubtful passage in *Iliad*, vi. 92 and 303, where the Trojan matrons place a robe 'upon the knees of Athene.' Some authorities regard this as implying the existence of a seated statue; if the expression be not a purely metaphorical one, it is the only example of any such thing in the Homeric poems. Though temples are often mentioned, no images of the gods are referred to. Art in Homer is purely decorative, and is not distinctively Hellenic; many of the objects of finest workmanship are attributed to the Phœnicians. When scenes of an elaborate nature are described, as on the shield of Achilles, there are none of religious significance among them, though Ares and Athene are spoken of as appearing in a battle scene. Here, however, it is the gods themselves that are thought of, rather than artistic representations of them.

3. Beginnings of sculpture.—Many primitive images of the gods were attributed to the Heroic age; an example is the Palladium stolen by Odysseus and Diomed from Troy—a tale told in the 'Little Iliad,' of about the 7th cent. B.C. Some of these may have been survivals from pre-Hellenic times; others were probably wrongly assigned to so early a date. Some of them were attributed to Dædalus, an artist whose historical existence is doubtful, but whose reputed attainments summarize the sudden advance in the art of sculpture which seems to have taken place about B.C. 600. Shortly after this date we find several sculptors, or groups of sculptors, employed to make images of the gods, sometimes, apparently, as a new departure, sometimes to replace a primitive or aniconic object of worship. Such families of artists existed in Chios (Melas, Micciades, Archermus) as workers of marble, and in Samos (Rhœcus, Theodorus) as workers in bronze. In the Peloponnese, many statues of the gods were made by Dipœnus and Scyllis, Cretan 'Dædalids,' and by their pupils; the 'unshaped plank' which had served as the symbol of the goddess Hera at Samos was replaced by an image made by Smilis of Ægina; the Apollo of Delos was made by Tectæus and Angelion, said to be pupils of Dipœnus and Scyllis; and probably most of the other early images of the gods in human form were made in this period. From this time on we hear of numerous statues of the gods, made by almost all the chief sculptors; some of these were intended to replace more primitive images as objects of worship, others merely for dedication. In the former case the artist would in most cases be bound by religious conservatism not to depart too far from the accepted type. An example is the Black Demeter of Phigalia, whose primitive image, with a horse's head, had been destroyed; the sculptor Onatas of Ægina is said to have replaced it with remarkable fidelity, with the help of copies, and even of a vision. This is an extreme instance, but in many other cases the artists had to satisfy the religious scruples of priests and others, as well as the growing desire for a more artistic representation of the deity. In the case of dedicated statues he would naturally have a freer hand. Here the limitations would be imposed by his art. We have many statues of early Greek workmanship preserved, and these show that sculpture was confined to a small number of clearly marked types, which served for representations alike of deities and of human beings. The commonest of these types represented a fully draped seated figure, a nude standing male figure, or a draped standing female figure. All of these were used alike for figures of the dead set up over graves, for figures of worshippers dedicated in sacred places, and for images of the gods. The artist devoted his skill to perfecting these types, to getting more approach to a natural expression in the face, to improving the shape of limbs and hands and feet, to observing and recording correctly the position of bones and muscles in the body. He was too much taken up with these matters to give much attention to the representation of character or individuality, much less of a worthy ideal of the gods, though it was by his work that the tradition was being built up which enabled the masters of the 5th cent. to progress in this direction. Some other early types, however, offered an opportunity for a more direct and simple expression of divine energy. Sometimes swiftness was shown by wings, usually borrowed from decorative Oriental models, and by a position which looks like kneeling, but is meant to represent rapid running or flight; sometimes the god or goddess was shown striding forward rapidly, with an attribute of power—if Zeus, a thunderbolt; if Poseidon, a trident; if Athene, a spear—in the raised right hand. Such purely external expressions of divine activity seem often to have been derived from primitive images, which were incapable of expressing it in any subtler manner; and although some examples of this type were made, usually to carry on a religious tradition, even in the 5th cent., it gradually became obsolete as the artist acquired facility in expressing the character and power of the god under an intellectual and moral rather than a merely physical aspect. When this change had come about, the relations of art and religion were revolutionized. The sculptor no longer occupied himself with the technical problem of providing a statue suitable in age, sex, and attributes to the requirements prescribed by religion, but was himself able to contribute something to the ideal conception of the deity.

4. Decorative and minor arts.—So far we have considered only sculpture in the round, having as its province the making of independent statues. Minor works in bronze and terra-cotta, which were abundant on all Greek sites, naturally followed the development of sculpture, or to some extent, perhaps, even anticipated it; but what is said of sculpture applies to them also. It is otherwise with reliefs and other decorative works, whether in wood, stone, marble, terra-cotta, bronze, or other metals. So far as their religious signifi-

cance is concerned, this group of objects goes with painting, especially vase-painting; it deals with the same kind of subjects, and treats them in the same manner. This decorative art affords a link, such as is missing in the case of sculpture, with the earlier periods; for it continued to be practised to some extent during the dark ages between Mycenæan and Hellenic art; it transmitted some inherited types, and it borrowed many others from Oriental or other foreign sources. It is also of considerable importance for the study of religion and mythology, since the means at its disposal enables it not merely to represent figures of the gods and heroes, but to record or to illustrate stories about them, or scenes connected with their ritual. It is to be observed that descriptions of decorative reliefs in the Homeric poems—notably that of the shield of Achilles, which, even if later than the rest of the *Iliad*, is earlier in date than the rise of Hellenic art—do not refer to mythological scenes, but to incidents of daily life. On the other hand, the Hesiodic 'shield of Hercules' has a whole series of illustrations of mythical tales, such as the battle of Lapiths and Centaurs and the flight of Perseus from the Gorgons. In this respect it resembles actual works of decorative art that are recorded for us by ancient writers, such as the throne made by Bathycles of Magnesia for the Apollo at Amyclæ, or the chest of the Corinthian tyrant Cypselus, dedicated in the Heræum at Olympia. And the subjects recorded both on the imaginary and on the actual reliefs are just the same as we constantly find upon extant early works of decorative art—both reliefs in marble or stone or bronze or terra-cotta, and paintings upon vases. It appears, therefore, that, while the art referred to in the Homeric poems has nothing Hellenic about it except the poet's imagination, the references to works of art in Hesiodic poems and in later literature are closely in touch with the actual development of art in Greece.

The relation of art to popular belief and to literature, in its treatment of religious or rather of mythological subjects, is somewhat complicated. The decorative artist was extremely conservative and imitative in the use of his available répertoire of groups and figures. Free invention was hardly ever resorted to, except in cases where no already familiar type could be borrowed or adapted. For example, the judgment of Paris seems to offer a theme for imagination, and we find it so treated on later vases; but in early art it always takes the form of a procession, with the figures more or less differentiated; and this form is borrowed almost without modification from the procession of dancing women, headed by a musician, which is a common subject on the most primitive vases. Such mechanical repetitions may appear at first sight to preclude any strong influence of art on mythology; but in some ways their cumulative effect was greater than any that could have been due to originality of treatment, for it became almost impossible for people to figure these scenes or events to themselves in any other way than that conventionally accepted. And, moreover, the same conditions tended towards the assimilation and even identification of legends originally distinct, and so facilitated the systematization of Greek mythology. Again, the tendency of early Greek art to adopt rather than to invent led to many almost fortuitous identifications that have had great influence, not only on later art, but even on later belief. Thus the gorgon, the sirens, the sphinx, and other such monsters probably had no distinctive form in the eyes of those who first told tales about them; certainly no such form is indicated in the Homeric poems. But the early decorative artists borrowed from the East many monstrous forms of winged and human-headed beasts and birds which had probably no particular significance to those who first adopted them as decorative elements; and these forms came to be identified with the creatures of Greek myth so completely and so finally that we at the present day cannot think of Sphinx or Siren under any other form. The fact that both these fantastic figures appear as symbols of death upon tombs in Greece, in Lycia, and possibly elsewhere also, has further complicated the influence of the borrowed type, so that, in these cases and in others like them, it is now almost impossible to disentangle the contributions of art and of myth to the common conception.

5. Vase-painting.—The more technical side of the early development of decorative art in Greece concerns us here mainly as it affects the gradual acquisition of greater power of expression. In this matter sculpture in relief has much the same history as sculpture in the round, so far as the execution of individual figures is concerned. Vase-painting, on the other hand, has an independent development. It is impossible here even to sketch the development of early vase-painting in Greece; it is possible only to mention those classes of vases which are of most importance for the representation of mythological scenes. (1) The *geometrical* class, which succeeds the Mycenæan in Greece, frequently depicts scenes from actual life; this is particularly the case with the Dipylon vases of Athens, on which we see elaborate funeral processions, scenes of seafaring and combat, and classic dances; but few, if any, of these can be given any mythological significance. (2) The geometric period is succeeded by that of *Oriental* influence in various parts of the Greek world. On the coasts and islands of Asia Minor, especially in Ionia, Samos, and Rhodes, we find various classes of vases, which have certain characteristics in common, as well as clearly-marked local variations; and about the same time we find a similar development in some of the chief manufacturing centres in continental Greece, mainly at Corinth and Chalcis; and colonies such as Daphnæ and Naucratis in Egypt, and Cyrene in Libya, have each their characteristic ware. Athens also has its own pottery at this time, in succession to the Dipylon ware. The technical development varies considerably, but in all alike the tendency is towards an improvement both in the colour of the ground and of the pigment in which the figures are drawn. As a rule, in earlier examples the ground is of a buff or brownish colour, sometimes almost white, and the pigment is of a dark brown colour, varying from red to dull black. In late examples, and, above all, in Attic pottery, the ground tends to assume the beautiful reddish terra-cotta colour which is characteristic of Greek vases of the best period, and the pigment to take the form of lustrous black varnish. The monstrous forms, many of them winged, and the other beasts borrowed from Oriental fabrics, tend gradually to be replaced by scenes of some mythological meaning, or, if retained, to acquire a mythological significance; and the human figure, at first introduced as a decorative type like the rest, gradually asserts its supremacy in interest. The treatment of myths upon early vases becomes, so to speak, stereotyped along certain lines, the same figures or compositions being repeated again and again with slight variations to illustrate the same myth, or adapted to the rendering of another myth that lent itself to a similar treatment. In this way the vase-painter contributed in no small degree to the uniformity and systematization of mythology. (3) About the middle of the 6th cent. B.C. the Attic potters, assisted by the excellent clay of the Attic ceramicus, surpassed all rivals. This is the age of what is called *black-figured*

ware, the figures being drawn in black silhouette, and details added in incised lines, with touches of purple or white. We have many vases signed by potters of this period, as well as of the next, which begins in the latter part of the 6th cent., and continues until the date of the Persian wars and a little later. (4) This next period, which overlaps the preceding, is known as the *early red-figured* style, the same pigments being used, but the figures being reserved in the terra-cotta colour of the clay, and the background filled in with the black varnish. In this age we find greater imagination and freedom of drawing; but the old traditions are still closely adhered to, and the advance is in the details rather than in the general conception. We find at this time the most perfect decorative treatment, and the utmost precision of line drawing. As we approach the middle of the 5th cent., we find greater dignity and severity of treatment, probably owing to the influence of the great fresco painters, above all of Polygnotus, who came to Athens and decorated the 'Painted Stoa' and other buildings about this time.

In Athens the work of Polygnotus consisted partly of historical paintings, such as the battle of Marathon; at Delphi his most famous works were the 'Fall of Troy' and the 'Land of the Dead,' and by these he probably exercised great influence on his contemporaries and successors. He was specially noted for the ethical character of his subjects. His paintings have not been preserved, but from imitations of them on vases and from descriptions of ancient writers, we can infer that they consisted of simply-grouped figures, arranged without perspective, and probably conventional in colouring. But the grandeur and nobility of his conception probably contributed in no small degree to the ideals of Greek art in the 5th century.

6. Sculpture of the 5th century.—The development of sculpture was at this time very rapid. The great struggle between Greece and Persia led to a new consciousness of Hellenic unity and a new pride in the superiority of Greek over barbarian; and at the same time, the spoils of victory and the offerings to the gods in thanksgiving for the great deliverance afforded both opportunities and themes for the highest energies of the artists. The full effect of these influences was hardly felt at once, and they were combined, in their most splendid manifestations, with the glory of Athens, which, taking the lead at the time of the Persian wars, became under Cimon and Pericles the example and summary of all that was best in Greece. The immediate predecessors of Phidias, though they produced works which were admired by posterity, seem still to have been mainly occupied with the study of the type and the perfection of technique and mastery over material. A statue like the 'Discobolus' of Myron is characteristic of this age; and however great the skill of the artist in dealing with a difficult subject, it is to be noted that he does not go beyond the expression of physical life to that of character or emotion. Even a masterpiece such as the 'Charioteer of Delphi' shows the same restriction of aim. Pythagoras, to whom it is probably to be attributed, was noted also for the expression of pain in his limping Philoctetes; but here, as in the wounded warriors of Ægina, it was probably the physical rather than the mental or spiritual aspect of the subject that was rendered. To Calamis, with his nameless grace, we might perhaps look for something more; but we have no certain work of his left, and we are not justified in assuming that he went beyond his contemporaries.

It was reserved for Phidias to fill the forms that had already reached so high a degree of perfection, with an inner life and meaning. His colossal gold and ivory statues have not survived, but we have some copies of them, and probably of others of his statues, and the descriptions of ancient writers; and we can also see the reflexion of his influence in all contemporary and later work. From all this evidence we can infer that his statues of the gods did not merely represent the perfection of the human form in face and figure, but embodied all that was noblest in the Hellenic conception of the gods. He is even said to have gone beyond this, and to have added somewhat to the received religion in his statue of Zeus, which was so worthy of the subject represented that 'he who is heavy-laden in soul, who has experienced many misfortunes and sorrows in his life, and from whom sweet sleep has fled, even he, I think, if he stood before this image, would forget all the calamities and troubles that befall in human life' (Dio Chrys. *Or.* xii. 51, tr. Adam). The Zeus at Olympia was the father of gods and men, full of power and benignity, the common god of the Hellenes. The Athene Parthenos at Athens represented the more intellectual conception of the goddess of Athens, the embodiment of the artistic and literary genius of the people. Statues like these doubtless transcended the ordinary notions of the gods; but they were no mere allegories or personifications; they represented the religious ideals of the whole people, and contributed in no small degree to purify and ennoble these ideals. This new influence of art upon religion came just at the time when the accepted views about the gods and the tales that were told about them were being questioned, and Phidias and Pericles were in sympathy with the most enlightened views; it can hardly be doubted that both artist and statesman had it as their aim to represent the gods to the people as they should be worshipped. From the sculpture that decorated the temples of this period, above all from the sculpture of the Parthenon, we can learn the beauty and nobility of type and the unrivalled skill in execution that supplied the means whereby such an artist as Phidias could express his ideas.

In the latter part of the 5th cent. B.C. there were several other sculptors who followed more or less closely the tradition of Phidias, and made statues of the gods, which, like his work, had a great influence on current religious conceptions. Alcamenes, who, after the exile or death of Phidias, was the sculptor most employed upon official commissions in Athens, made famous statues of Hephæstus and Dionysus, of Hera and Athene; Agoracritus made the Nemesis at Rhamnus. Polyclitus, the head of the Argive school, followed the Argive tradition in his study of the athletic type, and his system of proportions or 'canon' was embodied in a statue, 'The Doryphorus' or spear-bearer, as well as in a theoretical treatise. He also made a great gold and ivory statue of Hera for the Argive Heræum, which embodied the Greek ideal of the goddess, and was placed, by some who had seen it, beside the Zeus and Athene of Phidias. Cresilas, a Cretan sculptor who probably came under the influence of both Phidias and Polyclitus, was famous for a statue of a wounded man, and also of a wounded Amazon; he also made the portrait of Pericles, of which copies survive, and which is a typical example of the early portraiture which treats its subject as the ideal statesman rather than as an individual. In all these works we can see the character of the art of the 5th cent., which expressed, as ancient critics tell us, *ἦθος* rather than *πάθος*, fixed type of character rather than varying passions and emotions.

7. The 4th century.—The art of the 4th cent. was less abstract and dignified, more human and individual. If Phidias did something to counteract the growing scepticism about the gods by presenting them in a form which could not be rejected as unworthy, the works of Praxiteles and Scopas

may in some cases have brought the character of the gods home to men by an intense and vivid realization of their personality; but in making them so human these sculptors may have made them less divine, and have opened the way for successors who regarded even statues of the gods as a mere theme for the exhibition of their artistic skill. Early in the 4th cent. we find a conspicuous example of a tendency of which traces may be seen earlier—that to personification. A group by Cephisodotus represented Peace nursing the infant Wealth; and later on allegorical figures such as this, which appealed to the popular imagination, usurped much of the worship that formerly belonged to the Olympian gods. But the statues of Scopas and Praxiteles were for the most part taken from accepted mythology, though the subjects selected were no less characteristic of the time than the manner in which they were treated. The most famous works of Praxiteles represented Aphrodite and Eros; and he set the goddess before mortals with her beauty entirely unveiled; her nudity is not natural and unconscious like that of male figures in Greek art, but a motive for it is supplied in her preparation for the bath. He was also famous for his representation of Dionysus and his attendant satyrs; and from extant copies we can estimate the skill with which he characterized these soulless, half-human creatures of the woods. In the Hermes with the infant Dionysus, of which the original is happily preserved, we can see the mythological conception of Hermes as the protector of youth made to live in a genial and individual embodiment. In other works, such as 'Apollo the lizard-slayer,' we have what was once a religious type treated as a piece of playful *genre*. The work of Scopas is throughout more earnest and impassioned. Extant works that can be associated with him represent heroes rather than gods, but in these we can see a passionate nature and intensity of expression; his treatment of creatures of the sea, with the restless yearning of their nature, is notable; and in his 'Mænad' the enthusiasm of divine inspiration was expressed with wonderful power. Of his treatment of more dignified subjects we can judge from such a work as the 'Demeter' of Cnidus, which, if not from his hand, is certainly to be associated with him; its expression shows maternal grief and the chastened melancholy in a passionate nature. The work of Scopas and his associates may also be seen in the Mausoleum.

Great as was the influence of Scopas and Praxiteles upon their successors, that of the third great sculptor of the 4th cent., **Lysippus**, was, if not greater, at least more direct. As the head of the school of Sicyon, he represented the Peloponnesian tradition of athletic sculpture; and he established a new canon of proportions, slimmer and less massive than that of Polyclitus. He made many statues of the gods, some of colossal size; and in his portrait of Alexander he is said to have satisfied the king by his representation of his ambitious and fiery temperament. Portraits of Alexander, and other extant works that may be associated with Lysippus, show that he was not, as has sometimes been supposed, an academic master, but full of fresh observation, while in expression he seems to have fallen under the influence of Scopas. Partly owing to his association with Alexander, his pupils are most conspicuous in the next generation, and are the founders of the schools that carried the traditions of Hellenic art to the East. We have records of many other sculptors of the 4th cent. who cannot all be enumerated; among them are Euphranor, who was also a painter and a writer on art, and was noted for his expression of the characters of gods and heroes; and Leochares, who made not only statues of the gods but also a set of portraits of the family of Philip and Alexander in gold and ivory for the Philippeum at Olympia—works which exemplify the tendency to represent men in a manner hitherto reserved for the gods.

The great painters of the 4th cent. are known to us only by literary records; and in this case we cannot, as in the earlier age of Polygnotus, expect any assistance from vases. From the descriptions we learn that the painters of this age often chose dramatic or sensational subjects, and their power of rendering individual character and passion was probably comparable with that of contemporary sculptors. The greatest of all Greek painters, Apelles was, like Lysippus, noted for his portrait of Alexander; and he was also fond of allegorical subjects, such as his group of Calumny, of which a detailed description is left us.

8. **Hellenistic art.**—In the Hellenistic age Greek art followed the conquests of Alexander to new centres in the East; it is no longer to Athens or Argos or Sicyon, but to Alexandria and Antioch and Pergamos that we look for its most characteristic products. The beginning of the Hellenistic age is dominated by the personality of Alexander. He had changed the relations of East and West, and Greek civilization was henceforth the prevalent influence in western Asia. His career, which might well seem more than human, induced the Greeks to accept the Oriental custom of the deification of kings; and his features came to be repeated even in the types of the gods. His head, too, was placed upon coins—an honour hitherto reserved for the gods alone. And his successors, with a less justifiable arrogance, claimed even higher privileges. Beside such present deities—to use the phrase of contemporary flattery—the ancient gods became mere abstractions. Images of them were still made, distinguished for their size—as the 'Colossus' of Rhodes—or for their artistic excellence. But the old types and conventions were mostly repeated either in mere repetition or in eclectic imitation. Certain schools, inspired by the dramatic power of Scopas, infused some new life into the old forms, notably the school of Pergamos. On the great altar in that city was a frieze with a representation of the gods and giants, in which all the learning of the mythologists and all the technical skill of the sculptors were devoted to a complete representation of the Greek Pantheon in action against their wild adversaries. But the extraordinary dramatic vigour of this work does not hide the fact that it is more or less an artificial creation, not a spontaneous embodiment of the people's belief. While philosophers turned to a more or less abstract and monotheistic conception of the deity, which was out of touch with art, the people often turned to a more direct and intelligible worship, such as that accorded to the 'Fortune' of Antioch, embodied in a graceful representation of the city, seated on a rock with a river-god at her feet, which was made by Eutychides, a pupil of Lysippus. The representation of children or of rustic subjects showed a reaction against the artificiality of city life, parallel to the literary development of the pastoral. Statues of the gods were still made, but were mostly mere repetitions of established types, though occasionally we find examples of great dignity and beauty, such as the Aphrodite of Melos or the colossal works made by Damophon in Messene and Arcadia. In the inadequacy of contemporary art, we find, as often in an age of decadence, a return to the character and even to the mannerisms of early art; in extreme cases this leads to an affected archaistic work which is easily distinguished from that of the early sculptors whom it imitates. At the same time, dramatic vigour and scientific study were still kept up in some schools; and in Rhodes, in the middle of the

1st cent. B.C., there were still sculptors capable of producing such a masterpiece as the 'Laocoon.'

9. Græco-Roman art.—Græco-Roman art—that is to say, the work produced for the Roman market by Greek artists—belongs for the most part to the more conventional and less powerful survivals of the art of Greece. There was an immense demand in Rome for the decoration of public buildings and of private houses, gardens, and libraries with the products of Greek art; and this was met partly by the spoliation of Greek shrines, partly by the production of new work resembling the old nearly enough to please the taste of the patron. Even the statue of 'Venus Genetrix,' set up by Julius Cæsar in his forum and made by Arcesilaus, the most famous sculptor of the day, was a mere repetition of a type which goes back to one of the masters of the 5th century. Under such conditions there was not much scope for originality or for a fruitful relation between religion and art.

10. Roman art.—Roman art had more originality, and made some technical advances even on its Greek models; but, from the religious point of view, these do not much concern us. They are best seen in portraiture, historical reliefs, and decorative work. The old Italian gods did not as a rule lend themselves readily to artistic treatment. There were, indeed, old terra-cotta images of the gods, made in Rome under Etruscan influence, which Cato and other conservatives regarded with veneration, and preferred to the imported products of Greek workmanship. These may have had a certain vigour of individuality and realism which affected later art in Rome, and more especially portraiture. But in the art of Rome, as known to us in Imperial times, there presentations of the gods follow for the most part the types and conventions borrowed from Greece. There were indeed certain figures, above all that of Rome herself, which were new creations; but these followed the lines of impersonation common in Hellenistic art. The art of the Augustan age, though characterized by an austere beauty, was academic and classical in character. Perhaps the finest extant figures of the gods in Roman art are those on the arch of Trajan at Beneventum, which are beautiful and dignified in type, yet so animated with an interest in the action portrayed as to seem full of life. In the deification of the Emperors we also find an incentive to ideal portraiture which did something to counteract the realistic tendencies of Roman art.

Two classes of monuments are of great importance to the general history of art, and even to the transmission of religious ideas. In historical reliefs on columns and arches—above all, in the Trajan and Antonine columns—we find a continuous method of narration which lent itself admirably to the records of chronicle or story; and this method was continued, for didactic purposes, into early Christian and mediæval art. In the sarcophagi also we find a great wealth and variety of resource in the renderings of mythology, often coupled with indifferent execution; and these likewise served as models, and handed on the classical traditions to later art. Types, such as that of Orpheus, also acquired a new significance in Christian art. The Greek traditions, in varying form, survived both in Rome and in Asia Minor, and through them were transmitted to the modern world. The relation and the spheres of influence of the Eastern and Western branches constitute one of the most difficult and disputed problems of modern archæology.

ART (Jewish).—**1. The arts in which the ancient Hebrews excelled were poetry and music.** There are no remains, whether in literary sources or in the actual results of excavation, to warrant the belief that there was in any real sense a native Hebrew painting or sculpture. There are extensive stores of Jewish pottery, but the shapes and styles are derived from Phœnician and Egyptian types, and show some Babylonian influence. In glyptic art, again, the same imitativeness appears. Phœnician and Hebrew seals are much alike 'in shape, script, and ornamentation' (Benzinger). The Phœnicians, too, excelled in metal-working; and the Hebrews, while they do not seem to have early acquired the art of metal-casting, were skilful adepts in the process of overlaying wood with metal plates. This skill presupposes some aptitude for wood-carving, but sculpture as such was not one of the attainments of the Hebrews. It is remarkable how few inscribed stones of Hebrew provenance have thus far been discovered. Religion, which is usually the most powerful aid and stimulant of art, had the very opposite effect in Judaism. The prophetic attack on idolatry carried with it an objection to images, and the representation of any form of animal life was forbidden in the Decalogue. Thus, on the one hand artistic incapacity, and on the other pietistic asceticism, combined to prevent the growth of a Jewish plastic art. And when to these causes is added what Delitzsch terms a defective sense of colour (*Iris*, p. 43 ff.), we can understand that only a rude form of painting was possible. These subjects are treated by Flinders Petrie in Hastings' *DB* i. 157.

2. Art was held in high esteem in later Jewish opinion. In the Talmud (*Rosh Hashana*, 29*b*), art is a branch of wisdom (חכמה) as distinct from mere handicraft (מלאכה). But the old dislike of animal representations continued. The Jewish coins contain no heads of rulers; here, again, the cause was partly religious. And the same phenomenon of imitativeness recurs. If the Temple of Solomon shows Phœnician influence, that of Herod was inspired by Roman models. Most of the Talmudic terms for articles of art are foreign—Greek and Latin. Custom and law are not always identical in these matters. The law forbade only the carving of projecting images (*'Abōdā Zārā*, 43*b*), and Dr. Kohler (*JE* ii. 142) rightly asserts that 'portrait painting was never forbidden by the law.' But many Jews long continued to object to portrait painting. On the other hand, though as a rule the mediæval synagogues were destitute of mural paintings, there are instances of carved lions (as at Ascoli). The lion was a frequently used Jewish emblem. In recent times there has been an increase of ornateness in synagogue decoration, and stained glass windows are becoming common, though there is still a reluctance to admit animal or human forms.

3. But in some directions a specific Jewish art was developed. In mediæval times the Jews acquired great repute as silk-dyers, as embroiderers, and as masters of the gold- and silver-smith's art. The worship of the synagogue and the home required the use of many objects in which artistic taste could be displayed. The Ark, or receptacle of the scrolls of the Law, the mantles in which the scrolls were wrapped, the crowns and bells with which they were adorned, the lamps for Sabbath and *Ḥanukah*, the cups for the sanctification over the wine, the spice-boxes (mostly of a castellated shape) used at the *Habdala*, or separation service, at the close of the Sabbath, the Seder-dishes which were used in the home on the Passover Eve—these are among the most important of the articles which the Jews loved to ornament. Beautiful embroideries were also required as curtains for the Ark. Many fine specimens of all these were exhibited at the Anglo-Jewish Historical Exhibition in 1887, and the Catalogue of that Exhibition remains a valuable source of information on all these matters. An *édition de luxe* of the same Catalogue contains some splendid photographs by Mr. Frank Hars. Throughout the volumes of the *JE* will also be found many pictures of the objects briefly described here, as well as of another branch of art in which Jews excelled.

4. This branch is the illumination of manuscripts. Artistic writing was an art in which Jews were highly skilled, and in the illumination of initial letters and the painting of marginal ornament and grotesques, they acquired considerable proficiency. Though there is no specific Jewish art in manuscript illumination, there are original Jewish elements; as Mr. G. Margoliouth well puts it, the Jewish spirit makes itself perceptible to the eye. In classifying the Jewish illuminated MSS, Mr. Margoliouth takes first the Bible, with two kinds of illumination, (*a*) the Massorah in the form of designs, and (*b*) pictorial and marginal illuminations. Of course all these ornaments are confined to codices or Bibles in the form of books; in the form of the scroll (except in the case of the Roll of Esther) the Bible was never illuminated. The Synagogue does not permit the use, in public reading, of punctuated or ornamented scrolls. The illuminated Esther rolls were hardly meant for use in Divine worship. The most usual Hebrew book for illumination was the Passover Service, or *Haggadah*. This is often profusely supplied with miniatures, initials, and full-page pictures. Less common are illuminated Prayer-Books. But all Hebrew books might be illuminated. The Code of Maimonides exists in many beautiful specimens. A very common object for illumination was the *Kethubah*, or Marriage Contract.

It must be added that in recent times many Jewish artists have attained to fame.

LITERATURE.—Besides the works referred to in the course of the preceding article, see: the publications of the *Gesellschaft für Sammlung von Kunstdenkmäler des Judenthums* (Vienna, 1897 ff.); the *Mittheilungen der Gesellschaft zur Erforschung jüdischer Kunstdenkmäler* (Frankfort, 1900 ff.); *Die Haggadah von Sarajevo*, ed. Müller and Schlosser (Vienna, 1898); Günzburg and Stassof, *L'Ornement Hébreu* (Berlin, 1905); S. J. Solomon, 'Art and Judaism' in *JQR* xiii. 553; G. Margoliouth, 'Hebrew Illuminated MSS' in *JQR* xx. 113; and D. Kaufmann, *Gesammelte Schriften*, vol. i., 1908.

I. ABRAHAMS.

ART (Mithraic).—Oriental monuments of the worship of Mithra are as yet almost entirely wanting. The beautiful sculptures discovered at Sidon (De Ridder, *Collection De Clercq*, iv. 'Marbres,' 1906, No. 46 ff.) date from the 3rd cent. of our era, and cannot throw any light on the first productions of the devotees of the Persian god. We must, accordingly, confine ourselves to studying Mithraic art in the Latin-speaking provinces of the Roman Empire, where a very considerable number of its remains have been discovered. In time they range over about two and a half centuries. The most ancient monument, which is now in the British Museum, dates from A.D. 104 (Cumont, *Mon. myst. Mithra*, No. 65; cf. vol. ii. 546; *CIL* vi. 30728), and the last of them belong to the middle of the 4th century. They therefore constitute a group whose limits in space and time are small, and whose character can be accurately described.

It must be admitted that their artistic merit is much less than their archæological interest, and that their chief value is not æsthetic but religious. The late epoch in which these works were produced destroys all hope of finding in them the expression of real creative power or of tracing the stages of an original development. It would, however, be unfair, acting under the impulse of a narrow Atticism, to confound them all in a common depreciation. Some of the groups in high and low relief (for the mosaics and the paintings which have been preserved are so few and so mediocre that they may be disregarded) hold a very honourable rank in the multitude of sculptures which the age of the Emperors has bequeathed to us.

The bull-slaying Mithra.—The group most frequently reproduced is the image of the bull-slaying Mithra, which invariably stood at the background of the temples (see art. ARCHITECTURE [Mithraic]), and specimens of which are to be found in nearly all the museums. The sacrifice of the bull recalled to the initiated the history of the creation and the promise of a future resurrection. It can be proved (Cumont, *op. cit.* ii. 180 ff.) that these representations of Mithra, whose sacred type was fixed before the spread of the Persian mysteries into the Latin-speaking world, are replicas of an original created by a sculptor of the school of Pergamos, in imitation of the sacrificing goddess Victory which adorned the balustrade of the temple of Athene Nike on the Acropolis (Kekule, *Die Reliefs des Tempels der Athena Nike*, 1881, pl. vi.). The Asiatic adapter has merely clothed the Persian god in the half-conventional Phrygian costume which was associated with a number of Oriental personages (*e.g.* Paris, Attis, Pelops, etc.), and has given the face an expression of suffering which makes it resemble that of the celebrated 'dying Alexander.' 'The emotion that pervades the features of Mithras is rendered with almost Skopasian power' (Strong, *Rom. Sculp.* p. 311).

Certain sculptures discovered at Rome and at Ostia, dating from the beginning of the 2nd cent., still reflect the splendour of that powerful work of Hellenistic art. After an eager pursuit, the god, whose mantle flutters in the wind, has just reached the sinking bull. Placing one knee on its crupper and one foot on one of its hoofs, he leans on it to keep it down, and, grasping it by the nostrils with one hand, with the other he plunges a knife into its side. The vigour of this animated scene shows to advantage the agility and strength of the invincible hero. On the other hand, the suffering of the victim breathing its last gasps, with its limbs contracted in a dying paroxysm, and the strange mixture of exultation and remorse depicted in the countenance of its slayer, throw into relief the pathetic side of this sacred drama, and even to-day arouse in the spectator an emotion which must have been keenly felt by the worshippers.

This work of the Alexandrian period has, moreover, been affected by the Roman schools of art. In some of them is shown in a more or less felicitous manner the care for details which is characteristic of the works of the Antonine period, *e.g.* in a group from Ostia (Cumont, *op. cit.* p. 79, fig. 67) which dates from the reign of Commodus, and a bas-relief from the Villa Albani (*ib.* p. 38, fig. 45). The artist has taken delight in multiplying the folds of

the garments and in rendering more intricate the curls of the hair, merely to show his skill in overcoming the difficulties which he himself had created. A small piece of sculpture discovered at Aquileia (*ib.* p. 116, pl. iii.) is distinguished in this respect by a 'bewildering cleverness of technique.' The delicately carved figures are almost completely detached from their massive block base, to which they are connected only by very slender supports. It is a piece of bravura in which the sculptor displays his skill in producing in a brittle substance the same effects as the chaser obtains in metal. But these comparatively perfect works are rare even in Italy, and it must be acknowledged that the great majority of these remains are of discouraging mediocrity, which becomes more and more wide-spread towards the 4th century.

The Dadophori.—The group of the bull-slaying Mithra is almost always flanked by two torch-bearers, or *dadophori*, who were called *Cauti* and *Cautopati*. Dressed in the same Oriental garb as Mithra, one of them holds an uplifted, and the other an inverted, torch; they doubtless personify the sun at the equinoxes. The original of these two youths can be traced back, like that of the bull-slaying god, to an unknown sculptor of the Hellenistic age, who had drawn his inspiration from still more ancient models (Cumont, *op. cit.* i. 203 ff.); but this hieratic work, which did not afford scope for the expression of keen emotions, is of much less artistic worth. Yet, in the better specimens at any rate, one may notice the artistic advantage which the artist has been able to derive from the Phrygian dress, and the way in which he has been able to emphasize the different emotions of hope and sadness depicted on the faces of the two youths who are mutually contrasted. The most remarkable reproduction which we possess of this divine pair consists of two statues found near the Tiber, one of which has been taken to the British Museum, while the other is in the Vatican. They certainly date from the time of Hadrian (*ib.* 27 and pl. ii.).

The Mithraic Kronos.—The origin of the subjects just mentioned is to be found in ancient Greek art, but there is another Mithraic work which is certainly derived from an Oriental archetype. It is the lion-headed god, whose body is embraced by a serpent, and who personifies Eternity—the *Zrvân Akarana* of the Persians (see art. MITHRAISM), to whom the adherents of the sect used to give the Greek name Kronos, or the Latin Saturnus. The most celebrated specimen of this type is in the Vatican (Cumont, *op. cit.* 80, fig. 68). Like the majority of his compeers, this animal-headed monster is an exotic creation. His genealogy would carry us back to Assyrian sculpture (*ib.* i. 74 ff.). But the artists of the West, having to represent a deity entirely strange to the Greek pantheon, and being untrammelled by the traditions of any school, gave free course to their imagination. The various transformations which this figure has undergone at their hands were actuated, on the one hand, by religious considerations, which tended to complicate the symbolism of this deified abstraction and to multiply his attributes; and, on the other hand, by an æsthetic solicitude which tended to modify as much as possible the grotesqueness of this barbarous figure, and gradually to humanize it. Ultimately they did away with the lion's head, and contented themselves with representing the animal at the feet of the god, or with placing the head of the beast on his breast. This lion-headed god of Eternity is the most original creation of Mithraic art; and if it is entirely destitute of charm, the grotesqueness of its appearance and the suggestive accumulation of its attributes arouse curiosity and provoke reflexion.

We have, so far, confined our attention to the remains found in Rome and Italy, the artistic finish of which surpasses the average of the Mithraic ex-votos. But when we pass to the provinces of the Empire, we find there elaborate works of a very different kind. It is generally agreed that, during the Empire, a great number of the sculptures intended for the provincial cities were made at Rome, or by artists who had come from Rome (Friedländer, *Sittengeschichte*[8], iii. 280 f.) This is probably the case with certain of the sculptures we are considering; they come from distant studios, either those of the capital or even of Asia Minor or some other province. There is no doubt that certain tablets discovered in Germany were brought from quarries in Pannonia (Cumont, *op. cit.* i. 216). Nevertheless, the great majority of Mithraic remains were undoubtedly executed on the spot. This is obvious in the case of those which were sculptured on the surface of rocks, which had been smoothed for the purpose; but with regard to many, local workmanship is proved from the nature of the stone employed. Moreover, the style of these fragments clearly reveals their local origin. The discovery of so many Mithraic works has thus great importance for the study of provincial art under the Empire. The most remarkable of these works have been brought to light in the North of Gaul, or, more precisely, on the Rhine frontier. It seems that the whole of this group of monuments must be ascribed to that interesting school of sculpture which flourished in Belgium in the 2nd and 3rd cents. of our era, and whose productions are clearly distinguishable from those of Southern studios. Similarly, the less important bas-reliefs brought to light in the Danube provinces are certainly independent of Roman influence; they may be directly connected with certain Asia Minor models. The distinguishing feature of the most important works of these artists from the banks of the Rhine and the Danube is that the central group of the bull-slaying Mithra with his two companions is surrounded by a series of accessory scenes which represent the whole cosmogony of the mysteries and the mission of Mithra, from his birth out of a rock to his assumption up to heaven (*ib.* i. 153 ff.). Then there are added astronomical images or cosmic emblems (planets, signs of the zodiac, winds, etc.).

If we subject all these scenes and symbols to an analysis in detail, we can show that the majority of them are modifications or adaptations of old Greek subjects. Thus, Ahura Mazda destroying the monsters which have arisen against him is a Hellenic Zeus hurling his thunderbolt at the giants (*ib.* i. 157). The poverty of the new conceptions which Mithraic iconography introduces is in startling contrast to the importance of the religious movement that inspired them. At the period when the Persian mysteries overspread the West, the art of sculpture was too decayed to be revived. Whereas, during the Hellenistic period, sculptors were able to conceive novel forms for the Egyptian divinities (Isis, Serapis, etc.), happily harmonizing with their characters, the majority of the Mazdean gods, in spite of their strongly-marked nature, were obliged to assume, whether appropriate or not, the form and dress of the Olympian deities to which they were assimilated.

Art, accustomed to live by plagiarism, had become incapable of original invention. But if, without analyzing each scene and personage in detail, we contemplate the total effect of the work, we receive an impression of something entirely novel. The attempt to represent in stone, not only all the deities of the Mithraic pantheon, but the history of the world and of Mithra as creator and saviour, was a truly sublime idea. Even before this time, especially on the sarcophagi, we find a method employed which consists in representing

the successive moments of an action by pictures superimposed on one another or drawn on parallel surfaces; but we cannot mention any pagan monument which can be compared in this respect with the great Mithraic bas-reliefs, especially those of Neuenheim, Heddernheim, and, above all, Osterburken (*ib.* 245, 246, 251). To find a similar attempt we have to come down to the long series of subjects with which Christian artists in mosaic adorned the walls of churches.

If we wished to criticize the details of these sculptures, it would be easy to censure in them the disproportion of certain figures, the clumsiness of some movements, the stiffness of some attitudes, and, above all, the confused impression arising from the superabundance of personages and groups. This last fault of overloaded composition is one which the Mithraic monuments share with the contemporaneous sarcophagi. But in criticizing these remains, it must not be forgotten that painting came to the aid of sculpture. The strong contrast of colours emphasized the principal outlines, and threw accessory parts into prominence. Often certain details were indicated only by the brush; and gilding also was used to set off some subsidiary parts. Without such a brilliant combination of colours the piece of statuary would have been almost invisible in the deep shadow of the subterranean crypts. Such a device, moreover, was one of the traditions of Oriental art, and Lucian (*Jup. trag.* 8) had already contrasted the simple and graceful forms of the Greek deities with the startling gorgeousness of those imported from Asia.

In spite of the numerous suggestions which it has borrowed from the treasury of types created by Greek sculpture, Mithraic art, like the mysteries of which it is the expression, remains essentially Asiatic. The idea with which it is mainly concerned is not to produce an æsthetic impression; it aims principally at arousing religious emotion, not through the perception of beauty, but rather by recalling to the mind sacred legends and teachings. Faithful in this point to the traditions of the ancient East, it confines itself to relating and instructing. The medley of personages and groups with which some bas-reliefs are thronged, the host of attributes with which the figure of Eternity (see above) is overloaded, show us that a new ideal was born with the new religion. These ungraceful or tasteless symbols, the lavish use of which is attested by the monuments, did not charm by their elegance or their dignity; they fascinated the mind by the disturbing attraction of the Unknown, and aroused in the neophyte a reverential fear in face of a tremendous mystery. They were, as St. Jerome says (*Epist.* 107 ad Lætam), 'portentosa simulacra.'

Here, above all, is to be found the explanation why this art, extremely refined as it was, in spite of all its imperfections, has exercised a permanent influence. It was linked to Christian art by a natural affinity, and the symbolism which it had helped to make popular in the West did not perish with it. Even the allegorical figures of the cosmic cycle, which the devotees of the Persian god had reproduced in such abundance (for they regarded the whole of nature as divine), were adopted by Christianity, although really opposed to its spirit. Such were the images of the earth, the sky, and the ocean; the sun, the moon, the planets, and the signs of the zodiac; the winds, the seasons, and the elements; which occur so frequently on the sarcophagi, the mosaics, and the miniatures. Even the mediocre compositions which the artists had conceived to represent the incidents of the Mithra-legend were able to inspire Christian artists. Thus the figure of the sun raising Mithra out of the ocean served to express the ascension of Elijah in the chariot of fire; and, down to the Middle Ages, the figure of the bull-slaying Mithra was perpetuated in the representations of Samson rending the lion.

LITERATURE. — F. Cumont, *Textes et Monuments figurés relatifs aux mystères de Mithra*, Brussels, 1899, i. 213–220 and *passim*; E. Strong, *Roman Sculpture from Augustus to Constantine*, 1907, p. 309 ff.

F. CUMONT.

ART (Muhammadan). — **1. Introduction.** — Our researches into Muhammadan art are as yet entirely in their infancy. So far, the historical inscriptions are only being collected, and this undertaking, upon which M. van Berchem is still engaged, is a necessary condition of all historical study in this field. It is much to be desired that, by way of supplementing this, some one would group together the literary sources which bear upon graphic art in Islām. The bibliography at the end will show that, although we possess several comprehensive writings in this department, we have very few such treatises upon Muhammadan works of art as are serviceable for scientific investigation. The present position of our researches is conditioned by the fact that no Arabic scholar has made himself proficient in the department of graphic art, while the three or four historians of art who deal with Islām at all, have only the most meagre acquaintance with the language and culture of its adherents. In the circumstances it is not to be expected that the present article should do more than acquaint the reader with the outstanding facts of the subject in their relation to religion and ethics. The writer, indeed, feels more inclined to point out the *lacunæ* than able to fill them up. His purpose is not so much to supply adequate information upon the subject proposed, as to provide the reader with a general conspectus of Muslim art.

2. Pre-Muhammadan data.—The most important of these is the action which forms the inevitable adjunct of the Muslim's every prayer, viz., the turning towards Mecca. It does not fall to the historian of art to establish the origin of this custom of turning in a certain direction, or to decide whether it was not simply a transference of the practice of orientation by the sun, as was observed also by the Christians, to the new religious centre. So long as Muhammad had regard to Jews and Christians, it was towards Jerusalem that he turned; it was only at a later stage that he made Mecca the cynosure. We speak of Mecca therefore as pre-Muhammadan only in virtue of its having been a religious centre, and not because the Muslim turns his face towards it during prayer.

Mecca can hardly be said to have any further significance in regard to graphic art. As the Ka'ba lies in the centre of the temple-enclosure, and has not, like the mosque, a definite direction at one side, it naturally dropped aside as a pattern for the mosque. On the other hand, we may surmise that in this most important focus of pilgrimage in Arabia, some kind of monumental relic must have existed from the earliest times, even before Muhammad's day. We may imagine it to have been something analogous to the Qubbat aṣ-Ṣaḫra in Jerusalem, *i.e.* a centrally situated cupola-shaped building. At the present day the temple appears as a quadrangular open court, in the middle of which stands the 'Cube' with the Black Stone. Around this there has been laid out a circular area in the court, which may indicate the form of the earlier cupola-shaped structure. The Qubbat aṣ-Ṣaḫra is surrounded by a corresponding quadrangle.

3. Muhammad. — Had Muhammad not been forced to flee from his native city, it is probable that the mosque would have taken a form somewhat different from that which prevailed before the emergence of the *madrasa*, and apart from the influence of Christian architecture as applied to

churches. As Muhammad, however, established his place of prayer in Medīna, and was also buried there, this most unpretentious beginning gave the initiative to the architecture not only of places of worship, but also to some extent of tombs. Samhūdī, in his *History of the City of Medina* (ed. Wüstenfeld, in *Abhandl. d. Ges. d. Wissensch. zu Göttingen*, ix. [1860] 60), tells first of all how Muhammad obtained the site for his mosque, and proceeds as follows: 'Upon this the edifice of bricks was built, palms were used as columns, and a wooden roof was fixed above.' This mosque had three entrances—one at the back, which was built up when Muhammad began the practice of turning to Mecca instead of Jerusalem, the others being the Gate of Mercy and the prophet's private door. After the conquest of Khaibar the mosque was entirely re-built, being enlarged to twice its former size. Some idea of the interior is given by the position of the column beside which Muhammad prayed: 'It was the central column of the mosque, the third forward from the *minbar*, the third from Muhammad's tomb, the third from the south side, the third from the main road before (as Ibn Zabāla states) this was widened by the space of two pillars' (Wüstenfeld, 65). The columns fell into a state of decay during the Khalifate of Abu Bakr, and he had them replaced by fresh palm trunks. The most notable restoration—or re-construction—was that made by Walīd I., who was supplied by the Emperor of Greece with Greek and Coptic artizans, as well as with mussel shells and money. Walls and columns were built with hewn stones of equal size, and cemented with gypsum; decorations of shell-work and marble were introduced, while the roof was constructed of palm and coated with gold-colour. When Walīd inspected the completed work in 93 A.H., he exclaimed, 'What a contrast between our style of building (*i.e.* in Damascus) and yours!' to which the reply was, 'We build in the style of the mosques, you in that of the churches.' Beyond this single reference we have nothing from which to form an idea of the mosque of Muhammad as a whole, or of its imitations. We shall presently return to this.

Of the sacred accessories belonging to the interior of a mosque, such as the niche for prayer (*miḥrāb*), the platform (*dikka*), etc., the only one which we can trace to Muhammad himself is the *minbar*, or pulpit (Becker, in *Orientalische Studien Nöldeke gewidm.* 331 f.). In ancient Arabia the *minbar* was the judge's chair, but as Muhammad advanced from the position of judge to that of ruler, this originally very simple piece of furniture with its two steps became more and more of a throne. A fresco on the inner front wall of Quṣair 'Amra represents one of the first Khalīfs, or perhaps Muhammad himself, seated on a throne. As this, in view of the command against images, may well give rise to fruitful discussion, we give a reproduction of it (fig. 1, p. 897). Over the enthroned figure is a baldachin with a Kufic inscription, which is unfortunately so much abraded that only the closing words are now legible: 'May God grant him his reward, and have compassion upon him!' The personage thus pictured—with red beard, and the saint's *nimbus* about his head—must accordingly have been dead, and cannot have been, as one might naturally think, the Khalif then reigning. The figure beside the throne holds the lance—a recognized emblem in Islām to the present day; a woman with the *nimbus* is represented on the right, applauding. The design of the enthroned figure may be traced to the *Christus-Pantokrator*; in this case it will then be the Qur'ān, not the Gospels, upon which the left hand is placed. Beneath the great throne is seen the barge of the dead. At the time when this fresco was introduced, *i.e.* subsequent to 100 A.H., the *minbar* can scarcely have had the same appearance as that shown in the illustration. As a matter of fact, the pattern furnished by Muhammad for the mosque and the *minbar* alike was framed with a view to mere utility, and the artistic elaboration thereof belongs entirely to a later period; for Muhammad had even less interest than Jesus in the graphic arts. His attitude towards figure-painting was one of avowed hostility; thus he once remained standing before the house of 'A'isha until a curtain ornamented with figures was removed, and he threatened those who made images with the direst penalties in the world to come. It was therefore impossible that art in Islām should develop the same didactic tendency as it did in early Christianity, in which the representation of figures was expressly utilized as a means of instructing those who could not read.

4. The Umayyads.—It was under these rulers that foreign culture began to stream in upon Islām. Even the mosque did not escape the general transformation, and its original design of simple convenience was left behind. The incentive to the desire for something more was first given by contact with Christianity. At the conquest of Damascus, the principal church of the city, that of St. John, was divided. Apparently it had then the same form as now: a dome in the middle, contiguous basilicas to east and west, and a pillared court to the north fronting the whole. At first the Muslims laid claim only to one of the basilicas; it was Walīd I. (A.D. 705–715) who first transformed the entire edifice into a mosque. Of this 'church-design' of mosque, except in Damascus, only two examples are now known, viz., the great mosque of Diarbekr, dating from the 12th cent., and that of Ephesus, from the 14th. Its nucleus was a Christian *martyrium* built over a pagan sanctuary, around which in time several churches were grouped, as was the case with the Holy Sepulchre in Jerusalem, the church at Nola, the church at the tomb of Menas, and the twin-churches at Ephesus.

The 'mosque-design' has no connexion with church architecture. It is certainly believed by some to be traceable to the plan of the forecourt attached to the Church of the Sepulchre in Jerusalem, of which the Muslims made a mosque for themselves; but in reality the *atrium*, or forecourt of the Christian church, still corresponds most nearly to the 'court-design' with the well in the centre. It is probably the case, however, that between the Christian *atrium* and the Muhammadan mosque there is an intermediate form—some primitive Asiatic type, such as a court with hall adjoining. The mosque exhibits this type in purer form than the church; the columnated halls, for instance, which enclose the court, grow more numerous in the direction of Mecca. Muhammad's mosque in Medīna was most probably of this form; as it stands to-day it is quite in accordance with this supposition, though, of course, it has been several times re-constructed.

The Umayyads, in building such mosques, had probably to avail themselves of columns taken from ancient or Christian ruins. Muhammad himself had used palm-trunks, and had thus left no established precedent. The oldest mosques, or at least those which survive in their rudimentary form, such as the ruins of Baalbek and Bosra, the 'Amr mosque in Old Cairo, and the great mosques of Kairwan and Cordova, are virtual column-museums, something like the façades of St. Mark's in Venice. Such embellishments have only a negative bearing upon the characteristic quality of Muslim art. As an example of an interior constructed of columns from ancient and Christian buildings, we give a view of the mosque at Kairwan (fig. 2, p. 898). Here we see a forest of columns in front; behind, to the right

of this, extends the entrance wall, beside which large chandeliers are suspended between the columns, the mid-passage running thence to the *qibla*. The arches run parallel to the line of this passage; in this instance they are rounded, though as a general rule they are pointed, and disproportionately high. The variously moulded capitals are linked together by anchors, while a wooden roof is placed over the whole. Such was the prevalent type of the Muslim place of worship in early times.

From the 1st cent. A.H. come other two buildings. One of these, situated in Jerusalem, has long been known; the other has been recently discovered by an Austrian research-party. The first, the Qubbat aṣ-Ṣaḫra upon the Temple hill, is not a mosque, but a memorial edifice. Above the rock with its caves rises a dome supported by four pillars, between every two of which stand three columns. Two circular passages with eight pillars, and two columns between each pair of these, lead over to the octagonal surrounding wall. Of the original fabric erected by 'Abd al-Malik in A.H. 72 (A.D. 691) very little remains; the columns still retain vestiges of the Cross upon the capitals, and must therefore have been taken from some Christian building, while the exceedingly valuable mosaics of the passage are of Persian origin.

On the other hand, the second monument referred to, a secular structure known as Quṣair 'Amra, and situated in the desert adjoining Moab, is pure Syrian in character. Attached to a small bath is a hall roofed with three parallel tunnel-vaults, and showing on the south two apsidal chambers, the niche between them having a straight front-wall directly opposite the entrance. The structure as a whole recalls the type of tunnel-vaulted churches indigenous to the interior of Asia Minor. The paintings are most instructive, as has already been shown in the case of the fresco of the enthroned figure illustrated in fig. 1 (p. 897). They exhibit Umayyad art in the full current of the Hellenistic style; the frescoes of the bath-chambers might well be counted as ancient. The pictures in the hall are of far-reaching significance, furnishing the best exemplification of the tendency which, while opposed to all worship of images, was again adopted by the image-breakers in Constantinople, and which, after the example of the Assyrian relief, became associated rather with the portrayal of landscape, and of hunting and fishing scenes, instances of these being found likewise in the early Christian art of Syria and its offshoots.

We must now call attention to the fact that in 'Amra, among scenes of hunting, fishing, and bathing, there have been introduced two pictures which, from the standpoint of religion and ethics, may well evoke much controversy in the future. Upon the front wall of the niche, opposite the entrance, appears the figure of the man seated on a throne. But it is the other picture which calls for explanation from the Muhammadan point of view; its subject is the princes overthrown by Islām, viz., the Emperor of Byzantium, Chosroës of Persia, the Negus of Abyssinia, and Roderick of Spain. How are these pictures to be brought into accordance with the interdict against graphic representation, and in what sense are we to interpret them? The picture of the Khalīf upon the throne undoubtedly gives the impression of its being a devotional piece, but that of the conquered princes can scarcely be explained in a similar way.

The Umayyads have also in recent times been spoken of as the builders of a number of large and beautiful castles in the desert, situated in the neighbourhood of 'Amra, but more towards the inhabited country. These have been made known chiefly by the large Meshīta façade which the Emperor of Germany received as a gift from the Sultan and placed in the Berlin Museum. In these castles the present writer discerns structures so unmistakably of a Persian character as to suggest conditions which would allow of a closer connexion with Hira or North Mesopotamia. Both Meshītā and Qaṣr-aṭ-Ṭūba are immense fortified royal seats, surrounded by groups of plots, and resembling those found in the Sasanian fabrics of Mesopotamia. Both are unfinished, and their respective porticoes bear the same kind of decorations, amongst which the Persian wing-palmette amid vine-tendrils characteristically recurs.

5. The Abbāsids.—The shifting of the centre of the Muslim world from Damascus to Baghdad had very important consequences for the development of graphic art, as the Syrian, *i.e.* the Hellenistic-Christian, factor now fell into the background, while the Oriental came to the front. In the latter, it is true, there is always a double strain: on the one hand the Assyro-Sasanian tradition, and on the other a drift in part still older, which may possibly have come in with the Parthians, and certainly found a channel in the immigration of sporadic parties, or even of whole tribes, of Turks from Central Asia to Persia and Baghdad. For the remote part of Western Asia this drift has all the significance of a barbarian invasion of a long established civilization, such as was experienced by Rome at the hands of the Germans. The Turks and the Germans were in fact the emissaries of an inchoate 'Hinterland' culture, which had been quite overshadowed by the hothouse growth of Egyptian, Babylonian, and Greek art, but which, when the representatives of the older refinement began to flag, came once more into the foreground. We must likewise bear in mind the gradually weakening influence of early Christian art, as also the growing potencies of the Chinese factor.

(*a*) *Persian elements.*—A wholly unique type of mosque is found in Mesopotamia. Here again, indeed, we have the arcaded court, with the open hall lying towards Mecca, but, in keeping with the nature of the country, the supports are formed not of columns but of brick pillars. In consequence of this, and because walls, pillars, and arches are now uniformly ornamented with stucco-work, the mosque assumes a most characteristic appearance, known to us until recently only from a mosque in Cairo erected in *c.* 870 A.D. by the Ṭūlūnids, who came from Baghdad to Egypt. It has lately been shown, however, that the mosque of Ibn Ṭūlūn was built upon the model of the mosque of Samarra, as had been stated by early Arabic writers. Moreover, in Abū-Dilif, 15 km. to the north of Samarra, there still stands a mosque which agrees with that of Ibn Ṭūlūn even in the number of its supports. Of this example of the unique character of Mesopotamian mosques we give an illustration from the survey of General de Beylié, which shows the entrance-wall opposite the *miḥrāb* (fig. 3, p. 898). Here we see pillars composed of brick, with hewn-out ornamental niches, and united by arches, the springers of which still remain. The side arches leave the view open towards the surrounding wall of the mosque, and through the central arch appears the spindle-like minaret.

Even this peculiar and fantastic minaret at Samarra has been copied in the mosque of Ibn Ṭūlūn at Cairo by the erection of a winding staircase on the outside. Elsewhere the stair is for the most part on the inside, and the minaret, which is used for calling to prayer, is outwardly smooth, whether rounded or quadrate. In the period of the Fāṭimids, buildings were constructed not only in the older style prevalent along the Mediterranean seaboard, *i.e.* with columns (*al-*

ashār), but also according to the Mesopotamian mode, *i.e.* with pillars (*al-hakam*). In both styles, however, the ornamentation was of the same kind. We shall return to this, but meanwhile we must speak of the accessories of worship.

There is first of all the *qibla*, or the direction towards Mecca, which is determined by a niche (*miḥrāb*) in the wall, very small in comparison with the great apse of Christian churches, and aligned with one or two columns. Of the origin of the *miḥrāb* we have no certain knowledge. It appears to have been originally made of wood. In Cairo three ancient wooden niches with beautiful ornamentation are still to be found. The typical form was already in use in the Khalīfate epoch of Baghdad; that period, at all events, exhibits the niche let into the wall, with bounding columns at the corners—a design which emerged in the East in Hellenistic times, and which had great vogue in the later period of ancient art, especially in Syria and Asia Minor. The graduated columnar porches of Western architecture likewise find their origin here.

The *minbar* has always been constructed of wood, essays in marble or other substance being of the rarest occurrence. By 132 A.H., when all the provincial mosques received their *minbars*, it can hardly have retained its primitive form, and was certainly of a different shape from that represented in the 'Amra fresco. Its model was not the throne, but rather the Christian *ambo*, an approximation to which had gradually been developed. Numerous steps led up to the platform, and parapet and steps were richly endowed with ornaments. The oldest surviving *minbar*, that of the great mosque at Kairwan, is of plane-tree, brought from Baghdad by Ibrāhīm ibn al-Aghlab in 242 A.H. (fig. 4, p. 899).

In order to convey a distinct impression of what the art of decoration as practised by the Abbāsids in Mesopotamia could achieve, we give an illustration of the façade of the al-Aqmar mosque in Cairo, as discovered in recent years and restored (fig. 5, p. 900). According to the inscriptions, it dates from A.D. 1125. Here we already see the arrangement which also prevailed among the Seljuks of Asia Minor—a central *risalit* which stands in front of the two wings, and derives its principal embellishment from a lofty gate. We do not as yet know the source of this design. It is all the more striking as we have before us only a false façade, which has no inner apartment corresponding to it, but which is simply a high wall standing before an open court. Of still greater interest is the ornamentation upon the wall-surface. This contains designs which in all probability were originally naturalized in the Orient as stucco-work, but which are here, in Egypt, transferred to the stone in common use. The portal-niche is connected with two smaller niches on a level with the ground-floor; all three display in their arches shell-like *tori* of luxuriant outline. Here too appears, fully developed, one of the main elements of Muslim decoration, viz. the *stalactite*. We find stalactites upon the side portals, taking the place of mussel-panelling, and also as a surface-decoration above the little niches beside the main porch, while they appear in their proper and original function on the corners of the building, where in two rows of niches one above the other they form a beak. The design of the niche with inserted columns is often applied to the upper wall; the little columns on the central *risalit* already show the bell-form which came with the Ṭūlūnids or the Fāṭimids from Persia to Egypt. Along the upper extremity of the façade, which is filled out with ornaments of rosettes and lozenges, runs an inscription-frieze.

The present writer regards these stalactites as a characteristic deposit of Muslim ethics in the field of graphic art. In them constructive restraint, *i.e.* the best and obligatory design, is surrendered in favour of a freakishness capable of endless variation, which becomes all the more interesting by reason of the limitations laid down by the spatial form. The stalactite, rightly regarded, is of purely constructional origin. It served originally, as a single niche, the same purpose for which the Byzantines used the so-called pendentive, *i.e.* the filling-out of the corner which remains open when a round cupola is placed upon a square substructure. For this, later Hellenistic architecture had a definite, mathematically accurate, solution in the sector of the vault of the circumscribed circle; in Persia, on the other hand, the custom was to place a niche in the angle. Instead of the single niche, however, we occasionally find three, combined as already noticed in the case of the al-Aqmar mosque, or, more frequently, in the inverse position, one below and two above. Next a further row, of three, came to be added, thus making a group of six; then a row of four, making ten, and so on. This embellishment of the cupola-wedge was transferred to portal-niches, then to surfaces, and in this way was obtained an ornamentation which always indicates a terminal line or a transition (cf. on this point the works of Bourgoin).

This delight in the spinning out of fortuitous conceits likewise brought to maturity the second style of ornament typical of Muslim art, viz., the *arabesque*. In this also the distinctive feature is that from a theme originally given—some natural object in the present case—certain elements are grouped by the imagination to imitate nature, and for this end new themes are introduced, with which, as with conventional numbers, endless combinations may be made. As the present writer has shown in the *Jahrb. d. preuss. Kunstsammlung*, XXV. (1904), p. 327 f., the arabesque takes its inception from the Hellenistic vine-branch. In the later period of ancient art this became the most popular pattern for striated or superficial decoration. The development towards the arabesque begins when the artist divests the vine-leaf of its natural form by superimposing other leaves, or a triad of globules, upon the diverging point of the ribs, or when, further, he makes the leaf tri-lobed instead of five-lobed. But the actual transformation consists in the application to the vine-leaf of the lobate form which may really be described as the artificial flower of West-Asiatic art, *i.e.* the palmette. The vine-tendril moulded after the palmette—this is arabesque. The development proceeds in virtue of the fact that the palmette can be split up either into halves or into single lobes; while each of these lobes again may be expanded, and give rise to new ramifications. The façade of A.D. 1125, in its details, furnishes illustrations of the initial stage of this whole development: here the branch shows more of the Persian than of the Arabian form. On the other hand, fig. 6 (p. 900), representing a wooden tablet in the K. Friedrich Museum in Berlin supposed to date from A.D. 1125, exhibits all the stages side by side—the five-lobed vine-leaf with and without the grape-cluster, the trifolium, all kinds of ramifying palmettes, and also the palmette itself with ornamental branching.

In this tablet the divided palmette in the centre is surrounded by a ten-angled star which obtrudes itself into the marginal bands both above and beneath. This brings us to the third class of specifically Muhammadan ornament, viz., *polygonal lace-work*. It is already to be seen on a closer scrutiny of the Cairo façade of A.D. 1125—appearing as striated decorations in the lozenges of the surface-niches, above to the left; but here they show rather the older double-stripe design which was common also in ancient and Christian art. The

distinctively Muslim variety, as we think, shows in its origin the influence of the Turkish-Mongolian nomadic races, who eventually brought the Khalifate to an end (A.D. 1258).

Before dealing further with this subject we may draw attention to the influence exerted upon the development of Muslim art by religion and ethics —an influence revealing itself in the fact that the ornamentation of sacred buildings embraces no representation of living objects. The wonted Mesopotamian type of decoration consists in overlaying the walls, pillars, and arches with stucco ornaments. We are cognizant of no instance whatever in which this architectural decoration contains the figure of man, animal, or bird. The mosque of Ibn Ṭūlūn in Cairo; the Church of Abbot Moses of Nisibis in the Syrian monastery of the Nitrian desert, which was stuccoed by Mesopotamian artists; Maqām 'Alī itself, on the Euphrates; Samarra—in none of these have we a trace of a living creature figured as an ornament. In this period, therefore, the commandment against the use of figures in sacred buildings would seem to have been stringently enforced. The ornaments are composed of half or whole palmettes, which are connected with one another by spiral designs, and thrown out by indentations so as to form independent configurations. To these again are added designs which are traceable in the main to the stucco-technique in its capacity to suggest the dark effects of depth. Symbolical figures, such as were favoured by Sasanian and Christian art—the crescent, the star, the wing, etc.—are entirely absent so far as religious art is concerned. If we would adequately appreciate the authority thus attaching to the precepts of religion in the sphere of graphic art, we must keep before us the delight which the Orient has always found in the mystical and symbolical use of animal forms, as is in fact exemplified by the extreme frequency with which such figures are employed in the secular art of Islām itself.

(*b*) *Turkish elements.*—One of the most singular notions still current, and one to be explained only on the ground that our vision has been deranged by our immemorial habit of seeing everything in the light of Græco-Roman institutions, is that the migratory races, whether Germans or Turks, were destitute of all art. This is to forget that the Goths brought with them into Italy a highly-developed culture, acquired upon the Greek coast of the Black Sea; and the like holds good of the peoples who forced their way from Central Asia into Persia, and who had thus passed through, or temporarily settled in, the long-civilized region beyond the Caspian Sea. Think of the discoveries in Hungary, telling of the time when the Magyars took possession of the country. This equestrian people came from the territories lying between the Altai and the Ural without coming into contact with Transoxiana; nevertheless their taste in decoration was well developed. How much more are we entitled to look for æsthetic proficiency amongst the peoples who had not only lived at close quarters with the Samanids or the Ghaznavids, but who, as, *e.g.*, the Seljuks, had made themselves masters of their lands before they conquered Persia and Asia Minor. In Egypt the new conditions were ushered in under Saladin, and continued during the period of the Turkoman and Circassian Mamlūks, until, in 1517, the Turks proper gained the upper hand.

It is worthy of remark that with the advent of the Turkish tribes are conjoined two types of building of which there are no surviving examples from Umayyad or early Abbāsid times: the large cupola-domed *mausoleum* and a new type of mosque-school, the *madrasa*. As regards the mausoleum, there is no doubt that it had already been roofed —by Constantine or even before his day—with cupolas. But a gigantic fabric of brick, such as the tomb of the Sultan Sanjar in Merv, dating from 552 A.H. (A.D. 1157), is, of course, hardly to be compared with the finely articulated edifices of Christian times. We must never forget, however, that the tombs of the Umayyads were violated by the fanaticism of the Abbāsids, or that the only tomb known to exist in the neighbourhood of Baghdad, that of Zubaida, the favourite wife of Harūn al-Rashīd, bears a curious niche-pyramid, which hardly permits of comparison with the later buildings. It is true that pyramids are found also upon the mausoleums erected in A.D. 1162 and 1186 by Seljuk Atabeks in Nakshevan, on the Perso-Armenian frontier, but these are supported by a dome-shaped vault, the walls of which are embellished with polygonal ornaments of mosaic work in stucco bricks. One of the far-famed sights of Cairo is the Necropolis, the so-called Tombs of the Khalīfs and Mamlūks (fig. 7, p. 901), which in their picturesque construction invite comparison with the massive forms of the pyramids on the opposite bank of the Nile. The mausoleums of Islām are so arranged as to permit of being dwelt in by the family of the deceased at certain seasons of the year. An even more magnificent effect, however, than that of the Necropolis of Cairo is made by the sepulchral mound of Shah Zindah, near Samarcand. The huge mausoleum of Timur (†A.D. 1405), which the terror-inspiring Mongol leader had built in his lifetime, and which is now known as the Gur Emir, lends signal distinction to the whole district. As a work of art, however, it is surpassed by the sepulchral mosque of Khudābandakhān in Sultanīya (A.D. 1304–1316), which, like the mausoleum at Merv, presents on the outside an imposing arcade style of architecture. It can hardly be a mere matter of chance that these three most important sepulchral edifices should be found in the Caspian or Trans-Caspian area.

The second architectural form which first came into general use subsequently to the incursion of the Turkish tribes, viz. the *madrasa*, likewise evolved a capacity of being applied to great monumental structures. An example of this type may be seen in the illustration (fig. 8, p. 901) of the mosque of Sultan Ḥasan in Cairo, erected in A.D. 1356–1359. It was the Ayyūbids who instituted such college houses in Egypt. The *madrasa* expresses the idea that, in order to correspond with the four sects of Islām, four separate wings are required, viz. *Madrasat al-Ḥanifīya*, *al-Shāfi'īya*, *al-Ḥanbalīya*, and *al-Mālikīya*. This plan of associating four schools in one building was carried out in a very ingenious way, namely, by planting them respectively in the four angles of a cross, which was formed by four tunnel-vaulted arms converging upon the open central court. Were the tunnels of this cross all of equal length, and were a cupola placed over the small court, we might fail to discriminate between this form of building, in its general plan at least, and the cruciform church with a dome. As, however, the central square is open to the sky, and the four aisles are often of very different lengths, such an identification is out of the question. We incline to believe that the plan of the *madrasa* is in its essentials of very remote origin. It is resorted to in the construction of a gateway for the citadel of 'Ammān in Moab, and was no doubt often used in Sasanian palaces. It is accordingly a Muslim construction only in so far as it has been transferred to the institution of the four sects, and elaborated in accordance with the requirements thereof (see ARCHITECTURE [Muh. in Syria and Egypt], p. 757).

This remarkable construction impresses the native of the West as being more decidedly Oriental than even the mosque. Picture these huge tunnels, vaulted mostly in the pointed style, and strengthened by the schools built into the corners like immense supports, and yet without anything to sustain; it is the spirit of the stalactite without architectonic motive, and of the vine-branch without the link with nature. Further, in Egypt at all events, there is something which must cause the utmost amazement, viz. the 'High Gate,' or portal-niche. The niche of the mosque of Sultan Ḥasan in Cairo, built in A.D. 1356–1359, *c.* 26 metres in height, has been cut out of a wall which rises 37·70 metres above the level of the street, and is not accommodated to the main feature of the edifice as a whole, *i.e.* it does not correspond with the *qibla*, but has a relation to the line of the street, being placed in a corner obliquely to the longitudinal wall, so that any one entering the vestibule can reach the central court only by way of various narrow passages. We might all the more expect to find an axial design in the main ornament, viz. that of the porch, as the immense dome of the builder of the mausoleum towers aloft exactly in the axis behind the *miḥrāb*. This ignoring of systematic design is peculiar to Egypt, and is not found, so far as the present writer knows, in other Muslim lands, while, especially in Asia Minor, the *madrasa* is always arranged symmetrically about the central axis.

Meanwhile we must say something regarding other innovations, which make their appearance subsequently to the ascendancy of the Central Asiatic element in the Muslim world. The astonishing growth in the popular use of polygonal ornamentation already touched upon may possibly be attributed to the preference for geometrical decoration which is characteristic of nomads. Even upon the *minbar* of Kairwan, constructed probably in Baghdad in 242 A.H. (fig 4, p. 899), the double-striped lace-work in straight or curved lines so largely predominates that we can scarcely reconcile its vogue with our wonted conceptions of Sasanian and early Muslim art, in which it is rather the palmette that prevails. But, by the time when the Oriental element re-emerged from the obscurity in which it had been embedded for centuries, Hellenistic art must already have returned, more decisively than ever, to the style of the geometrical lace-work. This reversion to the primitive, then, finds ample scope for development among the nomads from Central Asia, whose taste was still in thrall to the lace-work, as to the material generally, and to caprice.

Since, in the art ancillary to the cultus, *lace-work* takes the place of animal ornament, it demands some notice at this point. As an illustrative example, we reproduce a detail of the *minbar* (A.D. 1168–1169) of the al-Aqṣā Mosque in Jerusalem (fig. 9, p. 902). Here we have a piece of work in wood and ivory, by an artizan from Aleppo, so complicated in its construction as to be hardly intelligible to Europeans. We perceive arabesques of ivory in the middle of both the vertical mouldings. On either side are polygonal decorations, composed of purfled mouldings in wood and fillings of ivory. From the corners which form the foci of the main lines we may be able to infer the class of polygon upon which any particular play of lines is designed — whether it is the hexagon, the one mainly resorted to, or some other fundamental figure. The discovery of this, however, merely gives us the key; the endlessly varied ways in which the purfled fillets intertwine and intersect, leaving, in ordered repetition, free spaces, which in turn are filled up with relief arabesques or coloured inlaid work, can scarcely be resolved. All this is an expression of the same exultation in elaborating designs obtained mathematically or fortuitously as was to be seen in the case of the stalactite. The fly-leaves of the Qur'ān exhibit first-rate examples of such artifices. There, indeed, they are in their right place, as in them and in the caligraphic amplification of the writing a compensation had to be found for the absence of the human form.

(*c*) *Chinese elements.*—We are not accustomed to regard China as the source of a contribution to Muslim art. Chinese elements, nevertheless, may already have found admission in Syria, as they certainly did, more powerfully, in Persia, and finally, in all probability, through the influence of the on-coming Turks. From early notices of silk as a Chinese product, and of silk materials in Egypt and in mediæval Europe, it is easy to show that in the later ancient and the Christian period there was commercial intercourse between Syria and China. In Persia during the Abbāsid dynasty the influence of China begins to be felt even in architecture, and unmistakable evidences of this influence are seen in the Talisman Gate of Baghdad, completed in 618 A.H., as well as in two reliefs of winged figures dating from about the same time. These works become intelligible only in the light of facts which were afterwards made plain by the Oriental carpet. Thus both the examples just cited as bearing upon the field of architecture find their immediate explanation in the enormous carpet now in the possession of the Emperor of Austria and known as the 'Vienna Hunting Carpet.' The illustration of this (fig. 10, p. 902) shows, in the borders, winged genii, and, in the angles of the inner field, the Chinese dragon struggling with the phœnix. The manner in which the plant-designs and the Chinese cloud-design are wrought out leave us in no dubiety regarding their origin. Yet the carpet was manufactured in Persia, as is evinced, to say nothing of the workmanship, by the hunting scenes in the inner field, where Persians with turbans and heron-feathers are shown on horseback engaged in the chase. Chinese traits are visible also in the drawing of the figures.

This brings us to the most interesting fact of all in the development of Perso-Muslim art, viz. the resuscitation of figure-representation as a result of Chinese influence. Reference has already been made to the illumination of Qur'ān manuscripts, from which figures are entirely absent. This does not entitle us, of course, to assume their absence from other classes of literature. There exist, however, a few miniature manuscripts which are decorated in the style usual in Armenian and Coptic writings. But the great majority of Persian illuminated manuscripts, and precisely those which are most valuable in an artistic sense, display alike in landscape and in figure the identical type of representation which, judging from the earliest Japanese and Chinese works of art of the class that imitates nature, we recognize as belonging specifically to the Far East. Moreover, as recent researches make it credible that the cavalier and love poetry of the earlier mediæval period in Europe caught fresh stimulus from the Perso-Muslim world with which it came into touch on Spanish ground, it cannot but amaze us to encounter, in Persian manuscripts, illustrated with designs developed in China, the very spirit known to us directly in our own literary history. In one province of Muslim art, therefore, viz. the secular, a sphere is found for a creative impulse which works freely in the expression of all human feeling, thus forming a vivid contrast to the sacred art which was fettered to the interdict against 'graven images.'

The case is somewhat different in regard to the portrayal of animals and animal fights, hunting

and drinking scenes, planets, Alexander upon the dragon-chariot, and the like, as seen upon the so-called Mossul-bronzes, from the middle of the 12th cent. and onwards. It is possible that the technique seen in those vessels derived its inspiration from Central Asia, while Chinese designs likewise occur sporadically; but in the main the impulse towards the representation of figures must be traced to Persian Christians. On this hypothesis alone can we explain the adoption of the late Hellenistic picture-cycle, and, in particular, the introduction of scenes from the life of Christ, which were designed for the apartments of Muslim princes. Consequently, the figures portrayed must be interpreted, not in the ethical spirit of Hellenic-Christian symbolism, but as purely decorative. The primitive Oriental interpretation of the animal fight, as symbolical of the conflict between good and evil, is simply lost.

6. Later developments.—The great mass of the Muslim memorials of art emanates from the period after the Turkish tribes gained the absolute lordship of the civilized regions originally permeated by the Syro-Persian spirit. Art was now devoted more than ever to purposes of representation and embellishment. It is therefore very remarkable that what have come down to us from this relatively late epoch are mainly mosques and mausoleums, not palaces, the Alhambra being the only one of its class. It would appear that at this time places of worship alone were built 'for eternity,' *i.e.* of durable material. In the Seljuk kingdom of Iconium (Konia) in Asia Minor this material was principally stone. The mosques and *madrasas* of Konia and Sivas have magnificent façades of the same, or of an incomparably richer, style than the façade of the al-Aqmar mosque given in fig. 5 (p. 900). The *madrasa* approximates more to the type of the arcaded court. In Persia the predominant building material was brick. The result was that every variety of the art of facing was resorted to, the walls being veneered with stucco or many-coloured bricks, or covered with faience mosaics. The native soil of such things was not Mesopotamia or Iran alone, but, as in the case of so many other features of Muslim art, Transoxiana. There, in Samarcand and Bokhara, the most marvellous erections of the Mongols are found standing to this day.

An altogether peculiar position in Muslim art was taken by the Osmanlis, from the time that they obtained possession of Constantinople. It was the Church of St. Sophia that roused them to rivalry, so that in Stamboul we meet for the second time with mosques of Christian design, as Damascus furnished us with the earliest examples. The Osmanlis, in fact, bring to completion what had been aspired to by the great architects of Asia Minor in the inception of antique art at Constantinople, viz. the construction of edifices on a scale of amplitude hitherto unknown. We feel unable to decide whether it was intensity of religious emotion that gave the incentive to the stupendous domes in Stamboul, rising above enclosures that yield a total impression of such magnificence as is unparalleled in the Renaissance and Barocco structures of the West. We may assert without misgiving that the mosques associated with the Church of St. Sophia exhibit that ideal form which, since Bramante's time, has been sought in the all-round effect of stately interiors. Thus Islām at length achieved what lay originally far beyond its range: it gave the crowning touch to the development of the art of architecture which had evolved its designs from a Hellenistic foundation.

A second triumph was won for Islām by the too little known memorials of art in India. Here again Muslim art accommodated itself to the indigenous forms—a process rendered all the more easy as the ground-plan and elevation of the mosque, and even the fantastic play of ornamentation, had already been fully evolved in pre-Muhammadan India, though, naturally, in a style different from that of Western Asia. The magnificence of the plan of arrangement in the Indian mosque constructions is almost without parallel. It is also in India that we find palaces of vast configuration dating from Muhammadan times, and thus furnishing the necessary supplement to the secular art so slenderly represented in the Mediterranean region.

The Alhambra.—To Europeans the Alhambra represents the sum and substance of Muslim art, and, in point of fact, it is really such, so far as the province of secular art is concerned. There is one thing, however, which we must not forget—a fact of decisive import for the ethical value of the whole structure, viz. that the Alhambra must be regarded, not as an independent work of architecture, but as a component part of the natural environment, which is always taken into account in the secular art of Islām, and which, in the case before us, is a park encircling the whole rising ground about the main hill. We may gain an idea of the wide expanse sometimes given to such enclosures from the Conca d'oro beside Palermo, where the palace-grounds embrace the chateaux of Zisa, Cuba, Favara, and Monreale; note, however, that a different style was adopted by the Normans in the construction of their dwelling-place, that, namely, of the fortified stronghold. But in the citadel of Granada we meet with open courts, enclosed by lath-and-plaster work, which has been preserved as if by a miracle. The first court, called the Court of the Myrtles, still retains its garden-like character; while in the second, the Court of the Lions (fig. 11, p. 903), the fountain in the centre sends out babbling streams which flow into the halls.

Then the glittering wealth of ornaments, with their lustrous colours and their puzzling variety of form! The principal designs, the stalactite, the arabesque, and the polygon, make their appearance here once more, though employed with a more uniform ornateness than in the earlier style of art. The kind of workmanship, however, to which all this exuberance of beauty has been applied, explains why it is the Alhambra alone that has survived: the arches which are finished in such a splendid style of architecture have nothing at all to sustain; they consist simply of wood and plaster, like an ornamental sign-board. The structures which lie behind this embellishment are of a very simple kind, and characteristic of the race which produced them.

The inscriptions of the Alhambra reveal a surprisingly intimate relation between spectator and ornament. Just as the Turks had the faculty of giving individuality to each one of a long series of fountains, so the Moors must have had a fine sense of the language of ornamentation. The inscriptions pertaining to the various portions of the great fabric, as well as to the various ornaments, furnish suggestive introductions to these. Thus, for example, upon a niche at the entrance to the Hall of the Ambassadors appear the words which Schack has translated thus:

'Mich hat des Künstlers Hand gestickt, wie ein Gewand von Seide,
Und mir das Diadem besetzt mit blitzendem Geschmeide;
So wie der Thron der jungen Braut strahl ich in hellem Schimmer,
Doch bringe höh'res Glück als er, es weicht und wechselt nimmer.'

Such facts of observation prompt the inquiry whether the ethical significance of Muhammadan decorative art is not of a higher order than we commonly suppose. It is our hope that the scientific research which is only now being vigorously applied to the field of Muslim art in general,

may in course of time yield fuller information on the subject than we have been able to give here.

LITERATURE.—i. *COMPREHENSIVE WORKS*: *Manuel d'art musulman*, (i.) H. Saladin, *L'Architecture*; (ii.) G. Migeon, *Les Arts plastiques et industriels*, Paris (1907).

ii. *ARCHITECTURE*: Franz Pascha, *Die Baukunst des Islam* (Darmstadt, 1896); Saladin, *La mosquée de Sidi Okba à Kairouan* (Paris, 1899); Herz Bey, *La mosquée du Sultan Hassan* (Cairo, 1899); Sarre, *Persische Baukunst* (appearing); the Russian work upon Gur Emir in Samarcand; A. F. Calvert, *The Alhambra* (London, 1907); and the recognized older literature.

iii. *DECORATION AND ORNAMENT*: Strzygowski, 'Mschatta' in *Jahrb. d. preuss. Kunstsammlung* (1904): the various works of H. Wallis, Martin, Schmoranz, and others, which are found well arranged in Migeon's *Manuel*. Inostranzeff and Smirnov have published a collection of materials for a bibliography of Muslim archæology, St. Petersburg (1906).

J. STRZYGOWSKI.

ART (Persian).—Persian art has developed more on the utilitarian side in connexion with the manufacture of rugs, draperies, embroideries, pottery, brass-work, and decorative tiles, than along the more purely æsthetic lines of sculpture and painting. Sculpture, in fact, had no chance to develop further in Persia after the Muhammadan conquest, for the teachings of the Prophet, even as modified by the Shī'ite views, to which the Iranians adhere, are adverse to representing objects that have animate life, and the Qur'ān expressly forbids the making of graven images (cf., however, preceding art, esp. p. 875 f.). In respect to sculpture, therefore, the Arab invasion marks a sharp line of division between the old régime and the new; but in other respects the history of Persian art may be traced with a fair degree of continuity for nearly twenty-five centuries.

The chief eras in the national history of the country, which it is found convenient to follow in a study of its art, have already been characterized in the article ARCHITECTURE (Persian) as: Early Iranian and Median period (before B.C. 550), Achæmenian (B.C. 550–330), Seljuk and Parthian (B.C. 330–A.D. 224), Sasanian (A.D. 224–661), and Muhammadan (A.D. 661 to the present day). As sculpture practically died out with the Muslim conquest, it may be appropriate to treat its history first, and then take up metal-work, the fictile or ceramic arts, art in textile fabrics, decorative designs, and pictorial representation.

1. **Sculpture and carving.**—(*a*) We know nothing definite in regard to sculpture or the state of the plastic art during the *Early Iranian period*, that is to say, prior to the 7th cent. B.C. Even if we consider that the Avesta in a manner represents that era of antiquity, we nevertheless can find in it no specific allusions to sculpture, unless we are to accept the theory, which has been advanced by some scholars, that images of the divine beings Vohu Manah (the Zoroastrian archangel of Good Thought) and Ardvī Sūrā Anāhitā, or Anaïtis (goddess of the heavenly waters), may possibly be referred to in *Vendīdād*, xix. 20–25, descriptive of cleansing, and *Yasht*, v. 126–129, describing the appearance of the divinity. Such an interpretation of the text, however (especially in the former of the two passages), is more than doubtful, even if we concede that images of these divinities were known in Strabo's time (*Geog.* xv. 114). It is indeed possible that some of the bronze figurines and small terra-cotta images that are now and then found in primitive burial-places, or unearthed in such excavations as those by Dieulafoy and de Morgan at Susa (J. de Morgan, *Mémoires—Recherches archéologiques*, i., viii., Paris, 1900, 1905), may go back to a remote Iranian age, but no truly archaic sculpture of any size has yet been found.

(*b*) A similar uncertainty prevails with regard to kindred objects attributed to the *Median age*, and also with regard to the huge stone lion at Hamadan. This statue is executed in the round, like the bull at Babylon and the taurocephalic capitals at Babylon (Dieulafoy, *L'Art antique de la Perse*, Paris, 1884–85, vol. iii. p. 13). Its age is a matter of debate. A thousand years ago Mas'ūdī (d. 951 A.D.) ascribed its origin to Alexander the Great, while Yāqūt (*c.* 1220 A.D.) placed it much earlier; and a number of modern scholars are inclined to assign the statue to the Median period (Jackson, *Persia Past and Present*, New York, 1906, pp. 151–162).

(*c*) The oldest identified sculpture of the *Achæmenian period* is the bas-relief figure of Cyrus the Great at Murghab, the ancient Pasargadæ. This image (which Weissbach claims to be a representation of Cyrus the Younger) must certainly have been prior to B.C. 525, when Darius succeeded Cambyses, the son of Cyrus, and transferred the royal capital to Persepolis. The figure is carved in low relief upon a large monolith slab, and is conspicuous both by reason of the curious crown, with Egyptian affinities, that surmounts the monarch's head, and because of the four magnificent wings that rise and droop from the king's shoulders—a feature borrowed from Assyro-Babylonian art. The image of Darius sculptured above his own inscription at Bisitun, or Behistan, may be dated some time before B.C. 500, and the panel on which it is carved likewise represents figures of the king's two chief retainers, together with portraits of Gomates, or the pseudo-Smerdis, and the other eight pretenders to the throne. Above the head of Darius floats an image of the god Auramazda (Ormazd) presenting him with the circle of sovereignty, or the guardian spirit of the king, as the modern Parsis prefer to interpret the image. The god is represented as a bearded figure, wearing a cylindrical head-dress, with horns, surmounted by the disc of the sun, and as swinging in a huge circle from which proceed rays of light (King and Thompson, *The Sculptures and Inscriptions of Behistūn*, London, 1907, pp. xxii–xxiii). The whole device shows the influence of Babylonia and Assyria. Of similar character are the carvings around the tomb of Darius at Naksh-i-Rustam, and upon the palace walls at Persepolis and Susa. In several of these the king is represented in the attitude of adoring Auramazda, or with his throne supported by subject nations; but the most spirited of the bas-reliefs are those which portray Darius in combat with real or mythical monsters—a *motif* borrowed, in like manner, from Assyro-Babylonian art. The same is true of the statues of XERXES, Artaxerxes I., II., III., and Darius II., III. (so far as we can identify them); but the finest of all the specimens of the sculptor's art under the Achæmenians is the frieze of the stylobate of Xerxes' audience-hall at Persepolis, representing the vassal nations bearing tribute to the Great King. Of imposing grandeur, likewise, are the gigantic winged bulls with human faces, in Assyrian style, guarding the Portal of Xerxes through which his audience-hall was approached (see art. ARCHITECTURE [Persian]). The influence that was exercised in general upon Persian art by Assyria and Babylonia during the Achæmenian period may be seen at a glance by looking over the illustrations in the standard works on Persepolis and Susa mentioned at the end of this article.

(*d*) In the *interregnum*, or Seljuk period, that followed after Alexander's invasion (B.C. 330–250) and during the *Parthian period*, little progress was made in sculpture, save that the Greek impress supplanted the Assyro-Babylonian influence, as is evident from the Græcizing tendency seen in the bas-relief heads on the pilasters of the palace-temple at Hatra, and in certain characteristics of the carved bases of the columns at Kangavar, if that temple be ascribed to the Parthian age—a

matter that is doubtful. The principal piece of Parthian sculpture, however, belongs to the middle of the period, and is that chiselled on the panel of king Gotarzes (A.D. 46–51) at the base of the Behistan Rock. Its mutilated condition, due to the fact that at some time in the first half of the 19th cent. a tablet was incised into its very middle, renders it difficult to judge of the workmanship, but the style and execution appear to show distinct traces of Roman art.

(*e*) *Under the Sasanian dynasty* (A.D. 224–661), Persian sculpture received further inspiration from Roman art through the hands of Byzantine craftsmen, and gave no mean promise of higher development; but this was abruptly cut short by the iconoclastic Arabs when they swept over the land with their Muslim hosts. In style, Sasanian art is bold, though rather heavy, like that of its predecessors, and is marked by a superabundance of decorative *motifs*, especially in the form of crimped streamers floating from the shoulders of some of the figures, or hanging from chaplets held in the hand. The examples of Sasanian sculpture are comparatively numerous, and may best be seen in the series of seven massive bas-reliefs carved below the Achæmenian tombs at Naksh-i-Rustam, or again at Naksh-i-Rajab near Persepolis, at Shapur in the south of Persia, at Susa in the south-west, Ṭāq-i-Bustan in the west, and near the plain of Salmas in the north-west. The finest among them are the carvings in the grottos at Ṭāq-i-Bustan, near Kermanshah. They represent scenes from the life of Khusru Parviz, or Chosroës II. (A.D. 590–628), and are ascribed by popular tradition to the chisel of Farhād, the royal sculptor, whose love for Shīrīn, the king's beautiful favourite, brought ruin upon the gifted artist. At Ṭāq-i-Bustan and in two of the Persepolitan Sasanian sculptures, it is thought that the figure of the god Ormazd, or possibly of the female divinity Anaïtis, is represented.

(*f*) From the middle of the 7th cent., when the Sasanian power fell before Islām, Persia produced no more sculpture, although there was an attempt at a revival of it in the beginning of the 19th cent., when Fath Alī Shah (1798–1835) caused himself to be immortalized in stone at Rai (near Teherān) and elsewhere. His sculptures show certain survivals of the style of Sasanian times, but are combined with thoroughly modern traits. One of the two panels at Rai portrays the king in the act of spearing a lion, and is spirited in execution. Unfortunately, it was carved over the space occupied by an old Sasanian sculpture, which was destroyed to make room for it.

2. Seals, gems, and coins.—Closely connected with the glyptic art in its larger application is the more minute skill shown in the cutting of seals and gems or the sinking of dies for coins. The use of seals and cylinders from the earliest times is well known, and is sufficiently illustrated by the archaic finds made at Susa by de Morgan (*op. cit.* viii. 1–27); but if we are insufficiently supplied with evidence for the Early Iranian and Median eras, there are enough Achæmenian seals and carved gems to show the height to which artistic execution in small carvings was carried in ancient days. The art has never been lost, for we can trace its development all the way through the Parthian and Sasanian ages, and no Persian to-day is without his signature handsomely engraved on a seal for ordinary use. A similar form of skill was needed in the cutting of dies for coins, as illustrated in the Achæmenian period by the *darics* from the mint of Darius. The coins that were current under the Parthian rulers indicate to what an extent Greek influence affected Iranian art, and from that time onward the various changes may be traced by the issues from the mint of each successive ruler down to the present day, when the nickel *shāhī* (worth less than a halfpenny), inscribed on one side with the Lion and the Sun, as the national emblem of Persia, and on the other with a device in Perso-Arabic script giving its denomination, is as modern in appearance as if it had been made in a European mint.

3. Metal-work.—Owing to the mineral resources of the kingdom, the art of the metal-worker may be regarded as one of the oldest in Persia (cf. Geiger, *Ostiranische Kultur im Altertum*, Erlangen, 1882, pp. 146–148, 388–390). Specimens have been preserved in sufficient number to show the development of this phase of art from Achæmenian times, illustrated, for example, by the discoveries at Susa and the finds on the Oxus, down to the present day, when the brass-beaters of Iṣfahān and the coppersmiths of Kashan turn out some of the finest examples of artistic workmanship in the form of lamps, trays, dishes, bowls, pitchers, or damascened armour, that can be found anywhere. The various pieces of Achæmenian jewellery to be seen in the museums of Europe—the nail-studded Parthian helmet in the British Museum, two beautiful cups of the Sasanian king Chosroës II. in the Cabinet des Médailles in Paris, one of them embossed in silver, the other enamelled with gold—together with many beautiful examples of Iranian metal-work of various ages to be found in the Hermitage at St. Petersburg, may be cited as typical of the range and scope which Persia had in this branch of artistic production.

4. Fictile arts, porcelain, earthenware, and ceramics.—The artistic sense which Persia developed from the earliest times in fashioning and decorating earthenware objects, and in the making of beautiful tiles for practical and ornamental purposes, is worthy of high praise. In fact, it would be impossible to cite any rival for the wonderful frieze of archers, and the lion-frieze discovered by Dieulafoy at Susa, which show the height to which art in the making and colouring of tiles had been developed even in earlier Achæmenian times. If kindred specimens of Parthian and Sasanian tiles be missing, it is only because they have not been preserved; for the art was not lost, as is proved by the beautiful turquoise tiles on the domes of the mosques from the beginning of the Muhammadan era down to the present time. On the other hand, the remarkable skill which the Persians possessed in imparting to their tiles and plaques a metallic glint or lustrous sheen, known as the *reflet métallique*, has unfortunately been lost, since it died out some time during the 18th cent., and attempts to restore it have thus far met with the poorest success. For that reason good old tiles and plaques that display the metallic lustre are rare, even though broken fragments are still being dug up in the ruins of Rai, the city which seems most of all to have developed this peculiar product.

With reference to the early development of the ceramic art in pottery and earthenware, it may be said that some of the crude jars and bowls exhumed from the ash-hills at Urumiah (see Jackson, *Persia*, pp. 90–98), like those found by Henri de Morgan in archaic burying-grounds in Gilan and Talish (see J. de Morgan, *Mém.* viii. 251–342), may date from the Early Iranian or Median period, or even earlier. The potter's art, moreover, is mentioned in the Avesta (*Vend.* ii. 32, viii. 84), and fragments of jugs and earthenware vases, with coloured traceries as a decorative design, have been found in abundance as specimens of fictile art in the Achæmenian period. The same is true of the Parthian remains discovered at Warka; and noteworthy among these are the Parthian so-called 'slipper-coffins,' made

of a beautiful green glazed ware, and decorated with a somewhat stiff small human figure, repeated a number of times. The Sasanian fondness for elaborate decoration, as evidenced in the intricate designs and flower patterns on capitals of columns and in the ornamentations at Ṭāq-i-Bustan, was shown also in their ceramic work; for it is still possible to pick up among ruins like those of the Sasanian fire-temple, or *ātash-Kadah*, near Iṣfahān, pieces of jars and bricks with decorative markings that show an artistic sense; and the potter's art, well known to all through Omar Khayyam, is actively practised to-day.

During the earlier centuries after the Muhammadan occupation, Persia's art in faience (for, strictly speaking, there is no true Persian porcelain) is believed to have received considerable impetus through importations brought from China and through Chinese artizans settling in Iran. But, whatever may have been the extent of that influence — and the influence was not without reciprocity—Persian faience never lost its marked national characteristics in shape, colour, and design. In regard to glass, we know that the glass-worker's trade is referred to in the Avesta (*Vend.* viii. 85, *yāmō-pacika*), and specimens of glass, dating back to a comparatively early period, are extant. Glass vials, thought by some to have been lachrymatories, were found among the Parthian ruins at Warka, and the glass portions of the gold-enamelled cup of Chosroës II. show that the artistic uses of glass were well known under the Sasanians; while the employment of tiny facets of mirror glass in the interior decorations of sumptuous houses has long been a favourite means of ornamentation in Persia. Glass bottles, vases, jars, and urns, generally of a bluish colour, are found in almost every age down to the present, although the glass that is used in Persia to-day is almost wholly imported from Europe.

5. Textile fabrics: rugs, draperies, and embroideries. — The art by which Persia is best known in modern times is the manufacture of beautiful textile fabrics—rugs, carpets, draperies, and embroideries. We may presume that the art of rug-making was fully developed in Achæmenian times, since Themistocles, according to Plutarch (*Themist.* xxix. 3), when first presented before Xerxes or Artaxerxes, illustrated his meaning by a simile drawn from the intricate patterns of a Persian carpet; and there is little reason to doubt that rugs were used both on the floors and for ornamental hangings in the royal palaces at Persepolis and Susa. The employment, moreover, of archaic designs, handed down by tradition in the rug-maker's conservative art (for example, conventionalized forms of the tree of life), points back to the greatest antiquity. The carpet industry is to-day widely spread throughout Persia, and among the places that are thought to produce the best rugs, both in quality and style, are the districts of Kurdistan, Khorasan, and Kerman. Aniline dyes from Europe and Occidental patterns and designs are unfortunately finding their way in to corrupt the purity of this Oriental art, but a strong endeavour is being made to preserve its native integrity and ancient prestige—a prestige recognized in all the numerous works published in the West on the subject of Oriental rugs. Among Persia's textile arts is the weaving by hand of soft white and brown felts (Mod. Pers. *namad*) for mats, cloaks, and saddle-cloths. The art is as old as the time of the Avesta (cf. Av. *nemata-*, *Vend.* viii. 1, ix. 46), and it is still carried on in many parts of the country, more especially at Hamadan, Iṣfahān, and Yazd. Mention should also be made of richly embroidered Persian shawls, delicate fabrics with elaborate designs in needlework, heavily embossed brocades, ornamental draperies and hangings, and silks of various colours and fineness of texture. Among the oldest specimens of such fabrics are the examples of Sasanian textile work in the Archepiscopal Museum in Cologne, Germany, and in the temple of Horiugi, near Kioto, Japan (cf. Münsterberg, *Japanische Kunstgeschichte*, Brunswick, 1907, p. 118, pl. 14). The introduction and development of the textile arts as well as other arts of Persia were ascribed by Firdausi (A.D. 1000) to the legendary king Jamshīd, who lived in the golden age of Iran (see Firdausi, ed. Vullers and Landauer, Leyden, 1877, i. 23, 24 [tr. Mohl, Paris, 1876, i. 34–36; tr. Warner, London, 1906, i. 32–33]).

6. Painting, decorating, designing, and the art of penmanship. — Although painting cannot be called one of Persia's special arts, the wonderful effects in colour and decorative design that were obtained by the Achæmenian artists, as shown by the tile-work discovered in ancient Susa, prove conclusively how highly developed in early times were their æsthetic sense and their productive skill. Allusion has already been made several times to the artistic manner in which they still know how to employ colour and ornamental patterns even in connexion with objects of ordinary everyday use. How far the painter's art had advanced in Sasanian times among the Manichæans (for Mani was a painter as well as the founder of a great religious sect) has recently been illustrated by the remarkable finds made in Turkestan by the expedition sent out from Berlin by the German Emperor William II. As a rule, the Persians do their best work when painting portraits and flowers, while their landscape work and perspective composition are but mediocre. Their best pictures, in fact, are those on a small scale, like the miniature portraits on papier mâché writing-cases and lacquered boxes, or on the enamelled porcelain tops of tobacco pipes; or, again, in decorative designs of roses on book-covers, for the making of which they are especially noted.

One art, however, is carried to perfection in Persia; it is caligraphy, or the art of beautiful handwriting. Originally this accomplishment as an art may owe much to Muhammadanism, but nowhere else are to be found such beautiful specimens of chirography, whether minute or large, as in Persia; and no other people are so skilled in using their alphabet for decorative purposes, as may be seen from the graceful arabesques twined about the domes and minarets of the mosques, or interlaced into monograms of wonderful intricacy. To write a good hand is an essential part of culture among the Persians, and a number of well-known authors were masters of caligraphy. Not only so, but skilled scribes have devoted infinite time to copying in luxurious style the compositions of famous Persian poets, and their manuscripts are in themselves works of art.

7. Influence of Persian art.—The influence of Assyria and Babylon, of Greece and the Roman Empire, upon Persian art and architecture during the early and mediæval periods has already been referred to more than once. The fact has also been pointed out that Persia made these borrowings and importations thoroughly her own. In mediæval and later times Persia was influenced by (and influenced) China in ceramic art, and in the non-Muhammadan representation of living beings in paintings and the like (cf. above, p. 879). If the Arabs conquered Persia, they received more in art from her than they gave, and it is probable that the arts which the Moors developed in Spain and elsewhere were largely derived from the Persians. The Mongol invaders had little if anything artistic to offer Persia, but

she imparted to them in Central Asia much from her artistic taste, in the same manner as her art penetrated deep into Northern India. In the Europe of Chaucer's time Persian blue in textile fabrics was sufficiently well known to be referred to as 'pers,' and the West to-day acknowledges Persia's supremacy in the weaving of artistic rugs and carpets. In minor matters Persian art still exercises an influence on the Occident, but not without receiving some influence in return, and this gradual infusion of Western elements will doubtless tend to grow greater as time goes on.

LITERATURE.—See the bibliographical list given under ARCHITECTURE (Persian), and refer especially to Perrot-Chipiez, *Hist. de l'art dans l'antiquité*, tome v. 'Perse,' Paris, 1890; Gayet, *L'Art persan*, Paris, 1895; Murdoch Smith, *Persian Art* (Kensington Museum Handbook), Lond., 1880; Saladin, *Manuel d'art musulman*, Paris, 1907; Benjamin, *Persia and the Persians* (chap. xi. 'A Glance at the Arts of Persia'), London, 1887; Dalton, *The Treasure of the Oxus, with Antiquities of Ancient Persia and India*, London, 1905. A. V. WILLIAMS JACKSON.

ART (Phœnician).—To express the deity with the emblems of his majesty, as conceived by the worshippers, is the highest aim of religious art, and it was apparently this that animated the Babylonians, Assyrians, Egyptians, Greeks, and Romans, all of whom have produced specimens of their skill worthy of the highest admiration. The Phœnicians, on the other hand, worshipping Baalim and Baalat, did not possess any deities sufficiently distinctive in their nature to lend themselves to representation in sculpture and painting. El, Adon, and Melek were in the same case with Baal and Baalat—terms of much too general a nature. The Babylonian Tammuz, a sun-god, who became with the Greeks a simple hunter in Syria, and Ashtoreth, the Ištar of the Babylonians, spouse of Tammuz, and goddess of the moon and of the planet Venus, form exceptions, and had their influence, though they were not the chief divinities of the Phœnicians. When, therefore, they wished to represent the divinity, the emblem which they chose was in the form of a cone, of which numerous examples exist, not only in Phœnicia, but also in the countries which fell under its influence. The two Phœnicians of Malta, Abdosir and Osirsamar, did not attempt a beautiful statue of their great national god Melqart, but contented themselves with a cone-crowned plinth which the first stone-cutter they met with was able to make.*

Whether the Phœnicians felt that something better was expected, and even needed, than the commonplace, though mystic, emblem which they had adopted, is uncertain. Knowing, however, the art of Babylonia from old time, they turned to the Egyptians for their artistic education. And here it is worthy of note that they did not borrow from them, as they might have done, the gods with the heads of all kinds of beasts, in which the Egyptians delighted, but divine types taken from the human form. From every point of view this was an improvement, for they made their deities as frankly manlike as those of the Greeks.

The cone representative of the divinity is seen in the picture of the temple of Byblos (Gebal), towering high above the entrance of the great courtyard.† This cone, though found in Carthage more often than in Phœnicia itself, must have been at one time very common as a symbol in that country. Probably some would regard it as of phallic origin, but that seems to be doubtful. It is not impossible that it had some connexion with the small *cippi* with an ovoid top found at Sidon.‡ These also recall the objects with pyramidal or hemispherical tops* found at Tharros, one of which,† adorned with the sun and the crescent moon reversed above it, is flanked by two truncated cones with mouldings at the top. In connexion with these cones, it is noteworthy that Esarhaddon possessed a large clay seal,‡ formed like half an egg, upon the flat face of which is a cone surmounted by a bird, recalling the similar objects set up in the temples of Aphrodite at Cyprus.§ This, whilst showing a connexion between the cone and the hemisphere, at the same time suggests that they are of different origin.

Esarhaddon's half-egg seal, besides giving the cone with the dove on it, has, on one side of that emblem, the sun as an eight-rayed star, and, on the other, the moon and seven globular objects, emblematic of the seven planetary bodies, which, in all probability, corresponded with the seven deities whom the Assyro-Babylonians called the *Igigi*. As the sun and the moon are often represented on the votive inscriptions of Carthage,‖ it is probable that these emblems also occurred very frequently in the art of the Phœnicians in their own country. Other emblems, however, accompany them—the triangle emblematic of the cone, the top finished with arms (bent at the elbow and directed upwards), and a circle at the top of the cone representing a head; ¶ the raised right hand, palm outwards;** the candelabrum surmounted by a pyramid;†† the staff with a globe at the top surmounted by the broken ring emblematic of the crescent moon when a mere broken circlet of light;†† the plinth with the three truncated cones †† (apparently simplified forms of the two with cornices, flanking one with a pyramid on the top, already described). Such are the simple representations of the divine which the Phœnicians, apparently when uninfluenced by the nations around, produced. It is possibly an augmentation of the feeling of powerlessness in representing the deity which made their relatives and near neighbours, the Jews, go a step further, and seek to discard every image which might seem to recall idol-worship. Even a symbol derived from a living creature was a thing to be avoided.

As a type of a male divinity more or less Phœnician in character may be mentioned Baal Hammon, who, in a terra-cotta figure belonging to the Barre collection,‡‡ appears as a man in the flower of his age, with ram's horns on either side of his head, his hands resting on the heads of the rams which form the supports of the arms of his throne. A terra-cotta figure seated on a throne seems to show Tanit, his consort, the Astarte of Carthage, holding a dove in her left hand.§§ This is very roughly formed, and was apparently one of the little statuettes made in great numbers for exportation. A strange creation on the part of the Phœnicians was the pigmy-god—a little man with exceedingly short body and legs and a very large head, holding in his left hand a shield of curious shape.‖‖ These are said to be the dwarf-gods which became the pigmies of the Greeks.

‖‖ *Ib.* fig. 22.

The inventive powers of the Phœnicians therefore tended towards the grotesque rather than the dignified and serious, and they were at their best as copyists. The upper part of the stele of Yehaw-melek, notwithstanding its weathered state, is a noteworthy specimen of their skill.* It shows Yehaw-melek, clothed in a Persian costume, standing before Baalat Gebal, the 'Lady of Gebal,' offering a dish probably containing the precious things which he presented to her. The 'Lady of Gebal,' however, is in Egyptian form and dress, seated and holding a lotus-staff. In her attributes she closely resembles the Egyptian Isis, and the style of the carving (relief within a sunken outline) shows Egyptian influence. At the top of the stele a mortice-hole indicates where the Egyptian disc with uræus-serpents was placed (probably carved in metal), and from this point curved wings sweep down on each side, like a canopy over the god and the king. A very fine specimen of Phœnician bronze-work reproduced by Perrot and Chipiez† seems to show the same goddess, the style differing somewhat from that of true Egyptian work. There is the disc, with the horns of the moon strangely shaped, surmounting her head, and the uræus rises upon her forehead. Perrot points out that, just as the type of the infant Ptah was appropriated by the Phœnicians to represent their Kabires and pigmies, so they borrowed Isis-Hathor to represent Astarte.

The pigmy-god already referred to‡ seems to be simply an exaggerated type of the Egyptian Bes, which the Phœnicians had also adopted.§ A very fine piece of glazed earthenware is that figured by Perrot and Chipiez in their monumental work (p. 408);‖ and if it really be Phœnician (it was found in Cyprus), it shows an imitative skill such as the cleverest forger might envy. Bes, with feathered head-dress, precisely as found in Egypt, is sitting astride upon a woman's shoulders. The latter, who holds him by the feet, stands upon a little lotus-pedestal, suggesting that the whole formed the top of a staff in the Egyptian style. In the opinion of Perrot, it is the woman's figure—naked, short, and broad—that stamps this work of art as being Phœnician rather than Egyptian.

But in all probability one of the finest efforts on the part of a Phœnician sculptor to produce the type of a divinity is preserved on the Stele of Amrit, in the de Clercq collection.¶ The owner called it the 'Phenico-Hittite Stele of Amrit,' on account of the group's likeness to certain rock-sculptures at Pterium, where a goddess is shown traversing the mountains whilst standing on the back of a lion. In this case it is a god wearing the crown of Upper Egypt with the ostrich feathers, and a close-fitting tunic in the Egyptian style, with a knotted girdle. In his left hand he holds by its hind legs a lion-cub, and in his right he raises a curved weapon like the so-called 'boomerang,' which the Assyrian hero of the sculptures of Khorsabad, who grasps in his arm a lion, likewise carries. His legs are thick and muscular, as in the Assyrian sculptures, and one foot is placed upon the head, and the other upon the curved tail, of the lion upon which he stands. The animal in question is represented walking over rocky ground, also indicated much in the Assyrian manner. Immediately above the deity's head is the crescent moon with the sun within; and forming an arch above his head, conforming to the shape of the stele, are the drooping plumes of the Egyptian winged disc. Except for the thickness of the legs and the shortness of the arms, the human form is well-proportioned, and the lion also is fairly good. It is therefore a good piece of work, and, whilst illustrating the art of the Phœnicians, is at the same time a symbol of their religion—a Phœnician idea on an Assyro-Babylonian foundation, and a Hittite design in an Egyptian dress.* There is nothing Greek in it—perhaps it was before contact with that nation, as the early style of the Phœnician inscription which it bears seems to imply. According to Philippe Berger, the deity mentioned in the dedication is probably Shôrbêl—a reading which Clermont Ganneau admits as possible, although he himself is rather inclined to read Shadrapha (Satrape).

There is naturally some doubt as to how far the Phœnicians, when they came into contact with the Greeks, imitated their art. That there are objects in the Greek style which are due to Phœnicians is undoubted, but they may have been merely ordered from Greek sculptors. This is well illustrated by the coin figured by Donaldson in *Architectura Numismatica* (No. 20),† where, in a Greek temple with a strangely un-Greek fan-shaped pediment, a winged Victory in purely Greek style, mounted on a pedestal, crowns with laurel a princely conqueror, equally Greek, holding a crozier. In fact, the whole coin may have been by a Greek engraver A votive stele representing a shrine,‡ which was found at Carthage, and is now in the museum at Turin, is regarded as being purely Greek work. The goddess is Persephone Cora, veiling herself as a bride, and holding in her left hand a basket of pomegranates. In the pediment above is the panther of Dionysus. Though dedicated by Melekiathon the Suffete, not only the art, but also the subject, is Greek. In Cyprus the story of Hercules was probably a favourite subject, as certain objects illustrating his tenth labour, the carrying away of the flocks of Geryon, show. In the bas-relief,§ Hercules is represented with considerable artistic skill, but the statues‖ are inferior, though some are not without merit.

The statuettes representing the worship of the power of reproduction are, as usual in the East, not in the best style of art. The mother goddess, as Perrot calls her, whether holding an infant or not,¶ is represented as thick and heavy; and the women pressing their breasts**—reproductions, perhaps, of votaries of Astarte—are far from being equal to some of the figures of a similar nature found in Babylonia. Certain figures thought to be Phœnician prototypes of the Venus de Medici are regarded as later than the Greek period, and therefore due to Greek influence. They show a female pressing one breast and hiding with the other hand the part which, in real Phœnician work, the artist intended to show openly. The best specimen†† is from Livadia, near Larnaca, and wears an Egyptian head-dress. In the purely Semitic figures, there is a direct and naïvely brutal allusion, as Perrot says, to the mysteries of fecundation and generation, but the thought which the Greek artist wished to awaken was quite different; it was Venus ashamed—the representative of woman.

Religious ceremonies are rare. One—that representing Yehaw-melek before the 'Lady of Gebal'—has already been referred to. Another—a mere fragment—seems to be simply a mural decoration.‡‡

†† *Ib.* fig. 382. ‡‡ *Ib.* fig. 81.

It was found in the neighbourhood of Tyre, not far from Adlun, and represents a personage, seated on a throne, holding in the left hand an object which cannot now be determined. Before him is a candelabrum or stand surmounted by a pan in which a flame is seen, whilst beside the throne or seat is a head with Egyptian head-dress, evidently part of a sphinx as supporter. The border-ornament recalls some of the designs of Assyria. This piece is extremely good, and shows what the true Phœnicians were capable of. Of an entirely different style is the statue of the Sacrificer, in the Metropolitan Museum, New York.* This shows a beardless man, with plump cheeks (perhaps a eunuch, as the Babylonian priests seem sometimes to have been), carrying a ram for sacrifice upon his shoulders, the feet, which come down in front, being held tightly and determinedly with both his hands. The style is that of the artists of Cyprus.

Greatly affected by the religion of the nations around, the Phœnicians absorbed from them ideas which they carried beyond the limits of their own domain. Strangely susceptible, they in like manner were strongly influenced by the religious art of their neighbours, which, when they migrated, they carried to other lands and modified. A series of different styles was the result, and the task of studying and understanding these is a long and difficult one. Nevertheless, it is a branch of archæology of considerable importance, though it must be admitted that the material from the various spheres of Phœnician influence is generally insufficient for a complete picture to be gained. The destruction of their temples and divine emblems and statues in Western Asia adds to the difficulty of the study; but the remains, such as they are, have a value quite their own, and reflect the religious feelings of a strong people who accomplished important work in their time. T. G. PINCHES.

ART (Shinto).—The genius of Shinto, like that of Islām, is adverse to the development of the arts of painting and sculpture. With few exceptions, no idols or paintings of the gods are to be seen in Shinto shrines. The deity is represented by a mirror, sword, stone, or other object, which is shut up in a box, and is never seen by the worshipper. In many cases the priest himself does not know what the box contains. In pre-historic times there was a practice of setting up a row of terra-cotta figures of men and animals round the tombs of Mikados, in substitution for an older custom of burying the servants of the deceased and other victims up to the neck, and leaving them to die and be devoured by dogs and crows. Several of these figures have been preserved in the Imperial Museum at Tokyo, and there is one in the Gowland Collection of the British Museum. They are of an extremely rude and primitive workmanship. This practice, however, does not appear to have given rise to a school of glyptic art, and in any case it is not directly associated with Shinto, which abhorred all connexion with death. In more modern times there is a custom of expressing gratitude to the Kami for answered prayer by making *ex voto* offerings to the shrine of pictures representing miraculous escapes from shipwreck, etc. Several of the more important shrines have galleries for the reception of such mementoes. They have no great importance in the history of Japanese art. Such galleries are called *emado*, or 'picture-horse hall,' one of the most common pictures being that of a horse—in substitution for the real living horse, which is a favourite Shinto offering. The 'seven gods of good fortune' are a common subject for the Japanese artist, but here we are dealing with quite a modern development. Nearly all of these deities, though called *Kami*, are of Buddhist origin, and in their portraiture foreign influence is easily traceable. At the present day Shinto myth is not infrequently resorted to for subjects by the Japanese artist, more especially by the book-illustrator; and wood engravings, of no great artistic value, representing the gods are sold to the pilgrims to Shinto shrines as mementoes.

W. G. ASTON.

ART AND ARCHITECTURE (Teutonic).—The antiquities from Northern Europe give evidence of a high artistic development from the Stone Age downwards, but few finds of earlier date than the Iron Age can with any certainty be connected with the religious life of their owners. Of the heathen period there are no architectural remains except the graves, and the structural forms of these do not appear to have had any definite relation to the religious beliefs of the different periods to which they belong. Sacred buildings of any kind came late into use among the Teutonic races, and the scanty knowledge we possess of their temples is derived entirely from literary sources, and refers only to the last few centuries of heathendom.

1. In the Stone Age the antiquities as a whole show a remarkably high development of art. The elaborate finish of the finest examples in both pottery and weapons may imply that they were not intended for ordinary purposes, but were reserved for religious ceremonies.

Many of the axes found are obviously not made for use. Some are too thin, others too small, others have shaft holes only large enough to admit a cord, and miniature axes of amber are also common. All these are doubtless votive offerings of some sort, in all probability dedicated to the god of thunder.

2. The Bronze Age in the North is also distinguished by the artistic skill of its productions, but foreign influences may now be recognized. At first the types resemble those found in the Ægean area, and the spirals and zigzag lines so common in Mycenæan art are a frequent form of ornamentation. The most notable relic of this period is the 'disc and horse of the sun' from Nordseeland, Denmark, usually dated about B.C. 1000.

It consists of a round bronze plate mounted on wheels and drawn by a horse also on wheels, and is, no doubt, intended to symbolize the sun's passage across the heavens. The face of the disc is overlaid with gold and ornamented with spirals, and the figure of the horse strongly recalls the animals of the Dipylon style of Greece.

At a later period of the Bronze Age there are evidences of Etruscan influences in the art, and many objects have been found that are clearly imported from Etruria. Among those of native workmanship are a number of beautiful gold vessels which seem too precious for private purposes, and were probably dedicated to religious uses. Such are the eleven gold vessels with long handles that were found at Rømminge, carefully placed inside a large bronze vase, and the two gold bowls with similar long handles, terminating in horses' heads, found with a couple of smaller gold bowls in Seeland. Other objects certainly connected with the worship of the gods are the little bronze cars on four wheels, apparently made to carry large sacrificial vessels, from Sweden, Denmark, and North Germany.

Religious symbols were frequently used in the ornamentation of the Bronze Age. The wheel cross, the symbol of the sun, occurs first in the Stone Age, and is found on many of the earlier objects of bronze. It is later replaced by the

* Perrot-Chipiez, *Phénicie*, fig. 402.

swastika,* and the *triskele* also appears, both of which symbols are common to all the Aryan races, and are universally agreed to have a religious signification. These same sacred signs are seen on the rock carvings from Behistan and elsewhere, which belong to this period. The purpose of these carvings is not clear; they consist of geometrical figures, ships, weapons, and other objects, animals and persons, and it seems probable that at least some of these represent the gods and their attributes.

3. In the first centuries after the introduction of iron the grave finds are scanty, and there is a scarcity of gold objects. This is partly due, no doubt, to the fact that the tribes of the North were at this time subjected to a strong Celtic influence, and it was the universal custom among the Celts to bury little else with the dead than their mere personal equipment. This Celtic influence introduced foreign elements into the style of the art, but was soon almost entirely supplanted by the spread of the classical culture due to the Roman conquests in Central Europe. Many of the finest antiquities from the graves and the bog deposits belonging to the first four centuries of the Christian era are unmistakably of Roman workmanship.

The most important of the native works of this earlier Iron Age appear to be connected with religion. Of these the earliest are the two four-wheeled chariots with long shafts, found in a bog at Deibjerg in Jutland. They are made of ash-wood, and the sides, shaft, and frame are richly adorned with bronze-work. The *swastika* is among the ornaments used. These cars are supposed to have been employed in religious ceremonies, and possibly to have been sacred carriages for images of the gods, such as are mentioned later in the sagas. Fragments of a similar one, however, which had evidently been burnt, were found inside a large bronze vessel in a grave at Fynen, so that, in this case at least, the car seems to have been given not to the gods, but to the dead man for his use in a future life. Cars have been found under similar circumstances in Celtic graves in France and the Rhine country, so that the peculiar disposal of the Fynen car may be due to imitation of a foreign custom.

Somewhat later in date, and showing a mixture of Celtic and Roman influences, is the beautiful silver bowl from Gundestrupp in Jutland. This was, no doubt, a sacred vessel, like the gold bowls of the Bronze Age already referred to; and we may compare in this connexion the statement of Strabo (p. 293), that the Cimbri sent their 'holiest bowl' to Augustus. Other bowls of similar shape to the Gundestrupp bowl have been found, but although it was in all probability made in the North, it is quite un-Northern in both style and subject. The subjects are drawn partly from classical art (there is, for example, an obvious imitation of Hercules and the Nemean lion), and partly from Celtic sources, as the representation of the Gallic god Cernunnos, with his stag-horns, ring, and serpent.

4. To the close of the Roman period, *i.e.* to the 4th cent. A.D., belong what are perhaps the finest of all the Northern antiquities—the two magnificent gold horns from Gallehus in Jutland. It is supposed that they were used as trumpets in religious services, and parallel instances can be quoted from many peoples of antiquity. Both the horns are of solid gold, and decorated with bands of carved figures; one has runes around the top, but these give only the maker's name. Both were incomplete when found. The significance of the figures upon them is not certain; various explanations have been given, and it seems probable that they have a mythological meaning, and refer to legends of the gods.

5. The later centuries of heathendom in the North may be divided into two periods: (*a*) a time very rich in gold ornaments of every kind, owing to the vast quantities of gold obtained from Byzantium; (*b*) the age of the Vikings, to which belongs the splendid profusion of silver ornaments to be seen in the museums of Copenhagen and Stockholm.

(*a*) In the first of these periods, *i.e.* from the 4th to the 8th cents. A.D., the only objects that appear to have any close connexion with religion are the gold bracteates. These were worn as pendants and necklaces, and were originally copies of Roman coins of the 4th cent., although the types soon became greatly altered, and the later bracteates appear to have a religious signification. The sacred symbols of the *swastika* and *triskele* appear on many of them, and when placed beside a human head may imply that a god is represented. The most common device is a head above a four-footed animal, and in some cases the latter seems to have a pointed beard and to be intended for a goat, an animal sacred to Thor. On others Odin is possibly to be identified, surrounded by snakes, or riding on his horse Sleipnir, with a sword in his right hand and a spear in his left, and fighting against the Midgaard serpent. Other bracteates have interlacing designs ending in animal forms—which shows that the beautiful animal ornamentation, which was elaborately developed later, already existed. This peculiar style of decoration, so characteristic of the later Northern art, seems not to have arisen from a desire to represent the animals sacred to the gods, but to be derived from creatures unfamiliar to the North, namely, the lions and griffins of classical art.

(*b*) When we reach the second, or Viking, period of the later Iron Age, we have evidence from literature, as well as from antiquities, of religion in art. Of the antiquities, the most important are the runic stones that were set up over the graves. On some of these are figures which appear to depict the gods; for example, a stone from Tjängvilde shows a figure riding on a horse with eight legs, probably intended for Odin on Sleipnir; and on the Sanda stone there are three figures in a special panel, which have been interpreted as the three chief gods, Thor, Odin, and Frey. On many of these stones Thor is invoked in the runes, and his hammer is carved to consecrate and protect the grave. Little silver pendants in the form of hammers have been found, and were doubtless worn as amulets, but these do not appear until the 10th cent., and were probably due to the influence of the cross-wearing Christians.

Under the head of amulets may be reckoned the figure of a boar, which was frequently placed on the crest of the helmet for protection in battle. This custom is referred to by Tacitus (*Germania*, 45), and there are several allusions to it in *Beowulf* (*e.g.* 303, 1113). It should presumably be connected with the golden boars of Frey and Freya mentioned in the sagas.

Two warriors wearing helmets surmounted by figures of boars are represented on one of four small iron plates from a cairn in Öland. That these plates were used to adorn helmets is evident from the similar bronze plates on the helmets from Vendel. The examples from Öland, as well as the majority of those from Vendel, are supposed to portray scenes of Scandinavian mythology. Thus

* The *swastika*, or cross with bent arms, in its simplest form appears thus , but is often elaborated into . Similarly the *triskele*, the three-armed figure, from , becomes .

one of the Vendel plates shows a cavalier armed with shield and spear, preceded and followed by a bird, and attacking a serpent; this is interpreted as Odin with his ravens Huginn and Muninn, and may be compared with the gold bracteate described above.

Regarding actual idols our only information is derived from literary sources. From the sagas we gather that the figures of gods set up in the temples were life-size, made of wood, and richly adorned with gold and silver. Thus in Olaf Tryggvason's saga, when Gunnar fought with the image of Frey and drove out the fiend inhabiting the idol, 'nothing remained but the mere stock of a tree,' and Gunnar, dressing himself in Frey's apparel, was accepted by the people as the god. Again, in the saga of Olaf the Saint a figure of Thor is described as 'a huge man's image gleaming with gold and silver . . . he bore the likeness of Thor, and had a hammer in his hand . . . he was hollow within, and had a great stand on which he stood when he came out.'

Other images are described as wearing bracelets, necklaces, and similar ornaments. The different gods seem usually to have been invested with their own peculiar attributes—Thor with his hammer or with sceptre as chief god, and Odin armed with sword and spear.

We also hear of smaller figures of the gods, such as the image of Frey which Ingimund carried in his pocket, and the ivory image of Thor which Halfred was accused of secretly carrying in his purse.

6. Turning to the heathen architecture, what knowledge we possess of the temples is gleaned from the literature of the North. Until the last few centuries of heathendom, the Teutonic races appear to have worshipped in the open air, Tacitus (*op. cit.* 9) saying: 'The Germans deem it inconsistent with the majesty of their gods to confine them within walls.' The temples that we hear of in the sagas apparently consisted of two parts: an oblong hall, the *langhús*, with an apse-shaped building, the *afhús*, at one end. It is possible that these two parts were originally separate, and that the round form of the *afhús* is due to its having taken the place of the sacred tree that was, in earlier times, the centre of worship. In this case the *langhús* would represent the dwelling of the chief (who officiated as priest) beside the tree. This *langhús* appears to have been copied directly from the simplest form of dwelling-house, and was used for the sacrificial feasts, but possessed no great sanctity. The *afhús* was the sanctuary proper, and contained the images of the gods, among whom Thor always occupied the chief place. Here also were the altar with the oath ring, the blood kettle, and the perpetual fire.

The temples were almost always constructed of wood, but the exterior as well as the interior was doubtless often ornamented. Adam of Bremen describes the chief temple of Sweden, that at Upsala, as a magnificent gilded structure. When Christianity finally drove out the old superstitions from the North, the temples were in most cases pulled down and destroyed; but the sanctity of the sites remained, and many Christian churches still mark the spots where the heathen gods were originally worshipped.

LITERATURE.—In addition to frequent references throughout the sagas, special mention may be made of S. Müller, *Nordische Altertumskunde*, 2 vols., Strassburg, 1897-98, and *Urgesch. Europas*, Strassburg, 1905; O. Montelius, *Die Kultur Schwedens in vorchristlicher Zeit*, Berlin, 1885; J. Worsaæ, *Primeval Antiquities of Denmark*, London, 1849; G. Vigfusson and F. Y. Powell, *Corpus Poeticum Boreale*, Oxford, 1883.

RELIGION AND ETHICS

ARTHUR, ARTHURIAN CYCLE.—The Arthurian cycle is a body of legend that has grown up around the name of the British hero, Arthur. There appears to be no reason for doubting that Arthur was one of the leaders of the Britons against the English in the 6th cent. A.D., but nothing further concerning him can be stated with certainty. Among the Britons themselves legends appear to have readily attached themselves to his name, as they did to the names of other British heroes, while to the original Arthurian legend itself legends of other heroes became appended, so that in the Middle Ages the Arthurian cycle of romance had attained an extraordinary development. In France, especially, the cycle was the successor in popularity to that of Charlemagne, and, like other legends, either in France or in Britain, it was combined with certain legendary narratives of the Church to form the story of the finding of the Holy Grail, the Cup from which Christ drank at the Last Supper.

The name Arthur is Brythonic (the Celtic tongue of the Britons), a language which came later to be differentiated into Welsh, Breton, and Cornish. Though Brythonic in form, the name Arthur is probably borrowed from Latin, like many other Brythonic names, such as Urien (Urbigena), Owein (Eugenius), Geraint (Gerontius), Padarn (Paternus), Emrys (Ambrosius), Custennin (Constantinus), Rhufawn (Romanus), Anarawd (Honoratus), Rhystud (Restitutus).* The Latin original of Arthur is Artorius, a name found in Greek letters in Clement of Alexandria, and at Khamisa in an inscription dedicated to the goddess Noreia by G. Artorius Tertullus. Another form of it is probably Artŭrius, found in Juvenal (*Sat.* iii. 29). The later Latinized form Arturus or Arthurus and the Irish Artur are based on the British form, and of this the French form Artus and the Italian Artù are also corruptions. In Wales the name Arthur does not appear to have been common, but there is an example of it in the *Book of Llan Dâv* (Oxf. 1893, pp. 77 and 133) and also in one of the pedigrees, as that of Arthur, father of Noe or Nouy (also written Nougoy), a member of the royal line of Dyfed (Demetia). In the Osney Charter of 1129 the name Gaufridus Arturus (probably Geoffrey of Monmouth) occurs as that of one of the witnesses. The fact that the name Arthur is a genuine phonetic derivative of a real, though rare, Latin name is strong evidence of its authenticity, and the probability is that it was preserved, like other Welsh names of the Saxon period, in some genealogy or rudimentary chronicle, such as the nucleus of Nennius, which Prof. Zimmer (in his *Nennius Vindicatus*) thinks was composed at Dumbarton or Carlisle.

Attempts have been made from the evidence of Arthurian place names to determine the region of Britain with which Arthur was most closely associated; but, in spite of the researches of Mr. Stuart-Glennie (author of *Arthurian Localities*) and others, it cannot be said that these attempts have been successful, inasmuch as the later popularity of Arthur led to the naming of many places after him. The oldest indications make it probable that, like other prominent post-Roman Britons, he came from the zone of the North. Certain ruling families of Wales, such as those of Coel, Cunedda Wledig, and Cynfarch, maintained even into mediæval times the tradition (supported by Nennius) that they were settlers in Wales from the North, and styled themselves in their pedigrees 'The Men of the North' (for the northern associations of the Arthurian and kindred legends see the writer's articles in the *Celtic Review* for Oct. 1907 and Jan. 1908 on 'Wales and the Ancient Britons of the North'). The northern zones in question appear to be two: (1) that of Caer Alclud (Dumbarton), and (2) that of Dineiddin (Edinburgh). In an early stratum of Arthurian legend Arthur seems to be closely associated with Caw o Brydyn (Caw of Pictland), the father of Gildas and Aneirin (a Welsh poet), and of many of the saints of Anglesey. In the 12th cent. *Life of Gildas*, Arthur is represented as making war against Hueil, king of Scotland, one of the sons of this Caw. How early the name of Arthur came to be associated with the local legends of Wales it is hard to say, but it is significant that the name of one of Arthur's closest companions, from the very first appearance of the legend in the Welsh literature, is that of Cai (the Sir Kay of the Romances), whose name is found in that of Caer Gai, near Bala in North Wales, a place also known as Caer Gynyr, after the name of Cai's father Cynyr. An old Welsh poem which survives in the *Red Book of Hergest* mentions a *Ffynnon Vedwyr* ('the Spring of Bedivere'), but its locality is unknown. Through its entry into local legend in Wales and in other parts of the Brythonic world, the name of Arthur became attached to the characteristic stories of Celtic folklore, of which numerous examples are given by Professor Sir John Rhys in his *Celtic Folklore, Welsh and Manx* (1901), notably to those of the Other World, a type in which the folklore of Celtic countries abounds. It is not necessary to suppose that the names which that

* In this art. the spelling of Celtic names follows that now generally adopted by Celtic scholars, except in a few cases, where the actual spelling of the mediæval documents has been retained.

of Arthur may have supplanted in such stories bore any resemblance to it in sound or derivation.

In dealing with the Arthurian cycle, it will be convenient to give its place, first, in the tradition found in Cymric literature; secondly, in the Chronicles; and, thirdly, in the Romances.

1. Arthur in Cymric tradition.—The chief MSS in which fragments of this tradition are to be found are: (1) *The Black Book of Carmarthen* (verse, 12th cent.), (2) *The Book of Aneirin* (verse, 13th cent.), (3) *The Book of Taliessin* (verse, early 14th cent.), (4) *The White Book of Rhydderch* (prose, 14th cent.), and (5) *The Red Book of Hergest* (prose and verse, late 14th and 15th cents.). *The Triads of Arthur and his Men*, which are found in a Hengwrt MS of the 13th cent., are also important, as showing with what other legendary cycles that of Arthur was then, and probably earlier, associated in Wales. A considerable amount of the matter contained in the MSS, especially in the case of the oldest poetry, is older than the period of the MSS themselves. The Cymric tradition has many affinities with that of Geoffrey of Monmouth, but it has many features which are quite independent of Geoffrey, and which show that, while Geoffrey in some points borrowed from it, he either neglected or was ignorant of certain other important portions of it.

Of those above named, the MS which gives the clearest indication of containing pre-Norman matter is the *Book of Aneirin* (now in the Cardiff Free Library), since in one of its poems the scribe, in the course of copying a poem called *Gorchan Maelderw*, departed from his usual practice of changing the orthography into that of his own time, and copied that of his archetype practically unmodified, thus showing that this archetype was written in a style of spelling in many points identical with that of the pre-Norman glosses of Wales. In this clearly pre-Norman poem the name of Arthur occurs in the words 'bei ef arthur' ('even if he were Arthur'). The poem in question is practically identical in many of its lines with the *Gododin*, which forms the main portion of the MS, and thus suggests that the name of Arthur was held in high respect in the zone of poetry to which the *Gododin* belongs. This zone is essentially one composed in praise of the family of Cynfarch, to which Cynon ab Clydno Eiddin, the chief hero of the *Gododin*, belonged, and also Urien Rheged, whose son Owein is the original of Chrétien de Troyes's *Yvain*. With this family was associated the poet Llywarch Hen, and Elphin, the friend of Taliessin, and other heroes, whose names with brief records of their memory are given in the *Gododin* in connexion with the battle of Cattraeth (one of the famous battles of Welsh bardic tradition), in which they were said to have taken part. From all indications, the historical stock-in-trade of the Welsh bards seems to have contained short lists of famous battles, such as Cattraeth, Gwenystrad, Argoed Llwyfain, Badon, and Camlan. The two last were among the chief battles of the Arthurian tradition. In Welsh, as in other legend, the prominent heroes of one period tended to sink into the background of action in that of a later date, or else to survive as vaguely imposing figures, present, as it were, behind the scenes. Cynon ab Clydno Eiddin, Caw of Pictland, and Brychan Brycheiniog are names of this type in Welsh mediæval literature, while in the Cymric Arthurian tradition Arthur's warriors undoubtedly play a much more active part in the story than he does himself. This fact has often been wrongly interpreted as implying that the legend of Arthur himself was not in any way developed in Wales (a view which, in face of the significant allusions to Arthur in Welsh literature, is quite untenable), while the truth seems to be that it was so long established in Wales that to it were attached other legends, whose heroes came to loom more largely in action than Arthur, their sovereign chief. In the stock-in-trade of the bards and story-tellers of Wales, from whom the remnants of old Welsh poetry and narrative have come down, Arthur appears to have held distinctly a place of honour, and the various portions in which this stock-in-trade of legend reveals itself bear witness to the same tale. This stock-in-trade, though the stories composing it were heterogeneous in origin and in local association, yet preserved a certain unity from its professional character, and portions of it can easily be detected in various parts of old Welsh literature. In the *Triads*, in the account of Arthur's Court found in *Kulhwch and Olwen*, in the *Book of Aneirin*, in a group of Arthurian poems in the *Black Book of Carmarthen*, in the *Stanzas of the Graves*, in the poetry of the *Book of Taliessin*, in the Llywarch Hen poems of the *Black Book of Carmarthen* and the *Red Book of Hergest*, certain associated groups of names come to view which show clearly the body of legend to which they belong. It is significant that in all these legendary clusters the name of Arthur appears. It is true that he is not once mentioned in the *Four Branches of the Mabinogi*, in the *Dream of Maxen*, or in *Lludd and Llevelys*; but the reason is that, in the *Mabinogion* in their present re-cast form, a certain chronological arrangement is implied which would make any reference to Arthur anachronistic in a story that was meant to be pre-Saxon. In the *Book of Taliessin* and in the lists of Arthur's men in *Kulhwch and Olwen*—the least altered of the *Mabinogion* stories—no such regard for chronology is shown, and in the latter Arthur is said to have been related to the 'Men of Caer Dathyl' on his mother's side. It is significant that, even in Chrétien and the later romances, many of the names of those who are associated with Arthur are those of well-known heroes of the Cymric tradition. If this tradition was carried into Cornwall or Brittany, the extreme scantiness of the heroic literature of these provinces in mediæval times makes it exceedingly difficult to judge of the extent of the transference, and it may well be that it was only fractional in character, though Arthur himself may have attained a high degree of legendary popularity, as Alanus ab Insulis suggests when he says in the second half of the 12th cent. that in Brittany any one who should deny Arthur's return would arouse the deep hatred of his hearers.

In the *Stanzas of the Graves* (given in the *Black Book of Carmarthen*), a series of verses kindred to the elegies of Llywarch Hen, the various heroes of the Cymric cycle are commemorated, and among them in one stanza are named March (the King Mark of the Tristan legend), Gwythur (the rival of the fairy king Gwyn, son of Nudd), Gugaun of the Red Sword, and Arthur. Each of the first three heroes is said to have a grave, but the grave o Arthur is said to be 'anoeth bid' ('the object fo which the world searches'). The word 'anoeth' meant 'difficult,' as it still does in the Dimetian dialect of Welsh, and was used for the object of a difficult search, as in the Arthurian story of *Kulhwch and Olwen*. In the *Black Book of Carmarthen*, where these stanzas occur, there are other poems that contain direct or indirect allusions to Arthur. For example, in an elegy upon Geraint, son of Erbin (the Erec of Chrétien de Troyes), Arthur, for whom Geraint is said to have fought at the battle of Llongborth, is called 'the emperor, the ruler of the toil.' The significance of an allusion such as this, as indicating the place of Arthur in Welsh story, is clear. The site of Llongborth is unknown, but the men of Geraint are

said to have come from the region of Dyfneint (the Dumnonii). Poem xxxi. in the same MS is clearly Arthurian; but it is important to observe that it is one of a group in which the story of Arthur is associated with a cluster of names from the bardic tradition. Poem xxx., for example, though it does not name Arthur, yet mentions his horse Cavall, the Cabal of Nennius, the mark of whose hoof, according to that chronicler, was left on a mountain near Builth when Arthur was hunting the Porcus Troit (y Twrch Trwyth). In *Kulhwch and Olwen*, Cavall is erroneously given as the name of Arthur's dog. In the same poem, too, is mentioned Owein Reged, the Yvain of Chrétien. In the obviously Arthurian poem (No. xxxi.) there is a picture of Arthur and his men that is entirely distinct from those of Geoffrey and the Romances, and much more akin to that of the story of *Kulhwch and Olwen*. Arthur and his men arrive at a fortress (for what purpose is not stated, but it may have been for the rescue of one of their lost companions). Among his men are Cei Wyn (Kei the Blessed); Bedwyr (Bedivere); Mabon, son of Modron (an old deity, Maponos, son of Matrona); Mabon, son of Mellt (Lightning); Manawyddan, son of Llyr (Manannan mac Lir of Irish legend, a hero of the *Four Branches*); Llacheu, Arthur's son (who is unknown to Geoffrey); and others. Some of the topographical allusions, such as those to Traetheu Trywruid (probably the Solway Firth) and Mynydd Eiddin (the mountain of Edinburgh, possibly Arthur's Seat), are to the North. As in *Kulhwch and Olwen*, expeditions to the wild country of the North, *gwrthtir uffern* ('the wild land of Hades'), as it is called, appear to have been a favourite theme of the Welsh Cymric Arthurian tradition; and for the men of North Wales, North Britain appears to have been the natural way of getting into the Other World by land, while the men of South Wales may have had their corresponding entrance into it in Cornwall. The poem in question, too, like the story of *Kulhwch and Olwen* and portions of the lives of the Welsh saints, describes Arthur and his men as being in conflict with certain pests, both animal and human, and, among the latter, with certain militant hags or witches (Welsh, *gwiddonod*). Even in the Welsh story of Peredur (the Percival of the Romances) there is an account of a conflict with the Witches of Gloucester (*Gwidonot Caerloyw*). One of the monsters mentioned in poem xxxi. is the 'Paluc cat' (*Cath Paluc*), also mentioned in one of the *Triads*. Poem xxxiii., though not referring to any exploits of Arthur, mentions his son Llacheu, 'the marvellous in song,' in words put into the mouth of a speaker who refers to certain other of the stock characters of the Welsh bardic tradition, such as Gwyn, son of Nudd; Creurdilad, daughter of Lludd (the Cordelia of Geoffrey); Guendoleu, son of Keidaw (the Gwenddoleu of the Myrddin legend); Bran, son of Iwerydd (the latter possibly his mother's name); and Gwyddneu Garanhir (a prominent character in a legend of inundation). With this poem is closely linked poem xxxv., which mentions Taliessin, while it also alludes to two of the chief characters of Math ab Mathonwy (Lleu and Gwydion), whose names and legends were associated with the places Nant Lleu (now Nantlle), Din Lleu (now Dinlle), and Bryn Gwydion in Carnarvonshire, and Moel Gwydion near Trawsfynydd in Merionethshire.

From this stock of narrative certain historical names other than that of Arthur, such as that of Maelgwn Gwynedd (the Maglocunos of Gildas), were far from being excluded, and that of Maelgwn occurs in this poem. As suggestive of the association of the Arthurian legend with Monmouthshire as well as with the North Wales scenes in question, it may be mentioned that the *Liber Landavensis* (early 12th cent.) alludes to two streams whose names are identical with those of Arthur's sons (Llecheu or Llacheu and Amhir) in the forms Lechou and Amir.

How persistent was the Welsh Arthurian tradition which mentioned Llacheu may be seen from the fact that he is given as a son of Arthur even in the late Powys story of *The Dream of Rhonabwy*, found in the Red Book text of the *Mabinogion*.

Again, the evidence from the *Book of Taliessin* points in the same direction. In this curious book there are scraps of Welsh legend interspersed with ideas derived from the current cosmology of the Middle Ages. In one passage, *Annwfn* (the Celtic 'Other World') is definitely located beneath the earth. Other poems imply that it contains a cluster of island fortresses, accessible from the sea. With the latter conception the Cymric Arthurian tradition has been linked in one of these poems, and the place of fortresses in this tradition is worthy of notice. No effort was apparently made to reconcile this belief in *Annwfn* with Christian teaching. It was simply conceived as a kind of counterpart of this world; for example, in the story of Pwyll, prince of Dyfed, it is a land divided into kingdoms. The view of it, reflected in *Kulhwch and Olwen*, as being accessible by land through Scotland, appears to be associated with the idea, found in the Welsh poetry of the 12th and 13th cents., that the ghosts of the dead wandered in *Coed Celyddon* ('the Caledonian forest'); and this was pictured as the scene also of the wanderings, accompanied by ghosts, of Merlinus Silvestris.

In one of the poems of the *Book of Taliessin*, Arthur and his men are represented as making expeditions to the island fortresses of *Annwfn* in Arthur's ship *Prydwen*. These expeditions were for various purposes, such as the releasing of one of his men, Gweir, from prison, and the carrying away of the cauldron of the Head of Hades (*pen Annwfn*): the latter would not boil the food of a coward, and was heated by a fire kindled by the breath of nine maidens. As further evidence of the Arthurian legend in Monmouthshire in at least the 12th cent., it may be stated that one of the place names mentioned in one of the boundaries (*Lib. Land.*, Oxf. ed. p. 207) is *Mesur Pritgruenn* ('the Measure of Prydwen'). The poem has an obscure allusion which connects the story of Arthur with that of Pwyll and Pryderi, just as the *Black Book of Carmarthen* poem associated Arthur with Pryderi's friend Manawyddan. One of the island fortresses referred to in this poem, Caer Vandwy, is mentioned also in the *Black Book of Carmarthen*, while another bears the remarkable name Caer Wydyr ('the Fortress of Glass'). Of Arthur the first line of this poem says: 'Who has extended his rule beyond the bounds of the Universe?' That Arthur's name was proverbial within the zone of this poetry is shown by a passing allusion to 'the valour of Arthur' in poem xlviii. of the same MS.

This undoubted feature of the connexion of Arthur and his men with the Other World in the Welsh tradition suggests that the name of Arthur's wife, Gwenhwyfar ('the White Spectre'), is part of the same circle of ideas, and that the introduction of this conception made possible a number of congenial plots, such as the loss and rescue of one of Arthur's warriors, the loves of Arthur's warriors with ladies from *Annwfn*, the introduction into literature of the dwarfs with whom *Annwfn* was peopled, the machinery of magic and the supernatural, with which Celtic folklore especially associated the fairies, the possibility of being rendered invisible (another fairy privilege), and other commonplaces of Celtic legend, such as are found in Welsh and Irish story as well as in the living folklore not only of Celtic but of other imaginative countries.

As illustrating the place of the idea of imprisonment and release in the Welsh Arthurian tradition, it may be stated that one of the *Triads* contains a supplementary statement referring to a fabulous imprisonment of Arthur himself. The triad reads: 'The three noble prisoners of the Isle of Britain, Llyr of imperfect speech, who was with Euroswydd in prison, and the second, Mabon, son of Modron, and the third, Gweir, son of Gweiryoed, and one who was nobler than all three was for three nights in the prison of Oeth and Anoeth, and was for three nights in prison with Gwenn Benn Dragon, and was for three nights in the prison of magic (or fairyland) under the slab of Echymeint, and that noble prisoner was Arthur, and the same youth released him from those three prisons, and that youth was Goreu, son of Custennin (Constantine), his cousin.'

This story certainly appears to reflect a phase of Arthurian legend coloured by the characteristic ideas of Celtic folklore. These ideas show

themselves, too, in the Welsh Arthurian story of *Kulhwch and Olwen*, where Arthur and his warriors are represented as hunting the Twrch Trwyth (the Orc or Torc Tréith of Irish legend), a fabulous boar, to which there are obscure references in Old Welsh poetry and in Nennius. Though this story refers to Arthur's expedition to *Annwfn* and to other pieces of legend connected with that sphere, yet, like the *Four Branches of the Mabinogi*, it is characterized by the minute localization of its topography, an indication of the close relation of the Arthurian legend to certain Welsh districts. In *Kulhwch and Olwen* the narrative bears signs of having been connected originally with the North, but in its present form it is chiefly connected with Pembrokeshire, Carmarthenshire, Cardiganshire, and Breconshire. It is pre-eminently a story that has grown by accretion. The Court of Arthur, as is usual in the Welsh tradition, is located at Gelliwig in Cornwall (Cernyw). It is possible, however, that Cernyw is a later substitute for some Welsh locality. There is in the peninsula of Lleyn in Carnarvonshire a mansion called Gelliwig, but the writer has been unable to discover how old the name is.

It is, perhaps, not irrelevant to mention that in this peninsula there are certain names which provide links with the Welsh Arthurian legend, such as Bodarnabwy (for Bod Gwernabwy), Dynfra (for Rhedynfre), Coetan Arthur ('Arthur's Quoit'), a fine cromlech near Sarn Feillteyrn, and Ffynnon Wenhwyfar ('Guinevere's Well'). In the same district, too, is Castellmarch ('Mark's Castle'); nor is the zone of Nant Gwrtheyrn ('Vortigern's valley'), Dinas Emrys ('the fortress of Ambrosius'), and Abererch, where Rhydderch Hael was said to have been buried, far off.

Of the Welsh tradition there are certain indications, too, in the historical poets of Wales which suggest that it differed in some forms of it from Geoffrey's version. For example, in elegies and eulogies men are compared in compliment to Medrod (Modred). Meilir, for instance, says of Gruffydd ab Cynan, who died in 1137, that he 'thrusted in the fore-front of battle like Medrod'; and Gwalchmai, Meilir's son, in praising Madog ab Maredudd, prince of Powys, says that he had the strength of Arthur and the gentleness of Medrod. Gwynfardd Brycheiniog, too, calls the Lord Rhys of South Wales the twin-brother of Medrod, prophesied by Myrddin (Merlin). One triad (Foerster, *Myv. Arch.*[2] p. 393*a*), which shows, it is true, signs of later modification, states that there were in Arthur's Court three royal knights, Nasiens, king of Denmark; Medrod, son of Llew, son of Cynfarch; and Hywel, son of Emyr Llydaw. They were, the triad says, men of such gentle, kindly, and fair words, that any one would be sorry to refuse them any request. Where the feud between Arthur and Medrod is mentioned, it is represented sometimes in a different light from the account of Geoffrey; nor is the sympathy of the tradition always with Arthur. For example, a blow given by Arthur to Medrod is called 'an evil blow,' like that given by Matholwch to Branwen.

In a triad referring to the three costly campaigns of the Isle of Britain, Medrod is said to have gone to Gelliwig in Cornwall, to have left in the Court no food or drink unconsumed, and to have dragged Gwenhwyfar from her queenly throne. Arthur in revenge is said to have gone to the Court of Medrod, and to have similarly consumed all the food and drink, and, further, to have left neither man nor beast alive in the Hundred. The story of the battle of Camlan, too, appears to have been differently treated in different forms of the Welsh tradition. One form ascribes it to a blow given by Gwenhwyfar to Gwenhwyfach—a blow which is called in a triad one of the evil blows of the Isle of Britain. Another triad speaks of this as one of the vain battles of the Isle of Britain, and attributes it to the rivalry of Gwenhwyfar and Gwenhwyfach. According to the story of *Kulhwch and Olwen*, Gwenhwyfach was Gwenhwyfar's sister. In the story of *The Dream of Rhonabwy*, the battle of Camlan is said to have been caused by the mischief wrought by Idawc Cord Prydein in the negotiations between Arthur and his nephew Medrod. The fact that one of the triads says that there were three Gwenhwyfars suggests that there were in Wales not one but several Arthurian traditions. Though the Welsh 14th-cent. poet Dafydd ab Gwilym mentions Melwas (as in the *Life of Gildas*) apparently as the abductor of Gwenhwyfar, it cannot be stated with certainty that he was so known to the Welsh tradition. The name Melwas, however, was not unknown to S.E. Wales, as we see from references to persons of that name (written Melguas) in the *Liber Landavensis*.

Possibly, in one form of the Welsh tradition Arthur and Medrod fought on the same side at Camlan, for one of the triads says that one of the evil counsels of the Isle of Britain was Arthur's decision to divide his men three times with Medrod at Camlan. It is not impossible that this was the view of the writer of the *Annales Cambriæ* (under the year 537), who gives Camlan as the battle in which Arthur and Medrod fell together (*corruere*).

As illustrating further the Welsh tradition, it may be stated that Cynddelw Brydydd Mawr, a leading poet of the 12th cent., locates Arthur's Court at Celliwig, and that he has allusions to Gwalchmai, Dullus, son of Eurei, Cai and his father Cynyr, Myrddin, Elifer, Llacheu, the bards of Manddwy, Gwyndoleu, the family of Cynvarch, the Twrch Trwyd, and the battles of Baddon and Camlan. Another poet, Bleddyn Fardd, refers to Arthur as the slayer of a certain Erthyst, and to the valour of Gwalhaved as proverbial. All these allusions, though only of a passing character, suggest undoubted acquaintance with the legend, and the independence of the Welsh tradition from Geoffrey.

2. Arthur in the Chronicles.—Under this head reference may be made first to the lives of certain Welsh saints, and then to the *Chronicles* proper. The *Life of St. Gildas*, written in 1160, according to one of the most distinguished of Arthurian scholars, M. Ferdinand Lot, represents Arthur as being in conflict with Hueil, king of Scotland, the son of Caw of Pictland, and brother of Gildas. The association of Arthur with the family of Caw suggests a stratum of legend of an early type, not unrepresented in the story of *Kulhwch and Olwen*. The same *Life* also represents Melwas, a petty king of Somerset, as having carried Gwenhwyfar away from Arthur. In the *Life of St. Cadoc*, Arthur and his companions, Cai and Bedwir, are represented as haunting the borders of Breconshire and Monmouthshire.

In this connexion it may be mentioned that the highest point of the Breconshire beacons was called in the time of Giraldus Cambrensis (12th cent.), 'Arthur's Throne.' The association of Arthur in Nennius with Builth, in the same county, has already been mentioned, and there are similar associations in the story of *Kulhwch and Olwen*. Again, in the *Life of St. Carannog* (the saint of Llangrannog in Cardiganshire), there is a reference to Arthur as hunting a very powerful, huge, and terrible serpent, which had laid waste twelve parts of the land of Carrum—a description of Arthur's activities which is in thorough keeping with the Welsh tradition.

The *Life of St. Illtud* speaks of Arthur as the saint's cousin, to whom Illtud becomes a soldier, but the site of Arthur's Court is not mentioned. Further, in the *Life of St. Padarn* there is a curious story told of Arthur, who is called a *tyrannus*, in which, owing to his cupidity, he is cursed by the saint and swallowed in the earth up to his chin. This story is probably connected with the place name Llys Arthur ('Arthur's Court'), in the parish of Llanbadarnfawr in North Cardiganshire. In the *Chronicles* proper Arthur first comes to view by name in Nennius (a composite work completed before the 9th cent.), the nucleus of which was a *Chronicle of North Britain*, written probably at Dumbarton or Carlisle. Gildas, though he does not name Arthur, mentions a battle of Badon (fought, according to the *Annales Cambriæ*, in 516), which Nennius gives by name as one of the battles of Arthur. This battle is frequently mentioned by Welsh poets as Gweith Fadon ('the action of Badon'). In Nennius, Arthur is called *Dux bellorum* in the account of his battles, and *miles* elsewhere. The names are given of twelve of his battles, one of which was fought in 'the wood of Celidon' (Caledonia). Some of the other battles were also probably in the North. In the Chronicle called *Annales Cambriæ*, there is a reference under A.D. 516 to Arthur's leadership of the Britons at the battle of Badon by carrying the cross on his shoulders for three nights. In Nennius's account of

one of the battles, it is said that Arthur bore the image of the Virgin on his shoulders. Geoffrey of Monmouth says that Arthur fastened on his shoulders his shield Pridwen (in the Welsh tradition Pridwen was his ship), on which was the image of the Virgin Mary. Possibly the discrepancy between Geoffrey's account and the others is due to the resemblance between the old Welsh pre-Norman for 'shoulder' (*iscuid*) and 'shield' (*iscuit*). The Cambridge MS of the 13th cent. explains this passage of Nennius by saying that Arthur went to Jerusalem, and made a cross of the size of the true cross. These passages are interesting as demonstrating the Welsh tendency, shown in the case of Bran, son of Llyr, and Lles ap Coel, to make Arthur into a Christian hero—a tendency which reached its full development in the story of the Grail. Another Chronicle of the same type as the *Annales Cambriæ*, the *Chronicle of St. Michael's Mount*, composed by a Breton possibly in the 11th cent., says, under the year 421: 'St. Gildas was born. In these days was Artus (Arthur) king of the Britons, brave and witty' (*fortis et facetus*).

That there was a flourishing Arthurian legend in Brittany in the second half of the 12th cent. is suggested by the statement of Alanus ab Insulis already quoted, and that in the 12th cent. the Arthurian legend flourished in Britain also is attested by William of Malmesbury (born about 1095), who says of 'the warlike Arthur': 'This is Arthur of whom the idle tales of the Britons rave wildly even to-day—a man certainly worthy of celebration, not in the foolish dreams of deceitful fables, but in truthful histories; since for a long time he sustained the declining fortunes of his native land and incited the uncrushed courage of his people to war.' It is not improbable that there was at this time a flourishing Arthurian tradition in Glastonbury itself, in which place this historian was specially interested, and it is not out of place to mention that Glastonbury owned land in the beginning of the 12th cent. in the neighbourhood of Caerleon (see Adam de Domerham, *Charters of Glastonbury Abbey*). The popular view of Arthur may be reflected in Henry of Huntingdon's designation of him as 'leader of the soldiers and kings of Britain.' It was Geoffrey of Monmouth, however, who, in his *Historia Regum Britanniæ*, expanded and dignified the meagre annals of the Britons as given in Nennius by incorporating in them a number of stories (largely ætiological), together with matter based on the Welsh genealogies and on floating local legend, and by making the story of Arthur, as an Imperial figure, the culmination of these legends for the glory of Britain and his native county of Monmouth, wherein Caerleon, the seat in Geoffrey of Arthur's Court, was situated.

In this narrative Arthur is represented as the son of Uther-pendragon and Igerna (in Welsh *Eigr*). He becomes king at the age of fifteen, and his subsequent career is a succession of conquests, which culminate in an attempt to conquer Rome itself. In the very zenith of his power, and when within reach of the Imperial dignity, he is recalled to Britain owing to the usurpation of his throne by Modred (the Welsh *Medrod*), his nephew, and the latter's marriage to Ganhumara (Gwenhwyfar). In a great battle in Cornwall, Modred is killed, and Arthur is mortally wounded and carried to the Isle of Avallon (Glastonbury) to be healed. The note of tragedy in the story of Arthur is in keeping with other stories in Welsh literature, such as those of Pryderi, Bran, and Llew Llaw Gyffes in the *Four Branches of the Mabinogi*.

Geoffrey's form of the Arthurian legend (apart from his own pseudo-historical amplifications) was probably derived from the South Wales border and South-West Britain. It is needless to say that it is largely coloured by the ideas of the 12th cent., and traces of the spirit of chivalry and knight-errantry are already present. This book became exceedingly popular, and Henry of Huntingdon (some time after 1139) made an abridgment of it in his letter to Warinus. Benedict of Gloucester, too, gave a sketch of the Arthurian period in his *Life of St. Dubricius*. Afterwards came Thomas de Loches (about 1147) with a similar narrative in his *Gesta Comitum Andegavensium*. The chief successors of Geoffrey, however, were Geoffrey Gaimar (probably a little before 1150), whose *History of the Britons* unfortunately has been lost, Wace (in poetry), the author of the Anglo-Norman *Brut*, and Layamon, the author of a *Brut* in English verse. Wace's *Brut* is in the main a free paraphrase of Geoffrey's *History*, but in style it is often more romantic. His descriptions of love, for example, are not unlike those given by the Arthurian poet Chrétien de Troyes. Wace shows more of the spirit of chivalry than Geoffrey, and he appears to know many more stories about Arthur than he narrates. It is he who first introduced into literature the story of Arthur's Round Table, about which, he says, the Britons tell many a fable. Layamon came from Arley Regis in North Worcestershire, on the banks of the Severn, and may have been familiar with living Arthurian tradition. His narrative is based on that of Wace, which he treats even more freely than Wace treats that of Geoffrey. It may be noted that Layamon goes further than Geoffrey or Wace in naming the exact place of Arthur's final defeat, which he locates at Camelford in Cornwall, doubtless having in mind the Welsh *Camlan*. Of Latin metrical versions of Geoffrey, the chief were the *Gesta Regum Britanniæ* and the *Epitome Historiæ Britannicæ*. In spite of its popularity, Geoffrey's *History* was not allowed to escape criticism; it was violently denounced by William of Newburgh, and also by Giraldus Cambrensis, who accepts, however, important sections of the Arthurian story. A similar attitude was adopted in the middle of the 14th cent. by Ralph Higden. The longest account of the supposed discovery of Arthur's tomb at Glastonbury is given by Giraldus Cambrensis in his *de Principis instructione* (written about 1194). Of the later writers who followed Geoffrey, the most important is Holinshed (1577), from whose work the substance of Geoffrey became known to Shakespeare and other English poets.

3. **The Arthurian cycle in the Romances.**—The chief development of the Arthurian cycle combined with other cycles, both British and foreign, is found in the *Romances*, and the centre of this type of literary development was France. This development was undoubtedly stimulated largely by Geoffrey's *History* and the paraphrases of his successors, but the romances contain features of the Arthurian legend which are clearly independent of the *Chronicles*. In France, the chief poetic exponents of the Arthurian legend were Marie de France, Chrétien de Troyes, and Robert de Borron. In Chrétien de Troyes, especially, there are so many proper names—as Uriiens (Urien), Yvain (Ywein), Erec (Gereint), Keus (Kei), Bedivere (Bedwyr), Gauvain (Gwalchmai), Ider fil Nut (Edern, son of Nudd), Brons (Bran), Carados Briébraz (Caradog Freichfras), Ganievre (Gwenhwyfar), Tristans (Trystan), Melianz (Melwas), Maheloas (Maelwas), Bilis (Beli), Brangiens (Branwen), not to speak of others which are less obvious,—which are so clearly identical with well-known names of the Welsh tradition, that the existence of some relation to this tradition, whether direct or indirect, is obvious. Though the legend of Arthur himself flourished in Brittany, it is very doubtful whether the heterogeneous yet professedly connected mass of legends which the above names imply existed in Brittany, as it undoubtedly did in Wales. In spite of the opinion of Prof. Zimmer, it is perhaps simplest to accept the view that the Arthurian and other legends of the Welsh

tradition made their way into French literature through the contact of the Normans in the 11th cent. with the men of Breconshire, Glamorgan, and Monmouth. These districts were rapidly Normanized, and intermarriages of Normans and Welshwomen were frequent. This zone, too, was in close touch with Glastonbury and with other important monasteries, and monasteries such as this and Fécamp played no small part in the dissemination and development of the Arthurian and other legends. As for the lays of Marie de France, on the other hand, certain terms, such as 'Laustic' (=*l'eostik*, 'the nightingale'), as Prof. Zimmer points out, suggest Brittany as the source of their Arthurian matter. The degree of Chrétien's indebtedness not only for some of his proper names, but also for his materials, to Celtic sources has been a subject of great controversy, Prof. Foerster, the chief editor of his works, going so far as to deny that Chrétien derived any of his materials from such sources. But it is hardly conceivable that he should have borrowed from these sources only a bare list of personal names without a scrap of the legends connected with them. The task of discovering definite Celtic matter in his writings is, however, far from easy, owing to the elaborate transformation which such matter would have undergone when adapted to the courtly love-poetry of Chrétien and to his romantic conceptions generally. Still, it should be borne in mind that Welsh literature itself, as we see from the *Four Branches of the Mabinogi*, had already been developing on lines which reflected some of the conceptions of the feudal period, and which further showed skill in the delineation of female character, especially under conditions of unjust suffering.

The problem of Chrétien's origins has been further complicated by the existence in Welsh of three Arthurian romances corresponding to three by Chrétien, namely, *The Lady of the Fountain* (to *Yvain*), *Peredur* (to the *Conte del Graal*), and *Geraint and Enid* (to *Erec et Enide*). Count Hersart de Villemarqué thought that these were Chrétien's originals; but this is certainly not the case, as the traces of foreign influence on them show. At the same time, the Welsh tales, though in their present form based either on Chrétien himself (as Foerster thinks) or on his originals, have, in several points of topography and narrative, been shaped into conformity with a living Welsh Arthurian legend in a manner which adds considerably to their value and interest. The search for Celtic materials in Chrétien has been carried out with great diligence by Sir John Rhys, Mr. Alfred Nutt, M. Loth, Miss J. L. Weston, and a distinguished mediævalist, M. Ferdinand Lot. The task of reducing the narratives of Chrétien to their simplest elements, and comparing them with the narrative types of Welsh and Irish legend is one of great delicacy and difficulty, and some Celtic scholars, in their zeal for instituting such comparisons, have attempted to prove too much, without making sufficient allowance for the various literary influences to which Chrétien was accessible, or for his own imaginative power. The most fruitful line of investigation is the study of that Welsh group of legends from which Chrétien undoubtedly derived many of his proper names, and the classification of them into narrative types. Especially promising are the narratives that imply the wandering and return of Arthur's warriors, and in some cases their rescue from prison by him and his men. Narratives of the relations, pacific and hostile, between Arthur and his men and the fairy dwellers in *Annwfn* are a promising field of investigation, but Sun-myth theories of the Arthurian legend are now entirely abandoned.

Chrétien de Troyes was imitated in Germany by Hartmann von Aue, who wrote his *Erec* before 1197 and his *Iwein* before 1204; and also by Wolfram von Eschenbach, who composed his *Parzival* between 1205 and 1215. The latter mentions, in addition to Chrétien, a certain Kiot as his authority. The chief romantic accretions to the Arthurian cycle were the sagas of *Merlin*, the *Holy Grail*, *Tristan and Iseult*, and *Lancelot and Galahad*. The story of *Merlin* occurs in two forms, the ordinary *Merlin* and the *Suite de Merlin* (see MERLIN). The story of Tristan and Iseult is one of the most beautiful and tragic in the whole of literature, and, except perhaps as an element in the Welsh bardic tradition, was originally quite distinct from the Arthurian legend. The story of Lancelot is of uncertain origin, and that of Galahad, apart from the mere name (the Gwalchaved of the Welsh tradition), has no evident counterpart in Celtic legend. The story of Tristan was turned into German verse by Gottfried von Strassburg about 1210, who left it unfinished. But it was continued by Ulrich von Türheim (about 1236) and Heinrich von Freiberg (about 1270). In England the great collection of Arthurian romances was that of Sir Thomas Malory, printed by Caxton.

Within the limits of this article it is impossible to deal with all the problems which the various interrelations of these romances have raised, especially in the story of the Holy Grail. This story is essentially one where the legend of Arthur has been brought into connexion with the legends of the Church, notably such as were read from the Apocryphal Gospels at Easter. The stories of Helen, the mother of Constantine, and of Charlemagne had been similarly enlisted. One of the most distinguished authorities on the Grail legends, Mr. Alfred Nutt, conveniently divides them into two types, which he calls the 'Quest' and the 'Early History' versions respectively. These he enumerates as follows: Class I. (*a*) *Conte del Graal*, by Chrétien de Troyes; (*b*) *Conte del Graal*, by the continuators of Chrétien—Gautier, Manessier, and Gerbert; (*c*) the *Parzival* of Wolfram von Eschenbach; (*d*) *Peredur the son of Evrawc*, the Welsh version of Perceval; (*e*) *Sir Percyvelle*, an English metrical romance found in the Thornton MS, written shortly before the middle of the 15th century. Class II. (*a*) Robert de Borron, *Joseph of Arimathea*, and *Merlin*; (*b*) *The Grand St. Graal*; (*c*) *Quête del St. Graal*; (*d*) *The Didot Perceval*; (*e*) *Perceval le Gallois*, translated into English by Dr. Sebastian Evans under the title *The High History of the Holy Graal*. There is a Welsh mediæval translation of the story of the Holy Grail entitled *Y Seint Greal* which has been published with an English translation in the Hengwrt MSS. In modern times the Arthurian legend is most familiar through Tennyson's *Idylls of the King* and through Wagner's *Parsifal* and *Tristan*. Even into Dutch, Flemish, and Scandinavian literature portions of the Arthurian cycle penetrated.

E. ANWYL.

ARVAL BROTHERS.—The study of the Arval Brothers is peculiarly valuable to the historian of religion, because it gives a unique insight into the details of the activity of a Roman priesthood. It also illustrates in a pre-eminent degree the accidental character of our knowledge of ancient Roman religion. Further, it emphasizes the activity of Augustus as a restorer of forms of ancient religion. And, lastly, it affords us additional proof of the supreme value of inscriptions.

In the matter of the appointment of priesthoods the Romans were extremely conservative. During the whole period of the Republic only two new priesthoods were formed—the *Duoviri* (later *Decemviri*, later *Quindecimviri, sacris faciundis*), in charge of the cults introduced by the Sibylline books; and the *Tresviri* (later *Septemviri*) *epulones*, merely assistants to the *pontifices* in arranging the banquets. On the contrary, many of the older priesthoods declined, and were, if not entirely forgotten, so neglected that they are very seldom mentioned in the literature. Thus during the Republic we hear of a certain priesthood, the *Sodales Titii*, only incidentally (Varro, *Lingua Latina*, v. 85); and even the Augustan reform and the Emperor's personal association with the priesthood (*Monumentum Ancyranum*, i. 46) result merely in our possessing eight or nine inscriptions in which individuals are referred to as *Sodales Titienses*.

Except that the etymology of the words *Fratres Arvales* is easier to understand than that of *Sodales Titii*, we should know scarcely more concerning them than concerning the *Sodales Titii*, were it not for the remarkable discovery of inscriptions. It will be well, however, to examine first what we know of the Fratres Arvales apart from these inscriptions.

1. **Literary sources.**—The one and only reference to the Fratres Arvales in the literature of the Republic is in Varro's *Lingua Latina* (v. 85), and reads as follows: 'They are called Fratres Arvales who make public sacrifices to the end that the fields (*arva*) may bear (*ferant*) crops. They are called Fratres Arvales from *ferre* and *arva*. Some people derive the name (*fratres*) from *fratria*; *fratria* is a Greek word designating a section of the people, as it is even now used at Naples.' In other words, Varro's interest is merely etymological, and his whole manner of treating the subject shows that the priesthood, though possibly still in existence, was practically unknown.

Borghesi, *Œuvres*, i. 376, thinks that the crown of corn-ears seen on the coins of D. Postumius Albinus Bruti *f.* and of L. Musidius Longus (Babelon, ii. 241 ff., and 385) relates to the Arval Brothers; but this is by no means certain (cf. Wissowa in Pauly-Wissowa, *s.v.* 'Arvales,' ii. 1463).

Had not Augustus included the priesthood of the Arvals among his religious reforms, this might well have been our only reference to them. As it is, however, apart from the inscriptions, of which we shall speak in a moment, and which are themselves due to Augustus's influence, we have such a revival of interest that a faint reflexion of it is seen even in the literature.

A famous jurist of Tiberius's reign, Massurius Sabinus, seems to have dealt with the problem of the origin and the number of the Arvals. We read in Gellius (vii. 7. 8): 'But Massurius Sabinus in the first book of his *Memorialia* tells us on the authority of certain historians, that Acca Larentia was Romulus's nurse. This woman, he says, lost one of her twelve sons by death. In his stead Romulus became a son to her, and called himself and her other sons the Arval Brothers. From this time the college of the Arval Brothers was twelve in number. The insignia of this priesthood were the crown of corn-ears and the white fillets.'

A similar story is told in Pliny, *HN* xviii. 6, and again in Fulgentius, *Sermones Antiqui*, p. 114 (ed. Helm). This absurd theory of Massurius Sabinus was in some unaccountable way taken as genuine legendary tradition by Em. Hoffmann, *Die Arvalbrüder*, Breslau, 1858 (original and more condensed form in the *Verhandlungen der Breslauer Philol. Versammlung*, 1857, 67 ff.). A similar idea governs E. Baehrens in his article in the *Jahrb. für Philologie*, cxxxi. (1885) 785 ff. Wissowa (in Pauly-Wissowa, ii. 1464) has pointed out that this legend of Romulus and the Arvals arose at the beginning of the Empire, when the Emperor, as a new Romulus, himself belonged to the priesthood.

One additional piece of information is given by Festus (ed. Müller, p. 5): '*Ambarvales hostiæ* are sacrificial animals (*hostiæ*) which were wont to be sacrificed on behalf of the fields by the twelve (*duodecim*, so Augustinus; *duobus*, MSS) brothers.' These are evidently the Arvals (cf. Macrobius, *Sat. Conv.* iii. 5. 7).

With such a scanty beginning it might well seem foolish to expect that the discoveries of modern times would put us in the position of knowing more about the Arvals than about any other Roman priesthood. Yet such is the case, and it is entirely owing to the discovery of inscriptions.

2. **Inscriptions.**—These discoveries began in 1570 (on the date cf. especially Aldus Manutius in *Cod. Vatican.* 5237, f. 158). In that year, while workmen were digging in a field five miles outside the Porta Portese on the Via Campana, near the Papal villa La Magliana, in the region which then as now was known as *Affoga l'asino* ('Drown the donkey'), more precisely, in a vineyard then called Vigna Galletti (later Vigna Ceccarelli, now Vigna Vignoli), the remains of a building were discovered. In the apse of this building were found nine (according to other authorities seven) statues of Emperors who had been members of the Arval priesthood. In each case the base with the inscription was preserved.

Flaminio Vacca (*Memorie*, ed. Nibby, *Roma Antica*, Iv., No. 98; ed. Schreiber, *Berichte Sächs. Gesell. d. Wiss.* 1881, p. 82, No. 99) says: 'A good two miles outside the above-mentioned gate (Porta Portese), in a place which is called "Drown the donkey," towards the Tiber, in a thicket, were found in the time of Gregory XIII. (1572–1576; 1570 seems correct) many consuls in marble, and each one had his pedestal with an inscription; and also columns of fair marble, thirty palms in length. The columns were sawn up and used for the Cappella Gregoriana at St. Peter's. The consuls were scattered throughout Rome They were, however, of only fairly good workmanship.' Baldassare Peruzzi's son, Silvestro or Sallustio, made a sketch giving the ground-plan of this building, and an attempted restoration. These are preserved in Florence (*Disegni di Architettura*, No. 664), and are reproduced by Huelsen, *Eph. Epigr.* viii. Tab. ii.

The statues have entirely disappeared, and all the inscriptions except one (*CIL* vi. 1012 : to Marcus Aurelius, preserved in the Vatican, Giardino della Pigna ; cf. Amelung, *Sculpturen des vatikanischen Museums*, Part i., Taf. 89), but six others have been preserved in copies (*CIL* vi. 968, 1021, 1053, 1093). The seven Emperors are : Hadrian, Antoninus Pius, Marcus Aurelius, Lucius Verus, Septimus Severus, Caracalla, and Gordian.

At the same time were found fragments of inscriptions containing the minutes of the meetings of the priesthood (first published by Fulvius Ursinus, *Notæ ad M. Catonem*, etc., Rome, 1587). Somewhat more than a century later, in 1699, a second great find of two large inscriptions was made on the same spot. Then came a constant series of finds, which have continued down to the present time. The most curious feature of these discoveries is their wide distribution. Fragments have been found on the Esquiline, on the Aventine, in excavating for the foundations of the choir of St. Peter's, at St. Paolo fuori le Mura, at St. Lorenzo, near the Lateran, and in the catacombs of Calixtus. The finds accumulated, so that in 1795 G. Marini was able to collect and publish 47 pieces (*Gli atti e monumenti dei Fratelli Arvali*, Rome, 1795). Further progress was made in 1858, when de Rossi proved the real site of the grove (*Annali dell' Instituto*, 1858, p. 54 ff.). The delay in ascertaining accurately the location of the grove was due to an error of Filippo della Torre (*Monumenta veteris Antii*, pp. 94, 384), who asserted that the stones found in 1699 had been discovered at the fourth milestone of the Via Ostiensis instead of Campana or Portuensis. In this he had been followed by Marini. This discovery was followed in 1866 by another important find in the grove itself. From 1867 until 1871 excavations were conducted by the German Archæological Institute.

The results of these exeavations were summed up in Henzen's book *Acta Fratrum Arvalium quæ supersunt* (Berlin, 1874), with an admirable commentary. Henzen had written previous to this a preliminary report, *Scavi nel bosco sacro dei Fratelli Arvali* (Rome, 1868). The first definitive publication occurred in *CIL* vi. (city of Rome) Part i., 1876, and again in Part iv., 1902. The originals have been collected as far as possible and arranged by D. Vaglieri, and are exhibited in the small rooms off the cloister of the Museo Nazionale della Terme in Rome.

The body of inscriptions thus obtained presents a record, naturally with many breaks, of the minutes of the Arval Brothers' meetings from the first year of Tiberius's reign down into the reign of Gordian (A.D. 241). As regards the original situation and disposition of these marble tablets, Lanciani (in Henzen's *Relazione*, p. 105 ff., Tab. iv. and v.) thought they were placed on the outside of a round temple, that of the Dea Dia. But this is impossible, since the *acta* themselves indicate that the tablets were inside the temple, for they were engraved *in situ*, which necessitated the introduction of iron (the graving tool) into the grove—an offence against the deity for which a special expiatory ceremony had to be performed. The full formula for this begins : 'On account of the iron which had been brought into the temple for the sake of engraving,' etc. Further, a careful examination of the fragments has shown that they were not attached to a curved surface, either inside or outside of a building. The conclusion from these investigations (cf. Huelsen, *Eph. Epigr.* viii. 316–350, and Bormann, *Arch. Epigr. Mitt.* xvii. 1894) is that the tablets were attached to the flat walls on the inside of a building.

3. History of the cult.—With the knowledge gained from these inscriptions, supplemented by that gained from the literature and from the general history of religion, let us attempt to sketch the history of the priesthood.

Though the legend of the foundation of the priesthood by Romulus is of late date, the priesthood itself belongs to the very earliest period. Proofs of this are found at several points. First, the prohibition of iron in the grove and in the temple indicates that the worship preceded the discovery and use of iron. We may compare with this the custom referred to in Macrobius (*Sat. Conv.* v. 19. 13) : 'The Etruscans used a bronze plough when they founded cities . . . among the Sabines the priests' hair was cut with a bronze shears' (cf. also Servius, *Aen.* i. 448 ; Ovid, *Fasti*, vi. 230 ; Lydus, *de Mensibus*, i. 31). Similarly no iron was used in the construction of the Pons Sublicius (Plin. *HN* xxxvi. 15. 100 ; Dion. Hal. iii. 45). Finally, we may compare the express permission to use iron in making repairs in the temple of Juppiter Liber at Furfo (*CIL* i. 603 = ix. 3513). A second proof of the age of the worship may be found in the adoration of the *ollæ*, very primitive earthenware vessels, preceding the discovery of the potter's wheel. Remains of these *ollæ* were discovered in the sacred grove (cf. de Rossi, *Giornale Arcadico*, lviii., 1868, p. 136, Tab. iv.). A third proof of age is the sacred song which they sang, the words of which have been preserved to us in the minutes of the year 218 (*CIL* vi. 28 = vi. 2104 = Buecheler, *Carmina Epigraphica*, No. 1 = Schneider, *Exempla*, No. 392, where other literature may be found). This chant was probably not understood by the people of the Augustan age.

The fact that the great festival of the Arvals, their celebration in May in honour of the Dea Dia, is missing in the list of old festivals in the so-called calendar of Numa is no proof against its very great age. It was a movable feast, and hence could not be engraved on a permanent stone calendar. We cannot tell the exact nature of the Arvals' worship in this early period. In Augustus's restoration certain of the older features were retained, but it is difficult to distinguish exactly what is old and what is new in his scheme. Hence it is better to leave the discussion of details until the Augustan age. In general, however, we can think of the Arvals during the Kingdom and the early centuries of the Republic as performing their sacrifices to Mars and the Dea Dia, one of those numerous agricultural ceremonials of which the ritual of early Rome was so full. As we have seen above, the history of the priesthood during the Republic is absolutely unknown to us, but we are probably justified in supposing that it continued down through the period of the Second Punic War. At the close of that war, in the religious reaction which set in during the last two centuries of the Republic, this priesthood very probably declined along with the rest.

Our first definite reference to the new life into which the Arvals entered with the coming of the Empire is found in the *Monumentum Ancyranum* (iv. 7), where Augustus, in recounting the priesthoods to which he belongs, mentions that of the Fratres Arvales. This record, written at the close of Augustus's life, is therefore contemporaneous with what has hitherto been supposed to be the earliest datable fragment of the Arval inscriptions, that from A.D. 14, the year which saw Augustus's reign end and that of Tiberius begin. On the other hand, together with the Arval inscriptions were found fragments of a list of consuls (*Fasti Consulares*, cf. *CIL* i.² 70 ff.). The fragments cover the years B.C. 2 to A.D. 37. It has been supposed, accordingly, that the restoration of the Arval priesthood must have been undertaken by Augustus in or before the year B.C. 2, and probably not earlier than B.C. 12, when on the death of Lepidus he became Pontifex Maximus. This office would unquestionably be the best strategic point for a revision of the priesthoods. But it has been shown (by Hula in *Arch. Epigr. Mitt.* xv., 1892, p. 23 ff. ; for counter-arguments, which, however,

are not convincing, cf. Mommsen, *Eph. Epigr.* viii. 303 ff.) that one fragment at least (*CIL* vi. 32338) dates from the year B.C. 20. Accordingly, Augustus's reforms must have occurred before he became Pontifex Maximus. We have, however, other indications of Augustus's interest in religious restoration at the very beginning of his reign, notably the *augurium salutis* of B.C. 29 (aptly compared by Wissowa in Pauly-Wissowa, ii. 1468; cf. Dio Cassius, li. 20 and Suet. *Octav.* 31), and the rebuilding of temples in B.C. 28 (proofs for this date especially Dio Cass. liii. 2, and Hor. *Carm.* iii. 6, collected by Mommsen, *Res Gestæ*[2], p. 86).

The college as re-organized seems to have contained twelve members. Probably this was also the ancient number. That it was the number as restored by Augustus is clear not only from the legendary account of its foundation given by Massurius Sabinus (which on this point agrees with the facts), but also from the negative testimony of the inscriptions themselves, where, when the names of those present at each ceremonial are given, the number twelve is never exceeded. The fact that on the only occasion when as high a number as twelve is reached (at a session in the year 57, *CIL* vi. 2039, 1 ff.) the name of the Emperor Nero is not mentioned, although he was certainly a member of the college, is no argument in favour of the number being greater than twelve, because the Emperor and the members of the Imperial household would be *supra numerum*.

The members were elected by co-optation, that is, the college filled its own vacancies. Originally this co-optation was entirely untrammelled, the Emperor possessing merely his own vote, which he, like any other member, might send in writing in case he was not able to be present in person. But by degrees the influence of the Emperor began to prevail, until, from the time of Caligula onwards, the election was usually reduced to a mere formality, which is best described in the words of the minutes of the year 120 (*CIL* vi. 2080, 22 ff.):

'Under the same consuls on the seventh day before the Ides of February, in the vestibule of the temple of Concordia, when prayers had been said by C. Vitorius Hosidius Geta, the magister, they filled the place of Q. Bittius Proculus, and in accordance with a letter of the Emperor Hadrian Augustus (here follow the Emperor's other titles) elected Publius Manlius Carbo and invited him to the sacrifices. And the letter was opened, which was sealed with a seal representing the Emperor, and in the letter was written "The Emperor Trajan Hadrian Augustus to the Arval Brothers, his colleagues, greeting. In the place of Q. Bittius Proculus, for my part I vote as our colleague the name of Publius Manlius Carbo." There were present, etc. . . .'

Partaking, as such priesthoods did, of the nature of an exclusive social club, the membership was naturally restricted to men of high rank and great wealth (though not, as Marini thought, entirely confined to patricians; cf. Mommsen, *Röm. Forsch.* i. 79).

The college possessed two officers, a *magister* and a *flamen*, who were elected annually out of the members of the college on the second day of the great May festival (see below). These officers served one full year, one Arval year, which began and ended at the Saturnalia (December 17). The year received its name from that of the magister, though, fortunately for us, always subordinate to the names of the regular consuls of the year which always precede it. In case either the magister or the flamen was prevented from attending a meeting, he appointed a substitute (*promagister* or *proflamen*), who, however, served only for that occasion, and as the personal substitute of the man in question. A regular vacancy was filled by a new election.

Connected with the college and present at the May festival were four boys, the sons of senators (in many cases the senators in question were the Arval Brothers themselves). These boys, whose father and mother must both be living (hence called *patrimi, matrimi*), took part as assistants in certain of the ceremonies.

They were regularly employed along with the *servi publici* to carry the libations to the altar on the first day of the great May festival. They were present also at the banquet in the afternoon of the first day, seated in chairs, while the Arval Brothers reclined on dining couches. At the supper in Rome in the evening they waited at table. They did not officiate at the sacrifices of expiation, where only the *servi publici* assisted the magister and the *calator*. The attempt has been made to separate them from the *camilli*, with whom we are elsewhere familiar (cf. Henzen, *Acta*, p. vii, and Wissowa in Pauly-Wissowa, ii. 1471); but this is probably wrong (cf. Wissowa, *Röm. Relig.* 426, Anm. 2). Their sitting with the Arvals at meat is probably a reminiscence of the old custom that young boys should accompany their elders to dinner (cf. Tac. *Ann.* xiii. 16; Suet. *Claud.* 32).

Apart from their own elective officers and these lads of noble families, the Arvals were assisted in their work by a number of slaves and freedmen. Some of these, the regular *servi publici*, were assigned to them by the Emperor. Besides these, each brother had his own servant (*calator*), whom he chose from among his own freedmen. Each *calator* had to pay an initiation fee into the treasury of the college (this is proved by the interesting case decided by the Brothers on May 29, A.D. 120; cf. *CIL* vi. 2080, l. 45 ff.). There is also one mention of a sacristan (*œdituus; CIL* vi. 2068, ii. 27), who was probably a private slave owned by the college as a whole.

A list of the Arval Brothers, so far as they are known, is found in Gatti's article 'Arvales' in de Ruggiero's *Dizionario Epigrafico*, i. 683 ff.

4. Activity of the Arvals.—We have seen above that it is not possible for us to ascertain whether, at the close of the Republic, the priesthood of the Arvals had entirely ceased or whether it was still in existence, though neglected and forgotten. In any case, however, Augustus's re-organization of it, like all his work, was an attempt to restore the old forms of Roman religion in their purity and simplicity, though it was at the same time inevitable that he should consciously or unconsciously adapt them to the new conditions inherent in the Empire. His successors were less interested in the old ritual, and more concerned with the adaptation of the priesthood to the purposes of the moment. All these new adaptations, including the beginnings made by Augustus, were attempts to connect the priesthood of the Arvals with what was becoming more and more the one universal religion of the Empire, namely, Emperor-worship. Thus the greater number of the ceremonies performed by the Arvals were in the interest of the Emperor and of the Imperial household.

The cult acts of the Arvals fall therefore into two categories: (1) those acts which go back to the old forms of the religion of the Kingdom and of the early Republic, and (2) those acts which are connected with the Emperor.

(1) Let us discuss, first, those acts which go back to the old cult. We have seen above, in our discussion of the early history of the cult, that it was originally one of the many agricultural worships characteristic of early Rome. We have left until now the discussion of details.

So much did the Emperor and his household monopolize the attention of the Arval Brothers, that during the early part of the Empire, when the minutes are in general more concise, we have relatively few references to any of the really ancient ceremonies. As the minutes become more diffuse, however, the descriptions of the older rites are more detailed, until eventually under Elagabalus we have a full account of at least the May festival. Thanks to the conservative tendency of ritual performance, we are justified in considering that what we know of the ceremonies as conducted in the year 218 corresponds almost exactly with the ceremony as restored by Augustus. In

describing these ceremonies, therefore, we are at liberty to use them as though they were contemporaneous inscriptions covering more than two centuries.

The ancient ceremonies of which we find traces in the acts of the Arvals may be roughly divided into two classes: (*a*) those which relate to the great festival in May, and (*b*) certain *piacula*, or propitiatory ceremonies, carried out under special circumstances.

(*a*) *The Festival in May.*—As has been said above, the May festival belonged to the category of movable feasts, the so-called *Feriæ Indictivæ*. The days on which it was to be celebrated had to be formally announced at the beginning of the year. This process was known as the *Indictio*. It must in the nature of things go back to the earliest days of the priesthood, and may well have been mentioned in all the minutes from the time of Augustus. The first *indictio* actually preserved is of the year A.D. 21 (*CIL* vi. 32340). As an illustration of the process may be quoted the *acta* of the year 105 (*CIL* vi. 2075, l. line 11):

'Under the same consuls on the seventh day before the Ides of January, in the vestibule of the temple of Concord, the Arval Brothers set the date for the festival of the Dea Dia. And Marcus Valerius Trebicius Decianus, the magister, having washed his hands, and having covered his face, standing in the open air and facing the east, together with his colleagues set the date for the festival of the Dea Dia, thus for this year: So may it be good, favourable, happy, and fortunate for the Emperor, Cæsar Nerva Trajan Augustus Germanicus Dacicus, and for his whole household, for the Roman people, for the Quirites, and for the Arval Brothers, the festival of the Dea Dia shall take place this year on the sixteenth day before the Kalends of June (May 17) at home, and on the fourteenth day before the Kalends of June (May 19) in the grove and at home, and on the thirteenth day before the Kalends of June (May 20) at home. There were present,' etc. (the list of names follows).

Though the festival was indicted every year, there arose by degrees a certain regularity in the dates chosen. For the earlier period before Vespasian more or less irregularity prevails, but from Vespasian onward, with the exception of the year 90, the dates chosen are the 17th, 19th, and 20th of May (in the years of the city which were even in number according to Varro's reckoning), and the 27th, 29th, and 30th of May (in the years of the city which were uneven in number according to Varro's reckoning).

The festival itself accordingly occupied three days, but extended over a period of four days, because the first and second day were separated by an interval of a day, the familiar *dies postriduanus*. Of these three days the second was the most important. On it, in the morning, the ceremonies were held in the grove, whereas on the entire first and third days the celebration was held in Rome.

Regarding the localities in which these ceremonies took place, the following seems to have been the state of affairs:—In Rome itself the Arvals had no official meeting-place of their own. In the minutes of the earlier years we find them meeting in the year 14 in the Regia, in 38 in the temple of Juppiter Stator, in 59 in the Pantheon, in 63 in the temple of Concord, and from 69 onwards regularly in the temple of Concord, though naturally, when ceremonies were held in honour of the various deified Emperors, they met in the temple of the particular Emperor. In the grove itself there seem to have been at least four structures. First, there was the temple of the Dea Dia, which was on or near the top of the hill. No traces of this temple are left, nor do any of the Renaissance sketches seem to represent it. Probably in this temple the marble tablets containing the *acta* were exposed. As we have seen above, the temple was not round. Second, at the foot of the hill was a building referred to as the Tetrastylum. As its name implies, it was rectangular, and it is therefore probably identical with the building discovered in 1570, of which we have the sketch by Silvio Peruzzi (see above, p. 7[b]). Third, also at the foot of the hill was a building referred to as the Cæsareum. Probably this is the round building, represented in a sketch by Ligorio (in the Turin codex), the remains of which are still to be seen on the spot (cf. Altmann, *Italische Rundbauten*, p. 63 ff.). Lastly, there was the circus, of which we have no traces.

The fullest account of the festival is found in the *acta* of the year 218 (Elagabalus, *CIL* vi. 2104). It reads as follows (filling out the *lacunæ*, a process which can be accomplished with a high degree of certainty on account of the various other descriptions in other years of the minutes):

'Under the same consuls on the sixth day before the Kalends of June (May 27), on the Palatine in the temple of the Divi, Alfenius Avitianus, the vice-magister, officiating, the Arval Brothers made sacrifice at dawn with incense and wine, and took into their hands the dried grain-stalks and the fresh grain-stalks, and also the bread crowned with laurel, and they anointed the Dea Dia with oil, and the Arval Brothers put on the toga prætexta and sat in chairs, and thereafter they laid aside the toga prætexta. There were present the following (a list of names follows). Thereupon after midday, having bathed, they sat in their chairs, and then, when they had washed their hands, they put on the white garments for supper and reclined on dining couches and banqueted. Then boys clad in the toga prætexta, the father and mother of each of whom were living, sons of senators, four in number, sat in the chairs and banqueted. And after the banquet (*i.e.* the first course) the Arval Brothers reclined on couches ornamented with fluted valences, and made sacrifice with incense and wine; and the sacrifice was carried to the altar by the boys in the prætexta, the sons of senators, and by the slaves of the State; and the priests received the perfumes and garlands, and they consecrated the perfumes and wrapped them in the napkins (to take home). Likewise the second course, the dessert, was served, and *sportulæ* were given both to the priests of the Emperor and to the other priests whose names are written above. Then, having distributed the roses, they gave the usual salutations of farewell.'

Thereupon follows immediately the account of the second day:—'Likewise on the fourth day before the Kalends of June (May 29), in the grove of the Dea Dia, Alfenius Avitianus, the vice-magister, sacrificed at the altar two young sows, an offering of expiation for the cutting of the grove and the work thus done, and then he sacrificed a heifer in honour of the Dea Dia, and going to the Tetrastylum he sat in his chair. Then returning to the altar, he offered the *exta* of the young sows, and then in the circus, in a silver brazier ornamented with a piece of turf, he offered the *exta* of the heifer, and then he returned to the Tetrastylum and entered in the book (that he had performed the sacrifice), and thereupon he took off his prætexta and returned to his tent. Moreover, in the afternoon the Arval Brothers put the prætexta on again, and assembled in the Tetrastylum and sat on the benches and entered in the official records that they had come together and performed the sacrifice, and they feasted upon the young sows which had been sacrificed for expiation, and afterwards consumed the blood. Then wearing the prætexta, with covered heads and crowned with ears of wheat, they went up into the grove, and Alfenius Avitianus, the vice-magister, officiating, they sacrificed a fattened lamb, and examined the victim to see the success of the sacrifice; and when the sacrifice had been completed, they all made offering of incense and wine. Then they went back into the temple, and at the table made sacrifice to the wine-jars, and in front of the temple on the turf the vice-magister and the flamen made sacrifice. Then going out again to the altar, they all made an offering of money. Thereupon the flamen and the vice-magister, carrying silver cups with bowls filled with wine, and also incense boxes, made sacrifice before the door with incense and wine, and the priests took their stand before the door, and two (of their number), together with the slaves of the State, went to fetch the grain, and they gave it with the right hand and received it with the left hand, and they passed it thus one to another, and finally gave it back to the slaves. Then they entered into the temple and prayed to the wine-jars, and when the doors had been opened they threw the jars down the hill. Then they sat on the marble benches, and bread crowned with laurel was distributed by the slaves. Then they all took *lumemulia* (?) with radishes, and anointed the statues of the goddesses, and all (except the priests) went out of doors and the temple was shut. Then the priests shut up in the temple, girding up their togas, took the song-books, and marking the time, danced the three step, singing thus: "Enos Lases iuvate, enos Lases iuvate, enos Lases iuvate! neve luerve Marmar sins incurrere in pleores, neve luerve Marmar sins incurrere in pleores, neve luerve Marmar sins incurrere in pleores! satur fu, fere Mars! limen sali, sta berber! satur fu, fere Mars! limen sali, sta berber! satur fu, fere Mars! limen sali, sta berber! semunis alternei advocapit conctos, semunis alternei advocapit conctos, semunis alternei advocapit conctos! enos Marmor iuvato, enos Marmor iuvato, enos Marmor iuvato! Triumpe, triumpe, triumpe, triumpe, triumpe!" And after the three step, at a given signal, the slaves entered and took the song-books. And they stood before the door of the temple of the Dea Dia, and with their servants carrying the wreaths intended for each of them, they laid hold of the altar; and the images of the goddesses were crowned, and they elected Publius Ælius Secundinus as magister to serve from the next Saturnalia (for one year to the Saturnalia following), and they named Marcus Flavius Alpinus a flamen . . . and then they wished the customary good wishes, and went down out of the grove; and, taking off their prætextas, they put on white dining garments and banqueted in the Tetrastylum. And the platters with the Campanian earthenware and the wine-jugs of each of the priests were carried into the Tetrastylum like a solemn circus procession. And after the banquet each of those present received the *sportula* (100 *denarii*) and the roses. Then Lucius Alfenius Avitianus, the vice-magister, put on a tunic with a broad border and the purple mantle, and upon his head a wreath of roses, and he took his place above the Carceres and

gave the signal to the four-horse chariots and to the two-horse chariots, and to the vaulters . . . and when the circus performance was finished, they returned to Rome into the house of the magister, and put on white dining garments, and, reclining upon couches with fluted valences, they made sacrifice with incense and wine; and there ministered unto them the sons of senators, the boys above mentioned, whose fathers and mothers were still alive. And when the sacrifice was finished, they received perfumes and wreaths, and again they consecrated perfumes and wrapped them in napkins, and each one received a *sportula* (100 *denarii*). Then they divided the second course, the dessert, and then they took the roses and wished the customary good wishes.'

Lastly comes the account of the third day:—'On the third day before the Kalends of June (May 30), in the house of the magister, the Arval Brothers assembled to complete the sacrifice to the Dea Dia. At the supper there were present (a list of names follows), and reclining upon couches with fluted valences they made sacrifice with wine and incense, and there ministered to them those same sons of senators above mentioned, those boys whose fathers and mothers were still alive; and these boys, aided by the servants and the slaves of the State, carried the sacrificial grain-stalks to the altar. Then, lighting the lamps, they took the Tuscan wine-jars and sent them home by their private servants. Then they divided the second course, the dessert, and received wreaths and perfumes and *sportulæ* (each 100 *denarii*). In this year they feasted for a hundred *denarii* each day on the sixth, the fourth, and the third day before the Kalends of June, and there feasted also the boys, the sons of senators, four in number, and they (too) received each day a *sportula*. And they wished the customary good wishes.'

In spite of the detailed character of our information, the question still remains open as to the real meaning of these ceremonies. The one thing which binds the three days together is the presence of the grain-stalks, which the Brothers handled at dawn on the first day, which were passed from hand to hand at the solemn sacrifice of the second day, and appear again and are solemnly carried to the altar on the third day. The presence of these grain-stalks, the very name itself (*Arval* = 'land-brother'), the crowns of ears of wheat, their religious year from Saturnalia ('seed-festival') to Saturnalia, and the time of the festival in May at the close of the long series of agricultural festivals—all proclaim the character of their worship as intimately connected with agriculture.

Riddles in abundance remain, however. One is the identity of the chief goddess, the Dea Dia. This is, of course, not a proper name, but is merely one of those adjectival descriptions so common in early times (cf. Bona Dea, Di Manes, Dea Tacita), which were employed because of the reverent fear of mentioning the real name (that this fear was especially felt regarding agricultural deities is clear from Pliny, *HN* xviii. 8, and Macrob. *Sat. Conv.* i. 16. 8). This goddess can scarcely be other than Tellus or the old Italic Ceres. Another difficulty is the relation of this May festival to the Ambarvalia. This has been the subject of a long discussion (full literature on both sides is given by Wissowa in Pauly–Wissowa, ii. 1478 ff.). The truth seems to be that the Arval festival, while not identical with the Ambarvalia as a whole, was closely connected with it. That this connexion was very clear in the minds of later Roman writers is evident from Festus, p. 5 (quoted above, p. 7[b]).

(*b*) *Expiatory ceremonies.*—Apart from this great annual festival in May, the only traces of ancient ritual which remain are those of certain expiatory ceremonies (*piacula*). Two of these ceremonies—that connected with bringing instruments of iron into the grove, and that connected with taking them out again—have already been referred to. Other ceremonies are connected with the trees in the grove. We have a series of minor expiatory acts on account of broken branches or trees destroyed by old age or snow-storms. There are also certain major expiatory acts on account of more serious portents—for example, the growing of a fig tree on the roof of the temple, or a tree in the grove being struck by lightning. An event of the latter character occurred in the year B.C. 224, and on that occasion temporary altars were erected and many victims were sacrificed to various deities: to Dea Dia, to Janus, to Juppiter, to Mars, to the Juno of the Dea Dia, to the Virgines Divæ, to the Famulæ Divæ, to the Lares, to the mother of the Lares, to Fons, to Flora, to Summanus, to Mother Vesta, to the Vesta of the gods and goddesses, to Adolenda and Coinquenda, to the Genius of the emperor, and to the XX Divi.

(2) The other and more frequently recurring function of the Arvals was their activity in connexion with the Imperial household. They made sacrifices on birthdays, anniversaries of consecrations, on the occasion of accession to the throne, and on the giving of the title of *pater patriæ* or of the office of *pontifex maximus*, etc. Extraordinary sacrifices were made also on special occasions in the life of the Emperor—for example, when conspiracy was overthrown, when great military victories were won, when an Emperor was saved from shipwreck, etc. Another feature of their work was the making of regular annual vows (*vota*) on behalf of the safety of the Emperor and of the members of the Imperial household.

We have seen that the inscriptions begin with Augustus and continue down into the reign of Gordian. During this time the priesthood was in the main prosperous. There is, however, a slight indication that even before the close of this period the tide of prosperity had turned. It lies in the fact that the latest datable inscription (that of the year 241) gives the *sportula* as twenty-five *denarii* instead of the one hundred *denarii* always mentioned previously. The financial support of the State was therefore being reduced. We may suppose that this reduction was at least continued, if not increased, during the subsequent reign of Philip, who showed decided tendencies towards Christianity (de Rossi, *Ann. d. Inst.* 1858, 72 ff.). Under Gratian (382, cf. *Cod. Theod.* xvi. 10. 20) the Arvals' wealth went into the public treasury, but the geographical location of the temple and the grove outside the city of Rome, and possibly also the connexion with a circus for public amusement, would tend to preserve it (*Cod. Theod.* xvi. 10. 3). In any case it was preserved as a matter of fact. The proofs for this are sufficient, though in the main negative. Before the time of Constantine the catacombs of St. Generosa were built in the immediate neighbourhood of the Arval grove, but no materials from the grove were used (cf. de Rossi, *Roma Sotterranea*, iii. 689 ff.). The same respect for the grove was shown when Pope Damasus (366–384) built the oratory of the Martyrs Simplicius Faustinus and Viatrix. The first desecration of the marble plates occurred in the building of a Christian cemetery in the 5th or 6th century (Henzen, *Acta*, p. xxv).

LITERATURE.—The best general discussion: G. Wissowa, *s.v.* 'Arvales' in Pauly-Wissowa, ii. (Stuttgart, 1896) 1463–1486. The inscriptions themselves are available in *CIL* vi. parts 1 and 4. With these inscriptions may profitably be read Henzen's splendid Commentary, *Acta Fratrum Arvalium quæ supersunt*, Berlin, 1874; and Huelsen's Commentary in *Ephemeris Epigraphica*, viii. G. Gatti's article 'Arvales' in de Ruggiero's *Dizionario Epigrafico*, i. 682–710, may also be compared.

Conclusion.

INTRODUCTION.—*History.*—When A. Kuhn in the year 1845 published his famous treatise *Zur ältesten Gesch. der indogerm. Völker*, by which he gave the first impulse towards an Aryan* (Indo-Germanic) archæology, he held out at the close of it the prospect of further investigations:

'There is still abundance of material available for comparison, for there is *the whole province of religion*, which promises abundant results, and gives at the same time, from the intellectual side, the necessary complement of the picture we have sketched. If we have had occasion more than once in these pages to reach conclusions by means of the language of the Vedas, this will happen still more frequently when we are considering the myths and religion of these writings in relation to those of other races.'

A. Kuhn's scientific work during the remainder of his life was almost exclusively devoted to proving the truth of these words. Along with him we find Max Müller, with the same goal in view, and setting out from the same starting-point, the Rigveda, on which he was one of the best authorities.

These two scholars may be called the real founders of a comparative Aryan mythology, in which the notion of 'Aryan religion' had for a long time been taking shape. The common point of view which they hold lies in the conviction, already aroused by the brothers Grimm, that mythology as well as language is rooted deep in the heart of the people, and that it is not the creation of the higher ranks, such as the priestly or the poetic order—a theory which Fr. Creuzer had tried to prove at the beginning of the century in his *Symbolik*. Its explanation is to be sought exclusively in nature and its phenomena, especially in the idea of a struggle, such as the spectacle of a thunderstorm or the alternation of day and night presents to us. This naturalistic view of mythology is exhibited most clearly in the poems of the Rigveda—from which we can easily understand how the myths of the allied peoples were formed, and by means of which we are enabled to discover old Aryan myth-cycles. This A. Kuhn has attempted to do in his articles on 'Gandharven und Kentauren' (Kuhn's *Ztschr.* i.), 'Ἐρινύς, Saranyû' (*ib.*), 'Manus, Μίνως, Mannus' (*ib.* iv.), 'Ἑρμῆς, Saramâ, Sârameya, Wuotan' (*ZDA* vi.), and especially in his great work *Über die Herabkunft des Feuers und des Göttertranks* (Berlin, 1859). Max Müller—whose *Contributions to the Science of Comparative Mythology* (collected in 2 vols., 1897), *Lectures on the Science of Language* (1861–64), along with the 'Essays,' *Chips from a German Workshop* (1867–75), *Origin and Growth of Religion* (1878), *Biographies of Words* (1888), etc., are well known throughout the whole learned world—went even further than A. Kuhn in the naturalistic explanation of mythical names. As specially characteristic of the views of both scholars, the fact may be mentioned that they were not content with discovering old Aryan myths, but tried also to deduce their origin from the character of human speech, its capacity for poetic interpretation, its polyonymy and homonymy, etc. Such is, in a very condensed form, the conception of mythology and religion held by Kuhn and Müller, for the full characterization of which we should have to note also the meagre attention given in the works of both scholars to the important sphere of religious ceremonies or worship. This conception continued to be the prevailing one down to the eighties of last century, although from an early period currents were perceptible which, issuing from various departments of science, seemed to threaten the foundations of the Kuhn-Müller theory.

While this theory, in its re-construction of the Aryan religion, started mainly from the oldest literary remains of the Aryan races, first of all the Veda, and then the Avesta, Homer, and the Edda, on the other hand, the science which has become known under the title of 'Folklore,' and which has as its aim the collecting of the legends, fairy-tales, customs, and habits still prevalent among the people, directed attention to the forms of the so-called lower mythology, and sought to prove that the very oldest material is to be found in analogies, such as those of the Greek Dryads with the German moss- and wood-maidens, of the Cyclops and centaurs with the wild men, etc. It was held to be demonstrable that many exalted divine and heroic figures originated in these circles. The most successful representative of this view was W. Mannhardt, in his two chief works, *Der Baumkultus der Germanen und ihrer Nachbarstämme* (Berlin, 1875, 2nd ed. 1904) and *Antike Wald- und Feldkulte, aus nordeuropäischer Überlieferung erläutert* (Berlin, 1877, 2nd ed. 1905). Then, in addition to this, the study of ethnology, and in its train the *universal comparative history of religion*, pointed to a series of apparently primitive universal religious ideas among mankind, of which at least traces were found also among the Aryan races, and which did not seem to fit well into the system conceived by Kuhn and Müller. The *ancestor theory* especially, according to which all religions spring from the worship of the dead, was placed in the foreground from the anthropological side, and was applied to the Aryan races by J. Lippert in *Die Religionen der europäischen Kulturvölker, der Litauer, Slaven, Germanen, Griechen und Römer in ihrem geschichtlichen Ursprung* (Berlin, 1881); and in England, by H. Spencer, *Principles of Sociology* (1876–96), followed by Grant Allen, *Evolution of the Idea of God* (1897). Similarly Elard Hugo Meyer, in his *Indogermanische Mythen* (Berlin, 1883, 1887), distinguished three chief periods in the formation of myths: belief in souls, in spirits, and in gods, the first of which he designated pre-Aryan, the second Aryan, and the third post-Aryan.

Moreover, even the opinion that the poems of the Rigveda (from which, as we saw, the adherents of the Kuhn-Müller theory started, especially with regard to their interpretation of myths) introduce us directly to the domain of naïve nature-poetry began to waver, and there were many acute interpreters who claimed to discover, in the very

* The terms 'Aryan' and 'the Aryans' are used in this article for that group of languages and peoples which is generally called, among students of philology, 'Indo-Germanic.' The term 'Teutonic' is used as a general term, including all branches of the Germanic race; cf. art. TEUTONS.

oldest parts of the Veda, traces of decay and of priestly refinement. This objection to the Kuhn-Müller explanation of myths has been urged with special force by O. Gruppe in his book, *Die griech. Kulte und Mythen in ihren Beziehungen zu den orient. Religionen*, i. (Leipzig, 1887); and in England by A. Lang, *Custom and Myth* (1884), *Myth, Ritual, and Religion* (1899), and *Modern Mythology* (1897). Gruppe points out that a great many of the mythical figures of the Rigveda are explicable not by natural phenomena and occurrences, but by certain priestly manipulations of the cultus. He himself believes the Aryans of primitive times to have been completely devoid of religion, and ascribes the uniformity of their myths and worship, almost in the same way as Creuzer, to the enormous number of religious forms that they borrowed from Western Asia and Egypt and transferred to Greece, India, and Middle and North Europe.

Finally, at the end of the seventies, Comparative Philology, whose daughter the comparative mythology of the Aryan people might well be claimed to be, had also entered upon a new phase of its development, inasmuch as from that time onwards the demand for a *regular* system in the correspondence of sounds as the result of etymological comparisons of words and forms was more emphatically insisted on. Naturally, this claim was made also in the sphere of the identifications proposed by students of the history of religions; and it became evident that the great majority of these identifications, and among them many which had hitherto been regarded as the most reliable supports of mythico-historical hypotheses, were phonetically untenable: *e.g.* Skr. *gandharvá* = Gr. *κένταυροs* ('Gandharven und Kentauren'); Skr. *marútas*, 'the Maruts' = Lat. Mars; Skr. *Váruṇa* = Gr. *Οὐρανόs*; Skr. *Mánu* = Gr. *Μίνωs*; and many others (see A. A. Macdonell, 'Vedic Mythology' in Bühler's *Grundriss der Indo-Arischen Philologie und Alterthumskunde*, 1897).

Under these circumstances, it is not to be wondered at that doubt of the correctness of the Kuhn-Müller interpretation of mythology increased from year to year, and that finally people actually arrived at such a degree of scepticism as to affirm that it was impossible to ascertain with certainty anything whatever about the oldest religious ideas and customs of the Aryans (cf. *e.g.* E. Zupitza, in the *Ztschr. des Vereins für Volkskunde*, 1901, p. 343 ff.). It is only quite lately (cf. *e.g.* M. Winternitz, in a series of admirable articles on 'Was wissen wir von den Indogermanen?' in *Beilage zur Münchner AZ*, 1903, Oct. and Nov.) that people are beginning again to ask if it is necessary and just to pronounce the life-work of such distinguished investigators as A. Kuhn and Max Müller absolutely null and void, and are attempting to rescue at least some of their results. All this enables us to see how hard it is at the present moment to give a summary of our knowledge of the Aryan religion; and before we even begin this difficult undertaking it will be necessary, first of all, to touch on the most important points regarding the method which we are to follow in the subsequent discussion.

Method.—In a thoughtful address, entitled *Die Aufgabe der theologischen Fakultäten und die allgemeine Religionsgeschichte* (Berlin, 1901), A. Harnack says:

'In the first place, it needs but little consideration to recognize that the study of each single religion ought by no means to be separated from the study of the *history* of the people concerned. . . . To try to study the religion alone is a more childish undertaking than to examine only the roots or the blossom instead of the whole plant.'

On account of this indissoluble connexion between the history, or, more accurately, the *history of the culture*, of a race and its religion, which will often meet us in the following discussion, it goes without saying that the materials which furnish us with a knowledge of the culture of the primitive Aryans are in reality the same as those which make possible for us an acquaintance with their *religion*. As the present writer has recently treated the former in detail in the preface to his *Reallex. der indogerm. Altertumskunde* (Strassburg, 1901) and in the 3rd ed. of his work *Sprachvergleichung und Urgeschichte* (I. Teil: 'Geschichte und Methode der linguistisch-historischen Forschung,' Jena, 1906), it only remains for him to characterize it shortly here in its special application to the history of religion.

The materials which are at our disposal for the investigation of pre-historic periods of culture are derived partly from *language*, partly from *things*. With regard to the former, we must first of all, with very strict regard to phonetic laws, compare the pre-historic equivalents discovered in the history of religion. For example, there exists beyond all doubt an equivalence of this kind in the group of words: Skr. *devá* = Lat. *deus*, Lith. *dẽwas*, Ir. *dia*, Old Norse *tívar*, 'God'; and Max Müller is certainly right when, at different times, he has reckoned the establishment of an etymology of this kind among the most important achievements in the mental history of mankind. In this search for the primitive vocabulary, we must, of course, exclude equivalents that are confined to particular languages of the Aryan group, which, we know, were united to each other more closely than to the other languages. This holds, *e.g.*, of a very considerable number of Indo-Iranian word-correspondences like Skr. *sóma* = Avesta *haoma* for the soma plant, which played so important a rôle in the cultus of both peoples; Skr. *mitrá* = Avesta *mithra* for the sun-god Mitra; Skr. *hótar* = Avesta *zaotar* for a certain class of priests, etc. We cannot utilize equivalents like these for determining the character of the Aryan religion; on the contrary, they simply demonstrate that the Indians completed the development of their religious history along with the Iranians, or perhaps only with the Eastern branch of them, the consideration of which falls outside the scope of this article (cf., on this point, Spiegel, *Die arische Periode*, Leipzig, 1887; and numerous sections in Oldenberg's book, *Die Religion des Veda*, Berlin, 1894). *Negative conclusions* from the vocabulary of primitive times, *i.e.* conclusions from the non-existence of an expression for a certain idea to the non-existence of that idea itself, are, on the whole, dangerous, as all negative deductions are. But it is otherwise when primitively related expressions are wanting for a *whole class of ideas*. When, *e.g.*, all attempts have failed to prove that real god-names existed in the earliest times, or when there is no etymological agreement to be found between two languages for the idea of the temple, these facts will require due consideration in deciding the question whether there really were god-names and temples in the primitive Aryan period.

But it would be a great mistake to suppose that the only way in which philology can be of service to the history of religion is by placing at its disposal the primitive etymological equivalents in the sphere of religion. Harnack (*op. cit.*) is right in saying that the history of religion is reflected in the history of language, and that only he who knows the latter is in a position to seek to decipher the former. In fact, the whole formation of religious ideas can be understood only with the help of philology. Whence came the god-names of the separate Aryan races, if, as we have just seen, they cannot be recognized in the vocabulary of the primitive language? What religious thought called them

into being in each separate case; and how did this, their fundamental idea, afterwards grow deeper and wider? But even if it must, unfortunately, be admitted that our knowledge in this department is still very limited, the fact that at present we know nothing certain about the etymological explanation of many, indeed of most, Aryan god-names (an Indian *Varuṇa* and *Mitra*, a Greek *Ares* and *Poseidon*, a Roman *Mars* and *Liber*, the Teutonic *Tanfana* and *Nerthus*, a Lithuanian *Occopirnus* and *Autrimpus*, etc.) does not justify the conclusion that this must remain so in the future. In this connexion, H. Usener's *Götternamen, Versuch einer Lehre von der religiösen Begriffsbildung* (Bonn, 1896), a book which to some extent forms the basis of the present article, shows a marked advance, although the present writer recognizes this advance more in the fundamental idea of the work than in its details, which are often linguistically assailable. Moreover, what we really lack most, in the sphere of Aryan archæology as in others, is a collection of linguistic material. Once we have before us, collected and sifted, the terminology of sacrifice and prayer, of priests and temples, of lots and consulting of oracles, of legal and moral ideas from all the Aryan languages, various stages of historical development emerge of their own accord, and each new etymological discovery implies a new discovery in the history of religion.

We have so far been treating of expressions which either belong to the common pre-historic vocabulary or are autochthonous in the separate languages. Now we have to refer to another important source for the understanding of religious history. This is the *foreign word*, or borrowing. Thus the Gr. Κάδμος taken from Heb. *qedem*, 'the East,' the Lat. *Apollo* and *Proserpina* from Gr. Ἀπέλλων and Περσεφόνη, and the Russ. *bogŭ*, 'God,' from Avesta *baγa*, show the directions from which new religious thoughts and suggestions came to the separate Aryan races.

Now, even although the aid which is given to religious history by philology is great and many-sided, yet it is a great mistake to believe, as was formerly done, that the religion of the primitive Aryans, like their culture generally, could be deduced simply from etymological comparisons. It is true that the above-mentioned equation, Skr. *devá* = Lat. *deus*, shows us clearly that there were divine beings even in primitive times; but we cannot expect from philology any information regarding the intrinsic value, or import and scope, of this term. In this, as in all other questions, therefore, the comparison of *things* and the investigation of *things* must accompany the comparison of *words*.

This brings us, in the first place, to *Pre-history* or *Pre-historic Archæology*, a science which, in general, is based in no small degree on certain religious conceptions and customs of prehistoric man. For we owe the majority of pre-historic relics, as is well known, to the ancient wide-spread practice of the worship of the dead; and the questions, how and where the dead were buried, what was placed beside them in the way of food and drink, what weapons and implements were laid in the grave or on the funeral pyre, and why the corpse was buried in this or that position, turned in this or that direction, are naturally connected most closely with problems of the history of religion. But discoveries of another kind—such as sacrifice-stones, idols, amulets, bronze kettles, bronze chariots, no doubt serving a religious purpose (one was found near Trundholm as recently as 1902; cf. S. Müller, *Urgeschichte Europas*, Strassburg, 1904, p. 116), and many others—possess great significance in religious history, even if at first they raise more problems than they enable us to solve.

But the chief task in this field of investigation must always be *the comparison of the religions historically attested in the various Aryan races*, and the attempt to select from the crowd of their heterogeneous phenomena what is common and original. And there can be no doubt concerning the path to be pursued, provided that the analogy emphasized above between the history of Aryan culture in general and the history of Aryan religion in particular is correct.

It is the great merit of V. Hehn to have shown, especially in his book *Kulturpflanzen und Haustiere in ihrem Übergang aus Asien nach Europa*[7] (ed. O. Schrader, Berlin, 1902), that the conditions of civilization in primitive Aryan times have persisted, often with great faithfulness, among the N. European races, particularly the Lithuanians and the Slavs, among whom they not infrequently show themselves at the present day. It is from the study of these races that the higher forms of life, as they are presented to us in Indian, Greek, and Roman antiquity, have for the first time been fully understood. There was really nothing further needed than the transference of this simple thought to the history of religion. In very much the same way, men like W. R. Smith (*Religion of the Semites*[2], 1894 [Germ. tr. Freiburg, 1899]) and S. I. Curtiss (*Primitive Semitic Religion To-day*, 1902 [Germ. ed. Leipzig, 1904]) have recently attempted to deduce the oldest Semitic religious conditions, not so much from Babylonian, Phœnician, and Hebrew antiquity as from their *modern* remains, especially among Arab tribes. Similarly our task is to look at the higher forms of religion of the Indians, Greeks, and Romans from the standpoint of the lower stages of N. European paganism, and to find the latter again in the former. Unfortunately, this methodical plan is more easily stated than carried out. The reason for this is that our knowledge of N. European religions is, in many ways, still shadowy and incomplete; for—and this more nearly concerns the *Teutons*—it cannot be doubted that the work of J. Grimm (*Deutsche Mythologie*[4], 1875–78), however worthy of admiration it is even yet, suffers from two defects which have not been removed even by later investigation. The first of these is that the religious-historical information with regard to the Continental Teutons is too much amalgamated with what we know about the *Northern* mythology, which requires special critical examination. The second defect is that the whole re-construction of the old Teutonic faith in the hands of Grimm and his followers is dominated by the same spirit of over-estimation of its contents as Tacitus exhibits in his *Germania*. Our knowledge of Slavonic paganism is still more uncertain. In G. Krek's *Einleit. in die slav. Literaturgeschichte*[2] (Graz, 1887), we find, indeed, a comparatively matter-of-fact presentation of ancient Slavonic religion (pp. 377–439); but the incisive criticism by A. Brückner (*Archiv für slav. Philol.* xiv. 161 ff.) has shown how careful an investigation we still need of the sources, which are far too full of the most incredible misunderstandings and faulty emendations (examples of these in *Archiv*, iv. 423 or xiv. 164), before we can obtain from them any grains of real gold. In particular, we know absolutely nothing about common Slavonic god-names, for even the agreement of *Zuarasici* (certified by Thietmar, vi. 7) with the Russ. *Svarog* does not prove any such thing with certainty (cf Jagić, *Archiv*, iv. 412 ff.). This is perhaps due to the simple reason that, as yet, there were no Slavonic god-names at all. If the historical information about Slavonic paganism is thus of a doubtful nature, we are compensated for it in some measure by the fact that on Slavonic soil many

heathen manners and customs, even under the gloss of Christianity, make themselves widely felt even at the present time. We possess excellent data about these; and we hope, especially with regard to the cult of the dead, to obtain new and valuable information by means of them.

It fortunately happens, too, that we are very well supplied with information about the primitive paganism of the Baltic brother-races of the Slavs, the Prussians, Lithuanians, and Letts. Among these peoples, originally at least equally far removed from the influences of both Roman and Byzantine culture, a particularly primitive religious system survived down to the 15th and 16th cents., and even longer; so that we see the remarkable spectacle of adherents of the Lutheran doctrine like Jan Malecki (Meletius, Menecius) about 1550, or Matthæus Prætorius (born about 1635) being able to report in detail regarding the paganism existing in their communities. F. Solmsen has enumerated and briefly explained these sources of the Prusso-Lithuanian religion, in Usener's *Götternamen* (p. 79 ff.) We shall return to some of them in the course of this article. In general, however, we may express the hope that the Lithuanian religion will render services to the history of Aryan religion similar to those rendered by the Arabs to Semitic study.

Idea of God.—If we undertake to examine and arrange, in accordance with the method described above, the stock of religious ideas and customs prevalent among the primitive Aryan races, what could be a better starting-point than that conception to the evolution of which all those efforts are in the last resort directed—the conception of 'God'? We shall make the three words Gr. *θεός*, Lat. *deus*, and the common Teutonic O.H.G. *got* the pivot of this preliminary investigation.

For a long time the Greek word was erroneously connected with the Lat. *deus*. Nowadays this theory may be regarded as finally abandoned. On the other hand, nearly all later etymologists agree* that the Gr. *θεός* is derived from **θFεσο-ς* (cf. *θέσ-φατος* 'spoken by God') and belongs to the following word-group: Lith. *dvesiù*, *dvėsti* 'to breathe,' *dvãsė* 'breath,' 'spirit,' *dùsas* 'vapour,' Old Slav. *duchŭ* 'breath,' 'spirit,' *duša* 'soul,' M.H.G. *getwâs* 'ghost,' Old Gall. *dusii* 'nightmare' (cf. Augustine, *de Civ. Dei*, xv. 23: 'Quosdam dæmones, quos *Dusios* Galli nuncupant, hanc assidue immunditiam et tentare et efficere plures talesque asseverant'; Isid. *Or.* 8, 11, 103: 'Sæpe improbi existunt etiam mulieribus, et earum peragunt concubitum, quos dæmones Galli *dusios* nuncupant, quia assidue hanc peragunt immunditiam'), Lat. *Fĕrâlia* (**dhvĕsâlia*) 'a festival in honour of the dead' (also probably *fĕriæ* from **dhvĕsiæ*, and *festus*). As the development of the meaning of the Gr. *θεός* we get therefore 'breath,' 'soul,' 'soul of the dead,' '*god*.'

A *second* series of words presents a quite analogous appearance. Jordanis (ch. 13) remarks of the Goths: 'Jam proceres suos, quorum quasi fortuna vincebant, non puros homines sed semideos, id est, *anses* vocaverunt.' Now the word *anses* which is here made use of, and which in the passage quoted denotes the souls of ancestors worshipped as gods, rose on the one hand to be the title of the highest old Norse gods, the Æsen (Old Nor. *ęsir*), and on the other hand exists still in Anglo-Saxon (*ęse*) in the sense of lower spiritual beings, the elves: *ęsa gescot* is like *ylfa gescot* = N.H.G. *Hexenschuss*, lit. *witches' shot*, *i.e.* lumbago. It is not improbable that there is, further, a connexion between the same word and Skr. *ásu* 'the breath of life in men and animals,' *anima* (cf., in phonetic connexion, Skr. *ási* = Lat. *ensis* 'sword'), and once more with Skr. *ásura*, Avesta *ahura* (Ahura-mazda) = 'god,' 'lord.'

The facts referred to find their explanation in a series of other related phenomena. As is the case among other races, the *soul* is thought of in the Aryan languages as breath, wind, vapour or smoke. A primitive Aryan expression for this survives in the equation Skr. *átmán* = O.H.G. *âtum* 'breath,' 'soul' (Ir. *athach* 'breath'), while the closely related equation of Skr. *mánas* = Gr. *μένος* (cf. also Lat. *Minerva* from **Menesova*) seems to mean not so much the physical substratum of the soul as its spiritual power (cf. Gr. *μέμονα*, 'I strive'). The heart of man appears to be regarded as the real seat of the soul, a fact which seems to follow, on the one hand, from the Gr. *κῆρες*, primitive spiritual beings (cf. below, pp. 27, 52), and their identity with *κῆρ* 'heart,' and, on the other hand, from the circumstance that the Indian *mánas* also has its abode in the heart, as a being the size of the thumb (cf. Oldenberg, *Die Religion des Veda*, p. 526). The heart is also viewed as the starting-point of numerous spiritual functions and emotions: Lat. *vĕcors* 'mad,' *recordari* 'to remember,' Old Slav. *srŭditi sę* 'to be angry,' Bulg. *srŭčeliv* 'courageous' (Lat. *cor*, Old Slav. *srŭdĭce* 'heart'), etc. From the separate languages we may mention further, for the notion of the soul: Lat. *animus* 'soul,' *anima* 'breath': Gr. *ἄνεμος* 'wind' (Skr. *ániti* 'he breathes'); Gr. *ψυχή*: *ψύχω* 'breathe'; Gr. *θυμός* (*Il.* vii. 131 identical with *ψυχή*): Skr. *dhûmá*, Lat. *fúmus* 'smoke,' etc. This breath or smoke soul, then, is enclosed in the body of man, which, however, it leaves on the advent of death, also temporarily in the phenomena of sleep and dreams, in order to lead an independent existence. From the spiritual beings formed in this way there have now sprung a large host of spirits conceived as partly harmful and partly helpful, for which there exist in the Aryan languages a vast number of cognate expressions.

Some of these are: Skr. *drúh*, Avesta *druj* = Old Nor. *draugr*, Old Saxon *gidrog*, O.H.G. *gitroc* (cf. also A.S. *dreâg* 'larva mortui,' and perhaps Old Nor. *dvergr*, M.H.G. *twerc* 'dwarf') 'goblin,' 'ghost': Skr. *druh* 'to injure'; Skr. *rbhú*, Vedic expression for three clever elfish beings (Kuhn's *Ztschr.* iv. 102 ff.) = Old Nor. *álfr*, A.S. *ælf*, M.H.G. *alp*, 'fairy,' 'ghostly being,' 'demon,' 'nightmare' (cf. W. Grimm, *Kleinere Schriften*, i. 405 ff., and also Schrader, *Reallexicon*, art. 'Zwerge und Riesen'); common Teutonic M.H.G. *mar* m.f., Old Nor. *mara*, A.S. *mære*, *mare*, O.H.G. *mara* f. 'demon' (*mare* in 'nightmare') = Old Sl. *mora* 'witch,' 'demon,' 'goblin,' Ir. *mor-[r]ígain*, Gl. *lamia* 'goblin-queen'; Old Nor. *valr*, A.S. *wæl* 'the dead' (esp. on the battlefield) = Lith. *vėlės* 'ghostly forms of dead people, ghostly beings in general'; Goth. *hugs* 'νοῦς,' Old Nor. *hugr* 'soul' (*mannahugir* 'human souls which appear in many forms') perhaps = Lith. *kaũkas* 'dwarf-spirit,' 'hobgoblin,' etc.

To this class of beings, which will engage our attention, in the discussion of the conception of fate (below, p. 52[a]), belong originally the two series of words which were discussed above, namely, Gr. *θεός* and Goth. *anses*; but these words took on a higher meaning under the influence of the worship devoted to the souls of the dead, and ultimately became associated with those divine beings for whom the Lat. *deus* is the characteristic term.

The word *deus*, as we have shown above, corresponds to the Skr. *devá*, Ir. *dia*, Lith. *dievas*, Old Nor. *tívar*, and along with these goes back to an Aryan root **deivo-s*, which, in consequence of its close connexion with Aryan **dyĕu-s* = Skr. *dyáus* 'sky,' Gr. *Ζεύς*, Lat. *Juppiter*, must have had some such meaning as 'the heavenly.' Now, since the Aryan **dyĕus*, as the use not only of the Indian *dyáus*, but also of the Gr. *Ζεύς* and Lat. *Juppiter* proves, originally denoted merely the visible sky worshipped as a god, **deivos* derived in primitive times* from **dyĕus*, must have signified

* Bechtel forms an exception to this, in Bezzenberger's *Beiträge*, xxx. 267 ff. [*N.B.*—A star *before* a word (as in the next line) signifies that the form does not occur but is inferred.]

* A later formation from Skr. *dyáus*, *dívas* = Gr. *Ζεύς*, *Δι-F-ός* is Skr. *dívyas* = Gr. *δῖος* from **δι-F-jo-ς* 'heavenly.'

originally only the powers of nature visible in the sky, *e.g.* sun, moon, dawn, thunder, winds, etc. In them, therefore, we must see the 'heavenly ones.' The common Teutonic root Goth. *guþ*, Old Nor. *goð*, A.S. *god*, O.H.G. *got*, seems to the present writer to be largely characteristic of the oldest conception of the divine element thought of as active in these 'heavenly ones.' The most significant thing about it is that it leads back to a *neuter conception*, to an original **ghutóm* which (cf. on this point Osthoff in Bezzenberger's *Beiträge z. Kunde d. idg. Spr.* xxiv. 177), as is shown by the comparison with Skr. *hávate* 'he calls' (*hutá* 'called'), Avesta *zavaiti* 'he curses,' Lith. *záuėti* 'to charm,' most probably denoted originally 'the divine element called forth by a charm from the deified phenomenon.' We shall return to this later. But meanwhile the discussion of the Gr. *θεός* and the Lat. *deus* has led us to the necessity of dividing the material at our disposal into *two* parts, which we may distinguish as worship of the dead and worship of the 'heavenly ones.' In a *third* division we shall discuss what, indeed, in many ways comes into contact with the worship of the dead and the 'heavenly ones,' but yet is on the whole independent of it, viz. the prevailing ideas of Fate and the means of their investigation.

I. *THE WORSHIP OF THE DEAD.*—As far back as we can trace the Aryan races by means of tradition or excavations, they honoured their dead by a long series of customs which shed a surprising light on the ideas of man concerning a life after death. We shall get the best view of these by treating of (1) the different forms of disposal of the dead which we encounter among the Aryan races, especially burial and cremation; (2) the attentions paid to the dead at the time of the disposal of the corpse, especially the gifts to the dead; (3) the attentions paid to them after the funeral rites (ancestor-worship). Then we must speak (4) about the beliefs in fixed common abodes of the dead (realms of the dead)—beliefs which, in the course of time, made their appearance in several parts of the Aryan world.

1. **Burial and burning of the corpse.**—The fact that in all countries occupied by Aryans these two forms of disposing of the dead are found contending for the mastery, even in very primitive times, suggests to us the question, To which of the two are we to assign the greater antiquity? If we turn for an answer first to *Asia*, we find that cremation may be regarded as the regular means of disposing of the body among the *Indians* even in Vedic times, and is the only one mentioned in the ritual texts; but alongside of it there are also evidences of the burial of the unburned body. Thus in the *Rigveda* (x. xv. 14) the pious ancestors who dwell in the joy of Heaven are divided into 'those who have been burned by fire and those who have not been burned by fire'; and so too in the *Atharvaveda* (xviii. ii. 34) buried bodies and cremated ones are distinguished among the 'fathers,' whom Agni is to bring forward. A glance at the *Iranian* brother-race of the Indians shows us that in these latter quotations we have before us the traces of an earlier state of affairs. Among the kings of the Scythians, who ethnographically seem to represent a part of the primitive Iranian race, left behind or scattered westwards, and who remained in more primitive conditions of culture, Herodotus (iv. 71 f.), who describes their obsequies in great detail, presupposes burial as the only form; and the bodies of the ancient Persian kings also were entombed unburned, as their graves show. Herodotus (i. 140) states the same thing of the Persians in general, while he gives in addition an account of a protective envelopment of the body in wax (*κατακηρώσαντες δὴ ὧν τὸν νέκυν Πέρσαι γῇ κρύπτουσι*). When, on the other hand, cremation is proved by the Avesta as existing among non-Zoroastrian tribes, or when the followers of Zarathushtra, as well as the Persian Magi, previous to burying their dead, exposed them to be devoured by dogs, birds and beasts of prey, we must in both cases undoubtedly detect the introduction of foreign customs, the last-mentioned of which seems to have originated among the wild mountain tribes of the Oreitæ in Baluchistan (cf. Diodorus Siculus, xvii. 105: *τῶν γὰρ τελευτησάντων παρ' αὐτοῖς τὰ σώματα φέρουσιν οἱ συγγενεῖς γυμνοί, λόγχας ἔχοντες. εἰς δὲ τοὺς ἐπὶ τῆς χώρας δρυμοὺς θέντες τὸ σῶμα, τὸν μὲν περικείμενον τῷ νεκρῷ κόσμον περιαιροῦνται, τὸ δὲ σῶμα τοῦ τετελευτηκότος καταλείπουσι βορὰν τοῖς θηρίοις*).

Similar conditions confront us among the *European* Aryans, especially among the *Greeks*. In the shaft-graves, and in the bee-hive and chamber tombs of the Mycenæan period, the dead were entombed unburned in a partly mummified state (cf. Tsountas-Manatt, *The Mycenæan Age*, chs. v. vi.). And even if, in the face of these discoveries, we must take account of the possibility of a non-Grecian population in Mycenæan Greece, the case is different with the great Athenian cemetery which has been open to view in the N.W. of the town since the year 1891 (cf. A. Brückner and E. Pernice, 'Ein attischer Friedhof' in *Mitteil. d. kais. deutschen archaeol. Instituts*, Athen. Abt. xviii.). Among the nineteen 'dipylon-graves' (graves of the geometric period) in this burying-place, only one contained an urn with burnt bones, 'and this state of affairs agrees with the assurances of Greek local antiquaries, who claim to have seen no *προιστορικὸς τάφος* with a burnt body.' So, when burying and burning are met with in the Greece of history alongside of each other, there can be no doubt that the former custom must be regarded as the more primitive, and that the Homeric world with its practice of body-burning represents an innovation contrary to the primitive Greek custom of burial which is preserved in the mother-country.

The *Roman* tradition corresponds to the conditions actually found among the Greeks. According to Pliny, burial preceded cremation in Rome also (cf. *Hist. Nat.* vii. 187):

'Ipsum cremare apud Romanos non fuit veteris instituti; terra condebantur . . . et tamen multæ familiæ priscos servavere ritus, sicut in Cornelia nemo ante Sullam dictatorem traditur crematus.'

An old royal enactment referring to the so-called 'Cæsarian operation' (cf. M. Voigt, 'Über die leges regiæ' in *ASG*, vii.: 'negat lex regia mulierem, quæ prægnans mortua sit, *humari*, antequam partus ei excidatur') appears to be acquainted with burial only, but the legislation of the Twelve Tables already sanctions both methods of disposal of the dead.

Cf. Tab. x. (ed. Schoell) 1: 'hominem mortuum in urbe *ne sepelito neve urito*'; 8, 9: 'neve aurum addito cui auro dentes iuncti escunt, aut im cum *illo sepeliet uretve*, se fraude esto.'

The excavations also indicate that burial was succeeded by cremation on ancient Latin soil. The lowest layer of the burying-ground laid bare near the Porta Esquilina contains rock-hewn burial chambers with unburned bodies; while in the second layer of soil in this cemetery, as well as in the necropolis of Alba Longa and among the most recent excavations of Professor Boni in the Forum Romanum, urns of ashes have been brought to light which point, no doubt, to a higher antiquity for cremation in Rome than might be expected from the historical tradition quoted. We have to rely solely on excavations with regard to the northern part of Italy. Here, in the famous burying-places belonging to the older Iron Age, of Bologna, Villanova, and Marzobotto, the graves of bodies buried and burned almost contemporaneously lie close together. The latter class are assigned by Mon-

telius (*La Civilisation primitive en Italie depuis l'introduction des métaux*, Stockholm, 1895) to the Umbrians, *i.e.* to the near relatives of the Latins, and the former to the non-Aryan Etruscans. But the observations of the present writer, on the spot and in the Museum of Bologna, failed to convince him of the possibility of carrying through this ethnographic division.

When we pass to the East and North of our territory, we find both methods of disposing of the dead mentioned by Herodotus (v. 8) among the *Thracians*: ταφαὶ δὲ τοῖσι εὐδαίμοσι αὐτῶν [the present reference is thus only to the rich] εἰσὶ αἵδε· τρεῖς μὲν ἡμέρας προτιθέασι τὸν νεκρόν, καὶ παντοῖα σφάξαντες ἱρήϊα εὐωχέονται, προκλαύσαντες πρῶτον· ἔπειτα δὲ θάπτουσι κατακαύσαντες ἢ ἄλλως γῇ κρύψαντες.* The same thing holds of the pagan *Prussians* and *Lithuanians*, regarding whom a treaty with the Teutonic Order in the year 1249 (cf. Dreger, *Cod. Pomeran. diplom.* No. 191) certifies the following: 'promiserunt quod ipsi et heredes eorum in mortuis *comburendis vel subterrandis* . . . vel etiam in aliis quibuscunque ritus gentilium de cetero non servabunt.' Elaborate descriptions of the disposal of the bodies of people of rank by cremation among the races mentioned are given us by different authorities, such as Peter of Dusburg or the canon Stryikowski; while others like the clerical Jan Malecki (Meletius, Menecius), who will often be referred to, in their accounts of the ancient Prussian funeral customs, start with burial as a self-evident institution. The older information among the Slavonic races is somewhat more uniform, and is in favour of cremation. It is certified by Boniface (Jaffé, *Monumenta Moguntina*, p. 172) as existing among the *Winedi*; by Thietmar of Merseburg (*Chron.* viii. 2) among the Poles, and by the Arabs Ibn Dūstah, Ibn Fosslan, Mas'ūdi, etc., among the Eastern and the Danube Slavs. Alongside of this, however, Ibn Dūstah tells of a custom according to which, if a man of noble rank died, a grave was made for him in the form of a large house, in which he was laid unburned. But, as the followers of this custom are expressly called Rhos (Russians), not Slavonians, it is natural to conjecture that, as we must understand by the Rhos the Norse conquerors of Russia, we have here to do with a Scandinavian custom; for we read of stately rooms in Norway belonging to the oldest Iron Age—rooms hewn in wood, in which some corpses lay on stuffed cushions, and some sat on chairs (cf. O. Montelius, *Die Kultur Schwedens*[2], p. 193). It may also be considered a foreign custom when, in the account given by Ibn Fosslan of the interment of a Russian merchant (see below, p. 30), the corpse was put in a ship and burned along with it, in exactly the same way as was customary in Northern Scandinavia. On the other hand, the simultaneous existence of different burial customs among the old Slavonic races—cremation among the Radimičes, Sěverjanes, and Kriviče, burial among the Poljanes and Drevljanes—may be inferred from the information of the old Russian *Chronicle* of Nestor, and Christianity at its introduction seems to have found both methods of disposing of the bodies followed to practically the same extent (cf. Kotljarevskij, 'On the Burial Customs of the Pagan Slavs,' in *Trans. of the Department for the Russian Lang. and Lit. of the St. Petersburg Acad.* [Russ.] xlix. p. 240 ff.).

The *Teutons* and *Celts* still remain to be considered. Among these the Roman authors are acquainted with cremation only.

Cf., for the Teutons, Tacitus, *Germ.* 27: 'funerum nulla ambitio: id solum observatur, ut corpora clarorum virorum certis lignis crementur, struem rogi nec vestibus nec odoribus cumulant: sua cuique arma, quorundam igni et equus adicitur, sepulcrum cæspes erigit.' As late as the year 785 (*MGH* iii. 49) Charlemagne decreed against the Saxons: 'si quis corpus defuncti hominis secundum ritum Paganorum flamma consumi fecerit, et ossa eius ad cinerem redegerit, capite punietur'; and again, 'iubemus ut corpora Christianorum Saxonum ad cimeteria ecclesiæ deferantur et non ad tumulos Paganorum.' The native testimonies to cremations on a large scale are too well known from the *Beowulf* and the songs of the Edda to require to be detailed here. With reference to the Gauls, Cæsar states (*de Bell. Gall.* vi. 19): 'funera sunt pro cultu Gallorum magnifica et sumptuosa; omniaque quæ vivis cordi fuisse arbitrantur, in ignem inferunt, etiam animalia, ac paulo supra hanc memoriam servi et clientes, quos ab iis dilectos esse constabat, iustis funeribus confectis una cremabantur.' The same thing appears from Pomponius Mela (iii. 2, 3) and from Diodorus Siculus (v. 28).

The question simply is, *At what time* did the Teutons and Celts begin to cremate their dead? The final answer to this can be given only by prehistoric archæology, for want of older written evidences. This shows that in the lands occupied by the Celts and Teutons during the Neolithic Age, the corpses were interred unburned in dolmens, upright graves, and stone chests, and that it was only after the use of bronze had become more firmly established in Europe that cremation gradually came in. It further encourages more and more the opinion (cf. Montelius, *AA* xvii. 151 ff.) that the change of custom went on in the countries mentioned, without any real change in the population, so that in this way we should have to conclude that, for both Celts and Teutons, burial and not cremation was the oldest method of disposing of the dead, although history gives evidence only of the latter. It is worthy of notice that in Sweden and Norway burial once more appears decisively during the younger Iron Age alongside of cremation, and we may doubt whether the former mode of disposing of the dead was at any time quite extinct.

No one who considers the facts and conditions here described (cf. for details J. Grimm, 'Über das Verbrennen der Leichen' in *Kleinere Schriften*, ii. 211, and Ridgeway, *The Early Age of Greece*, i. ch. vii. 'Inhumation, Cremation, and the Soul') will doubt that, so far as the Aryan races are concerned, there is a not inconsiderable probability for the priority of burial over cremation. This view is confirmed by a *consideration of the language*.

If it really happened, as J. Grimm (*op. cit.*) assumed, that cremation existed before burial, we should naturally expect this fact to be indicated somehow in the Aryan funeral terminology; that, *e.g.*, expressions for 'to dispose of the dead' should exhibit an original sense='to burn.' But this is not at all the case; and even the Gr. *θάπτω*, which means in historical usage 'to bury' and 'to burn,' can by no means, in spite of J. Grimm's contention, be connected with Skr. *tap*, Lat. *tepeo*, Gr. *τέφρα*, 'ashes,' but must very likely be connected with O.H.G. *tunc*, 'pit,' or with Armen. *damban* 'grave.' On the other hand, there is a wide-spread prehistoric designation of burial in the series: Old Pr. *kopts*, *enkopts*, 'to bury,' Lith. *kāpas*, 'cairn,' Lett. *kapu mâte*, 'grave-goddess,' Gr. *κάπετος*, 'grave,' 'pit,' Lat. *capulus*, 'coffin': Lith. *kapóti*, Old Slav. *kopati*, 'to hew,' and the same change of meaning recurs in the equally primitive equation: O.H.G. *grab*=Old Slav. *grobŭ*, 'grave,' 'coffin' (Goth. *graban*, 'to dig'). There is a pre-historic designation of the grave also in the probable equation, Lat. *orcus* (**urcus*), 'under world'=Goth. *aírahi* 'sepulchral cave' (cf. Bezzenberger, *Beiträge*, xxv. 166); while the Lat. *sepelio*, the oldest meaning of which was undoubtedly 'to bury,' as follows from the passages of the Twelve Tables quoted above, through its connexion with the Skr. *sapary*, 'to serve,' 'do homage,' 'honour,' plainly expresses the ancient *ritual significance* of this mode of disposal of the dead (cf. also W. Schulze, in Kuhn's *Zeitschr.* xli. 335).

* Cf. also Kretschmer, *Einleit. in die Gesch. der griech. Sprache*, p. 178.

We are thus justified in assuming that the Aryans, alike in the land of their origin and after their arrival in what afterwards became their home, interred their dead unburned in carefully prepared graves. The thought that prompted this kind of burial must have been simply the desire to protect the body of the deceased, whether with the pious intention of warding off enemies and wild animals from it, or because, believing that the soul of the dead hovers around the corpse and is bound to its existence, they thought to secure the interests of the deceased by procuring for him the longest possible existence, and at the same time to serve the interests of the survivors—for they were afraid of ghosts—by confining the spirits of the dead rigidly to the grave. Or it may be that all these reasons worked together.

This intention of guarding the body of the dead person is exhibited on the grandest scale in those colossal tombs, known as dolmens, vaults, cairns, etc., which are scattered over Europe in the North, West, and South, and which also recur in North Africa, Palestine, and India; but the questions to which these buildings give rise from the side of the history of culture and ethnography (cf. S. Müller, *Nord. Altertumskunde*, i. 68; Hoernes, *Urgesch. der bildenden Kunst*, p. 241; Zinck, *Det nordevrop. dysseterritor. stengrave og dyssernes udbredelse i Europa*; M. Much, *Heimat der Indogermanen*, Abschnitt v., 'Die grossen Steingräber') are as yet so far from being settled that we cannot enter upon them here. At bottom, however, the same endeavour to protect and preserve the human corpse is expressed in the later but still pagan invention of the coffin. It is unknown during the whole of the Stone Age, and in Greece also during the Mycenæan period of the Bronze Age. In Sparta, as late as the time of Lycurgus, the dead were, without any such covering, laid upon palm branches and leaves of the olive tree. Afterwards, as in the old Athenian cemetery (cf. above, p. 16), the bodies were enclosed in large vessels (πίθοι), and then the clay and wooden coffin and the stone sarcophagus gradually found their way into the South, borrowed perhaps from foreign countries. In the forest land of N. Europe there appeared for the first time, in the earlier Bronze Age, the so-called 'tree of the dead,' *i.e.* a hollowed-out trunk, especially of the oak, which was used for the protection of the body. Any one who desires to convince himself of the preserving power of this manner of interment has only to examine, in the Copenhagen National Museum, the tree-coffins with their contents taken from the Danish cairns. In Ancient Russia, and in dialects even at the present day, the coffin bears the very name *klada*, *koloda*, *i.e.* 'tree-trunk' (cf. N. Germ. *Dodenstock*). The Slavonians, even at the beginning of last century, felled a hollow tree for the purposes of burial, shaped it, and pushed the dead body inside. The sectaries of the province of Czernigovski are still said invariably to manufacture their coffins out of a complete tree-trunk. Moreover, corpses have been found in Russia which were enveloped only in bark (cf. Kotljarevskij, *op. cit.* p. 222 f.). This northern 'tree of the dead,' whose wide-spread use is a proof of the fact that the burial of the dead had never quite been given up, was afterwards superseded by the Christian coffin *constructed* from boards, which spread over Europe along with the diffusion of the new beliefs.

Eloquent witness is borne to this by numerous names of the coffin in the Teutonic languages—names which were borrowed from the Latin (O.H.G. *saruh*, *sarh*, from **sarcus*=*sarcophagus*, A.S. *cest*, *cist*, 'coffin,' *cistian*, 'to coffin,' Old Nor. *lîk-kista* from Lat. *cista*, M.H.G. *arke* from Lat. *arca*, O.H.G. *sarh-scrîni* from Lat. *scrinium*).

Thus all along, from the earliest to the most recent times, we see connected with the disposal of the dead by burial the endeavour to protect and preserve the corpse.

Now, in the most direct opposition to this series of ideas connected with the burial of the dead, is the custom of *cremation*, which, as we have seen, emerges in pre-historic times among all the Aryan races, and subsists, alongside of burial, down even to the introduction of Christianity. While those who bury a body aim at *protecting* it by durable grave-constructions or by coffining, we now find men resorting to fire as the most drastic means of *destroying* it. It is in reality a revolution which can be explained only by a complete change in the ideas about life after death, and which in recent years several famous scholars have made the subject of research. The first place here is due to Erwin Rohde and his book *Psyche*[2] (i. 27 ff.). According to his view, cremation is meant to effect the speedy and complete separation of the soul from the body, and this from an affectionate as well as a selfish motive. As long as the body lasts, the soul is bound to it; it enjoys no rest itself and allows none to the survivors, whom it terrifies by manifold appearances.

'Nothing can destroy the visible counterpart of the soul more quickly than fire; if a fire is kindled, and the most precious belongings of the dead man are consumed in it, no bond can detain the soul any longer in this world. Thus, by burning the body, they serve the interests of the dead, who no longer roam about restlessly, and still more those of the living, whom the souls banished to the depths of the earth can never meet again.

In essential agreement with Rohde, but independently of him, S. Müller, in his *Nord. Altertumskunde* (i. 363 ff.), is convinced that the true purpose of cremation is the release of the soul in order that it may find peace in the other life, while R. Much, in a comprehensive discussion of Müller's book (*Anzeiger für deutsches Altertum*, xlviii. 315 ff.), lays greater emphasis on the release of the survivors of the dead person from the fear of him than on the release of his soul.

'The thought of the dead person, if it was a case of burial, would involve the idea of the preserved but disfigured body, decomposed or already changed to a skeleton. . . . But if the dead person had been burned, what was left of him afforded no new food for the imagination. . . . The part which the dead under such circumstances played in the dreams, hallucinations, and imaginations of the survivors was undoubtedly a smaller and also a more friendly one; in other words, his soul entered more easily into the peace of a home of souls, or else followed its destined way at liberty within living and active nature.'

In confirmation of his view, Much appeals to the custom, which long persisted, of burning what were supposed to be vampires, witches, sorcerers, and the like, for no other reason than to prevent their return.

In opposition to the opinion (which, by the way, is generally prevalent) of these three scholars, that the 'dogma' of cremation spread into Europe and Asia by passing from race to race, W. Ridgeway, in his work mentioned above, *The Early Age of Greece*, defends the view that cremation was brought by the *conquering expeditions* of a N. European Celtic race to Italy and Greece as well as to Iran and India. He holds that, at the same time and in the same way as the custom of burning the body, the belief had spread that an entrance into a world of the blest was secured only by those who were burned by fire, but that cremation itself is rooted, in the last resort, in the conviction that it is only by fire that man can be freed from the pollution which death brings with it.

Setting aside this attempt of Ridgeway (which appears to have little foundation) to explain the spread of cremation among the Aryan races by migration of races instead of by 'waves of culture,' the present writer believes that in the discussions of all four scholars important points of view have been suggested for the under-

standing of the question with which we are here engaged, although naturally it will never be possible to get beyond more or less credible conjectures on the subject. There is no doubt that the thought which in stages of primitive culture is expressed most frequently and plainly, as we shall see in the section on 'Realms of the Dead' (p. 29), is that cremation opens for the dead person the entrance into a paradise beyond. But it cannot yet be decided whether cremation first originated from an Aryan race and spread 'wave-like' in different directions, or took rise outside the circle of Aryan linguistic and racial kinship—perhaps among the primitive Sumerian population of Babylon, where, in the year 1887, huge burying-grounds of burned bodies were brought to light in the two ruined sites of Surghul and El Hibba (cf. R. Koldewey, in *ZA* ii. 403 ff.).

2. Attentions paid to the dead at the time of the disposal of the corpse, especially the gifts to the dead.—Whether, in primitive times, the body of the dead was buried or burned, the disposal of it must have been accompanied even then by a long series of solemn customs, which can still be ascertained by a careful comparison of the burial-rites handed down from the separate Aryan races. Unfortunately, such a comparison has not as yet been undertaken, and cannot be attempted in an exhaustive way here. To show, however, how far-reaching the analogies in this connexion are, two at least of the chief Aryan races, namely, the *Greeks* and the *Lithuanian Slavs* will be compared.

For the former we shall start from the description of the Greek burial-customs in Rohde's *Psyche*[2] (denoted by R.), i. 218 ff.; for the latter we shall take special account of the above-mentioned (p. 17[a]) work of Kotljarevskij (=K.); cf. also Joannes Menecius (=M.), 'de Sacrificiis et Idolatria veterum Borussorum, Livonum, aliarumque vicinarum gentium' (*Scriptores Rerum Livonicarum*, ii. 389 ff.); and P. V. Šejn (=Š.1), 'Materials for a Knowledge of the Life and Language of the Russian Population of the North-West' (White Russia), i. 2, 2nd pt.: 'Burial and Memorial Customs, Wailings over the Corpse, and Lamentations for the Dead,' in *Trans. of the Department for the Russian Lang. and Lit. of the St. Petersburg Acad.* [Russ.] 51, No. 3, St. Petersburg, 1890, and the same author's work (=Š.2), *The Great Russian in his Songs, Usages, Customs, Superstitions, Tales, Legends*, etc. [Russ.], St. Petersburg, 1898, 1900, 2nd pt. p. 777 ff. Thereafter the important subject of gifts to the dead will be discussed with regard to all the Aryan races.

(*a*) ANCIENT GREEK AND LITU-SLAVIC BURIAL-CUSTOMS.—(*a*) *The lying in state of the corpse* (*πρόθεσις*).—'After the eyes and the mouth have been closed by the hand of the nearest relative, the corpse is washed and anointed by the women of the family, clothed in clean garments, and laid on the bed in the house for solemn lying in state' (R.).

'In funeribus hic servatur ritus a rusticanis. Defunctorum cadavera vestibus et calceis induuntur, et erecta locantur super sellam, cui assidentes illorum propinqui perpotant ac helluantur' (M. p. 391). 'On the appearance of the master of the house, the wife, and the persons intimately connected with the dead man, the lying in state takes place in the "corner" (*kutŭ*), which in this case does not mean the corner under the sacred images, but the bench opposite the entrance door.* Among other wishes connected with a "decent" death, as, *e.g.*, that in the hour of death all the relatives may be present, that the son may close the eyes, the daughter sing the song of woe, etc., the White Russian peasant wishes to lie on his own "bench" after his death; he has not died "decently" if he has lain in the "corner" in a stranger's house.' 'They clothe every corpse in a clean white garment, prepared in the house, and in new bast shoes, which are replaced by boots only in wealthy families.' 'It is the bounden duty of the dead man's nearest relatives to close his eyes, and in doing so they are required to avoid most strictly any possible injury to his body; and they make haste to wash the body, before it has grown cold.' 'They clothe the dead man in a complete summer dress, *i.e.* in a summer tunic and girdle over the under-garment, and they usually put a hat on his head' (Š.[1] pp. 512, 518).

A difference from the Greek custom is shown in the fact that among the Slavs the washing of the dead body, which, moreover, is regarded as a religious ceremony accompanied by prayers, is not usually performed by relatives, but by strangers; in the case of men it is done by men, in the case of women by women, or sometimes in the case of both by old women.

(*β*) *The lamentation for the dead* (*θρῆνος*).—'The lamentation for the dead took place over the corpse lying on its bier, and the purpose of the lying in state was to give opportunity for this' (R.). The spontaneous passionateness of this lamentation in the earliest times is attested not only in the description of Homer,* but also by the endeavours of the lawgivers, especially Solon (Plutarch, *Solon*, 21), which were directed towards putting a check upon it. Solon will have only the women nearest of kin (cf. below, 3 *e*) to take part in the lamentation; all violent outbursts of grief, scratching of the cheeks, and beating of the breast and the head are forbidden, as well as the singing of set forms (*θρηνεῖν πεποιημένα*). Homer (*Il.* xxiv. 707 ff.) gives a graphic account of what once prevailed: Priam carries the body of Hector to Troy. The whole town is assembled before the gates; with weeping and lamentations the people surround Priam's chariot; wife and mother tear their hair at the sight of their beloved dead one. Priam now exhorts them: 'Give me place for the mules to pass through; hereafter ye shall have your fill of wailing when I have brought him unto his home.' There the body of Hector is laid on a splendid couch, professional singers strike up a melancholy air, accompanied by the woeful cries of the women; then Andromache, Hecuba, and Helen step forward to the dead body to utter those mourning songs which are doubtless meant by the *θρηνεῖν πεποιημένα* of Solon's edict.

We meet with all these customs in everyday use in the Litu-Slavic world, sometimes even at the very threshold of the present day. From the laying of the dead body on the 'bench,' from the very moment of death, indeed, the lamentations of female relatives or neighbours continue through all the phases of the burial—often it is impossible to say whether more as a conventional necessity or as an expression of deep anguish. Moreover, they are repeated at the anniversary festivals of the dead, which will be spoken of below. The Arab Ibn Dūstah (K. p. 217) was acquainted with the fierceness of these outbursts of grief when he relates that the women lacerated† their hands and faces with knives when a member of the family died. And Šejn states of the White Russians of the present day (Š.[1] p. 535):

'The room of the peasant's house, in which the dead body lies, re-echoes with the weeping and mourning of relatives, neighbours, and acquaintances. In such a case the women naturally distinguish themselves by special ecstasies of feeling, their wailing and moaning and their despair at times reaching such a pitch that, on looking at them, one involuntarily begins to be apprehensive not only for the health, but even for the life of some of them.' Again, referring to the *Great Russians*, he says

* Cf. also Š.[1] p. 531: 'They lay the dead body on a long broad bench, or on a frame specially prepared for it in the middle of the room, with the head towards the sacred images (*krasny ugolŭ*)'; and Š.[1] p. 551: 'They lay the dead body in the middle of the room, with the feet towards the door.' So in Homer (*Il.* xix. 212) the dead person rests *ἀνὰ πρόθυρον τετραμμένος*.

* Cf. *e.g. Il.* xviii. 22 ff. (the son of Nestor announces the death of Patroclus to Achilles):

ὡς φάτο, τὸν (Achilles) δ' ἄχεος νεφέλη ἐκάλυψε μέλαινα.
ἀμφοτέρῃσι δὲ χερσὶν ἑλὼν κόνιν αἰθαλόεσσαν
χεύατο κὰκ κεφαλῆς, χαρίεν δ' ἤσχυνε πρόσωπον·
νεκταρέῳ δὲ χιτῶνι μέλαιν' ἀμφίζανε τέφρη.
αὐτὸς δ' ἐν κονίῃσι μέγας μεγαλωστὶ τανυσθείς
κεῖτο, φίλῃσι δὲ χερσὶ κόμην ἤσχυνε δαΐζων.
δμῳαὶ δ', ἃς Ἀχιλεὺς λήίσσατο Πάτροκλός τε,
θυμὸν ἀκηχεμέναι μεγάλ' ἴαχον, ἐκ δὲ θύραζε
ἔδραμον ἀμφ' Ἀχιλῆα δαΐφρονα, χερσὶ δὲ πᾶσαι
στήθεα πεπλήγοντο, λύθεν δ' ὑπὸ γυῖα ἑκάστης.

† Cf. *Il.* xix. 282 ff.:

Βρισηΐς δ' ἄρ' ἔπειτ', ἐκέλη χρυσέῃ Ἀφροδίτῃ,
ὡς ἴδε Πάτροκλον δεδαϊγμένον ὀξέϊ χαλκῷ,
ἀμφ' αὐτῷ χυμένη λίγ' ἐκώκυε, χερσὶ δ' ἀμυσσεν
στήθεά τ' ἠδ' ἁπαλὴν δειρὴν ἰδὲ καλὰ πρόσωπα.

(Š.[2] p. 779): 'When the women strike up their mourning songs at the graves, the weeping widow often swoons in consequence of her great grief, i.e. she falls on the grave of her husband, and lies there perfectly motionless. Then the women who are present shake her and bring her to her senses; and she falls down on the grave again, and continues her song of lamentation. Swoons like these occur several times in succession. Often they are only pretended, as it does honour to the bereaved one, and they praise her for "knowing how to weep."'

It is worthy of note that these Russian lamentations often assume an epic, and even a dramatic, character—*epic* in so far as occasionally a complete sketch of the life of the deceased is given in them (cf. Š.[1] p. 546), *dramatic* in so far as the mourners are in the habit of turning to the dead person with questions as if he were alive.

Cf. Menecius, *op. cit.* p. 391: 'Epota cerevisia (see above) fit lamentatio funebris, quæ in lingua Rutenica sic sonat: . . . id est, hei mihi quare mortuus es? Num tibi deerat esca aut potus? Hoc modo lamentantes enumerant ordine omnia externa illius bona, cuius mortem deplorant; nempe, uxorem, liberos, oves, boves, equos, anseres, gallinas, etc. Ad quæ singula respondentes occinunt hanc næniam: cur ergo mortuus es qui hæc habebas?' and Š.[1] p. 520: 'Those who visit the dead man take pains to express their genuine grief, and in doing so they recall different circumstances in their lives which have such and such a connexion with his life. The women express this in a mournful, tearful song, but the men in a long address, during which the speaker often turns to the dead man with questions, just as if he were still alive, and several times during the course of the speech he repeats that the dead man, although no longer alive, can nevertheless hear and understand quite well, only he is unable to express his thoughts and feelings.'

These speeches of the men are not really dirges, since only the women can take part in funeral dirges. Copious collections of these dirges, arranged according to the relationship of the mourner (widow, mother, sister, daughter, daughter-in-law, etc.), are to be found in both of Sejn's works. While on the whole marked by great monotony, these songs not infrequently exhibit in details genuine poetic feeling, and quite recall the mourning songs which the Trojan women poured forth over the body of Hector.

Thus a White Russian widow laments (Š.[1] p. 638): 'O, my brave partner, how am I to live now with my dear little children? Who will be their supporter and father? Whence can warm winds blow down upon them? No warm winds will blow upon them,' etc. Cf. Andromache's words at the bier of her husband (*Il.* xxiv. 725 ff.): 'Husband, thou art gone young from life, and leavest me a widow in thy halls. And the child is yet but a little one, the child of ill-fated parents, thee and me; nor methinks shall he grow up to manhood,' etc.

In Russia there are also paid female mourners, who often achieve great fame by their art (cf. Melnikow, *In the Forests*, ii. 307, Russ. ed.).

(γ) *The funeral procession* (ἐκφορά).—'The lying in state seems to have lasted, as a rule, only one day. Early on the morning of the third day after death, the body was carried out of the house along with the couch on which it had lain. . . . The solemn and magnificent forms which this part of the cult of the dead assumed, in the time of the ancient aristocracy, may be seen from the portrayal (if it corresponds at all to the reality) of a funeral procession on one of the very ancient "dipylon-vases." Here the body lies on an elevated bier in a carriage drawn by two horses; there are men with swords at the side, and a whole crowd of women following, wailing and beating their heads' (R.).

'Cum ad sepulturam effertur cadaver, plerique in equis funus prosequuntur, et currum obequitant, quo cadaver vehitur; eductisque gladiis verberant auras, vociferantes: . . . id est, aufugite vos dæmones' (M. p. 391). 'They always drive the dead body to the cemetery, and that on sledges even in summer; it is not customary to carry the dead body with the hands'* (Š.[2] p. 778). 'In old Russian the phrase "to sit on the sledge" means the same as "to approach the grave" (cf. Anučin, 'Sledge, Boat, and Horse as Requisites of Burial Ritual' (Russ.) in the *Moskauer Drevnosti*, xvi.). 'It is also worthy of notice that, as a rule, they yoke the dead man's favourite horse to his carriage.' 'In my parish they convey the dead to the cemetery in no other way than on a waggon drawn by a pair of oxen.' 'The burial takes place on the third day after the death of the invalid, and often on the second' (Š.[2] pp. 522, 541, 530).

The obsequies themselves naturally took a different form according as it was burial or cremation that was practised; both methods, as we have seen, can be proved to have existed in pre-Christian times, both on Litu-Slavic and on Greek soil. Winternitz, in his articles, 'Was wissen wir von den Indogermanen?' (*Beilage zur Münchner AZ*, 1903, No. 258, p. 293), thinks it is possible to recognize a primitive Aryan custom, connected with burial as well as cremation, in the frequently recurring practice of the mourners walking three times round the grave or the funeral pyre; but the present writer has not as yet been able to trace such a habit on strictly Slavonic soil. The most important part, however, of the obsequies proper was undoubtedly the *depositing of the funeral gifts* on the grave or on the funeral pyre of the deceased—a point which will be treated in greater detail below. We shall therefore pass on to the fourth and last chief act of the ancient Greek burial ceremonial on the one hand, and the Litu-Slavic on the other, viz. the funeral feast.

(δ) *The funeral feast* (περίδειπνον).—'Having returned from the disposal of the body, the members of the family undergo a religious purification, and then, crowned with wreaths, attend the funeral feast. This was also a part of the cult of souls. The soul of the dead man was believed to be present, as their host; it was dread of the invisible companion that gave rise to the custom of alluding to him only eulogistically during the feast. The funeral feast was a repast for the living relatives, given at the house of the dead person' (R.).

'All the rest of the company return (after the burial) to the peasant's house, with the priest at their head, in order to "celebrate the funeral feast" (*pravitĭ stolŭ*; cf. Homeric πάφον δαινύναι). By this is meant a commemoration meal for the dead person, which lasts from two to four hours.' 'After they have buried the corpse, the priest goes home, but often they invite him to the house of the dead person. All the others who attended the burial immediately betake themselves to the house of the deceased "to the feast of cakes" (*na klečki*). After they have washed their hands, they pray here first of all to God, sometimes inaudibly, sometimes, if there is a reader among them, aloud; then they sit down to table. The reader and those who dug the grave sit in the places of honour. The men sit at one table a little higher ("in the corner," *na kutě*), the women at another' (Š.[1] pp. 513, 554). 'But each one, before eating [at the funeral feast], must wash himself. This must have been a very ancient custom, and it has not been given up yet among the Nadravians; for, when the people come from the burial, a tub of water is placed before the door, as those who attended the funeral must wash* themselves, even although none of them touched either the earth or the corpse' (cf. Matthæus Prætorius, *Deliciæ Prussicæ oder Preussische Schaubühne*, ed. W. Pierson, Berlin, 1871, p. 99). 'To this day I cherish the greatest respect for this burial feast (*žalobny stolŭ*), at which rude speaking, slander, dispute, disagreement, strife, wanton jests, and everything else that usually accompanies gatherings of peasants, had no place. The large gathering spoke with restraint, not raising their voices, and the conversation, whether of individuals or of the whole company, confined itself to the deceased, his actions, and the most trivial details of his life. They recalled the talk and instructions of the dead man, especially those in which the goodness of his heart shone forth' (Š.[1] p. 514).

We shall learn more about the funeral feasts of the Greeks and the Litu-Slavs when we come to speak of their 'commemoration feasts for the dead' (3 *d*); the latter cannot always be sharply separated from the former.

(ε) THE GIFTS TO THE DEAD.—The remote antiquity of the Lithuanian, White Russian, and Great Russian ideas and usages connected with the disposal of the dead is shown not least in the custom, which even yet is in part wide-spread, of laying in the grave along with the dead person the favourite objects of his past life. The following is a selection from the great mass of testimonies:

'Post lamentationem dantur cadaveri munuscula, nempe mulieri fila cum acu: viro linteolum, idque eius collo implicatur. . . . Qui funus mortuis faciunt, nummos proiciunt in sepulcrum tanquam viatico mortuum prosequentes. Collocant quoque panem, et lagenam cerevisiæ plenam ad caput cadaveris in sepulcrum illati, ne anima vel sitiat vel esuriat' (M. *l.c.*). '[1]

* The custom is different on the other side of the Volga, among the Raskolnikans (cf. Melnikow, *In the Forests*, ii. 309, Russ. ed.).

* The Scythians also, as Herodotus (iv. 73 ff.) describes in detail, had to purify themselves after the burial, which they did by means of a vapour-bath from hemp-seed.

was assured that they put into the pockets of the linen shirt (*nasovü*), which is put on the dead man, pipe and tobacco-pouch, flint and steel if he smoked during his life, and a snuff-box if he snuffed. To the man's girdle above the shirt they hung a small bag containing smooth copper buttons, as well as a small knife in a leather sheath—articles with which the peasant never parts during his daily life. In the case of both men and women they placed in the front folds of the linen shirt a clean linen handkerchief (*nosovička*), so that the dead person might, if necessary, wipe his eyes, his nose, and his mouth.' 'I have heard it frequently asserted that on opening a burial-mound the grave-diggers sometimes used to find a bottle of spirits which had been previously laid in the dead man's coffin. The men, so far from despising such a find, consumed it on the spot with great pleasure.' 'They place a towel in the dead man's hand, and some coppers in his pocket, with which he buys a place for himself "in yonder world."' 'After the burial-service they lower the deceased into the grave, along with objects which were specially treasured by him and were specially dear to him during his lifetime. If, *e.g.*, he was by trade a shoemaker, they invariably placed beside him an unfinished bast shoe (*sü pičikomü i spicami*, implements of his trade?); if he was a carpenter, or some other tradesman, they gave him an axe, a chisel, a plane, a file, etc. Besides these things they put into every dead man's grave bread, salt, eggs for an omelet, nuts, beer and spirits in a bottle, and also a short pipe with tobacco and tinder-box, or a snuff-box with snuff' (S.[1] pp. 512, 517, 531, 534).

Similar customs may still be shown to exist among the Teutonic races of the present day, although they have to a large extent disappeared (cf. E. Mogk, 'Mythologie' in Paul's *Grundriss d. germ. Phil.*[2] iii. 252).

The result of these investigations is that even to-day, under the complete domination of Christianity, we find the remains of a custom which can be traced back, by means of excavations and traditions, to the epoch when people generally began to bestow care upon the disposal of the dead, viz. the Neolithic Age; and this custom consisted in giving to the dead man gifts of meat and drink, weapons, household furniture of all kinds, ornaments, domestic animals, and even servants and wives. In fact, in the time of the Vikings, they even deposited the dead man's ship along with him at the burial mound, as the well-known discoveries of Tune and Gokstad show. And among those Aryan races which, at the time of the oldest historical tradition, seem to be no longer acquainted with the custom of gifts to the dead, unmistakable traces point to its existence at an earlier date. For instance, gifts to the dead appear to be unknown to *Vedic* antiquity, but such facts as the following must be taken into account. According to a famous hymn of the Rigveda (x. 18), they give the dead warrior on the funeral-pyre his bow, and then take it out of his hands again; or they make the wife lie on the funeral-pyre beside her husband, and afterwards command her to 'rise once more to the world of the living.' This shows that here also it used to be the custom for weapons and wife to be burnt along with the dead man (cf. Oldenberg, *Die Religion des Veda*, p. 575). The same holds good of the Homeric Greeks. With them also the ashes of the dead were interred generally without gifts to the dead; but the funeral ceremony which Achilles prepared for his friend Patroclus (*Il.* xxiii. 164 ff.), and the funeral-pyre on which he placed pitchers with honey and oil, and at which he slaughtered sheep, oxen, horses, dogs, and twelve noble Trojans, show that there reached even into the Homeric epoch the memory of a time when people honoured the dead with sacrifices and gifts.

The method in which these gifts were offered to the dead man varied. Where the rite of *burial* was prevalent, they were lowered with the corpse into the grave; where *cremation* was customary, they were either placed beside the ashes of the dead man or burned with him on the funeral-pyre—which seems to be the later custom. But it is difficult to carry through a sharp distinction as to the character of the gifts according as it was a case of burial or of cremation. It is true that S. Müller, in his *Nordische Altertumskunde*, has ventured to suggest, for the geographically limited district of this northern world, a complete history of the development of gifts to the dead in harmony with the development he assumes to have taken place in the ideas of the people of this region concerning a future life. Thus (according to S. Müller), at an earlier period of the Neolithic Age it was believed that the dead person really continued to live in the seclusion of the tomb, and so he was provided in great abundance with weapons and implements, with vessels containing meat and drink, with amber beads, etc. Then came the close of the Stone Age and the earliest Bronze Age, in which 'the earlier belief in the continuance of the life of the soul appears to have been given up without having anything to put in its place.' The consequence was that importance was no longer attached to the proper equipment of the dead, which 'was confined to a fixed collection of *weapons* and *ornaments*—one might say, to the things belonging to the daily outfit.' But what was the use of these then? And does it not seem a simpler assumption that in graves like these we have to do with those of warriors, who had no need of implements? Finally, we are told, cremation came in, which completely freed the soul from the body and carried it off to airy regions. From that time, according to S. Müller, the graves contain only 'petty wares, such as objects for the toilet, smaller pieces of furniture, or simple articles of dress.' But what would the soul, released from the body, want, *e.g.*, with a razor? Thus, however interesting it is to hear the opinions of an investigator of the standing of S. Müller, it is, nevertheless, very doubtful whether his views can be maintained even so far as the northern part, and especially the rest, of Europe is concerned. What meaning are we to put, *e.g.*, on the fact that, in the famous cemetery of Hallstatt, 525 graves of skeletons lie alongside of and among 455 graves of ashes, and that both kinds of graves exhibit essentially the same kinds of gifts deposited: weapons, utensils, ornaments, clay vessels, etc.? Or how are we to judge the fact that the Russian peasant of to-day who puts a handkerchief in the dead man's coffin (see above) gives as his reason the grossly material notion (which, according to S. Müller, really occurs only in the earliest Neolithic periods) that he does it in order that the dead man may be able to blow his nose?

The fundamental idea of all these gifts to the dead, from the most primitive times down to the present day, must always have been simply the wish to give the dead man something with him that might be useful or agreeable to him after death. In this connexion it must be emphatically observed that, *in depositing these things, the mourners were actuated not so much by definite conceptions of the future life, as by a custom inherited from their fathers.* This much we may say, that at different places and at different times the fundamental idea underwent a process of sublimation, in so far as the gifts to the dead, once seriously meant, showed a tendency to change into symbols of love and remembrance. We can recognize this very beautifully in the graves of the Athenian burying-ground already mentioned (cf. p. 16[b]), which was in use from pre-historic times down to the 4th cent. B.C. In the graves of the 'dipylon epoch,' which, as we have seen, contain skeletons almost exclusively, the abundant gifts (weapons, pottery of all kinds, pots with meat and drink, and bones from bull-offerings) deposited in the graves were doubtless meant seriously, and intended for the actual use of the dead man. It is quite different with the later graves—cremation as well as burial graves—between which no distinction can be made here in this

respect. The men generally get nothing more than a few worthless vessels. But beside the women are laid their ornaments, beside the children their toys (cf. Brückner-Pernice, *op. cit.* p. 189 f.).

We have said that we must regard as the fundamental idea of all gifts to the dead the wish of the surviving relatives to provide for the dead man in a future life, whatever they might imagine it to be. We cannot here enter fully into the much-disputed question as to whether this wish was called forth by fear of or love for the dead man. It may be that there was a time when fear of the soul of the dead, and the intention of keeping it securely in the grave by means of these gifts, were the only ideas in view. On the other hand, we must imagine the family ties so well knit, even in the times of the early Aryans, that they cannot be thought of as lacking a feeling of love (however rude the manner of expressing it), which was naturally extended also to the dead. So we can only say that a feeling of *timid* reverence for the dead, of fear mingled with love, was the foundation of the Aryan worship of the dead; and this notion is reflected in numerous testimonies (see below).

On the other hand, we must notice briefly another motive frequently supposed to underlie these gifts to the dead, viz. the assumption that men did not venture to deprive the dead of the property belonging to them in the eyes of God and of justice. It is all the more necessary to examine this view, because it best explains a number of facts which it is otherwise impossible or hard to understand. Thus, in the first place, the idea was widely current in Teutonic law of 'the portion of the dead,' *i.e.* 'a share which belongs by right to the dead for his own legacy,' and which H. Brunner (*Z. der Savigny-Stiftung für Rechtsgesch.* xix. Germanistische Abt. p. 107 ff.) has shown 'originally consisted of the movables which were burned or buried with the dead man.' If, therefore, the oldest usage affecting the rights of souls was that the dead should receive his entire possessions, the further inference is drawn (cf. Rohde, *Psyche*[2], i. 30 f. footnote 3) that in later times the idea must naturally have arisen of commuting this right by means of a small symbolical gift. Thus is to be explained the coin, the *obolus*, which in classical antiquity was squeezed between the teeth of the dead man, and which we have also frequently met with among the Litu-Slavic races as a gift to the dead. In the former instance it appears as 'Charon's penny,' *i.e.* as payment for the ferryman of the dead, in the latter (cf. above, p. 21[a]) it is transformed into money to buy a place in the next world. Generally, at the transference of an inheritance, many customs appear which indicate the notion that goods and chattels, from the point of view of God and justice, must follow the owner to the grave. In White Russia (Š.[1] p. 522) when the coffin has been lifted to the waggon drawn by a horse, the relatives take leave of the dead man by kissing his forehead, but the new head of the house kisses the hoofs of the funeral horse, as well as those of the other horses, and sometimes those of all the cattle.

'The dead man,' writes Kotljarevskij (*op. cit.* p. 211), 'could take all his belongings with him into the grave; so among the inhabitants of Mazovia, the new head of the house, as soon as the old one dies, goes to the house, to the buildings connected with the house, to the trees, and to the domestic animals, and tells them of the death of their former master, and of the entrance into power of the new one, with the words: "Your former master is dead; I am now your new lord."' The same thing is stated by Carl Cappeller, *Kaip senëji Lëtuwininkai gyweno, Aufzeichnungen aus dem Kreise Stallupönen*, Heidelberg, 1904, p. 36: 'Thus it was a pagan custom,' the account concludes.

Similar customs are also reported from Germany. In Michelbach, near Marburg, when the head of the house dies, the new master goes to the cattle in the stable and to the bee-houses, and announces the 'Läd' and his taking over of the charge with the words: 'The master is dead; I am the master' (in letters of R. Heldmann). Hessler (*Hessische Landes- und Volkskunde*, ii. [Marburg, 1904] p. 152) tells of a similar undertaking of command on the part of the mistress.

Nevertheless, the present writer does not believe that the custom of gifts to the dead is made altogether clear by the series of ideas described above, however old they may be. In order to show this, he will in closing this section refer to one more point from which it will appear that on Aryan soil, even in pre-historic times, people had not only thought about providing the dead man with such things as had been, or might have been, his property during his life—his axe, his sword, his apparel, etc.—but made provision beyond this for his well-being in the world to come. For our purpose, we may start from the custom, already touched on above, of giving the dead man his wife, or, if he had several wives, one of them, as a companion in the grave or on the funeral-pyre.

According to the evidence in Europe collected by V. Hehn (*Kulturpflanzen und Haustiere*[7], p. 535) and H. Zimmer (*Altindisches Leben*, p. 329), the same thing is clearly demonstrable among Scythians, Thracians, Lithuanians, Slavs, and Teutons, and undoubtedly goes back to primitive Aryan times. For India, it cannot be proved from Vedic antiquity. Nevertheless, Indologists do not doubt that, when the burning of widows makes its appearance, from about the 5th cent. B.C., we have to do not with an innovation, but with the revival of a very old custom preserved locally even in Vedic times (cf. R. Garbe, *Beiträge zur indischen Kulturgeschichte*, Berlin, 1903, p. 141 ff., 'Witwenverbrennung'; Risley, *Report Census of India*, 1901).

All these testimonies are concerned with provision for the *married* dead. What happened in the case of the single man? The present writer has tried to answer this question in a little monograph on *Totenhochzeit* (Jena, 1904). In this he starts from the custom, attested in Attica, of placing on the grave of those who died unmarried a λουτροφόρος, *i.e.* a certain kind of water-pitcher, which at the same time played an important part in marriage-ceremonies, as the water intended for the bridal bath of the young couple was brought in it. It is only by comparing the Greek customs with those of other Aryan peoples that we can discover the meaning of this custom. We then find that the placing of the bridal λουτροφόρος on the grave of unmarried people represents the symbolical preservation of a custom which is still very wide-spread among the Slavonic races, in terms of which a ceremonial imitation-marriage was celebrated at the graves of unmarried men and maidens, during which a bride or a bridegroom was there and then assigned to the dead person.* The third and last stage of the custom under discussion is presented to us in the accounts of the Arabs regarding the oldest Slavonic and Russian conditions of life. According to them, not only, as has been mentioned, was the wife of the dead *married man* given to him as a companion in death, but the *single man* too was, after his death, married *in regular fashion* to a young girl, who also was therefore doomed to die (cf. Mas'ūdī, *Les Prairies d'or*, ed. Barbier de Meynard, Paris, 1861–1865, ii. p. 9, n. 7). One of these 'death-weddings' is described in detail by the Arab Ibn Fosslan (text and translation ed. by C. E. Frähn, St. Petersburg, 1823). But it follows from isolated traces that the custom of the wife dying along with her husband was prevalent also in Greece in pre-historic times (cf. Pausanias, ii. 21. 7), and in the story of the Trojan maiden Polyxene, sacrificed at the grave of Achilles, there exists also on classical soil a case of the barbarian custom of 'death-

* Remains of this custom are found also in Germany; for in Hesse the coffins of single men who have died must be accompanied by 'wreathed girls,' who must wear mourning for four weeks, etc. (cf. Hessler, *op. cit.*).

marriage.' If these statements (for a fuller account of which reference may be made to the booklet mentioned above) are right,* we are undoubtedly concerned with a case in which the funeral gifts cannot signify making the dead take with him property possessed before, but were clearly due to a concern on the part of the survivors for the fortunes of the deceased in the next world. This concern was based on the conviction, firmly rooted in primitive Aryan times, that marriage is an absolute necessity and bachelorhood a pitiable condition (cf. the present author's book, *Die Schwiegermutter und der Hagestolz*, Brunswick, 1904, p. 26 ff.).†

3. Attentions paid to the dead after the funeral rites (Ancestor-worship).—After the dead body had been consigned to the grave or the funeral-pyre, in the way described above, the person remained in connexion with his relatives by means of a rigidly appointed service of the dead. Survivals of this service are to be met with more or less distinctly among all Aryan races. They can, however, now be studied in detail and as a whole only in two branches of the Aryan linguistic group, widely separated from each other in time and place, the Indians and the Litu-Slavs. With regard to the latter we must refer to the works of Šejn and Kotljarevskij, already quoted (pp. 17[a], 19). So far as the Indians are concerned, their ancestors were worshipped by two kinds of religious ceremonies, the *Piṇḍapitṛyajña* and the *Śrâddha*. The first of these is a sacrifice in which balls of rice (*piṇḍa*) are offered only to 'the fathers' on the afternoon of the day on which the new moon sacrifice takes place. The *Śrâddha*, however, *i.e.* 'that which is offered from a sense of trust (*śraddhâ*, viz. in the Brâhmans),' is a celebration in which the ancestors are honoured with water, cakes, ointment, clothes, and again with water, —but in addition, in order to please one or more of the departed, the worshipper provides food for Brâhmans. For the former ceremony compare O. Donner, *Das Piṇḍapitṛyajña oder Manenopfer mit Klössen*, Berlin, 1870, and, for the latter, especially W. Caland, *Über Totenverehrung bei einigen der indogermanischen Völker*, Amsterdam, 1888, and *Altindischer Ahnencult*, Leyden, 1893 (cf. also the same author's 'Die altindischen Todten- und Bestattungsgebräuche' in *Verhandelingen der Koninklijke Akademie van Wettenschappen*, Amsterdam, 1896). Although the fundamental features of this old Indian ancestor-worship must be regarded as belonging to the Vedic period, still one cannot fail to recognize that its forms in most of the sources show that the ruling priesthood exerted a strong influence on them, and to a large extent transformed them. Fortunately, too, in India itself there is no lack of statements, as, *e.g.*, in the *Gṛhyasutra* of Gobhila, pointing to an essentially lower stage of ancestor-worship, features of which recur with surprising exactness in the Litu-Slavic ceremonial. We can almost say that the veil which Christianity has drawn across this ancient layer of religious worship is more transparent than the one which Brâhmanism has spread over it. In any case, it will be advisable in the re-construction of the old Aryan cult of the dead, to which we now pass, to take as our starting-point the Litu-Slavic and not the Indian conditions. Here we shall deal with (*a*) the designation and the manner of conceiving of the worshipped ancestors, (*b*) the times, (*c*) the places, (*d*) the ritual of the worship of the dead, (*e*) the general significance, for the history of culture, of the worship of the dead in early times.

(*a*) DESIGNATION AND MANNER OF CONCEIVING OF THE WORSHIPPED ANCESTORS (ADMISSION INTO THEIR NUMBER). — The White Russian peasants designate those to whom worship of the dead is offered as *dzjady* (Russ. *dědŭ*), 'grandfather,' while the Great Russians use the term *roditeli*, lit. 'parents.' Both expressions, but especially the Russian *roditeli*, *roditeli*, have now assumed such a general meaning that they can be applied to any deceased person, even to children of both sexes (cf. Š.[1] p. 594, footnote 1). The Gr. γονεῖς and the Lat. *parentes* (cf. *parentalia*, *parentatio*) correspond to the Great Russian expression, while the technical designation of the worshipped ancestors in Sanskrit, *pitáras*, literally means 'fathers.' A still further stage in the upward direction than the White Russian *dzjady* is represented by the Gr. τριτοπάτορες, 'great-grandfathers.' These are the ancestors to whom the inhabitants of Attica, at the celebration of a marriage, pray for the blessing of children (cf. E. Rohde, *Psyche*[2], i. 247). Thus we get the designations 'fathers' ('parents'), 'grandfathers' and 'great-grandfathers,' and it is not a matter of chance that in the Indian ritual the offering of cakes and water is dedicated to these three:

'To three (ancestors) is the water offered, to three is the *piṇḍa* given, the fourth (viz. the descendant) offers it (viz. *piṇḍa*) to the three; the fifth has nothing to do with it' (Manu, ix. 186). In the same way this 'threefold circle of fathers' is embraced by the Gr. γονεῖς and the Lat. *parentes*; cf. Isæus, viii. 32: γονεῖς εἰσὶ μήτηρ καὶ πατὴρ καὶ πάππος καὶ τήθη καὶ τούτων μήτηρ καὶ πατήρ· ἐκεῖνοι γὰρ ἀρχὴ τοῦ γένους εἰσίν; and Festus, p. 221: *parens vulgo pater et mater appellatur; sed iuris prudentes avos et proavos, avias et proavias parentum nomine appellari dicunt* (cf. A. Kaegi, *Die Neunzahl bei den Ostariern*, p. 6).

These ancestors are everywhere considered as real and powerful beings, watching especially over the welfare of the family, as may be seen from the designations applied to them, such as θεοὶ πατρῷοι, *Di parentes*, *Divi manes*, White Russ. *svjaty dzjady*, 'the sacred grandfathers,' etc., as well as from the wording of the prayers which are addressed to them. The following, *e.g.*, is a very characteristic report with regard to White Russia (Š.[1] p. 593):

'On every possible occasion the peasant expresses his worshipful remembrance of his "grandfathers." He does so in his daily prayer, in conversation in the family and in company, as well as on the different festive occasions. There are, too, weighty considerations which compel him to regard this as his duty. He is persuaded that all good fortune in the farm and in life was produced by the continuous exertions of his ancestors, and is sustained by means of their blessings and their prayers to the Supreme Being (the latter is a modern idea). It was they who laid out the present settlement and erected the buildings which until now have remained intact. There the grandfather dug a canal, there he broke up the land and made the fields arable. The grandson splits wood with the grandfather's axe, the granddaughter reaps with her grandmother's sickle. In the dowry of the daughter there are the "sarafan," the necklace, and even the wooden shoes of the grandmother; the spirited black horse is descended from the grandfather's mare. In a word, just as these individual objects speak of the ancestors, so the whole construction of life, which has changed little since their time, calls them daily and even hourly to remembrance.'

It is to them, therefore, that the peasant turns in all the necessities of daily life. Thus the following is a prayer used in India at the *Piṇḍapitṛyajña*:

'Honour, Pitaras, for your comfort, honour for your living sap, honour for your living power, honour for your gentleness, honour for your life, honour for your vigour, *Svâhâ* to you, honour to you, Pitaras, honour; this (viz. water) is yours, Pitaras, this is our and your life-bringing element; may we who are here be quickened.' Thereupon the husband gives

* Several objections to these views raised by Paul Stengel in the *Wochenschrift für klass. Phil.*, 1905, No. 18, and by F. Kauffmann in the *Zeitschrift für deutsche Philologie*, 1907, vol. i., have been answered by the present writer in his *Sprachvergleichung und Urgeschichte*[3], i. (Jena, 1906), p. 220, note 1, and ii. (Jena, 1907), p. 385, note 3, p. 532.

† For examples of marriage of the living to the dead in modern India, see Nelson, *Manual of the Madura District*, ii. 40; Logan, *Manual of the Malabar District*, i. 128; Francis, *Report on Census of Madras*, 1901, i. 56. It was noticed also among the Tatars by Marco Polo (1st ed. i. 234, ed. Yule), who gives other examples; see also J. J. M. de Groot, *Religious System of China*, ii. 802 f.

the *pinḍa*, which lies in the middle, to his wife to eat, with the words: 'Give me a male child, ye Pitaras,' while the wife replies, 'Insert fruit in me, ye Pitaras, a lotus-wreathed boy, that he may be uninjured.'

In accordance with this signification of the help of the ancestors in producing children, we can understand why the Attic maiden, before her departure from her parents' home on the occasion of her marriage, was bound to offer a sacrifice to the souls of her ancestors (cf. E. Samter, *Familienfeste der Griechen und Römer*, Berlin, 1901, p. 96).

Frequently these spirits of ancestors are designated as the 'good' and 'helpful,' especially in the Lat. *mânes*: Old Lat. *mânus*, 'good.' This may, however, have been intended more in a euphemistic sense, in the same way as, *e.g.*, the avenging goddesses are called the 'Eumenides,' in order that they might be good and gracious; for, in general, the souls of ancestors are regarded as very stern and easily roused to anger.

The inhabitants of White Russia are filled with dread (Š.[1] p. 588) 'lest at the commemoration festival any mistake should be made. Then, to speak in the language of the peasants, the feast would be no feast. It would mean that they did not respect the memory of the person in whose honour the feast was instituted. As a punishment for disrespect to the dead there would follow at once family discord, death of cattle, failure of crops; in short, mountains and hills would fall upon the living.'

Woe betide those who do not really slaughter the cattle they have appointed for the commemoration feast, or who do not first taste the food which is served. In all these ways can the wrath of the worshipped ancestors be only too easily roused. The same ideas are to be found in India: 'Do us no harm, ye fathers, if in accordance with the way of mankind we have committed any fault against you' (*Rigveda*, X. xv. 6); and in the *Śrâddha*, too, the offerer, immediately after the offering of the cakes, pronounces the words: 'May the fathers not be hard' (see further in Caland, *Ahnencult*, p. 176 ff.). It was exactly the same thing that was meant in Greece by the saying, that the ἥρωες ('the spirits of the dead') were δυσόργητοι ('prone to anger') and χαλεποὶ τοῖς ἐμπελάζουσι (cf. E. Rohde, (*Psyche*[2], i. 246). In Italy, however, according to Festus (p. 237), they hung up to the Lares* at the *Compitalia* dolls resembling human beings, *ut vivis parcant, pilis et simulacris contenti*.

The dead man does not, immediately after his death and without more ado, join the number of these ancestors who are worshipped with such anxious dread; on the contrary, fixed ceremonies are necessary to elevate him to the rank of the ancestors who are worshipped as divine.

In White Russia (Š.[1] p. 534), after the mourners have returned from the burying-ground, 'one of the old women takes a piece of bread, turns towards the door, and, fixing a copper coin on it, speaks the following words, *with which she introduces the dead man into the general list of her departed relatives*: 'Grandfathers and grandmothers, fathers and mothers, uncles and aunts, take our dead father to yourselves, live there with him in friendship, do not quarrel, etc."' In addition to that, it is a wide-spread idea that for 40 days after his death the deceased has no rest in his grave, but 'visits his own house as well as those of strangers, and is able to inflict all kinds of damage on those among the living with whom he stood in hostile relations during his life; and, in fact, he can do this all the more easily as the latter are deprived of the power to take vengeance on their adversary, since he, owing to his immateriality, is invisible or comes forward in the form of different animals—which gives him ample scope to inflict all sorts of injury on his enemies' (Š.[1] p. 519). 'The peasants also believe that for six weeks the soul of the dead, every 24 hours and generally by night, flies into the peasant's hut and drinks water from a vessel, which is set out for the purpose and filled to overflowing' (Š.[1] p. 559).

A corresponding idea is prevalent in India, namely, that the soul of the deceased does not enter at once into the world of the Pitaras, but rather wanders to and fro as a 'spirit' or 'ghost' (Skr. *preta*, lit. 'the departed'). The spirits have also the inclination to return to the dwellings of the relatives, where in the same way 'food with a jug of water' must be given to them. In order to deliver the departed from this condition and to adopt them among the Pitaras, definite ceremonies were necessary, the most important of which was the *Sapiṇḍîkaraṇa* ('Sapiṇḍa-making'), which took place usually on the day after the first anniversary of the death, but often earlier (for particulars, see Caland, *Totenverehrung*, p. 22 ff., and Oldenberg, *Die Religion des Veda*, p. 554 f.). See ANCESTOR-WORSHIP (Indian).

We shall have to speak afterwards (3*c* and 4) of the places where the spirits of the ancestors in the earliest times were supposed to live, and of the later transformation of the views on this subject. We have still to mention here that these spirits of ancestors show a tendency in different territories, usually in connexion with the cult of the hearth-fire, which came more and more to the front (cf. below, II. 1), to develop into tutelary house deities, localized in the home.

The same is true of the Gr. ἀγαθὸς δαίμων (Rohde[2], i. 255), of the Lat. *di penates* ('those within,' cf. *penitus*, *penetrare*), and *lar familiaris*, of the Germ. 'kobold' (**kuba-walda*, 'the one who rules the house'; cf. Old Nor. *koi*, 'hut,' A.S. *cofa*, 'room,' M.H.G. *kobe*, 'shed, hovel' = Gr. γύπα, 'underground dwelling'; A.S. *cofgodu*, *cofgodas*, '*penates*, *lares*'), of Russ. *domovój* ('the one in the house'); and of many similar names.

In this connexion the worship of the *house-snake*, found among several of the Aryan peoples, can be explained. Nothing is more frequent in Greece than to imagine the soul of the deceased in the form of a snake (cf. Rohde, *Psyche*[2], i. *passim*, and artt. on SOUL and SPIRIT), which seemed especially suitable for this on account of its winding motions, partly on the surface of the earth and partly underneath it. Based upon this idea, a strongly marked domestic snake-worship has been developed among the Lithuanians, regarding which Menecius (see above) gives the most detailed account:

'Præterea Lituani et Samagitæ in domibus sub fornace, vel in angulo vaporarii, ubi mensa stat, serpentes fovent, quos numinis instar colentes, certo anni tempore precibus sacrificuli evocant ad mensam. Hi vero exeuntes, per mundum linteolum conscendunt, et supra mensam assident: ubi postquam singula fercula delibarunt, rursus discedunt, seque abdunt in cavernis. Serpentibus digressis, homines læti fercula illa prægustata comedunt ac sperant illo anno omnia prospere sibi eventura. Quodsi ad preces sacrificuli non exierant serpentes, aut fercula super mensam posita non delibaverint, tum credunt se anno illo subituros magnam calamitatem.' Cf. also Lasicius, *de Diis Samagitarum*, p. 51: 'Nutriunt etiam quasi deos penates nigri coloris, obesos et quadrupedes quosdam serpentes, Giuoitos (Lith. *gyvãtė*, "serpent") vocatos;' and Æneas Silvius in Usener-Solmsen, *Götternamen*, p. 91: 'Serpentes colebant; paterfamilias suum quisque in angulo domus serpentem habuit, cui cibum dedit et sacrificium fecit in fœno iacenti.'

At the same stage as the Lithuanian snake-worship stands among the ancient Romans (cf. Wissowa, *Religion und Kultus*, p. 155), the worship of the house-snake, which is consecrated to the genius of the house, and which by its sudden appearance foretells the coming destiny of the house. This genius itself, lit. 'the generator' (*gigno*), can originally have been none other than the ancestral head of the family, who then came to be regarded as its tutelary spirit, under whose protection stands, as we might naturally expect from these family gods, especially the *lectus genialis*, the marriage-bed, the place of the generation of children. As the *paterfamilias* in Rome was considered the representative of the whole family and possessor of the family estate, it was natural that this genius should become spiritual

* *Lâses* (nom. sing. *lâs*, gen. *lâsis*) are undoubtedly, from the first, spirits of the dead, as is proved by the certain etymological connexion of the word with *larva* from *lâsua*, and with the festival of the dead, *Lârentalia*. The change from *â* to *ā* must be considered exactly the same as in *âcer*: *ācuo*, *ambâges*: *ăgo*, *fâma*: *fāteri*, *stâre*: *stātus*, etc. Wissowa, in Roscher's *Ausf. Lexicon der griech. und röm. Mythologie*, art. 'Lares' (cf. also *Religion und Kultus der Römer*, p. 148 ff., and *ARW* vii. 51), fails to recognize this connexion, and consequently comes to a false conception of the Lares as 'spirits of the fields.' The correct view is given by Samter, *Familienfeste*, p. 115; cf. also Walde, *Lat. etymol. Wörterbuch*, artt. 'Lar' and 'Larva.'

ized into the tutelary spirit of the master of the house.*

(*b*) THE TIMES OF THE WORSHIP OF THE DEAD.—Apart from the funeral feast already mentioned (p. 20[b]), which followed immediately after the disposal of the corpse, the feasts in commemoration of the dead in White Russia may be divided into two main classes, *special* and *general*:

'The former are celebrated in the circle of the family and near relatives, for each individual who has died in the course of the year, and they take place at stated intervals, though not on the same days or in the same months, but on the 3rd, 6th, 9th, 20th, and 40th days, reckoning from the day of the burial, during a period of six months, and periodically thereafter in the course of the year till the date of the death (*godovščina*, "anniversary"). These commemoration feasts take place without the co-operation or blessing of the Church. They are a relic of primitive, pre-Christian customs. The second class, or the general commemoration festivals, are held by all on the same days, which have been fixed from the remotest times by the Orthodox Church, and are never engaged in without her consecration. They are held from four to six times in the year, and for all relatives at one and the same time, no matter whether they have been dead for a longer or a shorter period. In the whole of Russia these commemoration festivals are held on Saturdays, and called in White Russia *dzjady* [the same name as that of the worshipped ancestors themselves], in Great Russia "parents' Saturdays" (*roditel'skija subboty*). But the *radunica* is for the most part celebrated on the Tuesday of the week following the first Sunday after Easter, and this feast is not everywhere called *dzjady*. . . . These commemoration feasts admit of being classified, according to the seasons of the year, into those of spring, summer, autumn, and winter' (8.[1] p. 582 f.).

These Christian institutions correspond to the old Lithuanian heathen conditions. Menecius has the special commemoration festivals in view when he writes: 'Cæterum cognati celebrant convivia die a funere tertio, sexto, nono et quadragessimo.' A general feast to the dead is described by Laskovskij in Lasicius, *de Diis Samagitarum*, p. 50:

'Iisdem feriis (the beginning of November, at the festival of the flax-god Waizgauthos) mortuos e tumulis ad balneum et epulas invitant: totidemque sedilia, mantilia, indusia, quot invitati fuerint, in tugurio eam ad rem præparato ponunt; mensam cibo, potu onerant. Dehinc in sua mapalia reversi triduum compotant; quo exacto, illa omnia in sepulchris, potu perfusis relinquunt; tandem etiam manibus valedicunt.'

Another general celebration of this kind is mentioned in Lasicius, p. 51: 'Skierstuvves festum est farciminum, ad quod deum Ezagulis ita vocant: Veni cum mortuis farcimina nobiscum manducaturus.' Cf. also p. 48: 'Vielona Deus animarum, cui tum oblatio offertur, cum mortui pascuntur; dari autem illi solent frixæ placentulæ, quatuor locis sibi oppositis paullulum discissæ. Eæ sikies Vielonia pemixlos ("wafers of which V. is very fond") nominantur.'

From the starting-point supplied by these data let us examine the times appointed for the worship of the dead among the other Aryan races. Among them all, *special* and *general* festivals in honour of the dead are frequently mentioned. With regard to the former, the Greeks in the south of Europe present us with exact parallels. In their case we meet with the *τρίτα καὶ ἔνατα* (the latter recurs also in the Roman *novendial*), *i.e.* meals which were offered to the dead at the grave on the third and ninth days after interment. In Athens we have likewise the *τριακάδες* (which was also at times repeated), a commemoration meal on the thirtieth day, a date which appears again among the Lithuanians, at least in so far as the widow must mourn for thirty days at the grave of her husband.

(Menecius: 'Uxor vero tam oriente quam occidente sole super extincti coniugis sepulcrum sedens vel lacens lamentatur diebus triginta').

Then both in Greece and Rome, in addition to the *parentalia* on the day of the death or the burial (White Russ. *godovščina*), an innovation appears in appointing the birthday of the deceased (*γενέσια*) as a regular commemoration festival in his honour.

Among the *general* festivals in honour of the dead, the most important, so far as Greece is concerned, is the close of the Anthesteria festival in the spring, while in Rome we have the nine *dies parentales* from the 13th to the 21st of February, the last of which is called Feralia, on the 23rd of December the great State festival of the Larentalia, and on the 9th, 11th, and 13th of May the Lemuria, all three named directly from the spirits of the dead (Feralia from **dhvĕsôlia*, cf. above, p. 15; Larentalia: *lâr laris*, cf. above, p. 24, footnote; and Lemuria: *lemures*, 'larvæ'). A later general festival in honour of the dead, though not a public State feast, was the *Rosalia*, festival of roses, which in Christian times acquired a significance far beyond the land of its origin, and among the great majority of Slavs has led to their designation of the Whitsuntide festival (*rusalija*, Lat. *pascha rosata*). See Warde Fowler, *Roman Festivals*, London, 1899.

With regard to the ancient Teutons we have not much reliable information. It seems that they held commemoration festivals for the dead on the 3rd, 7th, and 30th days, and on the anniversary of the death. It is also not improbable that at Yuletide a general feast for the dead took place (cf. R. Kögel, *Gesch. der deutschen Liter.*, i. 1, 55, and E. Mogk, in Paul's *Grundriss der germanischen Philologie*[2], iii. 391).

Lastly, regarding the Indian times for the worship of the dead, we are supplied with the same detailed information as we have about those of the Litu-Slavs. The time of the uncleanness of the relatives after a death lasts from three to ten days. During this period libations of water with grains of sesame must be offered to the departed either daily or on the 3rd, 5th, 7th, and 9th days. Then on the 11th day the first sacrifice (*śrâddha*, see above, p. 23[a]) is offered to the dead, and thereafter every month (thus every 30 days) on the day of the death and on the anniversary of the death itself sacrifices are offered to the ancestors (though the conditions are more complicated than they appear from this short summary). There were also in India real All Souls' feasts, among which the *Aṣṭaka*-festival may be specially mentioned (cf., for details, below, II. 4 *d*).

If we glance at the details before us, we see what a significant part *odd* numbers play in the fixing of these dates for the festivals in honour of the dead; and, in fact, it is frankly avowed in India that the odd numbers are sacred to the worshipped ancestors. The same thought, however, permeates the White Russian ritual, in consequence of which, *e.g.*, the number of foods offered at the commemoration festivals must invariably be odd (cf. Caland, *Totenverehrung*, p. 23, and Šejn[1], pp. 590, 611, etc.). Then among these odd numbers, the number *nine* comes very prominently to the front, which seems to represent the three days' period between death and interment (funeral feast) taken three times. Perhaps the 10 days' period of uncleanness or of mourning of the Indians may be conceived of as a nine decadally rounded off. The number 30, which also occurs frequently, would then be a triad of such decadally rounded nines (cf. A. Kaegi, 'Die Neunzahl bei den Ostariern' in the *Philologische Abhandlungen für H. Schweizer-Sidler*). It is, moreover, worthy of note that the farther back we go and the more primitive the state of culture, the greater is the number of these memorial feasts. A White Russian peasant can thus, according to the details given above, make the number of special and general festivals for the dead mount up to several dozens in the year.

*Cf. for a full account of snake-worship, F. S. Krauss, *Sreča, Glück und Schicksal im Volksglauben der Südslaven*, Vienna, 1886. It is especially interesting, in connexion with the Roman beliefs, that among the Wends in the Spreewald two snakes were worshipped in each house, one of which was called *gospodař*, 'lord of the house,' the other *góspoza*, 'lady of the house.' Each dies at the same time as the master of the house, or the mistress, as the case may be.

(*c*) THE PLACES OF THE WORSHIP OF THE DEAD.—The nearest and, so to speak, most natural place for the friends to serve up the dead man's feast for him, and to eat and drink together with him, is the neighbourhood of the grave where the body has been laid. This is still the custom in great parts of Russia.

'After the close of the banquet (in the house) they all repair to the burying-ground, taking with them vodka, "bliny," and barley. There each family prays at the graves of their relatives for the peace of their souls. Then they eat and drink, pouring out a little vodka on the grave and throwing some morsels from each dish on it' (Š.[1] p. 605). At the spring-*dzjady*, 'after the public worship of the church, they invite the priest, in whose company men and women betake themselves to the churchyard, partaking together of brandy and food on the way. After they have reached their destination they all seat themselves on the burial mound of those of the departed who during the year have completed the laborious days of their life's journey. Here they repeat fixed prayers for the blessed peace of their souls, as "Anëlŭ Panĭski" ("Angel of the Lord"), then they begin to weep and lament, and end with a small debauch in honour of the dead. . . . The first mouthfuls of each dish are in every case laid on the grave for the soul of the dead. After the glasses of brandy have gone round the circle several times, the mournful mood of the assembly gradually changes into a joyous one. While some of those present sob aloud, others laugh and joke. Some bow their heads over the grave of their beloved dead, and sing in a sustained tone melancholy laments. . . . In order to calm their sorrow, those taking part in the celebration have frequent recourse to their comforter—the brandy. Ultimately these memorial feasts end in the laments turning imperceptibly into songs of joy' (Š.[1] p. 616 f.).

The doings at the Greek τρίτα καὶ ἔνατα, which were likewise celebrated at the grave (see above, p. 25[a]), and at the Roman *solemnia mortis* (cf. Marquardt, *Römische Staatsverwaltung*, iii. 298 ff.), which were accompanied by feasts at the grave, as well as at those old German *obsitiones*, 'quæ in quibusdam locis ad sepulcra mortuorum fiunt,' against which Burchard of Worms, as late as A.D. 1000, protested, were no doubt *mutatis mutandis* identical with those just described. It is not improbable that the funeral banquet also (see above, p. 20[b]) took place originally not in the house of the deceased, but at the grave itself.

Thus Jordanis relates the following with regard to the funeral obsequies of Attila (ch. 49): 'Postquam talibus lamentis est defletus, *stravam* (probably a Slavic word, which signifies in Russian, Polish, and Bohemian "food," "meal," and in Old Bohemian also means "funeral banquet"; cf. Miklosich, *Etymol. Wörterbuch der slav. Sprachen*, Vienna, 1886, *s.v.* "Strava") *super tumulum eius*, quam appellant ipsi, ingenti commissatione concelebrant'; and the Greek expression περίδειπνον, 'funeral banquet,' could be most easily explained if the δεῖπνον took place, as among the White Russians, *round about the burial mound* of the deceased. The old Russian expression for the commemoration festival was *trizna*, which has not yet been etymologically explained.

Further, the *trench*, in which the meals are frequently offered to the dead, may be regarded as a symbolical indication of the grave. This is what we have in ancient India, according to the description of Gobhila: 'Then three trenches are dug out, one span long, four fingerbreadths wide, and the same depth. Thereupon *darbha* grass is scattered on them.' On this *darbha* grass, then, with many varied ceremonial actions, the cakes are laid down for the three ancestors, father, grandfather, and great-grandfather (cf. Oldenberg, *Die Religion des Veda*, p. 549 f.). The same significance belonged in Rome to the *mundus*, a trench situated at the centre of the town, and opened on certain days for the purpose of receiving sacrifices for the dead. This trench played the same rôle in the worship of the *inferi* as the altar played in the cult of the *superi*. Such a *mundus* was probably also the 'grave' of the Larenta, in which at the Larentalia a sacrifice to the dead was offered (cf. Wissowa, *Religion und Kultus der Römer*, p. 187 ff.; Samter, *Familienfeste*, p. 12 f.). Ulysses, too, as is well known, when in the lower world, offers his libations in a trench.

A third place at which the dead were often honoured with food, drink, and all kinds of festive celebrations was the *cross-road*. Among the Slavs, Cosmas of Prague bears witness that, about the year 1092, Prince Brětislav II. issued the following prohibition:

'Item sepulturas, quæ fiebant in silvis et in campis, atque cenas (or scenas? cf. Kotljarevskij, *op. cit.* p. 102 ff.), quas ex gentili ritu faciebant in *biviis* et in *triviis*, quasi ob animarum pausationem, item et iocos profanos, quos super mortuos suos manes cientes manes ac induti faciem larvis bachando exercebant.'

A feast similar to that here described was the Roman Compitalia, which was held once a year with debauchery and merry-making (*ludi*) in honour of the Lares at the cross-roads (more fully explained in Wissowa, *op. cit.* p. 148 f.); but in Greece also it was customary to throw down at the same places offerings to the souls and to Hecate, their mistress (cf. Samter, *op. cit.* p. 120). In India, in the same way, the belief is widely held, and of extreme antiquity, that cross-roads and dwelling-places of spirits are identical (cf. Oldenberg, *op. cit.* pp. 268[1], 562[2]; and Crooke, *Popular Religion and Folklore of N. India*, London, 1896, i. 77 f., 165, 290). The reason for this idea has been sought in the fact, which has been expressly attested at least in the case of India (cf. Oldenberg, p. 562[2]), that the crossing of great main roads was a favourite place for burying the dead. In this way the worship of the dead at the grave, at the trench, and at the cross-roads really amounts to the same thing. In opposition to this, however, we have the remembrance of the dead, with gifts of food and drink, in the *dwellings* of the surviving relatives, which will be dealt with in the next section.

(*d*) THE RITUAL OF THE WORSHIP OF THE DEAD.—It will here be advisable to pass over a considerable number of individual peculiarities, and to confine ourselves to the most important features.

(*a*) *The summoning and dismissing of the ancestors.*—It is a prevailing custom to call solemnly on the ancestors at the beginning of the commemoration feast, and to dismiss them as solemnly at its close. We are again informed most accurately with regard to White Russia:

'All seat themselves at the table, which is set with articles of food, among which beer and spirits are to be found, and the one who reads the prayer utters the following words:

"Ye sacred grandfathers, we call you,
Ye sacred grandfathers, come to us!
Here is all that God has given.
. . . . . .
Ye sacred grandfathers, we implore you,
Come, fly to us!"

At the end of the meal they rise from the table and disperse, after having taken leave of the heavenly inhabitants in the following way:

"Ye sacred grandfathers! ye have flown hither,
Ye have eaten and drunk,
Now fly away home again!
Tell us, do you wish anything more?
But better is it, that ye fly heavenwards.
Akyšŭ, akyšŭ!"

(a sound which they make to scare away hens and crows).' Cf. Š.[1] p. 596 ff.

The summoning as well as the dismissing of the ancestors is accompanied by extraordinary customs. For the purposes of the former they place a cooked pig's, sheep's, or fowl's head on the table.

'After the master of the house has got the guests seated at the commemoration table, he takes in the one hand a candle rolled up in a pancake, in the other a loaf of bread, and carries these three times round the animal's head which has been placed on the table, calling aloud by name not only all his dead relatives and acquaintances, but also all who have ever lived on the piece of ground belonging to him as master of the house, and invites them with the words, "Come to this banquet"' (Š.[1] p. 602 f.).

At the end of the feast the ancestors are scared away.

'The master or the mistress of the house removes the table away from the seats, and sprinkles the whole floor of the room to the door with water, saying at the same time, "If you have not eaten or drunk enough, go to the priest's court." With these words the souls of the dead are turned out' (Š.[1] p. 614).

A custom very like this is described by Menecius, who is also acquainted with the solemn invitation to the dead ('ad quæ convivia animam defuncti invitant precantes ante ianuam') among the pagan Lithuanians:

'Peracto prandio sacrificulus surgit de mensa, ac scopis domum purgat: animasque mortuorum cum pulvere eicit, tanquam pulices, atque his precatur verbis, ut e domo recedant; edistis ac bibistis animæ dilectæ, ite foras, ite foras.'

The same invitation and leave-taking of ancestors are attested with regard to the Indian *Piṇḍapitṛyajña*:

'After depositing the *piṇḍa*, he (the offerer) utters the words, "Ye Pitaras, may this be savoury to your taste, may each one enjoy his share." Afterwards he dismisses the Pitaras with the words: "Depart, ye lovely Pitaras, to your old mysterious ways, give us riches and good fortune, grant us abundant possession in men"' (cf. Caland, *Totenverehrung*, p. 5 f.).

In Italy and Greece, on the other hand, there are to be found survivals only of the final *expulsion* of the souls. In the latter there existed the saying, which is at once proved to have been very ancient by the use of the word *κῆρες* for *ψυχαί* (cf. above, p. 15): *Θύραζε, κῆρες, οὐκ ἔτ' Ἀνθεστήρια*—'Away, ye souls, the feast of the dead is over' (see J. E. Harrison, *Proleg. to the Study of Greek Religion*, Cambridge, 1903, pp. 35, 165, 632). In Italy, at the Lemuria, the spirits of the fathers were driven away with the words, 'Manes exite paterni' (cf. Rohde, *Psyche*[2], i. 239[1]).

(β) *The feeding of the summoned ancestors.*—Concerning the *forms* in which the 'grandfathers' were entertained by the White Russian peasants, we are also provided with full information from Šejn's materials:

'At the table, which is laid with Lenten food, all the guests sit down along with the family of the deceased. Before the meal the *kanunŭ* (from Gr. *κανών*, the real food of the dead) is given out, from which each of the guests takes four spoonfuls: one of these he pours out on the table beside him, the other three he sups, in accordance with the demand of custom to eat them all and leave nothing behind. The guests must leave over a part of each dish (of which there are not few) to appease the deceased, that he may not rob his relatives of their earthly goods' (Š.[1] p. 585).

'The supper begins with porridge, the first spoonful of which each member of the family lays on the table, directly on the table cloth, and these remain the whole night on the table, along with all the other eatables which have been left over from the supper. This is done, the peasants say, on account of the fact that the deceased comes during the night and devours all that is left there' (Š.[1] p. 592).

'The master of the house commences the feast. He takes a spoon with *kanunŭ* and a small piece of bread and pours it out on the table, and then he eats three spoonfuls from this dish. This is repeated in turn by all the members of the family who are present. Then the *kanunŭ* is removed from the table. From the other courses each guest takes as much as he pleases, provided that he first of all sets aside a small piece of each dish for the table—for "the grandfathers." From these little bits a considerable heap of all kinds of mishmash is, by the end of the supper, formed on the table' (Š.[1] p. 613).

'If at the time of the banquet any part of the food falls on the seat or on the floor, they dare not lift it up. "That," they say, "some one will eat"' (Š.[1] p. 611). Cf. also Menecius: 'Si quid forte decidat in terram de mensa, id non tollunt, sed desertis, ut ipsi loquuntur, animis, quæ nullos habent vel cognatos vel amicos vivos, a quibus excipiantur convivio, relinquunt manducandum.' 'After they have prayed at the grave, they all separate and go to their homes, where they seat themselves once more at the table, on which the wives place pancakes and mead. They throw morsels of the pancakes into the mead. Each member of the family (with the exception of the children) must invariably sup three spoonfuls of this dish. Some of this mixture they leave intentionally in a soup-bowl for the "grandfathers." After the pancakes they eat the other prepared courses. When they have supped and prayed to God, they lie down to sleep, placing the remains of the mixture on the window sills. The remains of the other foods they divide out into small dishes, which in the same way are placed here and there beside the window. Bread and spoons are left on the table the whole night. The doors in the peasant's room are not locked during this night, but are left a little ajar, so that the dead may come in' (Š.[1] p. 605).

From these statements three points are clear: (1) Food and drink are shaken out on the table for the 'grandfathers' during the meal itself; (2) That which falls under the table belongs to the dead who have no family or friends; (3) The remains of the food and drink are placed after the meal in vessels, which are set near the windows or on the tables to be partaken of by the 'grandfathers.'

All this can be proved in classical tradition, although only in fragments. Certainly the barbarian custom of preparing the meal for the dead on the table itself (as at the grave) has fallen into abeyance. Among the Greeks, points (1) and (2) are combined into one, in such a way that they believe that whatever falls under the table during the meal belongs to the dead in general.

Cf. Laert. Diog. viii. 34: *Ἀριστοφάνης τῶν ἡρώων φησὶν εἶναι τὰ πίπτοντα λέγων ἐν τοῖς Ἥρωσι μηδὲ γένεσθ' ἄστ' ἂν ἐντὸς τῆς τραπέζης καταπέσῃ*, and Athenæus x. 427 e: *τοῖς τετελευτηκόσι τῶν φίλων ἀπένεμον τὰ πίπτοντα τῆς τροφῆς ἀπὸ τῶν τραπεζῶν* (cf. also Samter, *Familienfeste der Griechen und Römer*, p. 109).

The third point finds its analogy again among the Greeks, in the fact that on the last day of the Anthesteria festival it was customary to place cooked fruits and seeds for the dead in pots—*χύτραι*, after which the day was named (cf. Rohde, *Psyche*[2], i. 238).

(γ) *The food of the dead.*—Like all the details of the ritual connected with the dead, the kinds of food and even the courses which must be placed before the dead are fixed in detail. With regard to the first of these, the cakes (cf. above, Lith. *sikies Vielonia pemixlos*, 'the wafers which Vielona likes'; and also White Russ. *klëcki*, the latter taken over from German through Polish) play an important part among the Lithuanians.

'The courses at the commemoration meal were as a rule as follows: *kutjá* (wheat or barley grains) prepared with ordinary or lenten butter, if honey could not be got, *klëcki*, "cakes" (in most cases made of barley with a piece of lard in the inside), pancakes, and porridge' (Š.[1] p. 514). 'All the others who attend the funeral at once betake themselves to the house of the deceased *na klëcki*, "to eat cakes"' (Š.[1] p. 554). 'At this meal *galuški* or *klëcki* must without fail be among the dishes. There are even proverbial expressions referring to them to be found among the population of this place, such as "he was *na klëckachŭ*" (he was at a funeral- or commemoration-feast); or if a person is dangerously ill and there is no hope of his recovery, they say: *nu klëckí jemu!* i.e., "he will very soon have to enjoy cakes"' (cf. Š.[1] p. 576).

It is hardly necessary to emphasize how closely this corresponds to the Indian *piṇḍa*, which is so characteristic of the Indian worship of the dead, that *sapiṇḍa*, 'cake companion,' has come to be the technical expression for the circle of relatives whose duty it is to offer to the three ancestors (father, grandfather, and great-grandfather).

The question, what dishes were in the earliest times served up to the dead, would require a special inquiry, which would also have a general interest for the history of culture by helping to determine the most primitive food of the living. In the meantime we can refer only to two undoubtedly very ancient foods of the dead, viz. *honey* and *beans*.

The former is the most important ingredient of the White Russian *kanunŭ* (see above): 'This is usually cooked with bruised grains of peeled barley or wheat, which are afterwards stirred in *sytá*, "honey-water"' (Š.[1] p. 555). Thus it happens that the *kanunŭ* (a Gr. foreign word, as we saw) is called by its vernacular name *sytá* (p. 613), and on comparing this with the Skr. *sutá*, 'soma-juice, soma-offering' (*lit.* 'pressed,' root *su*), we may venture to recognize in it a word derived from the primitive Aryan vocabulary, just as in the more frequent expression for honey and mead, Skr. *madhu*, Gr. *μέθυ*, O.H.G. *mëto*, O. Slav. *medŭ*, etc. The Indian food for the dead, which was offered at the *śrâddhas*, rice-soup and honey, corresponds exactly to the White Russian *kanunŭ*.

'Thus speak the Pitaras: "May the person be born in our family who will offer to us on the 13th day rice-soup mixed with honey and *ghí*!"' 'Tormented with hunger and making known their own sins, they demand rice-soup mixed with honey from their sons and grandsons' (cf. Caland, *Totenverehrung*, p. 44 f.).

But in the Greek and Roman cult of the dead also, honey is a favourite food devoted to the powers of the under world (cf., for details on this, Samter, *op. cit.* p. 84 ff., and Marquardt, *Staatsverwaltung*, iii. 299).

With regard to the *beans*, we may refer to an exhaustive article by L. von Schröder, 'Das Bohnenverbot bei Pythagoras und im Veda,' in *WZKM*, xv.

187 ff., in which convincing proof is brought forward that the above-mentioned pod, whose Aryan name appears in the Lat. *faba* = O. Slav. *bobŭ*, Alb. *baðę*, was used even in primitive Aryan times as an offering to the departed souls (see J. G. Frazer, *Pausanias*, iv. 240 f.).

It is also to be noticed that in the Polish-Russian province of Pintschov (cf. Kotljarevskij, *op. cit.* p. 255) the combination of these two foods of the dead, honey and beans, is attested: 'The foods at the commemoration feasts consist of beans and peas which are cooked in honey-water.'

(δ) *The frame of mind of the worshippers (joy and grief).*—According to Menecius, the funeral and commemoration meals were celebrated among the ancient Lithuanians in perfect silence: 'in his conviviis quibus mortuo parentant, tacite assident mensæ tanquam muti'; and also in India we are told: 'As long as the Brāhmans eat in silence, so long do the manes enjoy the meal' (cf. Winternitz, 'Was wissen wir von den Indogermanen?' in *Beilage zur Münchner AZ*, 1903, No. 259, p. 300). On the other hand, it is doubtful whether the Lat. *silicernium* denotes the 'meal taken in silence' or the 'meal of the silent ones' (*i.e.* the dead) (cf. Osthoff, *Etymologische Parerga*, Leipzig, 1901, 66 ff.).

In any case the meal, or at least the chief part of it, was passed in a restrained and anxious mood, as is most vividly described by Šejn ([1] p. 596 ff.) with regard to the White Russians:

'One can perceive that some anxiety fills the hearts of the whole assembly. The aged, who already stand, so to speak, with one foot in the grave, are at this time sadder and more thoughtful than the others. Not infrequently, when they have just raised the glass of spirits to their lips, they stop suddenly and do not drink, but listen to some unexpected noise, the moaning of the wind, or the rustling of a neighbouring tree which is casting off its last leaves. If the gate creaks, or the door moves, or the door-latch gets unfastened, or a half-broken pane in the window rattles—whatever the cause may be—if, attracted by the light, a belated moth or some similar insect should approach, all these things are regarded as undoubted signs of the visit of their dead grandfathers. Conversation comes to a standstill and consists only of single remarks, either concerning the certain presence of the dead and their share in the entertainment, or about their former life,' etc.

It is this frame of mind—this firm conviction that the deceased person is present at the meal—that led to the custom among the White Russians (cf. above, p. 20[b]), as well as in Greek and Roman antiquity, of remembering the dead at the meal only in a friendly way: *εἰώθεσαν οἱ παλαιοὶ ἐν τοῖς περιδείπνοις τὸν τετελευτηκότα ἐπαινεῖν καὶ εἰ φαῦλος ἦν* (cf. Rohde, *Psyche*[2], i. 232, footnote 1).

If thus the first and fundamental sentiment of the funeral and commemoration feasts is naturally a sad one, it is, nevertheless, quite as characteristic of these celebrations to show a tendency, before they are finished, to pass over to the opposite extreme—joy and mirth. The reason of this is, of course, to be sought, in the first place, in the fact that the mourners in an excessive degree turn for comfort to spirituous liquors, which very soon take effect, while, in the second place, the conviction is widely prevalent that too many tears and too passionate grief disturb the peace of the dead in the grave (cf. for details, Winternitz, *op. cit.*). In any case, it is a fact that, among all the Aryan peoples, the festivals in honour of the dead are wont to be brought to a close by games and dancing, trials of strength, masquerades, and music (cf. Winternitz, *op. cit.*). All these elements of rejoicing are contained in the following description from White Russia (Š.[1] p. 588):

'After the close of the entertainment, the mistress of the house produces a sieve with cabbage-heads and places it on the table. Every one has cabbage-stocks in his pockets. The person standing at the head of the table now takes a head of cabbage and pitches it at the master of the house, whereupon all begin to fight with cabbage-heads and cabbage-stocks. When these are exhausted they begin to throw at one another whatever comes to their hands. . . . It seldom happens that commemoration festivals pass without brawls. The ceremony of throwing or beating with cabbage-heads is accompanied by songs, masquerades, music, and dancing (after grief and anxiety come joy and consolation). That is how the White Russian commemoration festivals (*chavtury*) are celebrated.'

For the student of comparative culture, however, this rustic play with cabbage-heads is fundamentally the same as the *spectaculum admirandum* which took place at the funeral of Attila, or the games at the pyre of Patroclus.

(ε) *The feeding of beggars.*—In conclusion, we may mention the wide-spread custom, in the White Russian service of the dead, of showing kindness to *beggars* on this occasion.

'Without them no single funeral or commemoration festival takes place. They take the place of the priest on this occasion. Their songs, prayers, and religious poems are regarded as a sufficient equivalent, and one very advantageous to their pockets.' 'The beggars, knowing that at burials they are treated to food and drink, and receive bountiful gifts, stream together to them in crowds from all directions' (Š.[1] pp. 507, 527).

The reason for this is perhaps to be found in the fact that beggars, *i.e.* cripples, the blind, the lame, and especially the weak-minded and idiots, being exceptions to the normal course of nature, have in the thought of primitive man something supernatural, and thus 'sacred,' about them, on account of which they can be regarded as representatives of the summoned souls of the dead ancestors. It may also be owing to this idea that on Slavonic soil (cf. A. Brückner, 'Polnisch-lateinische Predigten des XV Jahrhunderts,' *Archiv für slav. Phil.* xiv. 183 ff.) the spirits of the dead are often thought of as *ubože* (O. Slav. *ubožije*), *i.e.* 'poor little men' ('dæmonibus sacrificia offerunt, quæ dicuntur *vbosthye*, remantes seu derelinquentes eis residuitates ciborum quinta feria post cenam'). We are therefore inclined to believe that in this feeding of beggars at the White Russian festivals a primitive custom is preserved which in India, as we have already seen, the clergy had turned to their own account, by actually making it a rule that the pious should feed and clothe whole bands of Brāhmans at the *śrāddhas*. The service which is rendered to the Brāhmans is really rendered to the ancestors.

(ε) THE GENERAL SIGNIFICANCE, FOR THE HISTORY OF CULTURE, OF THE WORSHIP OF THE DEAD IN PRIMITIVE TIMES.—It is not asserting too much to say that the entire social organization of primitive times rests in the last resort on *ancestor-worship*. Its practice falls, in the first place, on the sons, and then on the more distant relatives of the deceased. In this connexion we find, among some of the individual peoples, definite circles of relatives: among the Indians the *sapiṇḍa*, or 'cake-companions'; among the Greeks, the ἀγχιστεῖς, or 'nearest'; among the Romans, the *propinqui sobrino tenus*, 'the relatives as far as the *sobrinus*'; and it is not improbable that even in primitive times there existed a notion of such a close kinship, the members of which were, in the first instance, under an obligation to present the sacrifice of the dead to their common ancestors. In his *Reallex. der indogerm. Altertumskunde* (see art. 'Erbschaft') the present writer has sought to prove that these 'next of kin' in primitive times were covered by the conception of the Indian *sapiṇḍa*-relationship, and included those persons who had in common father, grandfather, and great-grandfather, or one of these ancestors, while in the case of the Gr. ἀγχιστεῖς and the Lat. *propinqui sobrino tenus* the purely *agnate* relatives mentioned above were, in the performance of the duties of mourning, early joined by *cognati* and even *affines*. But in any case they must have been originally the same persons to whom belonged, besides the offering of the sacrifice to the dead, the right of *inheritance* and the obligation of *blood revenge*. Thus worship of the dead and inheritance appear everywhere in

closest connexion with each other. In India, such expressions as 'to be one's heir' and 'to give the funeral feast to somebody' (Skr. *dâyâdâ*, 'sharer,' 'heir,' and *sapiṇḍa*, 'sharer in the sacrificial cake') are often synonymous. The same holds in Greece, where, as late as his own time, the orator Isæus (vi. 51) could say: 'Which of the two alternatives is law, that the son of this woman, or this son of the sister of Philoctemon, whom he has adopted, εἶναι κληρονόμον καὶ ἐπὶ τὰ μνήματα ἰέναι χρόμενον καὶ ἐναγιοῦντα?' In Rome the principle of the jus pontificum is accepted, *nulla hereditas sine sacris*, but among the old Teutons also the idea must have prevailed that worship of the dead and inheritance were identical conceptions.

Linguistic proofs of this are supplied by the Old Norse expressions: *erfa*, (1) 'to honour with a funeral feast,' (2) 'to inherit'; *erfð*, 'inheritance'; *erfða-öldr*, 'a funeral feast'; *erfi*, 'a wake,' 'funeral feast'; *erfingi*, *erfi-vörðr* (A.S. *erfe-weard*), 'an heir'; *erfi-öl*, 'a wake,' 'funeral feast.'

This alliance of worship and property was, at the same time, the real defensive and offensive alliance of primitive times, inasmuch as on it, in the first resort, the duty of *blood revenge* (cf. Schrader, *Reallex.*, art. 'Blutrache') for a murdered or wounded companion devolved; and since in those ancient times, in which as yet there was no State, but only families, clans, and tribes, it was simply this institution of *blood revenge* that afforded mankind that protection which in historical times the laws and institutions of the State guarantee, the extraordinary significance of ancestor-worship and the circle of relations based upon it again becomes, from this point of view, quite apparent.

But whether it was a question of offering the *sacrifice to the dead*, the entrance of the *heir* into possession, or the performance of the duties of *blood revenge*, it was always on the sons, in the first instance, that the man based his hope. This explains the ardent desire for sons which appears undisguised in the prayers to the gods, and especially to those ancestor-spirits who had charge of the welfare of the family (cf. O. Schrader, *Reallex.*, art. 'Kinderreichtum'). There was no special desire for daughters, who were unfitted to offer sacrifice to the dead, and were employed only in the lamentation services (see above, p. 19 f.). But sons who are to be fitted to perform these religious and social duties cannot even in primitive times be begotten of any woman indiscriminately; they must, on the contrary, be born of a wife who has been solemnly brought into the husband's house in compliance with the sacred customs (cf. *Reallex.*, art. 'Heirat'). It follows further from this, that in primitive times marriage was regarded as an unavoidable necessity, and bachelorhood as an almost unthinkable self-contradiction. So intense was this feeling, that, as we have already seen, the unmarried dead man was even after his death married to a wife for the life to come, with the observance of the full marriage ritual (cf. on this O. Schrader, *Die Schwiegermutter und der Hagestolz*, Brunswick, 1904, and *Totenhochzeit*, Jena, 1904).

4. The realms of the dead.—As the primitive Aryans lived together in families and clans (cf. *Reallex.*, artt. 'Familie' and 'Sippe'), we may assume that they buried their dead in families and clans. In Rome each *gens* had the use of a common *sepulcrum*, and also in Greece the individual groups of related οἶκοι were bound together by common places of interment (κοινὸν μνῆμα) (cf. Marquardt, *Privatleben der Römer*, 1879–82, p. 353; and Rohde, *Psyche*[2], i. 229, note 3). In the North, expressions like O. Nor. *œtthaugar*, 'hill of the tribe' (*œtt*, 'family,' 'tribe') and Russ. dial. *roditeliskoje mĕsto*, 'cemetery,' properly 'place of the ancestors' (on Russ. *roditeli*, 'ancestors,' see above, p. 23), point to the same custom, which is also confirmed by many facts of early historical research (cf. *Reallex.*, art. 'Friedhof,' and M. Much, *Mitteilungen der anthrop. Gesell. in Wien*, xxxvi. 90).

Public roads and paths were places at which these tribal graves were by preference wont to be laid out, perhaps because they were in this way most visible to the eye, or perhaps because in ancient times roads and paths were regarded at the same time as boundary lines between the separate districts, which were in this way both made obvious and protected by the sacred remains of the ancestors. The custom is especially well attested in Rome and Greece (cf. Marquardt, p. 351, and I. Müller, *Die griechischen Privataltertümer*[2], 1893, p. 221) as well as in India (cf. p. 26); but according to Nestor's *Chronicle* (ed. Miklosich, p. 7) the old Slavonic Radimičes, Vjatiči, and Sěverjanes laid the ashes of their dead in a small vessel and placed this *na stolpě* ('upon a pillar') beside the roads (cf. Kotljarevskij, *op. cit.* p. 123, who also refers to the fact that the Czech *hranice* has, in addition to the meaning 'boundary,' the significations of 'burial-mound' and 'funeral-pyre').

At these tribal cemeteries, situated at the sides of roads and paths, the souls of the dead were supposed in primitive times to dwell in the depth of the earth and in the neighbourhood of their graves. But as in the course of historical development (cf. *Reallex.*, artt. 'Stamm' and 'Staat') the families and clans of primitive times gradually increased to larger political unities, ruled over by kings, the idea became more and more natural of localizing the deceased in real realms of the dead, situated usually at a great distance, either in the heavens or on the earth, and governed by powerful rulers. Then, as the distinction between good and evil was more clearly recognized and, owing to the authority of influential priestly castes, obtained a religious significance (cf. on this below, II. 5), it became usual to distinguish in these newly created realms of the dead places of enjoyment for the 'good' and places of punishment for the 'wicked.'

Among the Aryans the following are the most important of these realms of the dead. The Indians, leaving the older primitive ideas (above, p. 23) out of account, thought of the kingdom of the blessed as in the heavens under the sovereignty of the first human pair, Yama and Yamî, whose names recur in an almost identical form in the Iranian Yima, proving this twin pair to be a common Indo-Iranian idea. It is a contested question whether, along with this heaven, there was also in Vedic times the conception of a 'hell' (cf. Oldenberg, *Die Religion des Veda*, p. 530 ff.; Macdonell, *Vedic Mythology*, p. 169 f.). Among the Greeks, there stands as the central point of their belief in immortality the dark, because underground, world of Ἀιδης. Its entrance is reached by a long voyage over the ocean to the land of the Cimmerians, and the grove of Persephone (details in Rohde[2], i. 53 ff.). Deep down beneath it lies Τάρταρος (*Il.* viii. 13), a place of punishment for the wicked (*Od.* xi. 576). For a few elect Ἠλύσιον (*Od.* iv. 561 ff.) is appointed—a plain at the Western border of the world, where everlasting spring reigns. The only thing the Romans had to place over against these poetical pictures, which at a later date passed also into Italy, was their Orcus, which is lacking in every characteristic trait.

'The Romans did not possess a conception of the continuance of life and of retribution after death, or of the form of existence in the realm of the shades which was invested with any lively imagination' (Wissowa, *Religion und Kultus der Römer*, p. 192).

If we turn northwards, we find, in the first place, among the Γέται ἀθανατίζοντες, 'the *Getes* who regard themselves as immortal' (Herod. iv. 93),

a kingdom of the dead belonging to the god Ζάλμοξις or Γεβελέϊζις, to whom it was customary to send a messenger every five years, by throwing a man upwards and then receiving him on lances and so piercing him to death. We have already (above, p. 25[a]) made the acquaintance of the Lithuanian god of the dead *Vielona*, beside whom there existed a Lettic *Wella mâte*. In all the Teutonic languages there is, as an ancient designation of the realm of the dead, the common expression Goth. *halja*, Old Nor. *hel*, A.S. *hell*, O.H.G. *hella*, which only in the Old Norse (*Hel*) developed into a name for the goddess of the dead. The idea of *Valhöll* is also confined to the north. Among the common people it was in all probability only a name for a home of the dead, but by means of the poetry of the Scalds it became a paradise of warriors under the rule of Odin. In Anglo-Saxon we find for Paradise the unusual expression *neorxna-wong*. It remains for us to mention the expression *raj* (Lith. *rojus*, Lett. *raja*) common to all Slavonic languages, which even in pagan times must have denoted some paradise-like dwelling of the dead. But it is impossible to prove the existence of a pagan word, such as Old Slav. *piklŭ*, for the idea of 'hell.'

If we glance over these expressions for realms of the dead and their rulers, we see that they are formations of the separate languages, and etymologically tolerably clear. The Gr. Ἀιδης must be derived from an original *ἀ-Fιδᾱ, 'place of invisibility' (Lat. *videre*, Gr. *Fιδεῖν*), and then, by being made masculine (cf. νεανίας, 'young man': *νεανία, 'youth'), came to denote the ruler of the under world. The case is similar with the Goth. *halja*, etc. (=Lat. *celare*), 'place of concealment,' originally, in all probability, simply the grave (cf. A.S. *byrgan*, 'to bury,' *byrgels*, O.L.G. *burgisli*, 'tomb'); as also the Lat. *orcus* (cf. above, p. 17[b]) should most likely be compared with the Goth. *aúrahi*, 'sepulchral cave.' A.S. *neorxna-wong* has lately been interpreted by A. Leitzmann (*Beiträge z. Gesch. d. deutschen Sprache u. Lit.* xxxii. 1) as 'meadow of the powers of the under world' (**neorscna*, **nerþ-iska*, *Nerthus*, 'terra mater,' Gr. *νέρτεροι*, 'the powers of the under world'; otherwise F. Kluge, *Zeitschr. für deutsche Wortforschung*, viii. 144; Uhlenbeck, *Beiträge*, xxxii. 1). Perhaps we may also venture an explanation of the Getic god of the dead, Γεβελέϊζις. There was an Old Slavic root *gyb*, *gib*, 'ἀπόλλυμαι' (Old Russ., *e.g.*, *gybeli*; Russ. *gibeli*, 'destruction,' 'loss'). Thus the language would point to a meaning for Γεβελέϊζις such as δαίμων τῶν ἀπολλυμένων (Herodot. iv. 94: οὔτε ἀποθνήσκειν ἑωυτοὺς νομίζουσι, λέναι τε τὸν ἀπολλύμενον παρὰ Ζάλμοξιν δαίμονα. οἱ δὲ αὐτῶν τὸν αὐτὸν τοῦτον νομίζουσι Γεβελέϊζιν). However, the group Lith. *Vielona* (**Vélônis*), Old Nor. *Valhǫll*, and Gr. Ἠλύσιον (**Fηλύσιον*) may possibly rest on a prehistoric connexion. The first part of both of the first two words is undoubtedly the Lith. *vėlės*, 'spirits of the dead,' Old Nor. *valr*, A.S. *wæl*, 'the dead on the battlefield,' O.H.G. *wal*, *wuol*, 'strages,' 'clades,' so that *Vielona* is the '*deus animarum*,' as is also explained in the Lithuanian tradition, while *Valhǫll* signifies 'the hall of the dead.' As regards the Gr. Ἠλύσιον (πεδίον), it is usually derived—even by E. Rohde (*Psyche*[2], i. 76, footnote 1)—from ἐλευσις, ἐλεύσομαι, etc., and interpreted as 'the land of the departed.' But in this etymology the fact is overlooked that the root ἐλευθ in Greek signifies 'to arrive' rather than 'to depart'; and as a 'land of those who have arrived' obviously gives no satisfactory explanation of Ἠλύσιον, the connexion of the Greek word with the Lith. *vėlės*, 'spirits of the dead,' suggested by A. N. Veselovskij (*Trans. of the Department for the Russ. Lang. and Lit. of the St. Petersburg Acad.* [Russ.], xlvi. p. 287 ff.), seems worthy of consideration. But, of course, we have before us in the case of *Vielona*, *Valhǫll*, and Ἠλύσιον, independent formations of the individual languages, so that all that follows from the series quoted is, in the end, no more than the existence of an Aryan root **vel-*, **vol-*, **vêl-* in the sense of 'souls of the departed.' Thus there is a total want of points of connexion to justify the assumption that even in the primitive Aryan times realms of the dead, like those mentioned above, were believed to exist. All the linguistic comparisons from which people were wont at an earlier date to draw conclusions as to the existence of such primitive ideas—as, *e.g.*, Gr. Κέρβερος=Skr. *śarvara*, *śabala* (a name of an Indian dog of the dead); Gr. Τάρταρος=Skr. *talâtala* (at a later date the name of a definite hell); Gr. Ἑρμείας (as leader of the dead)=Skr. *sârameya* (used of the dogs in the Indian world of the dead); Gr. Μίνως (as ruler of the dead)=Skr. *mánu*, and other similar comparisons—belong to the realm of beliefs that have long ago been given up by modern philology, as has been shown above (p. 13). Even the alleged agreements as to the matter in this sphere—as, *e.g.*, that a certain resemblance is to be found between the Gr. Κέρβερος and the two 'four-eyed and spotted dogs of Yama who guard the path'—do not turn out to be capable of convincing proof (cf. O. Gruppe, *Die griechischen Kulte und Mythen*, i. 113; E. Rohde, *Psyche*[2], i. 304, footnote 2; Oldenberg, *Die Religion des Veda*, p. 538).

Thus we believe that the idea of actual realms of the dead, situated at a great distance from the graves of the deceased, belongs to the individual development of the separate Aryan races, although this development may have taken place in prehistoric epochs. In the same way, it seems to us that it was also in the separate development of the individual peoples that the custom originated of burning the corpse and sending away the soul (which was thought of as 'smoke') to a distant land by means of the smoke of the funeral-pyre—a custom which, as we have shown above, stands in intimate connexion with this idea of a distant realm of the dead. If the first practice of cremation arose from still more primitive ideas—as, *e.g.*, from the wish to free the living from the pollution which was threatened by the dead, or to keep back, by means of fire, evil spirits from the body of the beloved dead—still it cannot be disputed that the conception of the flame as a female guide of the soul into a distant realm of the dead was one which, in the course of time, rose more and more clearly into prominence. This is most unmistakably the case in India, where, in an extremely realistic manner, the assurance is added, in the way of comfort, that at the cremation the male organ does not burn, and that there are many women-folk in the heavenly world (Oldenberg, *op. cit.*, pp. 544, 536). In Homer the only way to Hades is over the funeral-pyre, but the elect are 'translated' into Elysium, even when still alive. Among the Gauls (Diodorus Siculus, v. 28) it was usual at a cremation to lay letters on the funeral pyre, addressed to the departed relatives. These were supposed to be carried along with the soul of the cremated dead into the realm of the shades. But a Russian expresses himself most unreservedly as to the real purpose of cremation in the case of the funeral of a Russian merchant described by Ibn Fosslan (see above, pp. 17, 22):

'Ye Arabs are indeed a stupid people: ye take him who is the best beloved and most highly honoured of men and cast him into the earth, where the creeping beasts and worms feed on him. We, on the other hand, burn him in an instant, so that he goes directly, without delay, into Paradise.'

The oldest abode, therefore, in which the spirits of the ancestors dwell is the earth, the same earth

to whose bosom the farmer commits the seed; and accordingly we are not surprised if the gods of the earth who gradually emerge among the different peoples rule over the souls of the dead that are laid *in* the earth as well as over the seed which springs up *out of* the earth. This is true, in the first place, of the Mother Earth herself, of the Greek Γαῖα (Rohde, i. 208), and of the Latin *Tellus* (Wissowa, *Archiv für Religionswissenschaft*, vii. 47), while among the Lithuanians *Žemyna* (cf. Lett. *Semmes mâte*, Lith. *žẽmė* 'earth,' Thrac. Σεμέλη 'earth-goddess') is on the one hand a goddess of blessing for field and house, and on the other hand sacrifices are offered to her at the festival of the dead. In this connexion the attempt has been made by the writer of the present article (*Reallex.* p. 870) to interpret the Greek *Persephoneia* as the 'killing of the seed,'* and the Latin *Feronia* as the 'bringing of the seed.'

II. *WORSHIP OF THE SKY AND OTHER NATURAL PHENOMENA — 'THE HEAVENLY ONES.' — Introduction.*—If we have so far succeeded in presenting the fundamental features of the Aryan worship of the dead, sometimes even to very trifling details in its development, we have owed this above all else to the Litu-Slavic tradition, by means of which we were enabled fully to understand the conditions prevalent among other Aryan races, which were both incompletely attested and (as *e.g.* among the Indians) transformed by priestly refinements. It is natural, therefore, to ask whether it will not be possible in the same way to understand the fundamental character of the Aryan religion as a whole. For this task it will unfortunately be necessary, owing to the facts noticed above (p. 14), to leave almost entirely out of account in the meantime the history of the religion of the pagan Slavs, and to confine ourselves to a consideration of the conditions prevalent among the *Lithuanian Prussians*, regarding which, fortunately, we have much fuller information. We may begin the subject with some general descriptions, supplied by trustworthy authorities, of the pagan beliefs about God obtaining among these peoples. First of all we may mention Peter of Dusburg, the editor of the first *Prussian Chronicle* (1326).

'Prutheni noticiam dei non habuerunt. Quia simplices fuerunt, eum ratione comprehendere non potuerunt, et quia literas non habuerunt, immo in scripturis ipsum speculari non poterant. . . . Et quia sic deum non cognoverunt, ideo contigit, quod errando omnem creaturam pro deo coluerunt, scilicet solem, lunam et stellas, tonitrua, volatilia, quadrupedia etiam, usque ad bufonem. Habuerunt etiam lucos, campos et aquas sacras, sic quod secare aut agros colere vel piscari ausi non fuerant in eisdem' (*Scriptores rerum Prussicarum*, i. 53).

We may compare with Peter of Dusburg's statement the following passage from the *Chron. ord. Theut.* of Blumenau (*Scriptores rerum Prussicarum*, i. 53, note 1):

'Horum (the Prussians) ritus sicut a Christiana religione alienus, ita ab omni humanitate remotus fuit. Ipsi namque prisco gentilitatis errore imbuti omnem ornatum cæli atque terræ adorantes nonnullas silvas adeo sacras esse arbitrabantur ut nec ligna incidere nec vetustate quidem delectas arbores inibi abducere permittebant.'

Later but still more characteristic testimonies regarding the Litu-Prussian conditions are supplied by the report of a Jesuit missionary who at the beginning of the 17th cent. travelled all through Polish Livonia:

'Hi varios deos habent, alium cæli, alium terræ, quibus alii subsunt, ut dii piscium, agrorum, frumentorum, hortorum, pecorum, equorum, vaccarum ac singularium necessitatum proprios' (cf. Usener, *Götternamen*, p. 109). Cf. *Helmoldi Chronica Slavorum*, i. p. 163, ed. Pertz: 'Inter multiformia deorum numina, quibus arva silvas tristitias atque voluptates attribuunt, non diffitentur unum in cælis ceteris imperitantem.'

With these general characteristics of the Litu-Prussian religion the gods and god-names of the Lithuanians and Prussians themselves correspond well. We have information about these from men like Jan Menecius (Meletius, Malecki, see above, pp. 17, 19), Math. Stryikowski (*Kronika Polska, Litewska, Pruska, Moskowiewska, Tatarska*, Rgbg. bei Osterberg, 1582), Jakob Laskowski (in Lasicius,* *de Diis Samagitarum*, Basel, 1615), Matthæus Prætorius (*Deliciæ Prussicæ oder Preussische Schaubühne*, completed about 1698, edited, with verbatim extracts from the MS, by William Pierson, Berlin, 1871).

If we attempt to emphasize what is really characteristic in these Prusso-Lithuanian conceptions of the gods, it is evidently to be found in the fact that, for all phenomena of nature and life, for all undertakings and conditions of mankind, in fact even for every section or act of these which was at all prominent, individual gods (*Sondergötter*, 'special gods,' as H. Usener has aptly named them) were created, who, at least as a general rule, may be said to remain within the limits of the conception to which they owe their origin.

If, in order to demonstrate this by an example, we single out a particular province of culture, as, *e.g.*, cattle-breeding, which evidently occupied a prominent place in the life of the Litu-Prussians, we have, to begin with, a god who looks after cattle in general (*Sutvaras*), then a goddess who looks after their propagation (*Gotha*), a god who attends to the feeding (*Szerīczius*), another taking care of the pasture lands (*Ganýklos dẽvas*). In addition to these, there are 'special gods' concerned with the oxen (*Baubis*), the horses (*Ratainīcza*), the sheep (*Eratīnis*), the swine (*Krukis* and *Kremata*), the poultry (*Swieczpuńcscyunnis dẽvos*), the bees (*Bicziu birbullis, Austheia, Prokorimos*), the calves (*Karvaitis*), the young pigs (*Priparszas*), and there is even a divinity that reveals itself in one of the most horrible plagues of the farmer, the fly pest (*Musiũ birbiks*). We should meet with the same phenomenon if we examined closely the realms of nature or other spheres of civilization, agriculture, the home, family life, etc.

Long ago it was observed that this fundamental feature of the Litu-Prussian conception of the gods recurs on Aryan soil with amazing accuracy in the *Old Roman* religion. This comes before our notice most obviously in the list of gods which appears in the so-called *Indigitamenta*, *i.e.* priestly collections of forms of prayer to be used on the most varied occasions, which are known to us in the main from the attacks of the Church Fathers on the *Antiquitates rerum divinarum* of Varro, who drew his materials from these *Indigitamenta*. Now, although the fixing of these names of gods in definite classes (*di nuptiales, di agrestes*, etc.) † may have been already undertaken by the Pontifices, or for the first time by Varro, and although many of these names of deities may at first have been placed in that particular class owing to the interpretation of Varro, which was doubtless often wrong, still it is quite certain that in these *Indigitamenta*, and therefore in the Roman cult, there must have been a great number of individual gods, exactly resembling in their nature the Litu-Prussian deities:

'Sed et alii sunt præterea (*i.e.* besides the great gods of the cult, whose names also stand in the *Indigitamenta*) dei complures hominum vitam pro sua quisque portione adminiculantes, quos volentem cognoscere indigitamentorum libri satis edocebunt' (Censorinus).

* *Φερεφόνη*, etc.; *φῆρον· ἡ τῶν ἀρχαίων θεῶν τροφή*, Hes.; *φηρίς· ἡ τροφὴ θεῶν*, Arcadius, and *φόνος* (cf. also Hoops, *Waldbäume und Kulturpflanzen*, Strassburg, 1905, p. 360); *Fĕronia, Fārōnia, Fērōnia*, acc. to W. Mannhardt, *Wald- und Feldkulte*, Berlin, 1875–7, ii. 328: *far* (= *φῆρον*, **bhers-*), 'spelt'; for another view of *Feronia* cf. W. Schulze, *Eigennamen*, Berlin, 1904, p. 165.

* Cf. *Joh. Lasicii Poloni de Diis Samagitarum libellus*, ed. by W. Mannhardt, with additions by A. Bielenstein, Riga, 1868; 'Die Baltica des Libellus Lasicki: Untersuchungen zur litauischen Mythologie,' by Theodor R. von Grienberger in *Archiv für slavische Philologie*, xviii. 1 ff., and A. Brückner, 'Litauische Götternamen,' *ib.* xxii. 569 ff. The last-mentioned scholar raises doubts as to the trustworthiness of Laskowski, the main source of Lasicki. He holds, among other things, that the Lithuanian deities Gabie, Polengabia, and Matergabia mentioned by Laskowski to Lasicki are simply mutilations of the Christian saint Agatha, the patroness of fire (*Polengabia*, 'the Agatha of the hearth'; cf. Lith. *pelẽnė*, 'fire-place,' *Matergabia*, 'Mother Agatha'). All this may be quite right in itself, but we are not justified on that account in doubting the good faith of Laskowski. What must be regarded as primitive among the Lithuanians, as we shall see more fully below, is the attempt and the ability to form separate gods, but not all the separate names and forms of these gods themselves. Why should not a Christian saint in earlier times have strayed into their midst? However, in the following discussion names of gods mentioned *only* by Laskowski-Lasicius will be noted as such.

† Cf. Wissowa, 'Echte und falsche "Sondergötter" in der römischen Religion' in *Ges. Abh. zur römischen Religions- und Staatsgeschichte*, Munich, 1904, p. 304 ff.

The important thing, however, is that these great gods of the cult themselves, as we know them particularly from the fixed or movable festivals which were devoted to them, are essentially, even in the earliest historical times, or at least in the earliest period we can read with certainty, nothing else than 'special gods.' If we take, *e.g.*, the sphere of agriculture, which lay at the foundations of old Roman culture, sowing is represented by *Saturnus*, harvest by *Consus* and *Ops*, growth by *Ceres*, blossom by *Flora*, fruit by *Pomona*, failure of crops by *Robigus*—all of them deities who, according to the information supplied by the stone-calendar, had special feasts, or special priests and feasts, at their disposal (cf. Wissowa, *Religion und Kultus*, p. 21). If we may judge from pictures in the circus, there were worshipped along with Consus, the god of harvest, the three goddesses *Seia*, *Segetia*, and *Tutilina*, who had power over the seeds beneath and above the ground (Wissowa, *op. cit.* p. 195).

In addition to these, there are the twelve gods who were invoked by the flamen at the *sacrum Cereale*: *Vervactor* (for the fallow ploughing), *Redarator* (for the second ploughing), *Imporcitor* (for the drawing of the furrow), *Insitor* (for the sowing), *Obarator* (for the grubbing), *Occator* (for the harrowing), *Sarritor* (for the hoeing), *Subruncinator* (for the weeding), *Messor* (for the mowing), *Convector* (for the gathering), *Conditor* (for the storing), and *Promitor* (for the delivery of the grain), while from the report of Varro could be added a god of manuring (*Sterculinus*), and several more (cf. especially Peter, 'Indigitamenta' in Roscher).

A remarkable fact regarding these old Roman names of gods is that sometimes there seem to appear in them chronologically different strata of one and the same idea. Thus *Insitor* (and at the same time *Sator*) is at the *sacrum Cereale* the 'sower'; *Conditor* is the 'storer.' The same meaning is in all probability in the names of the old gods of the cult *Saturnus* (Sæturnus) and *Consus*, which are probably connected etymologically with *serere* and *condere* (Wissowa, pp. 169, 166). In the same way, *Janus* (Wissowa, p. 96) originally was simply the god of the doors (*ianua*), just as in the Lithuanian religion there was a god of the well, *Szullinnis* (Lith. *szulinỹs*, 'the well'), or a god of the bath-broom, *Szlotrazys* (Lith. *szlùtražis*, 'broom-stump'). After higher ideas, such as the concept of the deity as a god of the beginning (entrance), were blended with the idea of Janus, a renewal of this idea took place. This renewal we find in the gods of the *Indigitamenta*: *Forulus*, 'god of the doors,' and *Cardea*, 'goddess of the hinges.'

If in the preceding account we have placed the Litu-Prussian and the old Roman gods on the same stage of development in the history of religion, we do not mean to say that the figures which belong to these two groups represent common pre-historic formations, even in cases where these figures exactly correspond to each other in their nature, as is the case, *e.g.*, with the Lith. *Gabjaujis*, 'god of the barns' = Lat. *Consus*; Lith. *Tartois kibirksztů*, 'god of fire' = Lat. *Stata mater* (Wissowa, p. 185); Lith. *Perdoytus*, 'god of merchants' = Lat. *Mercurius*; Lith. *Pizius* (Lasicius), 'god of sexual intercourse' = Lat. *Mutunus Tutunus* (Wissowa, p. 195), etc. What can be proved to be pre-historic is rather the mere capacity and the tendency to form into a divinity every conception in nature or in culture which was of significance for primitive man, and to maintain the gods who were thus created for a longer or shorter period in their original sphere.

The greater part of H. Usener's standard work (*Götternamen*) is devoted to proving that the same tendency was operative in the formation of the Greek gods, that here too the great personal gods were evolved from special gods resembling those of the Romans and Lithuanians. This book also shows (cf. p. 116 ff.) how, even under the rule of the Christian Church, the same primitive and deeply-rooted longing for separate gods lived on in the worship of the *saints*, who, just like the gods of the *Indigitamenta*, could be rightly designated as 'dei hominum vitam *pro sua quisque portione* adminiculantes.' But how do matters stand in this connexion with the religion of the ancient Teutons? 'It is impossible,' says F. Kauffmann in his *Deutsche Mythologie*[3] (Stuttgart, 1893), p. 40, Eng. tr. *Northern Mythology*, London, 1903, p. 31, 'to prove in the oldest Teutonic religion the existence of more than three male divinities; and a triad of gods is usually ascribed to the Teutons by the historiographers of later times. The names given are Mercury, Juppiter, and Mars, names which really denote the Teutonic gods Wodan, Donar, and Ziu. With them is associated a goddess originally the great all-mother Earth, the beloved of the gods, and as such called by the name of Freia.' Certainly, if this statement is correct, and it expresses the opinion current among the German mythologists, there would hardly be room for 'special gods' in the religion of the ancient Teutons. But how then is it to be explained that even Procopius found among the Herulians a πολὺς θεῶν ὄμιλος; and when Jordanis (ch. xi.) relates of the Goth Dicenus: 'elegit ex eis tunc nobilissimos prudentioresque viros, quos theologiam instruens *numina quædam et sacella venerari iussit*,' what else can be meant than that that ruler was the first to choose some few State-gods out of the crowd of existing deities? Or is it possible to regard the numerous gods, and especially goddesses, which the Roman inscriptions exhibit—a Thingsus, Requalivahanus, Halamardus, Magusanus, Saxanus, etc., or a Tanfana, Nerthus, Baduhenna, Nehalennia, Hludana, Garmangabis, Haiva, Vagdavercustis, Harimella, etc.—as all being different forms of the names and ideas of those chief gods or goddesses? When only the Roman gods Juppiter, Mars, Mercury, and Hercules appear as Roman equivalents of the Teutonic world of gods, is it not natural to suppose the reason of this to lie in the fact that the people who first brought news about the Teutonic gods to Rome were soldiers and merchants? The former of these classes—in addition to *Juppiter Optimus Maximus*, who was worshipped by all in common—honoured especially the god Mars, the latter Mercury and Hercules (as the guardian of measure and weight; cf. Wissowa, p. 227, 231), and accordingly these classes sought with special fondness their favourite guardian gods on the barbarian Olympus—and found them too. But none of these questions can be disposed of briefly, and accordingly we cannot settle them here. In any case, however, no substantial objection from the standpoint of Teutonic religion* can be raised against the view that the craving, which is strikingly prominent in the Litu-Prussian and ancient Roman religion, for an endless variety of 'special gods' representing all sides of the life of nature and culture is to be regarded as a primitive Aryan characteristic. What confronts us here, however, as the oldest of the old is in reality nothing else than the phenomenon which anthropologists have called 'animism,' *i.e.* 'the investing with life and the deifying of the inanimate.' The extraordinary world-wide importance of this mode of thought for religious life has long been recognized (cf. especially Tylor, *Primitive Culture*[3], London, 1891). In close connexion with this animism we see fu-

* The same is true of the old Indian religion. Here, from primitive Indo-Iranian times onwards, the ever-growing tendency to form gods was kept in check by influential priests and priestly classes, who everywhere exercised the strongest influence on the development of great personal gods (cf. below, § 5).

ther how, in the Aryan religions as well as everywhere else, traces of a pronounced 'fetishism' remain. It cannot be doubted that the Aryans, like other races, once worshipped and prayed to trees and stumps, stones and animals, not only as symbols of divinity, but as real embodiments of a divine *anima*. In the meantime it may be advisable to leave the proofs of this to be discussed in those sections which deal with the outward appearance and the oldest dwelling-place of the deity (below, 3 and 4 *c*).

In this way it may be said that in the Aryan world animism and fetishism form the first and the oldest stage in the evolution of the history of religion. They are also to be traced in historical times, and are still to be detected at the present day. But it is likewise certain that even in primitive Aryan times the beginnings of a higher form of religion made their appearance.

For although the countless numbers of 'special gods' presupposed as original are not at first to be regarded as differing qualitatively among themselves, still it is natural to suppose that, just as the individual objects and conceptions which excited religious emotions were of different significance for mankind, so also the significance of the deities arising out of them would from the beginning be different, or would soon become so. And, in fact, we see how at a time when the Aryan peoples were still together, or were for the most part very close to each other, a class of beings became separated from the motley crowd of divinities, and appeared distinct from the other 'special gods.' These were designated by the list of primitive Aryan words already known to us: Skr. *devá*, Lat. *deus*, Lith. *dìẽwas*, Ir. *día*, Old Nor. *tívar*, nom. pl. *i.e.* the 'heavenly ones.'

These 'heavenly ones' will accordingly have to occupy the chief place in the following discussion, which will consist of five sections: (1) evidences of the significance of the 'heavenly ones' in the old Aryan religion, (2) their names, (3) their forms of manifestation, and the interpretation of them in riddle and myth, (4) their worship, and (5) their relation to the morality of mankind.

1. **Evidences of the significance of the 'heavenly ones' in the old Aryan religion.**—It is emphasized in the most unmistakable fashion, by unbiased authorities, with regard to the most diverse sections of the old Aryan racial territory, that the worship of the *sky* and the powers of nature connected with it formed the real kernel of the primitive Aryan religions.

This we have already seen in the reports regarding the Prussian Lithuanians* quoted above (pro deo coluerunt, scilicet solem, lunam et stellas, tonitrua—omnem ornatum cæli atque terræ adorantes—varios deos habent, alium cæli, alium terræ, *quibus alii subsunt*).

This is still more clearly proved by Herodotus (i. 131) with regard to the Persians: ἀγάλματα μὲν καὶ νηοὺς καὶ βωμοὺς οὐκ ἐν νόμῳ ποιευμένους ἱδρύεσθαι, ἀλλὰ καὶ τοῖς ποιεῦσι μωρίην ἐπιφέρουσι, ὡς μὲν ἐμοὶ δοκέει, ὅτι οὐκ ἀνθρωποφυέας ἐνόμισαν τοὺς θεοὺς κατάπερ οἱ Ἕλληνες εἶναι. οἱ δὲ νομίζουσι Διὶ μὲν ἐπὶ τὰ ὑψηλότατα τῶν οὐρέων ἀναβαίνοντες θυσίας ἔρδειν, τὸν κύκλον πάντα τοῦ οὐρανοῦ Δία καλέοντες· θύουσι δὲ ἡλίῳ τε καὶ σελήνῃ καὶ γῇ καὶ πυρὶ καὶ ὕδατι καὶ ἀνέμοισι· τούτοισι μὲν δὴ μούνοισι θύουσι ἀρχῆθεν, and the Scythians (iv. 59): θεοὺς μὲν μούνους τούσδε ἱλάσκονται, Ἱστίην μὲν μάλιστα, ἐπὶ δὲ Δία τε καὶ Γῆν νομίζοντες τὴν Γῆν τοῦ Διὸς εἶναι γυναῖκα. Cæsar reports regarding the Teutons: 'Germani multum ab hac (Gallorum) consuetudine differunt, nam neque druides habent, qui rebus divinis præsint, neque sacrificiis student, deorum numero eos solos ducunt, quos cernunt et quorum aperte opibus iuvantur: *Solem et Vulcanum et Lunam*, reliquos ne fama quidem acceperunt' (*de Bell. Gall.* vi. 21).

At the head of this worship stands the sky itself: Skr. *Dyáus*=Gr. *Zeús*, Lat. *Diespiter, Juppiter* (*Jú-piter*=*Zeû πάτερ*, an ancient vocative), Old Nor. *Týr*, O.H.G. *Ziu*.†. The fundamental meaning of the term 'sky' is most clearly preserved in the Vedic *Dyáus*, while the Gr. *Zeús* and Lat. *Juppiter* on the one hand, and the Old Norse *Týr* and O.H.G. *Ziu* on the other, have developed into gods, conceived of as purely personal, the classical words denoting the greatest god of the sky, and the Teutonic the greatest god of war. The root from which the whole class of words is derived is Skr. *div* 'to radiate,' so that Aryan **dyēus* (=Lat. *dies*, 'day') indicated in the first place the sky as the bearer of the light of day, and thus one of the first of the more elevated religious ideas of the Aryans was connected with the light of day.

The most violent natural phenomenon seen in the sky is the thunderstorm. From what has just been said regarding the fundamental signification of the Aryan **dyēus*, as well as from what has been indicated above regarding the fundamental feature of the Aryan religions—the formation of 'special gods'—it follows that the primitive condition of things has been preserved by those Aryan languages which have formed special deities for the phenomenon of the thunderstorm and its accompanying manifestation, the thundercrash, which agitates most powerfully the feelings of mankind. This is the case particularly over the whole of Northern Europe. Thus the universal Teutonic name of the thunder-god, O.H.G. *Donar*, O.L.G. *Thunar*, O. Nor. *Thórr*, is nothing else than the term for thunder (Skr. *stanáyati*, 'it thunders,' Lat. *tonat, tonitrus*, A.S. *þunian, þunor*, O.H.G. *donar*). The common Celtic expression for this natural power **torannos* (Irish *torann*, Welsh *tarann*, Cornish *taran*, 'thunder') is derived by metathesis from the same root. These Celtic forms led to the god (or goddess?) *Taranis* attested by Lucan (*Phars.* i. 445) and to forms which are found on inscriptions, such as Ταρανόου (Dat.), *Taranucus, Taranucnus*. Along with these we have a form exactly corresponding to the Teutonic *Donar*, viz. *Tanaros* (cf. R. Much, 'Der germanische Himmelsgott' in *Festschrift für Heinzel*, p. 227). The names of the Lithuanian god of thunder, *Perkúnas* (according to Menecius '*deus tonitruum ac tempestatum*'), and of the Slavonic *Perun*, who was especially worshipped in Kiev, are obviously related to each other, but the exact nature of this relationship has not yet been determined. Both of them are used in their own languages as appellative terms for 'thunderstorm,' 'thundercrash.' The first of these two names has been connected (cf. H. Hirt, *Indog. Forsch.* i. p. 479) with the Old Norse *Fjörgyn*, the name of the mother of Thor, and with *Parjánya*, the rain- and thunder-god of the Vedas. All these words have again been connected with the Lat. *quercus*, O.H.G. *forha* 'oak,' 'fir' (**perku*), so that the meaning 'he of the oak' would result for *Perkúnas* (cf. in Menecius: *Putscœtus*, 'deus qui sacros lucos tuetur,' Lith. *Puszaitis* [from *puszìs*, 'pine tree'], 'he of the pine tree'; cf. J. G. Frazer, *Early History of the Kingship*, 210). But the Skr. *Parjánya* must for phonetic reasons be excluded from this series (Skr. *j* is not=Lith. *k*), and after all it may be better (especially in consideration of the clear and evident changes of meaning which occur in the Celtic *Taranis* and the Teutonic *Donar*), in the case of *Perkúnas* and *Perun* to start from their appellative signification.† Just as in the North of Europe, so also in

* Cf., in addition, Erasmus Stella, 'de Borussiæ Antiquitatibus' ii., in Grynæus, *Novus Orbis*, Basel, 1537, p. 582: 'Solem et Lunam deos omnium primos crediderunt, tonitrua fulgetrasque ex consensu gentium adorabant, tempestates advertendas etiandasque precationibus dixerunt.'

* Bremer (*Indogerm. Forschungen*, iii. 301) has lately, on insufficient grounds, the present writer thinks, separated the Teutonic words from **dyēus*=Zeús and connected them with **deivos*=*deus*.

† E. Lidén (*Armenische Studien*, Göteborg, 1906, p. 85) has recently discussed all these words. With us he derives the Slav. *perunŭ* and Lith. *perkúnas* from the appellative significations 'thunder,' and places both words beside Old Slav. *perą, pirati* and Armen. *hark-anem*, aor. *hari* (cf. also Armen *ork*

the Vedas, *Dyáús*, the god of heaven, and *Indra*, the god of the thunderstorm (along with *Parjánya*) are carefully kept separate. In contrast to that, the Greek Zeus is god of the clear sky and thunder-god at the same time :

Ζεὺς δ' ἔλαχ' οὐρανὸν εὐρὺν ἐν αἰθέρι καὶ νεφέλῃσι (*Il.* xv. 192).

In fact, titles of the god referring to the latter quality, such as νεφεληγερέτα, τερπικέραυνος, στεροπηγερέτα, κελαινεφής, ἐρίγδουπος, ἐριβρεμέτης, ἀστεροπητής, ἀργικέραυνος, etc., exist in large numbers. On the other hand, the epithet of Zeus, the old neuter plural εὐρύοπα, 'wide-eye' (cf. above, τὸν κύκλον πάντα τοῦ οὐρανοῦ Δία καλέοντες), which is by far the most ancient of his titles, and takes us back to a long-forgotten epoch of the language, points to the god as the bearer of the light of day (cf. J. Schmidt, *Pluralbildungen der indoger. Neutra*, Weimar, 1889, p. 400). The same thing is to be found in the case of the Latin Juppiter as in the case of the Greek Zeus. In both instances, therefore, secondary developments and approximations are evidently present.

Further, the sun and the moon are unanimously mentioned, in the reports given above, as objects of worship among the tribes on the shores of the Baltic, the Persians, and the Teutons.

The Aryan names of these are :

The Sun : Skr. *súvar* (*sûrya* and *svàr*, Av. *hvar*), Gr. ἀβέλιος (Cret. Hes.), ἠέλιος, ἥλιος, Lat. *sol*, Goth. *sauil*, neut. (beside *sunnô*, fem.), Welsh *heul*, Old Pruss. *saule*, Lith. *saulė*.

The Dawn : Skr. *ushás* and *usrá*, Av. *ušah*, Gr. ἠώς, Æol. αὔως, Lat. *aurora*, Lith. *auszrà*.

The Moon : Skr. *más*, Av. *mah*, Gr. μήνη, Goth. *mêna*, Lith. *mėnů* (in addition O. Lat. *losna*, Lat. *lûna*, Armen. *lusin*; cf. Old Pruss. *lauxnos*, 'constellations').

All these and the related phenomena of the sky connected with light—*Saulėlė* 'the sun,' *Mėnů* or *Mėnesėlis* 'the moon,' *Auszrinė* 'the morning star,' *Wakarinė* (also called *Żevoruna*) 'the evening star,' the stars (Lith. *Żwaigždė*) as a whole, over which *Suaixtix* rules, *Auszrà* 'the dawn' (cf., in Lasicius, 'Ausca [for *Auszrà*] dea est radiorum solis [vel occumbentis vel] supra horizontem ascendentis'), etc.—play, as will be seen further on, an exceptionally important part in the Prusso-Lithuanian religion and mythology. But even in the case of the neighbouring Teutons evidences of the prevalence of the worship of the sun and moon are by no means confined to the report of Cæsar quoted above. Thus Tacitus (*Ann.* xiii. 55) mentions a Teuton of the name of Boiocalus, of whom he says : 'Solem deinde suspiciens et cetera sidera vocans, quasi coram interrogabat,' and even as late as the 7th cent. the saintly Eligius preaches among the Franks : 'Nullus dominos solem et lunam vocet neque per eos iuret.' A deified sun is mentioned in the O.N. *Sól* and in the second Merseburg magic formula : *Sinthgunt Sunna era suister*. The history of the Teutonic names of the days of the week points to the same fact. If the analogy of the days of *Ziu*, *Wodan*, *Donar*, and *Freia* (A.S. *tîwesdæg*, *wôdnesdæg*, *þunresdæg*, *frîgedæg*) in itself as well as O.H.G. *sunnûntag* and *mânatag* (=Lat. *dies Solis* and *dies Lunæ*, where Sol and Luna were regarded as highly sacred divinities, at least by the Romans, who brought these days of the week to Germany) makes probable the existence of Teutonic gods and goddesses, in the same way the hypothesis of the worship of a heathen goddess *Sunna* is strengthened by the general West Teutonic formation A.S. *sunnanæfen*=O.H.G. *sunnûn-âband*. For as this combination, whose original meaning (as in A.S.) was 'evening before Sunday,' must without doubt have been formed in pagan times, the conclusion may in all probability be drawn that there was a feast in honour of a heathen goddess *Sunna*, the eve of which was called *sunnûn-âband* (but cf. R. Much, in *Mitteilungen der anthrop. Gesellschaft in Wien*, xxxviii. p. 16). The name of *the dawn*, too, developed on Teutonic soil into an important goddess *Ôstara* (to be found in the O.H.G. *Ôstarûn*, *Ôstarmânod*), A.S. *Eostre* (*Eastormonaþ*, cf. Bede, *de Temporum ratione*, c. 13)=Skr. *usrâ*, Lith. *auszrà*, only with the difference that here the original goddess of the morning has become a goddess of Spring (but cf. A.S. *êarendel*, 'morning-star,' 'morning-dawn'). The reason of this change is to be found in the fact that in pre-historic times special worship was paid to the goddess of the dawn at the beginning of the year (the spring), as is made probable by the ritual of the Indian *Ushas* (cf. Hillebrandt, *Vedische Mythologie*, Bonn, 1891–1902, ii. 26 ff. and L. v. Schröder, 'Lihgo' in the *Mitteilungen der anthrop. Gesell. in Wien*, xxxii.). On Italian soil the Sabine *ausel*, 'sol' (Varro, *de Ling. Lat.* v. 68 acc. to emendation), must be mentioned as derived from the root **aus-* which has just been referred to, whose priests were called *Auselii* (*Aurelia familia* ; cf. also the form found on Etruscan mirrors, *Usil Sol et Eos*). With regard to the divinities *Sol* and *Luna* themselves, it is doubtful whether or not they belonged to the oldest components of the pantheon (cf. Wissowa, *op. cit.* p. 261). Tradition decides in favour of the former view, although there are no traces of their worship either in the calendar of feasts or in the priestly regulations. But the same is also the case with other Roman divinities, *e.g. Minerva*, whose name (**Menes-ova*) is derived from a root (Gr. *μένος*, **μενεσ-ος*) which is entirely extinct in the Italian languages, and therefore must be very old. *Mêna* in the *Indigitamenta* is the special goddess of menstruation. In Greece the related divinities are Ἥλιος and Ἠώς, Μήνη and Σελήνη, although they continue for the most part to play a rôle in the mythology subordinate to that of the chief gods. Finally, the Rigveda also knows a sun-god (*Súrya*) and a moon-god (*Mâs*), who, however, in the same way withdraw into the background before other gods who are probably not creations of the Indian soil, as *e.g. Mitra* (Avestan and Old Pers. *Miθra*, New Pers. *mihr*, 'the sun'), *Varuṇa*, and the *Âdityas*, or they have been repressed by these (cf. Oldenberg, *Die Religion des Veda*, pp. 185 ff., 194). The position of the female personification of the sun *Súryâ* is more important, owing to her relation to the *Aśvins* and her marriage with *Soma*, the moon-god of a later date, which we shall discuss further on. The same is true of the *Ushas*, so often celebrated in song (cf. above). For a Μήν (moon-god ?) of Asia Minor, see Kretschmer, *Einleitung*, p. 197 ff.

Along with sun and moon, we find in Herodotus and Cæsar fire (Skr. *agni*=Lat. *ignis*, Lith. *ugnìs*, Old Slav. *ognĭ*) mentioned as an object of worship According to primitive ideas it is born in heaven (cf. A. Kuhn, *Herabkunft des Feuers*, Berlin, 1859), and is carried to earth in the lightning-flash, which is accordingly called 'fire' in the most ancient times (cf. Schrader, *Reallexicon*, art. 'Feuer'). On Prusso-Lithuanian soil it was the object of a sumptuous worship. Here Jerome of Prague found 'gentem quæ sacrum colebat ignem eumque perpetuum appellabat ; sacerdotes templi materiam ne deficeret ministrabant.' The people called it *Ugnìs szwentà*, 'holy fire,' or *szwentà ponyke*, 'holy mistress.' On leaving the house of her parents (Prætorius, p. 82), the young wife said, 'Thou holy fire, who will guard thee ?' There was also a goddess of the hearth, *Aspelenie*, 'the one behind the hearth' (Lith. *pelėnė*), etc. We thus find in

'thunder'), both of which mean 'to beat.' He also seeks to connect with this the Skr. *parjánya*. If this is correct, then, there would lie in the Skr. *parjánya*, Slav. *perunŭ*, Lith. *perkúnas*, a primitive Aryan word for thunder with the fundamental significance of 'the beating one.'

the North the same perennial fire, fed by priests, as recurs in the South in the cult of the Roman *Vesta*, Greek *ἑστία*, Arcadian *Ϝιστία*, 'hearth,' 'hearth-fire.' There is absolutely no reason for deriving this Roman cult of Vesta from Greece, as Kretschmer has lately attempted to do in his *Einleitung* (p. 162 ff.). On the contrary, everything we know of this cult and its usages, as, *e.g.*, its place in the oldest calendars of feasts, the existence of appointed priestesses, the re-kindling of the extinguished flame by means of the rubbing together of pieces of wood, the carrying of the fire in a brazen instead of an iron sieve, the beating to death of the unchaste Vestal, the circular form of the temple of Vesta, etc. (cf. Schrader, *Reallexicon*, art. 'Herd'; Frazer, *Early History of the Kingship*, 209 f.; and Wissowa, *op. cit.*, p. 141 ff.), points to the remotest antiquity. If we add to this the fact that, according to Herodotus (iv. 59), among the Scythians Ἰστίη (Scyth. Ταβιτί, *i.e.* 'the warming one,' or 'heat'; Avesta *tap*, Skr. *tápati*, *tápayati*, *taptá*; New Pers. *tâbad*, *tafsad*; Lat. *tepesco*) was a most sacred, in fact the most highly honoured, goddess, it is beyond doubt that the worship of the single hearth-fire, as well as of the common perennial fire, belongs to the most ancient religious ideas and cults of the Aryans. The most exalted, however, of all the divinities which spring from the element of fire is the Vedic *Agni* (Lith. *ugnis*), the wise and great priest of mankind. The Greek Ἥφαιστος (probably derived from the kindling of the flame, cf. *ἁφαί*, 'kindling'), and the Latin *Volcanus*, in pre-historic times apparently the god of the fearful and devastating might of fire (from **volkâ*, 'fire'=Skr. *ulkâ*, 'firebrand'; cf. Kretschmer, p. 133), are more narrowly confined to their original sphere than the Vedic *Agni*. The beginning of a formation of a Teutonic god of fire may probably be found in the figure of the Old Norse *Völundr*, whose name, however, has not yet been sufficiently explained.

As the last of the great powers of the sky and of nature we have to mention *wind* and *water*. The former appears as a god in the Litu-Prussian *Wējo-patis*,* 'lord of the wind' (also *Wejpons* and *Wejdievs*) from the Lith. *wējis*, *wéjas*, 'wind.' The last of these words corresponds to the Vedic *Vâyu*, 'wind,' and 'god of the wind,' and to the Greek Αἴολος (**Fη-ιο-λο-ς*). The name *Vâta*, which is found in the Vedas together with *Vâyu* and also means 'wind,' 'wind-god,' is generally compared with the Teutonic *Wôdan-Ôðinn*; but the etymological connexion in this view is not free from difficulty. The worship of *water*, too, in the form of springs and rivers, is reported from all Aryan lands (for the Persians, see Herodotus i. 138: *σέβονται ποταμοὺς μάλιστα*; for the Germans, Agathias 28, 4: *ἱλάσκονται καὶ ῥεῖθρα ποταμῶν . . . καὶ τούτοις ὥσπερ ὅσια δρῶντες*). The same is true of the Greeks (cf. Preller, *Griech. Myth.* iv.[4], 146 ff.), among whom the rivers were called *διοτρεφεῖς* and *διιπετεῖς*, 'fed from heaven' and 'heaven-born.' Gods having their name from the watery element are the Latin *Neptûnus* (Umbr. *nepitu* '*inundatio*,' according to Bücheler, *Lex. Italicum*, Bonn, 1881, xvii., Av. *napta*, 'moist,' Νάσατ, a Persian spring, Νάπαρις, a Scythian river); the Greek Νηρεύς: *ναρός*, 'flowing,' 'moist'; the Indian *Apsaras*: *ap*-'water' (*apâm nápât*, 'the water-child'), etc.

These powers of nature which we have now enumerated, *i.e.* the sky (**dyêus*), together with the phenomena appearing in it or coming from it, 'the heavenly ones' (**deivôs*), must accordingly be designated as the *real kernel of the old Aryan religions*. The way in which around this original kernel new layers of divine beings were ever added among the separate peoples will be indicated, at least in broad outline, at the close of the next section, although, strictly speaking, it does not belong to this discussion.

2. The oldest names of the 'heavenly ones.'—Aryan archæology, in the course of its historical development, has been gradually coming to the conclusion that, in the vocabulary of the original Aryan language, real names of gods cannot be proved. The only thing that can be proved, as follows clearly from the indications given above, is that there were appellative but perfectly transparent designations of the sky and the natural phenomena proceeding from it. The fact that they were worshipped in primeval times follows from their being all united in the word **deivos*, and from the numerous historical divinities which have grown out of them. The reason for this phenomenon lies in the simple fact that in primitive Aryan times there were as yet no real gods in the later sense of the term, viz., no personal gods whose names could have been inherited. In *dyâus*—Ζεύς—*Juppiter*—*Ziu*, in *agni*—*ignis*—*ugnis*—*ogni*, in *donar*—*torann*, etc., people worshipped in primitive times the mysterious power, the part of the infinite, the divine *anima*, which manifested itself to mankind in the phenomena of the sky, of fire, thunder, etc., but not as yet a god who was regarded as a person or who exerted influence outside of his own sphere. They were 'special gods' set, so to say, on a high pedestal of worship. That this was the oldest belief of the Aryans regarding their gods has already been clearly emphasized by the present writer in his book, *Sprachvergleichung und Urgeschichte*[2], p. 600 (1890). It is the merit of H. Usener, in his frequently mentioned book *Götternamen* (p. 277), to have recognized that such a worship of gods is *actually* borne witness to in extensive parts of Europe.

Thus Herodotus reports (ii. 52) of the Pelasgi, 'the ancients,' a name which, as the present writer believes, included all that was known or supposed to be known regarding the pre-historic inhabitants of Greece: *ἔθνον δὲ πάντα πρότερον οἱ Πελασγοὶ θεοῖσι ἐπευχόμενοι ὡς ἐγὼ ἐν Δωδώνῃ* (the oldest place of worship in Greece) *οἰδὰ ἀκούσας, ἐπωνυμίην δὲ οὐδ' οὔνομα ἐποιεῦντο οὐδενὶ αὐτῶν· οὐ γὰρ ἀκηκόεσάν κω.*

Thus they possessed gods and worshipped them, but as yet had given them no epithets and no names. The ancients, too, had obviously meant the same thing when they designated certain peoples as *ἄθεοι*, 'without gods.'

Theophrastus knew such a people in the Thracian Thôl of Mt. Athos, and in the same sense Strabo, iii. p. 164, reports: *ἔνιοι δὲ τοὺς Καλλαϊκοὺς ἀθέους φασί, τοὺς δὲ Κελτίβηρας καὶ τοὺς προσβόρρους τῶν ὁμόρων αὐτοῖς ἀνωνύμῳ τινὶ θεῷ* [*θύειν*] *ταῖς πανσελήνοις νύκτωρ πρὸ τῶν πυλῶν, πανοικίους τε χορεύειν καὶ πανυχίζειν.*

The gods of the Aryans were also 'nameless.' They sacrificed to the sky, the sun, the moon, the dawn, fire, wind, and water; but the names indicating these powers still coincided perfectly with the respective designations. A Greek who had listened to their worship would, under the impression of the lively figures in his Olympus, have called them also *ἄθεοι*.

The further development in the formation of gods among the Aryans was now mainly directed towards the *creation of personal gods* and *true proper names* for them. This process was called forth almost spontaneously in the course of the history of culture. History produces personalities, and, as happens on the earth, separate individuals come to the front as kings or nobles and grasp power and riches for themselves, in the same way an attempt was made to invest some of the gods with an individual and personal character. All the 'special

* The Lithuanian names of gods ending in *-patis* (cf. also *Dimstipatis*: *dimstis*, 'house,' 'court,' *Laukpatis* 'lord of the fields,' *Raugupatis*, 'lord of the leaven') are regarded by the author of the present article, in opposition to Usener-Solmsen, p. 115, as very old, seeing that the Lith. *pâts*, 'husband,' has preserved the old meaning 'lord,' 'master,' only in one case besides these names of gods, viz., in the old compound word *wíẽszpatis*, 'God,' lit. 'lord of the tribe.'

gods' had the capacity of annexing the sphere of activity of others. In the case of some deities the powers of various other gods were united. Then we have the additional fact that hundreds of new aspects and tasks of material culture, as of law and custom, require a new heavenly lord and protector, while the significance of the natural powers begins to pale, the more mankind gets raised above them.

In addition to this, there is no Aryan territory where *influences from without* have not made themselves felt. As far as India is concerned, Oldenberg (*Die Religion des Veda*, p. 194) is convinced that the great figures connected with light, which are sharply distinguished from the rest of the Vedic pantheon, *Mitra*, *Varuṇa*, and the *Âdityas* (according to him, sun, moon, and planets), had been borrowed, as early as the Indo-Iranian period, from the Semites or the Sumerians, or that they had received their astronomical character from them. Herodotus himself relates, in the passage referred to above, that the Pelasgi received the names of their originally nameless gods from the Egyptians, and that they afterwards handed on these names to the Hellenes. In any case there cannot be the slightest doubt that the personal characterization of the Greek deities followed the Oriental pattern to a large extent. The Persians, too, according to Herodotus (i. 131), had learned from the Assyrians and the Arabs to sacrifice to a personal deity, Οὐρανίη, along with their old nameless gods. Nor can we fail to recognize how the colourless forms of the old Roman gods were, during the course of Hellenic influence, clothed with Greek flesh and blood. The relation of the ancient Teutons to the Romans must be regarded in the same way. If we take the deities mentioned by Cæsar (obviously only as instances), sun, moon, and fire, and add to these the thunder (*Donar*), the sky (*Ziu*), and the wind (*Wodan* [?]), these being then regarded in their originally purely appellative meaning, we can find absolutely nothing in this list of old Teutonic gods which is in the least striking or unusual. Tacitus, 150 years later, mentions (*Germania*, ch. 9) as Teutonic gods Hercules, Mars, and Mercury; and these possess, at least according to his report, personal characteristics. But these 150 years were at the same time an epoch of intimate contact between Teutonic barbarism and Græco-Roman culture; and its definitely stamped divine figures, in the form which would be mediated to the north by traders and soldiers, must have tended to re-mould the conceptions of the special gods of the Teutonic nature-worship. If then, in addition to all this, we call up before our minds how the ever-increasing influence exerted by the priestly castes (cf. below, 4 *b*) and the beginnings of poetry and plastic art vied with each other in selecting individual deities from the ὅμιλος τῶν θεῶν, and in working up and embellishing the forms of their favourites, we shall have pretty well exhausted the conditions which brought about the gradual development of personal gods.

But however clear this development seems to be when we consider it in broad outline, it is nevertheless extremely difficult to fix beyond question the actual process of growth of the separate gods. For, at the point where the written records among the various Aryan tribes begin, these gods stand for the most part completed and finished before us, and in order to determine the point of departure in their development we are thus *almost exclusively dependent on the interpretation of their names*. It must, however, be said that the etymological explanation of the Aryan names of the gods unfortunately forms one of the most obscure chapters of comparative philology, and the only great step of progress that has been made here lies in the recognition of the fact that we know only a very little for certain. But even if we were successful in fixing the origin of a name of a god, and with it the first sphere of his activity, the 'cell of his nature,' still only more or less credible conjectures would be possible as to the lengthy and intricate pathway which led from this point to the personality of the god that we find in history. The phenomena of the sky, of which we have spoken above, are the most natural sources for personal gods. As soon as Ζεύς (**dyĕus*) began on Grecian soil to denote not only the brilliant sky of day, but also the cloud-girt sky of the thunderstorm, with reference to the divine *anima* which was thought of as in both, from that moment the point of commencement was given for the formation of a personal god, which now led in continuous development, through the assumption of ever new elements in the life of nature and of man, to the immortal figure of the father of gods and men which we find in Homer. But it is worthy of note that in the Epic the number of epithets describing the relations of the god to the order of the world and of mankind (*e.g.* μητίετα, ξένιος in the *Iliad*) is extremely small compared with the crowd of attributes referring to natural phenomena (cf. above, p. 34). Corresponding to this, *Agni* in India is originally nothing else than the divine *anima* of fire. But it enters into the realm of personal gods as soon as man requires it, not only to give light and warmth or to dispel evil spirits by its heat, but also, as is already done in the Rigveda, to supply the blessing of children and to promote domestic prosperity.

The Greek Zeus and the Indian Agni are thus real 'heavenly ones,' true *dii*. Then there are joined to these, from the most varied spheres of nature and culture, countless other special gods, who raise themselves in ways similar to these to the position and dignity of personal deities. We shall illustrate this by a few examples from the history of the Greek, Roman, and Teutonic religions.

From the first of these let us take the figures of *Apollo* and *Hermes*. Among the very numerous interpretations that have been proposed for these divine names there are two which, without forcing, satisfy all the demands of phonetics and the science of word-formation; both of them originate from Carl Robert, the editor of Preller's *Mythologie*. According to them, Ἀπόλλων, Ἀπέλλων (ἀπέλλα, 'fold') is 'he of the fold' (cf. *e.g.* κίβδων, 'miner': κίβδη, 'dross'; Ἀγάθων : ἀγαθός; Φίλων : φίλος, K. Brugmann, *Grundriss der vergl. Gram.* ii.[2] 1, Strassburg, 1906, 300); and Ἑρμείας, Ἑρμῆς (ἕρμα, ἕρμακες, 'stone,' 'stone-heaps'), is 'he of the stone-heap.'

Divine names which designate the god appellatively as standing in a characteristic relation to a definite conception are exceedingly numerous in all Aryan languages, as is seen. *e.g.*, in Lith. *Medeinis*, 'he of the wood' (Lith. *mẽdis*); *Puszaitis*, 'he of the pine tree' (Lith. *puszis*); *Eratinis*, 'he that belongs to the lambs' (Lith. *éras*); Lat. *Silvanus*, *Pomona*, *Mellona*, *Bubona*, *Minerva* from **Menesova* ('she who has to do with the **menos* = Gr. *μένος*'), Old Gall. *Braciaca* (*brace*), 'he of the malt'; Phryg. *Sabazios* = Dionysus (Illyr. *sabaia*, 'beer'), 'he of the beer' (cf. Schrader, *Reallexicon*, p. 89); and in numerous other instances. In the Teutonic languages the numerous formations in *-ana*—*Tanfana*, *Hludana*, *Saxanus*, *Magusanus*, etc.—may belong to this class. Ἀπέλλων is accordingly, in the first instance, a 'special god' of the cattle-pen,* then a god of cattle-rearing in general, in which character, as is well known, he already appears in Homer (*Il.* ii. 766, xxi. 448 ff.), and which is clearly referred to in the ancient epithets Λύκιος, 'he who frightens away the wolves from the folds,' Καρνεῖος : κάρνος, 'flock' (cf. Lith. *Eratinis*), and Νόμιος : νόμος, 'pasture' (cf. Lith. *Ganỹklos dẽwas* : *ganyklà*, 'pasture'), which had all, without doubt, originally designated independent gods. The figure of Hermes, however, takes us back to the primitive epoch of an ancient stone-worship (cf. below, 4 *c*). As late as the year 1583 the Jesuit Rostowski was able to report the following from Lithuania (cf. A. Brückner, *Archiv für slav. Phil.* ix. 33): 'Antiquæ colonis superstitiones . . . alibi Akmo (Lith. *aszmũ*, 'stone'), saxum grandius'; and further: 'Saxa pro diis culta (quæ illi lingua

* The Lithuanian god *Sutvaras* (cf. above, p. 31), 'the god of cattle,' would exactly correspond, if it is correct to connect his name with the Lith. *tvorà*, 'fence.'

patria Atmeschenes Viete, adiectorum scilicet loca [really adiciendi locus; Lett. *atmeschanas wieta*], in quæ ciborum analecta pro libamine coniectabant; quibus cæsorum animantium cruorem aspergebant quæque contingere ipsis fas esset victimariis), sex inquam eiusmodi aræ circum oppida, in primis Rositenum, Duneburgum, Russonum, eversæ coetusque sacrificantium dissipati.' Prætorius too relates (p. 21): 'There was, several years ago, a somewhat higher stone not far from Gumbinnen or Bisserkeim, in a pine grove, which was regarded as sacred, and on which the surrounding people offered money, clothes, and the like.' Similar phenomena occur in Greece. Even in the *Odyssey*, xvi. 471, we find the place name Ἑρμαιος λόφος:

τὸ γὰρ ἴδον ὀφθαλμοῖσιν.
ἤδη ὑπὲρ πόλιος ὅθι θ' Ἑρμαιος λόφος ἔστιν,

and the scholiast remarks on this passage: 'The heap of stones on the roadside is called *ἑρμαῖον*. Hermes first cleared the roads, and where he had cleared them he set a stone for a mark on the roadside. Ἑρμαιος λόφος, however, is the same as finger-post, for the Roman milestones were called Ἑρμαιοι λόφοι. Hence it is the custom of people to erect cairns of stones in honour of Hermes, because he is the guide and protector of travellers, and to throw ever more stones on these cairns, which they call Ἑρμαιοι λόφοι.' Cf. also *ἕρμακας λίθους σεσωρευμένους εἰς τιμὴν τοῦ Ἑρμοῦ* (Schol. *Nik. Ther.* 150). Eatables, too, such as dried figs, etc., were laid down on these cairns of Hermes (*ἕρμαιον*), professedly for the passing travellers, but in reality as a sacrifice to the god. In both racial territories we therefore find divinely worshipped stones or cairns, which were added to by the passers-by. The divine *anima*, which exercised sway in them, was called among the Greeks, 'he of the cairn of stones,' Ἑρμείας.

How these primitive gods, 'he of the cattle-pen' and 'he of the cairn of stones,' gradually grew into the powerful and many-sided personalities of the Greek Olympus will never, as has been mentioned above, be completely ascertained in detail. Before all else his early combination with Φοῖβος, 'the shining one,' a sun-deity, may have been of significance for Apollo. The sun-god Phœbus opened the ἀπέλλαι, 'the cattle-pens,' in the morning and drove the cattle to the pasture. Hermes was raised from insignificance by the circumstance that these cairns of stones were more and more transformed into 'direction posts,' and the god with artistically formed head and extended penis became the protector of the ever growing traffic, and the messenger of gods and men. In any case, at the end of their development both of them attained to the same elevation as Zeus, and were regarded as his sons.

On Roman soil let us recall once more the figure of *Janus*, which is remarkable in many ways. As *Terminus* was the 'god of the boundary stone,' *Fons* the 'god of the spring,' *Vesta* the 'goddess of the hearth,' and Lith. *Szullinnis* (*szulinỹs*) the 'god of the well,' in the same way the Latin *Janus* was originally nothing else than the 'god of the doors' (so also Kretschmer, *op. cit.* p. 161), however difficult it may be for the modern mind to conceive what religious emotion could be aroused by looking at doors and gates. Probably it was the thought of the two-sidedness of the door, the fact that it looked inwards and outwards at the same time (*Janus Geminus, Janus bifrons*), and that it both shut and opened (*Clusius, Patulcius* in the *Carmen Saliorum*), that gave occasion to the first conception of the god. But even in Rome of the earliest date the god had his own priest (*Rex sacrorum*) and his own festival (*Agonalia*), and higher thoughts, chiefly the idea that he was the beginning of everything—especially of the year (Januarius)—must have become connected with his worship and have made him into the *divom deus* or the *principium deorum* (cf. Wissowa, p. 91 ff.). In the same way as a material and originally highly prosaic conception was here elevated to the rank of the *dii*, we find in Rome a great fondness, corresponding to the abstract-thinking spirit of the Romans, for raising even abstract ideas into deities.

This is seen, *e.g.*, in *Ceres* (**Keros*, 'growth': *cresco* (cf. Osthoff, *Parerga*, i. 1), *Venus** (**venos* = Skr. *vánas* 'desire,' 'pleasantness'), *Sêia* ('sowing' = Lith. *sėjà*, 'seed-time'), *Robigus* ('failure of crops'), etc.

* In Oscan and Pælignian the goddess *Herentas* corresponds to her. The name is connected with Osc.-Umbr. *her-*, *herí-βούλεσθαι*, Goth. *gaírnjan*, 'to desire,' etc., and accordingly means 'desire.'

In the same way among the Teutons all sorts of 'special gods' were added from all sides to the ancient *tîvar* = *dii* (*Sol, Luna, Volcanus, Donar, Ziu, Wôdan*). As examples we may take the gods *Saxnôt* and *Requalivahanus*, which can be interpreted with comparative certainty. When bronze swords were introduced from the south-east into Europe, and thereby a new and formidable weapon was put into men's hands, they could not help seeing in this the activity of a god. As a matter of fact, evidences of such a *sword-cult* can be produced from extensive parts of Europe, from the Scythians, Alans, Quads, and other peoples (cf. J. Grimm, *Deutsche Mythologie*[3], i. 185). This god who was present in the sword was called by the Saxons *Saxnôt*, *i.e.* 'sword-bearer,' 'companion of the sword,' and we can easily understand how he could, among a warlike people, acquire so great importance that in the baptismal vow he was placed on an equal footing with *Thunar* and *Wôdan* (Braune, *Althochdeutsches Lesebuch*[3], Halle, 1888, p. 159). We have seen above how a Celtic tribe, which had remained behind, worshipped a 'nameless god' by dancing in families before the gates on the nights of the full moon (above, p. 35[b]). May we not presuppose a similar custom among the neighbouring Teutons as well, and is it not likely that the god, when any one wished to indicate him in any way, was called 'he of the darkness' (Goth. *riqis* = Gr. *ἔρεβος*)—an interpretation of the *Requalivahanus* mentioned by the Romans, which the Germanists, by way of exception, unanimously accept? Besides, he was undoubtedly an important deity at the time when, according to a Roman inscription, Qu. Aprianus offered sacrifices and made vows to him on the banks of the Rhine.

3. The forms of manifestation of the 'heavenly ones,' and their interpretation in riddle and myth.—It is a characteristic quality of most primitive religions that in them the distinction between man and animal is entirely disregarded. 'The sense of an absolute psychical distinction between man and beast, so prevalent in the civilized world, is hardly to be found among the lower races. Men, to whom the cries of beasts and birds seem like human language, and their actions guided as it were by human thought, logically enough allow the existence of souls to beasts, birds, and reptiles, as to men. The lower psychology cannot but recognize in beasts the very characteristics which it attributes to the human soul, namely, the phenomena of life and death, will and judgment, and the phantom seen in vision or in dream' (Tylor, *Primitive Culture*[3], i. 469). There may also have been such an epoch in the Aryan religions, in which it seemed quite natural to think of the flame racing over the fields as a horse, or the thunder in the storm-cloud as a bellowing steer, and numerous direct and indirect evidences point to a time in which the gods were actually conceived of as animals, or at least as beings partaking partly of human partly of merely animal qualities. Even as late as the Vedas (cf. Oldenberg, *op. cit.* p. 68 ff.) the lower deities at least are by preference thought of as being in the form of animals. But the higher gods also are repeatedly characterized as the children of animals, *e.g.* the *Aśvins* as children of the mare. The different animals, too, which were sacred to the gods, such as the eagle of Indra, or the animals under whose figure and name the gods were honoured, the horse of Agni, the steer of Indra, etc., are unmistakable signs of these once prevalent ideas. The oldest condition of affairs in Greece is summarized by E. Meyer (*Geschichte des Altertums*, ii. 98) in the following way: 'The view is almost still more wide-spread that the gods reveal themselves in the form of animals.' All through Greece a wolf-god was worshipped, which

in the Peloponnesus has become Zeus, while the wolf is otherwise regarded as a manifestation of Apollo (but cf. above, p. 36). Artemis, in Attica and Arcadia, where she was honoured as the mother of the tribe, is regarded as a she-bear; in other cases she was thought of as a hind (cf. Farnell, *Cults of the Greek States*, ii. 435). In Argos, Hera βοῶπις was worshipped as a cow that was fertilized by Zeus in the form of a bull. In the countless rough figures of stone and clay, in human and animal form, which are found in all the layers of the Trojan and Ægean civilization, we may in all probability recognize the representations of the gods belonging to this epoch of Greece; not a few of them may have been house fetishes. In Italy, too, sacred animals (woodpecker, wolf, and ploughing ox) were assigned to different gods, particularly Mars. But the fact that the gods were here, too, conceived of as animals is very strongly supported by the tradition that there was carried in front of the divisions of the army, marching into the field, not only the eagle, as at a later date, but other figures of animals as well, wolves, minotaurs, horses, and boars (Pliny, *Hist. Nat.* x. 16: 'Romanis eam aquilam legionibus C. Marius in secundo consulatu suo proprie dicavit. Erat et antea prima cum quattuor aliis: *lupi, minotauri, equi aprique* singulos ordines anteibant'). It is the same custom to which Tacitus bears witness among the Teutons (*Germania*, ch. 7): 'Effigiesque et signa quædam detracta lucis in prœlium ferunt,' since it cannot be doubted that, among the *effigies*, the sacred animals of the gods, the snake and wolf of Wodan, the bear and he-goat of Donar, the ram of Ziu, and the boar (cf. A.S. *eoforcumbol*, 'sign of the boar') of Freyr are to be understood (cf. Tacitus, *Hist.* iv. 22: 'inde depromptæ silvis lucisque *ferarum imagines*'). Thus the oldest banners are seen to be animal fetishes, under whose visible protection the army marched into battle.

Along with the conception of the gods as animals, there is to be found, from the very beginning, the conception of them as existing in human form. In course of time this latter idea came more and more into prominence. It may seem that this is a contradiction of our earlier assertions, according to which the appearance of personal gods among the Aryan peoples is comparatively late. This is, however, not the case. We must not consider personification and the formation of personal gods as identical, no matter how much the latter presupposes the former. The characteristic mark of a *personal god* is that he is regarded as exercising influence outside of the sphere to which he owes his conceptual origin and his name. *Personification*, however, means, at first, simply the substitution of a human figure for the divine *anima* present in the phenomenon. This need for personification is all the greater the lower down we go in the stages of civilization. If the White Russian peasant be asked even to-day about his *Perunŭ*, whose fundamental appellative meaning is still quite clear to him (cf. above, p. 33), he says: 'He is a tall, broad-shouldered fellow, with black hair, black eyes, and a yellow beard. In his right hand he has a bow, in the left a quiver with arrows. He drives on the heavens in a chariot and discharges fiery arrows' (cf. Dahl, *Erklärendes Wörterbuch der lebenden grossrussischen Sprache*[2], St. Petersburg, 1880–82, iii. 104). Even quite impersonal conceptions of Greek and Roman civilization are, on their passing over into the Slavonic world, taken possession of by this primitive passion for personification. Thus the Lat. *calendæ* (καλάνδαι), 'New Year,' has led on Russian soil to a divine being, personifying the whole time between Christmas and Epiphany. In the neighbourhood of Moscow, even at the present day it is customary on Christmas eve to lead a maiden called *Koljada*, dressed in white, through the streets, and to sing, 'On Christmas eve was Koljada born, beyond the rapid river,' etc. In the same song, in close connexion with the worship of this Koljada, a pagan sacrifice of a kid is mentioned (cf. Glazunov, *Russian Folksongs* [Russ.], St. Petersburg, 1894, p. 1). We may also call to mind the supernatural *rusalki*, from Lat. *rosalia* (ῥοσάλια), 'festival of roses,' already mentioned above (p. 26).

Thus we may assume that there was, even in primitive times, an active tendency to conceive the divine in human form; and if Indra in the Rigveda and Thor in Northern mythology are described as giants with tawny or red beards, there is nothing against discovering there a primitive Aryan idea common to the Indians and the Teutons. This tendency, too, suggests an explanation of the fact that in certain branches of the Indo-Germanic language the attribute 'father' must have been, even in pre-historic times, added to the primitive Aryan **dyêus*, 'sky' (Skr. *Dyâus pitâ*, Gr. Ζεὺς πατήρ; cf. also in Hesych. Δειπάτυρος· θεὸς παρὰ Τυμφαίοις, Lat. *Juppiter*), as there were also a Scythian Ζεὺς Πατάϊος and a Bithynian Ζεὺς Πάπας, Παππῶος (Kretschmer, *op. cit.* p. 241 f.). It is doubtful, however, whether the word 'father' indicates a position of honour of **dyêus* compared to the other 'heavenly ones,' as seems more likely to the present writer, or expresses the relation of the god to the community worshipping him, as is the case in Italy, where *pater* (or *mater*) is applied to almost all the gods (or goddesses) of the oldest group.

A further consequence of this personification of the deity is to be found in the circumstance that the god was supplied with a wife, whose designation was most simply and originally obtained by forming the feminine of the male deity (Skr. *Agnâyî*: *Agni*; Gr. Διϝώνη: Ζεύς, Διός; Lat. *Juno*, **Jovino*: *Juppiter*, *Jovis*). The idea, too, that the heaven and the earth constitute a pair united in marriage is very old. In the Rigveda the 'mother,' *Pṛthivî* (=A.S. *folde*, 'earth'), appears along with the 'father,' *Dyâus*. The report of Herodotus regarding the Scythians (νομίζοντες τὴν Γῆν τοῦ Διὸς εἶναι γυναῖκα) has already been mentioned. Among the Thracians the lordly Διόνυσος (probably a Thracian word) is sprung from the marriage of the god of heaven with the earth-goddess Σεμέλη (cf. the Lithuanian *Zémyna*: Lith. *žẽmė*, Old Slav. *zemlja*, 'earth'). Deeply rooted in the mind of the Russian peasantry is the belief in the love of Jarilo, the god of light, to the *matì syra zemlja*, 'the cold Mother Earth,' just as we find in an Anglo-Saxon rural verse: '*Hal wes þu, folde, fira moder, beo þu growende on godes fæþme*,' 'Hail to thee, O Earth, Mother of men! Be thou fruitful in God's embrace.'* It is doubtful, however, if the ἱερὸς γάμος of Zeus with Ἥρη, who can scarcely be shown to be a goddess of the earth, is related to the same circle of ideas (cf. Kretschmer, *Einleitung*, p. 90 f.; on the other side, Frazer, *GB*[2] i. 228, and Farnell, *Cults of the Gr. States*, i. 180 ff.). Finally, we have to mention that the distinction of grammatical gender, which was already perfected in the primitive language, formed the basis on which, on the one hand, male (*e.g. Dyâus* and *Agni*) and, on the other hand, female deities (*e.g. Ushas, Eostra*) could be developed. In short, in many places there are to be found, even in primitive times, the first beginnings of the formation of those divine families whose real evolution belongs entirely to the province of the respective separate peoples.

The conception of the oldest gods now as animals now as men, which we have so far discussed, is

* We may look upon the rôle played by *Tellus* at Roman marriages as a reminiscence of the same ideas. Cf. Servius, iv. 166: 'Quidam sane etiam Tellurem præsesse nuptiis tradunt; nam et in auspiciis nuptiarum invocatur; cui etiam virgines, vel cum ire ad domum mariti cœperint, vel iam ibi positæ, diversis nominibus vel ritu sacrificant.'

however, in reality only the outcome of a general longing, immanent in mankind, to know and understand the world, a longing which in primitive stages of culture expresses itself in two other phenomena as well—in *riddle* and in *myth*. In discussing these we may commence, as we have done so frequently, with the Litu-Slavic conditions, where both ideas appear with special purity and originality. It is difficult to overestimate the significance of the riddle in the literature of the Slavonic peoples (cf. Krek, *Einleitung in die slavische Literatur gesch.*[2], p. 810 ff.; and, for the value of riddles in the interpretation of myths, Max Müller, *Contributions to the Science of Mythology*, 1897, i. 80 ff., and art. RIDDLE). They are in the real sense of the word *Welträtsel* ('riddles of the universe'), for their subject is, if not exclusively, at least in great measure, the universe, with its thousand-and-one phenomena, their meaning and illustration.

'Peas are scattered on a hundred paths; no one will gather them up—*ni cart, ni carica, ni krásnaja dévica*' (*the stars*). 'The black cow has gored all men to death; the white cow has brought them to life again' (*day and night*). 'Without hands, without feet, he creeps on the mountains' (*the wind*). 'In Spring he makes glad; in Summer, cool; in Autumn, satisfied; in Winter, warm' (*the tree*). 'There stands an oak. On the oak there are 12 nests; in each nest there are 4 blue-bonnets; each blue-bonnet has 14 eggs—7 white and 7 black' (*the year, the month, weeks, days and nights*).

It is the same fundamental trait as appears in these few Russian examples (cf. Sadovnikow, *The Riddles of the Russian People* [Russ.], Petersburg, 1875), viz. the tendency to explain the great cosmic processes, the course of the sun, the division of the year, etc., that comes most clearly to the front in the riddle-making of related peoples.

Thus in ancient India (cf. Haug, 'Vedische Rätselfragen und Rätselsprüche,' in *Sitzungsberichte der Münchner Ak. d. W.*, phil.-hist. Kl. 1875, p. 457 ff.) the priests even in Vedic times, on occasions of great sacrificial gatherings, proposed for each other and for the offerer riddles of the following kind. The Hotar asks, *e.g.*, 'Who travels alone?' 'Who will be born again?' 'What is the preventive against snow?' 'What is the great scattering?' and the Adhvaryu answers: 'The sun travels alone,' 'The moon will be born again,' 'Fire is the preventive against snow,' 'The earth is the great scattering.' Quite similar series of riddles occur on Teutonic soil (cf. Wilmanns' *ZDA* xx. 252) in the Edda and the poem of Traugemund ('What is whiter than snow? What is fleeter than the roe? What is higher than the mountain? What is darker than the night?'). In Greece one need only refer to the very ancient riddle of the fire that swallows up the father and mother, occurring in the *Marriage of Keyx*, ascribed to Hesiod. It makes quite a Vedic impression, seeing that it is a prevalent idea in the Rigveda that Agni, the son of the two pieces of wood by the rubbing of which he is produced, swallows up his father and mother at once after his birth.

The *myth* is devoted to the satisfaction of the same primitive longing as the riddle. It is quite incorrect (cf. above, p. 12) to suppose that it is the exclusive possession of higher social classes or the product of priestly acuteness, however much these may have influenced its forms as presented to us in history. In its origin it is undoubtedly nothing else than the naïve and popular expression of the wish to understand and comprehend the universe, as can with especial clearness be recognized on Aryan soil in the rich but simple and transparent mythical formations of the Lithuanian and Lettic peoples. These, in any case, prove that, even at the most primitive stage of religious ideas, a myth can be developed to explain processes of nature puzzling to the people. In the first place, this formation of myths is concerned with the phenomena of the sun, moon, and stars (cf. Mannhardt, 'Die lettischen Sonnenmythen' in *ZE* vii. 73, 209, 281, and Usener-Solmsen, *Götternamen*, p. 85 ff.).

Teljawelik is the smith that forged the sun. The people worship the sun and an iron hammer of special size. Once upon a time the sun was invisible for several months, because a very mighty king had closed him up in a strong tower. Then the figures of the Zodiac brought him help with the iron hammer. The tired and dusty sun is placed in a bath by the mother of Perkúnas, and then is dismissed on the following day washed and shining. Sun and moon are described in various *Dainas* as husband and wife, and, indeed, as unfaithful in that relation. The moon separates herself from the sun, falls in love with the morning star (*Auszrinė*), and is cut in two by the sword of Perkúnas. The stars are considered as daughters of the sun, and so on.

Such stories as these regarding the heavenly beings, their deeds, and their relations to one another, were without doubt related even in primitive Aryan times; and it is to-day, in spite of all opposing scepticism, the right and the task of comparative mythology to discover cycles of myths which go back to such pre-historic interpretations of nature, as has been done by A. Kuhn and Max Müller. Three of these cycles of myths seem to the present writer to have been fixed beyond question.* These refer (1) to the relation of sun, moon, morning and evening stars, (2) to the origin of the thunderstorm, and (3) to the source of fire. It must suffice at this point to characterize them in the briefest possible way.

(1) Sun and moon have concluded a marriage with each other, as is related in the Lithuanian and Lettic poems, and more fully in a celebrated hymn of the Rigveda (x. 85). The morning and evening stars stand to these two heavenly bodies in a relation described in different ways. In a Lithuanian poem, as we saw above, the moon separates itself from the sun in order to run after the morning star. In the Lettic poems the most usual conception is that the 'sons of the god' (*dēwa deli, dēwo sunelei*), among whom the two stars already mentioned are undoubtedly to be understood, are described as suitors for the favour of 'the daughter of the sun,' *i.e.* most likely the sun itself, just as in India the two *Aśvins*, 'the lords of the horses' (cf. Skr. *aśva*, 'horse'), are regarded as the lovers of *Sūryā* or *Sūryasya Duhitā*, 'the daughter of the sun.' A pre-ethnic connexion of the Indian *Aśvins* with the Lettic 'sons of the god' seems, therefore, beyond the range of doubt (the view of Oldenberg, *Die Religion des Veda*, p. 212), particularly when we remember that in the Lettic poems the morning and evening stars are also called the 'ponies' of the moon and the 'sons of the god' are thought of as riders on grey horses. Further, the equestrian Greek Διόσκουροι (Castor and Pollux), the brothers of Helena ('Ελένη : σέλη, * *sveltā*, 'heat of the sun') correspond to the Lettic *dēwa deli*, 'sons of the god.' Finally, the Lettic 'sons of the god' are very often described as servants and workmen of the sun and the moon. Seeing now that we know from Lasicius, *de Diis Samagitarum*, p. 47, about a Lithuanian god *Algis*, '*angelus summorum deorum*,' whose name (cf. Lith. *alga*, 'reward') literally means 'hired labourer,' and this Lith. *Algis* is etymologically the same as the name of the Teutonic deity *Alcis* who corresponded to Castor and Pollux (Tacitus, *Germania*, ch. 43: Apud Nahanarvalos antiquæ religionis lucus ostenditur; præsidet sacerdos muliebri ornatu, sed deos interpretatione Romana Castorem Pollucemque memorant; ea vis numini, nomen *Alcis* [**Alki*, dual ?]; nulla simulacra, nullum peregrinæ superstitionis vestigium; ut fratres tamen, ut iuvenes venerantur)—since this is so, it is impossible to deny that these forms also belong to the cycle of the Lettic 'sons of the god,' the Indian *Aśvins*, and the Greek Dioscuri.†

(2) The second cycle of primitive Aryan myths referred to above, dealing with the explanation of the thunder and the thunder-shower, is presented in two different settings. According to the one, a heavenly being slays the dragon concealed in the cloud, whose water now flows over the earth (fight of *Indra* with *Vṛtra*, of *Tištrya* with *Apaoša* in the Avesta, of Donar with the wolf Fenris, of Apollo with the Python); according to the other, a god delivers from a monster the cows of the clouds, who are imprisoned in a mountain gorge (*Indra* and *Viśvarūpa*, Herakles and Geryones, Hercules and Cacus).

(3) Lastly, the myths dealing with the origin of fire are connected with the custom, preserved among the Indians, Greeks, Romans, Slavs, and Teutons, and partially among the Lithuanians (cf. Usener, *op. cit.* p. 87), of obtaining fire for sacred purposes by taking a stick of hard wood (oak), boring it into a plank or board of softer wood (lime tree), and turning it round and round till fire is produced by the friction. In this way, which may be compared with animal generation, fire is also produced in the cloud, whence it is brought to earth by a bird or a daring human being (Prometheus). A similar origin is enjoyed by the earthly fire-drink, the honey-mead (Skr. *mādhu* = Gr. *μέθυ*, etc.) which, when drunk by mortals, bestows upon

* In this connexion the present writer agrees with Winternitz, 'Was wissen wir von den Indogermanen?' (*Beilage zur Münchner AZ*, 1903, No. 258, p. 292). Only in one point does Winternitz seem to make a mistake, viz. in deducing from these myths the existence of personal gods, a view which rests on the confusion emphasized above (p. 38[a]) between personified natural phenomena and natural phenomena that have become personal gods.

† A. Brückner (*Archiv für slavische Philologie*, xxiii.) is wrong in finding in the author's contention that Lith. *Algis* = Ger. *Alcis* (*Realexicon*, p. 673), a contradiction of his opinion, of which Brückner himself approves, that as yet there were no Aryan names for the gods; for these names represent, not an Aryan god-name, but an Aryan appellative ('hired labourer') preserved by chance in the myth.

them immortality (Skr. *amṛta*, 'immortality,' 'draught of immortality' = Gr. ἀμβροσία, lit. 'immortality') as it is possessed by the heavenly beings (A. Kuhn, *Die Herabkunft des Feuers und des Göttertranks*, Berlin, 1859). The thought that the universe is a well-ordered whole, resting on fixed laws, is a long way in advance of these explanations, and where this thought meets us in earlier epochs, as in the Indo-Iranian conception of Skr. *ṛtá* = Av. *aša*, it points to foreign non-Aryan influences (cf. Oldenberg, *Die Religion des Veda*, pp. 49, 195).

4. The worship.—In the foregoing sections we have dealt with the ideas of the Aryans regarding their gods and with their beliefs. We now go on to the consideration of the services which they devoted to them, *i.e.* their worship. This point, which has often been neglected by investigators, is also of the greatest importance for the development of the gods, for naturally it must have been along with and by means of the form of worship assigned to them that the fluid and indefinite figures came to assume more fixed and individual forms. We shall in this discussion have to deal with four phenomena connected with worship which we find in historic times: (*a*) sacrifice and prayer, (*b*) the priests, (*c*) the temples, (*d*) the feasts. We shall have to ask whether and how far these institutions go back into the primitive history of the Aryan peoples.

(*a*) Sacrifice and Prayer.—There was among the Aryans, just as among all other peoples, a more ancient way of bringing the supernatural within reach of the natural than sacrifice and prayer, namely, *magic*. Its forms appear so closely connected, even in historic times, with those of the cult, that it is often difficult, if not impossible, to draw a sharp line of distinction between the two conceptions. We may say, however, that magic is present in all those cases in which man imagines that he is able, by word or by deed, to make a spirit *directly* and immediately serviceable to himself. On the other hand, we can speak of an act of worship only where, by a sacrifice or a prayer, the otherwise free will of a deity is supposed to be more indirectly influenced and made favourable to mortal man. It thus depends on the *way of influencing* the deity, not on the intention connected with it, which is in both cases the same. He who lights a fire early in the morning in order thereby to facilitate the rising of the sun, or he who banishes with a text a demon of sickness into a stone or a plant, performs a *magical* act. He, however, who appeals to the heavenly powers by means of sacrifices and prayers in order that they may cause the sun to shine or make him well, engages in an *act of worship*.

Magic may be practised either by *an action* or by *words*, as can be clearly gathered from its terminology. The following series of terms is characteristic of the former method: Skr. *kṛtyā* 'action,' 'bewitching,' 'magic,' 'witch,' Lith. *kerus* 'magic,' *kerėti* 'to bewitch some one by the eye, etc.,' Old Slav. *čarŭ* 'magic'; Skr. *kṛṇóti* from *kar* 'he makes,' from which also Skr. *kárman* 'the sacrifice' is derived. In both cases, *i.e.* in magic and in sacrifice, a 'doing' κατ' ἐξοχήν, a ceremonial action is intended.

In by far the greatest number of cases, however, 'to charm' is the same as to 'speak' or 'sing,' as is seen in the Greek ἐπῳδός 'magician,' 'charmer,' ἐπῳδή 'magic formula': ἐπᾴδω 'I sing to it'; O.H.G. *galstar* 'magic song,' *galâri*, *galstarâri*, 'magician': *galan*, *bigalan*; Old Slav. *bajati* 'fabulari,' 'incantare,' 'mederi,' Serv. *bajati* 'to charm,' Old Slav. *balija* 'magician': Gr. φημί, Lat. *fâri*; Lith. *vařdyti* 'to conjure,' 'charm'; *vaĩdas* 'name,' and in many other examples (cf. Osthoff, 'Allerhand Zauber etymologisch beleuchtet,' in Bezzenberger's *Beiträge zur Kunde der indogerm. Sprachen*, xxiv. 109; and Schrader, *Reallexicon*, art. 'Zauber und Aberglaube'). Here also we have to do with a 'speaking' κατ' ἐξοχήν, a ceremonial, rhythmical speaking, in which *a priori* a definite magic power is latent.

Such magic acts or words occur frequently on the soil of the separate Aryan peoples, along with and mixed up with actions of worship in the proper sense of the term. In India he who wishes to possess deadly weapons sacrifices iron nails (cf. Oldenberg, *op. cit.* p. 369); in Greece he who wishes to conjure up an actual thunderstorm produces by the rolling of a waggon a noise similar to thunder (cf. O. Gruppe, *Griech. Mythol.* i. p. 820). Burchard of Worms tells of a custom prevalent in Germany (cf. J. Grimm, *Deutsche Mythol.*[5] i. 560), according to which he who wishes rain causes a naked girl to be led to the river and there sprinkled with water. In Lithuania, if the people wish rainy weather, they turn towards the sun and sprinkle themselves with water at the time of the morning prayer (cf. Prætorius, p. 33), etc. We may call special attention to another rain-charm of this kind, which by comparison with the Indian and the Greek usage is seen to be primitive. In Greece the phrase Ζεὺς ὕει is used for 'it rains,' which, when traced back to an older stage of the language, can only mean 'The father (heaven) presses grapes' (Skr. *sunṓmi* 'I press,' *sóma* 'the pressed,' 'the soma drink'). It is also customary to charm the rain by an offering of honey, where the rain which drops on the trees and branches is likened to honey. Exactly corresponding to these ideas we find in India the belief that by letting the soma, which itself is called a son of the rain-god Parjanya, drip through the strainer, rain is enticed to fall. Thus the very fact that the man 'presses' the juice on the earth, incites or rather compels the god in heaven to 'press,' *i.e.* to cause the rain to fall (cf. Windisch, *Festgruss an Roth*, p. 140; Oldenberg, *op. cit.* p. 459; O. Gruppe, *op. cit.* p. 819). The *magic formula* plays a still more important part in the religious conceptions of the ancient Aryans, and at the lower stage everything is secured by its means, for which at a higher stage man turns to the gods with prayers and sacrifices. By its means wounds and sicknesses are healed, by its means women in labour are delivered of the fruit of their body (cf. *Reallexicon*, artt. 'Arzt' and 'Hebamme'), by its means the heavenly powers are enticed to partake of the food offered to them (see below, p. 41), by its means a man curses himself in case of perjury (see below, II. 5), by its means the darkness of the future is penetrated (cf. below, III. 1), and so on.

But it cannot be doubted that from the wilderness of these primeval beliefs, which from the standpoint of a higher conception are called 'superstition,' *superstitio* (survival[?]), but which were originally 'faith' itself, a higher form of divine worship was developed among the Aryans even in pre-historic times, in which real, if exceedingly primitive, sacrificial rites were employed.

The history of the language points at once to this, for the expressions for 'sacrifice,' 'to sacrifice,' 'sacrificial animal,' in the separate Aryan languages, extend for the greater part beyond the realm of magic, and belong to a higher class of words, whose fundamental meaning we are wont to express in our language by the term 'holy.'

Cf. Gr. ἅγος 'worship,' 'sacrifice' = Skr. *yájas* 'worship': Skr. *yaj*, Av. *yaz* 'to sacrifice,' 'to worship by sacrifice' (ἄζομαι 'to worship with religious fear'); Goth. *hunsl*, Old Nor., A.S. *hûsl* 'sacrifice' = Lith. *szventas*, Old Slav. *svętŭ*, Av. *spenta* 'holy'; Volsc. *esaristrom*, Umb. *esunu* 'sacrifice' = Gr. ἱερός 'holy'; Lat. *victima* 'sacrificial victim' = Goth. *weihs* 'holy,' *weiha* 'priest,' *weihan* 'to sanctify'; O.H.G. *zëbar*, A.S. *tîfr*, Old Nor. *tafn* 'sacrificial victim' = Lat. *dapes* 'sacrificial meal,' etc.

We have the additional fact that, among all the Aryan peoples, Slavs and Lithuanians as well as Greeks and Indians, the existence of real sacrificial rites can be proved. It will be our task in the following section to give an account of these.

Among the Indians, Greeks, and Romans of historical times, when sacrifices were offered to the immortals, fire had to be kindled on the altar in order that the gifts might by its means reach the gods. Thus 'to sacrifice' in Greek (*θύω*, *θυσία*,

etc.; Lat. *fāmus* 'smoke') implies 'to cause to go up in smoke.' Quite another picture is offered, however, by the other Aryan peoples. To begin with, Herodotus (i. 132) tells of a much more simple and primitive kind of sacrifice in the case of the Persians, who, as we saw above, preserved with great faithfulness the original ideas with regard to the gods:

θυσίη δὲ τοῖσι Πέρσῃσι περὶ τοὺς εἰρημένους θεοὺς (sun, moon, sky, earth, fire, wind, water) *ἥδε κατέστηκε. οὔτε βωμοὺς ποιεῦνται οὔτε πῦρ ἀνακαίουσι μέλλοντες θύειν. οὐ σπονδῇ χρέονται, οὐκὶ αὐλῷ, οὐ στέμμασι, οὐκὶ οὐλῇσι. τῶν δὲ ὡς ἑκάστῳ θύειν θέλει, ἐς χῶρον καθαρὸν ἀγαγὼν τὸ κτῆνος καλέει τὸν θεὸν ἱστεφανωμένος τὸν τιήρην μυρσίνῃ μάλιστα . . . ἐπεὰν δὲ διαμιστύλας κατὰ μέρεα τὸ ἱρήϊον ἑψήσῃ τὰ κρέα, ὑποπάσας ποίην ὡς ἁπαλωτάτην, μάλιστα δὲ τὸ τρίφυλλον, ἐπὶ ταύτης ἔθηκε ὧν πάντα τὰ κρέα. διαθέντος δὲ αὐτοῦ μάγος ἀνὴρ παρεστεὼς ἐπαείδει θεογονίην, οἵην δὴ ἐκεῖνοι λέγουσι εἶναι τὴν ἐπαοιδήν. ἄνευ γὰρ δὴ μάγου οὐ σφι νόμος ἐστὶ θυσίας ποιέεσθαι. ἐπισχὼν δὲ ὀλίγον χρόνον ἀποφέρεται ὁ θύσας τὰ κρέα καὶ χρᾶται ὅτι μιν ὁ λόγος αἱρέει.*

Thus this old Persian sacrificial custom did not know the use of fire in bearing the food to the gods. The flesh was laid on a specially prepared sacrificial litter, on which the gods were supposed to descend (Skr. *barhís*, Av. *baresman* 'sacrificial litter' = Old Pruss. *balsinis* 'cushion,' *pobalso* 'pillow,' Serv. *blazina* 'cushion,' Old Nor. *bolstr*, O. H. G. *bolstar* 'pillow'), and the god was allured, by means of an exorcism, to partake of the food. Herodotus (iv. 60) tells of a similar practice prevalent among the Scythians. The sacrificer threw the animal to the ground by means of a noose, and strangled it after calling on the god, *οὔτε πῦρ ἀνακαύσας οὔτε καταρξάμενος οὐδ' ἐπισπείσας.* The flesh of the strangled animal was boiled, just as was customary among the Persians. In this connexion the two Litu-Prussian sacrifices, which are described in Lasicius' book, *de Diis Samagitarum* (pp. 49 and 54), are of great interest. Both are harvest-offerings. At the first (related by A. Guagnini from the *Kronika Polska*, etc., of Math. Stryikowski, mentioned above), which took place at the end of October, the sacrificial animals were battered to death with cudgels by the priests and other worshippers, who all the time called on the god Zemiennik. Before the worshippers sat down to the feast, portions of each kind of food were thrown into every corner of the house with the words: '*Accipe o Zemiennik grato animo sacrificium atque lætus comede.*' The second (related by Menecius) was the sacrifice of a goat. The faithful were assembled in a barn. A he-goat was led in. The sacrificing priest, or 'wurschaite,' laid both hands on it, and called on all the gods in succession. Then, while a hymn was being sung, the goat was raised into the air and held there till the song was finished. Thereupon the priest slew the animal, sprinkled the blood, which had been caught in a dish, round about, and gave the flesh to the women to boil. Here, again, there is no trace of a burning of the victim. Finally, in the case of the Teutons also, regarding whose sacrificial customs we have, unfortunately, very scanty information, sacrificial fire seems to all appearance to have been unknown. The bodies of the victims or their heads (cf. Tacitus, *Ann.* i. 61) were in this case hung on sacred trees, a custom which, according to the report of the Arab Ibn Dūstah, prevailed among the heathen Russians of northern origin:

'The soothsayer takes the man or the animal, puts a noose round the neck, hangs the victim up on a tree, waits till it expires, and then says: "This is a sacrifice for the god"' (cf. Thomsen, *Der Ursprung des russischen Staates*, Gotha, 1879, p. 27).

The flesh of the victim is boiled here too, as is seen from the Goth. *saups*, 'sacrifice,' O.H.G. *siodan*, 'to boil.'

Moreover, as there is in the Veda no lack of evidence that 'in the sacrificial fire an innovation of an advanced sacrificial technique' was present (cf. Oldenberg, *Religion des Veda*, p. 343 ff.), we have good reasons for assuming that the thought that the gifts assigned to the god could be borne to him by means of the flame or the smoke was one which was as yet foreign to primitive Aryan times. In the earliest times the gifts were, on the contrary, spread out on the place of sacrifice itself, raised into the air or hung on trees, and the god *must come himself and partake of them on the spot.*

The worshipper refreshes his gods with the *food* and *drink* of which he himself partakes, in order thereby to make them strong and willing to carry out his ends. That this was the original sacrificial idea of the Aryan peoples follows most distinctly from the complete correspondence between ancient Aryan sacrifice and ancient Aryan food. The further back we penetrate into the past of the Aryan peoples, the more do we find that cattle-rearing predominated over agriculture, and that in consequence flesh foods and animal products outweighed vegetable foods (cf. Schrader, *Reallexicon*, artt. 'Ackerbau,' 'Viehzucht,' and 'Nahrung'). The same thing is true of the sacrifices. In the reports quoted above we find only animal sacrifices referred to. In the same way Tacitus (*Germania*, ch. ix.) mentions only *concessa animalia*. In reference to the Slavs, cf. Procopius, *de Bell. Got.* iii. 14: *θεὸν μὲν γὰρ ἕνα τὸν τῆς ἀστραπῆς δημιουργὸν* (*Perunŭ*) *ἁπάντων κύριον μόνον αὐτὸν νομίζουσι εἶναι, καὶ θύουσι αὐτῷ βόας τε καὶ ἱερεῖα ἅπαντα*, and also Helmold, *Chron. Slav.* i. 52: 'Conveniuntque viri et mulieres cum parvulis, *mactantque diis suis hostias de bobus et ovibus.*' Among the Lithuanians, as late as the beginning of the 16th cent., sacrifices of oxen and swine were offered. The very early acquaintance of the Aryan peoples with animal sacrifice is significantly witnessed to by the existence in their primitive vocabulary of exact designations of the outer and inner parts of the animal carcass, which could be obtained only in the course of sacrificial rites (cf. Schrader, *Reallexicon*, art. 'Körperteile').

In the earliest times it was customary to sacrifice and eat, or eat and sacrifice, the flesh of the ox, the sheep, the goat, and, in Europe, the pig, *i.e.* the most ancient domestic animals of the Aryans. The sacrifice of the horse seems to have occupied a special place. As the horse did not belong to the oldest stock of Aryan domestic animals (cf. Schrader, *Reallexicon*, art. 'Pferd'), perhaps other sacrificial ideas may have been influential in introducing this sacrifice, such as the wish to incorporate the qualities of the animal in the worshipper, or to render a special service to the god who was thought of in the form of a horse (cf. J. v. Negelein, *Das Pferd im arischen Altertum*, Königsberg, 1903). Fowl, game, and fish were excluded from the stated sacrifices, because they did not originally serve as food (cf. Schrader, *Reallexicon*, artt. 'Viehzucht,' 'Jagd,' and 'Fisch, Fischfang'). In the oldest times, too, the use of salt was avoided, again for the simple reason that for purely animal food it was unnecessary (cf. *Reallexicon*, art. 'Salz').

The sacrificial drink of primitive times was mead, the place of which was gradually taken in the north by beer, and in the south by wine. The customs connected with these drink-offerings in barbaric conditions, such as we must presuppose for primitive times, are again vividly portrayed by Menecius (Lasicius, c. 53) with regard to Lithuania:

'Die Georgii sacrificium faciunt *Pergrubrio*, qui florum, plantarum omniumque germinum deus creditur. Sacrificulus enim, quem Vurschaiten appellant, tenet dextra obbam cervisiæ plenam invocatoque demonii nomine decantat illius laudes. Tu, inquit, abigis hiemem, tu reducis amœnitatem veris, per te nemora et silvæ florent. Hac cantilena finita dentibus apprehendens obbam, ebibit cervisiam nulla adhibita manu ipsamque obbam ita mordicus epotam retro supra caput iacit. Quæ cum e terra sublata, iterum impleta est; omnes quotquot adsunt, ex ea bibunt ordine atque in laudem Pergrubrii hymnum canunt. Postea epulantur tota die et choreas ducunt.'

If, then, 'to sacrifice' means simply to refresh the gods with earthly food and drink, and if, as we have seen, these gifts were originally offered to the heavenly beings to be partaken of by the summoned recipients on the place of sacrifice without the use of fire, we cannot fail to see how closely this sacrificial rite resembles the entertaining of the dead described above, when food and drink were shaken or poured out into furrows or trenches (see above, p. 26). The explanation is thus by no means far-fetched that the feeding of the beings which were thought to be in the natural phenomena, the thunder, the storm, the fire, etc., is to be understood as a kind of deduction or transference from the cult of the dead, where the offering of food and drink is intelligible without any difficulty from the prevailing ideas regarding the further existence of the soul after death. In that case we should conceive of the course of development in the following way. There was a time when only the dead were supplied with food and drink, and when man sought to obtain influence over the powers of nature only by means of magic, as described above. But the more the thought of personification gained precedence over magic, the more did people begin to transfer the sacrificial customs usual in the service of the dead to the worship of the heavenly powers, and then the further change arose naturally from this state of affairs, viz. that the sacrificial gifts were spread *on* the ground instead of being buried *in* it.

Returning to the sacrifice itself, we reach one form of it which has not yet been considered—a form which with its gloomy aspect persists from primitive into historic times, viz. *human sacrifice* (cf., for the Greeks and Romans, E. V. Lasaulx, *Das Sühnopfer*, Würzburg, 1841; for the Celts, Teutons, Slavs, Lithuanians, J. Grimm, *Deutsche Mythologie*[3], i. 38, V. Hehn, *Kulturpflanzen*[7], p. 531, Golther, *Germanische Mythologie*, p. 516, Müllenhoff, *Deutsche Altertumskunde*, iv. 214 ff.; for the Indians, A. Weber, *Indische Streifen*, i. 54–89, and Oldenberg, *op. cit.* p. 363). This human sacrifice is to be found in various forms. Thus in the north of Europe we have the *sacrifice of victory*, *i.e.* the previously promised slaughter of prisoners at the altars of the gods. In the south and among the Gauls we have the *sacrifice of expiation*, *i.e.* the giving up of a human life for other lives that are forfeited or in danger. We find everywhere the *building sacrifice*, *i.e.* the conviction that the durability of a new building could be purchased only by a human life (cf. Liebrecht, *Zur Volkskunde*, p. 284 ff. 'Die vergrabenen Menschen,' also *Germ.* xxxv. 211). It is difficult to discover the really fundamental idea in this sacrifice. To carry out the idea of the meat-offering, we might start with the supposition that cannibalism was once wide-spread among Aryan peoples, which undoubtedly is very fully attested for numerous non-Aryan peoples of Europe (cf. R. Andree, *Die Anthropophagie*, Leipzig, 1887, p. 2). In milder times a change in this sacrificial idea had taken place, in the sense that a human being was regarded as the best sacrifice that could be brought to the gods (cf. Procopius, *de Bell. Got.* ii. 15: *τῶν δὲ ἱερείων σφίσι τὸ κάλλιστον ἄνθρωπός ἐστιν, ὅπερ ἂν Δωριάλωτον ποιήσαιντο πρῶτον*). Or we could think of a transference from the worship of the dead, in which, as we saw above (p. 21), it was usual to give men to the dead as servants and companions in death. From this, too (cf. below, II. 5), the *penal-sacrifice* (execution), which has not been mentioned above, may have taken its rise. Ideas connected with magic may also have been operative in the *building sacrifice*, as, *e.g.*, the wish to transfer human potencies into the building. Whatever the real explanation may have been, we must in any case regard human sacrifice as a primitive institution in the history of Aryan religion, and not a comparatively late innovation originating from the East, as is done by O. Gruppe (*Jahresbericht über die Fortschritte der klassischen Altertumsw.* lxxxv. 10).

We have already become acquainted with the incantation or magic formula which entices the gods to the feast, and seen it to be a necessary accompaniment of sacrifice. This is perhaps the oldest form of prayer. In any case the different terms for prayer point to a close connexion with sacrifice (cf. Gr. *εὔχομαι* = Lat. *voveo*; Gr. *λιτή*, *λίσσομαι* = Lat. *litare*; Lith. *maldà* 'prayer' = Goth. *blôtan* 'to sacrifice,' from **mlâd* [the last according to R. Much]). 'To pray' is to request a benefit while promising or offering a sacrifice: *do ut des*. The idea of *thanks* appears in the Aryan languages at a late date compared with the idea of petition (cf. *Reallexicon*, pp. 598, 605), and thank-offerings are almost entirely unknown both in the Vedic worship and in the Homeric poems. Those divinities, however, who were called up by means of those ancient incantations and prayers must at a very primitive stage of development have been designated simply as 'the called.' This we learned above (p. 16) to have been the real signification of the Teutonic 'God,' which then, as is easily enough understood, passed over into the masculine gender under the influence of expressions which were more personally conceived.

(*b*) THE PRIESTS.—If the practice of magic and the incantation preceded sacrifice and prayer, the magician must have been the forerunner of the priest. This development is clearly presented to us in the history of the language. The most important designation of the priest in the language of ancient India is *brahmán* (masc.), while *bráhman* (neut.) means 'devotion.' The opinion used to be generally held that the fundamental signification of this class of words was to be found in the sphere of religion (according to Böhtlingk-Roth, *Sanskrit-Wörterbuch*, v. 135, 'the devotion which appears as intensity and depth of feeling, and aspires towards the gods'), but in recent times it has become more and more recognized that *bráhman* originally means 'the incantation,' and *brahmán* in consequence 'he who knows incantations' (cf. M. Haug, 'Über die ursprüngliche Bedeutung des Wortes brahma,' in *Sitzungsb. d. kgl. bayer. Ak. d. W. zu München*, 1868, ii. p. 80 ff.; R. Pischel, *GGA*, 1894, p. 420; H Osthoff, in Bezzenberger's *Beiträge*, xxiv. 113 ff.). Now, in the view of the present writer and of the majority of investigators, the Lat. *flâmen*, whose formation (cf. *carmen*, *agmen*) points with certainty to an originally neuter idea (priesthood), corresponds exactly to the Skr. *bráhma*, so that for this word also there follows a similar evolution of meanings, 'incantation,' 'community of those who know incantations,' 'individuals acquainted with incantations' (= priests).*

It is accordingly not to be wondered at that from the Aryan root *vid—void*—'to know,' frequent designations of the magician and the priest are derived, since both are regarded as the 'knowers' (viz. of all kinds of magic) *κατ' ἐξοχήν*. Here must be mentioned, on the one hand, the O.H.G. *wizzago*, A.S. *witega* 'prophet,' O.N. *vitki* 'magician,' *vitka* 'witchery,' O.H.G. *wîzzôn* 'prophecy,' and Old Russian *vědunŭ* 'magician,' *vědĭ* 'witchcraft,' *vědĭma* 'witch,' *vědĭstvo* 'witchery'; but, on the other hand, there is also to be placed alongside of these the designation of the ancient Gallic priestly caste of druids, Ir. *drúi*,

* Even those scholars who do not believe in the etymological relationship of *bráhman* and *flâmen* (cf. *e.g.* Walde, *Lat. etymol. Wörterbuch*) admit the two facts which are of importance for the history of religion, viz. (1) that *bráhman* originally signified 'magic formula,' and (2) that *flâmen* was originally a neuter conception.

which, being derived from **dru-vids* (according to Thurneysen, in Holder, *Altkeltischer Sprachschatz*), means exactly 'the very knowing ones.' But the personalities which in this connexion are most important for the history of Aryan religion are those that are frequently mentioned in the Litu-Prussian sources, and designated with all kinds of variations of their name * as *waidewut*, *waidelotte*, *waideler*, *waidler* (Old Prus. *waist* 'to know,' *waidimai* 'we know,' *waidleimai* 'we perform pagan religious rites').

They were also named *žynỹs*: Lith. *žinóti* 'to know' (*žýnauti* 'to charm'), or the *monininks*: Lith. *moniu* 'I understand,' or the *maldininks*: Lith. *maldà*, 'prayer' (cf. especially Matth. Prætorius, *Deliciæ Prussicæ oder Preussische Schaubühne*, p. 41 ff.). These 'waidlers' may be described both as magicians and as priests. They were servants of the chief-priest, who was called in Old Prussian *kriwe*, of whom we shall speak further below. The separate gods seem each to have had special 'waidlers': *naruttes* (cf. Gr. Νηρεύς above, p. 35) was the name given to the waidler of the water-god; *szweronei* (Old Pruss. *swirins*, Lith. *žwieris* 'wild animal') were 'the waidlers who worshipped and protected the sacred animals in the woods, especially elks, owls,' etc.; and *medziorei* (Old Pruss. *median* 'forest,' Lith. *mẽdis* 'tree') were 'the servants of the sacred woods.' Every imaginable charm to divine the future (cf. below, III. 2) was in their hands. Now they are for the most part beggars and shepherds, although 'there are still well-to-do farmers who practise these arts of the waidler.' Prætorius (p. 48) mentions a fact regarding these waidlers which is especially important for the history of the priesthood:

'An old peasant of Strigkeim said to me that, many hundred years before, one of his race had been a chief-priest here in Prussia. He was called *Krywe Kriwulů*, and was believed to possess all the gifts which we find singly among the waidlers now called *Maldininks* (see above). *The gifts of the waidler are, they say, hereditary; if the gift ceases in one family, it becomes extinct.*'

This *hereditary transmission*, in certain families or clans, of the existing magic formulas, sacrifices, and prayers, which we have here attested, may be regarded by us *as a common feature of the gradually evolving priesthood among the Aryan peoples.*

Sacred clans like the *Vasiṣṭhas*, the *Viśvamitras*, the *Bharadvâjas*, and others are well known to us from the Rigveda as the forerunners of the later priestly castes, and there is no lack of traces that these priestly families, who, according to the tradition, represent essentially the same cult, had in earlier times possessed *special cults* and *special rites* (cf. Oldenberg, *Die Religion des Veda*, p. 373). In Greece, too, we find numerous sacred clans with special cults, the Εὐμολπίδαι, the Ἐτεοβουτάδαι, the Ἡσυχίδαι, the Κηρυκίδαι, Κροντίδαι, Κυννίδαι, Παμμενίδαι, etc. The priesthood was a joint-possession in these families, and descended from the father to the son and grandson (cf. P. Stengel, *Die griechischen Kultusaltertümer*). By the institution of a sanctuary (which does not occur in Vedic India) such a priesthood becomes *local*, and in this way forms the *ἱερόν*, to which in Homer the existence of the *ἱερεύς* is united. Most nearly akin to the Homeric priest was the Norwegian 'godi' (Old Nor. *goði*, Goth. *gudja* 'priest'; cf. Goth. *Guþ*, 'God,' and see above, pp. 16, 42). They could break up the temple belonging to them and migrate elsewhere. Among them, too, the priestly office was inherited through several generations (cf. Golther, *Germanische Mythologie*, p. 615; and J. Grimm, *Deutsche Mythologie*[3], i. 83). Finally, in *Rome* also there are indications of a condition in which not State colleges but particular families attended to the performance of special cults. This comes out most unambiguously in the case of the *fratres arvales* (see art. ARVAL BROTHERS), for at the time when this designation was coined *frater* can have indicated nothing else than the actual degree of relationship. The legend, too, explanatory of the name, reports that Acca Larentia, the wife of Faustulus, had twelve sons, along with whom she sacrificed once every year for the fruitfulness of the fields. We have, therefore, a real brotherhood (Gr. *φρήτρη*, Slav. *bratstvo*; cf. *Reallexicon*, art. 'Sippe') before us. Their peculiar hereditary magic poem was that song, luckily still extant, which was united to a dance, and by the combined invocation of the spirits of the dead (*Enos lases iuvate*) and a real god (*Enos Marmor iuvato*) bears the stamp of remote antiquity. The designation, too, of the Luperci, the priests of Faunus, as *Quinctiales* and *Fabiani* points to their tribal origin (cf. Wissowa, *Religion und Kultus der Römer*, p. 340, note 3, p. 411). The Salii, or 'leapers,' were without doubt a sacred family of this kind. Their magical secret was the leaping procession which accompanied their obscure songs, for both dance and solemn procession (O.H.G. *piganc*—even in modern German we have the phrase 'ein Fest begehen') belong to the oldest form of divine worship among the Aryan peoples (cf. *Reallexicon*, art. 'Tanz').

On the ground of the facts which have been mentioned, we may assume that the 'learned in magic formulas,' whose existence in primitive times is attested by the equation, Skr. *brâhman* = Lat. *flâmen*, were primarily to be found in special families which were hereditarily distinguished by the gift of witchcraft. Further, seeing that it follows from the oldest sacrificial customs described above (p. 41) that at their celebration, in the majority of cases, persons designated as magicians, priests, or soothsayers assisted, we may consider it not unlikely that even in primitive times members of such sacred families were called upon by other families, and in particular by the head of the clan, to assist at sacrifices for the clan. In the case of sacrifices of the most ancient worship, we must sharply distinguish between the offerings dedicated to the souls of ancestors and those on behalf of the 'heavenly ones.' The former could, of course, be offered only by relatives (cf. above, p. 28 f.); in the case of the latter there was nothing against the assistance of a stranger who was particularly well acquainted with the incantations that would entice the gods. Here we have one of the deepest roots of the Aryan priesthood.

In the later history of the priesthood we shall call attention to only one more point, viz. the ever increasing closeness of the *union of law and religion* (cf. below, II. 5). This lent to the priestly dignity, here to a greater and there to a less extent, a new, and in part extraordinary, significance; and it may well be said that this is what really made the magician a priest. The more clearly the thought came to consciousness that the gods were the protectors of the moral and social principles attained in the long struggle of civilization, the greater must the influence of the authentic interpreters of the divine will have become.

In *India*, even before Vedic times, the hereditary dignity of the Brahmans had been developed from those families of primitive times that were expert in magic. From their midst there arose the domestic priest (*purohita*), who was indispensable to the king for preparing sacrifices, for 'the gods do not eat the food of a king who has no purohita' (*Aitareya Brâhmaṇa*, viii. 24). Under their supervision, too, the royal *administration of justice* was carried on, and in their conception of *dhârma*, 'the

* It may be conjectured that the form *waidewut*, **waidwut* = Gr. *εἰδώς* **Fιδ-Fυτ*, *Fιδ-Fότος*, 'the knowing one,' is the original one

fixed' (=Lat. *firmus*) law, custom, and religion lie together as yet undifferentiated. In *Rome*, in like manner, the *Pontifices*, 'the bridge-builders' (also without doubt originally a sacred family like the *fratres arvales*, perhaps endowed with a special magic charm for providing bridges and roads), were at the same time the guardians both of the *ius civile* and of the *ius sacrum* (*pontifex* according to Bezzenberger, in Kuhn's *Zeitschr.* xlii., from Umbr. *punti*, 'piatio, lustratio' from **kvento*=Av. *spenta*, Old Slav. *svętŭ*, Lith. *szwentas* 'sacred'). The former of these had, after a long process of evolution and not without leaving clear traces of its original condition (cf. Wissowa, *op. cit.* p. 324 ff.), separated itself from the latter. In *Gaul* also we find the administration of justice entirely in the hands of the Druids, who, however, in the time of Cæsar were not a real caste, or no longer a caste, but increased their numbers by securing and training novices:

'Fere de omnibus controversiis publicis privatisque constituunt, et si quod est admissum facinus, si cædes facta, si de hereditate, de finibus controversia est, idem decernunt, præmia pœnasque constituunt; si qui aut privatus aut populus eorum decreto non stetit, sacrificiis interdicunt. Hæc pœna apud eos est gravissima' (vi. 13).

In conscious contrast to these conditions, Cæsar (vi. 21) relates of the *Teutons*: 'Neque druides habent, qui rebus divinis præsint, neque sacrificiis student.' 'They have no Druids to preside over divine worship, nor do they lay any special stress on sacrifice' (cf. 'agriculturæ non student,' vi. 22, which cannot mean 'they do *not* engage in agriculture,' seeing that Cæsar himself attests that it was practised in a primitive form). The conclusion is that a distinctly marked priestly office which would attract the attention of a foreigner cannot at that time have been present among the Teutons. This, of course, does not exclude the existence of separate families expert in magic, as, according to our assumption above, was the case in primitive times. On the other hand, we find in the report of Tacitus a strong and influential priesthood already existing, particularly developed on the legal side (cf. also O.H.G. Old Sax. Fries. *êwart* and *êsago* 'priest,' lit. 'keeper or guardian of the law' and 'proclaimer of laws').

The priest is the man who calls for silence in the popular assembly (Tac. *Germ.*, ch. 11: 'silentium per sacerdotes, quibus tum et coercendi ius est, imperatur'); and while even Cæsar, vi. 23, reports: 'Cum bellum civitas aut illatum defendit aut infert, magistratus, qui ei bello præsint, ut vitæ necisque habeant potestatem deliguntur,' so that thus all power of punishment might be assigned to the *civil* authorities, we are told in Tacitus, ch. 7: 'Ceterum neque animadvertere neque vincire, ne verberare quidem *nisi sacerdotibus* permissum, non quasi in pœnam nec ducis iussu, sed velut deo imperante, quem adesse bellantibus credunt.' In addition, the priest carries the war standards out of the sacred groves (ch. 7), interprets the lot on public occasions, and accompanies, together with the king or prince, the sacred car in which horses are yoked (ch. 10). The priest of Nerthus (ch. 40) and the priest in the grove of Alcis among the Nahanarvali (ch. 43) seem to have presided at local sanctuaries.

The same extreme expansion of priestly power as is found in the west among the Druids of Gaul is to be met with again in the extreme east of Europe among the ancient Prussians.

Even Peter of Dusburg (*Script. rerum Pruss.* i. 53) was able to report: 'Fuit autem in medio nationis huius perversæ, scilicet in Nadrowia, locus quidam dictus Romow, trahens nomen suum a Roma (!), in quo habitabat quidam dictus *Criwe* [perhaps Lith. *keras* 'magic,' *kerėti* 'to charm'; a connexion with Lith. *krìwas* 'crooked,' from which we have *kriwūlė* 'the sign of the dignity of the Criwe,' seems semasiologically impossible], quem colebant pro papa, quia sicut dominus papa regit universalem ecclesiam fidelium, ita ad istius nutum seu mandatum non solum gentes prædictæ sed et Lethowini et aliæ nationes Lyvoniæ terræ regebantur. Tantæ fuit auctoritatis, quod non solum ipse vel aliquis de sanguine suo, verum etiam nuntius cum baculo suo vel alio signo noto transiens terminos infidelium prædictorum a regibus [by these are meant the small heads of clans who were to be found even in primitive Aryan times, cf. *Reallexicon*, art. 'König'] et nobilibus et communi populo in magna reverentia haberetur. *Fovebat etiam prout in lege veteri jugem ignem*' (cf. also the passage quoted above, p. 34, from Jerome of Prague, and the more detailed information given by Matth. Prætorius, *op. cit.* p. 38 ff.).

What we have here, then, is another of those families expert in magic (according to Prætorius, *op. cit.* p. 40, the blood relations of the Criwe were called *Krywaiten*), whose special service was devoted to a perennial fire, and whose chief on account of this cult—according to Jerome, magic oracles were practised by means of fire in the case of sickness—had attained to the position of influence described above.

(*c*) THE TEMPLES.—In primitive religions all over the world it is a recognized phenomenon that all objects which rise above the surface of the ground, in particular, *stones*, *stumps*, and *trees*, are regarded as possessing a divine *anima*, and are made the objects of a fetish worship (cf. E. B. Tylor, ii. 161 ff., 215 ff.). Among the Aryan peoples also this low stage of religious life can be proved. The most important testimonies for it will be brought together, without as yet asking the question whether the objects of worship of which they treat were really conceived of everywhere as real *incorporations* of the deity, or only as *representations* of it.

(*α*) *Stone-worship.*—With regard to ancient Greece in general, we have the following report of Pausanias, vii. 22. 4:

ἐστήκασι δὲ ἐγγύτατα τοῦ ἀγάλματος τετράγωνοι λίθοι τριάκοντα μάλιστα τὸν ἀριθμόν· τούτους σέβουσιν οἱ Φαρεῖς (Pharæ, a town of Achaia), ἑκάστῳ θεοῦ τινος ὄνομα ἐπιλέγοντες, τὰ δὲ ἔτι παλαιότερα καὶ τοῖσι πᾶσι Ἕλλησι τιμὰς θεῶν ἀντὶ ἀγαλμάτων ἄργοὶ λίθοι.

The same author mentions, in detail, unhewn stones in place of the figure of the god in the fane of Herakles at Hyettus, and in that of Eros at Thespiæ; but with regard to the cult of the Graces at Orchomenos, it is said (ix. 38. 1): τὰς μὲν δὴ πέτρας σέβουσί τε μάλιστα καὶ τῷ Ἐτεοκλεῖ αὐτὰς πεσεῖν ἐκ τοῦ οὐρανοῦ φασίν. Thus the worship of rough stones was not confined to the oldest periods of Greek history, but continued through the whole time of paganism. For Socrates, in Xenophon's *Memorabilia*, knows:

τοὺς μὲν οὐθ' ἱερὸν οὔτε βωμὸν οὔτε ἄλλο τῶν θείων οὐδὲν τιμᾶν, τοὺς δὲ καὶ λίθους καὶ ξύλα τὰ τυχόντα καὶ θηρία σέβεσθαι (i.e. they were atheists and fetish-worshippers). Cf., further, Overbeck, 'Das Kultusobjekt bei den Griechen in seinen ältesten Gestaltungen' in *Berichte d. kgl. sächs. Ges. d. Wissenschaften zu Leipzig*, phil.-hist. Kl., 1864, ii. p. 121 ff.; and also the account above, p. 37, of the oldest cult of Hermes.

On *Italian* soil, perhaps the cult of Juppiter Feretrius or Lapis may be mentioned in this connexion. He was worshipped, in a chapel founded for him by Romulus, under the symbol of a fire-stone (*silex*), although in this case other explanations are still possible. In *Germany*, Burchard of Worms demands: '*Lapides* quoque quos in ruinosis locis et silvestribus, dæmonum ludificationibus decepti, venerantur, ubi et vota vovent et deferunt, funditus effodiantur, atque in tali loco proiciantur, ubi nunquam a cultoribus suis venerari possint,' and among the *Lithuanians*, as we have already seen above, the Jesuit Rostowski found the worship of a massive stone Akmo (Lith. *akmů* 'stone') as late as the 18th century.

(*β*) *Worship of stumps.*—More frequently than unhewn stones, however, we find in ancient *Greece* shapeless piles, boards, lumps of wood, and posts (ξύλον οὐκ εἰργασμένον, ἄγαλμα ξύλινον ἄμορφον, πρέμνον αὐτοφυές, δόρυ, σανίς) mentioned as objects of worship. The testimonies for this also have been fully gathered by Overbeck* (*op. cit.*). The *Italian* history of religion offers as proof of the primitive worship of stumps the Lat. *delubrum*, 'sanctuary,' lit. *delubrum lignum*, 'a piece of wood freed from the bark' (*liber*, **luber*, Russ. *lubŭ*). Regarding it, Festus (ed. O. Müller, p. 73) reports: 'delubrum dicebant fustem delibratum, hoc est decorticatum,

* The author has been unable to examine the work of M. W. de Visser, *Die nicht menschengestalt. Götter der Griechen* (Leyden, 1903).

quem venerebantur pro deo' (cf. also Böttticher, *Baumkultus der Hellenen*, and Overbeck, p. 149. Wissowa [*op. cit.* p. 400], on the other hand, gives another etymology, which was also wide-spread in antiquity, viz. *delubrum*, from *deluere* 'to wash away'; hence, 'place of washing away'). Among the *Teutons* also the Old Saxon 'Irmensul' was simply an upright tree-stump, regarding which we have in *Transl. S. Alexandri* (Pertz, *Mon. Germ.* ii. 676) the following account: 'Frondosis arboribus fontibusque venerationem exhibebant: *truncumque quoque ligni non parvæ magnitudinis* in altum erectum sub divo colebant, patria eum lingua *Irminsul* appellantes, quod Latine dicitur universalis columna' (cf. also W. Mannhardt, *Wald- und Feldkulte*, i. 304). The Scandinavian-Russian 'Waragers' are described by the Arab Ibn Fosslan (ed. Frähn). He tells how the people offered their reverence and sacrifices before a huge upright block of wood, which in this case had something resembling a human face. In the *Slavonic* languages the most frequent expressions for idols or idol-temples go back almost entirely to fundamental meanings, such as 'stump,' 'post,' 'picture,' 'statue' (cf. Miklosich, 'Die christliche Terminologie der slav. Sprachen,' *Denkschrift der Wiener Ak. d. W.* xxiv. 36 ff.). Is it not also possible that the Russian expressions for 'magician' and 'to charm,' *koldúnŭ*, *koldovátĭ*, are connected with Russ. *kolóda*, 'tree-stump'?* With regard to *India*, it is natural to mention in this connexion the so-called 'sacrificial post' (*yúpa*) to which the sacrificial animal was bound, but which was also made an object of worship, seeing that it was addressed as 'Lord of the wood' (*vánaspati*), smeared with oil, and bound with plaited bands of grass (cf. Oldenberg, *Die Religion des Veda*, p. 256). It is also worthy of note that the conception *post* or *stake* (cf. Skr. *sthūṇā*, Avesta *stūna* =Gr. *στήλη*, O.H.G. *stollo* from **st(h)el-nâ*, and Skr. *svāru*, 'sacrificial post'=A.S. *swēr*, 'stake') can be proved by means of two equivalents to be Aryan.

(γ) *Tree-worship.*—Of the exceedingly numerous evidences of tree-worship prevalent among the European branches of the Aryan race, only a few characteristic examples can be brought forward here. Further details will appear later in our investigation. In *Greece* we must, in the first place, mention the cult of Ζεὺς φηγωναῖος in the storm-moved Dodona, from whose sacred oak (ἐκ δρυὸς ὑψικόμοιο) the voice of the god rang forth proclaiming oracles, and who was served by a special priestly caste, the Σελλοί (=Lat. *Salii*), who slept on the ground with unwashed feet (*Il.* xvi. 234 ff.). In Mycenæan Greece also the worship of trees and stone-pillars was wide-spread (cf., regarding it, A. J. Evans, 'Mycenean Tree and Pillar Cult,' *JHS* xxi. 99 ff.), without making it necessary to think of influences from Oriental religions. The Phrygians, too, who migrated from Europe to Asia, worshipped a Βαγαῖος (probably =*φηγωναῖος*, cf. Kretschmer, p. 198). In Rome there stood on the Capitoline an oak sacred to the herdsmen.

Cf. Livy, 1. 10: 'Spolia ducis hostium cæsi suspensa . . . ferculo gerens (Romulus) in Capitolium ascendit, ibique ea cum ad *quercum pastoribus sacram* deposuisset, simul cum dono designavit Jovis fines . . . hæc templi est origo, quod primum omnium Romæ sacratum est.' In addition, Festus (ed. O. Müller, p. 87) states: 'Fagutal sacellum Jovis, in quo fuit fagus arbor, quæ Jovi sacra habebatur.'

We know also of numerous sacred groves in Greece as well as in Italy. In the latter country it was 'the deities of ancient origin,' such as *Robigus*, *Anna Perenna*, *Camenæ*, etc., that were worshipped in them (cf. Wissowa, *op. cit.* p. 401). The traces of tree-worship continue even more significantly in the richly wooded northern parts of the continent from the Amber coast to the Atlantic Ocean. With regard to the Lithuanians, we may refer to a few sentences of the report which a monk Jerome, who in the years 1409–1418 was active as a missionary in Lower Lithuania, sent to the papal secretary, Æneas Sylvius Piccolomini, and which is to be found in the work of the latter, entitled *Europa* (*S. Æneæ Sylvii Europa*), c. xxvi.:

'Postremo alios populos adiit (Jerome), qui silvas dæmonibus consecratas venerabantur et inter alias unam cultu digniorem putavere. . . . Ventum erat ad medium nemoris, ubi quercum vetustissimam et ante omnes arbores religione sacram et quam potissime sedem esse putabant percutere aliquamdiu nullus præsumpsit. . . . Erant in ea regione plures silvæ pari religione sacræ. Ad quas dum Hieronymus amputandas pergit, mulierum ingens numerus plorans atque eiulans Vitoldum (a Lithuanian duke) adit, sacrum lucum succissum queritur et domum dei ademptam in qua divinam opem petere consuessent; inde pluvias, inde soles obtinuisse; nescire iam quo in loco deum quærant, cui domicilium abstulerint. Esse aliquos minores lucos, in queis dii coli soleant, eos quoque delere Hieronymum velle.'

An altogether special worship was assigned to the sacred oak of Perkúnas, in whose rustling the worshipper believed himself to hear, as at Dodona, the voice of the god announcing the future (cf. below, III. 2). Other sacred trees were the birch (*biržùlis*), the hazel (*lazdona*), the cherry tree (*kirnis*), the maple (*klewēlis*), and the mountain ash (*szermukszsnis*). An especial reverence was assigned to trees that had grown together, *rumbuta*, *romove*, from which the centre of the Criwe mentioned above had its name. Undoubtedly the Teutons of the first Christian centuries stood at this stage of development, in spite of the idealistic interpretation which Tacitus (*Germania*, ch. 9) gives to their tree-cult:

'Ceterum nec cohibere parietibus deos, neque in ullam humani oris speciem adsimulare ex magnitudine cælestium arbitrantur: lucos ac nemora consecrant, deorumque nominibus adpellant secretum illud, quod sola reverentia vident.'

Of particular sacred trees, oaks before all others are mentioned, one of which Boniface felled near Geismar. The worship of a pear tree in Auxerre in heathen times is also well attested (J. Grimm, *Deutsche Mythol.*[3] i. 6 f.), although this report leads us to *Celtic* territory; for here, too, the tree-cult was fully developed. There was nothing more sacred to the Druid than the oak and the mistletoe that grew on it (Pliny, *HN* xvi. 249), and we hear of sacred groves in Gaul as well as in Britain (cf. on them H. Munro Chadwick, 'The Oak and the Thunder-god,' *JAI* xxx. 22 ff.).

In glancing over the evidences of Aryan stone-, stump- and tree-worship collected here, we could make no greater mistake than to suppose that the religious ideas which find expression in this worship are all to be placed at the same historical stage. It cannot be doubted that in many, in fact even in the majority of cases, the object of worship is merely the symbol under which a deity was worshipped that existed outside of the object, and was only occasionally present in it. But, on the other hand, it cannot be denied that the traces are clearly to be perceived of a time when people actually worshipped, as is the case among the rudest savages, the very stone, post, or tree, as a god, since they looked on it as the body of a divine *anima*. This becomes very evident in the remains of the Greek stone-cult and in the Lithuanian tree-worship. When Theophrastus (*Charact.* c. 17), in his day, tells us of people who, when passing stones smeared with oil at the crossways, did not fail to pour oil on them out of their oil-phials, to fall on their knees, and to present the most solemn salutations, this proceeding is to be judged in the same way as when 'in the Society Islands, rude logs or fragments of basalt

* At the present day this primitive stump-worship is perhaps to be seen on Teutonic and Slavonic soil in the remarkable 'Yule or Christmas log,' regarding which see R. Meringer, *Indogermanische Forschungen*, xvi. 151 ff., xviii. 277, xix. 444. Cf. here also on Lat. *delubrum*.

columns, clothed in native cloth and anointed with oil, received adoration and sacrifice as divinely powerful by virtue of the "Atua" or deity which had filled them' (Tylor, ii. 162).

In Lithuania the oak was, it is true, sacred to Perkúnas; but evidently, like the other sacred trees mentioned above, it enjoyed independent worship, as follows from the report of Rostowski: 'Arbores item evulsæ stirpitus, tum quercus, quibus mares tum tiliæ quibus feminæ pullastra pro frugibus et incolumitate rei domesticæ quasi diis faciebant' (Brückner, *Archiv für slav. Phil.* ix. 35), and other reports, according to which sick persons, observing remarkable customs, clamber up into the boughs of a sacred oak. 'Thereafter they bind each his offering on the branch of the tree, and seriously believe that they will be healed thereby. Often it happens that such a branch is quite full of garters, Lithuanian women's veils, girdles, knives, and such-like articles, which are tied to it from top to bottom. Several sacrifice money also, which they lay upon the ground before the tree' (cf. Usener-Solmsen, *Götternamen*, p. 87).

Accordingly, we may (like Frazer, *GB*[2]) conceive of the process of evolution of these ideas in the following way. There was among the Aryan peoples a distant period in which stones, stumps, and trees were worshipped as actual fetishes. When within the limits of this racial division—and certainly as early as primitive Aryan times (a point where the present writer differs from Frazer)—the cult of the 'heavenly ones' came more and more to the front, connexions began to be thought of between these 'heavenly ones' and the objects of worship just mentioned, especially with the sacred tree and its shoot, the stump or post, which were now regarded only as symbols and occasional dwelling-places of the 'heavenly ones.' Along with these ideas the old conceptions continued to operate further among the lower classes.

This connexion is most clearly exemplified in the relationship of the *thunder-god* to the *oak*. Zeus and the oak of Dodona, Juppiter Feretrius and the oak worshipped by the herdsmen on the Capitoline, Perkúnas and *Aužúlas* ('oak'), we have already noted; but we are also told of the Celts by Maximus Tyrius: Κελτοὶ σέβουσι Δία, ἄγαλμα δὲ Διὸς Κελτικὸν ὑψηλὴ δρῦς. Nothing can be more easily understood than this connexion, when we call to mind how the lightning flashes of the thunder-god come down with an especial fondness on the king of the forest; and it is difficult to conceive why H. Munro Chadwick, in his otherwise excellent essay, 'The Oak and the Thunder-god,' mentioned above, deduces such a far-fetched reason for this phenomenon as a supposed dwelling of primitive man below the oak. But the other gods are also preferably thought of as dwelling in trees and forests. In Greece we have, besides a Ζεὺς ἐνδενδρος, ἀ Διόνυσος ἐνδενδρος, an Ἐλένη δενδρῖτις, an Ἄρτεμις κεδρεάτις, etc. Among the Teutons were found, as well as a *silva Herculis* (= Donar) *sacra* (*Ann.* ii. 12), a *castum nemus* of Nerthus (*Germania*, c. 40), and a *lucus Baduhennæ* (*Ann.* iv. 73). Among the Lithuanians, as we have seen above, the rain- and sun-gods were worshipped in sacred groves.

In this assimilation of the cult of the 'heavenly ones' and a primitive stone-, stump- and tree-fetishism we have secured, once for all, the foundation for the explanation of the two most outstanding objects of heathen worship in historical times—the *temple* and the *image*. The tree or grove in which the deity is worshipped develops into the stone temple; the stone or wooden stump, which serves as a symbol of the deity, assumes human features and becomes the image of the god.

This process can be very well followed in the Greek word for 'temple,' Lesb. *ναῦος*, Dor. *νᾱός*, Ion. *νηός*, Att. *νεώς* (**ναϝο-*), which originally indicated not the *whole* temple, but only the inmost room, where the figure of the god stood (τὸ ἄδυτον, σηκός). This primitive Greek **nāvo-* is, in the conviction of the present writer, identical with the root found beside it, **nāvo-*, **nāu* (Skr. *nāva*, *nāvā́*, *nāú* = Gr. *ναῦς*), 'ship,' 'tree,' so that both words come together in the meaning 'tree-trunk' (cf. *e.g.* Skr. *ādru* 'wood' and 'boat,' Old Saxon *stamm*, 'tree-trunk' and 'ship,' and many other similar changes of meaning).

This probable combination is, the present writer thinks, raised to a certainty when we consider that in Greece, in the most ancient times, the figures of the gods were actually placed *in*, *below*, or *on* trees (*πρέμνῳ ἐνὶ πτελέης, φηγοῦ ὑπὸ πρέμνῳ, ἐν κέδρῳ μεγάλῃ*); and the name of Juppiter of Dodona in the primitive cult, *Ζεὺς Νάως* (*nāvio-s*), finds its natural interpretation if we conceive him as 'the one in the tree-trunk.'* The ἀργὸς λίθος and the ξόανον οὐκ εἰργασμένον gradually change into the *βρέτας* (= Skr. *mūrta* 'figure'?), the image or figure of the god. It is not far-fetched to find in the images of Hermes, in which only the face and the extended penis of the god are represented, a stage on this path of development.

The words of J. Grimm (*Deutsche Mythol.*[3] i. 59) are true of the Teutons. 'Temple is also at the same time wood. What we think of as a walled and built house, dissolves, the farther back we go, into the conception of a sacred place which has not been touched by human hand, but is hedged in and made peaceful by trees that have grown up of their own accord.' The conceptions *grove* and *temple* accordingly run to a large extent together in the Teutonic languages.

This is true of the series Goth. *alhs*, A.S. *ealh*, Old Saxon *alah* 'temple,' which corresponds to the Old Lith. *elkas* 'grove,' Lett. *elks* 'idol,' perhaps also to the Gr. ἄλσος (**alkjos*?) 'grove,' 'sacred grove,' which, however, is compared by others with Old Slav. *lěsŭ* 'forest.' The same also holds of O.H.G. *harug*, A.S. *hearh*, *hearg* (O.H.G. *harugâri* 'priest'), which are explained in glosses by *lucus*, *nemus*, and also by *sacellum*, *simulacrum*, *fanum*, as well as of the A.S. *bearu*, 'grove' (O.H.G. *parawâri* 'priest'), which belongs to the common Slavonic root *borŭ*, 'pine,' 'pine-forest' (cf. *Zutibure*, i.e. *sventi borŭ* 'sacred pine forest' in the lands of Merseburg according to Thietmar: *lucus Z. dictus ab accolis ut Deus ab omnibus honoratus*). To this class of expressions are added—for the later temples built of wood or stone, whose first traces are to be found probably in the *templum* of the *Tanfana*, which, according to Tacitus (*Ann.* i. 51), was level with the ground—new designations borrowed from the human dwelling-house, such as O.H.G. *hof*, *halla*, *sal*, *pētapûr*, *pētahûs*, *plôzhûs*, *plôstarhûs*, Goth. *gudhûs*, etc. Figures of the gods, too, which are designated as ξόανα, 'carved works,' but regarding whose more definite nature we unfortunately can discover nothing, are repeatedly mentioned from the 4th century (cf. Golther, *Germ. Myth.* p. 604).

At the same time in which we have among the Teutons *only* sacred trees and groves as places for the worship of the gods, the common Celtic name for 'sanctuary,' *nemeton* (δρυνέμετον, *Medionemeton*, *Tasnimeton*, *Vernemeton*: Skr. *námas* 'worship') without doubt indicates the stone temple built by human hands. Here too, however, the original meaning is seen from the Old Saxon *Indiculus superstitionum*, in which mention is made 'de sacris silvarum, quæ nimidas (= Gall. *nemeton*) vocant.' On the other hand, the neighbours of the Teutons on the North-East, the Prussians and the Lithuanians, may be regarded as having continued in their templeless condition up to the date of their conversion to Christianity. At the same time we hear incidentally of idols, which they carved for themselves. Thus a heathen fisher (cf. Prætorius, *op. cit.* p. 27) had made a wind-god (*Wējopatis*) out of bark, which had two faces on the head, one in front and one behind, both of them with gaping mouths. The same state of affairs is found among the *Eastern* Slavs, and Miklosich (*Die Christliche Terminologie*, p. 67) rightly remarks that there is no ground whatever for the assumption that the first preachers of Christianity found here buildings devoted to religious service (for Russian idols, cf. above, p. 45). The *Western* Slavs, on the other hand, were acquainted with

* The usual explanation of the Greek *νεώς*, 'temple,' derives this word from *ναίω*, 'I dwell,' and means the same as 'dwelling-place.' Against this view the chief objection is that designations of the temple according to the analogy of the human dwelling-place are all of a late date, and Gr. *νεώς* in the sense 'human dwelling-place' never occurs. Meringer (*Indogermanische Forschungen*, xviii. 277) now agrees with the explanation given by the present writer.

real temples, with statues of the gods, and with idols, *e.g.* the three-headed Triglav ('Three-heads'), as we learn from the descriptions of Thietmar of Merseburg (*Monum. Germ.* v. 812) and Otto of Bamberg (*M. G. Script.*, ed. Pertz, ii. 32). Here too, however, we see how deeply the ancient tree-worship was rooted in the affections of the people from the fact, related by Otto of Bamberg, that they calmly allowed four temples to be torn down, and even helped in the work, but raised objections when an attack was made on the large wide-spreading oak standing near, 'quam plebs simplex numinis alicuius inhabitatione sacram æstimans magna veneratione colebat.'

But the places of old Aryan worship are not yet exhausted in the foregoing discussion. While in the case of tree-worship it is to a certain extent supposed that the 'heavenly ones' descend from their airy abodes to the earth, an attempt was made by mankind in another direction to raise themselves to heaven. The *Persians*, we saw above (p. 33), climbed to the top of the highest mountain when they wished to offer a sacrifice to Heaven. The same was the case in Greece. Pausanias mentions the tops of mountains as the seats of famous cults in many localities. Especially sacred, however, was the territory of the Lycæan Zeus on the highest peak of Arcadia, where tree-cult and high-place-cult were combined. In *Italy*, too, the worship of the god of the sky was particularly connected with the high places; and with regard to most Roman hills the existence of ancient cults of Juppiter can be proved (Wissowa, p. 102). Of the Teutons, Agathias, 28. 4, reports: ἱλάσκονται καὶ . . . λόφους καὶ φάραγγας, καὶ τούτοις ὥσπερ ὅσια δρῶντες.

(*d*) THE FEASTS.—In the equation, Gr. ἑορτή, Ion. ὁρτή 'feast' = Skr. *vratá* 'decree,' 'divine service' (cf. *e.g.* *mahâvrata*, like M.H.G. *hôchzît*, lit. 'great feast'), there is to be found an originally related designation for the conception 'feast,' whose fundamental meaning was something like 'appointed time.' It is rather difficult to decide what these *certi dies* may have been among the Aryans, and without doubt a considerable time will have to pass before the comparative heortology of the Aryan peoples, the problems of which have hardly been taken in hand yet, will be in a position to give a decisive answer to this question. We saw above (I. 3 *b*) that the life of the Aryans even in primitive times was interwoven with a considerable number of special and general feasts for the dead; and in particular, in the wintry half of the year, the observance of a great festival of the dead, agreeing in many details, can be proved among almost all the Aryan peoples. Thus in India the third of the three annual festivals, which took place in the colder season of the year, was connected with a great sacrifice for the dead. Among the Lithuanians we discovered a general feast for the dead in the beginning of November. In Rome the *Larentalia* were held on the 23rd of December, the *Ferâlia* in February. Among the Teutons the dead seem to have been remembered with many varied customs at 'Yuletide' (cf. E. Mogk in Paul's *Grundriss*[2], iii. 391), a name which itself may be connected with the darkness of the realms of the dead, seeing that 'Yule' (A.S. *géol*, *geohhol*) probably goes back to a primitive Teutonic word **jeqa* or **jeqha* = Gr. **ζέφος* in *ζέφυρος*, *ζόφος*, 'west,' 'darkness,'—'under world.' Most remarkable in this connexion, too, is a wide-spread Slavonic name for the Christmas festival (Russ. *koročunŭ* 'Christ-evening,' Bulg. *kračun*, etc. 'Christmas'), which in White Russian signifies 'unexpected premature death in early years,' and 'an evil spirit that shortens life.' In regard to this development in meaning, Miklosich (*Etymol. Wörterbuch der slav. Sprachen*, p. 130) correctly remarks, 'perhaps *Kračun* was a feast of the dead.'*

The significance of these feasts of the dead, which in White Russia serve even to-day among the people as the basis for the reckoning of dates, is especially made manifest on Italian soil, as can be seen even in the language. Here it is impossible to separate the Lat. *fêriæ*, *fêsiæ* 'feast,' 'festival,' from the above-mentioned *fêrâlia* from **dhvês-âlia*, 'feast of the dead,' so that *fêsiæ* from **dhvêsiæ*, at first 'feast of the dead,' had come to mean 'feast' in general; and correspondingly *festus* from **dhvestus* and *fesnus* (in Umb. and Osc. *fesna*, *sc.* *domus*, 'temple') from **dhves-nus*, at first denoted 'applied to souls,' then 'sacred,' 'holy.'

But were there even in primitive times regular festivals in honour of the 'heavenly ones,' and is there a possibility of extracting a common primitive kernel from the endless mass of names and dates referring to the worship of the gods among the separate peoples? It has long been customary to find this in the festivals of the so-called four points of the year; and in particular the winter and the summer solstice were regarded as the most ancient feast dates of the Aryan peoples. We shall do well briefly to call to mind what we know regarding the oldest divisions of time among the Aryans, in order to make a judgment on these views possible. The *moon* was the oldest measurer of time for the Aryan peoples. According to its course natural months were distinguished. A division of the yearly course of the sun into these had not yet taken place, for which reason there were no names for the separate months in the vocabulary of the primitive Aryan language. Of course, some have sought to find a pre-historic attempt to equalize the moon-year with the sun-year in the apparent coincidence of our 'twelfth,' the time from Dec. 25 to Jan. 6, with the twelve sacred nights of the Brâhmaṇa-literature (354 days of the moon-year + 12 days = 366 of the civil sun-year) (cf. regarding it especially A. Weber, *Indische Streifen*, xvii. 224, and *SBAW*, phil.-hist. Kl. 1898, xxxvii. 2 ff.). The present writer, however, believes that it has been made very probable by A. Tille (*Yule and Christmas, their place in the Germanic Year*, London, 1899) that these twelfths, famed in legend among the Teutonic peoples, do not go back to the remotest heathendom, but are only a copy of the Christian Dodecameron, the sacred time between Christmas and Epiphany, the new and the old day for calling to mind the Divinity of Christ. Along with these purely unattached lunar months a distinction of seasons of the year was made in primitive times, originally only winter (Skr. *hêmantá* = Gr. χειμών, Lat. *hiems*, etc.) and summer (Avesta *ham* = O.H.G. *sumar*, etc.), then besides these, at an early date, a short transition period of spring (Skr. *vasantá* = Gr. ἔαρ, Lat. *ver*, etc.). Their combination was called a 'past' (**vetos* : Skr. *vatsara*, Gr. ἔτος, Lat. *vetus*, etc.); but in reckoning it was customary to calculate according to single periods of the year, especially according to winters. The Aryan year was thus a purely natural year (cf. *Reallexicon*, artt. 'Jahr,' 'Jahreszeiten,' and 'Zeitteilung'). All more exact methods of dividing the time, based on a knowledge of the course of the sun, were derived by the Indians as well as by the Aryan peoples of Europe from *Babylon*. Here, too, the distinction between the four points of the year must have arisen at a very early date, and in a long migratory progress have passed over to the Greeks (cf. Herodotus, ii. 109) and Romans, and from them to the north

* A Russian name for the whole period of Christmas is *kudesá*, lit. 'magic,' which shows with what sort of heathen ideas this time of the year was associated.

of Europe. The designations of the equinoxes in the Teutonic languages (O.H.G. *ëbennacht*, A.S. *efenniht*, Old Nor. *jafndœgri*) are undoubtedly only translations of the Lat. *æquinoctium* (Gr. *ἰσημερίαι*); and for the idea of the solstice separate expressions have been formed among the different Teutonic peoples (O.H.G. *sunwende*, *sungiht*, *sunstede*, *sommertag*, A.S. *sunnstede*, Old Nor. *sólhvarf*) which proclaim their dependence on the Lat. *solstitium* by the fact that they, like it, are used only for the *summer solstice*; but for the *winter solstice* (Lat. *brûma*, i.e. *brevissima*; perhaps its festival was *Angerona*, cf. Wissowa, *op. cit.* p. 194) *absolutely no old Teutonic expressions are to be found.* Finally, it is impossible to understand what significance the fixing of the longest or the shortest day could have had, presupposing that it was at all possible in primitive conditions of culture*; for Procopius (*de Bell. Got.* ii. 15) relates of the inhabitants of Thule that, after they had been 35 days without the light of the sun, they sent messengers to the highest peaks of the mountains to spy out if the sun would not soon return, and then, when they had announced its speedy return, they celebrated the greatest of their festivals. Such a narrative is easily enough understood of the most northerly stretches, but would be utterly unintelligible among men who had the sun always before their eyes (cf. A. Tille, *Yule and Christmas*, 'Solstices and Equinoxes').

But although these solstice festivals, as such, among the Aryan peoples, seem to be by no means very primitive, it cannot be said that the manifest agreement of the customs and usages relating to them rests entirely on later transference and migration. If we turn our attention to the rites connected with the summer solstice or St. John's day (St. Ivan's day among the Slavs), we see that a characteristic feature of them is the intimate connexion in which the two elements of *fire* and *water* occur. It is everywhere customary to kindle bonfires, to dance round them, or to leap over them, generally in pairs. Almost everywhere we find water in some form or other along with the fire. It may be that the festive company bathe either before or after the kindling of the fire, it may be that fire-wheels are cast into the stream and there extinguished, or it may be in some other way.† In this connexion it seems most easy to understand an old Indian solstice custom which took place at the *Mahâvrata* festival, *i.e.* (according to Hillebrandt, *Romanische Forschungen*, v. 299) at the festival of the summer solstice (at a later date Mahâvrata is the winter solstice). Accompanied by the beating of drums, women carrying jars filled with water march in procession three times round a fire from right to left and then again from left to right, singing a song, which closes with the refrain, 'That is mead.' After going round the fire for the last time, they pour the water into the fire and thus extinguish it.

This remarkable combination of the two elements so highly honoured by the Aryans, fire and water, is entirely inexplicable when we start from an original solstice festival. On the other hand, it can be very easily interpreted if, in the usage of the Mahâvrata festival, which, moreover, was held in honour not of a sun-god but of Indra, the giver of refreshing rain, we see with Hillebrandt (*op. cit.*) and Oldenberg (*Die Religion des Veda*, pp. 448, 507) an ancient *rain-charm*, *i.e.* a magical device for procuring rain (cf. above, p. 40). Then the conjecture is inevitable, that in the rites described as existing mainly among Indians, Slavs, and Teutons, we have to recognize the vestiges of an ancient Aryan festival dedicated to fire and water, and held in summer, in which, by means of extinguishing the fire on the earth, the worshipper sought to cause the heavens to send down streams of fertilizing moisture on the meadows and fields. We have the additional fact that among all the Aryan peoples inhabiting Middle Europe the time near the Feast of St. John constitutes a kind of dividing period in the rainfall, *i.e.* the rain that fell *before* St. John's Day was believed to be especially valuable, and was prayed for from heaven by priest and congregation, while, on the other hand, the rain that fell *after* St. John's Day was useless, and even brought harm. Regarding St. John's Day itself, different opinions prevail. The peasants of the Russian province of Archangel say, 'The rain on St. John's Day is better than a mountain of gold'; other peoples hold an exactly opposite view (cf., for details on the subject, Alexis Yermoloff, *Der landwirtschaftliche Volkskalender*, Leipzig, 1905, p. 296 ff.). Thus from this side also we seem to obtain confirmation of our conjecture that in the customs described above we have traces of a midsummer feast which was celebrated without special regard to the longest day. Among other things, it may have belonged to the solemn rites of such a festival to seek, for the last time in the summer, to obtain moisture for the meadows and fields by means of a rain-charm. This view, which we have adopted with regard to the original significance of fire and water, does not in any way militate against the idea expressed by Mannhardt (*Der Baumkultus*, pp. 497, 516, 521). He regards the midsummer fires as sun-charms, since fire is supposed to represent the light and heat of the summer sun, to which the growing vegetation must be exposed.

Remains of a second Aryan festival, *a spring-feast*, are perhaps to be found in the worship of the Teutonic *Ôstara* and the Indian *Ushas*, which had its special place in the ritual at the beginning of the year at the *Prâtaranuvâka* of the *Agniṣṭoma* sacrifice, which was observed with great solemnity in spring (cf. Hillebrandt, *Vedische Mythologie*, ii. 26 ff.). It seems that this festival is chiefly in view in the idea, proved to be Aryan by L. v. Schröder ('Lihgo, Refrain der lettischen Sonnwendlieder,' in the *Mitteil. d. anthrop. Gesell. in Wien*, xxxii.), that the sun at its rising, particularly on certain days, dances, jumps, shakes itself, and plays.

From such indications as these we must seek further information concerning the times of the old Aryan festivals. Since the moon, as we have already noticed, was the measurer of time in primitive times, the Aryan *certi dies* must have been connected with the chief phases of the moon, new moon and full moon. In fact, in India the sacrifices of the new and the full moon belong to the regular and most ancient offerings to the gods (cf. Oldenberg, *op. cit.* p. 441 ff., and A. Hillebrandt, *Das altindische Neu- und Vollmondsopfer*, Jena,

* Even in civilized Greece it seems to have been difficult. Cf. Eustath. on *Od.* xv. 402: *ἕτεροι δέ φασι σπήλαιον εἶναι ἐκεῖ, δι' οὗ τὰς τοῦ ἡλίου ὡς εἰκὸς ἐσημειοῦντο τροπάς, δι' ὃ καὶ ἡλίου διὰ τοῦτο σπήλαιον ἔλεγον, καὶ τοῦτο δηλοῦσθαι ἐν τῷ δθι τροπαὶ ἡλίου.* Cf. also Lebègue, *Recherches sur Délos*, Paris, 1876, p. 876: 'Le matin vers le moi d'avril un rayon de soleil glissant contre la montagne pénètre dans la caverne et la remplit un instant tout entière,' etc. (Communication of C. Weniger in Weimar).

† Cf. the following description from the south of Russia in Glazunov, *Russian Folksongs* (Russ.), St. Petersburg, 1894, p. 81: 'In particular, young men and women bathe themselves, then they put on wreaths of field-maple with fragrant herbs, gird themselves with artemisia, and gather before sunset on an elevated place, always overlooking a river. They set up two figures: one a human-like image, the other a piece of wood covered with female attire, ribbons, and garlands. The wood is generally maple. Then they kindle heaps of straw, walk in a circle round it, sing songs and, taking the figures in their hands, spring in pairs (every lad with his lass) through the fire. When they have all sprung through, then they throw the figures, of which the male is called *Kupalo* (*kupála* "St. John's day," cf. *kupatt* "to bathe"), the female *Marena* ("madder"), into the water. Afterwards they also throw their wreaths into the stream.'

1880). But in Greece also the feast-days were connected with definite phases of the moon, particularly the full moon (cf. A. Mommsen, *Heortologie*, p. 2); and among the Teutons the 'certi dies, cum aut inchoatur luna aut impletur' (Tac. *Germania*, ch. 11), on which the popular assemblies took place, and which were regarded as the 'agendis rebus auspicatissimum initium,' were certainly identical with the 'certi dies' (ch. 9) on which the people, *e.g.*, 'Mercurio humanis quoque hostiis litare fas habent.' In Rome all the Ides (*idus* = Ir. *ésce* 'luna') were regarded as feast-days.

Religious ceremonies must in primitive times have accompanied the ordinary family feasts as well. These come most directly to the front in the Aryan *marriage ceremonial*, in which again fire and water enjoy common worship. In India the bridegroom, after taking the bride by the hand, leads her three times round the fire on the hearth, on which a sacrifice of roasted corn is offered. Previously a new jug filled with water is placed on the floor, and it must remain on the right side of the bridal pair as they march round the fire. But liberal use is also made at other times of water, which is solemnly brought from the spring. The bride is bathed in it, or the young pair are sprinkled with it. In Rome, marriage is even designated a union 'aqua et igni.'

Romulus married the captured Sabine women, κατὰ τοὺς πατρίους ἐκάστης ἐθισμοὺς ἐπὶ κοινωνίᾳ πυρὸς καὶ ὕδατος ἐγγυῶν τοὺς γάμους (Dion. ii. 30), and Varro (Serv. *ad Æn.* iv. 167) reports: '*Aqua et igni* mariti uxores accipiebant. Unde hodieque et faces prælucent et aqua petita de puro fonte per felicissimum puerum aliquem aut puellam interest nuptiis, de qua nubentibus solebant pedes lavari.'

Here, too, a solemn procession round the altar from left to right took place, at which a boy carried the marriage-torch and the marriage-water, drawn from a pure spring; then in the house of the bride's father a *far*-loaf (hence *confarreatio*) was sacrificed in the fire (on the Greek λουτροφόρος, cf. above, p. 22). The same customs which we find in the east and south of the Aryan world exist also in the north of Europe.

Thus Menecius reports of the Lithuanians: 'Cum nuptiæ celebrantur, sponsa *ter ducitur circa focum*, deinde ibidem in sella collocatur, super quam sedenti *pedes lavantur aqua* qua lectus nuptialis, tota supellex domestica et invitati ad nuptias hospites consperguntur.'

Also among the Slavs, just as on St. Ivan's day, baths and dancing through or over a fire belong to the fixed marriage rites, and finally, in ancient Germany the bride was led three times round the hearth in the house of the bridegroom after she had stepped over a vessel of water (cf. the proofs of this fact in *Reallexicon*, art. 'Heirat,' p. 356 ff.). Perhaps in this case the union of fire and water (heat and moisture) may be regarded as the symbol under which husband and wife were united to each other for the purpose of producing a numerous progeny.

For further details regarding the common religious customs connected with the naming of the child, the first cutting of his hair, the feast of puberty, etc., see Winternitz, 'Was wissen wir von den Indogermanen?' (*Beilage zur Münchner AZ*, 1903, No. 258, p. 293), and E. Samter, *Familienfeste der Griechen und Römer*, Berlin, 1901.

5. The relation of the 'heavenly ones' to the morality of mankind.—In all the higher stages of heathen religion we find the gods represented as the guardians of all written and unwritten law, and as the strict avengers of all human transgressions of the same. Here we shall seek to discuss the question how far back in the history of the Aryan peoples this conception goes. It is obvious that legal or moral ordinances could be thought of as under the protection of some higher being only after these ordinances had been evolved and come to consciousness in the human society itself. Accordingly, it will be necessary in entering upon this discussion to direct our attention to the law and custom of primitive Aryan times as they are shown to us by the science of Aryan antiquities. What we at the present day designate as 'punishment' and 'crime' resolve themselves, the further back we go into the past of the Aryan peoples, in a great number of cases into the conceptions of 'fine' and 'act liable to a fine.' The Lat. *pœna* is the judicial penalty prescribed as a corrective provision against the transgression of the law, but the Gr. ποινή, from which *pœna* is borrowed, is, as we shall see below, the old Aryan expression for 'fine.' In the same way the Lat. *condemnare* is used of every legal condemnation, but the root-word *damnum* originally signifies nothing else than 'that which is given (as a fine)' (**da-mno-m : dare*). The German word *Schuld*, which in all the Teutonic languages in which it occurs designates the guilt of the accused in a law-court as well as guilt before the gods, as is evident from its being derived from Goth. *skal*, *skulun*, *skula*, *skulds*, meant nothing else than *Du sollst*, sc. *bezahlen* ('Thou shalt pay'). The Lat. *flâgitium*, 'crime,' 'infamous deed,' which is derived from **flageto*, (cf. *flagito*, 'I demand') probably = Ir. *dligid* (**dligeto-*), 'duty,' 'law,' 'right,' Ir. *dligim*, 'I have a claim to something,' Welsh *dleu*, etc., 'to be guilty,' Bret. *dle*, Goth. *dulgs*, Old Slav. *dlŭgŭ*, 'guilt,' undoubtedly goes back in the same way to a fundamental meaning 'liability,' *i.e.* to a fine, and so on. The reason of this phenomenon lies in the fact that in primitive Aryan times a great number of actions which we regard as crimes at the present day, and which are punishable by the State—murder and manslaughter, theft and robbery, rape and adultery, etc.—were not punished in any way by the community, *i.e.* in primitive relations, *by the tribe and its chief* (Skr. *râj* = Lat. *rex*, Ir. *rí*), but the avenging of them was left to the self-help of the individual families which were united in the tribe. The exercise of this self-help took the form of *blood-revenge* (cf. above, p. 28), which even in the earliest times could be expiated by a fine of cattle. The Aryan expression for blood-revenge itself and its compensation by means of the money payment is contained in the equivalents: Avesta *kaênâ* = Gr. ποινή: Skr. *cʰi*, Gr. τίνομαι = 'to punish,' 'to avenge,' 'to submit to pay a fine.' When at a later date the power of the State to inflict punishment deprived the families of the self-help and the exacting of the fine, the latter idea was changed into the conception of the penalty imposed by the State, and the action which incurred payment of a fine became a crime against the laws of the State (cf. *Reallexicon*, artt. 'Blutrache,' 'Strafe,' and 'Verbrechen').

Now such actions as were to be followed by blood-revenge or to be expiated by a fine were not in primitive times regarded as transgressions of the decrees of any supernatural beings whatsoever. This is seen to be the case from the fact that, in the earliest historical times, *e.g.* in the ethics of the Homeric poets, those very crimes which according to our ideas are most heinous, murder and robbery, were neither regarded as defiling mankind nor condemned by the moral consciousness of the people. For what other explanation can be given of the fact that Theoclymenus (*Od.* xv. 256 ff.), who had slain a man in Argos and had taken flight, was received by Telemachus without any purification being regarded as necessary, as was usual at a later date; or that Ulysses himself (*Od.* xiii. 256 ff.) was not afraid of the abhorrence of his listener, when, although in an imaginary story, he represented himself as a man who treacherously lay in ambush and killed a fellow-countryman in Crete? Just as little did Telemachus (*Od.* iii. 70 ff.) take

offence when he was asked on his arrival if he was perhaps a robber who was roving over the sea and at hazard of his own life bringing woe on alien men (cf., further, in *Reallexicon*, artt. 'Mord' and 'Raub'). Thus, it seems that actions such as those mentioned above had nothing in them offensive to the conscience of the people if they were carried out openly or with violence. On the other hand, theft and adultery may have been regarded at an earlier date as morally reprehensible merely on account of their secrecy—a view which finds expression in the fact that, so far as we can see, the killing of the adulterer or the thief, caught in the act, did not as a rule call forth the blood-revenge of his family, *i.e.* to use the form of expression of a later date, remained unpunished (cf. *Reallexicon*, artt. 'Diebstahl' and 'Ehebruch').

Under the circumstances described above, it may seem remarkable that in the vocabulary of the original language there was nevertheless *one* expression for the notion of sin and crime, in which the idea of a shortcoming before gods and men seems to have been operative from the beginning: Skr. *á'gas* = Gr. ἄγος (*ánágas* = ἀναγής, *i.e.* 'without *á'gas*'—ἄγος). But we shall see that the circumstances connected with this expression are very peculiar. If we examine the oldest use of the Greek word (with regard to that of the Indian one, we can unfortunately deduce very little), we find that it is used by the tragedians (cf. *Reallexicon*, p. 905) with reference to *four* different actions, namely, high treason, regicide, parricide, and carelessness with regard to the duty of interment of a relative. An ἄγος, then, which is best translated by 'abomination,' was committed on the one hand by the man who was guilty of a hostile act against the tribe and against its chief, the king, and on the other hand by the man who violated the duties resting upon him in virtue of his family or tribal connexion. Here, too, there can be no doubt as to who the deities were that were insulted thereby. In Æschylus (*Septem contra Thebas*, 1017) we are told of Polynices: ἄγος δὲ καὶ θανὼν κεκτήσεται | θεῶν πατρῴων οὓς ἀτιμάσας ὅδε | στράτευμ' ἑπακτὸν ἐμβαλὼν ἥρει πόλιν, *i.e.* he who led the army against the city was in life an abomination to the θεοὶ πατρῷοι, and—as unburied—would be the same in death. But these θεοὶ πατρῷοι (cf. the discussion of the name in Caland, *Totenverehrung*, p. 69 f.) were—at least originally—*not* the 'heavenly ones' or the gods related to them, therefore not Zeus, Apollo, Athene, etc., but rather the *souls of the ancestors honoured as divine*, the heroes of the tribe or the family, to whom on the mainland of Greece even in later times a rich worship was assigned (cf. E. Rohde, *Psyche*[2], i. 167 ff.). We saw (above, p. 28) that the foundation pillars of the social organization in primitive Aryan times rested on *ancestor-worship*, and it is an almost obvious conclusion that the souls of the worshipped ancestors were thought of as watching with jealous exactness over the keeping of the old institutions in the family and in the tribe (cf. above, p. 23). All those actions which merited praise rather than blame, when committed against one who did not belong to the clan, were regarded when perpetrated against a member of the family as ἄγος, which challenged the vengeance of the spirits of the progenitors who presided over the family. The old Roman conditions speak very plainly in this connexion: 'In regis Romuli et Tatii legibus hæc est: "si parentem puer verberit, ast olle plorassit parens, puer divis parentum sacer estod" id est clamarit. adicitur: "si nurus [sc. verberit parentem], sacra divis parentum estod" in Servi Tulli' (acc. to Th. Mommsen in C. G. Bruns, *Fontes iuris Romani antiqui*[6], Freiburg, 1883, p. 8). Thus, then, if a son beats his father or a daughter-in-law her father-in-law, they are said to be doomed to the *divis parentum*, the θεοῖς πατρῴοις, the souls of the ancestors, *i.e.* to death. How much more must this have been the case with the *paricida*, the 'kin-murderer' (**pâro-* from **pâso-* = Gr. πηός), *i.e.* the man who had killed a member of the clan; and Brunnenmeister (*Das Tötungsverbrechen im altrömischen Recht* p. 171) has undoubtedly good ground for describing the *deo* (or better still the *divis parentum*) *necari* as the legal consequence of the *paricidium*. These conditions doubtless also gave rise to the Latin expression *supplicium*, 'capital punishment,' really, however, the 'appeasing' (*sub-placare*), sc. *divorum parentum*. As the spirits of the ancestors had power over the family, so in the same way would they also have controlled the tribe even in primitive times, and their wrath would have been aroused by everything which was directed against the tribe and its leader, the king. Punishment by death, then, by means of stoning, the only punishment of primitive times (cf. above, p. 42), which was decreed and immediately executed by the popular assembly, which represented the tribe, can best be conceived of as a *supplicium*, *i.e.* an act of expiation of the spirits who rule over the tribe (cf. *Reallexicon*, artt. 'Opfer,' 'Verbrechen,' 'Strafe,' and 'Volksversammlung').

It is therefore evident that the oldest combination of law, custom, and religion is to be found in the *worship of the dead*, who from the remotest antiquity were looked upon as the guardians of the order prevailing in the family and the tribe (Skr. *svadhá* 'propriety,' 'customary condition' = Gr. ἔθος, 'habit,' 'custom,' 'usage,' ἦθος, 'use and wont,' 'habitual stopping-place,' and (perhaps) Goth. *sidus*, O. H. G. *situ*, 'custom'). The 'heavenly ones' have originally nothing whatever to do with this conception; they are entirely beyond the realm of good or ill ('jenseits von Gut und Böse'). For if what is stated in detail above is correct, that the deities designated by the equivalents Skr. *devá*, Lat. *deus*, etc., were nothing else than 'special gods' of the sky and the natural phenomena connected with it, who exerted an influence only within the spheres to which they owed their conceptual origin, it is obvious that mankind could have recourse to them only in matters which lay within these special spheres. In this way a man may have sacrificed to the thunder that it might spare his own head and strike the head of the enemy, or he may have prayed to the fire to light up and to scare away the night-monsters and destroy the fields of the enemy, but nothing more. It is no accident that, even in the hymns of the Rigveda, the gods are much more frequently represented as strong, large, and powerful than as endowed with any moral qualities (cf. Oldenberg, *Die Religion des Veda*, p. 284). But the more the 'heavenly ones' and the gods connected with them developed into distinctive and many-sided *personalities*, the more were they also invested with a moral life, seeing that, on the one hand, with the evolution of the family and the tribe into the city and the State, they took over the rôle of guardian from the souls of the ancestors, and, on the other hand, appeared as the bearers and protectors of *new* moral ideas, which were gradually coming to the front in human society. Thus the past belongs to the spirits of the ancestors, and the future to the 'heavenly ones.' It will be of advantage to seek to apprehend this important process of evolution in the history of *two* moral duties which received comparatively late recognition—the duty of truth and the duty of hospitality.

(1) *Truth.*—The Aryan name for this idea is contained in the two originally connected equivalents, Skr. *satyá* = Goth. *sunjis*, and Lat. *vērus* = O. H. G. *wâr*, Old Ir. *fír*, both roots signifying the 'actually existing' (*satyá* : *sán*, 'existing,' Lat. *verus* from **ves-ro-s*: Goth. *visan*, 'to be,' 'to exist'). The oath serves the purpose of strengthening this 'actually existing'; and

the farther back we go in point of time, the more important is the part played by the oath; just as, even at the present day, the uneducated more frequently than the educated regard it as necessary to strengthen their words by means of an oath. The existence of the oath in primitive Aryan times is placed beyond the reach of doubt by the series of words: Skr. *am*, Gr. ὄμνυμι, Ital. *omn* (cf. Aufrecht, *Rhein. Museum*, xl. 160, and Bücheler, *Lex Ital.* p. 18; cf. also the words, Old Slav. *rota* 'oath,' = Armen. *erdnum* 'swear,' and Irish *éth* = Goth. *aiþ*). The most ancient oath on Aryan soil (cf. *Reallexicon*, art. 'Eid') was simply a *curse*, which a man declared against himself in case of false swearing (thus Skr. *śapátha*, 'curse,' 'oath', Old Slav. *klęti sę*, lit. 'to curse oneself' = 'to swear,' Germ. *schwören*). In swearing, a man touched himself or some other object (thus Ir. *tong*, 'swear,' = Lat. *tango*, 'I touch,' and Old Slav. *prisęga*, 'oath,' lit. 'touching'), with the idea that the object touched would bring destruction or be exposed to destruction if he swore falsely. In contrast to this, the oaths of the Greeks and Romans manifest, even in the oldest historical times, a more elevated character; for among both these peoples, leaving out of account a few survivals of the oldest state of affairs, the gods, and in particular Zeus-Juppiter, were invoked both in order to be present as witnesses of the curse pronounced, and to carry it out in the case of perjury. Thus we are brought from the realm of magic to the sway of religion; the 'heavenly ones'—particularly Zeus, the god of the bright, all-seeing sky of day—have become the bearers and the guardians of the concept of truth.

(2) *Hospitality.*—The primitive Aryans, like all other primitive races, regarded the stranger as a man without rights, who could be killed or robbed with impunity. In apparently irreconcilable contradiction to this idea, which in its last ramifications was finally vanquished only by the new conception of life brought in by Christianity, there stands the custom of *hospitality*, which can be proved to have existed among all the Aryan peoples, even among Teutons, Slavs, and Lithuanians, as early as the beginning of historical tradition (cf. *Reallexicon*, art. 'Gastfreundschaft'); and the present writer, in opposition to his previous opinion, thinks it may be regarded as belonging to the primitive Aryans. How is it possible to regard a person as an outlaw, and yet at the same time give him a cordial reception at one's own fireside? In answer to this question, R. v. Ihering, in an essay, 'Die Gastfreundschaft im Altertum' (*Deutsche Rundschau*, 1888–87, vol. lii. April–June, 1887), and the present writer in his book, *Handelsgeschichte und Warenkunde*, i., Jena, 1886, p. 4 ff., have simultaneously, and independently of each other, pointed to the *exchange of gifts*, which is everywhere inseparably connected with the custom of hospitality, and expressed the view that in it is to be found the origin of hospitality, without which, in these primitive conditions, commercial intercourse would have been impossible. This opinion is everywhere confirmed by the facts of ethnology, which show that among many uncivilized peoples trade is nothing else than an exchange of gifts, and a hospitable reception is extended to the trader in spite of the bloodthirsty hatred of strangers. 'The Angami-Nagas, in the mountainous regions of Assam, are divided into numerous communities, who live in constant feud; they are zealous head-hunters. But, none the less, the Angami trader of any village whatsoever finds in every other at least *one* house where he receives food and shelter, and is in safety from sudden murderous desires' (Ratzel, *Völkerkunde*[2], i. 570 ff.). G. Klemm (*Kulturgeschichte*, iv. 310) also reports as follows of the South Sea Islanders: 'As we saw above, besides the salutation a special gift is also essential to the sign of hospitality. This gift is regarded, when it is received, as being, in a kind of way, a continuation and a confirmation of the salutation. It consists of fruits, mats, and such-like articles, and forms to some extent the foundation of intercourse on the basis of barter and trade.' Similar conditions may also be assumed for primitive Aryan times, in which the existence of a primitive trade by barter can be etymologically demonstrated (cf. *Reallexicon*, art. 'Handel'); and in the series of words, Lat. *hostis*, Goth. *gasts*, Old Slav. *gosti*, this twofold conception of enemy and guest lies clearly before us (cf. Winternitz, *op. cit.* p. 339). But, in order to become a 'guest,' the stranger must be formally received into a native family group. He thereby becomes himself a relative, as is expressed, *e.g.*, in the Lith. *svẽczias*, 'guest,' from **swetjas* = Gr. ἕτης from **svetá*, 'relative'; the father of the family, on the other hand, into which he enters, becomes the *hospes*, *i.e.* **hosti-pets* 'lord and protector of the stranger,' and thereby at the same time takes over the responsibility for the personal safety of the stranger. This relation is still clearly described in the Anglo-Saxon legislation (cf. Roeder, 'Die Familie bei d. Angelsachsen,' *Studien zur eng. Philol.* iv. 83, note 1); and that is what is meant when Mauricius, *Strateg.* xi. 5, reports of the Slavs: εἰσὶ δὲ τοῖς ἐπιξενουμένοις αὐτοῖς ἥπιοι, καὶ φιλοφρονούμενοι αὐτοὺς διασώζουσιν ἐκ τόπου εἰς τόπον, οὗ ἂν δέωνται, ὡς εἴγε δι' ἀμέλειαν τοῦ ὑποδεχομένου συμβῇ τὸν ξένον βλαβῆναι, πόλεμον κινεῖ κατ' αὐτὸν ὁ τούτου παραθέμενος, σέβας ἡγούμενος τὴν τοῦ ξένου ἐκδίκησιν, *i.e.* he feels himself bound to take blood-revenge, just as if he were a relative. Thus the 'guest,' by means of the protection of a family and the θεοὶ πατρῷοι which guard it, is rendered inviolable. Now, the more the intercourse between tribes is extended, and the more they all learn to look up to Zeus, the great father of gods and men, the more does he also take over the task of protecting the stranger who is already, in a certain sense, sacred, and so Ζεὺς ξένιος takes his rise. That this is a comparatively late process is expressed by this very epithet, which appears very seldom in the Homeric language, in comparison with the countless number of attributes referring to the physical or natural powers of the god (cf. above, p. 34).

Not only did the 'heavenly ones' become the guardians of moral ordinances which were present in human society from the earliest times or had arisen at a later date, but there were evolved from their cult moral ideas previously unknown. This side of the relation between the gods and morality can be illustrated from the history of the idea of chastity.

That there was anything of the nature of this idea in primitive Aryan times must, in view of ascertained facts, be regarded as well-nigh impossible. Unlimited sexual intercourse with concubines and slaves besides his wife was allowed to the husband. The wife was, it is true, bound to conjugal faithfulness on pain of death; but the circumstance that the husband, in case of his own sexual impotence, could hand her over to a 'helper in generation' or could place her at the disposal of an honoured guest, shows that less value was laid on her sexual chastity than on the unlimited possession of her, which could occasionally be surrendered. As far as the condition *before* marriage was concerned, it is to be feared that Herodotus with his description of the Thracians: τὰς δὲ παρθένους οὐ φυλάσσουσι, ἀλλ' ἔωσι οἵαι αὐταὶ βούλονται ἀνδράσι μίσγεσθαι (v. 6) comes nearer the true state of affairs in antiquity than Tacitus with his well-known glorification of ancient Teutonic chastity (cf. *Reallexicon*, artt. 'Ehebruch,' 'Keuschheit,' 'Zeugungshelfer,' 'Gastfreundschaft'). In addition, what a mass of indecent customs, or which at least seem to us indecent, are to be found in primitive times! In Rome a god *Mutunus Tutunus* (cf. above, p. 32) was worshipped, whose name was derived from the male and female sexual organs (*mutto* and *titus*). The newly married bride was placed on his *fascinum*. The amulet was called *muttonium* (from *mutto*). The Lithuanian youth sacrificed to a god *Pizius* (from Lith. *pisti*, 'coire') when they brought the bride to the bridegroom. Even the 'chaste' Teutons too, according to the report of Adam of Bremen, worshipped at their marriage festivals their god *Fricco* under the symbol of an immense *priapus*.

If, in contrast to this undisguised and brutally emphasized idea of sex, we examine the terminology of the conception 'chaste' in the separate Aryan languages, viz. Gr. ἁγνός (cf. ἅγιος 'holy,' ἄζομαι 'I fear'), Lat. *castus* (cf. *castum*, 'the sacred festive season of a deity, during which much restraint was enjoined,' *castimonia*, 'bodily purity which is demanded for religious ceremonies, the restraint from sensual enjoyments'), Goth. *swikns* (ἁγνός, ὅσιος, ἀθῷος), O. H. G. *chúski*, *scûski* (perhaps *sciuhen* 'to fear'), we find as a result that this conception in all probability has *its root in sacred soil*. In the worship of the 'heavenly ones,' the idea must first have occurred that it was fitting at definite periods, in order to draw near to the gods 'in purity,' to abstain from cohabitation* and other pleasures of the senses. An interesting pamphlet in this connexion is Eugen Fehrle, *Die kultische Keuschheit im Altertum*. i., Naumburg, 1908. It is, however, not unlikely that the whole teaching on religious purity, of which sexual purity forms only a single branch, is not native to Aryan soil (cf. *Reallexicon*, art. 'Reinheit und Unreinheit').

The connexion of the 'heavenly ones' with law and morality, thus briefly described, was, as we saw above, considerably promoted by the priests and priestly bodies that were always coming more clearly to the front among the individual peoples. For they believed that in representing all the rules of law and morality prevalent on earth as the outcome of heavenly ordinances, and themselves as the appointed interpreters of the same, they were most effectively serving the interests of the 'heavenly ones,' of mankind, and of themselves.

If in this way we are correct in our contention that in primitive Aryan times the bond of connexion between the 'heavenly ones' and the morality of mankind was very weak, we must not omit, at the close of our discussion of this topic, to call attention to the theory recently propounded by Leopold v. Schröder (cf. *Verhandlungen des II. internationalen Kongresses für allgemeine Religionsgeschichte in Basel*, 1905, p. 89). He holds that, like other primitive peoples, the primitive Aryans not only cherished animism and ancestor-worship, but already possessed the belief in one supreme benign being. This

* This does not exclude the possibility that certain rules of continence, as, *e.g.*, the demand occurring among the Indians and Teutons to preserve continence some time after marriage, had as their object the turning aside of magic influences, such as the entrance of evil spirits into the body of the woman at the consummation of the nuptials (cf. Oldenberg, *Die Religion des Veda*, p. 271, and L. v. Schröder, *Die Hochzeitsbräuche der Esten*, etc., Berlin, 1888, p. 193).

being came in the course of pre-historic times to be combined with the primitive god of the sky, Dyaus, Ζεύς, etc. (cf. above, p. 33). We shall wait with interest to see what grounds L. v. Schröder is able to bring forward in support of this contention, which, to us at least, seems very daring.

III. *Fate.*—More even than by questions concerning the origin and relation of life and death, or by reflexion on the nature and descent of the heavenly gods, has the mind of man from remotest antiquity been exercised by the gloomy power which mysteriously surrounds him from the cradle to the grave, and which we call 'fate.' The souls of ancestors or the spirits that reveal themselves in the powers of nature can be reconciled and made serviceable to man. But inaccessible and incomprehensible seems to be that unknown power which appears ever to lavish its smiles on one and to bear an everlasting grudge against another, and which without distinction overwhelms with weal or woe 'now the curly-headed boy in the innocence of youth, now the grey-haired sinner in the guilt of old age.' Only rarely, and at certain late stages of its development, do we find in paganism the thought in which the Christian finds peace of soul—the thought, namely, that in reality God and fate are one and the same. Before that, however, mankind had proposed other solutions of the dark problem. What are these? Again the Christian, in his confidence in the unity of God and fate, and in the certainty that all that befalls him, as being sent from God, must be for his best here and hereafter, declines the attempt to probe the unsearchable will of God by human means. On the other hand, there runs through the whole of heathenism an irrepressible longing, appearing in a more intense degree the further back we go in point of time, to penetrate with inquisitive and premature vision into the dark land of the future, to tear the covering from the veiled picture. In what ways was this attempted?

Thus there are *two* questions which we have here to consider in reference to primitive Aryan times: 'What idea did they entertain of fate?' and 'How did they seek to divine the future?'

1. **The conception of fate.**—In this discussion we shall start from a famous passage in the *Iliad* (xxii. 208 ff.). Achilles has pursued Hector three times round the walls of Troy:

ἀλλ' ὅτε δὴ τὸ τέταρτον ἐπὶ κρουνοὺς ἀφίκοντο,
καὶ τότε δὴ χρύσεια πατὴρ ἐτίταινε τάλαντα,
ἐν δ' ἐτίθει δύο κῆρε ταναηλεγέος θανάτοιο,
τὴν μὲν Ἀχιλλῆος, τὴν δ' Ἕκτορος ἱπποδάμοιο,
ἕλκε δὲ μέσσα λαβών· ῥέπε δ' Ἕκτορος αἴσιμον ἦμαρ.

The expressions that are of interest to us here are, first of all, the κῆρε, which are laid by Zeus on the balance of fate, and, secondly, the αἶσα involved in the αἴσιμον ἦμαρ. A synonym of αἶσα is μοῖρα, which is not mentioned here, but which is identical with it, representing the power that moves the balance of fate. As far as the word κήρ is concerned, we have seen its exact meaning at an earlier stage (cf. above, pp. 15, 27), where we were speaking of the driving away of the spirits designated as κῆρες on the occasion of the Anthesteria festival in Athens. κήρ is, accordingly, the soul, or better, *a* soul of man, for Tylor (i. 427 f.) has shown us that belief in the existence of several souls in the human body is widely prevalent. The soul designated by the term κήρ is specially regarded as the bearer of the fate of death to men, whether that death be peaceful or fraught with violence (cf. *Il.* ix. 411). Every man is invested at birth with such a κήρ, in consequence of which there are μυρίαι κῆρες (*Il.* xii. 326 f.). But every people as well, in so far as it is thought of as an individual, *e.g.* the Trojans or the Achæans (*Il.* viii. 69 ff.), possesses such a κήρ; and the word is finally used, and that, too, very frequently, as a personification of the goddess of death, Κήρ, the daughter of the night, whose brethren are Μόρος, Θάνατος, Ὕπνος, and the φῦλον Ὀνείρων, 'the people of dreams' (cf. Hesiod, *Theog.* 211 ff.). A series of ideas from the north of Europe comes more or less near to this Old Greek conception of κήρ. In the first place, the Old Norse figures of *fylgja* must be mentioned. Their identity with the human soul follows at once from the circumstance that the expression is interchangeable with the above-mentioned Old Norse *hugr*, 'soul' (cf. p. 15, and also W. Henzen, *Über die Träume in der altnordischen Sagalitteratur*, Leipzig, 1890, p. 36). They are called 'followers,' because the soul, like the ψυχή in Greece, follows the man as his second 'self,' his εἴδωλον. They often appear to the dreamer as animals (birds, horses, fishes, wolves, lions, white bears, boars, hares, oxen, goats); and if they appear, they announce certain ruin. As there was a κήρ of the Trojans and the Achæans, so among the old Norsemen there was a *kyn-* or *ættarfylgja*, i.e. a *fylgja* of the tribe; and, as was the case with the κῆρες (cf. *Il.* ix. 411), a man could have several *fylgja*. On the other hand, the latter word has a wider signification in so far as it designates the guardian spirit of the man generally. The latter is also the meaning of the Old Norse *hamingja*, 'the many-formed' (Old Nor. *hamr*, 'form'), in like manner a designation of the human soul taken from its capacity of transforming itself, for the *hamingja* appear frequently as animals or as women. Especially characteristic is their hereditary transmission in the family, passing over from father to son, and so on. They appear first as giant women, offspring of the Norns, who are the *hamingja* of the world (cf. Vigfusson, *Icelandic-Eng. Dictionary*, Oxf., 1874–76, p. 236). Finally, we may mention the characteristic features of the southern Slavonic *vjedogonya*, who are conceived of partly as spirits of the house and partly as guardian spirits dwelling in each man. Probably their name (Slovenian *vjetrogonja*) is connected with Old Slav. *větrŭ*, 'wind,' in which case the wind-like nature of the soul would be indicated (cf. F. S. Krauss, *Sreća, Glück und Schicksal im Volksglauben der Südslaven*, Vienna, 1886, p. 19 ff.).

We have thus made acquaintance with a series of souls of fate and souls of fortune, a knowledge of which will assist us in the following consideration of αἶσα and μοῖρα.

Both of these words signify not only etymologically (αἶσα from **aigia*: Lat. *æquus*; μοῖρα: μέρος, μείρομαι, εἵμαρται), but also in actual usage, nothing more in the first instance than 'share' without any reference to fate, and then the share assigned by fate to every individual man at his birth (ὅτε μιν τέκε μήτηρ) (*Il.* xx. 128; *Od.* vii. 198). Thus they correspond exactly to the Slavonic expressions, Russ. *častĭ*, 'part,' 'lot,' 'fate,' *sčastĭe*, 'fortune,' *nesčastĭe*, 'misfortune' (**čensti*: Gr. σχίζω, Lat. *scindo*, lit. 'the part split off,' 'the share'), and *dolja*, 'part,' 'portion,' *nedolja*, 'misfortune' (Old Slav. *dola*, *dělŭ*, 'part,' Goth. *dails*).

This 'share' is, according to the popular Slavonic idea, innate, and it is natural to make the mother responsible for it if one is dissatisfied with his 'share' (cf. A. N. Veselovskij, 'Fate in the popular thought of the Slavs,' in *Trans. of the Imperial Academy of Science in St. Petersburg* [Russ.], xlvi. 173 ff.). There is thus a slight distinction between μοῖρα (αἶσα) and *dolja* (*častĭ*), in that the former is received *at* birth, the latter *by* birth. The latter idea, however, is proved to be the more ancient from the circumstance that among many Aryan peoples, in connexion with the assignation of fate to the separate individuals, there are deities who

are designated as 'mothers' or 'child-bearers.' On Slavonic soil this is true of the Old Slav. *roždanicy* (*roditi, ražd̆ati* 'parere,' *rožd̆enije*, 'generatio,' *rožd̆enica*, 'nativitas,' 'obstetrix, 'matrix,' 'mater,' 'generatio'), deities to whom, just as to the Perun and the Rodŭ, *i.e.* the personifications of the clan, sacrificial offerings of bread, cheese, and honey were offered. At the present day among the Bulgarians of the Rhodope mountains the woman in child-bed is called *rožd̆enica*, but among the Slovenians and the Horvatians the women of fate are called *rodjenice* or *rojenice* (cf. Krauss, *op. cit.* p. 118 f.). Among the Greeks, the Εἰλείθυιαι, the goddesses of travail, are to be mentioned in this connexion. They occur in intimate alliance with the Μοῖραι (cf. Preller, *Griechische Mythologie*[4], i. 512). Among the Romans, we must note the *Parcæ*, whose name (*Par-ca: pario*, cf. similar formations in Brugmann, *Grundriss*[2], ii. 1, p. 476 f.) stamps them as 'child-bearers' (so also Wissowa, p. 213). Would it not be possible also to find in this way a better explanation of the puzzling Celto-Teutonic cult of the 'mothers' (*matronæ, matres, matræ*) than has as yet been suggested? Thus the mothers originally bring forth his fate to man, or, having become goddesses of fate or even fate itself (Old Slav. *roždenica*,* 'εἱμαρμένη,' cf. also *Archiv f. slav. Phil.* xiv. 137 ff.), they 'impart' it to him at birth, for which reason they are not infrequently called 'imparters.' Such designations are the Bulgarian *urisnicy* (from Gr. ὁρίζειν), the North Russian *udělinicy* (from *uděljati*, 'to impart'), which—an important fact for the subsequent consideration—have developed into spiteful spirits of nightmare, who torment women in labour, drag the children prematurely out of the womb, cause convulsions, etc. The Gr. Νεμέσεις (from νέμομαι 'impart') have also, in all probability, a similar origin, although at an early date they, along with the Erinyes, came to be known as avenging and punishing goddesses of fate. What these women of fate allotted to the newborn child in the decisive hour is designated not only as the 'share' (cf. above, p. 52), but also in three other ways: (1) as that which is 'spoken' by them (Lat. *fâtum*† [from *fâri*], Russ. etc. *rokŭ*: O. Slav. *reką*, 'I say'); (2) as that which is 'spun' by them (Old Nor. *urþr*, A. S. *wyrd*, O. H. G. *wurt*; cf. O. H. G. *wirt, wirtel*, 'spindle'); for next to bearing children it is fitting for the Aryan woman and the women of fate (cf. Gr. κλῶθες) to engage in spinning (cf. on this Veselovskij, *op. cit.* p. 210; otherwise R. Much, *Mitteilungen der anthrop. Gesellschaft in Wien*, xxxviii. p. 16); and (3) as that which is 'decreed' by them (Old Nor. *ørlǫg*, A. S. *orlæg*, O. H. G. *urlag*, Russ. *sudĭba*, 'judgment').

We have up to this point become acquainted with the women of fate as 'mothers' and as 'imparters.' This, however, does not by any means exhaust the enormously rich terminology belonging to them in the Aryan languages. In the Scandinavian North they are also called *nornir* and *díser*. The etymology of the former expression has not yet been explained. The latter, however (cf. Goth. *filu-deisei* 'cleverness'), is equivalent to 'wise women,' undoubtedly in the same sense as French *sage-femme*, since their help is called for by those in labour (cf. 'The Song of Sigrdrifa,' 9). Thus here, too, the women of fate stand in the most intimate relation to the birth of man. From the Slavonic region we may also mention the Bulgarian *narąčnici* and the Servian *sudnice, sujenice*, both so called from the *rokŭ* and *sudŭ* = *sudĭba* (see above) which they announce. From Lithuania the *laumė̃* (of unknown derivation) must also be mentioned. The most important phenomenon for us, however, is to be found in the fact that in many regions the conceptions of division, fate, fortune, etc., at first abstract, show a strong tendency to become transformed into beings regarded as persons. This is true in particular in Polish and Little Russian of the *dolja* mentioned above, in Servian of the *sreća* (cf. Krauss, *op. cit.*), a word which literally means 'coming-together,' 'meeting' (*sŭ* + √*rêt*). In Latin, from the *fâtum*, as we saw above, the 'word spoken' (by the Parcæ), we have evolved, particularly on Celtic soil, the demons of fate designated by the name *fati* and *fatæ*, the latter of which became Old French *feie*, M. H. G. *feie*, German *Fee* ('fairy'). The same process went on also with regard to the Greek αἶσα and μοῖρα 'portion of fate,' to the consideration of which we now return. It is well enough known how both have evolved into personal powers of fate, Aisa being thought of only in the singular, Moira being also used in the plural (cf. Preller, *Griech. Myth.*[4] i. 530). The Moiræ, as is well known, play a specially important part in the life of the common people of Greece even at the present day, and it is not unlikely that primitive features of ancient Greek life are here preserved (cf. B. Schmidt, *Das Volksleben der Neugriechen*, i. 210 ff.). Besides the form μοῖρα, there is also a masculine form μόρος, Μόρος 'fate,' especially 'misfortune,' to be mentioned. Now all these forms lead back to an Aryan **moro*— **moria* (perhaps on account of εἵμαρται, εἱμαρμένη there was a form in the primitive language equivalent to this, viz. **smoro*— **smoria*), which corresponds phonetically to the primitive Teutonic names of the demons of the nightmare, O. H. G. *mar, mara*, Old Nor. *mara*, A. S. *mære* (=**moria*, μοῖρα); the terms most nearly connected with these in the North of Europe we have already discovered (p. 15, above). Since then, on the one hand, we have just seen, in the Russian *udělinicy*, spirits of fate becoming spirits of the nightmare, and, on the other hand, Laistner (*Rätsel der Sphinx*, ii. 342 ff.) has shown in detail how many spirits of fate and fortune have their origin in demons of dreams and nightmares—which is easily understood from the close connexion between the spirits of the departed and those of fate on the one hand, and the phenomena of the departed soul and those of dreams (nightmares) on the other—we need not hesitate to assume in the Gr. μοῖρα (=A. S. *mære*) the existence of a group of primitive Aryan words bearing the meaning of the share allotted to man by fate, which was either innate or bestowed at birth. From this group beings were evolved who in Greece became spirits of fate, while in Teutonic countries they were rather spirits of oppression, although, even in the latter case, their connexion with fate could not be concealed.

The details given above prove that *the faith of the Aryan peoples was permeated by a deeply fatalistic trend of thought.* The fate of each individual is born with him, transmitted by his mother, or is bestowed upon him at the hour of birth by spirits who at first have nothing to do with the heavenly gods, but much with the realm of departed souls. It was only gradually that the more advanced idea came to the front which united fate to the immortal gods; and where this idea appears, it is still in conflict with the older conceptions. This is the case in Homer. Now Zeus is subject to Moira, and again he takes her place as

* The report of Procopius (*de Bell. Goth.* iii. 14), that the Slavs did not know the εἱμαρμένη, must, with Veselovskij (*op. cit.* p. 174), be understood to mean that *at that time* they had still no abstract *Fatum*, but knew only beings or deities of fate.

† According to Wissowa (p. 213), Lat. *fâtum* was only a 'translation and interpretation' of the Greek αἶσα, which, however, cannot be correct, seeing that *fâtum* means 'that which is spoken' and αἶσα 'share,' as we saw above. *Fâtum*, like *Parca*, must have been a living religious conception among the people.

he 'spins out' to men their fortune (*Od.* iv. 208). That this latter idea could only at a later date have been transferred to Zeus, follows at once from the metaphor of 'spinning' (above, p. 53). This figure is exceedingly far removed from the activity of the highest god of the heavens, and it finds a satisfactory explanation only in the primitive cycle of ideas regarding mothers and women of fate. Thus we may hold that the belief which finds expression in the oracular responses, in Herodotus, and—at least very often—in the tragedians, the belief, namely, in a supreme law of the universe, the Moira, which rules over gods and men and from which none can escape, represents the ancient condition of popular thought from which the Homeric world had begun to raise itself, just as it did in other religious matters, *e.g.* burning of corpses instead of burial, disappearance of gifts to the dead and of a real ancestor-worship, realms of the dead, Hades and Elysium, etc. (cf. above, I. 4). In this way it was possible for demons of fate to become immortal gods. An instance of this evolution is afforded by the Greek δαίμων. The word, probably connected with δαίομαι 'I divide,' signifies the 'divider,'* and as it is used by the oldest tragedians (*e.g.* Æschylus, *Persæ*, 620) to indicate the soul or the shade of some dead person, and by Hesiod (cf. Rohde, *Psyche*[2], i. 146) in the sense of glorified human souls, we see that δαίμων is originally one of the many spiritual beings that determine the fate of individual human beings *in bonam* and especially *in malam partem*. These ideas prevail also in Homer; but in addition δαίμων is a common name of the immortal gods, because, according to the belief which gradually came into favour, they were responsible for the decrees of fate. This fatalistic trait of the Aryan religions has in Europe been most faithfully preserved by the Slavs (cf. Krauss, *op. cit.* p. 89 ff. 'Gott und das Schicksal'). Nor is this merely a matter of accident. Of all the Aryans, the Slavs are the race that remained nearest the original home, and are thus the last to enter into history. Nothing, however, frees the soul so certainly from the dull depression of fatalistic ideas as the great deeds of historical life.

2. The divining of the future.—A primitive Aryan expression for this important idea is to be found in the series of terms: Lith. *saitas*, 'interpretation of signs,' *seitones*, 'interpreters of signs,' Old Nor. *seiðr*, 'a particular kind of magic for investigating the future,' Middle Welsh *hut*, New Welsh *hûd*, 'præstigiæ,' Old Corn. *hudol*, gloss. *magus* = Gr. οἶτος (Ionic for *οἶτος), 'fate' or 'misfortune.' A complete account of all the means used by the Aryan peoples to divine the future cannot be given here; still, we shall prove that among the Lithuanians and Prussians, from whom we have so often started in this discussion, the great majority of all kinds of divination practised among all the separate Aryan peoples is also to be found. The Baltic tribes, of whom Peter of Dusburg reported: 'Prutheni raro aliquod factum notabile inchoabant, nisi prius missa sorte secundum ritum ipsorum a diis suis, utrum bene vel male debeat eis succedere, sciscitentur' (*Script. rer. Pruss.* i. 54), come once more (cf. above, p. 31 f.) nearest to the Romans, of whom Cicero reports in almost identical terms: 'Nihil fere quondam maioris rei nisi auspicato ne privatim quidem gerebatur' (*de Div.* i. 28). For the most detailed account of this topic we are indebted to the repeatedly mentioned work of Matthæus Prætorius, *Deliciæ Prussicæ, oder Preussische Schaubühne* (ed. by W. Pierson, Berlin, 1871), in which the 'waidlers' (cf., p. 43, above) of the ancient Prussians, experienced in divination, are enumerated, and upon which we shall base the following discussion.

(*a*) *The flight and the cries of birds.*—'*Lekkutones* (cf. Lith. *lekiù* 'I fly') were the persons who observed the cries and the flight of birds and predicted future events from them, also called *Paukszt*ů*čiei* (cf. Lith. *paũkszt*ì*s*, 'bird'). Eagles, ravens, hawks were regarded by them as birds of strife; the kite as well as swallows, owls, and bees brought harm and fire. On the other hand, storks, herons, woodpeckers, nightingales, and pigeons were omens of good fortune' (Prætorius, p. 43). 'A *lekkutons*, or bird-diviner, when he is to prophesy, dresses in white, takes a sacred *krywule*, *i.e.* a crooked staff, in his hand, goes to a *pillukztis*, *i.e.* a mound of earth, prays with his face to the east, and waits till a bird comes' (Prætorius, p. 48). It is in accordance with this custom that in almost all the Aryan languages the words for 'bird' mean at the same time bird-omen and omen generally; cf. Skr. *śákuna* (*śákuna* 'the science of interpreting the flight of birds'), Gr. οἰωνός and ὄρνις, Lat. *auspicium* from **avi-spicium*, and probably also *augur* from **avi-gur* (the second part of the word is still obscure), O. H. G. *fogalôn* 'auspicari'; *fogal*, *fogalrarta* 'auspicium,' 'augurium' lit. 'bird's-cry' (Goth. *razda*, 'cry'), Old Slav. *kobl*, 'augurium'; Czech *koba*, 'raven' (for a more detailed list see *Reallexicon*, artt. 'Orakel' and 'Rechts und links'). We see how closely the Litu-Prussian *lekkutons*, even in details, corresponds to the Roman *augur*, who in the same way, armed with a crooked staff (*lituus*), mounted the citadel, and, generally with his face turned to the east, observed the sky. It is noteworthy that the dove, among the Prussians, was a bird of good omen, although it generally announced death and misfortune.

(*b*) *The appearance of the sky and natural phenomena.*—'*Szweigdžurûnis* (cf. Lith. *žvaigždė*, 'star') was a star-gazer' (Prætorius, p. 42). '*Orones* (cf. Lith. *óras*, 'air,' 'weather') observed the sky and predicted its changes' (Prætorius, p. 43). '*Wejones* (cf. Lith. *vėjas* 'wind') watch the winds, change the weather, and are still to be met with in Nadravia' (Prætorius, p. 44). '*Wanduolutti*, *item Udones* (cf. Lith. *vandů*, Skr. *udán*, 'water') are water-diviners, who divine from the foam, waves, etc. Of these there are different classes' (Prætorius. p. 45). It is enough to refer to the *de cœlo servare* of the Roman magistracy, the *cœlestia auguria*, as well as the report of Plutarch (*Cæsar*, c. 19) regarding the Teutonic sacred women: αἱ ποταμῶν δίναις προσβλέπουσαι καὶ ῥευμάτων ἐλιγμοῖς καὶ ψόφοις τεκμαιρόμεναι προεθέσπιζον.

(*c*) *Sacrifice, entrails, and blood.*—'*Widdurones* (cf. Lith. *widurìai*, 'entrails') were soothsayers who could predict the future from the entrails of the animal sacrificed to the gods. At the present time several of the inhabitants of Nadravia, on examining the spleen, liver, etc., of a pig, are able to say what kind of a winter it will be, what kind of a crop, whether the early or the late seed will thrive. *Kraujutten* (cf. Lith *kraũjas*, 'blood'), who could predict good or evil fortune from the blood of men and cattle, from the way it flowed, from its colour and changes, and who prophesied also from the menstrual blood of women, were the *medici* of the ancient Prussians. At the present date, in Nadravia we find *kraujutten* who let blood from the veins, suck it by means of a small horn, and tell from the taste whether the person will remain in good health or not. Before they suck, they murmur a few words indistinctly' (Prætorius, p. 43 f.).

In the south, the Greek ἱεροσκοπεία and the Roman *haruspices* correspond to these. It is generally believed that in these phenomena we have to deal with an oracular custom which was introduced at a comparatively late date from foreign sources (into Italy from Etruria), but it is not in accordance with this view that the Latin word *haruspex* with *hariolus*, *fariolus*, has been formed from a primitive root no longer extant in any Italian language (**haru-* 'entrails,' Old Nor. *gorn*, pl. *garnar* 'bowel,' 'bowels,' 'entrails,' Skr. *hirá'*, 'bowel'). It is also worthy of mention that in the Prussian reports the *liver* is emphasized as especially significant for oracular purposes, while in Greece it is regarded particularly as the seat of soothsaying (cf. K. F. Hermann, *Lehrbuch der gottesdienstlichen Altertümer der Griechen*[2], p. 242). In the same way among all Aryan tribes the blood of men and animals was regarded as a means of foretelling the future. Who does not remember the white-haired priestesses of the Cimri, who, according to Strabo (vii. p. 294), prophesied over a kettle of the blood of slaughtered prisoners of war? Cf. also Old Nor. *hlaut* 'sacrificial blood' = Goth. *hlauts* 'lot.'

(*d*) *Ominous meetings.*—'*Szweruttei* (cf. Lith. *žvėrìs*, 'game') prophesy from game. If a hare, wolf, ass, toad, lizard, or locust appears, it signifies misfortune' (Prætorius, p. 48). Cf. also the Galician-Volhynian chronicle of the Hipatios manuscript (A. Brückner, *Archiv für slav. Phil.* ix. 3): 'Still his conversion (*i.e.* of Mendowej) was not genuine; he was wont to sacrifice secretly to his gods, to *Nûnadėj*, *Teljawel*, *Diwerix*, and the hare-god *Mėjdėjn*; if when he rode out in the fields a hare rose, he would not enter into the thicket or dare to break off a twig, and he sacrificed to his gods, burned the corpses of the dead, and openly practised his paganism.' 'To meet a snake is still a good omen to the old Prussians and the Lithuanians' (Prætorius, p. 37). As far as the other Aryan peoples are concerned, it must suffice to call attention to the monograph of P. Schwarz, *Mensch und Tier im Aberglauben*, Celle, 1888. But we must specially bear in mind in Roman territory the information contained in Festus (ed. Müller, p. 244) on 'Pedestria': 'a vulpe, lupo, serpente,* equo, ceterisque animantibus quadrupedibus fiunt

* This explanation seems more likely than the one previously given by the author in his *Reallexicon*, p. 29 f.

* Also by Joh. Lasicius (*de Diis Samagitarum*, p. 51: 'nutriunt etiam quasi deos penates nigri coloris obesos et quadrupedes

(auspicia),' and p. 260 on 'Quinque': 'signa quæ augures observant ex quadrupedibus.'

(*e*) *The rustling of the oak.*—'Præexcellentes arbores, ut robora, quercus, deos inhabitare dixerunt, ex quibus sciscitantibus responsa reddi audiebantur, ob id nec huiuscemodi arbores cædebant, sed religiose ut numinum deos colebant' (Erasmus Stella, 'de Borussiæ Antiquitatibus,' li., in Grynæus, *Novus Orbis*, Basel, 1537, p. 581). Cf. *Od.* xiv. 327 *f.*:

τὸν δ' ἐς Δωδώνην φάτο βήμεναι, ὄφρα θεοῖο
ἐκ δρυὸς ὑψικόμοιο Διὸς βουλὴν ἐπακούσῃ,

and Æschylus, *Prom.* 830 ff.:

ἀμφὶ Δωδώνην, ἵνα
μαντεῖα θᾶκός τ' ἐστὶ Θεσπρωτοῦ Διός,
τέρας τ' ἄπιστον, αἱ προσήγοροι δρύες.

(*f*) *Fire and smoke.*—'Szwakones, those who observe the signs of a burning light and its smoke, from *szwake*, "a burning light," are called *Dumones*, from *dumai*, "smoke"' (Prætorius, p. 43). 'Illi (the fire-priests, cf. above, p. 44) noctu ad ignem accedebant, mane vero consulentibus responsa dantes umbram ægroti (the question is about predicting the future in the case of illness) apud ignem sacrum se vidisse aiebant, quæ cum se calefaceret, signa vel mortis vel vitæ ostentasset: victurum ægrotum facies ostensa igni, contra si dorsum ostentasset moriturum portendit' (Jerome of Prague). Cf. the Greek μαντικὴ ἐξ ἱερῶν or ἐμπύρων (K. F. Hermann, *op. cit.* p. 241). Thus, *e.g.*, Prometheus boasts in Æschylus, *Prom.* 498: καὶ φλογωπὰ σήματα ἐξωμμάτωσα, πρόσθεν ὄντ' ἐπάργεμα. But here we have to deal with prophetic utterances from the *sacrificial fire*, a custom which, as we saw above (p. 41) was unknown to the Prussians and Lithuanians.

(*g*) *Dreams.*—'*Sapnonei*, *i.e.* dreamers, from *sapnas* (*sāpnas*), "a dream": interpreters of dreams are to be found especially among the women' (Prætorius, p. 47). Cf. Gr. ὀνειροπόλος, 'interpreter of dreams' (see K. F. Hermann, *op. cit.* p. 330).

(*h*) *Prophetic utterances at marriages.*—'*Szwalgones* are bride-examiners, 'waidlers,' who attend at the betrothal and prophesy. They also arrange the *szwalgus* (Lith. *švalgà*, 'bride-inspection'), *i.e.* the betrothals. *Swalgauti* signifies literally 'to behold.' They interpret from all kinds of things, *e.g.* from the pouring, as either the bridegroom or the bride pours beer into the other's eyes. Such customs are still to be found' (Prætorius, p. 46). Cf. Servius, i. 346: 'secundum Romanos locutus est, qui nihil nisi captatis faciebant auguriis et præcipue nuptias'; iv. 45: 'nuptiæ enim captatis fiebant auguriis . . .'; iv. 168: '. . . ideoque auspices deliguntur ad nuptias.'

But, with all these the number of the Prussian 'waidlers' engaged in separate branches of divination is far from being exhausted. There was also a *Waszkonis* (*wāszkas*, 'wax'), *i.e.* a diviner who studied wax moulds; further, there were *Szwinautzei* (*szwinas* 'lead'), or lead-moulders; *Puttones* (*putà*, 'foam'), 'those who observed signs in the foam of the beer'; *Seitones* (see above, p. 54), who prophesied life or death from charms bound round the necks of men or animals; *Sietones* (*siẽtas*, 'sieve'), 'those who acquired information from the turning of a sieve'; *Stiklorei* (*stiklas*, 'glass'), *Zerkoluttei* (*zerkolas*, 'mirror'), and *Zolininkei* (*žolẽ*, 'plant'), who predicted the future from glass, mirrors, plants, etc. It would not be difficult to find parallels to these kinds of divination among the other Aryan peoples. On the other hand, there were several kinds of oracles attested among other peoples which have not yet been discovered in the Prusso-Lithuanian sources. Such are the *tree-oracle*, or oracle of the tree-lots (cf. *Reallexicon*, art. 'Los'), which is found among Scythians, Teutons, and Celts, and also in indistinct traces among the Greeks and Romans; the significance of monsters as foretelling misfortune (cf. *Reallexicon*, art. 'Orakel'); the *horse-oracle*, found among Iranians and Western Slavs (cf. V. Hehn, *Kulturpflanzen*, p. 44); and also the peculiarly Roman '*signa ex tripudiis*.' Still, the horse was also looked on as sacred among the Lithuanians (Peter of Dusburg: 'aliqui equos nigros, quidam albos vel alterius coloris propter deos suos non audebant aliqualiter equitare'); and also hens, which were regarded as inviolable, were attended to in the houses, and their chickens under certain circumstances were understood to foretell misfortune (Lasicius, p. 48: 'nato cuiusvis generis vel cocco vel debili pullo actutum sedes mutantur').

The facts respecting divination here set forth can be regarded only as characterizing, and can in no way be supposed to exhaust, the enormous number of customs of this class. And they will arouse deeper interest if we can only succeed in discovering the *motives* by which this proceeding, viz. divining the future, which seems so absurd to us, is to be explained. Ihering (*Vorgeschichte der Indoeuropäer*, Leipzig, 1894, p. 441 ff.) is, so far as the present writer is aware, the only one who, although confining himself to the practice of taking the auspices among the Romans, has dealt with this fundamental and central question in detail. He begins with the undoubtedly correct idea that the supposition that auspices of this kind revealed the will of the heavenly gods is secondary and transmitted, and that every attempt to connect divination with higher religious ideas is quite valueless. He himself, accordingly, seeks to deduce the origin of oracular divination from purely practical grounds. Thus, according to his opinion, the oracle from birds (*signa ex avibus*) takes its rise from the observation of the birds of passage which showed the Aryans in their migrations the passes of the mountains, the courses of the streams, and the islands in the ocean which invited them to rest. The inspection of the entrails (*signa ex extis*) is explained from an examination which was made of animals of an unknown region to see if their entrails were healthy, and consequently whether the fodder of the land was satisfactory, etc. Thus we should obtain the remarkable result that this divination becomes the more sensible the further back we go in primitive times. No one will hesitate to conclude that the solution proposed by Ihering cannot be the correct one, no matter how difficult it may be to show it to be impossible in detail. No one, however, who considers with unprejudiced mind the material presented will fail to observe that the whole conception of divination does not rest on a basis of rational consideration, but has its roots in the childlike, dream-encircled, and imaginative mental condition of primitive man. Τὸ γὰρ εἰωθὸς οὐ τέρας, says Theophrastus (*de Plantis*, v. 3); and in this short sentence we have the key, or at least one key, to the understanding of oracular divination. For primitive man only the smallest part of his inner and outer life is εἰωθός. Everywhere wonders and signs terrify him. The phantoms of his dreams, and especially those of the horrible nightmare*, which, in the rooms of primitive times, filled with noxious charcoal fumes, must have been very frequent (cf. Höfler, *Centralblatt für Anthropologie*, vi. 1), are realities to him. In the plants and animals, in the stones and stars, there live, as in men's own bodies, souls to which, as we saw above, fate is united. Can we be surprised, then, that in the world of dreams, in the rustling of the trees, and in the flight of birds, the shadows of the future were supposed to hover mysteriously round the life of man? This anxious, timid, and nervous condition of primitive mental life called to its aid the art of priestly diviners, who—deceived deceivers—were always devising new means of obtaining some mysterious message with regard to the future. Their profession, however, always rests in the end on one fundamental thought, namely, on making the probability or improbability of a future event dependent on the incidence of another occurrence which was independent of human volition, such as the approach of a four-footed animal or a bird, a flash of lightning, hearing the sound of animals or the human voice. All this had, originally, nothing to do with the heavenly gods, and it is only at the close of a long process of evolution that we find the Roman *auspices* announcing the will of Juppiter or Pythia, and prophesying in the name of Apollo.

Conclusion.—It has been our aim—and nothing else was possible—to present, in this discussion regarding the religion of the Aryans, not the opinions and the usages of a perfectly definite and distinct period of antiquity, but rather a *series of developments* in the history of religion taking place on the soil of primitive Aryan peoples. These developments depend on more or less deeply-rooted pre-historic connexions,

quosdam serpentes') snakes are considered as quadrupeds. This settles the doubt expressed by R. v. Ihering (*Vorgeschichte der Indoeuropäer*, p. 444 *f.*) with regard to the passage of Festus quoted above.

* Cf. L. Laistner, *Das Rätsel der Sphinx, Grundzüge einer Mythengeschichte*, Berlin, 1889, and H. Roscher, 'Ephialtes, eine pathologisch-mythologische Abhandlung über die Alpträume und Alpdämonen des klassischen Altertums,' *Abh. d. kgl. sächsischen Ges. d. W.*, phil.-hist. Kl. xx., 1900.

and lead to more or less distant epochs of primitive antiquity. Thus there have appeared different strata, lower and higher, overlapping each other in the historic development of the religion.

If at times we have assumed that these higher and lower strata of religion were to be found side by side at the same time and among the same people, such a supposition will not astonish any one who remembers that even among our own countrymen the purest religion and the darkest superstition are to be found existing side by side.

This series of developments has been obtained by a comparison of words and customs confined to the Aryan languages and peoples. Our intention has been to give the features of a comparative history of Aryan religions, not a comparative history of religions generally. At the same time, we by no means wish to underestimate the advantages of the latter discipline. On the contrary, we are indebted to it for a series of general stages in the evolution of the religious consciousness, which are also of great importance in the special history of Aryan religion. But at the same time it cannot be denied that a real history of religion can be written only on a historically coherent foundation, such as is offered by the Semitic and Aryan races, and only in the closest connexion with the history of language and culture, which can as yet be sufficiently examined only in the case of the two races mentioned. Even with this limitation, it must be confessed that comparative investigations such as ours, which are compelled to deal not only with the facts themselves but also with conclusions drawn from them, cannot possess the same degree of certainty as is to be found in the discussions of those who are content to supply a description of the historically attested religion of a single Aryan or Semitic people, the Indians or the Romans, the Hebrews or the Babylonians. It must, none the less, be emphasized that he who undertakes to give such a special description without reference to the comparative religion of related peoples deliberately closes his eyes to the light which, in judicious research, is cast by pre-historic upon historic times.

O. SCHRADER.

ĀRYA SAMĀJ.—1. Founder.—Swāmī Dayānand Sarasvatī was born in the year 1824 in a village belonging to the Rājā of Morvī in Kāthiāwār, India. During his lifetime he refused to make known either his own name or his birthplace, lest his relatives should hinder him in his work or after his demise try to provide a successor as head of the sect. After his death, however, in 1883, it came out that his real name was *Mūl Śaṅkar*, son of Ambā Śaṅkar. His father was a well-to-do man, by occupation a banker, by descent a Brāhman, and in religion a stern and puritanical worshipper of Śiva. The life of Mūl Śaṅkar, *alias* Swāmī Dayānand Sarasvatī, falls into three nearly equal portions, namely, his life at home (1824–1845), his wanderings and studies (1845–1863), and his public ministry (1863–1883). For an account of the first two periods of the life of Swāmī Dayānand we are indebted to his *Autobiography*, which was dictated by him to the editor of the *Theosophist*, and published in English in that magazine.

There are three moments of religious interest in the home-life of the founder of the Ārya Samāj: first, his revolt from idolatry at the age of fourteen, on the night of his initiation into the mysteries of the Śaiva cult, when he saw mice running over the image of Śiva and defiling it; second, his resolve to abandon the world and seek salvation, the fruit of his profound grief on account of the death of his sister; and third, his flight from home at the age of twenty-one, in order to avoid the entanglement of marriage, into which his parents were determined he should enter. The history of the first twenty-one years of the life of the future Swāmī is thus summed up—(1) in the negative determination to eschew idolatry, (2) in the positive determination to seek salvation, and (3) in the further resolve to allow no such entanglement as marriage to interfere with his supreme purpose. There is no reason for questioning the essential truthfulness of the account of these early experiences. The sincerity of his revolt from idolatry, however it came about, is proved by the magnificent courage and vigour with which he afterwards attacked it in its chief centres, such as Hardwār and Benares. And the reality of his abandonment of the ties of home and kindred is proved by the fact that after his escape from his relatives he never again looked upon their faces.

After his flight from home he spent about eighteen years as a *Sannyāsī*, or religious mendicant, wandering from place to place and learning from a great variety of teachers. He first came under Vedāntic influences, and for a time was convinced of the identity of the individual soul and the Supreme Soul. He was initiated into the *Brahmāchārya* order and given a new name, *Śuddha Chaitanya*. Later, he was initiated into the fourth order of *Sannyāsīs*, and was given the name by which he always has been known, namely, Dayānand Sarasvatī. He retained little or nothing, however, that came to him from his Vedāntic teachers except this name, for he soon deserted the standpoint of the *Vedānta* for that of the *Yoga*. The crowning religious influence on the life of Dayānand Sarasvatī was exerted by the blind Vedic scholar, Swāmī Virajānand of Mathurā, an enemy of modern Sanskrit literature, who, as a condition of teaching him, demanded that he should throw away all his modern Sanskrit books. This condition being fulfilled, the blind Swāmī taught Dayānand the Vedas, and dismissed him with the words: 'I want thee to go forth into the world and spread enlightenment among mankind.' Thus ends the second period in the life of Swāmī Dayānand Sarasvatī (1845–1863).

His religious development may be briefly summed up. It was a movement from Paurāṇic Hinduism through philosophical Hinduism to Vedic Hinduism. He successively deserted Śaivism and Vedāntism, but clung to the end to the *Sāṅkhya-Yoga* as the philosophical point of view from which, in his opinion, the Vedas ought to be interpreted. The last twenty years of the life of Swāmī Dayānand Sarasvatī is the period of his public ministry (1863–1883). It is a history of preaching tours throughout the length and breadth of India, from Bombay and Poona on the South to Calcutta and Lahore on the North; of public discussions with pandits, maulvies, and missionaries; and of literary work. After his first preaching tour of four years, he went into retreat on the banks of the Ganges 'for further contemplation and perfection of character.' Happily, we have a picture, from the pen of a European, of Swāmī Dayānand as he appeared in 1868, during this time of partial retreat:

'In the afternoon I visited a fakeer down on the sand, by the water's edge, of whose learning and sanctity I had heard in the crowds of the bazaar. I found him sitting in a little straw booth; and a splendid looking fellow he was, with his herculean frame and massive limbs, fine oval cranium, and really benevolent face. He was sitting almost entirely naked, and entered at once into pleasant conversation. I found him to belong to a class of mendicants who profess to have entirely abandoned the world, and are living in complete contemplation of the Deity. The conversation revealed in him a fine mind, and well

versed in the ancient lore of the Hindus. He talked only Sanskrit, and our conversation was conducted through an interpreter' (T. J. Scott, *Missionary Life among the Villages of India*, p. 162).

After about two and a half years, Swāmī Dayānand emerged from his 'retreat' and plunged at once into public discussion and controversy. In the great centres of idolatry his usual theme was, 'Is there idolatry in the Vedas?' Against this practice he thundered with all the force of his strong will, impressive personality, and unusual eloquence, and, according to his biographers, uniformly carried the day.

It was at Bombay, on the 10th of April 1875, that Swāmī Dayānand founded the Ārya Samāj. He visited Delhi in 1877 at the time of the grand *Darbar*, where he met certain gentlemen from the Panjāb, who invited him to visit their province. This was the occasion of his first visit to the Panjāb, the scene of the future triumphs of his Society. From 1878 to 1881 there was the curious episode of a partnership between the Ārya Samāj and the Theosophical Society. Both parties were disappointed, for a split soon took place on the question of the personality of God. For the history of this strange union, see, as representing the Ārya point of view, the various biographies of Swāmī Dayānand; and for the point of view of the Theosophical Society, Col. Olcott's chapter on 'Swāmī Dayānand' in *Old Diary Leaves*.

Swāmī Dayānand came into contact with many different leaders of religious thought in India, *e.g.* Dabendra Nath Tagore and Keshab Chandra Sen of the Brahmo Samāj, Madame Blavatsky and Col. Olcott of the Theosophical Society, Bholānāth Sārābhāi of the Prārthnā Samāj, Sir Saiyid Ahmad of Reformed Islām, and Dr. T. J. Scott and Rev. J. Gray representing Christianity. There is evidence that Swāmī Dayānand made overtures to the leaders of both the Prārthnā Samāj (see Krishnarāo Bholānāth, *Life of Bholānāth Śārābhāi*, p. 7 f.) and the Brahmo Samāj, with a view to organic union, the amalgamated body to be called 'The Ārya Samāj.' But no union with any other organization was even temporarily effected except with the Theosophical Society.

In 1882–1883 the Swāmī visited Rājputāna, and while there became the friend and counsellor of princes. According to his biographers, he acted the part of a modern John the Baptist in rebuking the Mahārājā of Jodhpur for being under the influence of a courtesan. A few days later the Swāmī fell ill. Some think that a slow poison had been given him in his food. At any rate, the illness was fatal. He died at Ajmēr on the 30th of October, 1883, in the fifty-ninth year of his age.

Swāmī Dayānand was, from all accounts, a man of splendid physique, impressive personality, and great strength of will. T. J. Scott speaks of his 'magnificent presence' and 'imperious zeal,' and tells how 'he would crush an ordinary opponent with a sledge-hammer style.' The epithet *mahāmūrkh* ('great fool') was often on his lips when debating with the defenders of idolatry. Olcott speaks of him as 'tall, dignified in carriage, and gracious in manner,' and gives a general estimate of him in these words: 'The Swāmī was undoubtedly a great man, a learned Sanskrit Pandit, with immense pluck, force of will, and self-reliance—a leader of men' (*Old Diary Leaves*, p. 406).

2. **Doctrine.**—The official creed of the Ārya Samāj is in the form of a Decalogue, and it reads as follows:—

i. God is the primary cause of all true knowledge, and of everything known by its name.

ii. God is All-Truth, All-Knowledge, All-Beatitude, Incorporeal, Almighty, Just, Merciful, Unbegotten, Infinite, Unchangeable, without a beginning, Incomparable, the Support and the Lord of All, All-pervading, Omniscient, Imperishable, Immortal, Exempt from fear, Eternal, Holy, and the Cause of the Universe. *To Him alone worship is due.*

iii. The Vedas are the books of true knowledge, and it is the paramount duty of every Arya to read or hear them read, to teach and preach them to others.

iv. One should always be ready to accept truth and renounce untruth.

v. All actions ought to be done conformably to virtue, i.e. after a thorough consideration of right or wrong.

vi. The primary object of the Samāj is to do good to the world by improving the physical, spiritual, and social condition of mankind.

vii. All ought to be treated with love, justice, and due regard to their merits.

viii. Ignorance ought to be dispelled and knowledge diffused.

ix. No one ought to be contented with his own good alone, but every one ought to regard his prosperity as included in that of others.

x. In matters which affect the general social well-being of the whole society, one ought to discard all differences and not allow one's individuality to interfere, but in strictly personal matters every one may act with freedom (*Handbook of the Ārya Samāj*, 1906).

It will be noticed that of the 'Ten Principles' given above, the first three, which deal with the existence and nature of God and with the doctrine of Vedic Scripture, are theologically the most important. The last seven are ethical principles. The Creed of the Ārya Samāj, it will be observed, is a *short* Creed. It is published with considerable variations in the phraseology, there being no insistence upon the same form of words.

In the *Handbook of the Ārya Samāj* we are told that 'the theology of the Ārya Samāj may be summed up in one word, viz. *the Vedas*' (p. 21). Combining principles i. and iii. of the Creed, namely, 'God is the primary cause of all true knowledge,' and 'The Vedas are the books of true knowledge,' we have the doctrine of the *Divine Origin of the Vedas*, which will now be considered.

In approaching this doctrine, let us first notice the problem of the regeneration of India, religious, political, and scientific, as it presented itself to the mind of the founder of the Ārya Samāj. He found himself confronted by a variety of faiths both indigenous and foreign. Of religions of foreign origin there were Islām, introduced in the 10th cent., and Christianity, a comparatively recent importation from the West. The indigenous religion of India, namely, Hinduism, presented itself as a vast congeries of faiths, ranging all the way from the strict *advaita* doctrine of Śaṅkarāchārya to the crudest and grossest superstitions embodied in the Tantras, the whole being held together in a kind of external unity by the vast hierarchical organization of caste. Such was the religious environment of Swāmī Dayānand. There was also a political environment furnished by the vast and impressive administration of the British Government in India, and a scientific environment consisting of the spectacle on all sides of railways, canals, telegraph wires, steam-engines, etc. Thus, as Swāmī Dayānand wandered up and down over India, he studied not only the past but also the present, not only the thought of India as embodied in *Veda* and *Upaniṣad*, *Sūtra* and *Epic*, but also the thought of Europe as embodied especially in the inventions of modern science, everywhere manifest in India.

The problem which confronted him was how to reform Indian religion, how to effect a synthesis of the old and the new, of the East and the West, in such a way as to guarantee the intellectual and spiritual supremacy of the Indian people, do full justice to the attainments of other nations, and provide a universalistic programme of religion. The solution of this problem was found by Swāmī Dayānand in the doctrine of the Vedas as the revealed Word of God.

There are many points of contact between Dayānand Sarasvatī and Martin Luther. As Luther the German monk was a child of the European

Renaissance, so Dayānand the Gujrātī monk was a child of the Indian Renaissance. Both alike felt the tug of the 'Zeitgeist'. Both in their different ways became exponents of the new spirit. Luther attacked indulgences, while Dayānand attacked idolatry. Luther appealed from the Roman Church and the authority of tradition to the Scriptures of the Old and New Testaments. Swāmī Dayānand appealed from the Brāhmanical church and the authority of *smṛti* to the earliest and most sacred of Indian Scriptures. The watchword of Luther was 'Back to the Bible'; the watchword of Dayānand was 'Back to the Vedas.'

Swāmī Dayānand's theory of the Vedas may be outlined as follows:—The word *Veda* means 'knowledge.' It is God's knowledge, and therefore pure and perfect. This transcendent and heavenly knowledge embraces the fundamental principles of all the sciences. These principles God revealed in two ways: (1) in the form of the four Vedas, which were taught to four *Ṛṣis*, Agni, Vāyu, Sūraj, and Aṅgira, at the beginning of Creation over one hundred billion years ago; and (2) in the form of the world of nature, which was created according to the principles laid down in the Vedas, somewhat as the Tabernacle is said to have been built according to the pattern shown in the mount (Ex 25^{40}). Mark the doctrine of correspondence involved. The book of Vedic Scripture agrees with the book of nature, so that the latter confirms the truth of the former. As Swāmī Dayānand says: 'I regard the Vedas as self-evident truth, admitting of no doubt and depending on the authority of no other book, *being represented in nature, the Kingdom of God*' (*Handbook of the Ārya Samāj*, p. 35).

Note the ambiguity in the meaning assigned to the word *Veda*. It is (1) God's knowledge, the content of the Divine Omniscience, *which is one thing*; and (2) it is the collection of Aryan literature known as the 'Four Vedas,' which is *quite a different thing*. One may believe in the Veda in the first sense, without accepting it in the second sense. The Vedas, then, being regarded as 'the Scripture of true knowledge,' the perfect counterpart of God's knowledge so far as 'basic principles' are concerned, and the 'pattern' according to which Creation proceeded, it follows that the fundamental principle of Vedic exegesis will be the interpretation of the Vedas in such a way as to find in them the results of scientific investigation. As E. D. Maclagan remarks: 'The bases of the Aryan faith are the revelation of God in the Vedas and the revelation of God in nature, and the first practical element in this belief is the interpretation of the Vedas in conformity with the proved results of natural science' (*Census of India*, 1891, xix. 175). In other words, there is involved the assumption that the Vedas as 'the books of true knowledge' must contain 'the basic principles of all the sciences,' and accordingly that every scientific discovery and invention of modern times must be found expressed, germinally at least, in the Vedas. The science of the West, then, is but the realization of the scientific programme anticipated by the seers of the East, over one hundred billion years ago. To the ancient East belonged the faculty of *seeing*: to the modern West belongs the faculty of *doing*. The programme comes from the East; the realization, from the West. In this way Swāmī Dayānand sought to render to the East the things which belong to the East, and to the West the things which belong to the West. Thus the West, in realizing the principles laid down in the Vedas, is unconsciously following the Vedic religion.

The principle that all the sciences have their revealed source in the Vedas is enlarged by the further principle that all religions have their original and inspired source in the same early literature. The doctrine of the Vedas as a primitive revelation given once for all to mankind, and so 'the fountain-head of religion,' reminds one of the similar doctrine of 'primitive revelation' held by some Christians. Diversities in religion are explained as due to the influence of different environments, in the one theory, upon the primitive Biblical revelation, in the other theory, upon the primitive Vedic revelation.

The Ārya doctrine of Vedic Scripture may now be summed up: (1) The Vedas are a revelation from God, as is proved by their correspondence with nature. (2) They are the sole revelation from God, since no other books show this correspondence. (3) They are accordingly the fountain-head of the science and the religion of all mankind. Such is the doctrinal basis of the two great duties of the Ārya Samāj, namely, (*a*) to recall India to the forsaken Vedic paths, and (*b*) to preach the Vedic gospel throughout the whole world.

It is evident from all this that Pandit Dayānand Sarasvatī was a man of large views. He was a dreamer of splendid dreams. He had a vision of India purged of her superstitions, filled with the fruits of science, worshipping one God, fitted for self-rule, and honoured as the primeval source of the world's science and religion.

All will admit that the vision of a regenerated India as seen by the prophet and founder of the Ārya Samāj is a splendid and inspiring one. But what about the means to be employed for the realization of this vision? As above stated, it is a return to the Vedas, but, be it noted, to the Vedas as interpreted, not by the traditional scholarship of Indian orthodoxy or by the critical scholarship of the West, but by the scholarship of the Ārya Samāj alone. The Scripture basis of the Ārya Samāj then, while formally the Vedas, is in reality a certain interpretation of the Vedas, which is not recognized as legitimate by a single Sanskrit scholar, either Indian or European, outside of the Ārya Samāj. This interpretation must be characterized as highly subjective and fanciful, different meanings being applied to the same word according to the caprice of the interpreter. One can readily imagine what kind of interpretation is involved in the attempt to find in the Vedas the programme of modern scientific inventions. Thus Swāmī Dayānand's interpretation of the Vedas is marked by (1) great emphasis on the etymology and neglect of actual Vedic usage, and (2) assumption of irregularity in the Vedic moods, tenses, persons, and cases. For the proof of these statements it is sufficient to consult Swāmī Dayānand's *Commentary on the Rig Veda*. The pamphlets on Pandit Dayānand's interpretation of the Vedas, written by T. Williams of Rewāri (1893–1894), and a pamphlet entitled *The Dayānandī Interpretation of the word Deva in the Rig Veda* (1897) may also be consulted. In this connexion the opinion of Max Müller is worth quoting: '*By the most incredible interpretations* Swāmī Dayānand succeeded in persuading himself and others that everything worth knowing, even the most recent inventions of modern Science, were alluded to in the Vedas. Steam-engines, railways, and steamboats, all were shown to have been known, at least in their germs, to the poets of the Vedas; for Veda, he argued, means knowledge, and how could anything have been hid from that?' (Max Müller, *Biographical Essays*, ii. 170). In a word, the Vedic interpretation of Swāmī Dayānand is interpretation in the interests of a theory—the theory, namely, that the Vedas teach a pure and exalted monotheism, and contain 'the basic principles of all the sciences.' It is as if one should attempt to

find a pure monotheism and a complete programme of scientific inventions in Homer's *Iliad* or Virgil's *Æneid*. Every historical allusion in the Vedas is carefully explained away, on the ground that 'the Vedas, being divine revelation, expound the laws of existence in its various departments, which precludes the mention of persons and places' (*Ārya Patrikā*, Lahore, Oct. 19, 1901). Thus *a priorism* reigns supreme. Induction has no place. Enough has been said to show that the doctrines of the Ārya Samāj are based not on the Vedas themselves but upon an *uncritical* and *unscientific* interpretation thereof.

On the other hand, it is only fair to say that Swāmī Dayānand has shown a sound instinct in rejecting the manifold absurdities found in *smṛti*, or tradition, and in seeking a basis in the early literature for a purer and more rational faith. That in his ignorance of historical and critical methods he set up a method of interpreting the Vedas which must constantly remain the target of the critical spirit, may in charity be regarded as his misfortune rather than his fault. Nor is this all that can be said. For, as in the case of those who are determined to regard Srī Kṛṣṇa as an incarnation of deity, it is healthier and more ethical to allegorize his adventures with the *Gopis* than to take them literally, although by so doing a sin is committed against the critical conscience; even so we may say that for those who are bound to regard the Vedas as the Eternal Word of God, it is better that they should, by peculiar tricks of interpretation, read into the text a fairly consistent theism, than on the basis of a rigidly scientific interpretation find therein only a vague Henotheism or Pantheism. So much for the Ārya doctrine of the Vedas, which from its importance has been treated at length. The other doctrines of the Ārya Samāj may be dismissed with a word.

The *theology* of the Ārya Samāj is the religious philosophy of the *Sāṅkhya-Yoga*. The fundamental principle of the *Sāṅkhya* is the dualism of *prakṛti* and *puruṣa*, 'matter' and 'soul.' The *Yoga*, or theistic *Sāṅkhya*, takes one of the innumerable souls recognized by the non-theistic *Sāṅkhya* and makes it the Supreme Soul. The result is a kind of trinity consisting of God, soul (or souls), and matter, each category of being having independent self-existence. God is eternal; so also is each soul; so also is matter. Pandit Ralla Rām refers to this as 'the universal trinity recognized by science and religion alike,' and as 'the most important of the doctrines of the Ārya Samāj' (*Ārya Patrikā*, Dec. 14, 1901).

As regards the *soteriology* of the Ārya Samāj, the great means of salvation is the effort of the individual, and for this a sufficient sphere is allowed through the doctrine of Transmigration, or repeated births. Salvation is conceived as virtually an eternal process. There is no remission of sins. *Karma* is inexorable. As regards the freedom of the will, the Ārya Samāj holds that 'we are not free to will an act, if we were created by some one else. . . . In order to be free, we must be believed to be eternally acting as we thought best, or as our previous *karmas* determined the course for us, receiving, according to God's eternal laws, the fruits of our good or bad deeds, and shaping in accordance therewith, and with our own hands, as it were, our future destiny' (*Ārya Patrikā*, Dec. 14, 1901).

It is evident from all this that the God of the Ārya Samāj is conceived as a great Cosmic Executive, whose business it is to preside over the inexorable processes of transmigration and *karma*. He is, as it were, a constitutional monarch, whose power is limited and defined by the eternal existence of two other 'estates,' namely, *soul* and *matter*. Thus 'absolutism is denied even to God.'

In the Ārya system of theology there is an attempt to settle the age-long conflict between science and religion. The doctrine of correspondence between the book of Vedic Revelation and the book of Nature is used for this purpose. Miracle is rejected.

Ethically, there is one doctrine of the Ārya Samāj which is most objectionable. This is the doctrine of *Niyoga*, which may be described as a virtual recognition of the principle of free love, sanctified by a temporary arrangement. Thus, in the English translation of the *Satyārth Prakāś* (ch. iv. p. 150), we read: 'A man may also contract *Niyoga* with eleven women (one after the other), just as a woman may enter into the relation of *Niyoga* with eleven men (one after the other).' Swāmī Dayānand's doctrine of *Niyoga* has been correctly summarized as follows by Lālā Ruchi Rām in the *Niyoga Doctrine of the Ārya Samāj* (p. 34):

'The Ārya Samāj allows even married men and married women to enter into the *Niyoga* connexion with one another or with widows and widowers under the following distinctly specified circumstances:

(1) When the husband or wife is incapable of producing issue through disease, etc.

(2) When the husband has been absent from home longer than a given period of time, for the sake of religion, for the acquisition of knowledge, or for earning a livelihood.

(3) When he or she is troublesome or in the habit of saying unkind words.

(4) When the wife is sterile, that is, if she has not been able to produce issue within eight years after the marriage.

(5) When the children born of her do not live long.

(6) If she begets girls only.

(7) If the wife be pregnant or constantly sick, or if the husband be always in bad health, and the other party be in the prime of youth and unable to control his or her passions.'

The motives which underlie this concession are twofold: (1) the duty of perpetuating the male line of a family, and (2) the desirability of legitimizing an errant passion and so 'preventing adultery and illicit intimacies.' '*Niyoga* is solemnized publicly even as marriage is' (*Satyārth Prakāś*, p. 147), and thus differs from prostitution. It is evident from all this that Swāmī Dayānand, like Plato, held strange views as to the proper relations between the sexes. In this respect both alike seem to have been theorizers. The members of the Ārya Samāj have not been courageous in practising *Niyoga* in the manner prescribed. Says the editor of the *Ārya Patrikā* (Sept. 27, 1902): 'We have to confess with regret that even the Āryas have not been able to set a single example of *the higher kind of Niyoga*.'

Before leaving the doctrines of the Ārya Samāj, it is proper to sum up the things also which are commendable in the doctrines and practices of this Society. Briefly stated, they are: (1) *negatively*, the rejection of pantheism and of some of the doctrines included therein, such as illusion and absorption, the casting over of the Paurānic superstitions together with idolatry, and a more or less vigorous fight against certain hurtful social customs such as caste, child-marriage, and intemperance; and (2) *positively*, the promulgation of a fairly consistent theism, the doctrine of the eternal identity of the soul, belief in prayer and in the need of the social worship of God, and a certain enthusiasm for education and for social and political reform.

3. **The Society.**—The organization which Swāmī Dayānand founded for the purpose of realizing his doctrine, propagating his faith, and regenerating India and the world, is known as the Ārya Samāj. *Samāj* means 'society' or 'assembly,' and *Ārya* is an ancient Indian epithet meaning 'noble.' *Ārya Samāj*, then, means 'society of the noble.' The name 'Ārya' is a patriotic and religious name, freighted with memories of ancient India, and

applied to the members of the three 'twice-born' castes. As such it was fitted to awaken patriotic sentiments. It is a social and political more than a religious name. In this respect it differs from the names of the other theistic and reforming movements of modern India, as, *e.g.*, the *Brahmo Samāj*, or 'Society of *Brahma* (God),' and the *Prārthnā Samāj*, or 'Society of Prayer.'

Some account will now be given of the history, organization, government, worship, methods of work, statistics, and future prospects of the Ārya Samāj.

(1) *History.*—The chief event of the period reaching from the death of Swāmī Dayānand (1883) to the present time is the division of the Ārya Samāj into two sections. The ostensible grounds of this split are twofold: (*a*) differences of practice in regard to the use of flesh for food, and (*b*) differences in theory concerning the proper policy to be pursued in higher education. From the point of view of the first difference, the two sections are called respectively the 'meat-eating' party and the 'vegetarian' party; and from the point of view of the second, the 'College' party and the '*Mahātmā*,' or old-fashioned party. Both differences run back into a still more fundamental difference of opinion, namely, concerning the degree of authority to be ascribed to the teachings of Swāmī Dayānand. In this matter, the position of the College party, as the party of light and culture, is liberal, while the attitude of the *Mahātmā* party is conservative. The educational work of each section is carried on in harmony with its special theory. The 'Cultured' party has a College at Lahore, the *Dayānand Anglo-Vedic College*, which it administers on modern lines and with a considerable degree of efficiency. The *Mahātmā* party, on the other hand, has an institution at Hardwār known as the *Gurukula*, in which ancient ideals of education receive the emphasis.

(2) *Organization and government.*—The organization of the Ārya Samāj provides for the local Samāj or congregation, the provincial assembly, and a general assembly for all India. The conditions of membership in a local Samāj are (*a*) implicit faith in the Ārya 'Decalogue,' or Ten Principles; and (*b*) belief in the canons of Vedic interpretation laid down by Swāmī Dayānand. The minimum age for membership is eighteen. There is no special ceremony of initiation for members of the 'twice-born' castes, but outsiders, such as Christians and Muhammadans, must undergo a ceremony of purification. The members of a local Samāj are of two kinds, probationers, or non-voting, and approved, or voting, members. The period of probation is one year. Sympathizers are also mentioned as a separate class. The officers of a local Samāj consist of a President, Vice-President, Secretary, Treasurer, and Librarian, elected by the voting members. The officers, it will be observed, are those of an ordinary secular association. The provincial assembly is a representative body composed of delegates appointed by the local congregations. Each affiliated Samāj has the right to send one delegate for every twenty members. Thus the form of government of the Ārya Samāj is clearly representative.

(3) *Worship.*—The weekly religious service of the Ārya Samāj is held on Sunday morning, since the Government offices are closed on that day. It is a long service, lasting three or four hours. Directly in front of the speaker's platform in the place of worship is the Vedic Fire Altar, which occupies the same relative position as the Communion Table in many Christian churches. Religious worship begins with the burning of incense (the *homa*, 'sacrifice'), accompanied by the chanting of Vedic verses. This is followed by prayers, exposition of the writings of Swāmī Dayānand, hymns, sermon, and lecture, the whole ending with the recitation of the Creed. With the exception of the use of incense, the constituents of worship are those of an ordinary Protestant service. The service is Puritan in its simplicity. There is no official priesthood. Members who are qualified take their turn in conducting public worship. The prayers are mostly extempore, and the sermon is long. For a very graphic account of the devotional services of the Ārya Samāj, see J. C. Oman, *Cults, Customs, and Superstitions of India*, pp. 152–166.

(4) *Methods of work.*—In its methods of work the Ārya Samāj follows in general the methods current among the various Missionary Societies working in India. It uses preaching, education, tract distribution, newspapers, etc. There are two classes of preachers, honorary and paid. The honorary preachers are local, the paid are itinerant. The first class consists of men in regular employment as clerks, pleaders, teachers, physicians, and other business men, mostly English-educated, and many of them College-bred. The paid preachers, on the other hand, give all their time to the work of preaching, and are, as a rule, educated only in the vernacular. The 'Cultured' party, it is interesting to observe, emphasizes *education*, while the *Mahātmā* party emphasizes *preaching*. Each section of the Ārya Samāj maintains a number of high-schools and orphanages, and also several newspapers and reviews.

(5) *Statistics and future prospects.*—According to the *Imperial Gazetteer of India* (1907), i. 474, the Ārya Samāj in 1901 had 'over 92,000 professed adherents.' It 'showed an increase of 131 per cent. in the decade preceding the last census' (*ib.*). The Ārya Samāj probably has by this time a membership of considerably over 100,000. The largest number of members is found in the Panjāb and the United Provinces, nearly 98 per cent., according to the census of 1901. Thus the Ārya Samāj is essentially a North India religious movement. There are a few branches in Burma and in British East Africa, the fruit of work among Indians who have emigrated to those regions. Lahore is the religious centre and capital of the Ārya Samāj, although Ajmēr, as the scene of the death of Swāmī Dayānand and the seat of the Vedic press, is a close rival.

As regards the future of the Ārya Samāj, it is difficult to play the prophet. It is undoubtedly the most popular among the indigenous reforming movements in North India to-day. In the matter of female education, temperance, and other reforms, it is in the line of progress. It also ministers to the patriotic spirit through its claim that the Vedas are the original source of all the religion and science of the world. It contains many earnest and good men who sincerely desire the welfare of their country. By its emphasis on education and social reform it is playing no unimportant part in the regeneration of India. It keeps in close touch with orthodox Hinduism through the fact that comparatively few members of the Ārya Samāj have broken caste. Will it ultimately be reabsorbed into the abyss of Hinduism, as some think probable, or will it advance to a still more rational and enlightened position?

LITERATURE.—I. *BIOGRAPHICAL.*—'The Autobiography of Dayānand Sarasvatī Swāmī' in the *Theosophist*, Oct. and Dec 1879 and Nov. 1880; Max Müller, 'Dayānand Sarasvatī,' in *Biographical Essays*, 1884; J. C. Oman, *Cults, Customs, and Superstitions of India*, 1908, ch. vii. 'The Ārya Samāj and its Founder'; Pandit Lekh Rām and Lālā Ātmā Rām, *Maharṣi Swāmī Dayānand Sarasvatī Jī Mahārāj kā Jīvan Charitra*, 1897 (the standard biography of the Swāmī); Bāwā Arjan Singh, *Dayānand Sarasvatī, Founder of the Ārya Samāj*, 1901; Bāwā Chhajju Singh, *The Life and Teachings of Swāmi Dayānand Sarasvatī*, 1903.

II. *DOCTRINAL.*—*Rigvedabhāṣya* (*i.e.* the Rigveda translated into Hindi and explained); *Rigvedādibhāṣya Bhūmikā* (introduction in Hindi to the above-mentioned *Commentary on the Vedas*); *Satyārth Prakāś*, 'Light of Truth,' Eng. tr., Chiranjiva Bharadwāja, 1906. The three works just mentioned are all from the pen of Swāmī Dayānand Sarasvatī, and constitute the authoritative literature of the Ārya Samāj.

III. *CRITICAL.*—Pandit Kharak Singh and H. Martyn Clark, *The Principles and Teaching of the Ārya Samāj*, 1887; Henry Forman, *The Ārya Samāj, its Teachings, and an Estimate of it*, 1890; Lālā Ruchi Rām Sahni, *The Niyoga Doctrine of the Ārya Samāj*, Lahore, 1897; Pandit S. N. Agnihotri (of the *Deva* Samāj), *Pandit Dayānand Unveiled*; B. A. Nag, 'The Ārya Samāj, its History, Progress, and Methods,' in *Indian Evangelical Review*, Oct. 1901; H. D. Griswold, 'The Ārya Samāj,' in *Transactions of the Victoria Institute*, xxxv., 1903; Iswar Saran, 'The Ārya Samāj, its Present Position,' in the *Hindustan Review*, Allahabad, Dec. 1907; *A Hand-Book of the Ārya Samāj*, Benares, 1906; *The Vedic Magazine and Gurukula Samāchār*, vol. i., 1907–1908.

H. D. GRISWOLD.

ASAṄGA.—The sources of our knowledge about Asaṅga's life are the records left by Paramārtha (6th cent.), Yuan Chwang [Hiuen Tsiang] (7th cent.), I-Tsing (do.), and Tāranātha (16th cent.). From these we can gather the following data. He was born of the Kāuśika family in Puruṣapura in the north of India. He was the eldest of three brothers, of whom the youngest, known as Vasubandhu (*q.v.*), was intimately associated with him in religious and literary activities. The school in which Asaṅga was ordained as a monk was the Mahīśāsaka, a branch of the most ancient form of Buddhism; but he was afterwards (we do not know how or when) converted to a more idealistic phase of Buddhist philosophy, which is now known as Asaṅga's idealism. Still we see that his idealism is much influenced by his former faith.

According to Yuan Chwang, Ayodhyā (the modern Oudh) was the chief scene of his activity. Here it was that he taught publicly and wrote books, etc.; and here probably in Ayodhyā, on the bank of the Sarayū, he converted his brother Vasubandhu to the idealistic Mahāyāna, though, according to Paramārtha, this took place in Puruṣapura, their native town. In any case it is clear that both Asaṅga and his brother were closely connected with the court of Ayodhyā, and that they were contemporaries of King Bālāditya and his father Vikramāditya. If we identify this Vikramāditya with Chandragupta II. of the Gupta dynasty, his date can be fixed in the first half of the 5th cent. A.D.; if with Skandagupta, in the second half. This is confirmed from another source. Yuan Chwang tells us that his master Śīlabhadra was 107 years old when he saw him in 633 A.D. Śīlabhadra's master, Dharmapāla, was a great systematizer of Asaṅga's teaching, but he was not his immediate disciple. Thus we have sufficient grounds for fixing Asaṅga's date in the 5th cent. of our era.

Many writings (*śāstras*) ascribed to Asaṅga are enumerated by Yuan Chwang. They are all handed down to us in Chinese translations. Although not one of the originals has yet been discovered, and there can, therefore, be no question of any strict criticism, nevertheless the authenticity of their tradition is assured by the fact that most of them were brought to China by Yuan Chwang himself, who was the greatest apostle of Asaṅga's philosophy in the East. The most important are the following:—

(1) Yogāchārya-bhūmi (Nanjio, No. 1170). This contains descriptions of the practice of Yoga, and of the stages one successively attains through it. The work is ascribed to the revelation of Maitreya. (2) Mahāyāna-samparigraha (Nanjio, No. 1247), a condensed treatise on the whole system of Asaṅga's psychology. (3) Prakaraṇa-āryavāchā (Nanjio, Nos. 1177 and 1202), an exposition of the moral and practical aspects of the system.

We learn from these sources that Asaṅga's system, in contrast to the Mādhyamika of Nāgārjuna, is decidedly realistic. Though it bears the name of Vijñāti-mātratā, *i.e.* idealism, and though Buddhist enlightenment consists, according to Asaṅga, in release from attachment to the objective world, his philosophy postulates the reality of each man's personality and also of the external world. In this respect his system is very near to the Sāṅkhya.

Asaṅga terms mind the *ālaya*, *i.e.* abode or *nidus* where all things, both subjective and objective, are latent, and whence they are projected and manifested. This *nidus* produces from and by itself intelligence or will (*manas*, otherwise *kliṣṭa-manas*), reason (*buddhi*, or *manas*), and five senses (*vijñānāni*) in succession. It is, therefore, called the eighth (*aṣṭama*), just like the Sāṅkhyan *puruṣa*. Each of the sense-organs projects or manifests its own objects, both fine and gross, by virtue of the seed (*bīja*) stored up in the *ālaya*; and the world thus manifested or objectified reacts upon the eighth (the *ālaya*) through the seven subordinate mind-organs, by 'perfuming' them. The *nidus*, or source of the world, the *ālaya*, acts, in this way, as that which *takes on* the impressions received from the objective world, *i.e.* as the *ādhāna*. Illusion in human life thus consists in regarding the objectification of one's own mind as a world independent of that mind which is really its source. To get rid of this fundamental illusion, we must study the true nature of our mind and its objectifications. Right knowledge of its true nature, the *dharma-lakṣaṇa*, leads us to the full development of the 'seeds of enlightenment,' and, as a consequence, to the absorption of the whole world into one's own self. Following, therefore, on right knowledge, this absorption, first of thought and then of objective phenomena into the inner self, *i.e.* the *yoga-āchāra*, is the necessary step to the attainment of Buddhahood (see BODHISATTVA).

Asaṅga teaches seventeen grades (*bhūmi*) of this attainment, and also the three personalities or bodies (*trikāya*, see ADIBUDDHA, i. 97ᵇ, and *JRAS*, 1906, p. 943 ff.) of the Buddha (see TRIADS [Bud.]); but neither of these doctrines was originated by him. The characteristic feature of his system is the elaborate and scholastic systematization of a theory of mind and of the seeds contained in it. On this account the Buddhist sect founded upon his system is called the *Dharma-lakṣaṇa*, *i.e.* the wisdom which shows us the true nature of all phenomena. It is, therefore, a philosophy rather than a religion; and such religious traits as may be found in it are but loosely connected with the system.

In Asaṅga's Buddhism, faith in Gautama Buddha had declined, being gradually superseded by the worship of Maitreya, the future Buddha. This worship maintained its ground for a long time in India and the East, but it was at last overwhelmed by another feature of popular Buddhism, the worship of Amitāyus (*q.v.*), lord of the Sukhāvatī in the West. In this way Asaṅga's Buddhism lost its hold on India and China, and is now preserved simply as a branch of learning among the Japanese Buddhists.

I. Introductory Discussion and Definition.—'Asceticism' is derived from the Gr. word ἄσκησις = 'training.' The 'athlete' was one trained, and one might be an 'athlete' in virtue (πάσης ἀρετῆς ἀθλητής, Diod. *Excerp.* 551). So very early the ascetic became the spiritual athlete of Church History. Two quite different conceptions mingle in the history of asceticism. One of these preserves the original meaning of discipline of the body for some ultimate purpose, as when William James urges sacrifice to God and duty as a means of training the will (*Psychology*, vol. ii. p. 322, cf. also pp. 579–592). The other conception distrusts the body altogether. Asceticism has then as its function not the training but the destroying of the body or the negation of its importance.

1. **Pathological elements in asceticism.**—From the beginning we have to bear in mind that in the history of asceticism we are often dealing with phenomena distinctly *pathological*. The fact that this has only recently been fully recognized makes a critical investigation of all the phenomena exceedingly desirable. Whether we deal with the 'flagellantes' or with instances of *perversio vitæ sexualis*, we must recognize a distinctly psycho-pathological element in much of the self-torture and self-abnegation that goes by the name of asceticism. The close connexion between the excited emotions in the regions of love and religion has often been pointed out and variously explained (Neumann, *Lehrbuch der Psychiatrie*, p. 80; Krafft-Ebing, *Psychopathia Sexualis*, pp. 9–11); and in diseased conditions insane impulses to inflict pain and to suffer pain mark the mind controlled either by religious or by sexual emotions. It is not now difficult for the modern psychiatrist to recognize in the standard saints' stories of the Middle Ages many impulses familiar to him from his experience in the Insane Hospital, but which were, of course, at that time regarded only as evidence of piety and distinguished fellowship with God (Friedreich, *Gerichtliche Psychologie*, p. 389). Perversions of the natural impulses to protect the body from pain and destruction may range from slight and occasional contradictions to the madness of suicide. Thus no history of asceticism is complete that does not take into account the epidemics of hysteria in which all kinds of excesses against the body are committed. These outbreaks are common in Persia as well as in India, and marked the north of Italy from the 10th cent. until the 13th. At every step of a rational inquiry into asceticism in its most pronounced phases we must ask ourselves, How far are we dealing with distinctly morbid and neuropathic phenomena?

Literature.—Maudsley, *Pathology of the Mind*, London, 1879; Krafft-Ebing, *Psychopathia Sexualis*, Stuttgart, 1887, *Lehrbuch der Psychiatrie*, 1879; Friedreich, *Diagnostik der psyc. Krankheiten*[2], Würzburg, 1832, and *System der gerichtl. Psychologie*, Regensburg, 1842; Cramer, *Gerichtl. Psychiatrie*[4], 1908; H. Neumann, *Lehrbuch der Psychiatrie*, Erlangen, 1859.

2. **Survival forms in seeming asceticism.**—We must also deal with *survival forms* which are falsely classed as ascetic. Customs are classed as ascetic even by so critical an historian as Zöckler (*Askese und Mönchtum*[2], 1897) which may more correctly be connected with the survival of older moralities. Thus the Essenes saw the hope of Israel in desert life and in return to a semi-nomad communism. How far this was ascetic, however, it is impossible to say. To be ascetic this type of communism must be shown to be connected either (*a*) with a disciplinary process for the attainment of righteousness, or (*b*) with a complete negation of the body by its mortification. Even granting that the Essenes were ascetics (cf., however, art. 'Essenes' in Hastings' *DB*, in which this is not emphasized), all their peculiarities are not to be connected with their asceticism. Professional men in our age wear black coats, not from motives of asceticism, but as survivals of past fashions. The robes of the monks, the communism of various sects, the treating of vegetable diet as superior to meat diet, may all be connected with ascetic modes of life, but they may also be mere survivals of past customs, or a recrudescence of old ideals. In new social and economic situations past moralities see much to blame, and can find hope only in reverting to the outward simpler life of the past and its forms. Such reversion is, however, only in a secondary sense ascetic. It is, nevertheless, true that the ascetic finds a ready discipline in such reversions; and cave-dwellings, communism, vegetarianism, primitive dress, etc., all play their part in the history of asceticism, but must be always examined carefully when they occur, for they may appear, where no ascetic motive proper can be shown, simply as survivals.

Literature.—Ritschl, *Entstehung d. altkatholischen Kirche*, Bonn, 1857, pp. 179–203, for discussion of Essenes as ascetics; see also *Naturforscherversammlung*, viii. 184, Hamburg, 1893; Bousset, *Rel. des Judentums*[2], Berlin, 1906, pp. 484–496; Lucius, *Der Essenismus in seinem Verhältniss zum Judentum*, Strassburg, 1881; Schürer, *HJP* II. ii. 188 ff.; art. 'Essenes' in Hastings' *DB* by Conybeare, in *DCG* by C. A. Scott, in *EBi* by Jülicher, in *PRE*[3] by Uhlhorn; *JQR* vii. 558, viii. 155.

3. **Symbolic forms mistaken for asceticism.**—Some customs are not ascetic, but are *symbolic forms*. Primarily asceticism consists in the contradiction of natural desires under the mandate of some higher, or supposed higher, ideal set by the will before the life. Such contradiction involves pain and discomfort for the person, that the body may be disciplined into subjection or removed as a hindrance to the soul's development. Soon, however, such contradictions are symbolized, and the symbols become conventional, the original significance being sometimes lost. Thus the tonsure, shaving the head, peculiar clothing, taking the last place in the procession, etc., may become mere symbols of what was once the expression of an attempt at self-mortification. Here again the student must be careful to mark customs that have become binding through usage or enactment, and that may seem ascetic, as the wearing of phylacteries, or broadened borders to garments (Mt 23[5]), but which in truth may have an entirely different motive, this motive being either sanitary or æsthetic, or based on racial distinction, on misinterpreted phrases from religious authority, or the like. Sometimes a symbol with such past significance becomes a sign of self-mortification. The wearing of sandals had no ascetic significance as it arose in a hot country, but, transferred to the north of Europe, it became a familiar symbol of self-denial among the monastic orders.

4. **Disciplinary asceticism.**—Every system of morals enforces the discipline of the will, and all systems of developed casuistry suggest methods of such discipline (cf. Paulsen, *System d. Ethik*[5], vol. ii. pp. 10–29, ed. 1900; and the 'Spiritual Exercises' of the Roman Communion). In this definition might be included, therefore, all exercises undertaken as training of the moral life, and carried through not for the sake of the exercise but for the effect produced upon the person using it. Thus also spiritual exercises may have a mingled motive, on the one side the pleasure of actual participation, and on the other obedience to the impulse to overcome habitual sloth by doing what is at the moment unpleasant or even painful. So fundamental has regularity been to life's development (cf. Wundt's *Ethik*, ed. 1886, p. 120), that religion has ever insisted upon recurrent periods of religious exercise in festivals, Sundays, hours of sacrifice and prayer, etc. And the ethical value of enforced regularity has been so apparent that in all developed religious systems disciplinary asceticism has had a more or less pronounced place. In evangelical Protestantism, tithes, church-going, grace before meat, family devotions are felt to have this disciplinary value, apart from the spiritual mood of the moment, and sometimes in spite of felt unreality on the devotional side. The substitution of the rational and significant for the arbitrary and mysterious in religious acts has gone far in Protestantism, but perhaps at some loss to the disciplinary effectiveness of these acts. In the Roman Communion, the division of the year, the month, and even the day, is minutely undertaken; and, viewed as a means of ascetic discipline of the life, such divisions have untold influence. Asceticism in this sense has the commendation of all great Protestant writers (cf. Luther's Sermon 'Von den guten Werken,' 1520). Acts that have no value *per se* may become disciplinary measures of great usefulness as means to gain self-control, regularity of life, proper self-appreciation, etc. It may be necessary for the moral man to exercise himself spiritually, as a man of thought trains his thinking capacity and subjects it to severe tests, or as the physical athlete engages in increasingly severe bodily exercise for the development of his muscle. The NT writers, and especially St. Paul, abound in directions along this line (Ro 8^{1-14}, 1 Co 9^{24-27}, Ja 3^{1-12}). The temptation to attribute to such exercises a special merit *per se*, and to harden them into a legal bondage, is so great that it has made Protestantism fearful in developing the ascetic life, perhaps even along legitimate lines. In the study of asceticism, however, the student must carefully keep present to his mind this legitimate element amid the legalistic and dualistic distortions.

Literature.—Paulsen, *System d. Ethik*[5], Berlin, 1900, ii. 10-29; Wundt, *Ethik*, Stuttgart, 1886, p. 120; Black, *Culture and Restraint*, London, 1901, p. 187; Harnack, *What is Christianity?* Eng. tr. 1904, p. 81.

5. **Dualistic asceticism.**—The popular conceptions of asceticism have grown up in connexion with the experience of it linked with a distinct attitude towards life. In this thought the material body is inherently evil, and the spiritual element is alone good. (For the history of this, see the §§ 'Indian Asceticism' and 'Greek Asceticism,' p. 65). The object of ascetic exercise is not the *training* of the body, but its ultimate *extinction*, that the soul may be free (cf. Plato's *Timæus*, 69–71). This is a metaphysical dualism which separates soul and body, God and the world, material and spiritual, into sharply contrasted realities, and life is looked at more or less as the struggle for supremacy and the ultimate victory of spirit by the extinction of the material and lower elements. There are all degrees of this metaphysical dualism, from the sharp emphasis upon the negative work of destroying the body, that the soul may be free from its desires and itself cease (cf. Max Müller on 'Nirvāna' in *Chips from a German Workshop*, vol. i. pp. 276–287), to the positive emphasis upon union with God on the part of the soul by abstraction, contemplation, and faith, as in modern Pietism (cf. A. Ritschl's *Geschichte des Pietismus*, vol. i. pp. 1–60). In all shades of this thinking, asceticism plays its part. World-flight in various degrees becomes the standard of holiness. It may be only abstention from certain forms of amusement, or it may be the life of Trappist silence, but what determines the conduct is not loving expediency within the realms of a Christian freedom (Gal 5^{1}), using the world but not abusing it (cf. Augustine, *de vera Religione*, §§ 21 and 36), but world-flight, as from that which is inherently antagonistic to spiritual perfection (cf. A. Ritschl, *Die christliche Vollkommenheit*, 1902). This dualistic asceticism always results in establishing a double standard of holiness. The exigencies of social organization enable only a few actually to realize world-flight to any extent; for the average man some symbolic or sacramental substitute must be found. Hence the whole doctrine of merit grows up with dualistic asceticism, as thus enabling a chosen few to flee from the world and impart of their holiness to less fortunate or less gifted followers. In the history of asceticism, upon which we now enter, we shall find many elements mingling, and it is often impossible and always difficult exactly to determine with which special conception we have to do.

Literature.—Max Müller, *Chips from a German Workshop*, i. 276–287; Ritschl, *Gesch. der Pietismus*, 1886, i. 1–60, and *Die christliche Vollkommenheit*, 1902.

II. *History of Asceticism.*—1. **Ancient ascetic customs.**—Almost all primitive life is marked by certain trials of courage to which the boy reaching manhood must submit. The customs sometimes assume a time of preparation, and priestly or religious direction was only a natural development (cf. Tylor, ii. 362–442; Waitz, *Anthropologie der Naturvölker*, 1871). So also marriage has its rites, some of which have, no doubt, a sanitary origin, some are memories of past culture, while all of them may become in course of time ascetic, in the sense that they are regarded as a necessary training for the communal life. Thus circumcision became a religious rite, and in a sense may even be regarded as ascetic (cf. Wellhausen, *Prolegomena zur Gesch. Isr.* 1883, p. 360). But in a strict sense, as a discipline for the *spiritual* life, it cannot be classed as ascetic. And the classes of customs gathered by Zöcklér (*Askese und Mönchtum*[2], 1897, pp. 78–97) are almost without exception symbolic substitutes for outgrown customs, or they have social and legal significance apart from any true ascetic motive. Training for war and preparation for life's simpler duties produced customs which later on became the forms of ascetic practice; but in general it may be said that any developed asceticism belongs only to a high and elaborate economic stage. Asceticism proper belongs to an age of reflexion. Men in the process of mŏralization, looking out on life, revert to simple habits in the hope of restoring a morality that seems to them endangered. Thus the *forms* of asceticism have their history in customs that were in no sense ascetic. We have here to do with that variation of purpose of which Wundt rightly makes so much (*Ethik*, pp. 97–105, ed. 1886). A famine was viewed by primitive man as a direct infliction of the demons. To ward it off, self-inflicted periods of hunger, *i.e.* fasting, were the natural remedy. The punishment was thus anticipated and the demons were conciliated. There was no ascetic

motive until spiritual man sought in this form of religious custom a means for self-discipline. To the semi-nomad Amos the luxury of a commercial capital was immoral, and his only hope was a return to the nomad morality and semi-nomad customs and habits. The artificial music, ivory beds, etc. (Am 6^{4-6}), were hateful to him because connected with the luxury of a commercial development whose moral strains his people were standing but badly. The motive in his denunciation was, however, not ascetic, but patriotic and primitive. A tribe sees itself threatened with extinction, and to appease the wrath of gods or demons offers one of its members in human sacrifice (Iphigenia, Curtius, etc.). Later a *surrogatum* was found in animal sacrifice, or the devotion of that which was most precious to the worshipper (the Judæan-Prophetic story of Abraham, Gn 22^{1-19}). So at last the painful parting with possessions becomes by a process of reflexion a means of spiritual discipline in vows of poverty. At the same time the ascetic motive must be sought in the latest development. Hence the student must watch with care the uncritical collections of evidence for asceticism in primitive history. It is, to say the least, doubtful if, outside of the highest civilization, asceticism in the strict sense of either discipline or negation of the bodily desires can be shown anywhere (cf., however, Zöckler, *op. cit.*).

LITERATURE.—Waitz, *Anthrop. der Naturvölker*, 1871; Wellhausen, *Proleg. zur Gesch. Isr.* 1883, p. 360; Zöckler, *Askese und Mönchtum*[2], 1897, pp. 78–97; Wundt, *Ethik*, 1886, pp. 97–105.

2. Persian and Indian asceticism.—Geographical and racial factors in the development have exposed the populations of Persia, India, and Egypt to a long succession of oppressive tyrannies by physically superior, but often mentally and spiritually inferior, races (Mongol, Muhammadan, English). The Orient has hence become the breeding-ground for religions of despondency or even despair (cf. Schopenhauer, *Die Welt als Wille und Vorstellung*[3], ii. 701–703). Although in the Avesta fasting and mortification are forbidden (Spiegel, *Avesta*, ii. lviii.; cf. especially *Vendîdâd*, iv. 47–49), and a great many of the alleged evidences for a primitive asceticism in Persia will not stand a critical investigation, yet Mani and the very prohibitions of asceticism are evidences that in Persia as well as in India and Egypt spiritual suffering gave rise to a pantheistic world-view, with despair and asceticism as characteristic features. The forms of this asceticism are those of world-flight, the hermit life, the mortification of the body by unnatural inhibitions of all its desires. The most imperative of these was the sexual impulse, and hence, as it was also linked with the continuance of a hated existence, the mortification of this impulse became primary. As Indian religion became fully self-conscious in Buddhism and Jainism, it deliberately opposed the ascetic to the legal, and the life of contemplation to rituals and sacrifice, and democracy to caste-aristocracy (cf. Max Müller, *Chips from a German Workship*, vol. i. art. 'Buddhism'). The asceticism of Brâhmanism aimed at absorption into God. It was a training for spiritual vision. The asceticism of Brâhmanism, as awakened to full self-consciousness in the Buddhist reformation, was a negation of all life, the denial of the will to live (cf. Max Müller, *op. cit.*, art. 'Nirvâṇa'). This is the logical outcome of dualistic asceticisms, the perfection of world-flight. Even the monastic system is a compromise; and although it sprang up in India in response to the imperative social instinct, the hermit and the faqîr are the real types (cf. Rhys Davids, *Buddhism*, London, 1878). The relatively mild asceticism of Buddhism seems due rather to the good sense of Gautama Buddha than to the logic of his teaching, and the result has been that ever increasing sects have pushed the logic of asceticism to its limits.

LITERATURE.—Besides works quoted, cf. Kuenen, *Hibbert Lectures*, 'National and Universal Religions,' London, 1882; Monier Williams, *Buddhism in its connection with Brahmanism and Hinduism*, London, 1889; Silbernagl, *Der Buddhismus nach seiner Entstehung, Fortbildung und Verbreitung*, Munich, 1891; H. Oldenberg, *Buddha*, Eng. tr. 1882, p. 61; T. E. Slater, *The Higher Hinduism in relation to Christianity*, 1903, p. 253. See also special artt. ('Hindu' and 'Persian') below.

3. Greek asceticism.—The æsthetic inhibitions prevented in Greece the disagreeable and morbid developments of asceticism found in India. Moreover, the evolution period was shorter. Yet the waning freedom of Greece and the high intelligence of her population began even in Plato's day to produce a despondent and ascetic as well as a pantheistic type of religious thought. It is immaterial whether this arose on the soil of Greece independently of the Orient (so Zeller, *Philosophie d. Griechen*[3], iii. pp. 70, 420 ff.; but cf. Röth, *Geschichte uns. abendländischen Philosophie*, 2 vols.), or was an introduction from without. It rapidly developed from the teachings of Plato (cf. *Philebus*, 41; *Phædo*, 66–67, 82–83; *Apology*, 40), whose dialogues contain all the germs of the future Neo-Platonic development (consult treatment by Zeller, Weber, and Ueberweg-Heinze in their Histories of Philosophy). The cosmological speculations had their real religious interest in the assertion of the increasing badness of the phenomenal world as it fell below the spiritual reality. Nor is it essential whether the final belief was in a permanent separation of the two elements or an ultimate extinction of the lower element; the groundwork of an ascetic development is the hopeless surrender of the phenomenal as the sphere only of evil. The character of Greek asceticism was again controlled by the philosophic interest. The elimination of the phenomenal was by contemplation rather than by mortification. The way of salvation was escape from the body by pure thought. Even for Aristotle the higher life is open only to the man of pure speculative activity. In Neo-Platonism the Oriental mysticism was united definitely with Greek metaphysics (cf. Ueberweg, i. § 64, pp. 312–359). The Hellenistic-Judaic and the Neo-Pythagorean schools found their final expression along ascetic and mystical lines in Plotinus and Porphyry. God and the world were definitely separated. God as pure being was abstracted from all phenomenal manifestation. Salvation was in the beatific vision. Asceticism was the way of freedom from the fleshly. Between God and man angels and spirits became mediators, and revelation was in philosophy and ecstasy. Thus the waning faith of a homeless Greek culture found refuge, just where India found it, in ascetic despondency and theosophic speculation.

LITERATURE.—Besides the philosophical handbooks of Ueberweg-Heinze, Windelband, Weber, and Zeller, cf. E. W. Möller, *Geschichte der Kosmologie in der griechischen Kirche bis auf Origenes*, Halle, 1860; Leopold Schmidt, *Die Ethik der alten Griechen*, 2 vols., Berlin, 1882; Röth, *Geschichte uns. abendländischen Philosophie*[2], Mannheim, 1862; J. Adam, *The Religious Teachers of Greece*, 1908, p. 375; Rohde, *Psyche*[2], Tübingen, 1898. See also separate art. ('Greek').

4. Asceticism and Judaism.—(*a*) *Canonical Judaism.*—All early religions resort to various forms of self-inflicted privation or suffering to appease the assumed wrath of gods or demons. Famine is anticipated by fasting (cf. above), and wounding the body becomes a *surrogatum* for the punishment the offended powers would otherwise inflict with more fatal results. The motive in these cases is, however, not strictly speaking ascetic. The spiritual life is not being trained, nor is the body being destroyed as a thing evil in itself. Distinguishing, as we must in the interests of clear thinking, asceticism proper from such survivals of ancient thought, Judaism is seen to be a distinctly

non-ascetic religion. The fasts and the days of humiliation ('afflict your souls'), as in Lv 23^{26-32}, are no more ascetic in the strict sense than a day of prayer in a Protestant community. Some of the directions about the relations of sex may seem at first sight ascetic (Ex 19^{15}, Lv 15^{16-18} etc.), but a close examination shows that the motive was not ascetic, but had to do with the conception of a physical uncleanness (perhaps sanitary in origin) before Jahweh. This magical conception of impurity led to washings, lustrations, certain sexual inhibitions, but we find no trace of asceticism proper in the gradual evolution of the Jewish ritual. The dualistic asceticism of the Orient seems to leave no trace upon the canonical books. The fundamental conception of God, indeed, excludes it. Nor does it obtrude itself even as a foreign element, as it does in Muhammadanism. In spite of national disaster, the eschatological hopes of the Jews (cf. Bousset, *Die Religion des Judentums*[2], Berl. 1906, pp. 245–346) continually counterbalanced any beginnings of despair, such as we may notice in Job, Ecclesiastes, and Lamentations. For spiritual discipline the Jew turned to the study of the Torah (Ps 119), or submitted with great ease to the burden of a legal system. In all ages, however, the mystic world-view that lends itself to asceticism is sooner or later at war with any developed legalism, and likewise a developed legalism works inevitably against the mystic-ascetic type of religious thought. The evidences cited by Zöckler for an undeveloped asceticism (*Askese und Mönchtum*[2], pp. 113–120) will not bear critical examination. The Nazirite vows have no real marks of strict asceticism (cf. art. 'Nazirite' in Hastings' *DB*). They were vows of special consecration to Jahweh for a longer or shorter period, and represent survivals of primitive Semitic religious customs; but spiritual or ethical *training* was wholly lacking (cf. the story of Samson), and they had no marks of any desire to destroy the body. The abstinence from wine is a survival of nomad morality protesting against the agricultural stage (Hermann Schultz, *Alttest. Theologie*[5], 1896, § 111). The priestly regulation of the Nazirite vow has so destroyed its primitive character, that we must completely re-construct it in the light of the stories of Samson and Samuel and the allusions to the Rechabites (cf. art. 'Rechabites' in Hastings' *DB*). Jahweh as the storm-god of the desert had those who even in the midst of an agricultural economic stage were His earnest champions and the maintainers of more primitive types of conduct. Thus the forms were given in which asceticism might begin to develop, as perhaps in John the Baptist, although even here again we deal with other spiritual phenomena (cf. next col.); and only when the influence of the Orient and Greece can be historically traced in Judaism do we find undoubted evidences of the ascetic ideal. The story of Jephthah's daughter has no real bearing on the question (cf. Hastings' *DB*, art. 'Jephthah,' and the Comm. of Budde and Moore, *ICC*). The fasts, feasts, and ceremonial regulations of Jewish religion proceeded upon a supposition which excludes Oriental asceticism, for the nation is holy to Jahweh, and the body can and must be kept ceremonially holy. This is binding on all; but priests and Nazirites, who come into closest contact with Jahweh, must be especially holy, *i.e.* ritually clean. The religions of the Orient centre in the negation of the body; Judaism insists upon its physical and ceremonial cleanness. This gives an entirely different character to the thought of the relation of the physical to the spiritual. So that we may put even more strongly than Zöckler his closing words: 'Only the closing period of the pre-Christian Jewish history gives us real historical parallels and anticipations of monasticism,' and add that only in this period does ascetic practice proper have any place at all.

LITERATURE.—Out of a vast literature may be mentioned especially: H. Schultz, *Alttest. Theol.*[5] 1896 (Eng. tr. by Paterson, Edin. 1892); Bousset, *Die Religion des Judentums*[2], Berlin, 1906; Schürer, *Gesch. des jüd. Volkes*[3], Leipz. 1898–1902; Weber, *Jüd. Theol.*[2] 1897; H. P. Smith, *OT History*, Edin. 1903. See also separate art. ('Jewish') below.

(*b*) *Hellenistic Judaism.*—The distinction between fasts that have as their object the training of the spiritual life and those intended to propitiate an offended God must be constantly borne in mind. The first type is ascetic, the second has no necessary ascetic motive underlying it. The national fasts of Judaism, connected also as they generally were with times of special rejoicing, were intended to ward off the displeasure of the worshipped God. The non-ethical quality of these very fasts led to their entire rejection by the ethical prophets (Hos 6^{6}, Am 5^{25}). As custom hardened into a formulated legalism, neither world-flight nor spiritual discipline can be recognized as a formative motive. The mingling, however, of Oriental and Greek elements with Judaism began early (cf. Schürer, *Gesch. des jüd. Volkes*[3], i. 187–190, ii. 21–67). The influence was probably wide-spread, but it reached its climax in the work of Philo at Alexandria. Here we find all the familiar marks of the Neo-Platonic teaching of a later day (Grätz, *Gesch. der Juden*, iii. [1856] 298, Eng. tr. ii. [1891] 211; Schultz, *Die jüd. Religionsphil. bis zur Zerstörung Jerusalems*, 1864; Lucius, *Der Essenismus in seinem Verhältniss zum Judentum*, Strassburg, 1881). God is not dragged down by the material; the highest life is that of contemplation; and abstraction from the body is the essential thing in religion. Holiness is also a negative thing. The dualism between God and nature is spanned by the Logos. The dualism between the flesh and the spirit is resolved in the contemplative life, where the spirit frees itself from the flesh and rises to the vision of God. The Essenes (cf. art. by Conybeare in Hastings' *DB*) are, as we have seen, doubtfully to be considered as an ascetic development. The communism is the simple agricultural communism that marked all Israelitish life in early times. The marriage customs are hidden in evidently inaccurate estimates of them, and the asceticism reported by Philo may well be imported from his preconceptions into their practice. It is difficult to believe that a sect that in so many ways suggests a recurrence to primitive type should become a medium for carrying a Greek culture (cf., however, Zöckler, *Askese und Mönchtum*[2], pp. 125–127). The reports of Philo and Josephus are always open to suspicion when they see in Jewish customs bonds between the Greek world-view and Judaism. The food and clothing of John the Baptist (Mt 3^{1-17}, Mk 1^{4-8}) no more have asceticism as their motive than the poke bonnets and grey colour of the Quaker costume; both were inspired by the desire to revert to a primitive simplicity. John the Baptist is the reversion to the semi-nomad prophetic type. He proclaims no asceticism, but faithfulness to everyday duty (Lk 3^{7-14}). Only when Plotinus and Porphyry and Iamblichus leave the assumptions of the OT, and by symbolic interpretation read Greek and Oriental thought into Judaism, do we get a system of contemplative asceticism well developed. This asceticism is not a Jewish product and has left little trace upon Jewish life, but it has profoundly influenced the Christian development.*

* Muhammadanism has borrowed from old Christian sources an asceticism which, however, often resembles far more the nomadic excesses of the wilderness than either spiritual discipline or world-flight. Indeed, this latter is wholly strange to the Qur'ān, although in Persia it may be noted (cf. sep. art. 'Muslim' below).

LITERATURE.—Schürer, *op. cit.*; Bousset, *Die Rel. des Judentums*[2], Berlin, 1906; H. P. Smith, *The Bible and Islam*, Lond. 1897.

5. **The Christian Church and Asceticism.**—(*a*) *The Early Church and Asceticism.*—Very early in its history the transformation of Christianity from a life to a philosophy of life began (cf. Wernle, *Anfänge unserer Rel.*[2], Tüb. 1904, 322–346). The marks of this change are already upon several of the NT books, notably the Ep. to the Heb., where the influence of Philo and Alexandrian Judaism is marked (cf. Siegfried, *Philo von Alex.*, Jena, 1875, p. 321 ff.; Pfleiderer, *Das Urchristentum*, Berl. 1887, p. 629 ff.; McGiffert, *Apost. Age*, Edin. 1897, pp. 477–482). Thus the Judaism with which the Christian Church found herself dealing was often not that of the OT, but a Hellenistic Judaism whose thought was based no longer on the ethical monotheism of 8th cent. prophecy, but on Greek dualism (cf. Harnack, *Lehrbuch der Dogmengeschichte* [ed. 1883], vol. i. § 7, pp. 93–101). This distorted the whole conception of the relation of the body to the purpose of the Kingdom; but the distortion was not realized because the faith in a catastrophic introduction of a new age seemed in itself to minimize the importance of the existing world. Upon this distortion grew up the conception of world-flight, and asceticism of the purest Oriental character was linked with the life of the Church. The exact history of the rise of monastic asceticism is obscured by the controversy over the genuine character of the alleged work of Philo, *de Vita Contemplativa*. This document has been pronounced by P. E. Lucius (*Die Therapeuten*, Strassburg, 1879) and others to be a forgery, while it has been defended by Conybeare (*Philo: about the Contemplative Life*, Oxf. 1895) and P. Wendland (*Die Therapeuten und die philonische Schrift vom beschaulichen Leben*, Leipz. 1896). It is certainly impossible to use it with confidence as a source for studying the history of monasticism. The so-called Therapeutæ, described as a Jewish monastic order, probably never existed, but the invention reflects the ideals of the highest holiness of certain circles profoundly influenced by Hellenized Christianity. As might be expected, it was in the Oriental Churches that the most negative type of asceticism flourished. Egypt became the home of men and women fleeing from the world to find in ascetic solitude the holiness they longed for (cf. the interesting pen picture in Anatole France, *Thaïs*[3], 1891). The attitude of St. Paul to marriage had nothing fundamentally ascetic in the Oriental sense. Abstinence was a matter of expediency, for the stress was great and the time was short (1 Co 7^{1-40}), and marriage brought cares which hindered the Christian in his main business of proclaiming the coming of Christ. At the same time, the vileness and licence of the period made continency, even to the denial of marriage, a very distinguishing mark of superior enthusiasm. In opposition to Marcion, however, Tertullian protests (*adv. Marcion.* i. 20), and he was not the only one to do so, against the rising tide of ascetic denial of marriage, urging that Christian liberty must be preserved (Clem. Alex. *Strom.* li. 23, iii. 12; Euseb. *HE* iv. 29). Moreover, self-denial gave a stamp of sincerity to much religious life whose basis was really not Christian at all, as in Manichæism, and this religious life compelled the Christian communities to rival its earnestness by denials as dramatic; so that Tertullian, who himself distinctly repudiates asceticism in principle (*Apology*, 42), is nevertheless proud of the self-denials he is able to set over against the claims of the ascetic Marcionites (*op. cit.*). Thus, in Egypt and Africa world-flight and ascetic fasting and an un-Christian and un-Pauline celibacy came more and more to mark the ecclesiastical development. It culminated in the world-flight of Paul of Thebes, whose retreat to the desert was, however, only the logic of the transposition of Christian values effected by Cyprian and Origen. Manichæism and Gnosticism had really conquered, and, opposed with true instinct by the Church, had yet forced upon the Church the dualistic Oriental conception of life (cf. Hatch, *Organization of the Early Chr. Churches*, Lond. 1881, Lect. vi. pp. 152–164, for a slight modification of this view). And logic went to the fullest extent in the hermit seclusion and the absolute isolation of the individual, as in the case of Antony and Simeon Stylites. The grouping of the priests of the worship of Serapis is sometimes regarded (but see O. Zöckler's art. below, p. 75[a]) as the model for what now sprang up as a modification of this hermit isolation. The monastery was at first a mere group of hermits gathered about some conspicuous example, or banded together for mutual protection. To such groups Pachomius (285–345) gave a set of rules (F. E. König, 'Die Regel des heiligen Pachomius' in *SK*, 1878; Grützmacher, *Pachomius und das älteste Klosterleben*, Freib. i. B. 1896), and monastic asceticism was formally foisted upon the early Catholic Church. Then, as persecution began to lessen, and martyrdom became rarer and rarer, the enthusiasm that found vent in this last evidence of zeal and sincerity began to express itself in ascetic practices. The spiritual athlete proved his constancy by self-inflicted deprivations.

LITERATURE.—See ASCETICISM (Christian).

(*b*) *The Oriental and Greek Communions and Asceticism.*—In general it may be said that the negative, contemplative, mystic type of asceticism had its largest development in the Oriental Greek Church. From the time of Pachomius and Antony the contemplative withdrawal from life into the desert was indeed bound up with extraordinary limitations of diet, etc., but the life of contemplation was the end sought by these fastings. The bodily exercises remain in the late conception of Greek asceticism a means to the contemplative self-abstraction. This is seen clearly in the rules of Pachomius and their subsequent development (cf. Zöckler, *Askese und Mönchtum*[2], pp. 201–233). The influence of Origen and of the Neo-Platonic conceptions on the Oriental Church, as it ceased to be intellectually quick, was to emphasize dogma and details of ritual on the basis of an extreme literalism in the use of Scripture (cf. K. Müller, *Kirchengeschichte*, i. 209). The ritual development was excessive, and the monastery reflected the most primitive type, an aggregate of hermit cells. It was only when, in 988, the Russian organization and education called out the best that was in the monastic development that it exhibited any signs of life and growth. Cyril and Methodius, the two monks from Constantinople who gave Russia to the Greek Church, represented the spirit of missionary service (cf. J. M. Neale, *History of the Holy Eastern Church*, 1873). Yet asceticism in the true sense of the term was overlaid by formalism and ritual. The negative conception of holiness was even forgotten amidst the mass of superstitious externalism. The monastery as seen at Mount Athos or Mount Lebanon (cf. articles *ad hoc* in Brockhaus, *Konversationslexikon*) reflects the older type of com-

The prohibition of wine is not ascetic, but a return to primitive morality on national and economic grounds. Nor is the fasting of Muhammadanism in the strict sense ascetic any more than the regular hours of prayer can be so called. Pilgrimages, however (cf. art. 'Mecca' in *EBr*[9]), and various wild dances, do partake of the mystic negative view of holiness which sees in abstraction from the body the possibility of the Divine vision. But, on the whole, asceticism is as foreign to the real spirit of Muhammadanism as it is to the Jewish religious development.

munal life; but the asceticism, save in the absolute banishment of women from all participation in the life, is not extreme. Nor has asceticism proper experienced any new development in the Russian branch of the Greek Church. Sects have arisen with extreme and fanatical views based upon a bald literalism, as the sect of the *Skoptzy*, who interpret Mt 19^{12} literally, and of whom 176 were in the years 1839–71 sent to Siberia for obedience to this supposed command (cf. Loofs, *Symbolik*, i. 181 [1902]). Yet in such cases the pathological and the superstitious overshadow the ascetic motives; and, indeed, of genuine ascetic development in the various branches of the Orthodox Greek Church there is almost no trace since the 17th century.

LITERATURE.—J. M. Neale, *History of the Holy Eastern Church*, 5 vols., London, 1850–73; I. Silbernagl, *Verfassung und gegenwärtiger Bestand sämmtlicher Kirchen des Orients*, Landshut, 1865; W. Gass, *Symbolik der griech. Kirche*, Berlin, 1872; Stanley, *Hist. of the East. Church*, new ed., London, 1884.

(c) *The Roman Church and Asceticism.*—The primary interest of the Christian Church as an Imperial organization was neither in dogma nor in the negative conception of holiness fundamental in ascetic monasticism (cf. A. Harnack, *Das Mönchtum, seine Ideale und seine Geschichte*[5], 1901, p. 30 f.). Her interest was in the re-organization of the Empire in the service of an Imperial ecclesiasticism. At the same time, in the creeds and literature which the Western Church took over for her Imperial purpose, there were both dogmatic elements which she had to formulate and defend and ascetic ideals which she had to use and regulate. Under the leadership of Rome, asceticism became a handmaid of inestimable value. It was the great monk-pope Gregory VII. who forced on the whole of the clergy the ascetic celibate as an ideal (Synods of Erfurt and Passau, 1074), and in him were united the two contradictory ideals, the ruling of the world by an institution whose ideal was world-flight. The missionary activity of the monastery in Northern Europe had changed its character, and while bringing a mass of evils connected with the holding of property (cf. K. Müller, *Kirchengeschichte*, i. 353–358 [Freib. i. B. 1892]), it was at the same time the bearer of order and culture, and even of literature, to the relatively barbarous North. It had, however, of necessity drifted away from the ideals of Oriental asceticism. To the task of re-introducing those ideals the reform movements of the period from Otto I. (936–973) to Gregory VII. (1073–1085) were directed. The monastery of the Western Church was up to this period largely dependent on the great land-holders, and vows were not made for life. Only in the 7th century was the retirement from a cloister visited by penalty, and only under the vigorous reforms of Bernard of Cluny and the Abbot Hugo were the monasteries compelled to conform to the ascetic ideals of the past (cf. K. Müller, *op. cit.* i. 317 f., and 431–435). The new reformed monastic orders looked with suspicion on the agricultural and literary work which marked the less ascetic monastic institutions, and exalted more and more the life of contemplation and ascetic negation (cf. H. Reuter, *Gesch. der relig. Aufklär.* II. vi. 24–28, Berlin, 1877). From this period onwards extreme forms of ascetic life—scourging, wearing of chains and haircloth garments, no longer as survivals of primitive life, but planned to inflict pain and discomfort—as well as extreme seclusion, became the accepted means for the attainment of perfection; and the ideal of perfection was world-flight and the negation of desire. At the same time, the linking of these ideals with Churchly ambitions gave peculiar form to the ascetic conception. Everywhere the monastic reform set before itself the same ends:

'The revival of monastic institutions, the recovery of lost lands, and the acquirement of new possessions, the establishment of old ecclesiastical laws, the acquirement of a better class of novitiate, introduction of stricter discipline and cultivation of piety, as described in the older stories of monastery life, and especially in the writings of Gregory the Great (590–604), penance and self-inflicted pain of all kinds, contemplation in solitude, humility to the point of self-renunciation, constant employment of confession and the sacrament, homage of the saints and relics, pilgrimages, search for the miraculous, pessimistic judgment of the world, longings for death, and generally an abnormal raising of the emotional life, increased sensitiveness, and, above all, a high estimate of the "grace of tears"' (K. Müller, *Kirchengesch.* pp. 385–386).

Each new attempt at monastic reform of necessity but revived this negative idea of holiness, and hence it is no accident that the circumstances which originally produced the pessimistic world-flight religious type in the Orient should generally mark its revival in the Western Church. The times of revived asceticism are periods of national disorder and social disruption. Gentle and thoughtful souls found world-flight the only seeming refuge amidst the wrecks of all that makes life really attractive, and in the extreme symbolic self-renunciation of self-torture the only hope for the devoted lives of those who saw the evil. It is impossible for any religious development to be wholly without the note of service and self-sacrifice for others, yet this sinks more and more into the background the more self-consistent the pursuit of the ascetic ideal becomes. To save one's own soul by retirement from the dangers of life is the chief goal, and the selfishness of this goal is only partly hidden by the fact that service on behalf of others may become a means to this end. Even the asceticism that marked the great monastic revival under St. Francis of Assisi (1182–1226) made the great services rendered by the order often a source of real corruption (cf. *Life of St. Francis*, by Thomas de Celano, 1229, by Bonaventura, 1261, and recently by Hase, 1856, and Sabatier [Eng. tr.], 1894). The complete impossibility of making the negative monastic asceticism a universal demand upon all Christians, while still maintaining Imperial world ambitions, has always led in the Western Church to compromises with the 'lay' world. Hence each revival of the extreme emphasis has also led to 'lay-brotherhoods,' to modified vows for those who cannot altogether flee the world, and to an extension of ascetic symbolism. This ascetic symbolism plays, therefore, a larger and larger part in penance, fasts, prayers, vigils, etc., in which the element of pain and bodily deprivation is reduced to a minimum, and the ascetic element is represented by symbols, 'half-fasts,' fish and eggs instead of meat, beads told, and masses said by proxy, etc. Against these compromises protests were constantly being raised by those who seriously held the monastic ascetic type of Christian ideal (Bernard of Cluny); but more and more as the Imperial organizing force of a centralized Vatican made its way, these compromises received the sanction of the Church. From the time of the Reformation onwards the Roman Church has been on the defensive, and the militant character of her great organizing force, inherited from Rome, has driven the negative and ascetic conception of holiness into a secondary place. In the Jesuit development, asceticism has a distinctly different place from that occupied in the older orders. It is a training for service under the ecclesiastical Imperialism of Rome (cf. Döllinger and Reusch, *Geschichte der Moralstreitigkeiten in der römisch-katholischen Kirche* [1889], particularly the 'Einleitung'). The goal the Jesuit order set before itself was world-conquest rather than world-flight, and thus again is clearly seen the old struggle between two distinct ideals of holiness, while both are maintained within the great historic communion of the Roman Church. The

triumphs of the Jesuit policies since the great Jansenist controversy have therefore steadily relegated asceticism to a secondary and disciplinary place, and its recent history shows no new development within the Roman communion, while it still maintains its place as one of historic legitimacy.

LITERATURE.—Out of a vast literature may be specially mentioned: Zöckler, *Askese und Mönchtum*[2], Frankf. a. M. 1897; Lea, *Hist. of the Inquisition of the Middle Ages*, 3 vols., Lond. 1888; Jessopp, *Coming of the Friars*[3], Lond. 1905; Montalembert, *Monks of the West from St. Benedict to St. Bernard*, 7 vols., Edin. 1861–1879; Taylor, *Classical Heritage of the Middle Ages*, Lond. 1901; Harnack, *Das Mönchtum* [Eng. tr. *Monasticism*, Lond. 1881]; and the Standard Histories of the Church in the Middle Ages, *e.g.* those of Neander, K. Müller, etc.; also Gothein, *Ignatius von Loyola und die Gegenreformation*, Halle, 1895; Ranke, *Die römischen Päpste*, Leipz. 1878; Reuter, *Gesch. der religiösen Aufklärung*, Berlin, 1877.

(*d*) *Protestantism and Asceticism.*—In a true Protestantism there is no room for Oriental asceticism based upon world-flight (cf. Luther, *Von der Freiheit eines Christenmenschen*, 1520). The only place asceticism can properly have is as a training for the life of service, and it is only a matter of loving expediency whether the Protestant shall prepare himself for service by fasting, deprivation and negation of legitimate desires, or by the simple and faithful discharge of daily duty. In the Matthew tradition (Mt 6[16]) Jesus certainly anticipated fasting; but in actual fact His disciples did not emphasize it during His lifetime (Mt 9[14]), as is seen also in the Mark tradition (Mk 2[18], Lk 5[33ff.]); and St. Paul's doctrine of Christian freedom (Gal 5[1] and argument of whole letter), permitting, indeed, any act that may prove for spiritual edification, excludes any emphasis upon such practice as necessary. Hence the Reformers admit fasts. 'Fasten und leiblich sich bereiten ist eine feine gute Zucht,' says Luther in his Smaller Catechism, and he urged it as a pious and useful exercise; as did also Calvin, with, however, the old primitive motive appearing, for the Church was to fast 'to appease the wrath of God' (cf. Zöckler, *op. cit.* p. 565). All the ascetic practices have dropped away, or been actually condemned by both Lutheran and Reformed Churches (Augsburg Confess., Art. 27; 1 Helvet. Confess., Art. 28). In the form of world-flight Protestantism has overcome asceticism. Only in the forms of a legalism can we trace remains of the Catholic conception of a negative holiness (cf. A. Ritschl, *Gesch. d. Pietismus*, i. 36–80, Bonn, 1880), and even the legalism that forbids dancing, theatre-going, wine-drinking, and card-playing does so now on the basis of the expediency of the Christian life, or on the ground of inherent immorality in the practices, thus removing the discussion of them from the sphere of asceticism. It is therefore a source of confusion to confound these two separate motives. With Protestantism, therefore, Oriental asceticism may be said to have been theoretically overcome.

LITERATURE.—The best histories are those of Zöckler, *Askese und Mönchtum*[2], Frankf. a. M. 1897, a new edition of his *Kritische Geschichte der Askese*, 1863; and J. Mayer, *Die christliche Askese, ihr Wesen und ihre historische Entfaltung*, Freiburg i. B. 1894; see also article 'Askese' in *PRE*[3]. Interesting material may be found in Palladius, *Historia Lausiaca* (*PL*, vol. xxxiv.), and in Rufinus, *Historia Monachorum* (*PL*, vol. xxi.). There is curious material in Stadler and Heim, *Vollständiges Heiligen-Lexicon*, 1858. For the history of Monasticism consult the catalogue given in *Dictionnaire des Ordres Religieux*, 4 vols., Paris, 1860; and Montalembert, *Moines d'Occident*, 7 vols., 1860–1877 (in part translated). For accounts of Buddhism see Hardy, *Eastern Monachism*, 1850, *Manual of Budhism*[2], 1880, and *Legends and Theories of the Buddhists*, 1866. For the attitude of the Reformation see Luther, *An den christlichen Adel deutscher Nation*, 1520, and *de Libertate Christiana*; Melanchthon, *Loci Communes*, particularly 'de crucis afflictionibus,' 1521; Calvin, *Institutes*, iii. 6–10, iv. 12 ff.; also Luthardt, *Die Ethik Luthers in ihren Grundzügen*[2], 1875; P. Lobstein, *Die Ethik Calvins*, 1877. For the best expositions in the Ethical handbooks of the Protestant attitude, consult H. Schultz, *Grundriss der evangelischen Ethik*, 1891, p. 40 ff.; and Newman Smith, *Christian Ethics*, 1891. A very full bibliography is also given by Zöckler, *op. cit.* pp. 21–29.

T. C. HALL.

ASCETICISM (Buddhist). — Judged by its literature, India has revealed to us human intelligence at its widest, intensest range of reaction to sensuous and emotional stimuli. European writers have described the mild, passive, dreamy, quiescent Hindu. But they have ignored the fact that these qualities were the natural antithesis to, and rebound from, the preponderant disposition. That appears to have been of a nervous, eager, high-strung, emotional character, passionate and pleasure-seeking, keenly susceptible, exuberant in expression, impulsive and strenuous in effort to satisfy desire. The notes of the *vīṇā* (a kind of lute), the singing of the *Karavīka* bird from the Himālayas, are described as rendering languid and maddened those that heard it, no magic agency being imputed (*Saṁyutta*, iv. 197; *Sumaṅgala*, *ap. Dīgha*, xiv. 35). Where the heart's desire is cut off, the subject promptly lies down to die (*Majjhima*, ii. 57; Com. on *Therīgāthā*, p. 221). The ordinary man is described as indulging in extravagant expression and depression at a transition from happiness to grief (*SBE* xi. 102, 127; *Majjh.* i. 238, 239). Where sense and emotion sway so forcibly, we should expect to find a corresponding excess in attempts to cope with that exuberance. Nowhere, indeed, has asceticism been so highly elaborated as in India. Nowhere have sense impressions and sense gratification been suppressed more nearly to the utmost limits consistent with life. Nowhere has the art of pain been more studied. Every act and posture of common life was engrossed by the self-persecuting zeal of the ascetic. And the lay world that maintained him in the intervals of his weird warfare expected of him a rigid persistence in his efforts, in exchange for its alms, as much as the votaries expected it from each other, if the reputation for sincerity and sanctity of each was not to be lost (*Vinaya Texts*, iii. p. 66 ff., i. pp. 90, 93).

The English reader of translations from Pāli and Sanskrit will find the word 'ascetic' used to denote any person who from religious motives has 'renounced the world' (cf. *e.g. Dialogues of the Buddha*, i. 213, n. 2; *The Jātaka*, vi., Cambridge, 1907, Index, *s.v.* 'Ascetic'). This is due to the English poverty for such terms as *religieux* and its synonyms. It does *not*, however, follow that, beyond renouncing home, property, and marriage, the so-called 'ascetic' is to be understood as engaged in systematic penance or self-mortification.

Ascetic practices were spoken of collectively as *tapas* (Pāli *tapo*), *i.e.* 'burning,' 'glow.' Parallel with, but usually independent of, sacrificial rites, they constituted, no less than the latter, a systematic line of action pursued to gain a distinctive end. That end, when Buddhism arose, was chiefly the guarantee of re-birth under relatively happier conditions than the present life could afford.

For instance, in the parable of the log drifting down the Ganges, the Buddha, discussing the chances of its arriving in due course at the open sea, and enumerating the various obstacles, said that it might be seized by human or by non-human agencies. By this he illustrated the fate of a religious brother, drawn back again into the world, or captured by longings after some abode of the gods and conforming to some discipline (*brahmachariya*) with the notion: 'By this rule, or ritual, or askēsis (*tapena*), or discipline I shall become a god, or god-like being' (*Saṁy.* iv. 179 ff., but cf. also *Majjh.* ii. p. 36, l. 2).

Of the more usual object of *tapas*, according to the Vedas—the attainment of magical powers—but slight traces remain. The Buddha, for instance, tells, as an ancient legend, of the failure of certain *Ṛṣis* to blast by curses a seer who exclaimed that their *tapas* was proved futile and their discipline fruitless (*Majjhima*, ii. 155).

The way in which *tapas* was held to guarantee the end sought after was not, as in sacrificial rites, by the propitiation of a god or gods, but by satisfying, as a system of acts and abstinences, the law of *karma* conceived as impersonal, eternal, moral energy. Painful experience and the absence of pleasant experience were to work as a set-off, in the balance of fate, against the weight of pleasant

self-indulgences in the past, and of possible pleasant experience in the near future, respectively.

'There are, brethren,' the Buddha's discourse runs, 'certain recluses (Achelakas, Ājivikas, Niganṭhas, etc.) who thus preach and believe: Whatsoever an individual experiences, whether it be happy, or painful, or neutral feeling, all has been caused by previous actions. And thus, from the cancelling of old actions by *tapas*, and by abstaining from doing new actions, there is no influx into future life; by this non-influx *karma* is destroyed, and so ill is destroyed, and so feeling is destroyed, and so all pain will become worn away. This, brethren, is what the Niganṭhas (Jains) say. . . . Is it true, I asked them, that you believe and declare this? . . . They replied . . . Our leader, Nāṭaputta, is all-wise . . . out of the depths of his knowledge he tells us: Ye have done evil in the past. This ye do wear away by this hard and painful course of action. And the discipline that here and now, by thought, word, and deed, is wrought, is a minus quantity of bad *karma* in future life . . . thus all *karma* will eventually be worn away, and all pain. To this we assent' (*Majjhima*, ii. 214 ff.; cf. i. 238).

The recorded interviews between the Buddhists and the Brahmans yield no such efforts to master and forestall destiny. But one young Brahman names *tapas* as one of five conditions declared by the priestly class to be requisite for the achievement of 'merit' (*Majjhima*, ii. 199). And current verses commending *tapas* are here and there gathered into the Buddhist canonical anthologies (*Saṁyutta*, i. 38, 43, 172=*Sutta Nipāta*, verse 77; *Aṅguttara*, iii. 346).

Now Buddhism was frankly eudæmonistic in its ethics. It hastened to reduce the evil of the world to its ultimate term—*dukkha*, 'pain,' 'sorrow,' 'misery,' 'ill.' It spoke of *nirvāṇa* as absolute happiness. Its cardinal tenets were to be an organon for the extirpation of ill. Affectionate and moral conduct, 'noble' (Aryan) views, are commended as securing *phāsuvihāra*, that is, easeful, serene living (*Aṅguttara*, iii. 132). Consequently it could not well sanction any deliberate infliction of pain, or *dis*-ease, as such, on one's self or on others. One of those categories into which the canonical books delight to divide humanity classes men as self-tormentors, or self-burners (*attantapo*), tormentors of others, tormentors of both self and others, tormentors neither of self nor of others (*Majjhima*, i. 341, 411, ii. 159; *Aṅguttara*, ii. 205; *Puggala*, 55). Under the first head come the votaries of *tapas*; under the second, butchers, fowlers, hunters, fishermen, thieves, executioners, gaolers, and all doers of acts of cruelty; under the third, great functionaries who, when holding sacrificial ceremonies, perform rites involving some personal discomfort, and also have herds of animals slaughtered, and keep their slaves in fear of punishment. Under the fourth head come those who have left the world and the home for the career of a recluse. These are, or should be, filled with charity and compassion for all living beings; they own no property in animals or in personal service. They harm no one, molest no one, and have thrown off the cares and ties that torment the world. And, as it were in antithesis to the word 'burning,' they are said to have 'become cool' (*sītibhūto*).

The latter term, *sītibhūto*, would seem to imply renunciation of *tapas*, as well as of those professions and practices through which a man would become, as it were, a cause of burning or torment to others. He has, of course, still to cultivate, even if he be a *bhikkhu* frequenting forest seclusion (*Majjhima*, i. 469), the virtue of *hiri-ottappa*, conscientiousness and fear of blame. These will often entail, ere he graduates in saintliness, states of mind called 'burning-producing' (*tapanīyā dhammā*), to wit, 'I have left undone those things that I ought to have done, and I have done those things that I ought not to have done' (*Aṅguttara*, i. 49; *Dhamma-saṅgaṇi*, §§ 38, 1300, 1323). Nor was he to be 'cool' in pressing forward to complete emancipation and self-conquest; but, on the contrary, abundance of 'ardour' (*ātāpī*) was expected of him. Only the *arahat* is described as wholly *sītibhūto*, as one resting on a summit, or by clear waters beyond the jungle (see art. ARHAT).

Buddhism, again, claimed at its very inception, in the Buddha's first sermon, to be a Middle Path, opposed equally to the extremes of sensuous and worldly indulgence on the one hand, and of self-mortification on the other. Both are denounced as ignoble (un-Aryan) and unprofitable, the latter, also, as *dukkha* (*SBE* xi. 146, *Majjh.* iii. 230). Contrasted in another passage, in a jungle simile, as the thick-set path and the fired-out path, they are opposed to the middle course of the brother who (in the practice of the 'Four Inceptions of Mindfulness') 'ardently' surveys body, impressions, thoughts, and feelings, that he may subdue all grief arising from coveting the things of the world (*Aṅguttara*, i. 295).

The Buddha's twofold objection to the practice of asceticism is really one: *dukkha* is evil and must be removed. Excess is *dukkha*. *Tapas* is a form of excess, and multiplies *dukkha*. It does not even lead through suffering to any gain; it is unprofitable. This futility of *tapas*, and not any shrinking from pain, was the moral of his own strenuous essay in austerities. This he is said, in the canonical books, to have related to a rāja's son, who maintained that happiness was to be won only through suffering (*Majjhima*, ii. 93); also to a young Brahman, who questioned him on the originality of the system he put forward (*Majjhima*, ii. 212); and again to a young Jain, who doubted whether the Buddha's disciples studied bodily as well as mental control (*Majjhima*, i. 237). When almost worn out by his austerities, he came, he said, to the conclusion: 'Not by this bitter course of painful hardship shall I arrive at that separate and supreme vision of all-sufficing, noble (Aryan) knowledge, passing human ken. Might there not be another path to Enlightenment?' Whereupon he once more took reasonable care of the body, (whereby his fellow-ascetics, who had expected great results, lost faith in him), and chose, for the meditations that brought the light, a spot where the natural environment was of a kind to soothe and brace the spirit.

A little poem in the *Saṁyutta Nikāya* (i. 103) represents him, at this stage, as happy in the release from all self-mortification and from faith therein. Before his complete enlightenment he sat by the river Nerañjarā, at the foot of the Goatherd's Banyan tree, musing: 'Oh! but I am freed from all that difficult toil! Oh! but well freed am I from that useless course of difficult toil! Wholly steadfast and mindful now draw I near to *bodhi* (enlightenment).' Māra, the evil one, tried to shake his serenity: '*Tapas* and sacrifice hast thou abandoned, whereby the Brahman youths are purified? The impure may deem himself pure, when he hath missed the path of purity.' And Gautama replies: 'I who have discerned the uselessness of [my] *tapas* and of all *tapas* whatsoever—bearing along with it, as it does, all that is useless, even as punting-pole and steering-pole may bring along a water-snake—I, practising the path to *bodhi*—moral conduct, meditation and insight—have won the Purity supreme.'

The foregoing allusions define the attitude of Buddhism to asceticism when the term applies to a course of painful penance, privation, injury, toil, or tedium inflicted upon the person. But in the sense of the Greek *askēsis*, or way of life, in which some channels of activity are barred and others developed by special training, Buddhism was thoroughly ascetic. 'The Greek has his asceticism, but it is no mortification of the senses. It is just the power to refuse a lesser good for the sake of the greater. Such asceticism, an alert and constant effort after betterness, is a tonic, a strengthening of fibre, an added increment to life.' Dr. Jane Harrison's words (*Albany Review*, Jan. 1908) apply no less to the Buddhist. Of the lay-disciple a less high standard of training was expected. His whole duty may be said to be laid down in the *Sigālovāda Suttanta* of the *Dīgha*. But any deeply serious movement must always concentrate its energies and its care at first on a nucleus of whole-hearted devotees, who alone will tide it over initial difficulties, and propagate it. These can no more live like the rest of the world than an army when mobilized can afford to do. With the end it had in view, the Buddhist *askēsis* is in some respects in affinity with the Christian, in some, again, with the Greek. For the earnest student (*sekha*) the body was something to be analytically studied and kept in cleanliness and good health. Clothing for it, regular and frequent baths, massage, shelter, regular food, rest, and medicines were prescribed. But it remained, religiously considered, a foul thing (*pūtikāyo*); and the senses

were so many opportunities and channels of malefic impressions and impulses. Susceptibility to beauty of person required to be corrected by the contemplation or imagination of bodily transience, decay, and putrescence. The bodily culture of the Order amounted very much to what would now be called 'the simple life.' Needs (which would else provoke pain) were to be satisfied without arousing new and unnecessary wants. The recurring explanation of 'moderation in diet' is typical :—

'When any one takes food with reflexion and judgment, not for purposes of sport, excess, personal charm and attraction, but so as to suffice for the sustenance and preservation of the body, for allaying hunger and *for aiding the practice of the religious life*; and thinking, "While I shall subdue that which I have been feeling, and shall cause no new feeling to arise, and maintenance shall be mine, blamelessness also and comfort"—this content, temperance, judgment in diet, is what is called "moderation in diet"' (*Dhamma-saṅgaṇi*, 1348).

Compared with the ascetic excesses, as well as with the imaginative and speculative obsessions, of the age, the Buddhist standpoint was markedly hygienic. As the Buddha is recorded to have said (*Majjhima*, i. 509), to consider that health means merely that nothing ails the body is to lack all noble (Aryan) vision. On the other hand, a healthy and efficient condition of body was not only indispensable to a healthy and efficient condition of mind, but was an integral part of sound training (*Majjhima*, i. 239, 473 ff., 425; *Dhamma-saṅgaṇi*, §§ 40–51). There does not appear, in the canonical books, any glorification of the intellectual or spiritual at the expense of the corporeal. The constituents of individuality were ranked on a level, as being each and all impermanent, channels of suffering, and void of Ātman. But then this body-and-mind individuality, 'poor thing' though it might be, was potentially the vehicle of *nirvāṇa*, of *arahat*-ship. And hence the training of it was of the first importance—training by no means of a negative, paralyzing character. The pupil of a great Brahman ascetic school is asked by the Buddha whether, and how, Pārāsariya teaches the cultivation of the bodily faculties. The answer is, 'Yes; with the eye he sees no object, with the ear he hears no sound.' 'On that system,' is the rejoinder, 'the blind and the deaf have their senses best cultivated.' And 'the supreme faculty-culture (*indriya-bhāvanā*) of the noble (Aryan) discipline' is then described (*Majjhima*, iii. 298 ff.). The training, moreover, is often represented as gradual, just the 'bit placed in the colt's mouth' to begin with (*Majjhima*, iii. 2): 'Come thou, brother, keep the *sīla* and the precepts and acquire the range of moral conduct, . . . see that the gates of sense are well guarded, that no influx of impressions bear thee off thy feet, be moderate in diet, keep vigils, be mindful and heedful, cultivate self-collectedness in solitude, purging the heart of the five hindrances and practising the meditation raptures'—these are given as seven successive grades. But in proportion to the distance from graduation, that is, from 'emancipation,' was the training to be strict and unintermittent. Certain brethren, who asserted that a number of daily meals kept them in better health than the one midday meal of the Master, were gently reminded that they were too far from 'attaining' to emancipation to let themselves go (*Majjhima*, i. 473 ff.). To one who had attained, such questions sank into insignificance. 'You say,' the Buddha asks an appreciative friar, 'that my disciples hold me in reverence. Why do they?' 'For five qualities: your frugal diet, contentment with whatever raiment, food, and lodging you have, and your love of solitude.' 'That can hardly be,' is the answer, 'for while some of my disciples in one or other of these things practise austerities, I some days make a fuller meal, or wear lay robes, or accept invitations to dine, or dwell indoors, or among my fellows.' And he goes on to reveal the deeper basis of their trust in him (*Majjh.* ii. 5 ff.).

It was not to be expected that the Buddha's followers, even when they were advanced in training, would all appreciate the *quasi*-Pauline 'liberty' of his own high standpoint. In Dr. Neumann's words, 'ascetic simplicity is a characteristic of humanity and ineradicable' (*Lieder der Mönche und Nonnen* [Berlin, 1899], p. viii). The austerities alluded to in the Order became elaborated into a scheme of thirteen extra vows or burdens (*dhutaṅga*), more discussed, perhaps, than carried out (*SBE* xxxvi. 267–269). But they were at variance with the spirit of early Buddhism, which, in reducing life to a healthful simplicity for those who had set their faces toward the Highest, sought, in its own metaphor, to give them the liberty of the bird, which in flying 'bears with it but the power to fly' (*Digha*, i. 71).

C. A. F. RHYS DAVIDS.

ASCETICISM (Celtic).—**1.** It has been suggested (Fisher and Baring-Gould, *Lives of the British Saints*) that the monastic system of Ireland and Wales was a continuation of pre-Christian ascetic practices; but this statement is unsupported by evidence. Herodian (A.D. 197) mentions the hardiness and scantiness of clothing of the Britanni; but this had no ascetic significance. On the other hand, Strabo (vi. 196) states that the Celts were pleasure-loving (*ἡδονικοί*), and Diodorus (xxvi. 3) says of the Galatæ that they were fond of wine. At the same time, it has to be admitted that our information as to the Celts in antiquity is very meagre, and especially insufficient for the relatively barren Celtic lands where Christian cœnobitism and asceticism afterwards flourished.

2. The Christian asceticism of Celtic countries in the 5th and 6th cents. undoubtedly owes its origin to transmission from Egypt through Massilia (Marseilles), a port which under the Empire had a vigorous Egyptian trade. Massilia and Lérins (Lerina) in the South and Tours further North became active centres for the dissemination of the cœnobitic ideal in Gaul and beyond. In the Life of the Scottish St. Ninian it is said that the saint had met St. Martin of Tours, and held him in such respect that, when he heard of his death, he dedicated to him the church called *Candida Casa* at Whithorn, which he was then building. With the monastic system of Southern Gaul, John Cassian was closely associated, and it has been held by Professor H. Williams (in *Trans. Cymmr. Soc.* 1893–4) that the monastic system of Britain and Ireland was more akin to that of Southern than that of Northern Gaul. In the latter district monasticism made marked progress after the death of St. Martin of Tours (A.D. 400), and it may even have spread from this source to Britain, as is suggested by the story of St. Ninian; but the main impetus to the growth of the monastic movement in these islands undoubtedly came through the anti-Pelagian mission of Lupus and Germanus (429). At Lérins a church and cloister were built by Honoratus, and it was here that Lupus, bishop of Troyes, became a monk after giving up his see and his family life. There was probably some rivalry between the Northern and the Southern monastic systems of Gaul, for Sulpicius Severus (*Life of St. Martin*, cxvii.) says that the institutions of St. Martin were

in some respects on a higher plane than the Egyptian institutions of John Cassian, the founder of the monastery of Marseilles. That there were links between Lérins and Britain is suggested by the fact (attested by Sidonius Apollinaris) that Riocatus, whose name is undoubtedly Celtic, visited that monastery twice in A.D. 450. The probability is that both of the Gaulish movements made contributions to British and Irish monasticism.

3. Celtic asceticism, however, in spite of its relation to the general movement in Christendom, had certain well-marked features of its own, which were mainly conditioned by the tribal organization in which it took root (Willis-Bund, *Celtic Church in Wales*; Fisher and Baring-Gould, *op. cit.*). The heads of the cœnobitic communities of Celtic countries were members of ruling tribal families, and the headship of these communities and participation in their property and privileges continued (in some cases even to the 12th cent.) to be limited to those who, by means of their valid pedigrees, could show kinship with the founder. The formation of cœnobitic communities in Wales and Ireland was probably directed not only by religious but also by economic considerations, owing to the pressure of population and the insufficiency of cultivable soil. The monasteries were largely centres of co-operative industrial activity in agriculture and other arts, while the pursuit of learning and other amenities of civilized life were thus rendered possible. Lay interests probably had a larger place in the life of these communities than the later Lives of Celtic saints, written under Benedictine influences, might lead us to suppose, and it was natural enough accordingly that these communities, as such, should take no account of clerical orders (Willis-Bund, *op. cit.*).

Prof. Hugh Williams (*loc. cit.*) gives the following as the four stages of development of monasticism in Wales, and the development in Ireland was in the main parallel: (1) A *life of seclusion*, self-denial, prayer, and meditation (and it may be added, industry, to a large extent manual), in a common life of obedience to a superior, the abbot. There were similar institutions for women, and a Celtic monastery was sometimes double. The life of this stage appears to have been modelled on the teaching of Cassian in his *de Institutis Cœnobiorum* and *Conlationes Patrum*. (2) A stage when the monastery was pre-eminently a *school*, as exemplified in the case of the Welsh saint Illtud. When children were sent to a monastery of this kind, they were regarded as the foster-children of the Church, and a fee had to be paid not only for their fosterage but at their removal. (3) That of the *Eremites*, or *Anchorites*. In Egypt this stage came first, but in Celtic countries it grew out of cœnobitism. In 595, when Columbanus wrote to Gregory the Great, this movement was at its height in Ireland, and was also characteristic of Gaul and Britain. It was doubtless largely due to economic pressure upon the monasteries. The settlements of those who left the monasteries were often named after the saint who was head of the monastic community that they left. In all Celtic countries the hermits of this stage showed a marked predilection for islands, at first in lakes and streams, then in the sea. (4) The stage of *monastic pilgrims* or *missionaries*. These combined the work of itinerant preaching with that of tilling the soil in the districts where for the time being they settled. Among the fruits of these missions were the monasteries established by Welsh and Irish saints in Brittany, and notably the following important communities: (*a*) that of Iona, founded by St. Columba in 563; (*b*) those of Anegray, Luxeuil, and Fontaine in the Vosges, founded by St. Columbanus in the end of the 6th cent.; (*c*) that of Bobbio in Italy, founded by the same saint in the beginning of the 7th cent.; (*d*) that of St. Gall, founded by a disciple of St. Columbanus. Other Irish monasteries on the Continent were Lagny, Péronne, Fosse-la-Ville (near Liège), Lure, Beaulieu (in Argonne), Würzburg, and Säckingen. These and other Celtic monasteries were important centres of learning in the Dark Ages, and the Irish monks especially were distinguished for their skill in copying and illuminating MSS (cf. *ERE* i. 843, 860).

4. The regulation of life in the monastic communities gave rise to the formation of Penitentials and Rules. Some of the former, as, for instance, that of Gildas (see Hugh Williams, *Gildas*), show that drunkenness and worse vices had to be kept in check, and the Lives of the saints themselves sometimes give similar indications. The rule of Columbanus was in some respects severer even than that of St. Benedict (Warren, *Liturgy and Ritual of the Celtic Church*). So far as the celibacy of the clergy, however, was concerned, it is probable, as Warren points out, that a married priesthood was not unknown in certain places and at certain times. St. Patrick appears to have been the son of a deacon and grandson of a priest, and one Irish canon speaks of a cleric and his wife ('uxor ejus'). Gildas in his *Increpatio in sacerdotes* seems to imply a married priesthood. The efforts to promote clerical celibacy in Wales in the 10th cent. met with considerable opposition, which continued into the two following centuries. Gildas (*Epist.* xxii. 21) speaks with approval of the celibate life, and quotes Elijah, Elisha, and Jeremiah as examples of it ('Virgo Elias, Elisæus virgo, virgines multi filii prophetarum'); in *de Excid.* 80 he says, 'Hieremias quoque virgo prophetaque'; but this was probably in opposition to the current ecclesiastical practice of Wales in his time.

The lives of the Celtic saints sometimes describe their ascetic practices in terms not unlike those of Indian *yogis* or *faqîrs*, and it has been suggested that the principle underlying this self-torture was analogous to the Celtic legal remedy of 'fasting against a person,' a practice whereby the person 'fasting against' another, to whom he had preferred a request, could bring his blood upon the other person's head, if the fasting led to the faster's death through persistence in refusing the request (Fisher and Baring-Gould, *British Saints*, Introduction).

Some of the austerities recorded of Irish saints are as follows:—St. Finnchua is said to have spent seven years suspended by iron shackles under his armpits, 'so that he might get a place in heaven,' in lieu of one which he had given away. Both he and St. Ite are said to have caused their bodies to be eaten into by chafers or stag-beetles. St. Findian is said to have worn a girdle of iron that cut to the bone. Of St. Ciaran we are told that he mixed his bread with sand, and of him and St. Columba that they slept on the ground with a stone for a bolster. Of St. Mochua it is said that he lived as an *inclusus* in a prison of stone, and that he had only a little aperture left for letting food down to him. Of the Welsh saint Brynach we are told that he lessened his need for the luxury of clothing by dipping his body daily in the coldest water, and St. Cadoc is also said to have been wasted with fastings. Further, of the Irish saint Kevin it is said that he remained for seven years in a standing posture without sleep, with his arm held up in the same position, and that a blackbird laid and hatched her eggs in his palm. Some of these tales are obviously exaggerations, but doubtless the Celtic monks underwent not a few austerities both necessary and voluntary. An ascetic attitude towards women appears to be reflected in some ritual observances of the Celtic Church, as for instance in the rule (embodied in the *Penitential* of Cuminius) that women were to be veiled at the reception of the Eucharist. In the *Leabhar Breac*, too (f. 248, col. i.), there is mentioned an Irish church where women were prohibited from going near the altar or taking the chalice into their hands. The Irish *Liber Hymnorum*, in its praise of the celibate lives of St. Patrick and St. Brigit, shows that the ascetic ideal had an honoured place in Celtic monasticism; and St. Patrick says of himself in his *Confessio* that he prayed as many as a hundred prayers a day, and the same number at night. Neither snow, frost, nor rain could prevent him from going before daylight to his wonted place of prayer. In spite of its tribal and other features, it cannot be doubted that Celtic asceticism was essentially part of the same movement as that which showed itself in

Christendom generally, and was governed in the main by similar ideals.

5. One of the best known names connected with Celtic asceticism is that of the Culdees (Ir. *Céli Dé*, 'the companions of God'). This term was sometimes Latinized into *Colidei* ('God-worshippers'). It is probable, according to the view taken by Reeves and Zimmer, that this term, as used from the 9th to the 12th cent., did not denote the regular successors of the Irish monasticism of the 6th, 7th, or 8th cents., but the followers of a new movement, which dated from the 8th century. Zimmer suggests that it was probably due to the influence of monks who had returned to Ireland after living at Metz under the rule of Chrodegang (A.D. 749). It was not in Ireland, however, but in North Britain that the Culdee movement attained its most important development.

Many of the terms of Celtic monastic nomenclature were derived from Latin, but a few were of native origin. The following are the chief terms of Irish: *abb* ('the abbot'); *secnabb* (i.e. *secundus abbas*, 'the prior'); *fer légind* ('the lector'); *mac légind* ('the lector's pupil'); *coimétuide* ('the warden'); *manach* ('a monk'); *mac clérech* ('a young monk'); *banairchinnech* ('the prioress'); *caillech* ('a nun'); *mac-caillech* ('a young nun'); *berrad manaig* ('the tonsure,' in Celtic countries over the front of the head from ear to ear); *cathair, congbail* or *maimister* ('a monastery'); *anchara* ('an anchorite'); *anmchara* ('a soul-friend,' 'confessor'); *cilic* ('cilicium'); *clausul* ('clausula'); *crípta* (Lat. *crypta*); *disert* (Lat. *desertum*, 'an anchorite's cell'). In Welsh the following are some of the terms employed: *abad* ('an abbot'); *mynach* ('a monk'); *abades* ('an abbess'); *mynaches, lleian* ('a nun'); *mynachlog* ('monachi locus'); *mynachdy* ('a monastery'); *cufeint* ('a convent'); *didrufwr* (lit. 'a homeless man,' 'a hermit'); *ancr* ('an anchorite'); *meudwy* (lit. 'a servant of God,' 'a hermit'); *cufygl* ('cubiculum,' 'a hermit's cell'). The Breton and Cornish terms are practically identical with those of Welsh. The place name Dyserth in Flintshire is probably identical in meaning with the Irish *disert*. The derivative of *cella* was in Irish *cille*, in Welsh *cell*. *Cil* in Welsh place names means 'a retreat,' and *llan*, 'an enclosure,' a term applied to the precincts of a monastic settlement. Generally it is followed by the name of a saint, but sometimes by some other word, such as a river name: *e.g.* Llanelwy, Llandaf, Llangefni, Llanarth, Llanllyfni. The Welsh term *Plwyf*, Breton *Plou* (from Latin *plebes*), which now means 'a parish,' meant in mediæval Welsh 'a congregation.'

6. The general fusion of Celtic Christianity with that of Rome led to the assimilation of the monastic institutions also, and the foundation of new monasteries and nunneries by the leading orders of the Continent. In Wales some of the mediæval abbeys, such as Neath, Margam, Strata Florida, Strata Marcella, Aberconwy, and Valle Crucis, aided and patronized Welsh literature; but from the 14th cent. onwards Welsh poetry, largely under the influence of the love-poet Dafydd ab Gwilym, shows an anti-ascetic tendency. Unlike Ireland and Brittany, Wales has become thoroughly Protestant in spirit, and not only Protestant but Nonconformist. So far as the Nonconformity of Wales may be said to have an ascetic bias, it is in the direction of temperance and total abstinence from the consumption of alcohol; and this tendency has left its trace in legislation in the 'Welsh Sunday Closing Act.' The Calvinistic Methodist Church, especially, views the sale and use of alcohol by its officers and members with marked disfavour; and its regulations are strongly hostile to all forms of card-playing, dancing, and the drama, but the spirit of Welsh Nonconformity in general is practically identical in these matters with that of this denomination.

I. *INTRODUCTION: ASCETICISM IN ITS RELATION TO BIBLICAL REVELATION.*—The word 'asceticism' (Gr. ἄσκησις, from ἀσκεῖν = 'to exercise *or* practise'), when used in the sphere of religion and ethics, denotes self-preparation for a virtuous course of conduct, the zealous practice of acts of devotion and morality. This practice of virtue in the narrower and stricter sense, or what may be called moral gymnastic, may consist in exercises of an inward kind (prayer offered in the heart, examination of conscience, and the like), or in acts of self-discipline passing over into the outward life (self-mortification by fasting, voluntary poverty, sexual continence, etc.). Both forms of asceticism, that pertaining to the spiritual sphere and that of a physical and external character, were already known to classical antiquity, especially in the traditional teaching of its philosophers from Pythagoras and Socrates downwards (cf. ἄσκησις in Plato, for instance *Rep.* vii. 536; and in Aristotle, for instance *Eth. Nicom.* ix. 9; as well as the mention of πολλαὶ καὶ παντοδαπαὶ ἀσκήσεις ὀσιότητος in Isocrates, p. 226 C, etc.). A specially high value was set upon the ascetic habit of life in the schools of the Stoics (cf. especially Epictetus, Περὶ ἀσκήσεως, Diss. II. xiii. 6), the Cynics (cf. κυνικὴ ἄσκησις in Jos. *Ant.* VI. xiii. 6), and the later Platonists beginning with Plutarch (cf. the latter's *Moral.* p. 668 E). Owing to the great and widespread influence of these schools during the Roman Imperial period, 'philosophy' and 'asceticism' (τὸ ἀσκητικόν, Epictetus, Diss. II. xii. 6) were employed almost as synonymous terms. Abundant evidence of the essential identity of the connotation of the terms 'ascetic' and 'philosopher' is furnished especially by the writings of Philo Judæus, as well as by those of numerous Christian Fathers from the time of Justin Martyr and Clement of Alexandria onwards. When Philo hails the Jewish religion, and the Fathers hail Christianity, as the true philosophy, both have in view a certain ascetic element in their respective religions. The moral strictness and earnest demand for virtue found in both, when looked at from the view-point of asceticism, formed the connecting link which rendered possible such a combination of the Jewish or Christian ideal of life with the 'wisdom' of the Græco-Roman philosophers.

As a matter of fact, there does appear to be inherent in both the OT and the NT stages of revelation an element of asceticism. This consists in the urgent demand for an earnest combating of sin and a complete resignation to the holy will of God. In its ritual legislation the Old Testament also prescribes fasting—sometimes strictly obligatory and universal (especially on the Great Day of Atonement, Lv 16^{29} 23^{27}), at other times optional and limited by temporary or personal conditions (*e.g.* Jl 1^{14} 2^{12}, Jer 36^{6}, 1 S 7^{6}, 2 S $12^{16ff.}$, Ezr 8^{23});

in particular, it imposes upon the priestly order certain temporary forms of abstinence; and is acquainted with a form of vow in virtue of which certain persons abstain all their lives from the use of wine (Nu $6^{2ff.}$, Jg 13^4, 1 S $1^{10ff.}$, Jer 35). And the New Testament religion not only takes cognizance of these and similar ordinances of the Old Covenant, but even itself leaves scope for a corresponding ascetic course of conduct. While not prescribing fasting as a matter of obligation, the NT clearly assumes that this practice will occasionally be followed by members of the Christian community (Mt 6^{16} 9^{15}, Ac 13^2 14^{23}, 2 Co 11^{27} etc.); it exhibits a similar attitude in the matter of sexual continence (Mt 19^{12}, 1 Co 7^{25}), or of the renunciation of earthly possessions (Mt 19^{21}, Ac 2^{44} 4^{32} 5^4), or of temporary submission to a vow (Ac $21^{24ff.}$), and the like. In short, acts of ascetic discipline and training in virtue are contemplated in the NT as allowable, nay, even as necessary, according to time and circumstances, in the sphere of Christianity. In the interests of the kingdom of Christ, the Apostle Paul submits himself to fastings, watchings, cold, nakedness, etc. (2 Co 6^5 $11^{26f.}$); and 'bruises' and 'subdues' his body after the manner of athletes (1 Co 9^{27}). And he looks for similar action on the part of other seriously-minded followers of Christ (Gal 5^{24}, Ro 13^{14}, Col 3^5).

In view of the above and many other Biblical expressions, it cannot surely be maintained that ascetic practices are *excluded* by the religion of revelation. But, on the other hand, they cannot be regarded as a *primarily* important or *fundamentally* significant element of that religion. That they play only a secondary or accessory rôle in the sphere of revealed truth is plain even at the OT stage of religion, both from the relatively small number and the moderate strictness of the commands regarding fasting and other forms of abstinence, and from the sharp polemic of the Law and the Prophets against the excessive bodily and external mortification which prevailed widely in the religions of Israel's heathen neighbours (cf. the prohibitions of self-mutilation in Lv 19 and Dt 23, and Elijah's attitude towards the frantic wounding of themselves by the priests of Baal, 1 K $18^{28ff.}$). There is also proof of this in the absence of all trace of a partiality or a preference for the unmarried life in the social and ethical practice of life in Israel. To marry and to have children remain national fundamental virtues in Israel through all periods of its history; even as late as the Roman era, the Pharisees, who were preeminently the party of strict law, and who showed in many other points a disposition towards rigorous legalism in the matter of ascetic practice, maintained a decidedly unfavourable attitude towards celibacy. The opposite attitude of the Essenes cannot count for much, in view of the notoriously small number of this party and the extent to which they were probably influenced by foreign customs, particularly, it may be assumed, by the example of the Pythagoreans; and even in this sect there was a minority which (according to Jos. *BJ* II. viii. 13) did not renounce marriage.

That Christ and the primitive Christians deviated in any of the points here mentioned from the traditions that prevailed among the Covenant People of the OT is a theory that could be maintained only by a NT exegesis controlled by ascetic prejudices. Neither as regards the individual nor as regards society do the ethical teachings and prescriptions of the NT go further than *permit*. It is intended not as a rigorous statute, but as a command of love, when the Lord calls His disciples (Mt 10^{38} 16^{24}, Jn $13^{13ff.}$) to follow after Him in the way of the cross and of humility; and the Apostles adopted precisely the same free and mild attitude towards the problems of controlling the appetites and mortifying the flesh. In regard to these problems, St. Paul appears in some measure to have made stricter demands (cf. the above-cited passages in 1 and 2 Cor. as well as the Epistle to the Galatians, etc.) than even the stern legalist St. James; but an injustice is done him when the attempt is made to read into his Epistles anything like a commendation of monastic withdrawal from the world or of fanatical maintenance of virginity. He was and continues to be the preacher of true evangelical freedom, even in all those instances where he deals with questions of individual or of social asceticism (cf. 1 Co 6^{12} $9^{4ff.}$ 10^{23}, Gal 5^1, Ro $14^{2ff.}$); in the demands he makes for cross-bearing he nowhere goes beyond the standard set up by Jesus Himself. He who would 'walk by the Spirit' (cf. Gal $5^{16ff.}$) must, indeed, turn away from all works of the flesh; but there is no hint in this of an *ἀφειδία σώματος* or false angel-like spirituality (Col $2^{16ff.}$), no 'hating of one's own flesh' in the sense of Neo-Platonic or Oriental dualistic teachings (Eph $5^{28f.}$), no one-sided bodily exercise and mortification; for far higher than such *σωματικὴ γυμνασία* stands in his estimation the *γυμνάζειν ἑαυτὸν πρὸς εὐσέβειαν* (1 Ti $4^{7f.}$). Even in the solitary passage in which he uses the word *ἀσκεῖν* of religious and moral conduct (in his speech before Felix at Cæsarea, Ac 24^{16} *'ἀσκῶ ἀπρόσκοπον συνείδησιν ἔχειν πρὸς τὸν θεόν, κ.τ.λ.*), the practice of virtue he has in view is that which he champions everywhere else, a practice marked by the characteristic freedom of the Gospel, and as far removed from Pharisaic narrow-mindedness and legal bondage as it is from unnatural self-torture after the fashion of Indian *faqîrs* or heathen Syrian priests of Asia Minor.

II. *THE ATTITUDE OF THE EARLY CHRISTIAN CHURCH TO ASCETICISM.*—In spite of the condition of things described above, which forbids us to regard asceticism as an element of the religious and moral life belonging exclusively to the essence of Christianity, or prescribed in its original body of doctrine as necessary to salvation, the ascetic principle early made way for itself in the development of the Christian Church. Nay, in the course of this development, asceticism soared to heights and produced phenomena in the life of the Church which for greatness and far-reaching influence or the whole cultured life of humanity fall in no way behind what the history of non-Christian religions has to show of an analogous kind. Christian asceticism is one of the phenomena produced by the union of pre-Christian factors of civilization with the spirit of Christianity, phenomena which —like Christian art, poetry, jurisprudence, etc.— have everywhere made contributions of inestimable value and of abiding significance for the furtherance and elevation of the mental life of mankind. And the source from which the Christian spirit derived this element of culture—so far as it did not lie in the religious and cultured life of the OT —can have been none other than that from which formative influences and impulses mainly flowed in the departments of art, poetry, politics, and law. The beginnings of asceticism in the Christian Church, especially as organized in the form of communities—monasticism—constitute another chapter in the history of that process which is usually spoken of as the 'Hellenizing of Christianity.' No other place can be assigned to them than within the sphere of this process, which embraces the history of the Church from the 2nd to the 5th century. For the stage upon which the phenomena of a fully developed and socially organized Christian asceticism first make their appearance is found in those lands which constituted the world of Græco-Roman civilization; and the religious and philosophical traditions of this same cultured

world form the point to which the asceticism of the Church, with its ideals and efforts, primarily and mainly attaches itself.

Per se another supposition might appear possible, namely, that a fruitful influence upon the ascetic and monastic tendencies of the ancient Eastern Church proceeded from a religious civilization which in the matter of asceticism was so richly developed as that of *India* (with ascetic systems like Jainism and Buddhism, which date back to a time considerably earlier than the Christian era). Or an attempt might be made to trace the earliest ascetic and monastic movements in Christianity to kindred phenomena in the religions of *Babylonia* (and Syrophœnicia) or of *Egypt*. But when the various pre-Christian religious civilizations are pitted against one another and their share in the result before us examined, none can dispute the palm with *Greece*. India is far too distant, and was always much too widely separated from the mental life of the peoples of Western Asia, to be seriously taken into account. Towards the religious usages of Babylonia and Syria, which might certainly be considered with a view to the solution of the problem, the people of God in OT times—and primitive Christianity in like manner—consistently assumed an attitude only of disapproval and sharp opposition (cf. the remark already made on 1 K 18^{26}). Again, the analogies with early Christian asceticism, which have been sought in the religious system of the Egyptians, prove, upon closer critical examination, to be merely apparent. This remark applies especially to those alleged ascetics or priestly monks of the temple of Serapis whom H. Weingarten (art. 'Mönchtum' in *PRE*^{2}, 1882; and previously in *Der Ursprung des Mönchtums im nachkonstantin. Zeitalter*, Gotha, 1877) sought to represent as the real models and teachers of the earliest Christian monks—a false theory which has been completely shattered by more recent investigation (see E. Preuschen's monograph, *Mönchtum und Serapiskult*, Darmstadt, 1899 [2nd ed. 1903], in which the existence of Serapis priests of a monkish type is disproved, and therewith the utter impossibility of Weingarten's hypothesis demonstrated). Thus we must abide by the view that the beginnings of early Christian asceticism and monasticism go back to essentially Greek influences, or, to put it more exactly, to the influence of the late Greek and Judæo-Hellenic schools of philosophy, to which we have already referred in this connexion. The religions of the Ancient East can at most be credited with only an indirect share (the result of the syncretism of the Alexandrian epoch) in the formative process we are considering. [Cf., on the one side, Edwin Hatch, *Influence of Gr. Ideas and Usages upon the Chr. Church* (Germ. tr., Preuschen, *Griechentum und Christentum*, Freib. i. B. 1892, p. 101 ff.), and A. Harnack, *Das Mönchtum, seine Ideale und seine Geschichte*^{4}, Giessen, 1895, esp. p. 18 ff.; and, on the other side, the literature (No. II.) cited at the end of the present article, dealing with the history of asceticism prior to and outside Christianity.]

Long before the rise of monastic organizations, by which asceticism was elevated to the rank of the ideal of life for the social ethics of Christianity, many forms of ascetic practice and endeavour had made their appearance within the sphere of individual ethics. Some of these had their model in Jewish customs. This was the case in particular with the habit of fasting twice a week and observing fixed daily hours of prayer. For both of these practices, the so-called 'station' fasts on Wednesday and Friday, and the habit of praying at least three times a day (the germ from which the later conventual institution of 'hours' developed), there is evidence in writings as early as the 2nd cent. (*Didache*, VIII. i. 3; Hermas, *Sim.* v. 1, 3; Aristides, *Apol.* 15; Tertull. *de Jejun.* i. 10, *de Orat.* i. 19; Clem. Alex., etc.). And at the root of both there is not only the Pharisaic Jewish model, but also an underlying allusion, dating probably even from Apostolic times, to the principal features of the Passion of our Lord. The phenomena of pre-monastic early Christian asceticism may be assumed to have found their models and motives mainly in pagan Hellenism. So with the custom (to be attributed to the influence of Montanism) of partial fasting for several weeks before Easter (the *Xerophagy*, or Fast of the Passion); the disposition (attributable to the same source) to increase the severity of Church discipline and to place additional obstacles in the way of contracting a second marriage (cf. especially Tertull. *de Pœnit.*, *de Pudic.*, *ad Uxor.*, *de Monogam.*, etc.); as well as the high or exaggerated value (to be explained partly from Montanist and partly from Gnostic influences) set upon voluntary virginity (*παρθενία*, *ἐγκράτεια*) as an ideal.

We see the *coryphæi* of all the leading schools of theology, Greeks and Latins, Alexandrians and non-Alexandrians (cf., in regard to these last, not only the already oft-cited Tertullian, but also especially Cyprian, *de Hab. Virg.* and *de Orat. Domin.*; Lactantius, *Inst. Div.* vi. 23; and Methodius, *Conviv.* vii. 3, viii. 1), participating in the endeavour to commend such ascetic practices. The ascetic element was most prominent, to be sure, in the theology of that school which, as the founder of an ecclesiastically orthodox gnosis in opposition to that of the heretical Gnostics, ventured to draw most boldly and most deeply from the treasury of the traditions of Greek philosophy—the *Alexandrian*, which far surpassed all other theological schools of the early Church in the matter of establishing and developing Christian asceticism. Even Clement, although he defends the right to hold earthly possessions (*Quis div. salv.*), and upholds the sanctity of the married condition (*Pæd.* ii. 10; *Strom.* ii. 23, iii. 12), gives expression to very rigorous views regarding the Christian attitude to fine clothes and various worldly pleasures and enjoyments (*Pæd.* ii. 1 ff., iii. 2 f., 7 f.), and even pleads at times in favour of an almost Stoically conceived ideal of apathy (*Strom.* iv. 22, cf. iii. 7 and vii. 12). Origen, even after he had learned to repent of the hyper-ascetic excesses of his youth, in particular his self-emasculation (Euseb. *HE* vi. 8), still remained an enthusiastic panegyrist of all forms of world-renunciation and mortifying of the flesh. He went still further in the matter of fasting and other forms of abstinence (see *Hom. in* Lv $^{10.\ 11}$, *Exhort. ad Martyr.* etc.), and especially in recommending virginity (on this last point, besides passages like *c. Cels.* i. 26, vii. 48, viii. 55, see especially his Com. on Ro 12^1, where he commends three kinds of 'living, holy, God-pleasing sacrifice,' namely a martyr death, voluntary celibacy, and abstinence from sexual intercourse on the part of married persons; similarly *Hom.* 23 *in Num.*).

It is not surprising that, when an advance took place from the practice of asceticism by individuals to its practice by bodies of people, the earliest signs of the movement took place where this Christian-Gnostic theology made its influence first and most powerfully felt. Egypt, the home of the Alexandrian theology, became also the mother-land of early Christian *monasticism*, or, to designate it more exactly and correctly, *cœnobitism* (for *μοναχός* or *μονάζων* is properly 'a hermit,' 'one living alone'; it is the living together in *κοινόβια* that stamps the ascetics as monks in the modern sense of the word). It was in those circles in Egypt in which theology and church stood in the closest connexion with Origen that the impulse towards more intimate

association, with a view to a common ascetic life, appears to have set in earliest. The adherents of the Origenist Hierakas, whom Epiphanius in No. 67 of his Catalogue of Heretics describes as a sect under the name Ἱερακῖται, may in many respects be regarded as one of the earliest societies of ascetics. But in their case, as previously in that of the Encratite party of Tatian, the element of theoretical traditional teaching or mystico-Gnostic speculation probably predominated to such an extent that the name 'school' or 'sect' fits them better than such designations as 'Mönchverein' or 'Klosterbrüderschaft' (cf. art. 'Hierakas' in *PRE*[3] viii. 38 f. by A. Harnack, who does not take sufficient account of the peculiarity which distinguishes them from the cœnobite societies of the following period). Like these Hierakites, who may have belonged entirely to the 3rd cent., the 'solitaries' (μοναχοί, also μονότροποι, μονήρεις), described by Eusebius in two passages of his Commentary on the Psalms (on Pss 67 and 83), were also still without the closer social organization. The latter may yet have been wanting also to those 'bond brothers' or 'sons of the bond' (Syr. *bənai qyāmā*), of whom mention is made by a Syrian contemporary of Eusebius, namely, Aphraates of Edessa, in Nos. 6 and 18 of his *Homilies*. To the category of ascetics who received their impulse from the Alexandrian theology we must assign also those representatives of the ascetic habit of life who belong to the first decades of the 4th cent., and whose dwelling-places should probably be sought in Palestine and Syria rather than in Egypt. What here again forbids our identifying them with monks proper or cœnobites is the lack of more definite information as to principles of organization or rules that may have belonged to them.

This characteristic of being bound together by a fixed principle or rule of life is not wanting, however, in those societies of Middle Egypt which from the early part of the 4th cent. began to make their appearance in the Eastern Church, and as the founders of which St. Antony and St. Pachomius have gained superlative fame. The former (born 251, died 356) lived for some decades (from about 270) as a hermit in the mountain wastes of northern Middle Egypt, on the right bank of the Nile, opposite Arsinoë and Heracleopolis. Then, shortly after the year 300, a number of bodies of associates in his ascetic mode of life, who had taken up their abode in the same region, were trained by him to work and to practise devotional exercises in common, and thus—though for a time without written rules—a kind of monastic life was established. The sites of two of the κοινόβια, or colonies of monks, established and directed by St. Anthony down to his death (*i.e.* for a full half century) can be fixed with tolerable certainty: Pispir, or the 'outer mount of Antonius,' lying close to the right bank of the Nile, and the 'inner mount of Antonius,' lying farther to the east, near the Red Sea. While this older patriarch of Egyptian monasticism still refrained from committing his rules to writing, his younger contemporary Pachomius (born *c.* 290, died 345 or 346) provided the hosts of ascetics who gathered round him in southern Middle Egypt, between Akhmîm [Panopolis] and Denderah, with a rule of life which regulated in detail their devotional exercises and their work. This body of rules was, no doubt, reduced to writing by himself or by some of his immediate associates. By the authors of the earliest accounts of his life and work it was regarded as a product of Divine inspiration, having, it was alleged, been given to him, written on a tablet of brass, by an angel while he sojourned in a cave. Its prescriptions regulate in the most minute detail not only the daily round of work and prayer, but also everything relating to the food, the clothes, the sleep, and the dwellings of the monks. They comprise much that is original and characteristic of the national Egyptian monastic usage, but also some things which the later tradition did not accept at all (so, especially, the division of the inmates of each establishment into 24 τάγματα classified according to age), or accepted only with considerable modifications (for instance, the prescription of 3 × 12 daily acts of prayer).

Partly independent of the models offered by the creations of these two great monastic fathers, and partly with more or less close attachment to them, there arose even during their lifetime various large and afterwards influential settlements of associated bands of ascetics. Thus we find (1) in Lower Egypt, the monasteries, or, to be more correct, the hermit-villages of the Nitrian mountain, founded somewhere about the year 320 by Amun or Ammonius, as well as those of the desert of Skete to the north of this hill country, founded about 330 by Macarius 'the Great' or 'the Egyptian' (died 390); (2) the South Palestinian hermitages and monasteries of St. Hilarion, a pupil of St. Anthony (*c.* 320–360); (3) the N. Syrian and Mesopotamian monasteries called into being about 325 in Nisibis and its environs by the Egyptian Awgîn (a monkish saint who received his training at Tabennisi, the principal monastery of Pachomius); (4) the monastic societies established about 330 still farther north, in Armenia, Pontus, and Cappadocia, by Eustathius of Sebaste. Only a little later are the phenomena which mark the laying of the foundation of a joint practice of asceticism in the West, especially the essentially monastic activity of St. Martin (*c.* 370–400) in Western Gaul. Regarding the majority of these fathers of the monastic system we have more or less detailed and in the main reliable historical information. In his *Historia Lausiaca* (written in the beginning of the 5th cent.), Palladius has collected sketches of the lives of some 70 notable ascetics and founders of monasteries. These sketches, while not devoid of certain features of embellishment, are never pure fictions, but rather embody reports by eye- and ear-witnesses of the persons and events in question. The same remark applies to the historical value of the still older *Historia Monachorum* by Rufinus, and to Athanasius's *Vita Antonii*. Here, again, this last-named biography of the most famous of all the Oriental fathers of monasticism has handed down to us information which, while it is enriched with not a few legendary additions, represents in the main the authentic testimony of contemporaries. [Against the attacks of modern hyper-critics (esp. the above-named Weingarten) on these and other sources for the history of asceticism and monasticism during the era of Constantine and the following period, see, in general, the discussions by C. Butler and the author of the present article in the works cited below (esp. Zöckler, *Askese und Mönchtum*, pp. 188 ff., 200 ff., 212 ff.)].

III. *DEVELOPMENT OF ASCETICISM IN THE MIDDLE AGES.* — The Church of the Middle Ages added scarcely anything that was essentially new to the forms of ascetic effort and action that had become usual in the Early Church period; but in the matter of establishing fixed rules and systematizing these forms it went far beyond what had been done by the Ancient Church. The development in question was accomplished in the course of the following four periods:

1. *The transition period from the Early Church to the Middle Ages proper* (*c.* 360–800).—During this period the labours of a number of *monastic legislators* in East and West gave permanent form

and binding force to the traditions of the era of Constantine with reference to the living together of ascetics in monastic establishments. Basil the Great of Cæsarea (died 379) drew up a set of rules, which proved of fundamental importance and attained to permanent influence, for the monastic system of the Eastern Roman Empire and partly also of Lower Italy and Sicily. Suppression of the hermit or anchorite form of monastic life (which was still frequently preferred by the earliest Oriental ascetics) by cœnobite arrangements, transfer of monastic settlements from remote deserts to the neighbourhood of cities, rejection of hyper-ascetic excesses (*e.g.* in such matters as fasting and the number of daily times of prayer, which were restricted to seven or eight), and generally an increasing mildness of disposition, directed to the discouraging of excessive ascetic enthusiasm—such are, upon the whole, the characteristic features of this organization which derived its origin and its name from Basil. In the Latin edition of the Rules of Basil, which Rufinus prepared to serve as a constitution for the lower Italian and Sicilian branches of this monastic family, provision is made even for the establishment of double religious houses, *i.e.* the erection close to one another of monasteries under an abbot and of nunneries under a 'mother.' The foundation of these double houses indicates a shrinking from the vehemence of the older sexual asceticism. A similar custom prevailed frequently in the West, even independently of the influence of Basil and Rufinus. Such houses were founded, for instance, in Spain by Fructuosus (died 670); in the British Isles we have examples in the Iro-Scottish religious houses founded by St. Patrick and St. Columba; and still later in the orders of Robert of Arbrissel (died 1117), Gilbert of Sempringham (died 1189), and Birgitta of Sweden (died 1373); cf. Zöckler, *l.c.* pp. 290, 379 ff., 419 ff., 541 f. More or less important developments continued to be undergone by Basil's monastic legislation in the Byzantine East till towards the middle of the 11th century. These concerned especially such matters as the placing of the religious houses under the bishop's superintendence, increased severity of discipline within convents, an organic union whereby anchorites (κελλιῶται, 'inmates of cells') lived with cœnobites within the same cloistral district, and the distinguishing of the monks' right of penitential discipline from the pastoral charge exercised by the secular clergy. Most effective for this development were the ecclesiastical prescriptions of Justinian's civil code; the canons of certain synods of the 7th and 8th cents., especially the Trullan Council, ii. 692; the influence of the patriarch Germanus of Constantinople (died 703), of the abbot Theodorus Studita (died 826), of Athanasius of Trapezus (*c.* 960 ff.) who founded the oldest principal religious house of the monastic republic on Mt. Athos, and of the Constantinopolitan monastic prefect, Simeon the younger (*c.* 1040; cf. Zöckler, *l.c.* p. 290 ff.; and, in regard to the last named, K. Holl, *Enthusiasmus und Bussgewalt beim griechischen Mönchtum*, Leipzig, 1898).

Turning to the monastic system and asceticism of the West, we discover the most influential legislator and most famous founder of orders in the person of Benedict the Great of Nursia (died 543), the founder of Monte Casino. A number of his predecessors in the West (in particular Joh. Cassianus [died 435] and Cæsarius of Arles [died 542], the former the composer of rules for monks, the latter the author of a system for nuns) had sought to adapt the ascetic traditions of the East as represented by Egypt and Syria to the needs of the inmates of Western religious houses. In relation to these attempts it is to be noted that the course followed by the *Regula Benedicti*, which became the fundamental code of the greatest of all the orders of monks, is partly to summarize and partly to condense and simplify previous results. The *Regula* in its present form is divided into 73 chapters, and though perhaps not free from some later additions, may be regarded, certainly up to ch. 66, as genuine. It exhibits no small degree of legislative wisdom in its enactments, which are marked on the one hand by strictness and on the other by humanity and mildness. It wears the aspect of strictness in its insistence upon the maintenance of the *votum stabilitatis*, and in its measures for ensuring a strict *clausura* in opposition to all undutifulness and disposition on the part of the monks to wander about without restraint; so also in its demand that there shall be no holding of private property by any inmate of a religious house; in short, in its enforcing of the three fundamental monastic duties: *castitas, obedientia, paupertas*. But, on the other hand, it evinces relative mildness in its dietary prescriptions (the eating of flesh food being prohibited, but a moderate quantity of wine allowed), its regulation of dress, its enjoining of silence (*taciturnitas*) at fixed times, and its directions as to devotions, eight daily 'hours' being indeed prescribed, but excessive length being avoided by reducing the number of Psalms to be sung in each 'hour' to three. The *Regula* of the patriarch of Monte Casino knows as yet nothing of the more violent methods of penance and discipline, such as self-flagellation, wearing the hair shirt, temporary *inclusio*, or confinement of monks in their cells, etc. It was reserved for later epochs in the Middle Ages to give birth increasingly to such aggravations of ascetic practice until an unnatural degree was reached.

2. *The period from the beginning of the 9th till towards the end of the 11th century* (from Charlemagne to Hildebrand).—This period is characterized, on the one hand, by the beginnings of that rigorous reaction, within the bosom of the Benedictine order of monks, against the frequent laxity or disuse of monastic discipline, such a reaction as is exhibited in the reforms of the younger Benedict (of Aniane, died 821) and the 'congregation' of Cluny (especially from the time of its second abbot, Odo [died 942]); and, on the other hand, by the constant effort of the Church, through the instrumentality of penance, to carry over ascetic principles and habits of life to the lay world. Amongst the literature serving this purpose (the *Libri Pœnitentiales*), one of the earliest and most prominent places should be assigned to the works of Columbanus of Luxeuil (died 615), who composed not only a book of penance for laymen, but a rule for religious houses (*regula cœnobialis*) which contained a severe penal code. In this class of literature we find prescribed not only a number of the ordinary forms of penance for sins that have been confessed (money fines, almsgiving, pilgrimages to distant shrines, intensified fastings, etc.), but with special frequency also the penalty of flagellation. In connexion with the rigorous movement emanating from Cluny, there were many monasteries in which, from the commencement of the 11th cent., this flagellation was practised in a specially severe form, and with all sorts of refinements added to intensify it. Thus arose the practice of self-flagellation, first introduced in certain religious houses of Central Italy (Clusium, Pomposia, perhaps also at Camaldoli near Arezzo, the original seat of the Camaldulensian 'congregation' founded by Romuald [died 1027]), and reduced to a fine art in Peter Damiani's establishment, Fonte Avellana, by Dominicus, surnamed

Loricatus (*c.* 1050), who added to the self-inflicted flagellation yet other methods of mortifying the flesh, notably the performance of numerous genuflexions (*metanœæ*) during the singing of Psalms in Divine worship, and so became a much admired hero of the self-torturing hyper-ascetic discipline (see the literature cited below).

A more harmless form of the joint practice of asceticism, likewise developed first in the religious houses that were influenced by the reforming movement of Cluny, and showing itself almost simultaneously in Central Italy and in South Germany, consisted in the institution of lay-brothers or 'outside brothers' (*fratres exteriores* or *conversi* or even *barbati*). These were a kind of half-monks, who, because they were subject to only part of Benedict's *Regula* and were not bound to wear the monastic habit, did much to diffuse the spirit of monastic piety even in lay circles, and at the same time to extend the political influence of the monastery. Starting from Gualbert's 'congregation' of Vallombrosa near Florence (*c.* 1038), and from Hirschau, the monastery of abbot William the Holy (died 1091), this institution of lay-brothers gradually established itself in other 'congregations' as well. It became the model for those brotherhoods of Penitents or Tertiaries which were afterwards (from the end of the 13th cent.) affiliated with the mendicant orders of St. Dominic and St. Francis, and from whose activity results of great significance followed.

3. *The period of the Crusades and of the last two centuries of the Middle Ages* (*c.* 1100–1517).—The characteristics of this period are an ever-growing effort on the part of the religious orders to extend their manner of cultivating piety to the Church as a whole, and an increasing tendency to multiply ascetic practices and forms. Even during the 12th cent. the monasticizing of the secular clergy by the imposition of celibacy—a movement which had the fashion set to it in Rome from the time of Gregory VII.—had been accomplished in almost all the countries of the West, both the great rival 'congregations' of the Benedictine order, that of Cluny and that of the Cistercians, lending their services to the Curia for this end. Still greater results were reached by the above-mentioned mendicant orders, which from the 13th cent. began to take up the work of both these bodies and in general of the older religious orders. Partly through the stringency with which they enforced the rule of poverty, partly through the institution of Tertiaries above referred to, and, in addition to all this, owing to their preaching in the language of the people, and to the self-sacrificing character of their pastoral activity, especially in times of severe national calamities, they gained for themselves a degree of popularity which threw all their predecessors into the shade. Many phenomena of asceticism as well as hyper-asceticism still prevailed side by side with the influences emanating from these regularly constituted chief representatives of monastic piety. Such, for instance, was the practice, much resorted to by both sexes, of *inclusio*, or allowing themselves to be shut up in narrow cells, caves, or huts, sometimes in remote districts, sometimes in the vicinity of much frequented churches or religious houses. So with pilgrimages to places of devotion and miracle-working shrines, the latter increasing in number towards the end of the Middle Ages. To the same category belong the processions of flagellants, which after the year 1349 repeatedly poured over great tracts of country, and whose practices about the beginning of the 15th cent. were brought to the highest degree of perfection under the guidance of the Spanish Dominican saint Vincentius Ferrer (1401–1417). Another phenomenon was the appearance in particular localities of groups of people who were seized with a sudden religious (or semi-religious) mania, *e.g.* the 'dancers' of the Lower Rhine and Holland (1374) and Strassburg (1418). Finally must be mentioned the numerous instances, amounting almost to a general epidemic of asceticism, in which, from the time of the 'stigmatization' miracle connected with St. Francis (1224), visible copies of the wounds of Christ were, it was alleged, miraculously produced on persons of both sexes, sometimes within the pale of the two rival orders of St. Francis and St. Dominic, sometimes outside it.

The above and kindred phenomena betray a religious degeneration, hand in hand with which went numerous symptoms of moral decay, particularly in the discipline of most of the religious orders, old and new alike. An attempt was made to counteract this degeneration by the mystical and inward tendency which marked some ascetic groups, esp. the 'Brothers of the Common Life' (*q.v.*), who spread from the Netherlands over North and Central Germany; but this effort to lead men to spiritual religious exercises and to a spiritual following of Christ failed to make any deep and lasting impression upon any large number of people.

IV. *ASCETICISM IN MODERN TIMES.*—The Reformation of the sixteenth century led to a return, on the part of all that portion of Western Christendom which adhered to it, to that limited measure of ascetic practice and aim which was the norm for primitive Christianity, with its freedom from the Law. In other words, an attitude of disapproval was adopted not only towards the hyper-asceticism of the Middle Ages, but also towards those intensifications of the ascetic-monastic principle which had made their appearance in the Early Church. On the other hand, in both the Churches of Catholic tradition, the Roman and the Greek, this critical attitude, derived from the Protestant doctrine of justification, towards the development of previous centuries was condemned as unbridled antinomianism. Hence the attempt was made to conserve not only the ascetic but partly also the hyper-ascetic acquisitions of the Church's past. Accordingly a wide severance between the principal Churches in the matter of their ascetic practice now set in.

1. *The Græco-Russian Church.*—This Church, which had been more or less untouched by the exaggerations of asceticism that had shown themselves during the mediæval development of the Western Church, continues to abide in all essentials by the forms and conditions with which the period of primitive Christianity had ended. Hence for it an enduring validity belongs to Canon 13 of the Second Trullan Council, which frees the priests and the lower clergy in general from the obligation to celibacy; as well as to the 12th Canon of the same Council, which strictly binds the higher grades of the hierarchy, from bishops upwards, to an unmarried life. Accordingly, the higher church offices can, as a rule, be held only by men chosen from the ranks of the monastic clergy—a principle far-reaching in its bearing upon the whole ecclesiastical and civil life, and serving to erect a great wall of partition against Western Catholicism.

2. *The Roman Catholic Church.*—Along with the celibacy of the clergy, this Church retains almost all the other intensifications of the ascetic principle which the mediæval development added to the Early Church traditions. Nay, in the interests of its contra-reforming aims it has in not a few points gone beyond the Middle Ages. New forms of ascetic discipline and self-torture could indeed

no longer be invented, but all that was possible was done in order to give more effective form and more refined manner to the creations of earlier days. This will be seen if, for instance, Loyola's *Exercitia spiritualia* be compared with their embryonic types in the monastic mysticism of the Brothers of the Common Life, or if the Jesuitical school comedies and the performance of oratorios in the order of Neri be compared with the crudities of the clerical plays of the closing pre-Reformation period. Of the unnatural extravagances of the later mediæval asceticism, some, such as flagellantism, *inclusio*, the wearing of the penitential shirt, etc., were, if not wholly suppressed, at least somewhat mitigated and more discreetly ordered. The tendency to multiply the forms of joint practice of asceticism was still maintained. And especially in the frequent formation of new religious brotherhoods and sisterhoods outside the orders proper the more recent Catholicism exhibits an inventive genius and a productive power which have been able to defy all counter-forces, including even the revolutionary storm at the transition from the 18th to the 19th cent., and which at the beginning of the present century continue to exhibit the same capacity as during the first decades of the counter-Reformation. The Society of Jesus forms the chief centre. Within its bosom is constantly produced that inexhaustible supply of ascetic vital energy which is diffused in all directions with triumphant effect. The uniqueness of this most important and original of all Catholic orders consists neither in unexampled severity of self-mortification nor in unusual zeal in performing deeds of loving self-sacrifice, nor yet in a superlative degree of scientific industry. In none of these points, least of all in the last-named, is the order of Loyola content to hold a secondary place; but it seeks its chief glory in an intensifying of the monastic virtue of obedience, whereby it far surpasses all that has been achieved in this matter by earlier ascetic societies. The secret of its greatness lies in the blindly obedient devotion on the part both of its individual members and of its superiors to the command of the Pope, and all with a view to extirpating Protestant heresy. To the vow of obedience it has imparted, especially by that sacrifice of intellect to which it trains its pupils, a military precision which secures for it an incomparable superiority over all the other militant orders of the Papal Church. And, owing to this essentially military character and organization, while it has not indeed reached its goal in the extirpation of Protestantism, it has gained other successes of the utmost importance. Instead of the Churches of Protestantism, it has completely conquered its own Church, and secured for itself within it a position of influence which, to all appearance, is destined to continue for decades if not for centuries.

3. *The Protestant Churches.*—These reject, as their reforming instruments and Confessions declare with practical unanimity (cf. *Conf. Aug.* artt. 26, 27; *XXXIX Artt.*, xxxii., xxxiv.; *Conf. Helvet.* ii. 18, 24, 29; *Scotch Conf.* i. 14, 15, and ii.), the Roman demand for the celibacy of the clergy, just as they oppose the claiming of special merit for ascetic displays of virtue. A certain number of wonted ascetic observances, especially in the matter of keeping weekly and yearly fasts, passed over into the practice of Lutherans, Anglicans, and some of the other Reformed Churches in the times immediately following the Reformation, but have survived in only a very limited measure down to the present day. A return to the principles and practices of strict asceticism in the matter both of fasting and of abstinence from worldly pleasures and enjoyments, evincing in general a tendency to withdrawal from the world, was aimed at and in some measure achieved by the Continental Pietism of the 17th and 18th cents., as well as in England and her colonies by Methodism and some of the Methodist and Baptist sects (especially the Tunkers [from *c.* 1724] and the Shakers [from 1774], both of which favoured the principles of celibacy and complete community of property). But even these attempts led for the most part to no permanent results. The Pietistic bodies in Germany, in so far as they survived the Spener-Francke and Zinzendorf times, introduced important modifications in their opposition to a more secular form of Christianity. A more enduring character belongs to the ascetic efforts of many branches of British and American Methodism. Particularly in the sphere of the crusade against alcohol not a little success has already been achieved, whose salutary influence extends to the life of other denominations as well, and from which still more may be looked for in the future. A similar remark applies to the work of the Salvation Army. Its 'Self-Denial Efforts,' *i.e.* abstinence from a number of the pleasures of life with a view to being able to give all the more for the benefit of others, may be classed with those forms of ascetic action whose survival and wider diffusion within the pale of Protestant Christianity are in general to be wished and prayed for. Similar in character and aim are the 'Weeks of Self-Denial' that have recently become common among the Presbyterians of North America, of which an account is given by R. E. Thompson, the historian of that denomination, in *American Church History* series, vi. 189.

O. Zöckler.

ASCETICISM (Greek). — We find asceticism even in ancient Greek life, and there, in fact, its unseen beginnings go back to the 7th cent. B.C. Sundry anticipations of the practice are traceable in various religious cults, as, *e.g.*, the rigorous fasting enjoined by the Eleusinian Mysteries, the fast-day in the sacred calendar of the Attic *Thesmophoria*, the fasting preparatory to incubation in the chthonian cults, etc.* But none of these ever got beyond the embryonic stage, as they did not emanate from any systematic religious conception of the world. Ascetic movements of real significance make their first appearance among the ecstatic seers and purifiers of the 7th and 6th centuries B.C. Thus Abaris, whom Pindar (frag. 270 B) names as a contemporary of Crœsus, is said to have carried the golden arrow of Apollo over the whole earth without taking food.† In Strabo, vii. 301, he appears as the pattern *εὐκολίας καὶ λιτότητος καὶ δικαιοσύνης*—a description, of course, merely legendary and idealizing. The famous seer and purifier, Epimenides of Crete, is also extolled by ancient authorities for his rigorous fasting and his ascetic mode of life in general.‡ While it may be the case that these reports all proceed from the *Pseudepimenidea* of Onomacritus, we have nevertheless no reason to doubt the ascetic tendencies of the persons named, or of kindred spirits. This is, in fact, confirmed by the account given in Hippocrates, *de Morb. Sacr.* c. 1 (Littré, ii. 354 ff.), of the rules of abstinence prescribed by such purifiers.§ The purpose of these regulations and ceremonies was to purify men from the contaminating touch of demons. And, indeed, the practice of cathartics in general arose mainly from the dread of demonic powers, with their standing menace of pollution. Such ideas had not yet taken shape in the Homeric age.

These germinal notions, however, could not develop into a genuine asceticism until men had become conscious of an opposition between body and soul. No doubt the idea that the soul may pursue an independent existence apart from the body belongs to the remote past, the phenomena of dreams, the trance of 'possession,' as also the frequently abrupt transition from life to death, all having tended to suggest such a thought to primitive man. But the feeling of an *opposition*, the surmise that the soul is in its nature divine, while the body is merely its prison-house, makes its first appearance in Greece as a result of the experiences of men in a state of *ecstasy*, notably in connexion with the Dionysan cult. It was, in fact, the triumphal advance of the Dionysan religion which first gave currency to the conviction that the soul acquires hitherto unsuspected powers once it is free from the trammels of the body—a conviction presently appropriated by the adherents of Orphism. 'Of small account, as contrasted with the soul, ever striving after freedom, must appear the body, as that which obstructs, which fetters, and which must be cast off.' . . . 'It was all but inevitable that one who had become familiar with the idea of the antagonism between body and soul, especially if he moved in the circle of cathartic ideas and practices, should hit upon the thought that the soul itself must be "purified" from the body as a defiling encumbrance (Rohde, *Psyche*[2], ii. 101).'

This feeling of the rigid *opposition between soul and body*, as also of their vital and radical *difference in value*, forms the one main source of asceticism. The other is to be looked for in the nascent *consciousness of sin*, and the consequent *yearning for redemption*, in troubled souls.* Before the age of (let us say) Hesiod, such feelings had no place whatever in Greek life. They sprang from a pessimistic outlook upon earthly existence (cf. art. Pessimism), the proximate causes of which probably lay in the social and political conditions as well as in the revolutionary changes of the 7th and 6th centuries B.C. Asceticism was regarded as a means of liberating the soul from the bondage of the flesh and of the world of sense in general (that the body is the prison of the soul was one of the leading ideas of Orphism†): by the practice of asceticism, in fact, the soul, divine in origin, but meanwhile immured in the body by reason of its guilt, might free itself from every corporeal bond, as from the whole 'cycle of becoming,' and, venturing forth upon its flight to the Deity, at length become one therewith.‡ Here we come upon the conjunction of asceticism and mysticism.

1. Orphism.—Views of this character make their first appearance in the communities named after the Thracian bard Orpheus, which can be traced to about the middle of the 6th cent. B.C. The Orphic sect, which in the 6th cent. appears to have had its main centre in Athens,—witness the fact that Onomacritus flourished at the Court of the Pisistratidæ,—seems, towards the end of the same century, to have found a particularly congenial soil in lower Italy and Sicily.§ Fresh and surprising evidence of this has been furnished by the gold leaves found in tombs of the 4th and 3rd cents. B.C. at Petilia, near Thurii. An inscription of like import, moreover, dating from the 2nd cent. B.C., has been discovered at Eleutherna in Crete. While Orphism was never assimilated by the civic religion,‖ and while the various Orphic cults from the 4th cent. onwards degenerated more and more into esoteric mysteries and nonconforming communities, they nevertheless continued to exist till the close of the ancient era, and still exercised a profound influence upon Neo-Pythagoreanism and Neo-Platonism, as well as upon early Christian ideas regarding the other world and the experiences of the soul after death. The central feature of the Orphic faith was constituted by the fortunes of the god Dionysus-Zagreus, who as a child was torn in pieces and devoured by the Titans, Athene being able to recover his heart only; this she carried to Zeus, who, having swallowed it, presently, with Semele, begot the 'new Dionysus,' and destroyed the Titans with a thunderbolt. From their ashes afterwards arose the human race, and, accordingly, there are in man two constituent elements—a Dionysan and a Titanic. It is the Dionysan constituent that generates the human soul, and man must free himself as far as possible from the Titanic element in order to return once more to the deity whose essence he likewise shares.

The outstanding feature of early Orphic asceticism was the *prohibition of animal food* (cf. Euripides, *Hippolyt.* 952 = Diels, *Frag.*[1] 471, No. 8).

* Not only in the Demeter cult, but also in the worship of deities of foreign extraction: Cybele, or, later, Isis, or, finally, Mithras.

§ With Hippocrates' sketch cf. the Pythagorean regulations in Diog. Laert. viii. 33.

* *Orphica*, frag. 226.

† Cf. especially Plato, *Cratyl.* 400 C; *Phædo*, 62 B = *Orphica* frag. 221 (Abel).

‡ Cf. *e.g. Orphica*, frag. 226.

§ The earliest specific mention of the sect is in Herod. ii. 81.

‖ E. Maass is of a different opinion.

In Aristophanes, *Frogs*, 1032, Æschylus (who had probably been initiated into the Orphic mysteries) says :

'Ορφεὺς μὲν γὰρ τελετὰς θ' ἡμῖν κατέδειξε φόνων τ' ἀπέχεσθαι.

Cf. Euripides, frag. 475 N², v. 16 ff. :

Πάλλευκα δ' ἔχων εἵματα φεύγω
γένεσιν τε βροτῶν καὶ νεκροθήκης
οὐ χριμπτόμενος τήν τ' ἐμψύχων
βρῶσιν ἐδεστῶν πεφύλαγμαι.*

See also Plato, *Laws*, vi. 782 C : οὐδὲ βοὸς ἐτόλμων μὲν γεύεσθαι θύματά τε οὐκ ἦν τοῖς θεοῖς ζῷα, πέλανοι δὲ καὶ μέλιτι καρποὶ δεδευμένοι καὶ τοιαῦτα ἄλλα ἁγνὰ θύματα, σαρκῶν δ' ἀπείχοντο ὡς οὐχ ὅσιον ὂν ἐσθίειν οὐδὲ τοὺς τῶν θεῶν βωμοὺς αἵματι μιαίνειν, ἀλλὰ 'Ορφικοί τινες λεγόμενοι βίοι ἐγίγνοντο ἡμῶν τοῖς τότε, ἀψύχων μὲν ἐχόμενοι πάντων, ἐμψύχων δὲ τοὐναντίον πάντων ἀπεχόμενοι.† The prohibition not only applied to the eating of flesh, but covered all food-stuffs of animal origin, even eggs (frag. 42, Abel); and, amongst vegetables, beans : cf. Diels, *Frag.*² 214, 28 : φέρεται δὲ καὶ 'Ορφέως τάδε ἔπη, Δειλοί, πανδειλοί, κυάμων ἀπὸ χεῖρας ἔχεσθαι καὶ 'Ισόν τοι κυάμους τε φαγεῖν κεφαλάς τε τοκήων.

The reason of these prohibitions was that the things referred to were used by the χθόνιοι in their sacrifices to the dead and as food ;‡ in the case of eggs, a further consideration was perhaps the fact that these contained the germ of life (cf. frag. 42, Abel). The practice of *fasting* (*νηστεία*) seems also to have had a place in Orphic asceticism.§

'As a matter of fact, the things and conditions from which they really kept themselves unspotted were those which represented in the symbolism of religion, rather than involved in actual practice, a dependence upon the world of death and impermanence' (Rohde, *op. cit.* ii. 126).

The Orphic asceticism, however, like the 'Ορφικὸς *βίος* in general, probably had, even in its early stages, an ethical import as well. This is certainly not the opinion of Erwin Rohde, who, speaking of this asceticism, says : 'It does not enjoin the practice of the civic virtues, nor is discipline or transformation of character required by it ; the sum-total of its morality is to bend one's course towards the deity, and turn away, not from the moral lapses and aberrations of earthly life, but from earthly existence itself' (*op. cit.* ii. 125, cf. ii. 102). On the other hand, Gomperz writes : 'What distinguishes the Orphic branch of the Greek religion from the other Mysteries is the extraordinary emphasis it laid upon morality, an approximation to which is found only in the Apollinarian cult centralized at Delphi. This deepening of the moral consciousness may well be regarded as the true source of the most important and most characteristic element in the Orphic teachings about the soul' (*Griech. Denker*², i. 107, cf. 434).‖ It would certainly seem that the view of Gomperz, as compared with that of Rohde, is so far the right one, though the former has possibly somewhat exaggerated the moral factor.

2. Pythagoreanism.—Orphic ideas exercised a vast influence upon the succeeding period. In the first place, cognate views and practices are found among the early Pythagoreans. It is, of course, impossible to determine precisely how far such ideas are traceable to Pythagoras himself, as the oral traditions of the school are all we have to go upon till the time of Philolaus, *i.e.* the middle of the 5th cent. B.C. ;¶ but general considerations seem to favour the theory of their being so derived. With regard to Pythagoras, indeed, we are certain of only two of his cardinal tenets, viz. the immortality of the soul, and the transmigration of souls.** But when we bear in mind how intimately these two tenets are connected with asceticism among the adherents of Orphism, with whose Mysteries Pythagoras was undoubtedly acquainted, and when we find unmistakable traces of the ascetic mode of life even among the oldest Pythagoreans, we need hardly hesitate to infer that the founder of the school was himself an ascetic. Even Herodotus (ii. 81) speaks of the prohibition of burying the dead in woollen clothes as being not only an Orphic, but also a Pythagorean, ordinance ; while, again, the doctrine of the *ἀποχὴ ἐμψύχων* was attributed to Pythagoras by the geographer Eudoxus (*c.* 280 B.C.).* The contrary opinion expressed by Aristoxenus† is really meant to apply only to contemporary Pythagorean scholars with whom he was intimate.‡ The interdict against the use of beans seems likewise to belong to the early school.§ It cannot be doubted that the early Pythagoreans were distinguished by their *simple life*.‖ A peculiar feature in their asceticism, from the 4th cent. at least, seems to have been *silence*, originally resorted to, no doubt, as a means of avoiding sacrilegious or ill-omened language in their religious practices ; compare what is said by Isocrates (*Busiris*, 28) regarding the Pythagoreans of his own time.¶ It should also be noted that anticipations of *sexual* asceticism, or continence, are apparently found in connexion with the primitive school.**

Meagre as these notices are, they are sufficient to show us that purity (*ἁγνεία, ἁγιστεία*) in the ceremonial religious sense was the ideal of the 'Italic' philosophers no less than of the Orphic cults. Moreover, when we compare with them the teaching of Pythagoras regarding the immortality and the transmigration of the soul, and that of Philolaus regarding the human body as a house of detention wherein the soul expiates its guilt (frag. 14D), it would appear that early Pythagorean asceticism sprang from the same fundamental causes, and had the same objects in view, as that of Orphism, the influence of which upon the former is unmistakable. Pythagoreanism, further, had also an ethical tendency ; thus one of its characteristic virtues was *σωφροσύνη*, which was supposed to be promoted by asceticism, and which unquestionably had a place in the system before the days of Aristoxenus.††

3. Empedocles. — While we may thus deduce from a tradition, fragmentary at best and overgrown with later traditions, the fairly definite fact that among the ancient Pythagoreans asceticism was intimately associated with mystical theories about the soul, the same conjunction of ideas is brought out in strong relief in the case of the last great purifier of ancient Greece, viz. Empedocles of Acragas, who likewise belonged to the West. Further, the moral and religious views of Empedocles resemble those of the Pythagoreans in the circumstance of their having no organic connexion with his philosophical or scientific

* Diels, *op. cit.* 492, 27 n., where for frag. 472 read frag. 475.

theories. In his poem called Καθαρμοί, abstinence from animal food, and, in fact, avoidance of blood-shedding in general, are very specially inculcated, and are based upon the theory of transmigration and that of the close affinity of man and animal—a concatenation of thought which we may perhaps suppose, though we cannot prove, to have obtained among the ancient Orphics and Pythagoreans.

So Hippolytus, *Refutationes*, viii. 29, 249 = Diels, *Frag.*[2] i. 206, 29 ff.: διὰ τὴν τοιαύτην οὖν τοῦ ὀλεθρίου Νείκους διακόσμησιν τοῦδε τοῦ μεμερισμένου κόσμον πάντων ἐμψύχων ὁ Ἐ. τοὺς ἑαυτοῦ μαθητὰς ἀπέχεσθαι παρακαλεῖ· εἶναι γάρ φησι τὰ σώματα τῶν ζώων τὰ ἐσθιόμενα ψυχῶν κεκολασμένων οἰκητήρια.*

Frag. 140 is also worthy of note, as enunciating the inviolability of the laurel (on this cf. Rohde, ii. 181, 2). In strict consistency, of course, Empedocles ought to have affirmed the inviolable nature of trees in general (as is justly observed by Plutarch, *Quæst. Conviv.* iii. 1, 2, 646 D, in reference to the passage cited), since souls migrate also into trees and plants.† On the other hand, the interdict against beans,‡ which Empedocles has in common with the Orphics and the Pythagoreans, probably sprang from the same motive in his case as in theirs.§

The deeper significance of these ascetic injunctions, to which Empedocles manifestly attaches enormous importance for the soul's welfare, and their close connexion with his mystical standpoint, are fully disclosed in the still extant fragments of his Καθαρμοί. For him, too, the divine nature of the soul is an indefeasible fact,‖ and he likewise accepts the doctrine of the soul's fall from its original divine condition into the corporeal state, in which it must expiate its guilt by a long pilgrimage through the bodies of men, animals, and plants.¶ Empedocles also shares the view that the human body is the disparate integument of the soul (frag. 126). He regards asceticism as one of the most effective means of delivering the soul from the world of sense. 'Who ever exerteth himself with toil, him can we release'; the soul at length returns to its divine habitat, and indeed the wise men who practise such holy living—the asceticism of Empedocles having a strong ethical tendency**—eventually become gods while yet upon the earth (frag. 146), so that the poet even speaks of himself as a god (frag. 112, 4 ff., and frag. 113).

It is certainly the case that Empedocles was strongly influenced by the teachings of Orphism, as has, in fact, been made out, with reference to certain particular points, by Otto Kern.†† While this is so, it would nevertheless be wrong, the present writer thinks, to deny the influence of the ancient Pythagorean Mysteries and asceticism.‡‡

* Cf. the passages given in Diels at frag. 135 (p. 213, 1 ff.), especially Cicero, *de Republ.* iii. 11, 19, and Iamblichus, *Vita Pyth.* 108, and frag. 135 D; further, cf. especially frag. 136 (Empedocles): οὐ παύσεσθε φόνοιο δυσήχεος; οὐκ ἐσορᾶτε | ἀλλήλους δάπτοντες ἀκηδείῃσι νόοιο; with this cf. Sextus, *adv. Math.* ix. 127 (from Posidonius) in Diels, *Frag.*[2] i. 213, 19 ff., also frag. 137 D, and passages there; Porphyr. *de Abstin.* ii. 21 = Diels, i. 210, 22 ff., also frag. 139; and Porphyr. ii. 31 = Diels, p. 214, 9 ff.

† Frag. 117. Cf. Zeller[5], i. 808 ff., 824, 837.

‡ Frag. 141. See the relevant passages in Diels, i. 214, 19 ff.; Diog. Laert. viii. 34 = Diels, 279, 31 ff.; Lobeck, *Aglaophamus*, i. 254.

§ Special attention is due to the passage, Hippolytus, *Refutationes*, viii. 29, 249 = Diels, *Frag.* 206, 32 ff., where the injunction καὶ ἐγκρατεῖς εἶναι . . . τῆς πρὸς γυναῖκα ὁμιλίας, κ.τ.λ., is attributed to Empedocles.

‖ Diels, *Frag.* i. 159, 8 f.: καὶ θείας μὲν οἴεται τὰς ψυχάς, θείους δὲ καὶ τοὺς μετέχοντας αὐτῶν καθαροὺς καθαρῶς. Cf. *Frag.* i. 173, 1, and note by Rohde, ii. 185, 1.

¶ See especially the magnificent fragment, 115, and the passages cited in connexion therewith by Diels, who also refers to the famous passage in Plato, *Phædrus*, 248 C, as an imitation. Cf. also Diels, i. 219, 17 ff.; frag. 119, and relevant passages in Diels; frag. 121 (Rohde, ii. 178, 1).

** Frag. 112, 9 f.; 144, 145.

†† We do not agree with Kern, however, in regard to every point.

‡‡ Cf. Empedocles, frag. 129, and the passages given there.

To say nothing of the affinity between the views of Empedocles and those of the Pythagoreans,* it is impossible that one who lived at so short a distance from Magna Græcia could remain ignorant of Pythagorean doctrine, or that one of his cast of mind should not be deeply influenced thereby.

4. Plato.—This whole process of development, beginning with the ecstatic seers and purifiers of the 7th cent., may be said in one sense to reach its end, but in another to arrive at its culminating point, in the Platonic philosophy. In Plato, the founder of the idealistic view of the world, philosophical thought and theological thought merge and combine with one another in a wonderful way. The Divine origin of the soul, its pre-existence, its fall into corporeality, its judgment after death, its expiatory wanderings through the bodies of animals or men, according to its character, its final redemption from the cycle of re-births, and its return to God—all these various doctrines, in their main features at least, were borrowed by Plato directly from the 'theologians,' *i.e.*, in a special sense, the Orphics. The manner in which he amalgamates them with the results of his philosophical speculation is, however, all his own.

In the early stages of Plato's thought the two worlds of becoming and being stand in the relation of sheer opposition: here, the world of sense, with its unresting flux of ever-changing phenomena; there, the supersensuous world of eternally self-identical and absolutely unchangeable realities, of the 'Ideas,' of what alone truly exists. The human soul, however, occupies a peculiar position between the two; it is of Divine origin, and while not itself an Idea, it is 'most like' one, and partakes of the Idea of life. In its state of pre-existence in the supramundane sphere it has gazed upon the Ideas, but, having fallen into the state of corporeality, it has forgotten them; and only by its recollection thereof (*ἀνάμνησις*) can it possibly attain to true knowledge. Such leading principles must of necessity result in a pessimistic attitude to the world and its supposed goods,† that is, in a world-renouncing morality. Withdrawal from the life of the body, which only impedes and constrains the soul; the utmost detachment of the soul from its prison-house in the flesh (the philosophic 'dying' so impressively depicted by Socrates in *Phædo* [especially p. 64 ff.]); disengagement from the world of sense in general, with its phantasmagoria of delusive appearances—these things go to form the end which the friend of wisdom must keep in view.

In the *Theæt.* 176 A we read: διὸ καὶ πειρᾶσθαι χρὴ ἐνθένδε (from this world) ἐκεῖσε (to the gods) φεύγειν ὅτι τάχιστα. Similarly, philosophy becomes *κάθαρσις*; *Phædo*, 67 A: ἐν ᾧ ἂν ζῶμεν οὕτως ἐγγυτάτω ἐσόμεθα τοῦ εἰδέναι, ἐὰν ὅτι μάλιστα μηδὲν ὁμιλῶμεν τῷ σώματι μηδὲ κοινωνῶμεν, ὅτι μὴ πᾶσα ἀνάγκη, μηδὲ ἀναπιμπλώμεθα τῆς τούτου φύσεως, ἀλλὰ καθαρεύωμεν ἀπ' αὐτοῦ, ἕως ἂν ὁ θεὸς αὐτὸς ἀπολύσῃ ἡμᾶς.‡ καὶ οὕτω μὲν καθαροὶ ἀπαλλαττόμενοι τῆς τοῦ σώματος ἀφροσύνης, ὡς τὸ εἰκὸς, μετὰ τοιούτων τε ἐσόμεθα καὶ γνωσόμεθα δι' ἡμῶν αὐτῶν πᾶν τὸ εἰλικρινές· τοῦτο δ' ἐστὶν ἴσως τὸ ἀληθές· μὴ καθαρῷ γὰρ καθαροῦ ἐφάπτεσθαι μὴ οὐ θεμιτὸν ᾖ κ.τ.λ.; § 67 C: κάθαρσις δὲ εἶναι ἆρα οὐ τοῦτο ξυμβαίνει, ὅπερ πάλαι ἐν τῷ λόγῳ λέγεται, τὸ χωρίζειν ὅτι μάλιστα ἀπὸ τοῦ σώματος τὴν ψυχὴν καὶ ἐθίσαι αὐτὴν καθ' αὑτὴν πανταχόθεν ἐκ τοῦ σώματος συναγείρεσθαί τε καὶ ἀθροίζεσθαι, καὶ οἰκεῖν κατὰ τὸ δυνατὸν καὶ ἐν τῷ νῦν παρόντι καὶ ἐν τῷ ἔπειτα μόνην καθ' αὑτήν, ἐκλυομένην ὥσπερ δεσμῶν ἐκ τοῦ σώματος;‖

* Cf. also Cicero, *de Republ.* iii. 11, 19; Iamblichus, *Vita Pyth.* 108 = Diels, *Frag.* 213, 5 ff.; Sextus, *adv. Math.* ix. 127, quoted by Diels at frag. 136. The passages Diog. Laert. viii. 53, cf. 51 = Diels, 150, 22 f., cf. 154, 44 ff., refer to the grandfather of Empedocles, who bore the same name, and who, according to the latter passage (Athenæus, i. 5), had been a Pythagorean.

† Cf. *e.g. Gorg.* 519 A, *Repub.* vii. 515 D, *Laws*, vii. 803 B; and Rohde, ii. 291.

‡ Both the Orphic and the Platonic teaching make suicide a crime; the period of one's earthly existence is to be determined by the Deity alone.

§ Cf. 82 C ff., *Rep.* vii. 514 ff., *Phædo*, 62 B, 66 B, *Cratyl.* 400 B.

‖ Cf., further, 69 C, *Cratyl.* 403 E; Rohde, ii. 281, 4; 282, 1; 285, 2.

The philosopher also will therefore stand aloof from the enterprises and pursuits of his fellow-citizens, and, as one withdrawn from the community at large, will give himself entirely to the task of becoming holy.

On its positive side, however, this *katharsis* from all that is earthly implies a turning towards God. By renouncing the present world the soul becomes free to follow its true vocation—the knowledge of the ὄντως ὄν, the vision of the Ideas, and especially the Idea of the Good, the highest of them all. But the Ideas constitute the realm of divine realities. Thus the soul which, though of heavenly origin, had been cramped and defiled through its fall, becomes God-like by the possession of that highest *knowledge* which is identical with virtue.

Cf. *Theæt.* 176 B—in connexion with the passages given above: φυγὴ (from the corporeal) δὲ ὁμοίωσις θεῷ κατὰ τὸ δυνατόν· ὁμοίωσις δὲ δίκαιον καὶ ὅσιον μετὰ φρονήσεως γενέσθαι. 176 C: θεὸς οὐδαμῇ οὐδαμῶς ἄδικος, ἀλλ' ὡς οἷόν τε δικαιότατος καὶ οὐκ ἔστιν αὐτῷ ὁμοιότερον οὐδὲν ἢ ὃς ἂν ἡμῶν αὖ γένηται ὅτι δικαιότατος. 'To know God is to become divine' (Rohde). The philosopher, therefore, lives entirely in the ἐπιστήμη of the truly existent, this being rendered possible only by complete renunciation of the world.

Such is Plato's standpoint in the *Phædo*, as, indeed, also in the *Theætetus* and the *Gorgias*, a standpoint which, were it consistently applied, would put an end to all life and all progress upon the earth. As has been aptly observed by Eucken, however, 'in this relinquishment of the world we have the real Plato and the consistent Plato, but by no means the complete Plato.' In his later elucidation of the Ideal theory, Plato admits the possibility of mediation between the two worlds. Conceiving now of the Ideas as the final causes of phenomena, he sees the Divine realities looming through the world of sense, and he is thus able to regard the realization of the Ideas in practical life as the true task of mankind. Besides the all-pervading religious factor in Plato's thought, the æsthetic and the social factors are also active. Thus, to quote Eucken again:

'That ascetic tendency [in Plato] underwent considerable modification, and even some reaction, as has been the case with all its adherents who did not forget humanity at large in the individual. But that which upon Indian, and often also upon Christian, soil won at best a grudging recognition, found in Plato a native propensity in its favour; alike as a Greek and as the friend, nay, the discoverer of the Beautiful, he was bound with a thousand ties to the actual world.'

But nevertheless the opposition between the two spheres—between renunciation of the world and its transfiguration, between philosophical and theological thought—was never completely adjusted, and it shows itself unmistakably in Plato himself.

'In Plato's own nature the phlegmatic blood of the thinker co-existed with the lively heart-beat of the artist; there was a cleavage in the inner man; for, while his philosophy allured him into the realm of immaterial forms, yet the whole magic of Hellenic beauty was at work within him' (Windelband, *Gesch. der Philosophie*[3], p. 100).*

And, we may venture to add, he was thrilled with the desire to intervene in the moral, social, and political conditions of the world, with a view to succour, to ameliorate, to reform, as is well shown in the *Republic* and the *Laws*.

Plato was the discoverer of the supersensual world. The kingdom for which his lofty soul yearned was 'not of this world.' He purified the beliefs and ideas of the Orphic cult; he spiritualized and glorified them,† thereby becoming a religious reformer—probably the greatest, after Jesus Christ, our race has known.

5. Cynicism.—The asceticism thus far dealt with—*religious* asceticism, as it might be called—rests upon a twofold dualism; body and soul, Earth and the Beyond, being sharply and almost irreconcilably opposed to one another. But while among the earlier adherents of the older Academy, as, *e.g.*, Philippus of Opus, Heraclides Ponticus, probably Xenocrates too, and even in the youthful Aristotle (Rohde, ii. 297), a negative and ascetic attitude towards the world is still discernible (Polemon and Crantor being the first to secede therefrom), an entirely different congeries of ideas had given birth to a kind of asceticism which, in contrast to the religious, may be called the *rationalistic and ethical*, or more precisely the *volitional* asceticism. Its roots are to be found in the Socratic teaching. It is, of course, true that the ascetic aspect of the figure of Socrates portrayed by Xenophon in the *Memorabilia* and the *Symposium* belongs not to the historical but to the Antisthenic Socrates. (Xen. *Symp.* iv. 38 may serve as a striking illustration of this; on the whole question, cf. Joel's great work.) Further, the much-lauded temperance of Socrates, as has been appositely observed by Zeller (II. i.[4] 68), has nothing ascetic about it. His temperance, in fact, was not calculated abstinence from enjoyment, but only an expression of spiritual freedom; he would not be dependent upon enjoyment, nor would he sacrifice to it his self-command (Zeller, II. i. 57, 66, 68, 155 ff., 162 ff.).

But, as has been admirably said by Theodor Gomperz (*op. cit.* ii. 113) in reference to the views of life held by Socrates:

'In certain particulars he had certainly abandoned the view of life current amongst his people and his fellow-citizens; thus, in regard to one leading feature of that view, viz. its appreciation of external goods, including life itself, he ranks the health of the soul and inner peace of mind as incomparably higher than all.'

Here we have the germ of the ascetic strain in the *Cynic* ethics. Nevertheless, man's inner happiness, his εὐδαιμονία, was a matter upon which even Antisthenes, the founder of the school, laid the strongest emphasis, and in his view it could be won only by means of ἀρετή, 'moral excellence.' This moral excellence alone, therefore, as was argued by the uncompromising spirit of Antisthenes, is to count as a good; everything else in the world, as making no contribution to man's εὐδαιμονία, is simply indifferent, an ἀδιάφορον. The conviction of the utter worthlessness of earthly goods, moreover, brought the Cynics—even Antisthenes, and still more his pupil Diogenes, and subsequently Crates and others—quite consistently to the standpoint of *world-renunciation*.

Virtue, according to the Cynics, consists in right knowledge (φρόνησις) coupled with moral volition.* Their ethic, as formulated by Antisthenes, was above all a volitional ethic. Moral volition, however, as they held, was steeled by πόνος, by ἄσκησις. The latter word properly means the *exercise* or *practice* which was pre-eminently demanded by the Cynic conception of virtue,† since virtue, in the opinion of Antisthenes, was not simply theoretical knowledge regarding good and evil, but rather practical moral excellence, strength of character asserting itself against all περιστάσεις.‡ By virtue alone, he taught, does man attain to felicity. In what, then, does felicity consist? In that genuine freedom which is based upon independence of all external things—αὐτάρκεια—and in freedom from all desires and affections—ἀπάθεια. In order to

* See specially the *Symposium* and the *Philebus*.

† Cf. Windelband, *Platon*, 141: 'He implements the Orphic doctrine of the destiny of the soul, throughout its entire range, with the principle of moral responsibility and retribution.'

* Diog. Laert. vi. 11 (teaching of Antisthenes): Αὐτάρκη τὴν ἀρετὴν εἶναι πρὸς εὐδαιμονίαν, μηδενὸς προσδεομένην ὅτι μὴ Σωκρατικῆς ἰσχύος. Cf. also the Cynic ἐγκράτεια.

† The word certainly goes back to Antisthenes himself; cf. Xenophon, *Sympos.* viii. 27, *Memorab.* ii. 6. 20, where Socrates speaks of the ἀσκεῖν of ἀρετή. Cf. also *Memorab.* i. 2. 20 and 23, i. 2. 10, where Xenophon has even ἀσκεῖν φρόνησιν, as Isocrates, *Busir.* § 22, has φιλοσοφίας ἄσκησιν; both writers undoubtedly follow the example of Antisthenes. For the latter φρόνησις is inseparably connected with ἀρετή, and his whole philosophy is the practice of virtue based upon intelligence.

‡ On Heracles as an ascetic for the purpose of acquiring virtue, see Dio, *Orat.* lx., especially p. 310; on Diogenes' struggle against πόνοι, see Dio, viii. 12 ff., especially § 15; Marcus Aurelius, ii. 17.

render himself as independent of the external as possible, the Cynic endeavours to reduce his wants to a minimum; and in order to win his inner freedom (*ἀπάθεια*), he exercises himself in combating and overcoming the affections (so Diogenes, cf. Dio, ix. 12), more especially in fighting against *ἡδονή* (Diogenes, as in Dio, viii. 20 ff., ix. 12; cf. Lucian, *Vit. auct.* 8; Teles, frag. v. H).

This world-abjuring tendency in Cynic ethics found its chief expression in a negative attitude towards the family, the State, and the idea of nationality, and towards the great traditions of Greek history, even those of the Persian war; and in the position the Cynics assumed towards Greek religion, art, and science. This is to be explained in part by the fact that Antisthenes was but half Greek by blood, and that Diogenes sprang from the lower classes. Even in their boasted cosmopolitanism the Cynics were in earnest only with the negative constituent, viz. their detachment from State and nationality.

The real asceticism of the Cynics showed itself, above all, in their mode of life, which they reduced to the simplest conceivable form: thus their food consisted chiefly of lupines, dried figs, peeled barley and water; their clothing was practically limited to the *τρίβων*, their feet being *ἀνυπόδητοι*; while their place of abode, *i.e.* their lodging by night, was in the open air or among the pillars of the temple in summer, and in the bathing-houses in winter. By inuring the body to the extreme of rigour, they—more especially Diogenes—sought to strengthen their power of will (Diog. Laert. vi. 23, 34).

The significance attached to asceticism by Diogenes, who had already distinguished two kinds of *ἄσκησις*—one purely physical, the other both physical and psychical (Diog. Laert. vi. 70 f.)—is shown by his apothegm: *Οὐδέν γε τὸ παράπαν ἐν τῷ βίῳ χωρὶς ἀσκήσεως κατορθοῦσθαι, δυνατὴν δὲ ταύτην πᾶν ἐκνικῆσαι.* A significant, and characteristically Hellenic, feature of Cynic ethics, however, was its attitude towards the sexual impulse. To the Cynics this appeared to be no less natural than hunger itself, and therefore likewise to require satisfaction—though in the simplest and least expensive way. Thus Diogenes is in no way scandalized at either masturbation or illicit intercourse (marriage had, of course, no meaning for him); in fact, as the gratification of sexual desire was reckoned *κατὰ φύσιν* by the Cynics, many of them, such as Diogenes and Crates (with Hipparchia), had no scruples about indulging even in the presence of others, thus showing a gross lack of modesty, to say nothing of good taste. Nevertheless, those who indulged beyond the requirements of nature were looked upon as the slaves of pleasure (*ἡδονή*), and this they reckoned the worst of evils.*

Antisthenes did not himself lay so much stress on the external aspects of the Cynic mode of life; what he did was rather, it would seem, to make a virtue of necessity. Very much more did externals weigh with his gifted pupil Diogenes, as also with Crates, his wife Hipparchia, her brother Metrocles, and others.† The asceticism of the Neo-Cynics during the Roman Imperial period will be dealt with in connexion with the later Stoics.

Primitive Cynicism reprobated even innocent enjoyment. Further, from the time of Diogenes at least, the Cynics tended to make too much of the external aspect of their mode of life. But an asceticism which sprang from an ethical standpoint so grossly individualistic could be of no permanent value to human society. Still, in putting to the test of actual practice the dictum that man's true happiness does not depend upon his circumstances, the Cynics made a valuable contribution to human progress; while, from another side, their belief that moral volition is an essential constituent of virtue was pregnant with significance for the future.

6. Stoicism.—Of the leading principles of the early Cynic *ἄσκησις** only one was of exceptional importance, viz. the idea that virtue can be acquired only by unremitting practice. In this particular point, which involved an emphasizing of the volitional factor in virtue, the Cynics made an advance upon Socrates; it was, in fact, a thought destined to be fruitful for all time, and in the further development thereof special credit is due to the Stoics. We must not forget, indeed, that the Stoa was preceded by Aristotle, who in his *Ethics* had already distinguished two orders of virtues, viz. the ethical and the dianoetic (*e.g. Eth. Nicom.* ii. 1. 1103 A, 14 ff., i. 13. 1102 B, 33 ff.). Ethical virtue (*αὕτη ἐστι περὶ πάθη καὶ πράξεις* [*Eth. Nicom.* ii. 6. 1106 B]) *ἐξ ἔθους περιγίγνεται* (ii. 1. 1103 A, 17). Since the irrational impulse, with its resultant desire, is often stronger than the volition which springs from *φρόνησις*, it is only by means of exercise that the individual can acquire that *ἐγκράτεια* which enables him, even in opposition to the stronger desire, to do what he recognizes as right. Now, *ἐγκράτεια* is a sub-species of *σωφροσύνη*, which, again, is one of the 'ethical' virtues. But the idea of a psychological independence of the will—apart from the intellect—was foreign to Aristotle.

It must certainly be admitted that among the early Stoics, so closely related to the Cynics in many other things, the volitional moment in virtue does not stand out very prominently, though this may be due partly, of course, to the fragmentary character of our available sources. Unmistakable traces of the idea, nevertheless, are still extant, and yeoman service has been rendered by Adolf Dyroff in bringing these to light. The personal ideal of the Stoic doctrine of virtue—the wise man—has, of course, no further need of practice; but all the more is practice necessary for the neophytes, the *προκόπτοντες* (cf. Zeno, frag. 234 A). The founder of the school valued practical example more highly than arguments against pleasure (frag. 241); witness also his significant utterance *οὐδενὸς ἡμᾶς οὕτω πένεσθαι ὡς χρόνου. βραχὺς γὰρ ὄντω ὁ βίος, ἡ δὲ τέχνη μακρή, καὶ μᾶλλον ἡ τὰς τῆς ψυχῆς νόσους ἰᾶσθαι δυναμένη* (frag. 323). His successor Cleanthes likewise places moral conduct higher than theory, and that he recognizes the element of volition in virtue is shown by frag. 563. It is accordingly easy to understand why Cleanthes, like Antisthenes before him, regarded the *πόνος* as *ἀγαθόν* (frag. 611), while frag. 129 (Gercke) furnishes special evidence of the fact that Chrysippus, 'the second founder of the Stoa,' appreciated the value of practice and habit in the attainment of virtue. The task of becoming virtuous, or—since only a few finally attain that end—that of coming as near to perfect virtue as possible, belongs

* Antisthenes, frag. xi. 1, Winkelmann, p. 29 (Clemens Alex. *Strom.* ii. 20, p. 485, Potter); Diog. Laert. vi. 3: *μανείην μᾶλλον ἢ ἡσθείην.*

† Cf. *e.g.* Diog. Laert. vi. 23, 34, 48, 70 f. Concerning Crates, see Diog. Laert. vi. 87 (Diels, *Poetæ Philosoph. Gr.* 207). Further, Teles, frag., *πόνος αὐταρκείας* and *πόνος πενίας καὶ πλούτου*, 30, 10 ff., 31, 2 ff.; Crates, frag. 4, 7, 12, 18 (Diels). Main sources for ancient Cynicism: Diog. Laert. vi.; Xenophon, *Memorab.* and *Symposium*; Teles, ed. O. Hense, fr. v.–vii.; also Dio, especially *Orat.* 6, 8, 9, 10.

* No doubt, the doctrine of the absolute worthlessness of earthly goods was taken over by the Stoics, but it was subsequently modified by Zeno in his differentiation of three grades of *ἀδιάφορα*, viz., *προηγμένα*, *μέσα*, and *ἀποπροηγμένα*, whereby at least a certain relative value was assigned to sundry material goods. On the other hand, the *αὐτάρκεια* of the Cynics was spiritualized by the Stoics, who put no special value on the ascetic mode of life. Only in the case of certain adherents of the later Stoa, such as Musonius, and, in some degree, also Epictetus, did a change in this respect take place.

to the will, and cannot be performed without practice (cf. also frag. 214, 278 A). Chrysippus gave full recognition to the value of personal effort in the work of attaining perfection. True insight is shown also by Aristo of Chios in his remark that 'much practice and much fighting' is demanded by the struggle both against pleasure and against the affections (frag. 370 A). It is matter for regret that nothing now remains of the work of Herillus, who, like Dionysius Metathemenus, wrote *περὶ ἀσκήσεως* (Diog. Laert. vii. 166 f. [Diels, 410 f. A]), especially as he deemed *ἐπιστήμη* to be the supreme good. A further proof of the fact that the value of 'practice' in the sphere of virtue was ever more and more highly appraised by the Stoics, appears in their doctrine that many (apparent) evils are allotted to man for the purpose of calling his moral energies into exercise, and may therefore be utilized for his welfare in whatsoever degree he may choose. This idea was already mooted by Chrysippus, but it was especially in the later (though probably also in the middle) period of Stoicism that it became fruitful.

The early Stoics undoubtedly felt that the will has an important place in the acquirement of virtue, but they gave the thought neither clear articulation nor adequate recognition. An advance in this respect was made during the middle period. Thus Panætius, whose ethical teaching was unquestionably influenced by Aristotle, draws a distinction between a 'theoretical' and a 'practical' virtue, and holds that the latter, requiring, as it does, a correlative action, is attainable only by practice.* Discipline of the body is also necessary (Cicero, *de Offic.* i. 23, 79). The practical virtue, which concerns the individual, is *σωφροσύνη*, consisting in the unconstrained submission of the lower faculties to the reason. The most important of the four categories of *σωφροσύνη* is *ἐγκράτεια*, the virtue whose significance was first fully realized by Antisthenes, and afterwards very specially by Aristotle. Posidonius likewise distinguishes the two aspects of virtue. Inasmuch as practical virtue consists in the subordination of the irrational to the rational part of the soul, especially in the repression of the bodily impulses and passions, it is to be acquired, Posidonius believes, only by means of practice and habit, which must carry out the process of subjugating impulse begun by education. But this point of view, which at first sight is hardly distinguishable from that of Panætius, or even that of Aristotle, is in the case of Posidonius most intimately related to a mystical Platonic conception of the nature and destiny of the human soul: the soul is a part of the Divine *πνεῦμα*, and, coming down from the heavenly to the earthly sphere, enters the body which is its prison, and which seduces and defiles it with desires. To preserve this divinely begotten soul, this *δαίμων*, from earthly guilt and defilement, and by means of a virtuous life to effect its return to its celestial home, the Æther, where alone full knowledge can be its portion—such is the aim of all truly wise and great men. The influence of Plato is here quite unmistakable, though Posidonius was doubtless congenitally inclined to the idealistic point of view.

It was in later Stoicism, however, that the importance of practice in virtue, as in moral life and endeavour generally, first gained full and adequate recognition. Seneca, it is true, emphasizes this particular aspect in an incidental way at best, but this was due not so much to any lack of insight on his part, as to the defects and the weaknesses of his own character. He nevertheless makes many most apposite observations on the point in question.* Moreover, influenced as he was by the strong Platonizing bent of Posidonius, Seneca also manifests an ascetic mystical tendency which in the main takes the form of contempt for the body, the body being regarded as but a fetter upon the Divine soul, which amid her sombre, insecure, changeful, earthly existence longs for her Divine home, where every mystery of heaven and of nature shall be made plain.†

The idea of moral *ἄσκησις* assumes a new character in the hands of the two representatives of later Stoicism who deal seriously with moral problems and the improvement of their fellow-men, viz. Musonius and Epictetus. Of the dissertation *περὶ ἀσκήσεως* of Musonius a fairly large fragment has been preserved (frag. vi. H). He follows Panætius in drawing a distinction between theoretical and practical virtue. The practical, which he regards as the more important (p. 23, 14 ff. H), is to be attained only by practice of a twofold kind: one, as applied to body and mind together, the other, as applied to mind alone (p. 25, 4 ff.)—a distinction already made by the Cynic Diogenes. Exercise directed upon both body and mind produces *ἀνδρεία* and *σωφροσύνη*, whereas the purely mental exercise consists in those 'thought-actions' (*Denkhandlungen*, as Eucken calls them) which determine both our mental attitude and our conduct (cf. especially p. 25, 4 ff., Hense).

Frag. v., the thesis of which is *ὅτι ἰσχυρότερον ἔθος ἢ λόγος*, and frag. vii., *ὅτι πόνου καταφρονητέον*, are also significant passages; cf. also p. 7, 20 ff.; p. 10, 18; p. 11, 17; p. 29, 7 f. The ascetic views of Musonius in regard to sexual relations, as set forth in frag. xii., *περὶ ἀφροδισίων*, are likewise worthy of note; see, *e.g.*, p. 64, 1 ff.: *μόνα μὲν ἀφροδίσια νομίζειν δίκαια τὰ ἐν γάμῳ καὶ ἐπὶ γενέσει παίδων συντελούμενα, ὅτι καὶ νόμιμά ἐστιν· τὰ δέ γε ἡδονὴν θηρώμενα ψιλὴν ἄδικα καὶ παράνομα, κἂν ἐν γάμῳ ᾖ.* The student is recommended to read the whole fragment.

The moment of ethical *ἄσκησις*, however, reached its highest development in the Phrygian freedman Epictetus, in whose hands the idea of 'asceticism' became fully spiritualized, representing, in fact, *the unremitting endeavour of the individual soul towards its own moral perfection.* Of a multitude of relevant passages we note only the more important.‡

That which was openly taught and practised by Epictetus was put to the proof in private by Marcus Aurelius, the last Roman who sat upon the throne of the Cæsars.§ Amid the tumult of the world's capital, or by night in his lonely tent at Carnuntum, Aurelius laboured ceaselessly in the depths of his heart towards the purifying and perfecting of his soul. He is never able to satisfy himself, but never falters in his effort to come nearer and nearer to the ideal (pp. 127, 14 ff.; 131, 18 ff.), and throws himself bravely into the conflict between soul and sense (pp. 59, 13 ff.; 91, 9 ff.; 131, 12 ff.; 162, 4 ff.). But apart from other profound differences between Aurelius and Epictetus, though both were Stoics, they were fundamentally unlike in their spiritual outlook. Thus, while Epictetus, alike in thought and action, is wholly concerned with the present world—in the best sense, certainly—the mind of the Emperor tends rather to brood darkly upon the shortness of life and the transitoriness of earthly things (*e.g.* ii. 17, vii. 3). He despises the goods of this world (iv. 48), even fame, and often all but grows weary of life itself (p. 115, 9 ff.). His aphoristic utterances seem to be haunted by the pathos of life and the yearn-

§ Cf. *e.g.* *εἰς ἑαυτόν*, ii. 1; also i. 9, p. 4, 5 ff., ed. Stich, i. 15 (p. 5, 21 ff.), i. 16 (p. 9, 6 ff.).

ing for death.* He certainly has no belief in a future life, but his eye turns away from earth and from human effort, and is directed toward the All and the Eternal.† Though he is an adherent of the monistic philosophy characteristic of the Stoa—a philosophy, however, not consistently maintained by Aurelius, any more than by Seneca and Epictetus—yet the fundamental qualities of his great soul have an admixture of the spirit of renunciation and mysticism. Leaving his anthropology out of account, we see this most unmistakably in his conception of the Deity.

7. Neo-Cynicism.—Of an entirely different nature from the view of life entertained by Aurelius, is that of the Neo-Cynics, for whose teachings there was a lively interest, and even a certain sympathy, among the later Stoics, such as Musonius, Seneca, and Epictetus. The representatives of this Neo-Cynic tendency revive the asceticism of Diogenes and Crates, and, while laying the main emphasis upon the actual practice of asceticism, they contribute nothing whatever in the way of fresh thought. For fuller information see art. NEO-CYNICISM.

8. Neo-Pythagoreanism and Neo-Platonism.—The tendency towards renunciation of the world, which forms the basal element in the temperament of Marcus Aurelius, was not due to the spirit of Stoicism, but was rather a product of the time, and, one may well suppose, of his own experiences and fortunes. It was, however, organically related to the philosophy of the Neo-Pythagoreans—that singular group which emerged in the earlier half of the first cent. B.C., perhaps in Alexandria. No doubt the greater part of the literature of this school is pseudepigraphic, and we know by name only a few of its adherents. Apart from P. Nigidius Figulus and Vatinius, contemporaries of Cicero, and Sotion the friend of the Sextians, the most important representatives known to us are Apollonius of Tyana and Moderatus of Gades (1st cent. A.D.), Nicomachus and Numenius (2nd cent. A.D.), and Philostratus (3rd cent. A.D.).

The moral and religious view of life promulgated by the Neo-Pythagoreans is in part traceable to the Mysteries of the ancient school, but in a still greater degree to Platonism, especially to that form of Platonism set forth by Posidonius in his commentary to the *Timæus*. The characteristic of the sect is absolute dualism: God and the world, soul and body. Spirit is the principle of good (the Deity being conceived as pure Spirit, and regarded as utterly transcendent), while the body, like matter in general, is the principle of evil. Between the two stands the Demiurge, or world-former, and the demons, whose kingdom lies in the sphere between the earth and the moon. The soul, which is formed of the Divine essence, is meanwhile confined within the body as in a prison, and her deliverance from the body and its impulses, in order that she may become worthy of communion with the Deity, is the most urgent task of mankind—a task which finds its positive side in a holy and devout life, since the Supreme can be worshipped in a truly spiritual manner only with purity of thought and piety of conduct (cf. the fragment of Apollonius in Eusebius, *Præp. Evang.* iv. 13). Mankind is exposed on all sides, however, to contamination by demons, and the means employed to cleanse from this defilement is asceticism. The most effective forms of asceticism are certain specific ablutions and expiatory ceremonies, abstinence from certain kinds of food, more particularly from flesh and wine (among the later Neo-Pythagoreans), sexual temperance, or even abstinence (as is said to have been counselled by Apollonius), silence on the part of neophytes, etc.

* Pp. 24, 19 ff.; 54, 6 ff.; 62, 5; 91, 19 ff.; 115, 4 ff.
† Pp. 21, 17 ff.; 66, 19 ff.; 155, 3 ff.

But as man is of himself unable to realize this end, and since between him and the supramundane Godhead there yawns a great gulf which requires to be bridged, the Deity reveals His will through the agency of specially gifted individuals, such as Pythagoras formerly, and now Apollonius, as also in the art of divination, in order that man may be helped in his dark endeavour to reach his heavenly home and the deification of his being.

Sources for our knowledge of Neo-Pythagoreanism are the account of Alexander Polyhistor in Diog. Laert. viii. 22 ff., the large fragments of pseudonymous literature written under the name of the old Pythagoreans (particulars in Zeller), the fragments of Numenius, Philostratus's *Vita Apollonii*, and the *Lives* of Pythagoras by Porphyry and Iamblichus.

In Neo-Pythagoreanism the mysteries of the older school are resuscitated in a spiritualized and morally nobler form. The real significance of the later development, however, lies in the fact that, in conjunction with Philo, it prepares the way for the last great system of ancient philosophy, viz. the Neo-Platonism of Plotinus. It was the aim of Plotinus to get beyond the dualism of Neo-Pythagoreanism on both metaphysical and ethical principles. In his nobly planned and profoundly excogitated system the whole world stands forth as an emanation from the Deity, who is supersensual, supramundane, and exalted above oppositions, even that between spirit and body. He is Pure Being, the Absolute, and from Him issues the world in a series of gradations, returning again to Him in a similar way. The principal stages of this emanation are three in number, viz., Spirit, Soul, and Matter. Just as light eventually fatigues the eye, and its radiance is changed to darkness, so does the final irradiation of the ineffable and inscrutable Essence, having traversed the intermediate stages of Spirit and Soul, become Matter (*Enneads*, iv. 3, 9), which, however, never attains the metaphysical independence that belongs to the Absolute. Matter is the μὴ ὄν, and, as the ἀπουσία τοῦ ἀγαθοῦ, the πρῶτον κακόν. Man, too, is an effluence from the Absolute, and in the human soul are distinguished a supersensual or Divine, and a lower or sensual part. Just as pure spirit in its final expression becomes matter, so the human soul with equal necessity is metamorphosed into body. The supersensual part, which was pre-existent (iv. 3. 12, vi. 4. 14) and in union with God, has suffered disaster from having entered the body (iv. 3. 15 ff., v. 1. 1). From the union of soul and body springs all the irrationality and depravity of the soul. Our great task, therefore, is the 'extinction of everything that binds us to sensuous existence,' the complete withdrawal of the soul from the outer world to its own inner life. Hence, virtue is neither more nor less than the work of 'purifying' the supersensual soul from all its relations with the world of sense (especially i. 2. 3, i. 6. 6, v. 3. 9). It accords with all this that Plotinus should set no value upon taking part in earthly affairs, either of a scientific or a politico-ethical nature. This complete detachment of the soul from all ties with the external world, however, appears on the positive side as its surrender to the Supersensual, to the Deity, the yearning for whom becomes ever more intense as the bonds of sense are more and more transcended. So far as union with the Divine is concerned, the external mode of life is of no importance. What counts is, in the opinion of Plotinus, not action, but feeling; and accordingly he attributes no value to asceticism of the common sort, however it may have consorted with his own inclinations (Zeller, iii. 522 f.). Of greater importance is the thinking consideration of life, and, still more, pure intuition; but the full and blessed union is vouchsafed only to

the elect in the form of *ecstasy*, which is not to be won by force, but must be calmly waited for, if haply it may come over us. In the state of ecstasy, however, man not only forgets all his earthly limitations, but loses self-consciousness altogether, and all that remains is the blessed feeling of union with the Divine.

This withdrawal from the world of sense, however, is not without its positive complement. In the beauty of the external world and in all its varied phenomena, Plotinus, like Plato, discerns the shimmering of the eternal ideas. In man sensuous beauty awakes ἔρως, the love of the Good (cf. esp. i. 6) arouses the desire of the supersensual soul for its source. For the Absolute is likewise the absolutely Good.

This sketch lets us see that the ascetic tendency in the life of ancient Greece is of much more importance than is usually supposed. We are now in a position to distinguish two different kinds of asceticism: (1) the Orphic-Pythagorean-Platonic, or the religio-mystical; and (2) the Cynic-Stoic, or ethico-volitional. It is true, indeed, that the ascetic view of life, in the sense which we attach to the term, was always confined to narrow circles in the Greek world; nevertheless, as a consequence of its being embraced, deepened, and spiritualized by two of the greatest thinkers of Greece, Plato and Plotinus, its influence has been enormous. Of no less importance, however, than the asceticism of the religio-mystical type has been what we have called the ethico-volitional, which discovered, and to some extent developed, the significance of the will in morals. Both of these tendencies, which, moreover, were in some degree combined in Posidonius, exercised a profound influence upon early Christian thought.

The present writer has in preparation [1908] a monograph, *Die Askese im griechischen Altertum*, which will also take account of the Sextians, the Essenes, Philo, and, in particular, early Christianity.

W. CAPELLE.

ASCETICISM (Hindu).—In India ascetic practices have been very widely prevalent from the earliest times. The mortification of the body, and the self-inflicted penances associated therewith, have been habitually carried to lengths beyond anything familiar to other peoples. Tradition and legend have united to glorify the ascetic, whether human or Divine; religion, as elsewhere, has sanctioned and encouraged his devotion; and the highest rewards of place and power have been within his reach, if only his austerities have taken a form sufficiently protracted and severe. Eastern patience, self-abnegation, and resolution are seen in their strangest guise, in submission to extreme conditions of self-torture and distress. The profession of the ascetic has always been held in the highest esteem, and his claim to support at the public charge by gifts and alms universally allowed. If it is his merit to practise, it is the merit of others to give to him, that his simple wants may never lack supply. And thus on both sides asceticism ministered to spiritual profit, to the actual and personal gain of the ascetic himself, both present and prospective, and to the store of credit which by his generosity the householder trusted to accumulate for himself, so as to win a higher position and birth in the next existence. Part of the secret of the hold which the ascetic ideal has maintained on the Indian mind lies in the fact that, according to the teaching of their sacred books, benefit accrues also to the donor who forwards the holy man on his way with gifts of money or food, or ministers in any way to his personal needs.

The thought that essentially underlies the Indian conception of asceticism, and prompts the adoption of the ascetic life, is the desire to escape from the *saṁsāra*, the never-ending cycle or round of successive existences, in which all created beings are involved, and which brings in its train the suffering and misery to which all such beings are subject. Asceticism offers a means of escape from an otherwise hopeless procession, without beginning and without end. And there is therefore little marvel if to a people whose theory of life was essentially pessimistic present hardship and suffering voluntarily endured were welcome when they brought with them the promise of future deliverance.

1. **Meaning and history of the Indian term 'tapas.'**—The Hindu and Sanskrit term is *tapas*, from the root *tap*, 'to be hot,' 'to burn' (cf. Lat. *tep*-eo, *tep*-or, Gr. *τέφ-ρη*, 'ashes' [*Iliad*, xviii. 25, xxiii. 251], Old Germ. *damf*). *Tapas* signifies therefore in the first instance 'warmth,' or 'heat'; then the feelings or sensations, usually painful, experienced in consequence of heat; and thus pain or suffering in general, especially the pain which is voluntary and self-inflicted from a religious motive. The term therefore came to be applied in particular to religious penance, austerity, devotion, and to connote the merit which such devotion was supposed to assure. This was the paramount and ordinary significance of the word. But it was also used, by analogy, for the special duty or 'merit' of each of the four castes of Manu,* or again, in a limited and

* Manu, xi. 235 f.: 'All the bliss of gods and men is declared by the sages to whom the Veda was revealed to have *tapas* for its root, *tapas* for its centre, *tapas* for its end. Knowledge is the *tapas* of a Brāhmaṇa, protection the *tapas* of a Kṣatriya, his daily business the *tapas* of a Vaiśya, service the *tapas* of a Śūdra.'

technical sense, of the special season of the year (the month *Māgha*, Jan.-Feb.) to which the practice of religious austerities was more peculiarly appropriate. Other terms of less frequent occurrence were *tapasyam* and *tapasyā*.

The Greek writers, in their references to ancient India, make frequent mention of philosophers or ascetics, whose characteristic practices repeat themselves in every part of the country at the present day. Strabo, for example (bk. xv. ch. i.), quoting from Megasthenes, describes two sects of the philosophers whom he calls Brāhmans and Garmans,* who abstain from meat and from sexual indulgence, and live in groves without the city.† It is not always easy to determine whether he is referring to Hindu or to Buddhist mendicants; probably there was little difference at that period in the habits or dress of the monks and ascetics of either faith, and to a Greek eye they were indistinguishable. Elsewhere he writes of the Garmans (Sarmans) that the most honourable of them were known as Hylobioi,‡ who lived on wild fruits and leaves, clothed themselves in garments made of bark, and abstained from wine and sexual indulgence.§ Two of the Brāhman *σοφισταί* were seen in Taxila, of whom the elder was clean-shaven, while the other wore his hair long, and both were attended by disciples; they were provided with food without cost, and exhibited their powers of endurance by standing for a whole day on one leg, or lying on the ground exposed to the vicissitudes of the weather.‖ Others were seen standing immovable in one position during the day, naked and exposed to the almost intolerable heat of the sun. The elder of the two ascetics above referred to accompanied Alexander to Persis, and there abandoned his ascetic practices, giving as his reason that he had completed the forty years' term which he had prescribed for himself. Another, who followed in the train of the king, was named Kalanus. He perished by a voluntary death by fire at Passargadæ, at the age of seventy-three; with reference to this act Megasthenes is quoted to the effect that self-destruction was not a rule with the Indian philosophers, and that those who thus acted were regarded as rash and headstrong (*νεανικοί*, *ib.* xv. 68).

Other philosophers bore the name 'Pramnai' (Πράμναι, probably a corruption again of *śramaṇa*, *samana*), and were opposed to the Brāhmans. These the author distinguishes, some as living on the hills or plains, others as frequenting the cities. Others, again, were known as Γυμνῆται, and were therefore probably Jains, of the Digambara sect; they lived mostly under the open sky, and practised austerities for thirty-seven years.¶ Reference is made later to the Indian embassy to Augustus, and the Brāhman or perhaps Buddhist ascetic who accompanied it, and burned himself on the funeral pyre at Athens in the presence of the Emperor and the people. His name is said to have been inscribed on his tomb: 'Zarmanochegas, an Indian from Bargosa . . . lies here.'** Elsewhere the name appears as Zarmanus.††

2. 'Tapas' in Indian literature.—(1) *Rigveda.*—In the earliest Sanskrit literature, the Hymns of the *Rigveda*, neither the word *tapas* nor the conception and thought that underlies it is of frequent occurrence. It would not, however, be a legitimate inference from this fact that ascetic habits were unknown to the primitive Aryan communities. Nevertheless, the absence or rarity of reference does suggest that, together with much else which belonged to the lower side of the religious life, the practice of *tapas* also was, in great part at least, adopted from the aboriginal or other tribes among whom the new-comers settled. Theirs was the darker, gloomier view of religion and of life, to which austerity was congenial. To the bright, joyous spirit of the Aryans—the spirit that finds expression in the Hymns—the sad and despairing outlook which is the motive-power and inspiration of ascetic practice was repugnant. To them the gods were open-handed, and did not need to be forced or cajoled by human suffering; and life was not yet clouded by the pessimistic tendencies of a later age. It is noticeable that all the instances quoted from the *Rigveda* of the use of *tapas* in its technical sense are taken from the late tenth book, where the word is found both in the literal meaning of 'warmth,' 'glow' (*e.g.* x. 16. 4), and metaphorically of the glow of feeling, passion (*e.g.* x. 83. 2). *Tapas*, however, is also pain, suffering, voluntarily endured (*ib.* 109. 4, 154. 2, 167. 1). So also the root *tap*, which is met with in the earlier books with the significance of 'burn' (viii. 102. 16), or transitively to 'heat,' 'make hot' (iii. 53. 14, iv. 2. 6), to 'consume by fire,' 'destroy' (iii. 18. 2), assumes in the tenth book the connotation of remorse, the heat or pain which is within, self-originated in the heart (*tatāpa*, impers. x. 34. 11, cf. *ib.* 34. 10, 95. 17). Similarly, also in the same book, we find *tapasvat*, 'practising asceticism' (154. 4); *tapoja*, 'born through penance' (154. 5).*

The purpose and subject-matter of the *Sāmaveda* and *Yajurveda* almost preclude a reference to *tapas*; and the nature of the magical devices and charms, the incantations of the *Atharvaveda*, aims rather at inflicting harm upon another, or securing personal immunity, than at exhibiting endurance or attaining the desired end by actual self-inflicted tortures.†

Of the *Brāhmaṇa* literature the same is true as of the later mantra and ritual writings, that there was little occasion for reference to *tapas*. Such literature is concerned almost entirely with the order and interpretation of the sacrifice, with mythology, cosmology, and so forth. The practice of *tapas*, however, is recognized, and is enjoined, *e.g. Śatap. Brāhm.* x. 4. 4. 4: 'let him who knows this by all means practise austerities; for, indeed, when he who knows this practises austerities, . . . every part of him will share in the world of heaven.'‡ The world is conquered by *tapas* (iii. 4. 4. 27; cf. xiii. 7. 1. 1).§

(2) *Upaniṣads.*—In the *Upaniṣads*, on the contrary, the theory and the duty of *tapas* are completely assumed; and even where its efficacy is denied, or only partially and grudgingly conceded, the existence and wide-spread influence of ascetic ideals are taken for granted, though the writers claim that there is a better way by which to reach the supreme goal. In the oldest strata of the *Upaniṣad* literature the ascetic calling is an obligation to be undertaken at a special stage or period of life; and their greatest teacher, Yājñavalkya, proposes thus to abandon home and possessions, and, retiring to the forest, in the practice of austerities to sever actually and ideally every tie that binds to earthly existence. In complete harmony, however, with the spirit of these writings, *tapas* is depreciated in comparison with knowledge as an inferior, secondary way to the highest bliss, to *Brahman*.

* Βραχμᾶνες and Γαρμᾶνες, the latter name probably a textual error for Σαρμᾶνες, the Pāli and Buddhist *samana*, Skr. *śramaṇa*, *śrāmaṇera*, 'hearer,' 'disciple.'

† *διατρίβειν . . . ἐν ἄλσει πρὸ τῆς πόλεως, ὑπὸ περιβόλῳ συμμέτρῳ, λιτῶς ζῶντας ἐν στιβάσι καὶ δοραῖς, ἀπεχομένους ἐμψύχων καὶ ἀφροδισίων* (Strabo, xv. 59).

‡ *ὑλόβιοι*, 'dwellers in the forest,' *i.e.* Skr. *vānaprastha*.

§ *ζῶντας ἐν ταῖς ὕλαις ἀπὸ φύλλων καὶ καρπῶν ἀγρίων, ἐσθῆτας δὲ ἔχειν ἀπὸ φλοιῶν δενδρίων, ἀφροδισίων χωρὶς καὶ οἴνου* (*ib.* xv. 60).

‖ *τὸν μὲν πρεσβύτερον ἐξυρημένον, τὸν δὲ νεώτερον κομήτην, ἀμφοτέροις δὲ ἀκολουθεῖν μαθητάς· τὸν μὲν οὖν ἄλλον χρόνον κατ' ἀγορὰν διατρίβειν, τιμωμένους ἀντὶ συμβούλων, ἐξουσίαν ἔχοντας, ὁτὶ ἂν βούλωνται τῶν ὠνίων φέρεσθαι δωρεάν . . . τοῦ τε μέλιτος πολλοῦ προκειμένου καὶ τοῦ σησάμου μάζας ποιουμένους τρέφεσθαι δωρεάν . . . τὸν μὲν πρεσβύτερον, πεσόντα ὕπτιον, ἀνέχεσθαι τῶν ἡλίων καὶ τῶν ὄμβρων· ἤδη γὰρ ὕειν ἀρχομένου τοῦ ἔαρος. Τὸν δὲ ἑστάναι μονοσκελῆ, ξύλον ἑπτάπηχυ ἀμφοτέραις ταῖς χερσὶν, ὅσον τρίπηχυ· κάμνοντος δὲ τοῦ σκέλους, ἐπὶ θάτερον μεταφέρειν τὴν βάσιν, καὶ διατελεῖν οὕτως τὴν ἡμέραν ὅλην· φανῆναι δὲ ἐγκρατέστερον μακρῷ τὸν νεώτερον* (*ib.* xv. 61).

¶ *τοὺς δὲ Γυμνήτας κατὰ τοὔνομα γυμνοὺς διαζῆν, ὑπαιθρίους τὸ πλέον, καρτερίαν ἀσκοῦντας, ἣν ἔφαμεν πρότερον μεχρὶ ἑπτὰ καὶ τριάκοντα* (*ib.* xv. 70).

** *Ζαρμανοχήγας Ἰνδὸς ἀπὸ Βαργοσῆς κατὰ τὰ πάτρια Ἰνδῶν ἔθη ἑαυτὸν ἀπαθανατίσας κεῖται.* Zarmanochegas is probably the Sanskrit *śramaṇāchārya*, a mendicant teacher, and Bargosa is Bharūch, or Broach, at the mouth of the Narbada river.

†† The passages from the ancient classical authors referring to the Indian ascetics, and especially to the examples quoted of self-immolation, are translated in J. W. M'Crindle, *Invasion of India by Alexander the Great*, 1896, pp. 386–392; and in the same writer's *Ancient India as described in Classical Literature*, 1901, pp. 65 ff., 73 ff., 113, 167 ff., 176, 181 ff., 212 f.

* In one Hymn, x. 83. 2, *tapas* is invoked, together with *manyu*, to protect the worshipper and overthrow his foes.

† A confirmation of the view that the conception of *tapas* was strange to the earliest Aryan thought, and was adopted from without and became familiar only at a later period, is perhaps afforded by *Rigveda*, vii. 59. 8: 'kill him with your hottest bolt,' *tapiṣṭhena hanmanā*, where *Atharvaveda*, vii. 77. 2, and *Taitt. Saṁh.* iv. 3. 13. 3, substitute for the last word *tapasā*, 'with your hottest penance,' an expression quite in harmony with the later thought of the overwhelming magical power of *tapas*.

‡ *SBE* xliii. 362. § *SBE* xxvi. 111.

The representation, however, as might be expected, is not always consistent. In addition to the view most usually adopted, which sees in *tapas* a real, though less commendable and direct, means to the attainment of a knowledge of *Brahman*, the two extremes are met with of those who declare the practice of austerities indispensable to such knowledge, and those who refuse to acknowledge in asceticism any virtue or efficacy whatsoever, and maintain that only in the way of knowledge and by no other means may the final end be reached. Elsewhere asceticism and the study of the *Veda* are placed side by side as the essential conditions of a true insight; and those who in the right spirit with faith practise asceticism in the forest ascend on the way of the gods.

Tapas also is indefinitely associated in the *Upaniṣads* with the third *āśrama* (*q.v.*), and the life of the anchorite in the forest (*vānaprastha*). On him the practice of asceticism is especially obligatory, but even he must add to it faith, or the mere outward observance and self-mortification will be in vain. Only gradually, and not quite clearly or definitely, within the *Upaniṣad* period was a distinction drawn between the third and a fourth higher stage, the essential note of which was not mere bodily self-mortification, but the voluntary and entire surrender of all worldly possessions, and the concentration of thought and affection on the Supreme. This last stage is identified with a real knowledge of *Brahman*. He who 'knows' has passed beyond the (three) *āśramas* (*atyāśramin*, *Śvet.* vi. 21), and *tapas* is no longer in the least degree necessary or profitable to him, for that which the ascetic painfully strives to win he has already attained. Thus the theory of the *āśramas*, and with it the doctrine of *tapas*, takes on in the *Upaniṣad* literature a distinctly ethical colouring. It is only, however, in the later treatises that the separation between the two last stages, the *vānaprastha* and the *sannyāsin*, is completely carried out, and the duties and obligations of each clearly defined.

(3) *Manu and the Law-Books.*—It is in the *Law-Book of Manu*, ch. vi., that the formal conditions and rules of the ascetic life are set forth; and these are in large part repeated, quoted, or amplified in the later *Dharmasūtras*. How far some of the more strict and exacting of these regulations ever became matters of literal observance, or how far they represented merely abstract or conventional ideals, must, of course, remain uncertain. But, in view of the capacity which Indian ascetics have always exhibited for almost heroic endurance of self-mortification, it would seem by no means impossible, or even improbable, that in some instances at least the utmost extremes of bodily torture were submitted to, and the rules of the books carried out in fullest detail. It will be noticed that Manu confines the rights and privileges of an ascetic life to the twice-born.

'A twice-born Snātaka, who has thus lived according to the law in the order of householders, may . . . go forth from the village into the forest and reside there, duly controlling his senses. Let him offer those five great sacrifices according to the rule, with various kinds of pure food fit for ascetics, or with herbs, roots, and fruit. Let him wear a skin or a tattered garment; let him bathe in the evening or in the morning; and let him always wear (his hair in) braids, the hair on his body, his beard, and his nails (being unclipped). . . . Let him be always industrious in privately reciting the Veda; let him be patient of hardships . . . ever liberal . . . and compassionate towards all living creatures.'*

Then follow directions with regard to the sacrifices the ascetic must offer, and the kind and quantity of food he may eat.

'In summer let him expose himself to the heat of five fires, during the rainy season live under the open sky, and in winter be dressed in wet clothes, gradually increasing his austerities. When he bathes at the three Savanas (sunrise, noon, and sunset) let him offer libations of water to the manes and the gods, and, practising harsher and harsher austerities, let him dry up his bodily frame . . . let him live without a fire, without a house, wholly silent, subsisting on roots and fruit . . . chaste, sleeping on the bare ground, dwelling at the roots of trees.'* 'Having thus passed the third part of life in the forest, he may live as an ascetic during the fourth part of his existence, after abandoning all attachment to worldly objects . . . after offering sacrifices and subduing his senses . . . an ascetic gains bliss after death.'† 'Departing from his house . . . let him wander about absolutely silent, and caring nothing for enjoyments that may be offered. Let him always wander alone without any companion, in order to attain (final liberation) . . . He shall neither possess a fire nor a dwelling, he may go to a village for his food, indifferent to everything, firm of purpose, meditating and concentrating his mind on *Brahman*. A potsherd (for an almsbowl), the roots of trees (for a dwelling), coarse worn-out garments, life in solitude and indifference towards everything, are the marks of one who has attained liberation. Let him not desire to die, let him not desire to live, let him wait for his time, as a servant for the payment of his wages . . . let him patiently bear hard words, let him not insult anybody, let him not become anybody's enemy for the sake of this body . . . entirely abstaining from sensual enjoyments, with himself for his only companion, he shall live in this world, desiring the bliss (of final emancipation)'.‡ 'Carrying an almsbowl, a staff, and a water-pot, let him continually wander about, controlling himself and not hurting any creature. . . . A gourd, a wooden bowl, an earthen dish or one made of split cane, Manu, the son of Svayambhu, has declared to be vessels (suitable) for an ascetic.'§

Rules are then given for begging and the manner of eating, subjects of meditation, etc. The ascetic is to beg only once in the day, and when he goes to any house for that purpose it must be after the ordinary meal of the household has been concluded (cf. *Baudh.* ii. 22; *Vas.* x. 7, 8).

'Three suppressions of the breath even, performed according to the rule, and accompanied with the (recitation of the) *Vyāhṛtis*‖ and of the syllable "Om," one must know to be the highest austerity for every Brāhmaṇa.'¶ 'When by the disposition (of his heart) he becomes indifferent to all objects, he obtains eternal happiness both in this world and after death. He who has in this manner gradually given up all attachments, and is freed from all the pairs (of opposites), reposes in *Brahman* alone . . . a twice-born man who becomes an ascetic . . . shakes off sin here below, and reaches the highest *Brahman*.'**

Elsewhere in the *sūtras* of Manu, in the other books, there are incidental references to the ascetics, which lay down further rules for their conduct and life.

Ascetics and students are to receive alms from the Brāhman householder after the performance of the Bali offering (iii. 94; cf. vi. 7; and *Baudh.* ii. 5. 11; *Vas.* xi. 5; *Āpast.* ii. 4. 10, 11).

The purification ordained . . . shall be 'double for students, treble for hermits, but quadruple for ascetics' (v. 137; cf. *Viṣṇu*. lx. 26; *Vas.* vi. 19).

The ascetic is not admissible as a witness in the law-courts (viii. 65; cf. *Baudh.* i. 19. 13; *Viṣṇu*, viii. 2).

For secret converse with female ascetics a small fine is payable (viii. 363; cf. *Viṣṇu*, xxxvi. 7, and the statement [*ib.* xcix. 14] that the deity himself resides 'in the frame of gods, ascetics, and officiating priests').

'An ascetic, a hermit in the forest, and Brāhmaṇas who are students of the Veda shall not be made to pay toll at a ferry' (viii. 407; cf. *Viṣṇu*, v. 132).

'Hermits (*tāpasāḥ*, *i.e.* those who practise *tapas*), ascetics (*yatis*, those whose passions are under control), Brāhmaṇas, the crowds of the Vaimānika deities, the lunar mansions, and the Daityas are the first (*i.e.* lowest) order of existence caused by Goodness' (*sattva*, xii. 48).

Additional details in the *Law-Books* are to the effect that a householder must turn back if he meets an ascetic (*Viṣṇu*, lxiii. 36). 'An apostate from religious mendicity shall become the king's slave' (*ib.* v. 152). Cf. *Gautama*, iii. (*SBE* ii.[2] 192–196); *Baudhāyana*, ii. 11. 14–26, 17. 16, 17, iii. 3; 'eight mouthfuls are the meal of an ascetic, sixteen that of a hermit in the woods, thirty-two that of a householder, and an unlimited (quantity) that of a student' (*Baudh.* ii. 13. 7; cf. *Vas.* vi. 20); 'let him (the hermit) not injure even gadflies or gnats, let him bear cold and perform austerities, let him con-

* Manu, vi. 1–8 (*SBE* xxv. 198 ff.).

* Manu, vi. 23–26; cf. *Viṣṇu*, xcv. 1–4. Chs. xcv.–xcvii. of the *Institutes of Viṣṇu* are devoted to the exposition of the method of life and the duties of the ascetic, and the subjects of his meditation; the whole is closely related to the corresponding passages of Manu.

† Manu, vi. 33, 34. ‡ *Ib.* 41–49. § *Ib.* 52–54.

‖ *i.e.* the three mystic syllables *bhūr*, *bhuvaḥ*, *svar* (cf. ii. 76, 78, 81); the virtue of their recitation, with suppressions of the breath is so great that it frees from the guilt of the murder of a Brāhmaṇa (xi. 249).

¶ Manu, vi. 70. ** *Ib.* 80–85.

stantly reside in the forest, be contented, and delight in (dresses made of) bark and skins (and in carrying) water (in his pot)' (*Baudh.* iii. 3. 19; *Vas.* ix. x. [*SBE* xiv. 45–49]). 'The qualities by which a (true) Brāhmaṇa may be recognized are the concentration of the mind, austerities, the subjugation of the senses, liberality, truthfulness, purity, sacred learning, compassion, worldly learning, intelligence, and faith' (*Vas.* vi. 23); 'he is worthy to receive gifts who . . . reduces himself by austerities' (vi. 30); 'to suppress the breath is the highest austerity' (x. 5; cf. *Āpastamba*, ii. 21. 7–21, 22, 23. 1, 2).

(4) *Bhagavad Gītā.*—The 'Song of the Blessed' represents, as is well known, a syncretism between the two views of an idealistic pantheism and the practical devotion demanded by a theistic creed, salvation by conviction and knowledge alone, or salvation through faith and works. It is a subject of dispute which of these views is the earlier in the poem, and forms the original kernel, and which has been superimposed upon the other.* In either case *tapas*, in the form of renunciation, self-devotion, is the highest form which 'action' can take; and in the thought and teaching of the writer the essence of ascetic practices is not painful mortification of the body, but the abnegation of selfish desires and the sacrifice of selfish inclination and love of ease in the cause of right and devotion to the Supreme God. Passages which enforce renunciation and the duty of earnest and purposeful action belong to the practical theistic strata of the poem. Attempts, however, to reconcile conflicting views, or at least to recognize what is good in both, are not wanting.

'There is a twofold path, that of the Sāṅkhyas by devotion in the shape of knowledge, and that of the Yogins by devotion in the shape of action. A man does not attain freedom from action merely by not engaging in action; nor does he attain perfection by mere renunciation' (*Bhag. Gītā*, iii. 3 f.).

The 'ascetic' is one 'who has no aversion and no desire. . . . Children, not wise men, talk of *sāṅkhya* and *yoga* as distinct. One who pursues either well obtains the fruit of both. . . . He who, casting off attachment, performs actions dedicating them to *Brahman*, is not tainted by sin' (*ib.* v. 3 ff.).

'Some by concentration see the self in the self by the self; others by the *Sāṅkhya-yoga*; and others still by the *Karma-yoga*; others yet, not knowing this, practise concentration after hearing from others. They too, being devoted to hearing (instruction), cross beyond death' (xiii. 24 f.).

'Renunciation is devotion (*yoga*); for no one becomes a devotee (*yogin*) who has not renounced (all) fancies. . . . The devotee whose self is contented with knowledge and experience, who is unmoved, who has restrained his senses, and to whom a sod, a stone, and gold are alike, is said to be devoted. . . . He should restrain his mind, and concentrate it on me, and sit down engaged in devotion, regarding me as his final goal. Thus, constantly devoting his self to abstraction, a devotee whose mind is restrained attains that tranquillity which culminates in final emancipation and assimilation with me. . . . When his mind well-restrained becomes steady upon the self alone, then he, being indifferent to all objects of desire, is said to be devoted. As a light standing in a windless (place) flickers not, that is declared to be the parallel for a devotee, whose mind is restrained, and who devotes himself to abstraction' (vi. 2 ff.).

The indestructible seat . . . 'is entered by ascetics from whom all desires have departed' (viii. 11).

'Whatever you do . . . whatever you eat, whatever sacrifice you make, whatever you give, whatever penance you perform, do that as offered to me' (ix. 27).

'This threefold penance (*i.e.* bodily, vocal, and mental) practised with perfect faith . . . is called good (*sāttvikam*). . . . Whatever oblation is offered, whatever is given, whatever penance is performed, and whatever is done without faith, that . . . is called *asat* (not good), and that is nought both after death and here' (xvii. 7, 28).

'One who is self-restrained, whose understanding is unattached everywhere, from whom affections have departed, obtains the supreme perfection of freedom from action by renunciation' (xviii. 49).

'Those who, restraining the group of the senses . . . meditate on the indescribable, indestructible, unperceived . . . they, intent on the good of all beings, necessarily attain to me. . . . He who is alike to friend and foe, as also in honour and dishonour, who is alike in cold and heat, pleasure and pain, who is free from attachments, to whom praise and blame are alike . . . who is homeless, and of a steady mind and full of devotion, that man is dear to me' (xii. 3 f., 18 f.).

Similar quotations might easily be multiplied. In the *Bhagavad Gītā* the philosophic theory of asceticism, as it presented itself to the Indian mind, appears in its loftiest and purest form. To the earnest-minded *sādhu* this book is his Bible; and the nobility of its thought, and the charity and breadth of its outlook, render it not undeserving of the name.*

(5) *Epic poetry.*—The Epic poems add little to the general conception of *tapas*, although they offer many examples of its practice, and contain narratives more or less marvellous of ascetics who proved in their own experience its virtue and power (see below, p. 91[a]). Rāma in his hermitage on the banks of the Godāvarī is the type of the peaceful, gentle hermit who has renounced the world, and lives retired from its strife and care, 'true to duty, true to virtue.' In the *Mahābhārata* descriptions of the hermit (*vānaprastha*) and of the ascetic (*sannyāsin*) are found, which agree almost verbally with those of Manu (*Mahābh.* xii. 191 f., 243 ff.; cf. above, p. 89). And in the same book, true and false *tapas* are distinguished from one another: 'Fasting though for a fortnight, which ordinary men count for *tapas*, is merely a castigation of the body, and is not regarded as *tapas* by the good; renunciation and humility, these are the noblest *tapas*; he who practises these virtues fasts unceasingly, and his virtue is never found wanting.' 'Study of the Veda and avoiding injury to any living being, men call bodily asceticism; the true spiritual asceticism is control of speech and thought.'†

In the *Purāṇas* and later literature the extravagances of ascetic practice are more prominent than its virtues. The underlying conceptions remain the same; renunciation of worldly possessions and the voluntary endurance of bodily pain are means to an end, viz. deliverance from the *saṁsāra* and the acquisition of supernatural powers. The essential principles, however, are overlaid with a mass of extravagant fancy and repellent detail; and the stories of the lives of the ascetics, and the descriptions of their self-inflicted tortures, present few features of attractiveness or interest.

3. Asceticism in modern practice.—The most general term for a Hindu ascetic is *sādhu*, a 'good' or 'pious' man, a saint, or sage, of which the feminine *sādhvī* denotes a woman who has taken ascetic vows. *Sannyāsin*, one who has 'cast off,' *i.e.* home and possessions, is also frequently used of any mendicant, though the title is more properly restricted to a particular sect (see below, p. 93 f.). *Faqīr* is a Muhammadan term, expressive of poverty of spirit, but is sometimes, though incorrectly, applied to a Hindu beggar or ascetic. India has always been the home of asceticism, and from the very earliest times this feature of Indian life has attracted attention. *Sādhus* have formed the shifting itinerant element in a population for the most part stationary and rooted to the soil. In spite also of their general aloofness, by their numbers and by the respect paid to them they have always exercised a considerable influence in the land, and, in the absence of more direct methods of conveying intelligence, have formed a fairly constant though uncertain means of communication between the different parts of the country. Present everywhere, although rarely making a prolonged

* See esp. R. Garbe, *Bhagavad-Gītā*, Leipzig, 1905, Einleitung; *SBE*, vol. viii.[2], Oxford, 1898, Introduction; and art. BHAGAVAD GĪTĀ.

* Cf. the interesting account which Dr. T. L. Penneli gives of the *sādhu* whom he overtook on the road from Ludhiāna, and who recounted to him his experiences and manner of life: 'When my heart is lonely I read in the *Bhagavad Gītā*, and get consolation, and I like that better than any other book because it makes my heart glad' (*Church Missionary Intelligencer*, 1905, p. 516).

† *Mahābh.* xii. 217, 221; cf. Deussen, *Allg. Gesch. der Philosophie*, i. 3. p. 89 ff.

stay in one place, they brought to the settled inhabitants the consciousness of an outside world, and wrought effectively, though probably unintentionally, against the narrowness of a merely local and parochial spirit. Whether the *sādhus* were more numerous in ancient times than at the present day it is difficult to determine. They occupy a larger place in the ancient than in the modern literature of India; and the same is true also in all probability of the thought of the people. They still form, however, an appreciable though small percentage of the population. At the census of 1901 the total number of beggars and religious mendicants was returned at 4,914,000, or nearly five millions, a decrease of about 6½ % during the decade preceding. The decrease, however, is attributed to the heavy mortality of the famine years, and not to any lessened attraction in the profession of sādhuism. Probably by far the greater number of these, if not all, were true ascetics, bound by vows to a life of self-renunciation and poverty.

More, also, perhaps than in any other country asceticism in India has been under the definite and strong sanction of religion. That sanction was given to the practice of *tapas* in the first instance by the example of the greatest saints and heroes of old, and of the gods themselves, who are represented as enduring self-inflicted tortures for thousands of years in order to attain supernatural or enhanced power. The *ṛṣis* of old, the demigods of legend and story, the dwellers in heaven as well as on earth, engaged in the practice of *tapas* to secure dominion for themselves, or to confound their foes. The Supreme Being himself endured age-long austerities in order to create. And Śiva, in the character of an austere naked *sannyāsin* practising austerities of almost unimaginable severity for thousands of years, is the type and patron of the ascetic, who by the grace of Śiva and by the virtue of *tapas* hopes to attain all his desires. There was no limit to the power of self-mortification; all things were possible to *tapas*. The classical example and the most convincing to Hindu thought was found in the story of the rivalry and hostile encounters of Vaśiṣṭha and Viśvāmitra. The latter, a Kṣatriya and a most powerful and wealthy king, was overthrown and put to confusion at every point by the might of the Brāhman's incantations and magical devices. Humbled and beyond measure enraged, Viśvāmitra had recourse to *tapas*, and by the most severe and protracted austerities compelled the gods to grant him the birth and rights of a Brāhman, thus placing him on a level with his Brāhman adversary. The story undoubtedly represents the rivalry of the two great orders or castes, the priestly and the warrior; but it also expresses the conception of the omnipotent strength of *tapas*, which could bridge the gulf, and lift the Kṣatriya, inferior though a king, to the level of the proud and domineering Brāhman.*

On the power of *tapas* see also Manu, xi. 239 ff.: 'Whatever is hard to be traversed, whatever is hard to be attained, whatever is hard to be reached, whatever is hard to be performed, all may be accomplished by austerities; for austerity (possesses a power) which it is difficult to surpass. Both those who have committed mortal sin and all other offenders are severally freed from their guilt by means of well-performed austerities. Insects, snakes, moths, bees, birds, and beings bereft of motion reach heaven by the power of austerities. Whatever sin men commit by thoughts, words, or deeds, that they speedily burn away by penance, if they keep penance as their only riches. The gods accept the offerings of that Brāhmaṇa alone who has purified himself by austerities, and grant to him all he desires. . . . The gods, discerning that the holy origin of this whole (world) is from austerity, have thus proclaimed the incomparable power of austerity' (*SBE* xxv. 478 f.); cf. iv. 148, where *tapas* is one of the means for remembering former births, and xii. 83, where *tapas* leads to the attainment of supreme bliss; cf. also *Rigveda*, x. 1. 86, where the long-haired ascetic with semi-divine powers is able to move on the path of the Apsarases and Gandharvas (A. A. Macdonell, *Vedic Mythology*, p. 134).

Hindu asceticism represented, further, a revolt from, or at least a protest against, the tyranny of caste. In its origin probably remote from Brāhmanism, and conveying the ordinary idea that bodily pain was profitable for the advancement and purification of the spirit, the ascetic life became, in association with Hinduism and under the prescriptive sanction of Hindu law itself, a refuge from the burden of caste rules and ostracisms. By the ascetic, caste, like every other institution of the mundane life, has been surpassed, and left behind. He is casteless not because he is below but because he is above caste. And this freedom from the bondage and artificial restrictions of a society elaborately fenced off and partitioned by innumerable barriers which the ordinary man might not transgress presented no inconsiderable attraction, and has been one of the secrets of the abiding popularity of the ascetic ideal and manner of life in India. The subdual of the bodily passions by mortification of the flesh, which in other countries was itself the end of asceticism, was in India only the means; the end was primarily and avowedly the attainment of magical powers, but also, perhaps in many instances only half consciously, escape from the burdens of a social life, the petty restraints and prohibitions of which had begun to be a weariness to the spirit. Over this tendency, with that wonderful compliance and dexterity of which it is so great a master, Brāhmanism threw its shield, and legalized what it could not prevent. In the doctrine of the four *āśramas* (*q.v.*) asceticism was made an integral part of the orthodox Hindu life, and it became the duty of every Hindu, as advanced age overtook him, homeless and a wanderer to chasten himself with austerities. Formally this was to be done for the sake of detaching himself from earthly ties, and of realizing union with *Brahman* (see art. YOGA). And a religious motive was thus supplied for that which in itself was a welcome release from responsibility, care, and the minute requirements of an elaborate social code.

In the first instance apparently, the right and privilege of asceticism, according to Hindu custom or law, belonged to Brāhmans alone; it was then extended to all the twice-born, and finally all restrictions were removed, and admission into the ranks of the ascetics was accorded to men of every position and degree.

Cf. Rāmāyaṇa, *Uttara Kāṇḍa*, 74. 9 ff., quoted in Muir, *Orig. Sanskr. Texts*[2], i. 119 f.: 'Formerly in the *kṛta* age Brāhmans alone practised *tapas*; none who was not a Brāhman did so in that enlightened age . . . then came the *tretā* age, . . . in which the Kṣatriyas were born, distinguished still by their former *tapas* . . . Those Brāhmans and Kṣatriyas who lived in the *tretā* practised *tapas*, and the rest of mankind obedience. . . . In the *dvāpara* age *tapas* entered into the Vaiśyas. Thus in the course of three ages it entered into three castes; and in the three ages righteousness (*dharma*) was established in three castes. But the Śūdra does not attain to righteousness through the (three) ages . . . such observance will belong to the future race of Śūdras in the *kali* age, but is unrighteous in the extreme if practised by that caste in the *dvāpara*.' Cf. Manu, i. 86: 'In the *kṛta* age the chief [virtue] is declared to be *tapas*.'

It is evident, however, with what reluctance the privileges and powers of the ascetic life were extended to Śūdras and low-caste men. At the present time there is no distinction or barrier; any one may become an ascetic, and the vows are not necessarily lifelong. Some sects, however, still restrict membership to Brāhmans, or at least to men of the three higher castes.

Moreover, the distinction between the last two *āśramas*, that of the *vānaprastha*, the anchorite in the forest, corresponding to the class of the ὑλόβιοι

* See J. Muir, *Original Sanskrit Texts*[2], i. 388 ff., who quotes the story in a twofold form from the *Mahābhārata* (*Ādiparvan*, 6638 ff.), and from the *Rāmāyaṇa* (*Bālakāṇḍa*, 51–65); cf. the narrative of Nahuṣa, who by *tapas* won for himself the rank of Indra (*Mahābh.*, *Ādip.* 3151; Muir, *op. cit.* p. 307 ff.)

of Megasthenes (see above, p. 88[a]), and that of the true *sannyāsin*, the homeless wanderer, was never very clearly drawn even in theory, and was in practice entirely disregarded. Ascetic habits at least were common to both; and the dweller in the forest-hermitage, no less than the man who had 'cast off' possessions and earthly ties in favour of a vagrant life through the cities and country, endeavoured by means of *tapas* to break the fetters which bound him to an earthly existence, and to secure final rest and bliss.

(1) *Clothing and habits.*—Numerous also as were, and are, the sects of ascetics, varying in the details of costume and habit, they all possess certain broad characteristic features in common, and to the eye of the comparative stranger present a similar and specific appearance by which their profession may be recognized. All *sādhus* carry a begging-bowl, which in its simplest form consists of a hollowed-out coconut or gourd, but is sometimes of brass, figured or otherwise ornamented, and furnished with a lid or handle; a water-pot also, and usually a staff. Theoretically, and as individuals, they are without worldly possessions, but the monasteries in which many of them take up their abode during the rainy season, and for longer or shorter intervals, are often richly endowed. Such monasteries, which are very numerous all over India, owe their existence to the liberality of pious founders, and have at different times been the recipients of gifts of money or land, whereby merit has accrued to the donors, and the religious houses have in many instances become endowed with great revenues. They are not, however, in most cases, places of permanent residence, but their inmates wander through the country as *sādhus*, or ascetics, living on the alms of the people. The robes of the ascetic are ordinarily salmon-coloured, but sometimes other colours are met with, according to the sect or order to which they belong; many also go practically naked. On their bodies they rub ashes—a practice which is supposed to have been originally intended to protect the skin against the insect plagues of India, or as a defence against the hosts of the demons.* The forehead is marked with the *tilaka*, the variously shaped sign or symbol, made with coloured earths, indicating their sect or the god to whose service they have consecrated themselves; and the hair hangs down from the head, long and matted, but in other cases is formed into a rough coil at the top, or is entirely shaved off, the head being left bald. They sleep on the ground, and once or twice in the day go round to collect food and alms, for which they must not ask, but contentedly receive what is given. According to the stated rule, they must not approach a house to beg until the regular meal-time is past; what remains over is the portion of the mendicant.

Other objects usually found in the possession of a *sādhu* are a rosary, the material of which and the number of the beads vary with the different sects. Śaivite rosaries are composed of the berries of the *rudrāksha* tree (*Eleocarpus ganitrus*), thirty-two or sixty-four in number; sometimes, however, such ascetics wear strings of human teeth (*dantamālā*) or the skin of a snake round their neck. Vaiṣnavite ascetics carry a rosary of a hundred and eight beads of *tulasī* wood, the holy basil (*Ocymum sanctum*), or occasionally, though it is said rarely, of the seeds of the sacred lotus. The purpose of the rosary is for use in the recitation of prayers, or to enable the devotee to repeat the name of his god a definite number of times without error.† In all probability the Christian use of the rosary was derived ultimately from India. Many *sādhus* will also be found with fire-tongs, the iron of which is supposed to be a protection against evil spirits, and, as they are inveterate smokers of bhang, with a pestle and mortar, and a pipe, which are brought into constant use. Many of them carry on their person small idols, or sacred objects, or talismans as the *liṅgam* or *śālagrāma*, relics also from the places of pilgrimage they have visited, and seals or certificates issued by the priests in charge. They are supposed to spend their lives in meditation, withdrawn from the thoughts and interests of the world. For a similar reason, because he is believed to be in *samādhi*, 'profound trance,' a state of intimate and untroubled communion with the Divine, the body of a *sannyāsin* is under ordinary circumstances buried, not burned; he is in reality not dead, and may revive at pleasure to a consciousness of external things.

(2) *Mortifications.*—The distresses and self-mortifications to which the Hindu ascetic submits himself would be almost incredible if they were not certified by the accounts of many eye-witnesses from the earliest times to the present day, and by the well-known capacity of the Eastern to endure with stoicism hardship and pain that would be intolerable or fatal to a European. Fully to enumerate and describe the various kinds of self-torture invented and practised by *sādhus* would be impracticable. Among the more usual and prominent which attract attention is the so-called 'arrow' or 'spike-bed' (*śaraśayyā, kaṇṭakaśayyā*), a flat board studded with iron nails or spikes, on which the ascetic sits or lies at full length, and which he is supposed never to leave night or day. The practice is in imitation of the sufferings of Bhīṣma, the leader of the Kurus and chief antagonist of Arjuna in the *Mahābhārata*. His body was pierced in the fight by Arjuna with so many arrows that, falling, it did not touch the ground, and Bhīṣma lay thus supported for forty-eight days and nights before his death, during which time he discoursed on high topics before the assembled armies.* A Brāhman ascetic at Benares is said to have used one of these couches, on which he lay naked, for thirty-five years.† Another common form of self-torture is to raise one or both arms above the head, and to hold them there until stiff and atrophied, when they cannot be drawn down again (*ūrdhvabāhu*). A man who has both arms thus extended is unable even to feed himself, and is dependent in everything on the help of others. As a further penance the hand is sometimes held closed till the nails grow through the palm. The *pañcha-tapāṁsi* penance consists in enduring the heat of four fires lighted around, with the sun overhead as a fifth; sometimes five artificial fires are employed. Difficult and distressing postures of various kinds are frequent modes of self-mortification, which are supposed to distract the thoughts from external objects (see art. YOGA), for example, standing on one foot for protracted periods (*eka-pāda*), measuring the length on the ground (*aṣṭāṅga*), and thus making slow and painful progress from one place of pilgrimage to another, or round a sacred shrine. Most *sādhus* undertake long and toilsome journeys to visit the holy places of their religion, as Badarīnāth in Garhwāl, or the sacred mountain Kailāsa;‡ and on the way, or at the temples themselves, suffer the greatest hardships from want and cold. Many perish by the way from these causes and from the attacks of wild beasts. Other *sādhus* undertake prolonged fastings, or place themselves under vows

of silence for years. Some display their powers by chewing live coals, or their endurance by thrusting knives or skewers into their flesh, treading on beds of glowing ashes, sitting immersed to the neck in water, allowing themselves to be buried alive, or hung with the head downwards (*ūrdhvamukhi*). Tricks of self-hypnotism of a most remarkable character have been without doubt known to and practised by Indian ascetics for centuries.*

(3) *Ascetic sects.*—Hindu *sādhus* are of various types and sects, between which to the unaccustomed eye there appears to be little difference. The greater number are Śaivites, but some belong to Vaiṣnavite forms of Hinduism. Śiva, the narrative of whose austerities is found chiefly in the *Śiva*, *Skanda*, and *Liṅga Purāṇas*, is the chief patron god of ascetics. In this character he is represented as *digambara*, 'sky-clad,' with hair unkempt and his body smeared with ashes, sometimes sitting under a snake canopy. While practising austerities his home was in the remote fastnesses of the Himālaya range, where accordingly some of the most sacred places of Śaivite pilgrimage are to be found. Most of the great teachers or reformers of Hinduism founded mendicant orders, and established monasteries, which are centres and homes of ascetic life. There are sects that trace their origin to Śaṅkarāchārya, Kabīr, Rāmānuja, Rāmānanda, etc. The number of them is great, and only a few of the more prominent and important can here find mention.†

There are seven chief sects of Śaivite ascetics as follows:—(1) *Daṇḍin*, (2) *Sannyāsin*, (3) *Brahmachārin*, (4) *Paramahaṁsa*, (5) *Liṅgait* or *Liṅgayat*, (6) *Aghorin*, (7) *Yogin*. The first four are mendicant orders founded by Śaṅkarāchārya, the great Brāhman teacher and expositor of the 7th or 8th cent. of our era. The *Liṅgaits*, or *Liṅgayats*, are properly Śāktas, who worship the *liṅgam*, or phallus, and whose founder is said to have been a Brāhman named Basava, or Basappa, of Kalyāna, and to have lived in the Deccan about the beginning of the 12th century. Their itinerant monks (*jaṅgamas*) are to be found all over India (see art. LIṄGAYAT).

The subdivisions of the *Daṇḍins* and *Sannyāsins* appear to be uncertain in their limits,‡ and perhaps some of the sub-orders coincide, and are practically the same. There are said, however, to be ten classes of *Daṇḍins*, whence they are known as *Daśnāmī* ('ten-named') *Daṇḍins*, which derive their titles from ten disciples of Śaṅkara. The general name has been given to them from the *daṇḍa*, or staff, which every *Daṇḍin* carries, and which they are said to worship; the various sub-orders have different kinds of staves. Membership of the sect is confined to Brāhmans, and they are especially numerous in Benares. They wear salmon-coloured clothes, and beg only from the houses of Brāhmans. Initiation into the order is accompanied by a kind of baptism, with fasting; the sacred thread is also taken off at this time and burned, and together with the communication of the sacred *mantram*, and the new name of the sub-order to which the candidate is to belong, there is enforced upon him the observance of chastity and poverty. *Daṇḍins* avoid the use of fire, and bury their dead or cast them into a sacred stream § (see art. DAṆḌIN). Seven classes of *Sannyāsins* are enumerated by Oman, together with three which are said to belong more properly to the *Daṇḍin* orders. The list is as follows:—Giri, Puri, Bhārti, Ban, Auran (Aranya), Parvat, Sagar; Tirath, Ashram, Sarasvatī. Membership of the sect is open to all, without distinction of caste; twice-born men lay aside the thread, and all join at meals. They usually wear a necklace of *rudrāksha* berries, and some, in place of the ordinary salmon-coloured robes, carry the skin of a tiger. In their food, which they accept from any Hindu, they avoid meat and do not drink spirits, but are great smokers of *ganja* (*guñjā*), or hemp. At initiation the *guru* communicates to the novice his new name and the *mantram* of his order, and he is then expected to serve the *guru* for a time, receiving instruction from him. He has to bathe daily, and to perform daily worship with contemplation of the image of Śiva; he must not sleep on a couch or during the day-time, or converse with women, and must always go on foot, etc. At death the body is buried in a sitting posture, facing east or north-east, and no *śrāddha* ceremonies are performed, since he is supposed to have quitted this life when he entered the order* (see art. SANNYĀSIN).

The remaining sects are of less importance. *Brahmachārin*, the name given in the old literature to a student of the Veda during his period of pupilage in the first *āśrama*, has been appropriated to a subordinate class of ascetics, who are said usually to act as servants to *Sannyāsins* or *Paramahaṁsas* (see art. ĀŚRAMA). The *Paramahaṁsas* are the highest order, and have an *Upaniṣad* of their own, the *Paramahaṁsopaniṣad*. They lay claim to greater sanctity, and profess to observe stricter rules of conduct than others. Before admission to the rank of *Paramahaṁsa*, a probation of some years, usually not less than twelve, must be undergone. In token of absolute renunciation of the world, some observe a strict vow of silence, profess to abstain entirely from food, or dispense with all clothing. Some are unquestionably men of sincere piety, and devote themselves to study and good works. The *Paramahaṁsa* believes that he has already attained to union with the Divine, or rather has learned to know himself as identical with *Brahman*—a creed not conducive to humility or modesty. The title is said to be derived from a mythical bird, which possesses the faculty of separating water from milk; hence in a metaphorical sense is able to distinguish falsehood from truth. The word *haṁsa* ordinarily signifies a goose; so that the title was perhaps originally given to members of the sect in derision.†

The *Aghorins* or *Aghorapanthins* are *sādhus* who have acquired a strange and repulsive appetite for the flesh of corpses, and are said to steal dead bodies from the graveyards, and drag them from the rivers for purposes of food. There are probably few, if any, of these ascetics now left in India, but in times past they were more numerous, and their habits have been noted from a very early date. The home of the chief of the sect is said to be at Siddhapur, in North Kanara (see art. AGHORĪ).

Yogin is a general term for an ascetic who is endeavouring by restraint and discipline of the body to secure the union of the soul with the Supreme (see art. YOGA). Such ascetics are usually mystics and self-hypnotists, who claim to be possessed of miraculous powers, and in some instances undoubtedly perform marvellous feats. As a sect they trace their origin to Gorakhnāth, a

* J. C. Oman, *op. cit.* chs. iii. iv. and vi.; Monier Williams, *Indian Wisdom*[3], p. 104 ff.

† The list and details that follow are derived in the main from J. C. Oman's important work; see also separate articles. There are, of course, in India many men who live ascetic lives, but who are not Hindus, such as the Muhammadan faqīrs in the north, and the wandering Jain monks (see artt. MUHAMMADANISM and JAINISM).

† Monier Williams, *op. cit.* p. 87; Max Müller, *Ramakrishna*, London, 1905.

disciple of Mahendranāth, of whom little or nothing is known, even the period at which he lived being uncertain. *Yogins* worship Śiva, especially in the form of Bhairon or Bhairava (*q.v.*), the village god identified with Śiva, whose sacred animal is the dog; and they pay especial veneration to the nāths (*nātha*), or guardian spirits of the Himālayan peaks, and to the eighty-four *Siddhas*, or 'perfect' ones, whose practice of the *yoga* has reached perfection, some of whom are believed to be still living. They disregard caste, wear sacred rosaries of *rudrāksha* berries, and allow themselves the utmost freedom in the matter of food and drink. There are several sub-orders, as Kanphatas, Augars, distinguished by peculiarities of dress or ornamentation.*

The ascetic sects of the Vaiṣṇavites have perhaps hardly so much right to the name of ascetics. They are rather wandering monks, whose abstinence is displayed almost entirely in the matter of food and drink. Some of them practise the rules of *yoga*, and with few exceptions all refrain from partaking of flesh or spirits. Viṣṇu is worshipped by them under the form either of Rāma or of Kṛṣṇa, with whom they usually associate their wives Sītā or Rādhā. The list of the sects is as follows, omitting the adherents of Vallabhāchārya, whose principles are the reverse of ascetic:—

Name.	Reputed Founder.
Śrī Vaiṣṇava.	Rāmānuja.
Rāmānandin.	Rāmānanda.
Mādhava.	Mādhavāchārya.
Chaitanyite.	Chaitanya.
Kabīr Panthin.	Kabīr.†

The *Śrī Vaiṣṇavas*, so called because they unite the worship of Śrī or Lakṣmī, the wife of Viṣṇu, with that of Viṣṇu himself, retain the sacred thread, wear reddish-coloured robes, and carry strings of *tulasī* beads or of the seeds of the lotus. In addition to the *tilaka*, or sect-mark, on the forehead, they are often stamped or branded on the body with sacred marks emblematic of the god or his wife. They are found chiefly in the south of India, where the great monasteries of the sect are established.‡

The *Rāmānandins* are followers of Rāmānanda, the disciple of Rāmānuja. His work lay rather in the north of India, and the various types of ascetics who belong to this order are numerous in most of the northern districts of the peninsula. The chief subdivision is that of the *Bairāgins* (*q.v.*) or *Vairāgins*—a title which indicates one who is free from worldly passion or desire, and is often applied generally to any Vaiṣṇavite mendicant or devotee. The *Vairāgins* proper disregard caste distinctions, though they wear the thread, eschew meat and spirits, and worship Hanuman, the monkey-god, as well as Rāma and his brothers, and Sītā, and they go through an elaborate daily routine of bathing, etc., including the practice of *yoga*; frequently also they are branded upon the arm with the sacred symbols of Viṣṇu.§ Other sub-sects of Rāmānandins are Acharins, Khakins, Sannyāsins, the last-named being distinguishable from the Śaivite ascetics of the name by the use of the sacred thread. They wear robes of different colours, and the Khakins at least usually dispense altogether with clothing. All Rāmānandins are pledged to vows of celibacy (see art. Ramananda, Rāmānandin).

The *Mādhavas*, or *Mādhvas*, are almost entirely confined to the south of India. They live celibate lives, and admit all castes to the order. Their one garment is orange-coloured, and on breast and arms they bear the marks of Viṣṇu, and shave the head, in this last respect being distinguished from the true Vairāgins, who leave a small tuft of hair on the crown (see art. Madhvas).

The *Chaitanyites* are in some respects the most liberal in thought, and in mode of life most free and unrestrained of all Vaiṣnavite ascetics. They admit into the order men and women from all, even the lowest, castes, and with few exceptions do not profess or practise celibacy. The sect is most widely spread in Bengal, of which district the founder was a native. They wear white, or sometimes yellow garments, abstain from meat and spirits, and carry the usual *tulasī* rosary and necklace. There are several subdivisions, the moral reputation of some of which does not stand high (see artt. Bengal, Chaitanya).

The *Kabīr Panthins* can hardly be said to affect asceticism in any real sense of the term. They wear no distinctive dress, carry the usual necklace and beads, and on their foreheads the distinctive mark of Viṣnu. The wandering monks of the order are numerous in northern and central India, and bear a high character for simplicity and purity of life.*

The remaining orders of *sādhus* have originated among the Sikhs. The three most important are known as *Akālin*, *Nirmālin*, and *Udāsin*. There are others less numerous and distinctive. In general the dress of the Sikh *sādhu* is more complete than that of the ascetics of other, or at least of Śaivite orders; and he bears less prominent and obtrusive marks of his ascetic profession. The *Akālins*, or *Nihangs*, are the militant monks of the Sikh faith. They dress in blue garments, and travel over the country fully armed, on horseback or riding on camels, and their requests for alms are said to be preferred with a tone and manner that secures instant compliance (see art. Akālīs). The *Nirmālins* are for the most part quiet and inoffensive students of the sacred books, whose only outward marks of their *sādhu* profession are their reddish-yellow garments and long hair (see art. Nirmālin). The *Udāsins* dress in salmon-coloured robes, with a peculiar pointed cap, and a black cord round the neck; and, in addition to the water-pot, usually a gourd, carry a bag over the shoulder, and a small black mat or carpet, which they spread on the ground when they rest. Some Udāsins shave the head, while others allow the hair to grow; all avoid the use of meat or spirits, and do not smoke, and are pledged to poverty and continence† (see art. Udāsin).

There have also been at all times a few *sādhvīs*, or female ascetics, in India, who have emulated their more numerous male companions in their devotion and the rigour of their ascetic practices. The publicity, however, which the profession of sādhuism entails is an obstacle to its frequent adoption by Indian women, and any general observance by them of ascetic habits or vows would be opposed to the sentiments and prejudices of the Hindus themselves. *Sādhvīs* are usually widows, who have less to lose in the adoption of a roving life; and in most instances, though not always, are of low caste. It would seem also that generally, although again not without exceptions, the *sādhvī* is moved to enter upon this manner of life by the desire to cast in her lot with father or other male relative or friend; and solitude therefore rarely forms part of the voluntary penance which she undergoes. The case is recorded,

however, of a Hindu widow of good family, who lived as a solitary recluse in an underground cell near Benares for thirty-eight years, devoting herself to study and the practice of *yoga*, reverenced by all the people, and receiving visitors from the great distances to which her fame had spread.*

Asceticism, and the habits and practices associated with it, have been adopted in several instances in India by Christian missionaries, with the purpose and hope of thereby commending their teaching to the people among whom their lives were spent. It is doubtful how far the attempt has ever been really successful. With the spirit that counselled and animated such resolutions, moving men to self-renunciation and the abandonment of all for the sake of duty, and to promote the unselfish end which they had in view, all will feel sympathy. In the regard of every Hindu also the ascetic ideal is a noble one, and the man who endeavours to put it into practice is worthy of all honour. It would seem, however, that the utmost sacrifice which it is in the power of a European, either by constitution or circumstances, to make cannot approach the abnegation or extreme rigour of self-mortification of the ordinary Indian *sādhu*; and therefore to the Indian his mode of living will probably appear to be a pale imitation, not wholly sincere, and immeasurably below the true ideal. It will excite his wonder, but in no degree move him to respect, while the motive that prompts the adoption of such a life will be entirely beyond his comprehension. There have been native Indians also, Christian *sādhus*, who have wandered through the country in ascetic garb, and followed the ascetic rule of preaching and teaching by the way. Their action, so far as it is possible to ascertain, has greatly increased and widened their influence for good, and has appeared entirely commendable to their fellow-countrymen.†

4. Religious and ethical value of 'tapas.'—There is probably no country in which asceticism has been so widely and constantly practised, or in which its ideals have been held in such high regard, as India. The injunctions of their sacred books, and the examples of their sages, have kept before the mind of the people the thought that renunciation of the world, with rejection of its pleasures and pursuits, is the supreme good. And although the motive of the abnegation and bodily self-mortification of the Indian *sādhu* was undoubtedly in the ultimate analysis selfish‡—he abandoned the world that he might gain something better for himself—yet his life and action were an ever-present reminder to the people that the good of this world is not the good which is most worth having; and his example revived in them the longing, which the pressure of worldly cares and ambitions might well have deadened or crushed, for a higher experience of life than was suggested by the hard material facts of the present. The hand that pointed upwards and onwards might indeed be prompted by no generous or altruistic spirit. Nevertheless it did suggest and invite to upward striving. And there can hardly be any doubt that, in spite of its obvious drawbacks and limitations, sādhuism has been on the whole a good to India, and a force that has made for righteousness in the broadest use of the word.

That ideal commanded the assent and enthusiastic goodwill of the people at large. They were not blind to the defects and dangers of an ascetic life, the opportunities it afforded for imposture, the habits of idleness and the love of ease which it promoted. While, however, they jested at the *sādhu*, they respected his profession and wished themselves to be like him. It was his better qualities that they revered, and the ideal which he represented. His ignorances and littlenesses they tolerated or laughed at, while they allowed his claim to a holiness greater than any to which they, pre-occupied with mundane affairs, could aspire. That there were pretenders and impostors among the ever-moving crowd of ascetics, men to whom godliness was a way of gain, the keen instinct of the people always recognized. These, however, were not true *sādhus*, but were masquerading in a borrowed garb to which they had no right; and their presence hardly lessened the respect in which the profession was held, or weakened the influence which its better members wielded. It was and remained good that an ideal of purity, self-restraint, and indifference to pleasure and wealth should be constantly exhibited in concrete form before the eyes of the people.

On the other hand, the existence of so large a number of able-bodied men, living in idleness, cannot have been other, to our Western modes of thinking at least, than a burden to the commonwealth. No *sādhu* ever did any work. He passed his time in the most complete and absolute idleness, as far as the labour of the hands was concerned; and from a social or communistic point of view, his life was entirely unproductive. It must be remembered, however, that the burden was very widely distributed, from Cape Comorin to the utmost Himālayas; and that in any given case the demand made by the individual *sādhu* upon the people among whom he sojourned was very slight. The burden was probably little felt, much less than would have been the case in the more artificial and closer-knit States of the West. It is true, nevertheless, that, on the premisses of Western logic and argument, the loss of the remunerative labour of so great an army of potential workers cannot have been other than hurtful to the general prosperity of the land.

Sādhuism also, both by its principles and by its practice, struck a heavy blow at the spirit of caste. To the true *sādhu* all things were indifferent, and therefore the distinctions and jealousies of caste were nothing to him. Most of the orders acted up to this belief, although a few refused admission to membership to any but Brāhmans, and declined to receive food from men of a lower caste. Their influence, therefore, on the whole was democratic and levelling; they stood for brotherhood and equality as against caste assumption and pride. And mingling with the people as they did on their incessant journeyings, the conceptions and theories which they thus represented, though they never availed to break the Brāhman yoke, must have struck deep root, and given rise to many searchings of heart.

There is, however, at the present day a new spirit brooding over the land, inimical to sādhuism and the ideals which it represents and fosters. Western activities, and the conceptions of duty and aim which the West has introduced, and which are acting as a strong ferment in the life and society of India, must in the long run be fatal to the ascetic, to the world-renouncing spirit. English education, if there were nothing else, and the strenuous life which it inculcates, will render impossible the meditative existence of the *sādhu*—the man who in the world is not of it. The end is not yet; for perhaps a considerable time to come the professed ascetic in India will perform his pilgrimages by rail, will utilize the electric light and the other appliances and conveniences of

* Oman, *op. cit.* p. 244 ff.

† For a recent example of Indian Christian *sādhus*, see *Harvest Field*, 1906, p. 300 f.

‡ Cf. Deussen, *Philosophy of the Upanishads*, p. 364 f.; the worth of *tapas* to the Indian was primarily its worth to himself; the external results, its worth for others, were of comparatively little account

civilization, and will remain what he is, unmoved and unchanged. Eventually, however, and inevitably the forces of the new era will be too strong for him. It is hardly possible that the *sādhu* should accommodate himself to an age that prizes merchandise and gold above all. He must vanish before the pressure of modern forces and strange ideas. But with him will go one of the most picturesque if not the most lovable figures that Indian history or life has to show. And it is permissible to doubt whether the new spirit and influence that is driving him from the world's stage will be on the whole more conducive to India's real welfare and happiness than his has been throughout the long centuries.

LITERATURE.—The more important works have been quoted in the course of the article. The most complete description in English of ascetics and their manner of life is to be found in J. C. Oman, *Mystics, Ascetics, and Saints of India*, Lond. 1903, and the same author's *Cults, Customs, and Superstitions of India*[2], Lond. 1908, pt. i. ch. 1, and pt. iii. ch. 4. E. S. Oakley, *Holy Himālaya*, Lond. 1905, describes the sacred places of pilgrimage in Kumāun and Garhwāl; and an interesting description of a visit to the *sādhus* of Rishi Kesh is given by T. L. Pennell in *Church Miss. Intelligencer*, 1905, p. 597 ff. Add F. Max Müller, *Rāmakrishṇa, His Life and Sayings*, new impression, Lond. 1905; Monier Williams, *Brāhmanism and Hinduism*[4], Lond. 1891, with a portrait and description of a high-caste Brāhman *sannyāsin*, formerly prime minister of Bhaunagar, and a C.S.I.; W. Crooke, *PR*, Lond. 1896; J. Jolly, 'Recht und Sitte' in *GIAP*, Strassburg, 1896, p. 150 f.; P. A. S. GEDEN.

ASCETICISM (Japanese). — The asceticism found in Japan after the introduction of Buddhism is only a foreign importation with which we are not concerned here (see ASCETICISM [Buddhist]). What we must give our attention to is the only original form of Japanese asceticism, that is to say, the asceticism of primitive Shinto as it is met with in the most ancient documents.

A Chinese traveller, describing the Japanese of the early centuries of our era, mentions this interesting custom: 'They appoint a man whom they call an "abstainer." He is not allowed to comb his hair, to wash, to eat flesh, or to approach women. When they are fortunate, they make him presents; but if they are ill or meet with disaster, they set it down to the abstainer's failure to keep his vows, and unite to put him to death' (W. G. Aston, 'Early Japanese History,' in the *TASJ* vol. xvi. pt. 1, p. 55). All the features of this description—carelessness with regard to the cleanliness of the hair and the body, abstinence from certain foods, and continence—correspond exactly with what we know of the usual condition of the 'god-men' who are found among so many primitive peoples, and who, when illness or any other calamity occurs, are held to be responsible, and are deposed, punished, or killed (see J. G. Frazer, *GB*[3], *passim*). Analogous conceptions are also known to exist in China, where the Emperor is held responsible for drought; and in Korea, where, in the event of a bad harvest, the ancient kings were deposed or put to death.

If we turn now to the most ancient Japanese book, the *Kojiki* (A.D. 712), we shall not find this primitive custom mentioned; but we may see there at least an idea of abstinence which appears to be the continuation of it. This idea is expressed by the word *imi*, the root of the verb *imu*, which, in its original meaning, signifies 'to shun.' In one passage the reference is to a sacred weaving-hall (*imi-hataya*), where the Sun-goddess presides at the making of the garments of the gods. Here *imi* has only the secondary sense of 'sacred,' which, however, is closely related to its original meaning. In another passage we have an account of the mythical origin of the *Imibe no obito*, that is to say, the chiefs of the *Imibe* (or *Imbe*), a hereditary corporation of abstaining priests, who claimed descent from the god Futo-dama ('Great Jewel' or, rather, 'Great Gift,' 'Great Offering'). Again, in a third passage, relative to the troubles which followed the death of the first legendary Emperor, Jimmu, we are told that one of his sons, renouncing his claim to the succession, became an 'abstainer' (see *Kojiki*, ed. with notes by Motoöri, 1789–1822, vols. 8, 15, 20; or the Eng. tr. by B. H. Chamberlain, sec. 15, 33, 53, pp. 62, 134, 186 of the re-issue of 1906).

The *Nihongi*, which appeared only eight years later, that is, in A.D. 720, contains passages corresponding to the first two passages of the *Kojiki*; but, under the influence of Chinese ideas, it substitutes for the 'abstainer' of the third passage a single priest 'of the gods of Heaven and Earth' (*Nihongi*, ed. Shukai, vols. 1 and 4, or the Eng. tr. by W. G. Aston, 1896, pp. 41, 42–47, 140).

We shall now examine the documents relating to worship, especially the old rituals in which the *Imibe* appear (*Engishiki*, A.D. 927, ed. Dehabon, vol. 8, *norito* 1, 8, 14), to see more clearly what their 'abstinence' consisted in. The special function of the *Imibe* was to prepare the offerings for the gods, 'avoiding' all impurity in doing so. This is what is given in exact terms in the last lines of the first ritual, relating to the *Toshigohi no matsuri*, or 'Festival for the Harvest,' celebrated at the time of sowing, and also at the end of the fourteenth ritual, recited at the *Ohonihe no matsuri*, or 'Festival of the Great Offering of Food,' which was a festival of first-fruits (*Nihi-name*, 'New-tasting'), more solemn, and celebrated only at the accession of the Emperors. On the other hand, in the eighth ritual, concerning the festival of the *Ohotono Hogahi*, or 'Luck-wishing of the Great Palace,' we are told that it was the *Imibe* who, with a sacred (*imi*) axe, set to work on the wood destined for the construction of this palace, and who, with a sacred (*imi*) mattock, dug out its foundations. On this occasion they also prepared the offerings, brought the Imperial insignia into the great hall, hung up the magic stones in various places (the audience-hall, the Emperor's bathroom and privy), and in conclusion pronounced the ritual. The recitation of the ritual (No. 9) for the *Mikado matsuri*, or 'Festival of the Sublime Gates,' was also entrusted to them. In short, the main idea underlying these various functions is that of material purity, which the *Imibe* had to ensure by avoiding with great care everything that might cause defilement.

Apart from the *Imibe*, abstinence was practised also by certain people and on certain occasions. As a general custom, to prepare himself for a religious festival, the officiating priest had to remain indoors (*i-gomori*), to avoid speaking and making a noise, to eat no food except that cooked on a pure fire (*imu-bi*), in short, to contrive to escape every possible cause of uncleanness. The duration of this abstinence varied, too, with the importance of the festivals: a month for festivals of the first class, three days for festivals of the second class, and one day for festivals of the third class. During the month preceding the *Ohonihe*, the most important festival of ancient Shinto, a lesser abstinence (*ara-imi*) was observed, and during the last three days a greater abstinence (*ma-imi*). The Emperor himself, having to take part personally in the ceremony, had to conform to this rule. When the Emperor Yuriaku desired to see the god of Mount Mimoro without having practised abstinence previous to presenting himself before him, he was confronted by the apparition of a dreadful serpent, which made him rush, terror-stricken, into the interior of his palace for

safety (*Nihongi*, which assigns the event to A.D. 463). Certain categories of priests had to observe special forms of abstinence. Some lower priests, the *Negi* (from *negafu*, 'to pray'), were called *imi-bi* in some old provinces, because of the particular care which they had to take to avoid all uncleanness with respect to fire. Similarly, the priestesses had to be virgins. This rule of continence was limited, however, to the time of their priesthood, and did not prevent their marrying afterwards. The *Saiwō*, a princess of the Imperial blood consecrated to the worship of the Sun-goddess, prepared herself for this office for a long time before. For three years, on the first day of each month, she had to repair to a sacred hall (*imi-dono*), where she worshipped towards the great temple of Ise. This was the 'three years' abstinence' (*mi-tose no mono-imi*). The *Kamu no Ko*, or 'god-children,' young daughters of the nobility attached to the principal temples to perform there the sacred dance (*kagura*), and to cook the food for the offerings, were called also *mono-imi*, that is to say, 'abstainers from things' ('impure' being understood). Lastly, from a passage of the *Hitachi Fudoki* we gather that a domestic *Nihinome* existed apart from the official festival, and that on this occasion abstinence was observed by all the family. But in every case abstinence was associated with the idea of ritual purity. The important thing was to avoid impurities (*tsumi*) of every kind, that is to say, everything that might be displeasing to the gods, *e.g.* uncleanness (to begin with personal cleanliness: no one could take part in a religious ceremony without first having washed and put on clean clothes), crimes condemned from the ritualistic point of view (*e.g.* incest), and lastly, calamities (such as the bite of serpents), because these were then regarded as a Divine punishment for some unknown offence. But, on the other hand, certain things forbidden to the ascetics of the primitive period, such as eating meat, were not considered to be contrary to this Shinto conception of abstinence.

The psychological evolution of Japanese asceticism can be clearly followed in this series of documents taken in their chronological order. In the first centuries of the Christian era we have the asceticism of primitive peoples, characterized chiefly by its strict abstinence and continence, and by carelessness with regard to personal cleanliness. In the 8th cent. we can scarcely discover any trace of an ascetic properly so called (cf. the passage from *Kojiki* which the *Nihongi* thought it necessary to correct). On the other hand, there is mentioned as a hereditary priesthood, already well established, this corporate body of the *Imibe* which we see afterwards in operation in the *Engishiki* in the 10th cent., and which represents the most typical case of the abstinence practised also by many other people in all circumstances connected with religious rites. But, under this new form which so quickly succeeded the preceding one, Japanese asceticism no longer demanded abstinence properly so called, or even continence, except as an immediate preparation for certain festivals or as a temporary condition for certain functions; and, above all, far from regarding filth as a virtue, it required absolute cleanliness. Thus the idea of religious purity had undergone a complete transformation; and, in conformity with this instinct for cleanness which already manifested itself as one of the distinctive features of the national character, physical cleanliness became itself the condition of moral and ritualistic purity.

MICHEL REVON.

ASCETICISM (Jewish).—1. Pre-exilic customs.—Jewish piety, consisting originally of faith and trust in a covenant God, found no room for asceticism as a self-imposed discipline of the soul. Indeed, the terms of the bi-lateral covenant between Jahweh and Israel rendered asceticism impossible. For, according to the solemn transaction on Sinai, Israel became Jahweh's own people in a special manner, pledged henceforth to acknowledge Jahweh as their only God, and to obey His will as revealed to them by Divinely-inspired legislators and prophets. Jahweh in return solemnly promised to remain Israel's God. Moderate prosperity was therefore regarded as His smile on His land and people. In the midst of opulence it was possible 'to walk with Jahweh.' No mortification of the flesh or renunciation of the world was necessary to arrive at the highest stage of Jahweh-pleasing holiness. And so we find that pre-exilic customs and laws were adverse to asceticism, *e.g.* mutilation of the body was forbidden (Lv 19^{28}, Dt 14^{1} 23^{1}), fasting was only an accompaniment of prayer and confession of sin, and was therefore an act of humiliation before God, and not a self-inflicted chastisement, and, except on the Day of Atonement, was left to the free will of the faithful (1 S 7^{6}, Ps 35^{13}, Dn 9^{3}, Ezr 8^{23}, Jer 36^{9}).

2. Post-exilic legalism.—The re-organization of the community after the Exile laid the foundation of that rigid, torpid legalism from which Judaism has not yet recovered. The leaders of the nation, in their efforts to re-establish the theocracy and to guard it against internal and external foes, had recourse to the rigour of the Mosaic Law. They had already learned in Babylon that by attachment to ancestral customs they could remain the people of Jahweh outside Palestine and without a sacrificial cult. On their return, the miserable condition of the nation and the scanty materials at their disposal for re-building the State rendered adherence to the Law their only weapon in the struggle for self-preservation. The theocracy was gradually being converted into a nomocracy. 'Let it be done according to the law' (Ezr 10^{3}) became henceforth the norm of Judaism. No longer the prophet with fresh messages from Jahweh, but the expounder of the Law became the spiritual guide. Fresh cases for which the Law had made no provision were decided by an artificial deduction from the written, or by an appeal to the traditions or unwritten Law. If the name 'Pharisee' as the designation of a party sprang up after the Maccabæan rising, the spirit of Pharisaism or Nomism came with the exiles from Babylon. 'The law was forgotten in Israel, and Ezra restored it' (*Sukka*, 20*a*). Even five centuries later, Hillel, the great doctor of the Law, was called 'disciple of Ezra' (*Tos. Soṭ.* 13). Thus the State became a Church, and religion equivalent to legalism, according to which a man's acceptance with God depended on a considerable balance of good works over his failings. 'Know also,' says *Pirqe Aboth* (iv. 29), 'that everything is according to reckoning.' 'Weigh thou therefore our wickedness now in the balance, and theirs also that dwell in the world, and so shall thy name no where be found but in Israel' (2 Es 3^{34}; cf. also *Siphrā* to Lv 26^{9}). Piety was equivalent to a life of righteousness, but such righteousness as God acknowledged and demanded in the Law.

3. Ḥasidism.—The early enthusiasts of Nomism and forerunners of the Pharisees were the Ḥasidim. They were neither a sect nor a political party, as might appear from 1 Mac 2^{42}, but only the pious in the land, of whom frequent mention is made in the Psalms (cf. *JE* vi. 250 f.). They were the successors of those coadjutors of Ezra who endeavoured to fulfil the Law in all its bearings. With that they combined austerity of life and a contempt for earthly possessions (cf. Enoch $108^{8f.}$). They were expected to be more self-denying than God-fearing

men (*Shab.* 120*a*). Theirs was the highest degree of piety (*Rosh hash.* 17). 'Zeal leads to innocence, innocence to purity, purity to Pharisaism, Pharisaism to holiness, holiness to humility, humility to sin-fearing, sin-fearing to Ḥasidism, Ḥasidism to the gift of the Holy Spirit,' etc. (*Soṭa* ix. 15). Their excess of piety was so great that their practice could not be quoted to prove a doubtful halakha (*Men.* 41*a*). Only those were admitted into their circle who were learned (*Pirqe Aboth* ii. 6), and whose youth had never been defiled by sin (*Suk.* 53*a*; see also *B. ḳāma*, 103*b*). Most praiseworthy was their cultivation of an even temperament, a forgiving spirit, generosity in money transactions, and almsgiving (*Pirqe Aboth* v. 10, 11, 14). Their devotions were preceded and succeeded by an hour's meditation, and accordingly they spent nine hours a day in spiritual exercises (*Bᵉrākh.* 32*b*). In order to sacrifice the more, they occasionally took the Nazirite vow (*Ned.* 10*a*). It was probably due to their excessive fasting that they mostly died of enteric diseases, from which they suffered ten or twenty days before their death (*Sᵉmāḥ.* iii. 9; *Gen. Rab.* 62).

Since, however, the object of the Ḥasidim was not mortification of the flesh but nomism, their asceticism did not exclude such indulgences as were permitted by the Law. Hence they never eschewed marriage, although even in the married state they imposed restrictions on themselves (*Nid.* 38*a*). Unlike the Essenes, they did not live in separate communities, and therefore it is incorrect to describe them as an *ecclesiola in ecclesia*. Ḥasidism merged not into Essenism but into Pharisaism and Rabbinism. Pharisees are mentioned first in the time of Jonathan (Jos. *Ant.* XIII. v. 9). Henceforth a Ḥasid was only an exaggerated Pharisee. Most of the Rabbis who were eminent for piety bore the title Ḥasid.

4. Pharisaism and Rabbinism.—Although the Pharisees were as rigorous in their opposition to Greek hedonism as were the Ḥasidim, in their life and teaching they modified the austere views of the latter, and showed less tendency to asceticism. Starting from the principle that right and wrong were defined by the Law, and that the choice of either was in one's own power (cf., besides Josephus, *Pirqe Aboth* iii. 19), they had no inducement to inquire further into the origin of evil, or to trace any connexion between cosmic and individual evil. God created the evil inclination (יצר הרע), and God created the Law as antidote (*Ḳid.* 30ᵇ). As long as the faithful were occupied with the study of the Law and with the performance of works of mercy, they had the power over their own evil inclination (*'Abōdā zārā*, 5*b*). Perfection could be aimed at by a punctilious attendance to the positive and negative precepts of the Law, without the suppression of the natural feelings. A legalist could therefore indulge in all those pleasures of life of which the Law took no cognizance, provided that indulgence did not interfere with Israel's separation (cf. also *Jeb.* 20*a*, 'Hallow thyself also in lawful matters'). The body was accordingly considered sacred, having been created in God's image (*Lev. R.* 34). Self-inflicted injuries were forbidden (*B. ḳam.* 91*b*).

No scribe might live in a town which did not possess, among other sanitary requisites, a bath, a barber, and a physician (*Sanh.* 17*b*). When health required, one might sell one's shoes for food; and he who stinted himself was threatened with retribution by Providence (*Shab.* 129*a*). To save life, even the life of a newborn infant, all laws except those relating to idolatry, incest, and murder might be suspended (*Joma*, 82*a*) and the Sabbath profaned (*Shab.* 128*b*; cf. also Mekh. *Ki This*, 1, 'The Sabbath is delivered unto you, not you unto the Sabbath'). A hungry invalid might be dieted on ceremonially unclean food. The wine-cup hallowed the Sabbath and great festivals, and was not missing from the social board. 'He who abstains from wine is a sinner' (*Ta'an.* 11*a*). Rab went so far as to say that in the great Judgment Day man would have to give an account for every lawful pleasure he refused (Jer. *Ḳid.* iv.). The same Rabbi on another occasion said, '*Beati possidentes* אם יש לו חיטב לך, for there are no pleasures in Sheol, and death knows no delay' (*Erub.* 54*a*).

Nevertheless, moderation and contentment were among the cardinal virtues of Judaism. 'A rich man is he who is contented with his lot' (*Ab.* iv. 1). 'Man must be taught not to be a glutton' (*B. mes.* vii. 5). From Dt 14²⁶ the Rabbis curiously deduce that one may not eat meat unless he has a special appetite for it (*Ḥul.* 84*a*). 'Abstain from evil, and from every appearance of evil' (*Ḥul.* 44*b*). Marriage was raised by the Rabbis to a positive precept, based on Gn I and Is 45¹⁸. There are a few isolated passages in pre-Talmudic writings which seem to attach greater sanctity to the virgin and celibate state than to wedded life (see 2 Es 16⁴⁴, Wis 3¹³, Sibyll. ii. 48, Test. Issachar 2). Enoch (83²) received his revelation before his marriage (cf. also To 8⁷, Jth 8⁴ 9⁴·⁹ 16²³, Lk 2³⁶, Mt 19¹²). But this was not in accordance with the teaching and practice of the Rabbis, to whom marriage was both a legal duty and a safeguard against sin (*Jeb.* 63*b*, *Kᵉth.* 61*b*). Nowhere in the Rabbinic literature is abstinence from marriage recommended as a help to piety.

Great merit was attached to fasting. The fact that an official calendar, the *Mᵉgillath ta'anith*, was published, which prohibits fasting on certain days, shows the prevalence of private fasting at the time of the Christian era. The bi-weekly fast, supposed to have been instituted by Ezra, which is mentioned in Lk 18¹² and in the *Didache*, is still observed in the East by extremely devout Jews. But the ethical value of public and private fasting consisted in its sacrificial nature and in its being the outward expression of penitence; it was not regarded as a stage on the path to perfection.

The destruction of Jerusalem by Titus led many Jews to adopt ascetic practices. Some abstained from meat and wine because of the cessation of sacrifices and libations. But Joshua b. Ḥananiah argued that for similar reasons they should abstain from bread, water, and fruits, for these also were elements offered on the altar (*Baba bathra*, 60*b*).

There are, indeed, instances of Rabbis who led ascetic lives. Thus R. Zadok is said to have fasted forty years to avert the destruction of the Temple, and he was so emaciated that, at the request of R. Jochanan, Vespasian allowed him to be treated by a physician (*Giṭ.* 56*b*, *Lam. R.* i. 5). His contemporary Ḥanina b. Dosa, the thaumaturgos, subsisted only on a kab of locust beans from week's end to week's end (*Bᵉrākh.* 18). Nor were R. Ze'era and Simeon b. Jochai, though abstinent, ascetics in the true sense of the word. Asceticism was not suited to the Jewish temper. Although trials and chastisements (יסורין) were regarded as Divinely ordered for expiatory reasons and with promises of compensation, they were not willingly sought after. Both R. Ḥiya bar Abba and R. Jochanan, when asked whether trials were welcome to them, are recorded to have replied, 'No, I will have neither them nor their reward' (*Bᵉrākh.* 5*b*). The principle of Rabbinism was, 'The disciples of Abraham our father enjoy this world, and are heirs of the world to come' (*Ab.* v. 22).

5. Alexandrianism.—While Palestinian Judaism was being developed into a forensic science, that of the Greek diaspora, notably in Alexandria, assumed the appearance of a philosophical system. There

were several agencies at work to produce this effect. The inability to fulfil every precept of the Mosaic Law on foreign soil must have been the first inducement to spiritualize the Law. The Stoa further supplied them with the allegoric method, and the Greek language with a metaphysical terminology. As early as pseudo-Aristeas the Jewish delegates to Ptolemy IV. are called philosophers (Kautzsch, *Apok.* ii. 21). According to the fragments of Aristobulus, the most prominent Greek philosophers and poets derived their knowledge from Moses, who was the inspiration and source of all philosophy. One of the fundamental principles of this religious philosophy was the pessimistic dichotomy of man which led to asceticism. 'The corruptible body,' says the Book of Wisdom, 'presseth down the soul, and the earthy tabernacle weigheth down the mind that museth upon many things' (9[15]). But it is Philo who is the prophet of Alexandrianism. According to him, man's highest aim is a mystic union with the Deity, attained through asceticism and flight from the world, the former as a means of liberating the spirit from the trammels of the flesh, the latter as a safeguard against a relapse into the sensual (*de Præm. et Pœn.* ii. 411). The patriarchs were accordingly ascetics and hermits. Enoch was removed from sinful surroundings (*de Abr.* iii. 352). Abraham's call was accompanied with the command to depart from temptations of the flesh (*de Mig. Abr.* i. 437). Jacob was the true ascetic who wrestled until he obtained a vision of God (*de Som.* i. 643). But the greatest ascetic was Moses, whom self-discipline and continence qualified for the gift of prophecy, and raised to the nearest approach to God (*Vita Mos.* ii. 145 ff.). Alexandrianism left no impression on Palestinian Judaism, though some of the Philonic *Midrash* found its way into the Rabbinic *Haggada*. The *ḥokhmath Jevanith*, or Greek philosophy, had no attraction for the Rabbis. The works of Philo would have perished if they had not been preserved by Christians. The first Jew who mentions Philo is A. dei Rossi (1573).

6. Essenism.—The asceticism of the Essenes, as seen in the short accounts of them by Josephus, Philo, and Pliny, is so strange that we doubt whether the Essenes and their practices have any claim to be called Jewish. Even the origin of the sect is obscure. Since no satisfactory derivation of the name exists, we hazard the suggestion that Ἐσσαῖοι is an ethnic term=*Esauites*, or Idumæans, or at least a clan of Idumæa.* This would coincide with Pliny's account of their chief settlement on the western shores of the Dead Sea, and would also account for Herod's partiality for them, and for the presence of an Essene in his court. Their rejection of animal sacrifice removes them considerably from Palestinian Judaism, in which the sacrificial cult is everything. Their other tenets are so non-Jewish that the conviction is inevitable that the sect was of exotic origin, though on Jewish borderland; that in its gradual development it received accretions from Pythagoreanism, and finally from Alexandrianism; that to replenish its ranks it carried on a propaganda in Palestine and Syria where the soil was ripe for anti-hedonic movements; and that those Jews who joined the order, and among them chiefly Ḥasidim and Pharisees, would adopt only those practices of the Essenes which were not inconsistent with the State religion. Thus Onias ha-M^{e}aggel, who is supposed to have been an Essene (*Ta'an.* 19 and *ib. Tos.* ii. 11), was a married man and offered sacrifices (*Ta'an.* 23). Josi b. Joezer the priest, another reputed Essene, was a wealthy man (*Baba bathra*, 133). The number of adherents, however, could not have been very considerable. The name 'Essene' is not mentioned in the NT. In the Talmud the allusions to them are scanty and doubtful, and under the appellations of *Vathikin* ('firm'), *Z^{e}nuim* ('modest'), *Ḥashaim* ('silent,' 'mysterious'), *Bannaim* ('builders'), and *Toblē Shaḥrith* ('morning bathers'). Perhaps the *Anshe Ma'aseh* ('men of work'), who are mentioned on a par with the Ḥasidim (*Sukka*, 51; *Soṭa* ix. 15), were Essene ascetics, *ma'aseh* being pure Hebrew for *'eseḳ* (=ἄσκησις), 'work,' 'occupation.'

* For other etymologies cf. Kohler, *JE* v. 234.

7. Modern Judaism. — The teaching of the Talmud is codified in the *Ṭurim* and *Shulḥān 'Arukh*, which is still binding on Judaism. We look in vain for traces of asceticism in that code.

The Jewish devotional literature of the Middle Ages shows indeed a tendency to asceticism. Foremost among these is Baḥya's *Ḥoboth ha-Lebaboth* ('Duties of the Heart'), which is a Hebrew translation from the original Arabic made by Ibn Tibbon (1161–1180), and is as popular among orthodox Jews as Thomas à Kempis' *Imitation* among Christians. So are the *Sha'are T^{e}shubah* ('Gates of Repentance') and *Sepher ha-Jirah* ('the Book of Fear'), by Jonah Geronoli († 1263). But this is due mainly to the influence of Græco-Arabic philosophy (see Brüll, *Jahrb.* v. and vi. 71–93). Maimonides' views are more in accordance with the Jewish spirit. In his *Mishne Torah, De'oth* iii. 1 and vi. 1, he points out that asceticism is not only unnecessary but even sinful. Judah Halevi, another prominent philosopher, in the *Kuzari* (iii. 1 and 4), states: 'The prevalent custom among us is not to separate oneself from the world, nor to despise life . . . but to love the world and length of life.'

On the asceticism of the Kabbalists and Kabbalistic Ḥasidim see KABBALISM, ḤASIDISM, also ESSENES, KARAITES, PHARISEES, and SECTS (Jewish).

A. E. SUFFRIN.

ASCETICISM (Muslim).—The very copious materials which are available in Arabic, Persian, and Turkish literature for the study of Muslim asceticism have hitherto received little attention from European scholars, and much remains to be done before it will be possible to give an adequate survey of the subject. This article can only attempt to sketch the main lines of development, and to illustrate the salient features of each.

1. Introduction: the teaching of Muhammad.
2. Early Muslim and Ṣūfī asceticism.
3. Development of Ṣūfī asceticism in the Middle Ages.
   (*a*) Monastic institutions.
   (*b*) Ascetic systems.
4. Philosophical asceticism.
5. Conclusion: the Dervish orders.

1. Introduction: the teaching of Muhammad.—The religious ideas of the pagan Arabs were vague and scanty. Engrossed in the toils and pleasures of the present life, they seldom thought of the future, and the notion of preparing themselves for a shadowy existence beyond the grave never entered their minds. It was Christianity, not ecclesiastical, but of an irregular and unorthodox type, that sowed the first seeds of asceticism in Arabia before the advent of Muhammad, and continued to exert a dominating influence upon its development in the Muslim empire during the early centuries. In pre-Islāmic times Christianity was diffused among the tribes of North Arabia, and many Arabs had at least a superficial knowledge of its rites and doctrines (Wellhausen, *Reste*[2], 230 ff.). Allusions in the ancient poetry show that the Bedawîn were impressed by the Christian monk (*rāhib*), whose lamp, burning in his lonely

cell, was a welcome sight to travellers in the darkness of the desert. These monks, together with occasional wandering hermits, offered to the heathen Arabs a model of ascetic life, and inspired certain individuals, known as *ḥanīfs*, to reject idolatry, profess monotheism, and even adopt ascetic practices, such as the wearing of sackcloth and the abstention from particular kinds of food. There can be little doubt that the *ḥanīfs* stimulated Muhammad, with whom most of them were contemporary; two, in fact, were connected with him by blood or marriage (cf. Sir Charles Lyall, 'The words "Ḥanīf" and "Muslim,"' in *JRAS*, 1903, p. 771 ff.). The influence of Christianity may serve to explain ascetic tendencies which appeared in the oldest form of Islām—*e.g.* Muhammad and his first converts used frequently to watch and pray through the night—but which were gradually mitigated (Wellhausen, *Reste*², 241). Asceticism is characteristic neither of Islām nor of its founder. The Prophet himself enjoyed all pleasures within his reach, and commanded his followers not to abstain from the good things which God allowed them (*Qur'ān*, v. 89). It is true that he imposed on them some restrictions and obligations of an ascetic nature—the fast during Ramaḍān, abstinence from intoxicating drinks, the five daily prayers, the pilgrimage to Mecca, etc.—but these only threw into stronger relief the social, active, and aggressive spirit of Islām as contrasted with monastic quietism and renunciation. Apart from general exhortations to recognize the vanity of earthly joys, and to put trust in good works rather than in the gifts of fortune, the Qur'ān contains few passages that can fairly be interpreted in a specifically ascetic sense. *Fasting* is enjoined as a penance for certain ritual and legal offences (*Qur.* ii. 192, 257, iv. 94, v. 91, lviii. 5); *penitence*, when accompanied by faith and pious works, turns evil into good (xxv. 70); *prayer* restrains a man from committing sin (xxix. 44); the doctrine of *self-purification*, especially by means of almsgiving (*zakāt*), is preached in Sūras of the Meccan period: 'He that purifies himself (*tazakkā*) hath attained felicity' (lxxxvii. 14; cf. Grimme, *Mohammed*, 1904, pt. ii. p. 113). The root ZHD ('to renounce'), from which is derived *zuhd*, the ordinary word for Muslim asceticism, occurs in the Qur'ān only once, and is applied reproachfully to those who sold Joseph for a low price (xii. 20); but an older term, *tabattul* ('detachment from the world'), is found (lxxiii. 8) among Divinely ordained acts of devotion. Another ancient epithet of ascetics is *sā'iḥūn*, fem. *sā'iḥāt* (literally, 'wanderers'); these are mentioned honourably (ix. 113, lxvi. 5). It need scarcely be said that Muhammadan writers on asceticism interpret the Qur'ān in the light of their own theories, and import a technical meaning into many words, *e.g. dhikr* and *tawakkul*, which the Prophet used in the obvious signification.

2. Early Muslim and Ṣūfī asceticism.—According to the Qur'ān (lvii. 27), monasticism (*rahbānīya*) was an innovation in Christianity itself, and Muhammad in a famous sentence declared that it was no part of Islām. Nevertheless, some instances of a tendency in this direction are recorded by early Muslim tradition (see Goldziher, 'De l'Ascétisme aux premiers temps de l'Islam,' in *RHR*, vol. xxxvii. p. 314 ff.), which invariably represents Muhammad as condemning such acts of penance and mortification, whereas at a later time, when asceticism was firmly established in Islām, and had to be reconciled with the Prophet's teaching, he is constantly cited as an authority for similar practices. Goldziher has collected several examples of persons contemporary with Muhammad, or nearly so, who did penance for their sins. Thus Bahlūl b. Dhu'aib retired into the mountains in the neighbourhood of Medīna, clad himself in haircloth, and tied his hands behind his back with iron chains, crying repeatedly: 'O my God and my Lord! see Bahlūl, bound and shackled, confessing his sins.' Abū Lubāba, in remorse for an act of treachery (Ibn Hishām, 686), fastened himself to a pillar in the mosque at Medīna, and remained in that position until he was assured that God had pardoned him. Other forms of penance were associated with the pilgrimage to Mecca. It was not unusual for pilgrims to go on foot and without shoes, or, while circumambulating the Ka'ba, to let themselves be led like a camel by means of a ring which was inserted in the nose (cf. Goldziher, in *Vienna Oriental Journal*, vol. xiii. p. 36, n. 3). We hear of pilgrims who had taken a vow of silence; this was denounced as a heathen custom by the khalīf Abū Bakr.

The first century of Islām was singularly favourable to the growth of asceticism. The long and bloody civil wars, the fierce fanaticism of the political sects, the rapidly increasing laxity of morals, the spectacle of a military despotism enforcing its will upon devout Muslims, and openly rejecting every principle of the ideal theocracy which they wished to restore—all these circumstances contributed to excite in men's minds a disgust of earthly affairs, and fix their thoughts on the world to come. Hence arose a powerful and wide-spread ascetic movement, originally orthodox in character, but gradually developing mystical tendencies, and passing almost imperceptibly into the oldest form of Ṣūfiism. During the Umayyad period (A.D. 661–750) this movement continued to bear a distinctly orthodox stamp, and derived its leaders, if not its chief strength, from the Pietists, including Qur'ān-reciters (*qurrā*), students of the *ḥadīth*, and learned divines. Its most prominent representative was the famous theologian Ḥasan of Baṣra (ob. 728 A.D.), who may be regarded as the founder of the Baṣrite school of ascetics and mystics (cf. *Qūt al-qulūb*, Cairo, 1310 A.H., i. 129 and 166). His sayings, and those of the early Muslims in general, leave no doubt that the mainsprings of their asceticism were (1) the intense terror produced by the vivid descriptions in the Qur'ān of the Day of Judgment and the tortures of Hell, and (2) a morbid consciousness of sin, which impelled them to spend their lives in penance and devotion. 'Only extreme fear,' said Sufyān ath-Thaurī (ob. 777–778 A.D.), 'enables any one to support the burden of devotion' (*Ḥilyat al-auliyā*, i. 74*a*). 'Suppose,' said Bishr b. Manṣūr to 'Aṭā as-Sulamī, 'that a blazing fire were kindled, and proclamation made that whoever entered it should be saved?' 'I should tremble,' 'Aṭā replied, 'lest my joy might cause me to expire before I reached it' (*ib.* i. 32*b*). Many stories are told of persons who died of fear on hearing a preacher describe the anguish that awaits the wicked after the Resurrection, or who wept so violently from terror and remorse that they swooned away. The slightest infraction of the religious law required a long and painful expiation. Kahmas b. al-Ḥasan is said to have wept for forty years because he once took a piece of clay from a neighbour's wall. There was a class of ascetics called 'the Weepers' (*al-Bakkā'ūn*), a term probably borrowed from Christian monasticism (Abu 'l-Maḥāsin, ed. Juynboll, i. 396, l. 5; cf. Thomas of Margâ, *The Book of the Governors*, ed. Budge, vol. i. p. cxlvii).

In this connexion the pervading influence of Christianity on the early period of Muslim asceticism should not be overlooked (see von Kremer, *Herrschende Ideen*, 52 ff., 57 ff.; Goldziher, *RHR*, vol. xxxvii. pp. 314–324, and 'Materialien zur Entwickelungsgesch. des Ṣūfismus,' in *Vienna*

Oriental Journal, vol. xiii. p. 35 ff.). Not only can the dress, vows of silence, and many other practices of Muslim ascetics be traced to this source, but in the oldest Ṣūfī biographies, besides numerous anecdotes of the Christian monk (*rāhib*), who from his cell or pillar gives instruction and advice to wandering Muslim devotees, we find unmistakable proof that the doctrines of the latter were, to a considerable extent, based on Jewish and Christian traditions. Quotations from the Pentateuch and the Gospels frequently occur among the sayings attributed to Muhammadan saints; and Biblical stories, related from the monastic point of view, were eagerly read, *e.g.* the popular collection entitled *al-Isrā'īliyāt*, which is said to have been compiled by Wahb b. Munabbih (ob. 728 A.D.), and the still extant *Qiṣaṣ al-anbiyā* ('Tales of the Prophets'), by Tha'labī (ob. 1036 A.D.). While, as has been stated, many of the early Muslim ascetics belonged to the learned class, lived in towns, and did not exclude themselves from social intercourse and public life, the movement had its roots among the common folk, of whom a great number embraced with enthusiasm the ideal of unworldliness that was held up to them, and strove to attain it by abandoning all human society, seeking shelter in caves and cemeteries, or roaming in solitary places, deserts, mountains, and on the shore. Of such wanderers Ibrāhīm b. Adham (ob. 776 A.D.) is a type, although, unlike most of them, he was of noble birth. A prince of Balkh, he clad himself in garments of wool, left his kingdom, and roamed through Syria, earning a scanty livelihood by gardening and other kinds of manual labour. On being asked why he shunned the sight of men, he replied: 'I have clasped my religion to my bosom, and am fleeing with it from town to town and from peak to peak. All who see me think that I am a camel-driver (read *jammālī* for *ḥummā'ī*) or a madman. This I do, that perchance I may save my religion from Satan, and bring my faith safely forth through the gate of death' (*Tadh. al-auliyā*, ed. Nicholson, i. 95. 15 ff.). Others, again, sought refuge from worldly temptations in the Ṣūfī monasteries which began to be founded before the close of the 2nd cent. A.H. Women took an active part in the movement, especially on its mystical side (see ṢŪFIISM). It had no organization, no system of doctrine, but is characterized, as Goldziher has observed (*Vienna Orient. Journ.* vol. xiii. p. 37), by the one-sided elaboration of certain Qur'ānic ideas and doctrines, with a corresponding neglect of other elements equally important in the eyes of orthodox Muhammadans. In the early period, asceticism can hardly be separated from Ṣūfiism; and even when the distinction became sharp (in the 3rd cent. of Islām), many who called themselves Ṣūfīs were really little more than ascetics with a vein of mysticism. It will be convenient, therefore, to regard the early Ṣūfīs as in some degree belonging to the movement under consideration, leaving the monastic institutions and organized asceticism of a later period to be treated in the following section. We shall now deal with some practices and theories which illustrate the general character of ancient Muslim asceticism.

(*a*) *Dress.*—Garments of coarse wool (*ṣūf*) were a mark of asceticism in pre-Islāmic times: in this respect the Arabs copied the Christian hermits (Nöldeke, in *ZDMG*, vol. xlviii. p. 47). Similar garments were often worn by Muslim ascetics; hence the name 'Ṣūfī,' which came into use before 200 A.H. A synonymous epithet of rarer occurrence is *Muṣūfī*, which is derived from the garments of hair-cloth called *mish*, plural *musūh* (cf. *Ḥilyat*, ii. 60[a]; *Nafaḥāt al-uns*, Calcutta, 1859, Nos. 89 و 90). Ascetics of both sexes are described as wearing a smock (*jubba* or *midra'a*) of wool; women sometimes added a head-covering and veil (*ḥimār*) of the same material. Sufyān ath-Thaurī (ob. 777–778 A.D.) condemned the wearing of wool as being an innovation (*bid'a*), others on the ground that it was borrowed from Christianity or savoured of ostentation (*Ḥilyat*, i. 90[a]; *'Iqd*, Cairo, 1293 A.H., iii. 348 f.; Sha'rānī, *Lawāqiḥ*, 1299 A.H., i. 45, penult.). Abū Sulaimān ad-Dārānī (ob. 830 A.D.) declared that a woollen garment might be worn for economy, or as a travelling dress, but not for religious purposes (*Ḥilyat*, ii. 171[b]). In another place (*ib.* ii. 167[a]) he allows the adept, whose heart is purged of all the passions, to wear an *'abā* (woollen mantle), 'which is one of the signs of asceticism,' but says that it is safer for him to wear 'two white garments' like ordinary people, so as not to excite remark. Garments of hair (*sha'r*) are often mentioned; they were sometimes worn under a rich dress, *e.g.* by Ja'far aṣ-Ṣādiq (*Lawāqiḥ*, i. 42. 20 ff.). Some pietists were recognized by their long cloaks (*burnus*, pl. *barānis*; cf. *'Iqd*, ii. 291. 7). 'Utba al-Ghulām (ob. *circa* 780 A.D.) wore two dust-coloured garments—one as a *ridā*, the other as an *izār*—so that he looked like a ploughman (*Ḥilyat*, i. 37[b]). Bishr al-Ḥāfī (ob. 841–842 A.D.), the well-known ascetic of Baghdād, went to market 'wearing a shabby fur (*farw*), a short boot (*ḫuff*), and a very fine *izār*' (*ib.* ii. 77[a]). All this shows that certain kinds of dress were peculiar to ascetics, but that ascetics were not invariably distinguished by a peculiar dress. Concerning the patched frocks (*muraqqa'āt*), which in course of time superseded the woollen garb of the Ṣūfīs, see art. ṢŪFIISM.

(*b*) *Food and fasting.*—Many ascetics attached great importance to eating only what was lawful (*ḥalāl*). Thus Ibrāhīm b. Adham said, 'Let your food be good (*ṭayyib*), and you need not pray by night or fast by day' (*Ḥilyat*, i. 199[a]); and he used to eat clay and earth when he could not get anything above suspicion. Sarī as-Saqaṭī (ob. 867 A.D.) was celebrated for the purity of his diet (*ib.* ii. 247[a]); he wished to eat no food that entailed either gratitude to man or chastisement from God, but confessed that he found this impossible (*ib.* ii. 244[a]). The legends of the Muslim saints furnish many instances of holy men who were miraculously guarded from eating 'dubious' viands, *e.g.* such as came from a wedding-feast or had passed through the hands of a government official. It is related of Ḥārith al-Muḥāsibī (ob. 857 A.D.) that whenever he stretched out his hand to take any food of this sort, he was warned by the twitching of a vein in the tip of one of his fingers (Qushairī, Cairo, 1318 A.H., p. 64, l. 21). Ibrāhīm b. Adham recommended warm bread with olive oil as the best food for ascetics (*Ḥilyat*, i. 199[a]); others favoured bread and salt, gruel made of barley-meal, etc. Some abstained from meat altogether, but this does not seem to have been usual; it was, however, eaten sparingly. Vows of abstinence from particular kinds of food, *e.g.* carrots or dates, were often made, and were supposed to confer a higher spiritual rank (*Lawāqiḥ*, i. 61. 17 ff.). Besides the obligatory fast of Ramaḍān, voluntary fasts of varying length and severity form an indispensable feature of Muslim asceticism. Their purpose was to mortify the flesh and illuminate the spirit, to procure wisdom and prevent sin. 'He who masters his belly,' said 'Abd al-Wāḥid b. Zaid (ob. 793 A.D.), 'masters his religion and masters all the virtues' (*Ḥilyat*, i. 16[a]). Bāyazīd al-Biṣṭāmī said that he attained to knowledge of God by means of a hungry belly and a naked body (Qushairī, 16. 10). Sahl b. 'Abdallāh at-Tustarī (ob. 896 A.D.) was famous for his fasts.

He held that food should be eaten only to preserve life and reason, not to give strength, and that incapacity to perform one's devotions through weakness arising from want of food was better than the performance of them by one who had eaten his fill (*Iḥyā*, Cairo, 1289 A.H., iii. 87 f.). He used to break his fast once in fifteen days (Qushairī, 78. 31), and his name is included by Ghazālī in a list of those who had fasted forty consecutive days (*Iḥyā*, iii. 89). Later, Ṣūfīs surpassed his achievements in this line, for, according to Abū 'Uthmān al-Maghribī (ob. 983–984 A.D.), the man who is Divinely aided (*ṣamadānī*) does not eat once in eighty days (Qushairī, 79. 16).

(*c*) *Prayer.*—The five canonical prayers incumbent on every Muslim, arduous and exacting as they were, did not satisfy the zealots of the new religion. Authority for an extension of the practice was found in several passages of the Qur'ān where *dhikr* ('praise of God') is mentioned: the faithful are enjoined to praise God frequently (*Qur.* xxxiii. 14). Starting from this command, which does not refer to any special act of ritual, the early ascetics developed a regular service of litanies and devotional exercises: reading of the Qur'ān, repetition of the names of God, reiteration of certain invocations and formulas, such as *Allāh! Allāh!* and *Lā ilāha illā 'llāh!* This *dhikr* the Ṣūfīs regarded as one of the main pillars, nay, the very corner-stone, of practical religion; without constantly performing it no one could attain to God (Qushairī, 119. penult.). Here they may have imitated the Christian Euchites, as Goldziher conjectures (*Vienna Orient. Journ.* vol. xiii. p. 39) in his valuable paper on the early development of Ṣūfīism, to which the writer of the present article is deeply indebted. Even those who granted that ordinary prayer (*ṣalāt*) was the most excellent act of devotion recognized the superiority of *dhikr*, in so far as the latter was not confined to any stated times, and might be continued hour after hour without interruption (Qushairī, 120. 5 from foot). In some cases it was accompanied by acts of penance. Ḥāzim al-Ḥanafī used to knock his head against the wall of his chamber until it bled (*Ḥilyat*, ii. 251); and Shiblī (ob. 945–946 A.D.) during his novitiate was accustomed to pray in a dark cellar, and flagellate himself with a bundle of rods whenever he felt that his faculties were not concentrated (Qushairī, 120. 4 ff.). Meetings for the purpose of *dhikr* were held in the Umayyad period—Ḥasan of Baṣra is said to have presided over them—and seem to have been attended by persons inclined to quietism, who disliked the crude declamations of the *quṣṣāṣ*, or popular preachers (cf. *Qūt al-qulūb*, i. 149). The dangers lurking in a perpetual lip-service soon became apparent to the Ṣūfīs themselves; it was discouraged by the Baghdād school, which flourished in the 3rd cent. A.H., because it led to hypocrisy (Goldziher, *loc. cit.*, p. 40). Qushairī (119. last line) insists that *dhikr* with the tongue is subordinate to *dhikr* with the heart, and should be regarded as an instrument whereby the higher and truly effectual *dhikr* is acquired; nevertheless, the latter is incomplete without the former—the adept combines both. See also art. ṢŪFĪISM.

(*d*) *Renunciation and poverty.*—Qushairī, in his chapter on renunciation (*zuhd*), refers to the question whether *zuhd* consists in renouncing what is unlawful (*ḥarām*) or what is lawful (*ḥalāl*). The general opinion was that all Muslims were bound to renounce *ḥarām*, but that renunciation of *ḥalāl* was a merit; this view accords with many passages in the Qur'ān, *e.g.* 'Say, the goods of this world are little, and the next world is better for those who fear God' (*Qur.* iv. 79). At first, renunciation was understood almost exclusively in a material sense; the *zāhid* abstained from food, sleep, society, and all harmless pleasures. If a man possessed only one shirt, he might count on being admitted to paradise before his more deserving neighbour who had two (*Tadh. al-auliyā*, i. 47. last line and foll.). But since the ascetics naturally restricted *ḥalāl* to the narrowest possible limits, and condemned everything else as superfluous, it was but a short step to the view that 'nothing in the world is lawful, and therefore there is no true renunciation in renouncing the world' (Qushairī, 67. 11). The sayings of the early Ṣūfīs exhibit a strong bias towards a spiritual conception of *zuhd*. Not that they fasted less, kept fewer vigils, or relaxed their austerities, but they realized that such acts could have no value except as the expression of an inward feeling. Renunciation exists only in the heart (*Ḥilyat*, ii. 170[a]); it is the abandonment of all that diverts one from God (Qushairī, 67. 4), and especially the abandonment of 'self.' Self-abnegation, in its practical aspects, which alone concern us here, may be described as trust in God (*tawakkul*) or quietism (*riḍā*), and is closely connected with the doctrine of 'poverty' (*faqr*).

Most Muhammadan treatises on Ṣūfīism allude to the controversy which arose at an early period as to the superiority of poverty or riches (see, *e.g.*, *Kashf al-Maḥjūb*, Lahore ed. p. 15, l. 18 ff.; *Ḥayāt al-qulūb*, printed on the margins of *Qūt al-qulūb*, ii. 161. 15 ff.). It was debated whether the rich man who was blessed with wealth and who rendered thanks to God for it did not represent a higher ideal than the poor man who endured want uncomplainingly. Some argued that wealth (*ghanā*), being an attribute of God, should be preferred to poverty, which is an attribute of man, and cited the Prophet's saying: 'The upper hand is better than the lower,' *i.e.* 'to give is better than to receive.' The leading Ṣūfīs, however, with a few exceptions, declared in favour of poverty, quoting such traditions as these: 'O God, let me live poor, and die poor, and rise from the dead amongst the poor'; 'the poor of my people will enter Paradise five hundred years before the rich'; 'poverty is my pride' (*al-faqru faḫrī*). What poverty meant may be gathered from a saying of Sarī as-Saqaṭī (ob. 867 A.D.): 'Do not take any thing from any one, nor ask any thing of any one, nor have with you any thing that you can give to any one' (*Ḥilyat*, ii. 244[b]). This counsel of perfection was based on the theory of *tawakkul* ('trust in God'), which the early Ṣūfīs carried to extreme lengths (see Goldziher's investigation of the subject in the *Vienna Orient. Journ.* vol. xiii. pp. 41–56). They define *tawakkul* as renunciation of personal initiative and volition, leaving all to God, being entirely passive, like a corpse in the hands of the washer who prepares it for burial. Applying this doctrine to matters of practical life, the true *mutawakkil* could not make any effort, direct or indirect, to obtain the means of subsistence, or admit any thought of providing for the morrow. He could not beg, work for hire, or ply any trade or handicraft, but had to depend for his daily bread on what God, 'to whom belong the treasures of earth and heaven,' sent to him as a gift from Himself, or delivered to him by the hands of his fellow-creatures. He was then said to gain his livelihood *mina 'l-futūḥ*, *i.e.* through an 'opening' which God made for him. The ancient Ṣūfīs, who commonly adhered to these principles and hence are often called *al-mutawakkilūn*, seem to have been influenced by Christian teaching (Mt 6^{25-34}, Lk 12^{22-30}; see Goldziher, *loc. cit.* p. 45). In later times, when the theory had broken down, the same term was still used to denote a class of Ṣūfīs who wandered to and fro, living 'on trust' (*'alā 't-tawakkul*). It

was customary for such men to make the pilgrimage to Mecca 'without provision' (*bilā zād*), and in some cases they considered their vow of *tawakkul* to have been violated if they extracted a thorn from their feet or cried out for help on falling into a well. But, of course, the facts of nature were too strong for the doctrinaires. Living 'on trust,' if strictly interpreted, involved a serious risk of death by starvation. That some *mutawakkilūn* perished in this way is likely enough, and may possibly have evoked the assertion, which is ascribed to Sufyān ath-Thaurī (*Ḥilyat*, i. 81[a]), that those who refuse to beg, and die of hunger in consequence, go to Hell. Gradually the Ṣūfīs themselves came round to the opinion that *tawakkul* was not invalidated by seeking a livelihood (*takassub*). A similar conclusion was reached as regards the question whether a *mutawakkil* might take medicine or not; but there were always individuals who refused to compromise with their conscience. Goldziher (*loc. cit.* p. 53) mentions the existence in Persia, in the 4th cent. A.H., of a numerous sect who rejected medical aid. Their leader, Abu 'l-Ḫair b. Bābā, was a Christian physician, and, like modern Christian Scientists, he recommended his patients to trust in God. It is curious that a theory which forbade beggary, or allowed it only as a last resource, should actually have produced swarms of able-bodied mendicants who made their *tawakkul* an excuse for living on charity.

3. **Development of Ṣūfī asceticism in the Middle Ages.**—(*a*) *Monastic institutions.*—The Prophet's saying, 'There is no monasticism in Islām,' was not falsified, on any large scale at least, until several centuries had elapsed. Most of the early Ṣūfīs led secluded lives with a few friends and companions of the same way of thinking. Many of them were married, and some had the full legal complement of wives, like Ḥātim al-Aṣamm of Balkh, who died in A.D. 851 (*Ḥilyat*, i. 213[b]). Bishr al-Ḥāfī, although himself unmarried, is said to have acknowledged that Aḥmad b. Ḥanbal, who had followed the *sunna* approving matrimony, was his superior in this respect (*Qūt al-qulūb*, ii. 241). Nevertheless, the advocates of celibacy—for they did not always practise what they preached—soon began to make themselves heard. Ḥasan of Baṣra said that, when God wills the welfare of a man in this world, He does not occupy him with wife and child (*Lawāqiḥ*, i. 38. 10). According to Ribāḥ b. 'Amr al-Qaisī, no one attains the rank of the elect (*ṣiddīqūn*) until he leaves his wife a widow and his children fatherless (*ib.* i. 61. 4). Abū Sulaimān ad-Dārānī spoke of marriage as a backsliding and a concession to worldliness; it might be the better state for those who could endure its cares, but only the single man (*waḥīd*) tasted the full sweetness of devotion, and was able to give his whole heart to God (*Qūt al-qulūb*, ii. 247). These views, conflicting with the ancient Muslim doctrine that a man's duties towards his family are quite as important as those which concern his faith, never gained universal acceptance. Celibacy is seldom demanded by Muhammadan religious orders as a condition of membership.

We have but little information as to the origin and growth of monasticism in the early period of Islām. The first monastery (*ḫānaqāh*) for Ṣūfīs is said to have been founded at Ramla in Palestine by a Christian dignitary (*Nafaḥāt*, 34), apparently before A.D. 800. Sitting in a *ḫānaqāh* was condemned, as equivalent to begging, by Abū Turāb an-Nakhshabī, who died in A.D. 859 (*Ḥilyat*, ii. 222[b]). The year 200 A.H. (=A.D. 815) is named in two fictitious traditions (*Qūt al-qulūb*, ii. 239) as the date after which celibacy would be permissible to all Muslims, and would be adopted by the best men amongst them; and this prophecy after the event seems to mark the beginning of Muslim monasticism with approximate correctness. It is probable, however, that the development of organized monastic institutions throughout the Muhammadan empire belongs to a much later period. In reading the older works on Ṣūfīism, *e.g.* the *Qūt al-qulūb*, the *Ḥilyat al-auliyā*, and the *Risāla* of Qushairī (all of which were written before A.D. 1050), one is struck by the rarity of any reference to monasteries; yet the celebrated Ṣūfīs of the 3rd and 4th cents. A.H. generally gathered round them a circle of disciples, who would naturally have dwelt in religious houses, if such had been available. Maqrīzī (*Ḫiṭaṭ*, ii. 414. 3) says that *ḫānaqāhs* were introduced into Islām during the 5th cent. A.H., which corresponds to the 11th cent. of the Christian era. We may accept this statement in the sense that Ṣūfī monasteries, the members of which lived together for ascetic purposes under the direction of an abbot, or *shaikh*, first became numerous and widely spread during the above-mentioned epoch. Maqrīzī's observation agrees with a passage in Qazwīnī (*Āthār al-bilād*, ed. Wüstenfeld, 241. 3 from foot), where Abū Sa'īd b. Abi 'l-Ḫair, who died in A.D. 1049 (not about A.D. 815, as was erroneously asserted by De Sacy in *Journal des Savants*, 1821, p. 725, and after him by Dozy and von Kremer), is described as the founder of Ṣūfī monasticism and rules of discipline. During the next two hundred years (A.D. 1050–1250) the system was further organized and extended by the various Dervish orders—'Adawīs, Qādirīs, Rifā'īs, Mevlevīs, etc.—which arose in rapid succession.

The well-known treatise on Ṣūfīism, entitled *'Awārif al-Ma'ārif*, by Shihāb ad-Dīn 'Umar as-Suhrawardī (ob. 1234 A.D.), supplies many interesting details concerning Muslim monastic life (see especially chapters 12–18 and 48–52). Speaking of the relation between the Shaikh and the disciple (*murīd*), Suhrawardī asserts that the latter becomes part of the Shaikh, just as in natural generation the son is part of the father. 'This,' he says, 'is a spiritual birth, according to the words of Jesus: "Except a man be born again, he cannot see the kingdom of God"' (Jn 3[3]). The disciple was usually invested by the Shaikh with a patched frock (*ḫirqa*) as a sign that he submitted absolutely to the Shaikh's authority; in this ceremony the hand of the Shaikh was considered to represent the hand of the Prophet. While the disciple remained in constant association with the Shaikh and under his care, he passed through the time of 'sucking' (*irtiḍā'*), and it behoved him not to depart without leave, but to wait until the Shaikh decided that the moment of 'weaning' (*fiṭām*) had arrived. 'The ascetics of old,' Suhrawardī continues, 'desired solitude on account of the dangers to which society exposed them, but Ṣūfīs who live in convents overcome these dangers by the strength of their devotion and the soundness of their spiritual state. They are as one body animated by the single aim of dwelling together in complete accord both outwardly and inwardly; this is a unique characteristic which distinguishes them from every other sect in Islām.' The convent (*ribāṭ*) comprised men of all ages, and consisted of private cells (*zāwiya*) as well as an assembly-room (*bait al-jamā'a*). The old men, Suhrawardī thinks, should be allowed to stay in their cells, where they can sleep and rest and do as they please; but, for disciplinary reasons, it is advisable that the young should sit in the assembly-room, holding their breath and keeping their senses under control; if, however, a novice is disturbed by talking and noise, he should be sent to the Shaikh's private apartment, that his attention may not be distracted, while the Shaikh himself maintains order in the assembly-room. Novices should be em-

ployed in 'service' (*ḫidma*) and sent to help their brethren who are engaged in devotion and contemplation, and who alone are excused from menial tasks. Service is a pious work, but the Ṣūfīs do not approve of asking any one who is not a Ṣūfī to serve them; for 'they are men, and things proceed from them, in the course of human nature, which are objectionable to a stranger ignorant of their aims.' Their refusal to associate with such a person is due to respect for his feelings, not because they deem themselves superior to any Muslim. The food of the monks was either provided by endowment or procured by begging. Only those were entitled to partake of it who were so occupied with God as not to be capable of earning their livelihood, or who were excused on the score of age, or who were authorized by the Shaikh to receive it in return for their labour. Unless the terms of the endowment necessitated a certain indulgence, it was a universal rule in Ṣūfī asceticism that no idler should eat the food of the convent. Suhrawardī recommends a forty days' seclusion (*arba'īnīya*) for prayer and fasting once a year. Solitude, he insists, has for its object a moral purification: it must not be sought on account of the visions and ecstasies which sometimes result from it. The disciple who goes into retirement (*ḫalwa*) should strip himself of the world and discard all that he possesses, and, after seeing that his clothes and his prayer-mat are clean, he should pray two *rak'as* and repent of his sins with weeping and humility. He ought not to leave his cell except for the public and Friday prayers (*ṣalāt al-jamā'a wa-ṣalāt al-jum'a*); on these occasions he should continue his *dhikr* and pay as little attention as possible to what he hears and sees, in order that he may not fall into temptation. During his retirement, he should perform ablutions regularly, and sleep only when overpowered by fatigue, and never cease from repeating his *dhikr* until he grows weary; then he must con it over in his heart, without any movement of his tongue (see *'Awārif*, chs. 26–28).

(*b*) ***Ascetic systems.***—European writers on Ṣūfīism are often inclined to identify it with pantheism and to lay undue stress on its transcendental flights, while they ignore its ascetic and ethical foundation. This is the 'path' (*ṭarīqa*) which every Ṣūfī must traverse before he can hope to reach the goal of his journey, and which is expounded at great length in the *Qūt al-qulūb* by Abū Ṭālib al-Makkī (ob. 996 A.D.) and other manuals written with a didactic purpose. In such works the different 'stations' (*maqāmāt*) of the 'path' are carefully mapped out, and the doctrines pertaining to each are explained and illustrated by means of Qur'ānic texts, traditions of the Prophet, and sayings or anecdotes of famous saints. All systems of Ṣūfī asceticism are based on the same materials; hence it is not surprising that one is very like another externally, however much they may diverge in spirit according to the author's individual point of view. It is not possible to describe any of them in detail here, but their broad outlines can be exhibited if we briefly examine the systematic treatment of the subject by Ghazālī (ob. 1111 A.D.) in his *Iḥyā*, which is a classical text-book of orthodox Ṣūfīism. Ghazālī does not address himself to Ṣūfīs alone; his aim is the revivification (*iḥyā*) of the Muhammadan religion, and he has no desire to make every Muslim a monk. Consequently, in the first half of the work he deals with the ordinary religious duties of purification, prayer, almsgiving, fasting, and pilgrimage; then with supererogatory acts of devotion, such as recitation of the Qur'ān, praise of God (*dhikr*), supplication (*du'ā*), and vigils; and discusses exhaustively the relation of religion to social life. Many of these topics, though bearing a wider application, belong to the preliminary stage—the 'law' (*sharī'a*), as it is technically named—of Ṣūfī asceticism, but in the third and fourth volumes of the *Iḥyā* Ghazālī unfolds the method adopted by the Ṣūfīs for attaining spiritual perfection. This method falls into two parts, which may be called *purgative* and *unitive*, inasmuch as the former purifies the heart by subduing the passions, while the latter leads to union with God by the acquisition of virtues and faculties. The principles of the *purgative* way are summarized as follows (*Iḥyā*, iii. 74. 15 ff.):—Before entering on his novitiate, the aspirant must renounce four things: wealth, reputation, mechanical conformity (*taqlīd*), and sin. He will then need a Shaikh to direct him. The Shaikh, to whom he must cling 'like a blind man on the bank of a river to his guide,' will provide him with four weapons against the assaults of Satan, viz. solitude, silence, fasting, and sleeplessness. Now begins what is generally a long inward struggle with the lusts and passions. When these have been vanquished, the novice should retire to his cell and perform only the obligatory acts of devotion, and continually repeat some *dhikr*, such as *Allāh! Allāh!* or *Subḥāna'llāh!* ('Glory to God!'), until the essential meaning of it has filled his heart. He must strive to banish every thought that is not of God, and to repel the evil suggestions with which Satan plies him. Whatever passes in his mind he should communicate to the Shaikh. Then, if the Shaikh knows that his pupil is intelligent and can be trusted rightly to apprehend the Divine reality (*ḥaqīqat*), he will bid him meditate assiduously, in order that illumination may enter his heart. Herein it behoves the Shaikh to exercise the greatest possible care, for this is a perilous matter, in which many novices, going beyond their depth, are utterly lost. The weak should be confined to what they are capable of understanding, *e.g.* simple faith and practical devotion. Those who occupy themselves with meditation have to beware of many pitfalls, such as vainglory, hypocrisy, delight in visions and miracles. After this *résumé* of the *purgative* way, Ghazālī treats in ample detail of the various passions and vices, from lust and gluttony to spiritual pride, their nature, symptoms, diagnosis, and the remedies which are most effectual in each case (*Iḥyā*, iii. 78–392). Finally, in the fourth volume of his work, he expounds the *unitive* way under the following heads: (1) repentance, (2) patience and thanksgiving, (3) fear and hope, (4) poverty and renunciation, (5) unification (*tauḥīd*) and trust in God, (6) love, desire, intimacy, and acquiescence, (7) intention, sincerity, and truth, (8) contemplation (*murāqaba*) and self-examination (*muḥāsaba*), (9) reflexion (*tafakkur*), (10) meditation on death and what comes after it. Similar scales of ascent occur in every system of Ṣūfī theosophy (see ṢŪFĪISM), and are possibly of Buddhistic origin (cf. Goldziher, in *JRAS*, 1904, p. 139 ff.). At any rate, Buddhism can be shown to have exerted a considerable influence on the practice and theory of mediæval Muslim asceticism; *e.g.* the use of rosaries and the custom of holding the breath were borrowed from Buddhist monks, whose example must also have powerfully affected the monastic ideals and institutions that reached a high degree of development in this period (cf. Goldziher, *loc. cit.* p. 125 ff.; von Kremer, *Culturgesch. Streifzüge*, p. 45 ff.).

4. Philosophical asceticism.—Suhrawardī (*'Awārif*, iii. 194 ff.) distinguishes the asceticism of the mystics, which illuminates the heart, from that practised by philosophers and materialists with the object of purifying the senses and thus facilitating the acquirement of the intellectual sciences: the latter, he says, leads to heresy. It assumes its

most interesting form in the so-called *zindīqs*, a name given by the Muslims to various kinds of heretics, particularly those who rejected positive religion and acknowledged only the moral law (for the derivation and meaning of *zindīq*, cf. E. G. Browne, *A Literary History of Persia*, 1902, i. 159 ff.; Nicholson, *A Literary History of the Arabs*, 1907, 372 ff.; and art. ATHEISM [Muh.]). Renunciation (*zuhd*) was characteristic of many on whom this epithet was bestowed. Some of them were undoubtedly influenced by Manichæan and Buddhistic ideas, but Muhammadan orthodoxy was apt to brand as 'free-thought' (*zandaqa*) any moral creed that was not built entirely on a dogmatic basis. Abu 'l-'Atāhiya (ob. 828 A.D.), though his poems are full of allusions to Paradise, Hell, and the Resurrection, was called a *zindīq* by his contemporaries, apparently because they suspected him of being a moralist in disguise; and they might have urged, with truth, that the prevailing tone of his poetry is ethical and reflective rather than religious. He sings the praises of asceticism, which he had adopted professionally in consequence, it is said, of a disappointment in love. 'The noblest of men,' he declares, 'is a king in the garb of a beggar,' *i.e.* an ascetic who is independent of the world and whose passions no longer enslave him; and again, 'those who are content with their lot are the truly free.' With much better reason the charge of heresy was brought against another celebrated Muslim poet, Abu 'l-'Alā al-Ma'arrī (see MA'ARRĪ). He too retired from a world where he had found only sorrow and failure. His asceticism, however, presents some peculiar features which it is possible, though hardly probable (cf. *JRAS*, 1902, p. 291), that he borrowed from the Indian Jains. He held that it was wrong to kill or injure any living creature, even a flea. His diet was strictly vegetarian; he abstained from fish and eggs as well as milk and honey. He wore a dress of undyed wool and wooden shoes, on the ground that no animal should be slaughtered to make leather of its skin. His celibacy was not monastic in character, but was the result of his belief that the best fate is non-existence, and that one ought to shrink from multiplying the misery of life. To pretend that such opinions and practices are typical of the moral philosophers of Islām would be unjust to Ma'arrī's eccentric and original genius. He resembled some of them in making asceticism an affair of the conscience and the understanding, an ingredient of the highest virtue instead of a stepping-stone to the Absolute. Others, like the Iḫwān aṣ-Ṣafā, or 'Brothers of Purity,' inculcate obedience to the Divine world-law and love of God, which 'gains in this life serenity of soul, freedom of heart, and peace with the whole world, and in the life to come ascension to Eternal Light.'

5. **Conclusion: the Dervish orders.**—As was said at the outset, this article is limited in scope, and deals only with the origin and main developments of Muslim asceticism. Nearly every Muhammadan sect could contribute something to a detailed history of the subject, and there are abundant Oriental sources for such a work, but in the present state of our knowledge a certain sketchiness is unavoidable. European writers have confined their researches almost exclusively to the modern Dervish orders, in which Ṣūfī asceticism and mysticism are carried as far as human nature can go. Some were founded before the Mongol Invasion (A.D. 1258), but since the 14th cent. they have branched out in all directions from Senegal in the west to China in the east. While basing their doctrine on the principles of mediæval Ṣūfiism, they have evolved a complex organization, extended the old practices, and introduced new ones. In some cases, too, their spirit and aims have been altered by the influence of environment and political circumstances. As regards the ascetic training which they impose on their members, naturally each order has its own rules, but they generally agree in the following points: (1) an elaborate ceremony of initiation, which is sometimes preceded by a long and arduous apprenticeship; (2) the wearing of a peculiar costume; (3) for neophytes, a severe discipline of solitude, prayer, fasting, and other austerities; (4) the immoderate use of *dhikr*, with the help of music, dancing, and diverse physical stimulants, to excite ecstasy; (5) belief in extraordinary spiritual powers vouchsafed to adepts and ecstatic persons, which they display by chewing live coals, charming snakes, predicting future events, etc.; (6) veneration, approaching to deification, of the Shaikh, or head of the order. If it is true that in most of their practices and beliefs the modern Dervishes had already been anticipated by the Ṣūfīs of the Middle Ages, from whom they are lineally descended, it is no less true that they have vulgarized Ṣūfiism by surrounding it with a network of mechanical routine, by exalting its thaumaturgy at the expense of its theosophy, and by associating its deepest mysteries with the performance of an orgiastic exercise. See article DERVISH.

LITERATURE.—Besides the references given in the article, students may consult, for early Muslim asceticism: von Kremer, *Gesch. der herrschenden Ideen des Islams*, 1868, p. 52 ff.; D. B. Macdonald, *Muslim Theology*, 1903, pp. 172–180; R. A. Nicholson, *A Literary History of the Arabs*, 1907, pp. 224–235; for Ṣūfī asceticism in the Middle Ages: Miguel Asin Palacios, *Algazel, dogmática, moral, ascética*, 1901; for philosophical asceticism: Goldziher, 'Sālih b. 'Abd al-Qaddūs und das Zindikthum während der Regierung des Chalifen al-Mahdī,' in *Transactions of the Ninth Congress of Orientalists*, 1893, vol. ii. p. 104 ff.; Dieterici, *Die Philosophie der Araber im X. Jahrhundert n. Chr.*, 1861–79; and for the asceticism of the Dervish orders: J. P. Brown, *The Dervishes or Oriental Spiritualism*, 1868; Depont and Coppolani, *Les Confréries religieuses musulmanes*, 1897.

REYNOLD A. NICHOLSON.

ASCETICISM (Persian).—An essential part of the meaning of the Zarathushtrian reform, viz. the care of cattle and pasture land, is given in 'The Complaint of the Soul of the Kine' in the *Ahunavaiti Gāthā*, *Yasna* xxix. This zeal for economics being inseparably connected with the new faith, the Prophet in his religion placed a distinct value on earthly goods and productive work, and introduced that strongly anti-ascetic tendency which separates the Avesta so widely from the higher Indian religion.

1. The Avesta moral code is not only negative ('Thou shalt not,' etc.), but also contains positive duties. In its origin it is the ethics of cattle-breeding. Zarathushtra himself was the first "meadow-keeping cattle rearer' (*vāstryō-fšuyąs*, *Yasht* xiii. 89), as well as the first priest and the first warrior. The *Gāthās* do not know any but pasture land. By the time of the later Avesta agriculture has appeared. *Vendīdād* iii. mentions the five places which are the happiest on this earth: (1) where one of the faithful is worshipping; (2) where one of the faithful erects a house with a priest therein, with cattle, a wife, children, and good herds, and where all these treasures of life are prospering; (3) where most corn and fruit trees are cultivated, and where water is led into a poorly watered soil (a later glosser has added, 'and where dryness is brought to a watery soil,' ditching being later than artificial irrigation); (4) where flocks and herds increase most; and (5) where flocks and herds yield most urine. The life-long fight against the demons means cultivating the ground, sheltering the plants from drought and frost, spreading cultivation over land strenuously conquered from the wild. Activity has always been one of the first principles of Zarathushtrianism.

Among the later writings of the Parsis, *Sad Dar* lxxxi. 10 inculcates: 'Every good work which thou art able to do to-day do not postpone for to-morrow, and accomplish with thine own hand the counsel of thine own soul'; and in *Ganje-shāyagān* (§ 126) one-third of the day (and night) is given to religious duties, one-third to the cultivation of the ground (the eight hours' working day!), and one-third to eating and sleeping.

2. The following objections are raised against ascetic principles:—

(1) Wife and children make a man superior to him who is not married (*Vend.* iv. 47). A young woman without children needs a husband, just as uncultivated ground needs cultivation. The good husband receives fruit from both (*Vend.* iii. 24–25).

Zarathushtra is of Divine origin—the heavenly glory (see art. AGES OF THE WORLD [Zoroastrian], vol. i. p. 205 f.) entered his grandmother (*Dīnkart* VII. ii. 2 ff., 14; VIII. xiv. 1). But nowhere is an attempt made to eliminate his father in the flesh. Such an idea would be opposed to the Mazdayasnian ideal of holiness. The psychological relation of the union of Zarathushtra's parents in *Dīnkart* VII. ii. 48–52 may be a criterion:

'Both have embraced the first time with desire for a son, and the demons shouted out unto them, in the villainous speech of sinfulness, thus: "Why shouldst thou act like this, vile Pōrūshāspō?," whereupon they started up like people who were ashamed.' The same experience was repeated a second and a third time. 'And they spoke with one another about it, and continued at this duty, and accomplished it, saying: "We will not so stop without accomplishing something, not even though both Rāk and Nōdar should arrive here together." Then that manchild, who was the righteous Zarathūsht, became complete . . . in the womb of his mother.'

The Mazdayasnian has to recite the *Ahuna-Vairya* (*q.v.*) and the *Ashem* when he goes in to his wife (*Dīnkart* IX. xix. 8).

(2) The man who owns a house is superior to him who does not (*Vend.* iv. 47).

(3) Fasting is a sin. Without eating no one has strength for a vigorous piety, for cultivating the ground, for begetting strong children (*Vend.* iii. 33). The man who nourishes and develops his body through the eating of meat takes in more of *vohūman* ('good thought') than he who does not (*Vend.* iv. 48). The man who teaches or practises fasting is an *ashemaogha*, a destroyer of piety and of the holy law, and deserves punishment (*Vend.* iv. 49).

A well-known passage of the Parsi treatise *Sad Dar* lxxxiii. forbids fasting: 'In our religion it is a sin to pass a day without eating. To us fasting means to fast from sin with the eye, with the tongue, with the ear, with the hand, with the foot.'

According to al-Bīrūnī, the person who fasted was considered by the Zarathushtrians as a sinner, and had to feed a certain number of men as an expiation (*Chronology*, tr. Sachau, p. 217).

(4) All practices of mortification are prohibited. The Pahlavi paraphrase of the *Varshtmānsar Nask* of the Sasanian Avesta attributes the self-tortures prescribed by Mani to the Evil One (*Dīnkart* IX. 39).

The ascetics whose doctrines are opposed in the Pahlavi writings can be identified, even if they are not expressly mentioned, as Mani in the Pahlavi *Varshtmānsar Nask* and Mazdak in the Pahlavi commentary to *Vend.* iv. 49 ('Mazdak, son of Bāmdāt'). The chief form of asceticism opposed besides Manichæism was Christianity. During the persecutions of the Sasanians, marriage was not infrequently offered as an alternative to death.

The ascetics referred to in the *Vendīdād* may have been Christians (Darmesteter) or Manichæans (Spiegel). But it seems equally probable that ascetic doctrines were well known and practised in Iran before them. The Babylonian religion had unmarried brides of gods. In India the great ascetic methods of salvation were ancient.

3. Penalties, imposed for offences against the Avesta law, often illustrate the anti-ascetic tendency, inasmuch as those punishments themselves do not consist in sufferings, but in positive useful work. The requirements of penance and agriculture are fulfilled at the same time. In some Avesta fragments of the manuscript *Tahmuras* and in some of the book of ritual ceremonies, *Nīrangistān*, the degree of penalty incurred partly by omissions or smaller inadvertencies in the ritual, and appointed to be three cuts with the lash (*sraoshō-karana*, 'the instrument of obedience'), is commuted into a day's work in the fields (Fragments of *Tahmuras*, xii. 11, 12; Fragments of *Nīrangistān*, 42, 43, 69, 83, 109; *AMG* xxiv. 55 f., 105 ff.). If the penance inflicted by *Vendīdād* xiv. upon the man who has killed an otter belongs to the ideals never realized, it is nevertheless very characteristic. He must, among other penalties, kill thousands of snakes, lizards, frogs, ants, worms, and flies. He must give to good men the instruments of a priest, of a warrior, and of a farmer. He must make ditches for irrigation, and make a gift to good men of cultivated ground, a byre, and a beautiful bedstead. He must give a young virgin as wife to a good man. He must make a gift of small cattle. He has to bring up twice seven puppies, and make twice seven bridges over ditches. He must cleanse twice nine dogs from vermin, and let twice nine Mazdayasnians get a good square meal of meat, bread, strong drink, and wine (cf. quotation from al-Bīrūnī under 2 (3) above, and *Vend.* xviii. 73-74, where the killing of snakes, frogs, and ants, and the building of bridges over water belong to the punishment for sexual intercourse at forbidden times). All animals considered as bad and noxious are called *khrafstra*, and it is a most meritorious work to kill them. This is very different from the view of Lao-tse, from Indian, and from mediæval Ṣūfī and Christian asceticism and mysticism.

NATHAN SÖDERBLOM.

ASCETICISM (Roman).—1. For the purposes of this article 'asceticism' may be taken roughly to mean self-discipline, prompted either by the authority of religion or by philosophic reflexion upon life, or by a combination of both these forces. The early Roman religion, so far as we can trace its features, was not to any appreciable extent swayed by the yearnings which in the Orient gave rise to asceticism at a time immemorially remote. The primitive Romans deemed that their shadowy and impalpable divinities were under compact with the community whose exclusive property they were. They asked of their worshippers no burdensome price for the favour which they accorded. The sacrifices required by them were trifling, though the ritual of circumstance and language connected with them was complicated, and needed to be carried out with the utmost precision. The idea of a taint or impurity, displeasing to the gods, and attaching to individuals, to masses of men, or to places, and to be cleansed away only by purificatory ceremony, is old enough in Roman religion. But the expiation was easy, and called for little in the nature of self-suppression. Some of the primitive servants of the gods, particularly the Flamen of Juppiter and the Vestal Virgins, were subjected to strong ceremonial restrictions in their lives. But these resembled the religious tabus prevalent among backward races, rather than any genuine

ascetic discipline. The Roman *feriæ*, or public religious celebrations, though requiring a cessation of labour and ordinary occupations, were, for the most part, joyous in character. Even the services to appease the dead and the powers of the nether world, or to avert the wrath of heaven as declared by prodigies, were not accompanied by practices of an ascetic character.

2. It is probable that the idea of self-sacrifice as an element in religion was first made conspicuous to the Romans by some of the forms of worship which were imported from without into the Roman State. The rare traces of human sacrifice at Rome in obedience to superstition or religion may safely be referred to a foreign origin. Such an elementary ascetic form as the *fast* was not regarded by Varro as belonging to the real Roman ritual, but as a feature of the *Græcus ritus*. The earliest mention of it is in a fragment of the *Bellum Punicum* of Nævius (quoted by Nonius Marcellus, p. 197 M: 'res divas edicit, prædicit castus'). The special name for a fast, *castus* (a noun), is of doubtful derivation. The adjective *castus* implied originally purity achieved not by self-discipline but by ceremonial observance of no very exacting nature.

3. Such discipline as the early Roman underwent was not self-imposed or required by religion, but was laid upon him by his country. There was no limit to the sacrifices which she might demand of him; but only in rare cases had these a religious significance. This was particularly true of the ceremony called *devotio*, by which a commander in the field, using a solemn formula, vowed himself to death, thereby binding the gods to bestow the victory on his army (Livy, viii. 6–10). But even in such circumstances, if the enemy failed to kill the willing victim, it was possible, in true Roman fashion, to cheat the gods by burying a human image and raising a mound over it.

4. We must look, therefore, for traces of asceticism to those cults which Rome and the West adopted from Greece and the East. The fast (*castus* or *jejunium*) enjoined upon a deity's worshippers first appears in connexion with Ceres. Although her name is Latin, all her ritual in historic times was Greek, and her station in the official religion was first assigned to her in the earliest days of the Republic by the custodians of the Sibylline books, who controlled the immigration of alien divinities. Her priestesses were Greeks brought from the towns of lower Italy (Cicero, *pro Balbo*, 55). As she became a chief patroness of the plebeians and the poor, her cult grew in popularity, and new services were grafted on the old. In B.C. 191 a fast in imitation of a Greek νηστεία was instituted in her honour, and was celebrated annually on Oct. 4. By a paradox not uncommon in the history of religion, Ceres, who bestowed the boon of bread, was honoured by abstinence from bread (Fest. p. 154; Arnob. v. 16). The fast may also have indicated a participation in the sorrow of the mother (Ceres-Demeter) for the loss of her child (Libera-Persephone). Also in August a vigil was maintained during nine nights by women worshippers, and was accompanied by a strict rule of chastity. This led to Ceres being regarded as a divinity who presided over divorce, though she was commonly reckoned as one of the patronesses of wedlock. An inscription found at Bologna, and of at least as early a date as 200 B.C., seems to point to a *castus* by which Juno Lucina and Juppiter were propitiated (Ritschl, *Prisc. Lat. Monumenta*, Suppl. 11, 12).

5. A few years before the time at which the *jejunium Cereris* was introduced, the Magna Mater, the Great Mother of the gods, who dwelt especially on Mount Ida, was officially welcomed at Rome. This was due to the superstition which was generated in the minds of the people by the disasters of the Second Punic War, when the Roman gods seemed insufficient to sustain the Roman power, and a yearning arose for aid from the gods of other lands. The formless stone, which in the temple of the Great Mother at Pessinus in Galatia was venerated as her type, was brought to Rome and enshrined on the Palatine. The ritual of the goddess was frenzied and orgiastic. For the first time self-mutilation was accepted by authority at Rome as pleasing to Heaven. The favourite of the Great Mother, commemorated in her ceremonies, was the mythical Attis, who gave his name to the weird poem of Catullus. At first the priests of the goddess were imported from her original home, as their name (*Galli*) indicated, and Romans were forbidden to take office under her. But as early as B.C. 77 a breach of the rule took place, and during the Imperial period the priests and priestesses were all Roman. The worship became more and more elaborated as time went on, and it grew in popularity till it spread far and wide in the West.

6. Closely connected with the Magna Mater was the great rite of the *Taurobolium*, with its minor form, the *Criobolium* (*qq.vv.*). Its history and nature are in several respects obscure, but its essence was that the adherent of the goddess should be penetrated with a sense of impurity, of which he is rid by being drenched with the blood of a slain bull or ram. A famous inscription (*CIL* vi. 510) relates how, after undergoing the *taurobolium* and *criobolium*, a worshipper 'was born again for eternal life' (*renatus in æternum*). This ritual sprang up in the 2nd cent. A.D., and its earliest traceable home was the Vatican mount, where St. Peter's now stands. The fame of this ceremonial is significant of that great change which passed over the Western world during and after the 1st cent. A.D., when the passage was made from general scepticism to general belief and superstition, and a curious sense of guilt in the face of heaven became prevalent, with a longing to find means for purging it away. Renunciation and the repression of desire were to some extent demanded by all the worships of the East which encountered this changed spirit and endeavoured to satisfy it. The satisfaction offered was, of course, to a large extent ceremonial and magical, and sometimes, to our ideas, flagrantly unethical. But the Eastern cults in their westward march dropped most of their baser features, and, on the whole, introduced new and better conceptions of Divine power. It was possible for speculating Romans to identify the Magna Mater and also Bellona,* whose respectability in Asia Minor was not beyond question, with the divinized idea of Virtue.

7. As is well known, the soldiers who served Rome, whether Romans or aliens, and passed from land to land, were greatly instrumental in carrying westward the Eastern cults. Some of these failed for a time to obtain authoritative recognition, and were merely tolerated by Government (with occasional suppression), because of their acceptability to the people at large. But by the 3rd cent. the Roman Emperors practically abandoned the attempt to hurl back the Oriental deities who were invading Italy and the capital of the empire. A cult which long remained unofficially popular was that of the Cappadocian divinity Má, a form of the Great Mother, whose acquaintance the Roman soldiers made when Sulla penetrated into the country of the goddess. We have in Strabo (p. 535) a reference to her temple at Comana, with 6000 servants attached, whose forms of veneration were often far

* A Cappadocian goddess who must not be confused with the Roman deity of the same name (cf. Cumont, *Les Religions orientales*, Paris, 1907, p. 66 f.).

from reputable. She was identified by the Romans with the old Italian goddess Bellona. The populace of the West became familiar with the spectacle of hierophants in procession with strange garb, who cut themselves with the double axe and sprinkled the mob with their blood, while they uttered frantic prophecies. The priests wandered about making collections, like the begging friars of the Middle Ages.

8. Egyptian divinities, especially Isis, early made their way into the Greek districts of Italy and into Etruria. The cult of Isis ultimately had extraordinary ramifications all over the Empire, but particularly in the West, and it exercised an especial fascination over women. Stringent bodily abstinence and a sort of penance were marked features of her worship, which took upon it manifold forms. Its elaborated ritual, its perpetual services carried on (as few were) day by day, its mystical character, its discipline preceding initiation in ascending grades, the duties which its ceremonies provided for the multitude, as well as for the priests, and the brotherhoods in which the worshippers were united and in some sort fenced off from the outer world—all these characteristics proved strongly attractive to the lower classes, so that Christians of the earlier centuries saw in Isis a formidable enemy of Christ. And she contributed, indeed, to Western culture elements which penetrated into the texture of the Church. Her worship was at first regarded with disfavour by the Government, but it advanced irrepressibly, as the literature of the Augustan age and later abundantly proves.

9. There was also an influx of deities from Syria. The *Dea Syria* had close affinities with the Magna Mater and Bellona, and the priests and worshippers of these three heavenly beings were often seen in company, particularly in the last age of Paganism, when a dim consciousness of one great God beyond and above the separate divinities became prevalent. Another immigrant from Syria was the Sun-god, who played a great part in the reign of Elagabulus and later. But more important than these was the mighty Persian deity Mithra, often identified with the Sun-god. The strongly developed discipline, the advancement of the worshipper in mystic fellowship from grade to grade, and the community of the sacred brotherhoods rendered this cult highly fascinating to the West. Even in barbaric regions never wholly Romanized, numerous altars dedicated to Mithra and other traces of his worship have been found (see article MITHRAISM).

10. These new forms of worship supplied to the Italic peoples elements which were wanting in the indigenous religions—the satisfaction which comes of self-sacrifice for heaven's sake, the sensation of mystical awe and an elevation of soul born of intercommunion with the deity, also oftentimes a hope of life in a world beyond the grave. In the hard primitive life of the early Italian farmer the lack of these elements was not felt, but the expanded life of later times welcomed their advent. Mysteries of a Greek type, with symbolic ceremonies partly reminiscent of religion, partly embodying ideas that originated in the philosophic schools, seem to have begun to spread to the Italic races as early as the days of the Punic Wars. To these mysteries ascetic practices were often attached. How ready the soil was to receive and develop the seeds of these new devotions was shown by the rapid spread of the movement called by the Roman Government the 'Bacchanalian conspiracy,' which was violently suppressed in B.C. 186. The Bacchic mysteries, taking root in the Greek districts of Italy, drew into connexion with them multitudes of Italic race and large numbers of Roman citizens. Many thousands were executed by authority of the senate, after inquiry which recalls the drumhead court-martial, in defiance of the laws which guaranteed fair trial to the Roman burgess. The criminal nature of the 'conspiracy' was assumed, but never proved. The secrecy of the worship, then a strange and unfamiliar feature, produced an atmosphere of panic, generating visions of crime such as arose in the Gentile world from the mysterious nature of the early Christian observances. In later centuries, 'mysteries,' connected with some mythical or semi-mythical founder such as Orpheus or Pythagoras, or with some definite divinity, were popular in the West, but the information which has come down to us concerning them is defective.

11. The prevalence of the rites and practices to which reference has been made must have greatly changed, in the course of centuries, the primitive Roman and Italian sense of the relation between the Divine powers and man. The claims of the gods upon man were felt to be more exacting than had been imagined in early days, requiring a toll of human suffering, sometimes physical, sometimes consisting in a sharp repression of many of the desires and ambitions of the average human being. The object of the discipline was in some way to cleanse the worshipper from a taint of impurity which he conceived to stand between himself and his divinity. The sense of sin often had a merely superstitious, ceremonial, or mechanical origin, but more and more of a moral and truly religious leaven mingled with it as time went on. Rome contained a large Oriental population, mostly descendants of slaves brought from the East; these contributed to the gradual transformation of ideas which proceeded through the centuries. Juvenal (*Sat.* iii. 62–65), it will be remembered, declared that the Syrian Orontes had long since debouched into the Tiber, and many other Eastern races besides the Syrian were abundantly represented at Rome. In the orientalizing of religious sentiment, the Jews played a certain part. The populace of the capital were as familiar with Jewish ideas as the rulers of the Empire were ostentatiously ignorant of them. The action of the Christian element on the pagan cults of the West, though important, is hard to measure, and has often been over-estimated.

12. But another potent influence mingled with that of religion, and promoted a change in the moral atmosphere—the influence of philosophy. The first conspicuous example of asceticism within the bounds of Italy is seen in the extension among the Greek towns of the brotherhood founded by Pythagoras. The Roman antiquarians of the late Republic believed that early Rome itself had been influenced by the great philosopher, whose personality had already been dissolved away by legend. Down to the latest Imperial times there never ceased to exist in Italy men who called themselves his followers. The name 'Pythagorean' came to stand for simplicity of life, and for quiet of mind secured by self-suppression, self-discipline, and abstinence. Doctrines and ideas connected with the mythical name of Pythagoras entered into many of the late forms of religion and philosophy in the West. Apollonius of Tyana (*q.v.*), who was at Rome in the time of the Flavians, was supposed to be the great exponent of Pythagoreanism on its moral and religious side. This figure, like that of Pythagoras, was soon encrusted by myth. The romantic biography written by Philostratus during the reign of Septimius Severus is charged with 'Pythagorean' ideas, and is deeply coloured by asceticism.

13. But the vogue of the Pythagorean school never extended very far. The force of Stoicism in the Western world was vastly greater and more

pervading. The educated class at Rome began to be affected by it in the middle of the 2nd cent. B.C.; and the influence continued and grew until the Imperial system was submerged. The Roman character, as formed in the hard school of early military service, and of that subjection to authority in which Rome had found the secret of conquest, responded more readily to the call of Stoicism than to any other creed framed in the philosophic schools of Hellas. When the days of luxury and corruption came, the ideal Roman heroes were such men as Cincinnatus, summoned from the plough to command the State; Curius Dentatus, receiving the envoys of the Samnites while he cooked his herbs over the fire; Decius and Regulus, self-devoted to death for their country's sake. In the Augustan age, the Stoic and the ideal Roman were felt to be closely akin. There is a Stoic breath in the pessimism of Livy and Vergil, and the hope of their times for a new Golden Age and a great moral reform was often tinged by Stoic influence. It was not unnatural that many of the national heroes of later creation should be Stoics: Rutilius, 'the Roman Socrates,' who suffered on a false charge of the very crimes which he had repressed, Cato of Utica, Paetus Thrasea, and Helvidius Priscus. Even the Stoics who had opposed his predecessors on the throne, were heroes and martyrs in the eyes of Marcus Aurelius.

14. Like all the other Greek philosophies of the later time, late Stoicism laid peculiar stress on conduct, and paid comparatively little heed to old theological and cosmological speculation. It carried to a higher pitch than other schemes the enthusiasm for morality, which it raised almost to the level of a religion. A school which proclaimed the worthlessness of all ambitions except the ambition to achieve pure virtue within the soul, which regarded 'Nature' as the teacher of all simplicity, which deemed that man most god-like who had the smallest wants and the most perfect control over his desires, which enjoined absolute submission to a Divine order, and aimed at complete harmony between the individual and the Divine will, could claim affinity with what the best Romans regarded as the true Roman spirit. The Stoic made higher moral claims than other teachers; he was therefore more severely judged by the outside world. It has been easy for the detractor in ancient and modern times to contrast the professions of many Roman Stoics with their practice, and so to exhibit their school as worthless. In equally easy fashion has the worthlessness of Christianity often been alleged. It is certain that for the Romans, and for Western society generally, during many generations Stoicism was a leaven which worked powerfully for good, transforming the noblest natures most, but more subtly affecting the tone of life over a wide area. Profoundly influencing Roman law, and creating an atmosphere which the early Church inhaled, the ideal pursued by the Roman Stoics has transmitted much to the culture of the modern world. In particular, the growth of asceticism within the early Church was made easier because society was permeated with Stoic ideas and ideas akin to them.

15. The Cynic School, which was well represented in the Imperial age, exaggerated all the ascetic elements in Stoicism. Some of the Stoics even pronounced Cynicism 'a short road to wisdom.' Cynicism was indeed Stoicism 'heated seven times more than it was wont to be heated.' Epictetus draws a striking picture of the true Cynic (*Diss.* iii. 22). He has thoroughly accepted the old Greek doctrine, which left its traces in many systems, that the body is the tomb of the spirit. The soul must turn to God for release, and liken itself to Him, so far as human strength will go, and must regard all material conditions as hampering and evil. But ascetic features were not wanting to many other sects besides the Cynics and the Stoics. They were conspicuous even in the much maligned Epicurean School. Although the motive power in human action was differently viewed by Stoics and Epicureans, yet the practical road to happiness laid down by both was much the same. The would-be happy man must learn to control, to limit, and to repress his desires, and to make himself independent of all that lies beyond his own power. Epicurus could rival Zeus in happiness on a diet of bread and water; and it was a maxim among Epicureans that the man of perfect wisdom would not cease to be happy if he were stretched upon the rack. Human misery was held to spring in large part from the mistaken value set on things external to the soul—the rest of it being due to superstition. Like other moral and all religious schemes, Epicureanism could be distorted and travestied, and could stray far away from the lines laid down for it by its founders and leaders. But true Epicureanism and true Stoicism were two trees which bore much the same moral fruit, however unlike they might be at the roots. Many of the most ascetic lessons in morality which are laid down by Seneca were drawn from the writings of the Epicurean brotherhood.

16. Platonism was early influenced by Stoicism, and the Neo-Platonic movement of the third and later centuries resumed and enforced the ascetic elements in the earlier systems. Philosophic sects and cliques other than those which have been named also existed; and nearly all showed some drift towards asceticism. But the most important movement of all was that great missionary movement which began early in the period of the Empire. Philosophers, often Cynics, but often also calling themselves by other names, left their studies and went forth into the streets of the great cities and preached to the people, urging them to change their lives and to follow after purity and abstinence, and to listen to the Divine call. The bearded preachers, wandering from city to city in coarse attire, have often reminded the modern student of the poor friars of the Middle Ages, who might have used without change many of the phrases uttered by their Stoic, Cynic, or Epicurean predecessors. Indeed, some of their utterances ring very like those of the 'revivalist' of modern days. Refined triflers like Lucian ridiculed and vilified these enthusiasts, but the common people heard them gladly, and thronged to drink in their lessons. Doubtless some impostors traded on this demand for instruction; but when every deduction has been made on account of the sounder ancient criticism, such as that by Epictetus, it would be unreasonable to doubt that these teachers did stir among the lower grades of society some yearnings after a better life. We cannot measure their influence with precision, but they must have contributed to swell the tide which bore Christianity on to its assured triumph. That the philosophic influences in the late Empire were far from worthless is seen by the example of Boethius, who, Christian as he was, found his chief consolation in philosophy.

LITERATURE.—Information bearing on this subject is to be sought in the great modern works bearing on Roman religion and on late ancient philosophy. Among them may be mentioned: Wissowa, *Religion und Kultus der Römer* (Munich, 1902); Réville, *La Religion romaine sous les Sévères* (Paris, 1886); G. Boissier, *La Fin du paganisme* (Paris, 1894); F. Cumont, *Textes et monuments figurés relatifs aux mystères de Mithra* (2 vols., Brussels, 1895–99), and *The Mysteries of Mithra* (Eng. tr. from 2nd Fr. ed., Chicago, 1903); Zeller, *History of Greek Philosophy* (2 vols., London, 1881); Dill, *Roman Society from Nero to Marcus Aurelius* (London, 1904); and A. Gasquet, *Le Culte et les mystères de Mithra* (Paris, 1899).

J. S. REID

ASCETICISM (Semitic and Egyptian).—Asceticism, if it means the habitual renunciation of the things of the flesh as a self-discipline for the purpose of cultivating the things of the spirit, was unknown among the old heathen Semites and Egyptians. Asceticism is fundamentally based on a dualistic conception of the universe. It is justified only by the belief that matter is inherently corrupt—that it is the work, in whole or in part, of a being other than the Creator of the soul. Such a conception had no existence among either Semites or Egyptians. To the Semites in the earliest times the soul was simply the physical breath. It sometimes in later periods designated the inner nature of man, and thus was often used for the self, but it was always closely connected with the body, and was never conceived as of such a different order of existence that it could be benefited by the destruction of the body. That God who had made the body breathed into man's nostrils the breath of life, and man became a living soul (Gn 2^{7}), is the general Semitic conception. The soul was no holier than the body, for both were the work of the same deity. So dependent was the soul on the body, that after death the soul's existence was confined to the under world where the body had been placed—a dark and gloomy region, where it led a miserable and half-animate existence (see 'Ishtar's Descent,' *KB* vi. 80–91; Dhorme, *Choix de textes*, 326–341; or *Bab. and Assyr. Literature*, Aldine ed., 408–413; also Is $14^{9ff.}$ and Ezk 32^{18-32}). So closely was the soul associated with the body, that later, when Semites came to believe in a resurrection, they necessarily held to the resurrection of the physical body. Indeed, the early Semitic conception of the manifestation of divinity through the processes of procreation (see Barton, *Semitic Origins*, ch. iii.) shows that their conceptions were removed as far as possible from asceticism.

The Egyptian conception of the soul was different. They held it to be a concrete entity, impalpable during life, which had its residence in the body, but left it at the moment of death. Another entity was the *ka*—an impalpable something connected with every man. Whether it was his double, or his guardian spirit or genius, is not clear (see Steindorff, *Rel. of the Anc. Egyptians*, 121 f.). These were not, however, considered holier than the body, nor were their interests promoted by its destruction. On the contrary, the body had to be preserved for their use, and so preserved that each soul could recognize its own body; hence the great efforts made in Egypt to mummify the bodies of the dead.

It is clear, therefore, that among the peoples of whom we are speaking the fundamental thought-basis of asceticism did not exist. There are some phenomena, nevertheless, in the religions of these peoples which might to a superficial thinker seem to contradict this view. These must be briefly considered.

1. *Fasting* was practised by the Egyptians (Herod. ii. 40), by the Babylonians and Assyrians as is shown by their penitential hymns (cf. Zimmern, *Babylonische Busspsalmen*, 34; and *Bab. and Assyr. Lit.*, Aldine ed., pp. 434, 437), by the Hebrews (cf. 1 K $21^{9.\ 12}$, Lv $16^{29.\ 31}$ 23^{27-32} etc.), and by the Arabs, as is shown by the great fast of the month Ramaḍān, which has been taken over into Islām. A careful study of Semitic and Egyptian fasting makes it clear that it was not an ascetic practice. W. R. Smith (*Rel. of Sem.*[2] 434 ff.) held that in the beginning Semitic fasting was a preparation of the body for the reception of holy food—a view which Benzinger shares ('Fasting,' in *EBi*). This is evidently the conception of it which the Egyptians entertained, if Herodotus may be trusted, for he says the fasting was immediately followed by a sacrifice and a banquet. In the later development of Semitic thought among the Babylonians and Hebrews, fasting was undoubtedly regarded as a means of expressing penitence for sin, and of exciting the pity of the offended deity. This is the view which is expressed in the penitential psalms. It is based, however, on their conception of sin, and, as is shown below, that had nothing to do with asceticism.

2. Another practice which might be interpreted by some to indicate the presence of asceticism was the *abstinence from sexual intercourse* under certain conditions. Thus 'to lie with a woman having her sickness' was tabu (Lv 20^{18}). This was not, however, a manifestation of asceticism, but the tabu arose from the belief that menstruation was a manifestation of Divine power with which it was dangerous to come into contact. Herodotus tells us that among the Babylonians and Arabs all sexual intercourse was followed by purification (i. 198), which means simply that it was regarded as an especially Divine process (cf. W. R. Smith, 425 ff., 446 ff.). Sexual intercourse was also tabu among both Egyptians and Semites within the holy precincts of a sanctuary (cf. Herod. ii. 64, and W. R. Smith, 45 ff. and 481 ff.). This was the case even when sacred prostitutes were connected with the temples, for these were careful to take their partners outside the sacred precincts (cf. Herod. i. 199). It was also prohibited to warriors—war being to the ancients a holy function—and often to people under a vow. While the origin of these tabus is not altogether clear, they had nothing to do with asceticism. The tabu relating to holy places does not apparently belong to the earliest stratum of Semitic religious thought, for in the earliest period sexual licence appears to have formed a part of the religious feasts (cf. Barton, *Sem. Or.* 110). Probably at first sexual pleasures were tabued to those on pilgrimage for a reason similar to that which prescribed fasting, viz. that the body might be the better prepared for the holy function at the festival. The tabu may afterwards have been applied to the holy place as an extension of this, or may have existed from the first lest the exercise of such a holy function in a sacred spot would make it too dangerous for one afterwards to mingle with his fellows. The application of the tabu to warriors is an extension of the tabu attaching to the holy place. Sexual intercourse was also renounced by those under a vow, perhaps for the same reason that food was sometimes renounced, *i.e.* as a motive for the early performance of the vow (cf. Ac 23^{14}). In any case these tabus do not spring from ascetic principles.

3. The conception of *sin* which is found in the OT, the Babylonian penitential psalms, and in lesser degree in the Qur'ān (cf. Toy, *Judaism and Christianity*, 183 ff.; Morgenstern, *The Doctrine of Sin in the Babylonian Religion*, 1905; and Qur'ān, iv. 35), has no ascetic foundation. This consciousness of sin arose from the want of harmony between environment and life, or the disparity between prosperity and merit, and had nothing to do with ascetic conceptions.

There were two apparent exceptions in ancient Semitic life to the statements made above: the Essenes (*q.v.*) in Judæa, and the *rāhibs*, *sā'iḥs*, and *ḥanīfs*, who existed in Arabia at the beginning of Muhammad's career (see ASCETICISM [Muslim]). These were, however, not real exceptions, as in each case the impulse to ascetic practices came from non-Semitic sources.

The fullest contemporary description of the *Essenes* is in Josephus, *BJ* ii. 8. It appears that sunrise was a sacred time to them, though

Josephus does not, like Appian, imply that they worshipped the rising sun. The other ascetic traits connected with them were that they lived in brotherhoods, avoided trade, paid great attention to ceremonial purity, and some of them renounced marriage. Some regard this last as a natural heightening of Levitical purity, because priests had to be purified from sexual contact before performing priestly functions; others look upon it as a practice which could spring only from a dualistic conception of the universe, such as we find in Zoroastrianism. The reverence for the rising sun also points in the direction of Persian influence. Josephus makes it clear that the Essenes were confined to no locality, but were a brotherhood, about 4000 in number, scattered through the cities of Palestine. How the Persian influence reached them may be variously explained, but from the time of Cyrus the channels through which it might come were open.

Among the Arabs, the *rāhibs*, or monks, the *sā'iḥs*, or wanderers, and the *ḥanīfs*, who were regarded as a kind of monk, were probably imitations of Christian monks. We learn from the pre-Islāmic Arabian poetry in what high regard the Christian monks were held during that period. In the break-up of Arabian heathenism it was no wonder that men endeavoured to find satisfaction in the way of life which was followed by these monks and anchorites. Monasticism (*q.v.*) entered Christianity from non-Semitic sources, and in a mild form was transmitted by Christianity to Arabia. The same is true of Egypt, though monasticism in Egypt was Christian, and became much more intense than in Arabia. It was grafted on to Egyptian life, however, from a foreign source.

AL-ASH'ARĪ.—Abū al-Ḥasan 'Alī ibn Ismā'īl al-Ash'arī was born at Baṣra in A.H. 260 (A.D. 873), of a noble and ancient Arab family; several of his ancestors held high offices in the State, and it was one of them, Abū Mūsā al-Ash'arī, Governor of Kūfa, who after the battle of Ṣiffīn represented the cause of 'Alī in the arbitration that resulted in the proclamation of Mu'āwiya as Khalīf (A.D. 658). Of his father little is known except that he was an orthodox Muslim, a student of the Traditions, and a friend of the Shāfi'ite legist Zakarīyā ibn Yaḥyā al-Sājī. Baṣra had long been a centre of active religious controversy, and had been the home of some of the most famous teachers of the Mu'tazilite school, such as Wāṣil ibn 'Aṭā, Abū al-Hudhayl, and others, and at this period—the end of the 3rd cent. of the Hijra—Abū 'Alī Muḥammad al-Jubbā'ī was famous there as the greatest living exponent of the Mu'tazilite doctrines. Al-Ash'arī seems soon to have broken away from the orthodox influences of his home and to have become a zealous Mu'tazilite as the pupil of al-Jubbā'ī. Until his 40th year, he attended al-Jubbā'ī's lectures and took an active part in the disputations of his school; having a ready wit and an engaging delivery, he was not infrequently called upon by his master to take his place, whenever al-Jubbā'ī was not prepared to lead the discussion. We have no certain information as to the mental processes through which al-Ash'arī passed before he abandoned the Mu'tazilite position, at the age of 40, and went over to the orthodox party. His biographer gives the following dramatic account of the manner in which he publicly announced his conversion: 'He shut himself up in his house for fifteen days and refused to see any one; then making his way to the great mosque of Baṣra, he went up into the pulpit and cried out, "O assembly, I have absented myself from among you so long only because I have been absorbed in meditation, for the opposing doctrines seemed to me to be equally balanced, and the true did not outweigh the false nor the false the true; so I prayed unto God for guidance, and He has led me into the true faith, such as I have written down in these books of mine. I strip myself of all my former beliefs, just as I strip myself of this my garment." So saying, he took off the robe he was wearing and cast it from him, and distributed his books among the people' (Mehren, p. 252). The conversion of so eminent a thinker and so ardent a controversialist created a great stir, and the ability with which he now began to champion the orthodox position attracted to him a large number of disciples, so that he soon became one of the most celebrated teachers of his age, and theological problems were sent to him for solution from all parts of the Muslim world. He held several controversies with his old teacher, al-Jubbā'ī, who survived the defection of his pupil only three years. We have an indication of the character of such disputations in a story which several authorities tell in slightly different forms; but in spite of its doubtful authenticity and uncertain date (*e.g.* whether it belongs to the period after or immediately before his breach with the Mu'tazilites), it is undoubtedly characteristic of the theological controversies of this period. The story, as told by Ibn Ḫallikān, (No. 618, ed. Wüstenfeld), is that al-Ash'arī proposed the case of three brothers, one of whom was a true believer, virtuous and pious; the second an infidel, a debauchee, and a reprobate; and the third an infant. They all died. What was the state of each one of them? Al-Jubbā'ī answered: 'The virtuous brother occupies a high place in heaven; the infidel is in the depths of hell; and the child is among those who have obtained safety.' 'Suppose,' asked al-Ash'arī, 'that the child should wish to ascend to the place occupied by his virtuous brother, would he be allowed to do so?' 'No,' replied al-Jubbā'ī, 'it would be said to him: "Thy brother attained to this place through his numerous works of obedience (to God), but thou hast no such works to show."' 'But suppose,' said al-Ash'arī, 'that this child said, "That is not my fault; Thou didst not let me live long enough, neither didst Thou give me the means of proving my obedience."' 'In that case,' replied al-Jubbā'ī, 'God would say, "I knew that, if I had allowed thee to live, thou wouldst have been disobedient and deserved the grievous punishment (of hell); I thus considered what was for thy advantage."' 'But suppose the infidel brother were then to say, "O God of the universe! since Thou knewest what his state would be, Thou must have known what mine would be; then why didst Thou consider what was for his advantage and not for mine?"' Then al-Jubbā'ī was put to silence (Spitta, p. 42). Indeed, al-Ash'arī seems to have become rather a thorn in the side of his old teacher, who at last declined further discussion with him; whereupon al-Ash'arī is said once to have concealed himself in a part of the lecture-hall where al-Jubbā'ī could not see him, and to have prompted a woman sitting near him with question after question to which al-Jubbā'ī was unable to give satisfactory answers, until at last he guessed the trick that was being played upon him. Of the rest of al-Ash'arī's life few details are recorded.

We know that he ended his days in Baghdad, but have no information as to why he left Baṣra, the scene of his earlier triumphs. He died in A.H. 324 (A.D. 935–6) in the arms of one of his pupils, with a curse on the Mu'tazilites upon his lips.

Al-Ash'arī was a voluminous writer, and a list of upwards of a hundred of his works has come down to us; some are theological, dealing with the exegesis of the Qur'ān or with the Traditions, others philosophical; but the greater part of them are of a controversial character—polemics against heretics and unbelievers of all kinds, and attacks upon individual thinkers, such as al-Jubbā'ī, al-Balḫī, and others of his contemporaries (Spitta, pp. 63–81). This list of his works also includes a number of pamphlets written by him in response to queries relating to difficult problems in theology and philosophy, and those authorities who give 200, or even 380, as the number of his writings must have reckoned up each one of these letters as a separate work. Out of this immense literary activity, only five treatises are known to have survived, and these exist in manuscript only.

The importance of al-Ash'arī in the history of Muhammadan theology lies mainly in the fact that he was one of the first to employ in the defence of orthodox doctrines the dialectic method, and those processes of reasoning and of proof of which the rationalists had made so effective a use. Orthodoxy thus learned to fight its opponents with their own weapons, instead of merely doggedly repeating texts and traditions in answer to all arguments and questions. Al-Ash'arī is in this respect typical of an intellectual need that was being felt by the orthodox party of his time for a rational statement and defence of their position; the same tendency manifested itself among his contemporaries in other parts of the Muhammadan world, such as al-Ṭaḥāwī in Egypt and al-Mātarīdī in Samarcand. Further, in stating his theological position, al-Ash'arī held a mean between the gross anthropomorphism of some of the traditionists and the philosophical speculations of the rationalists. Thus, while devoutly accepting the statements of the Qur'ān about the face, the hands, the eyes of God, and His sitting on His throne, as articles of faith, not to be interpreted as metaphorical expressions for the knowledge and power, etc., of God, he does not take them to imply a corporeal existence analogous to that of man, but explains them as being His qualities and free from all limitations of space. In his later writings, however, when apparently he had come under the influence of the Ḥanbalite school, he gave up all such attempts to explain these anthropomorphic expressions in the Qur'ān, and maintained that they must be accepted 'without asking how and without drawing any comparison,' *i.e.* with human qualities. Similarly, he took up a middle position between the fatalistic and the libertarian schools, which has been stated by Professor Macdonald as follows: 'Man cannot create anything; God is the only creator. Nor does man's power produce any effect on his actions at all. God creates in His creature power and choice. Then He creates in him his action corresponding to the power and choice thus created. So the action of the creature is created by God as to initiative and as to production; but it is *acquired* by the creature. By acquisition (*kasb*) is meant that it corresponds to the creature's power and choice, previously created in him, without his having had the slightest effect on the action. He was only the *locus* or subject of the action' (*Muslim Theology*, p. 192). As one of the most famous theologians of this school, Abū al-Ma'ālī Imām al-Ḥaramain (A.H. 419–478), puts it, al-Ash'arī holds that man has no power over the production of his actions, but has power over the acquisition of them, whereas the Mu'tazilites maintained that he has power over both, and the Fatalists that he has power over neither (Spitta, p. 141). In similar fashion, al-Ash'arī dealt with the great controversy on the nature of the Qur'ān, which had stirred the Muslim world to its depths, and had been made the subject-matter of decrees by successive Khalīfs—al-Ma'mūn (in A.H. 202 and 218) giving official sanction to the Mu'tazilite doctrine that the Qur'ān is created, and al-Mutawakkil (in A.H. 234) as authoritatively establishing as the orthodox doctrine the belief that it is uncreated. While allying himself with the orthodox party in maintaining that the Qur'ān is the eternal, uncreated Word of God, al-Ash'arī rejected their extravagances about the letters and the ink and the sounds employed in reciting it being equally uncreated and eternal. The above examples are sufficient to indicate how far al-Ash'arī was willing to allow dialectic reasoning to be applied to theological questions, thereby avoiding the gross literalism of the anthropomorphic exponents of the orthodox position, and attempting to explain where hitherto any such attempt had been branded as heretical. But such concessions to a rationalistic method were made by him mainly in dealing with matters connected with the doctrine of *tauḥīd* ('unity'), such as the Attributes of God and the Word of God. In other matters he frankly accepted the orthodox position unmodified, *e.g.* the intercession of the Prophet, his journey to heaven (*mi'rāj*), the miracles of the saints, the evil suggestions of Satan, the coming of Antichrist, etc.

Al-Ash'arī was the founder of a theological movement that gradually won for itself a preponderating influence among Muhammadan sects, gaining a foothold first in 'Irāq, and later spreading eastward into Persia and westward into Syria and Egypt; introduced into the Maghrib by Ibn Tūmart (*q.v.*) in the 6th cent. of the Hijra, it became in a modified form the official doctrine of the Muwaḥḥids. The sect produced a number of remarkable thinkers, who by their independent speculations further contributed to the development of the system; among them the most distinguished were Abū Bakr al-Bāqilānī (ob. 403 A.H.) (*q.v.*), Abū Ja'far al-Sumnānī (ob. 444 A.H.), Abū al-Ma'ālī Imām al-Ḥaramain (ob. 478 A.H.) and al-Ghazālī (ob. 505 A.H.) (*q.v.*), who systematized the tenets of the sect into a body of doctrine that is accepted throughout the greater part of the Muslim world to the present day.

The creed of al-Ash'arī is given by D. B. Macdonald, *Development of Muslim Theology* (London, 1903), pp. 293–299.

T. W. ARNOLD.

ASHES.—The dust which remains after the burning of plants, animals, and human beings, has been used from the most remote times for various religious and semi-religious purposes. It is natural to think that, when once the use of fire was discovered, it would not be long before the ashes would be found to be valuable and be turned to some account.

1. In places where water is scarce, we know that sand has been used for *ablutions*. Where sand is scarce, ashes would provide an excellent substitute. And since, from the first, fire was regarded with awe and wonder, it is likely that the ashes were often thought to share its mysterious nature. At any rate, we know of the use of ashes in ablutions. Amongst the preparations which the Brāhmans made for any act of religion was an ablution called

'a bath sacred to fire,' the body being rubbed with ashes (Colebrooke, ii. 154).* Amongst the New Mexicans it was found that a newborn child was washed and then covered with ashes (Bancroft, i. 566). In this case, however, the ashes may have been used, not as part of the cleansing process, but for drying, or possibly for both purposes. People belonging to the Nahua nations were found by Bancroft to have a practice of rubbing an infant's joints, especially the knees, with ashes in order to strengthen them (Bancroft, ii. 277). This practice may have arisen from the other.

2. When ashes were used for ablutions, it would soon be noticed that the friction produced a healthy effect, or, as we should say, promoted the circulation.† In any case, it has been found that primitive folk also use ashes for *medical purposes*. Hot ashes would serve as a substitute for hot water. Thus the Nutkas apply them in order to cure headache, colic, or rheumatism; the Miwoks use a plaster of hot ashes for stomachic affections and cases of severe travail (Bancroft, i. 204, 396).‡ Vapour-baths are also produced by means of hot ashes. In parts of England the ashes of a consecrated box-tree, mixed with holy water, used to be thought an effective remedy for cold fever.§ Similar powers are attributed to the ashes of the Muhammadan sacred fire at Gorakhpur and to those of the Hindu Holi-fire; and in Ireland ashes from the bonfire on St. John's Day (June 24) are believed to aid the fertility of the fields (Crooke, ii. 197, 318). The Parsis of India dip their fingers in ashes, while the ancient Armenians venerated the ashes of the sacred fire, and scattered them in streams also considered holy. Among the modern Armenians, in like fashion, the ashes of the sacred fire kindled on Feb. 13 are held to protect men and cattle from sickness, and are carefully preserved or scattered on the four corners of the roofs, or in the stalls, the gardens, and the meadows (Abeghian, p. 73).

3. A more familiar use of ashes, however, is that associated with *mourning customs*. The Greeks showed their sorrow at bereavement by strewing themselves with ashes (Homer, *Il.* xviii. 22, *Odyss.* xxiv. 315; Plut. *de Superstit.* ch. 3; cf. Herod. ii. 85; Vergil, *Æn.* x. 844; Ovid, *Metam.* viii. 528), or by sitting in them (*Odyss.* vii. 153; cf. *Il.* xviii. 26); and the practice of sprinkling ashes over the head as a sign of affliction is wide-spread. But this simpler practice always seems to be an abridgment of the more elaborate ceremony. In course of time a mere sprinkling suffices instead of an actual sitting or lying in dust or ashes. It becomes a sign or simple expression of what was originally a stricter form of submission or humiliation, practised first before visible persons, and then before invisible beings as well. Herbert Spencer gives some interesting instances in support of this explanation of the custom. Thus, in the Congo regions of Africa, it was found that the person who would do homage to a *banza*, or village chief, prostrated himself, kissed the earth, and strewed dust over the forehead and arms. When the Dahoman made a salutation, he prostrated himself, and poured sand or earth upon his head. It was found that the Kakanda and Balonda people used the same ceremony; and we are told of the latter, that 'when they wish to be excessively polite they bring a quantity of ashes or pipeclay in a piece of skin, and, taking up handfuls, rub it on the chest and upper front part of each arm.' To what extent this ceremony underwent abridgment we see, when, instead of sprinkling dust on the head, people made salutations by pretending to do so (Spencer, ii. 124 f.). But originally the practice seems to have been one of humiliation. At the same time, even among primitive folk, other customs have been observed in which the ashes seem to be a mere badge of mourning. Thus it was found that some of the Californians mixed the ashes of a dead person with grease, and smeared their faces with the mixture. The dirt was allowed to remain until the action of the weather wore it off (Bancroft, i. 397). In the Arunta tribe of Central Australia, it was found that the widow of a deceased man smeared her hair, face, and breast with white pipeclay; hence she received the name *inpirta*, 'the whitened one.' Sometimes she smeared ashes from a fire over the pipeclay, and was then called *ura-inpirta*, *ura* meaning 'fire' (Spencer-Gillen, p. 500). Amongst the Athapascan Tacullies it was found that after a deceased man had been burned, the ashes were collected and put into sacks. Each wife then received one, and had to carry it on her person for two years, during which she was clothed in rags, kept in a kind of slavery, and not allowed to marry. At the end of this period of mourning, structures were erected, and the bags or boxes of ashes deposited in them (Bancroft, i. 126). Here again the bag of ashes seems to be a badge of mourning.

4. When bodies have been burned, instead of buried at once, the ashes have naturally been *regarded as sacred*. They are either buried afterwards, or left on the altar and the whole covered with earth, or thrown into a river to be carried out to sea, or carefully preserved in urns. In India, when cremation first took the place of ordinary burial, they were buried; at a later date they were thrown into a sacred river. Among the Nahua nations it was found that the ashes of the common people were placed in the yards of their houses, in the temple courts, in the mountains, or in the field. In time of war, even in the case of people who have not altogether adopted the practice of cremation in their native land, it has been the practice to burn the bodies of the slain, partly to prevent the enemy from mutilating them, partly that the warriors' ashes might be carried back to their native place. This explains the fact that in the Homeric poems only the burning of corpses is mentioned.* Sometimes the ashes are gathered with a good deal of ceremony. When the Brāhmans burn a corpse, the fire has to be so arranged that some of the bones may remain for the elaborate ceremony of gathering the ashes, which is performed by the nearest kinsman on the last day of mourning (Colebrooke, ii. 175 ff.). But it has not always been thought necessary to preserve all the ashes, or at least not all in the same place. Among the Nahua nations, it was found that, when a human victim was sacrificed, his heart, after being offered to the sun, was burned, and the ashes preserved with great care and veneration (Bancroft, ii. 307). Buddha gave directions that his body should be cremated, and a *dagoba* or *stūpa* ('reliquary monument') erected over the ashes. When the body had been burned, messengers came from the chiefs or kings of the tribes around and claimed the relics. To avoid dispute, these were divided amongst them, and placed in *stūpas* built for the purpose.† When

* Works are cited simply by their authors' names. The titles of the works will be found in the bibliography.

† In this particular instance, however, we possibly have a use of ashes which were supposed to possess special qualities.

‡ Some of the Californians took an internal dose of ashes for snake-bites. This, of course, is a different kind of treatment. We need hardly remind the reader that amongst primitive folk medicine is a part of religion. See MEDICINE-MEN.

§ It should be added here (cf. 5 below) that, according to Bede, the dust of Oswald, king of Northumbria, was preserved as a cure for sickness (see Brand, *Popular Antiquities of Great Britain*, ed. W. C. Hazlitt, i. 320).

* See H. Blümner, *Leben und Sitten der Griechen*, ii. 86 (Leipzig, 1887).

† See Hermann Oldenberg, *Buddha*, p. 428 (Berlin, 1897); and William Simpson, 'The Worship of Death,' in the *Transactions of the Lodge Quatuor Coronati*, No. 2076, p. 28.

Mr. William Simpson was in Jelalabad during the Afghan War, he excavated the remains of a Buddhist tope, called the Ahin Posh Tope, and was fortunate enough to come upon the relic-cell, where he found some brown dust which he supposed to be the ashes of the holy individual to whose sanctity the tope had been erected. Among the ashes was a golden relic-holder. The same writer tells us that amongst the Lāmas of Tibet also, when a holy man dies, a *stūpa* is made for his ashes. But he found another practice amongst them. The ashes are mixed with mud or clay, and small figures of Buddha are made of the mixture. These are then placed in the shrines where devotions are performed. But if the ashes of one person have sometimes been distributed, the ashes of two or more persons have sometimes been mingled. In this way Domitian and Julia, Achilles and Patroclus, were united in death. In other cases, family urns gathered up the ashes of kinsmen and friends.* It should be added that a king has been known to lie in state even when reduced to ashes. Thus it was found that among the Nahua nations they gathered the ashes and valuables of a Tarascan king, made them into a figure, dressed it in royal robes, and put a mask for its face, a golden shield on its back, and bows and arrows by its side (Bancroft, ii. 621).

5. Ashes have not only been regarded as sacred, but have sometimes been *thought to possess special virtues*. We hear of migrating tribes among the Nahua nations carrying the ashes of honoured chiefs with them to serve as talismanic relics (Bancroft, ii. 348), and of other savages inoculating themselves with ashes which represent and are supposed to impart moral and other virtues. Thus, as a protection against disease, a slight incision is made in a person's temple, and some powder made of the ashes of certain plants or animals rubbed into the wound, those plants or animals being chosen which denote certain special qualities (*e.g.* the claws of a lion might be used to impart bravery). In this way the fighting-men among some tribes of South-East Africa are inoculated with strength and courage in time of war (Frazer, ii. 361 f.).† Of a similar character is a practice found among the Tarianas and Tucanos and some other tribes. They disinter a corpse about a month after burial, reduce it by burning and pounding to a fine powder, mix this in large conchs of caxiri, and drink it, in the belief that by so doing they will imbibe the virtues of the dead man (Spencer-Gillen, p. 535 f.). The Cobeus were found to drink the ashes of the dead in the same way. It was a similar kind of belief in the virtues of human ashes that led the Romans to scatter in the city the bones of a general who had celebrated a triumph.‡ In Bavaria it has been customary to sprinkle ashes from the Easter fire on the land as a protection against hail-storms, and in Bombay caste is restored by swallowing ashes given by the *guru* (Crooke, i. 293). Ashes from the burning ground in India are used in 'black' magic (*ib.* p. 261).

6. A different use of ashes from any we have mentioned is found *in connexion with the belief in ghosts*. It has been a not uncommon practice to strew ashes on the ground in order to detect by the footprints the visits of ghosts or demons. The practice has been noticed amongst the Philippine islanders; and the Peruvians, instead of ashes, scattered flour of maize or quinua about the dwelling, to see 'by the footsteps whether the deceased has been moving about' (Spencer, i. 171). Amongst the funeral customs of the Hos of N.E. India, quite an elaborate rite has been observed, in which ashes are used to detect the return of a dead person's spirit; and similar customs exist in Mirzapur (Crooke, i. 176, ii. 72–74). Another practice has been noticed in Yucatan. A child is left alone at night in a place strewn with ashes, and the animal whose footprint is found on the spot in the morning is regarded as its guardian deity. With this may be compared the old superstition that the first bird or beast which appears after the birth of a child is its spiritual protector. In German folklore we hear of the little 'earthmen' leaving footprints in strewn ashes; and in England there was once a superstitious belief that, if on St. Mark's Eve ashes were sifted over the hearth, the footprints would be noticed of any one who was destined to die within the year (Tylor, ii. 197).

MAURICE A. CANNEY.

ASH-MOUNDS (in Persia).—The ash-mounds of Persia are a series of elevations in the Province of Azarbaijan in north-western Persia, composed largely of ashes mixed with earth, and called 'Hills of the Fire-worshippers' by the modern inhabitants, who assign their origin to the fire-cult of the ancient Zoroastrians. Scores of these hillocks are scattered over the great plain around Lake Urumiah and the city of that name, which is associated traditionally with events in Zoroaster's life in Azarbaijan. The mounds are usually constructed of clay mingled with immense deposits of ashes that are saturated with nitrous salts of organic composition; and in many instances these elevations surmount a small natural eminence. It is generally conceded that there is nothing of a volcanic nature in their composition; and although we may not agree in all respects with the natives, who unanimously ascribe the origin of the mounds to the accumulation of ashes from fire-temples, century after century, we may assume that at least some of the hillocks were surmounted, in ages past, by sanctuaries dedicated to the worship of fire.

Many of these hills have been excavated in recent years by the neighbouring peasants, who have discovered the value of the alkaline quality of the ashes for fertilizing purposes and for the manufacture of saltpetre. Their casual diggings have revealed in one or two instances remnants of ancient walls, and have brought to light ancient pieces of pottery, terra-cotta figurines, and other relics of antiquity, like the small bas-relief cylinder of alabaster found at Geog Tapah, near Urumiah, and now preserved in the Metropolitan Museum of Art in New York city. The design of the cylinder is archaic Babylonian in style, and among the figures carved upon it are the sun-god Shamash and the demi-god Ea-bani, as described by Dr. W. H. Ward in *American Journal of Archæology*, vi. 286–301. The Mission museum at Urumiah contains similar relics. No systematic excavations, however, have been carried on to determine the possible

* See Sir Thomas Browne, 'Hydriotaphia,' ch. iii. (*Works*, ed. Sayle, Edin. 1907, vol. iii. p. 118).

† Modern psychology teaches that such a practice, however superstitious the original idea in it, might—and no doubt often did—have the desired effect. It would serve to remind the inoculated person of certain qualities, to concentrate the mind upon them, and so to produce them. This would be an instance of primitive folk having been led to adopt a custom for a reason of their own, which for another and a better reason has proved to be one of the factors in civilization.

‡ See F. Granger, *The Worship of the Romans*, 1895, p. 61 f.

value of the ash-hills as contributing to archæological knowledge or to a better understanding of the early religion of Irān. The study of the ash-mounds should furthermore be brought into connexion with the entire subject of kitchen-middens, cromlechs, and cairns.

A. V. WILLIAMS JACKSON.

ASHTART (ASHTORETH), ASTARTE.—*'Ashtart* (עַשְׁתָּרֹת) was a goddess worshipped by the Canaanites, Hebrews, Phœnicians, and in Phœn. colonies. This vocalization of the name is attested not only by *'Athtar*, *'Attar*, etc. in the cognate languages, but by the earliest documentary evidence. In the Amarna Letters (Winckler, 142. 10, 237. 21) it appears as *Ash-tar-tu*. In a Bab. tablet (*PSBA*, Mar. 1889, p. 174 ff.) *Ash-tar-tu* is given as the Pal. equivalent of Ishtar, and in the treaty between Esarhaddon and Ba'al of Tyre *As-tar-tu* is named as one of the chief gods of Tyre (Bezold, *Catalogue*, 539). The Gr. transliteration is Ἀστάρτη, which appears even in the LXX along with Ἀσταρώθ. Augustine (*Quæst. in Jud.* 16) gives *Estart* or *Astart*. The pronunciation עַשְׁתֹּרֶת, *'Ashtōreth*, of MT is probably due to the substitution of the vowels of *bōsheth*, 'shameful thing,' as in 'Molech' for 'Melech' (Nöldeke, *GGA*, 1884, p. 1022).

1. **Origin.**—As to the origin of 'Ashtart, opinions differ. Hommel (*Zwei Jagdinschr.* 22), Delitzsch (*Assyr. Lesestücke*[4], *s.v.*), Driver (Hastings' *DB* i. 168), Zimmern (*KAT*[2] 420 f.), Jastrow (*Die Rel. Bab.* 81, 207 f.) hold that she is derived from the Babylonian goddess Ishtar. In favour of this view are the facts that Ishtar is mentioned in Bab. inscriptions long before the earliest mention of 'Ashtart, that Palestine was profoundly influenced by Bab. religion during the third millennium B.C., and that Ishtar is called *âshirat ilâni*, 'musterer of the gods,' which suggests a derivation of her name from Bab. *ashâru*, the same root from which *Ashshur* and *Asherah* may come (cf. Jensen, *KIB* vi. 409 f.).

There are, however, a number of difficulties in the way of this theory:—(1) This deity is found not merely in Babylonia and Assyria, but also in Canaan and among all the other Semites. In Syria she appears as *'Attar* or *'Atar* (see art. ATARGATIS); in Moab, as *'Ashtar* (see art. MOABITES); in South Arabia, as *'Athtar* (see art. SABÆANS); and in Abyssinia, as *'Astar* (Müller, *Epigr. Denkm. aus Abessinien*, 37 f.). In classical Arabic her name does not occur, though she herself is known under such epithets as *al-Lāt* and *al-'Uzza* (cf. Herod. iii. 8, where *al-Lāt* is identified with Urania = Astarte). It is hard to believe that the cult of Ishtar spread to all these races, since no other Bab. deity found such wide acceptance. It is more natural to suppose that 'Ashtar was a primitive Semitic goddess. (2) The phonetic changes that this name undergoes in passing from one dialect to another indicate that it is primitive Semitic. In Bab. א and ע are not distinguished. If Ishtar had been the original form, the appearance of the initial ע with the vowel *a* in all the cognates would have been impossible, and the second consonant would not have undergone the regular mutation Heb. שׁ = Arab. ش = Aram. ܫ. (3) The addition of the fem. ending *t* in 'Ashtar(t) is adverse to the theory of a direct borrowing of the Bab. Ishtar. (4) The absence of the fem. ending in 'Ashtar, Ishtar, favours the theory of a primitive Semitic rather than a Bab. origin of the name. Before the Semitic languages diverged from one another, the fem. ending was already developed, but a number of primitive words found in all the dialects, such as שֶׁמֶשׁ, רֶשֶׁל, are fem. without fem. ending. To this class Ishtar-'Attar appears to belong. If the Babylonians had coined this name after their separation from the parent stock, they would have appended the fem. ending. (5) The different genders of the name in the dialects witness to its primitive character. In South Arabia 'Athtar is masc., in Moab also apparently in the compound 'Ashtar-Chemosh. If these cults had been derived from Babylonia, where Ishtar was fem., the change of sex would have been impossible. If, on the other hand, 'Ashtar was a primitive Semitic name of some physical object, this might have been regarded as fem. by one tribe and masc. by another, just as in South Arabia *shams*, 'the sun,' was fem., while elsewhere it was usually masculine. (6) One of the most marked characteristics of the Babylonian Ishtar is her connexion with the planet Venus. There is no trace of this in other early Semitic religions, and this makes it improbable that she is the prototype of 'Ashtar, 'Athtar, etc. (7) The use of the plural *'ashtārōth* in the sense of 'offspring' (Dt 7^{13} $28^{4.\ 18.\ 51}$) cannot be explained from the goddess Ishtar, but points to a primitive Semitic root עשׁר. The Bab. association of Ishtar with אשׁר, accordingly, is to be regarded as merely one of the punning combinations of which there are so many instances in Bab. literature.

2. **Original sex and character.**—If 'Ashtar-'Athtar was a primitive Semitic name, the question then arises as to its original gender: Was it masculine, as in South Arabia and Abyssinia (*CIS* IV. i. 40. 4, 41. 2 f., 46. 5; Hommel, *Aufs. u. Abh.* 34; Mordtmann, *Him. Ins.* 862, 886[2]; Müller, *ZDMG* xxxvii. 4. 326; Barton, *Hebraica*, x. 52–59, 202–205), and apparently in Moab (*Mesha Ins.* 17; Barton, *Sem. Origins*, 141); or feminine, as in Babylonia, Assyria, Syria, Canaan, Israel, Phœnicia, and the Phœnician colonies? Zimmern (*KAT*[3] 420) holds that it was originally masc., on account of the absence of the fem. ending, but this proves nothing if the word belongs to the earliest period of Semitic language. Baudissin (*PRE*[3] 152) suggests that there were originally both a male and a female 'Ashtar, just as there were *ilu* and *ilat*, *Ba'al* and *Ba'alat*; but no other case exists where the fem. is expressed by the same word as the masculine. The most likely view is that 'Ashtar was originally feminine. This is the gender in all the Semitic languages except South Arabic and Moabite, and therefore is probably primitive. It corresponds also with early Semitic social organization. There is a large body of evidence to show that the Semites before their separation passed through a matriarchal stage of society (see W. R. Smith, *Kinship*, 131 ff.; Barton, *Sem. Origins*, 30 ff.). The tribe was a group of people inhabiting a particular oasis in the Arabian desert. It was made up of mothers and their brothers and children. The fathers were men of other tribes, dwelling in other oases, who contracted only temporary unions with the mothers. Descent was traced through the mother, and she was the head of the clan in peace and in war. In such a society the chief deity of the tribe must have been conceived as a counterpart of the human matriarch. Male divinities might exist and be known as אל, 'maternal uncle' (cf. חלכרב, חלאמר), but they would not be called 'father,' and would play so unimportant a part that they would survive only sporadically in later religion. This view is confirmed by the fact that all those traits which are oldest and most permanent in the character of 'Ashtart-Ishtar are those which for other reasons we must predicate of the ancient Semitic tribal mother.

(1) She is the goddess of *untrammelled sexual*

love. In the Ea-bani episode of the Gilgamesh Epic, one of the earliest monuments of Bab. literature (*KIB* vi. 166–171), she is represented as forming numerous unions which bring mischief to her suitors. In the Descent to Hades (*KIB* vi. 86 f.), sexual relations among men and animals cease the moment that she enters the under world. Prostitution as a religious rite in her service is widely attested: in Babylonia, by the Gilgamesh Epic (*KIB* vi. 122–129), Herodotus (i. 199), Strabo (xvi. 1. 20), Ep. Jer ^{43} (=Bar 6^{43}); in Syria, by Lucian (*Dea Syr.* 22, 43); in Arabia, by Theodoret (*Hist. Relig.*, ed. Sirmond, iii. 883; cf. Wellhausen, *Reste*^{2}, 44); in the Phœnician colonies at Carthage, Cyprus, and Sicily, by Augustine (*Civ. Dei*, ii. 4), Herodotus (i. 199), *CIS* I. i. 86, Clement of Alexandria (*Protreptikos*, 12 f.), Arnobius (*adv. Gent.* v. 19), Justin (xviii. 5), Strabo (vi. 2. 5). Among the Hebrews and Phœnicians, *qᵉdēshôth*, or 'temple harlots,' are often mentioned, but they are not expressly connected with the cult of 'Ashtart (yet cf. Herod. i. 105). If, however, they belonged to her in the colonies, they doubtless belonged to her also in the home country. *Ba'alat*, 'mistress,' the goddess of Gebal (Byblus) is only a title of 'Ashtart, and prostitution in her service is described by Lucian (*Dea Syr.* 6 ff.). The identification of 'Ashtart with Aphrodite by both the Greeks and the Phœnicians is also evidence of her sexual character. In this aspect she is clearly a counterpart of the ancient Semitic woman, who bestowed her love as she pleased upon men of other and often hostile tribes, who was courted at the risk of life (cf. *Mu'allaqāt of Labîd* 16–19, *of 'Antarah* 5–22, *of Ḥârith* 1–9), and who had frequent occasion to bewail the death of some Adonis.

(2) 'Ashtart-Ishtar is a goddess of *maternity and fertility.* With her is associated her son Tammuz (see art. TAMMUZ). Under the title *bêlit ilê*, 'mistress of the gods,' she is represented in Assyr.-Bab. art bearing on her left arm a child, which she suckles at her breast, while with her right hand she caresses or blesses it (Bezold, *ZA* ix. 121, line 5). She is called *bânat-ilâni*, 'creatrix of the gods' (Haupt, *Akkadische und sumerische Keilschrifttexte*, 116 f. obv. 6). She is often designated the 'mother' or 'creatrix' of men (cf. Zimmern, *KAT*^{3} 428 f.). In the Deluge Story (*KIB* vi. 238 f.) men are described as her offspring. In Babylon she was known as *Mu'allidtu* or *Mulittu* (מוּלִדְתּוֹ), 'she who causes to bear,' from which is derived the name *Mylitta* in Herodotus, i. 131, 199 (Jensen, *Kosmologie*, 294, 515). In a Sabæan inscription (*JA*, 8 sér. ii. 256 ff.) 'Athtar, who is commonly male, is called 'the mistress, mother-'Athtar,' and is described as the giver of children. In Arabia the goddess was comparable to the Virgin Mary with the child Jesus (Epiphanius, *Panarion*, li.). The existence of the same conception in the West is attested by the Carthaginian proper name אמעשתרת, 'Ashtart is a mother' (*CIS* 263), by the title 'mother' applied to the Paphian goddess, and by numerous myths of the sons of 'Ashtart (Aphrodite, Venus). In this aspect also she is the counterpart of the ancient Semitic woman, the fruitful mother of the children of the tribe.

(3) 'Ashtart-Ishtar is *a war-goddess.* She appears to Ashurbanipal robed in flames, with quivers on the right hand and on the left, a bow in her left hand, while with her right she draws a sword out of its sheath (*KIB* ii. 227, 251). In Babylonian art she is often depicted fully armed, standing on a leopard or a lion. In one hymn (Reisner, 108^{44}) she says of herself, 'Into battle I fly like a swallow.' In like manner the Canaanite 'Ashtart was regarded by the Egyptians as a war-goddess (*ZÄ* ix. [1871] 119), and was depicted standing on a lion (Müller, *Asien*, 313 f.). The armour of Saul was placed as a trophy in the temple of the Philistine 'Ashtart (1 S 31^{10}). Her statue at Cythera, a Phœnician colony, was in full armour (Pausan. iii. 23. 1), and there is little doubt that the armed Aphrodite and armed Venus of Gr.-Rom. art were perpetuations of Phœnician types. 'Attar at Hierapolis rode on a lion (Macrobius, *Sat.* i. 23. 18 f.). This warlike character of 'Ashtart stands in marked contrast to her maternal character, and is the basis of an antithesis often found in Gr. and Lat. poets. It finds a natural explanation in the analogy of the ancient Semitic matriarch, who was not only the mother of her tribe, but, like Deborah (Jg 5^{7-18}) and Samsi queen of Aribi (*KIB* ii. 54 f.), its leader in battle.

Other traits of 'Ashtart-Ishtar are local or late, so that they cannot have belonged to the primitive conception of this deity. In Babylonia she is identified with the planet Venus (also with Sirius and Virgo), but this does not appear elsewhere, except in late writers who have been influenced by Babylonian theology (*e.g.* Suidas and Zonaras, *Lex. s.v.*; Lydus, *de Mens.* iv. 44; Athenæus, ix. 392 D; *Myth. Vatic.* i. 17, ii. 37, iii. 8; Philo Bybl. in Müller, *Fragmenta Historicorum Græcorum*, iii. 569. 24). The identification of 'Ashtart with the moon by Lucian (*Dea Syr.* 4) and Herodian (v. 6. 4) is unconfirmed by ancient evidence, and is due to theological speculation. The horns with which goddesses are depicted in Phœnician art are not those of the crescent moon but of a cow, and are probably derived from the Egyptian Hathor, with whom 'Ashtart was early identified (Müller, *Asien*, 314). On 'Ashtaroth Qarnaim, ''Ashtart of the two horns,' see Moore, *JBL* xvi. 155 ff.

In the light of the foregoing facts, the original conception of 'Ashtar(t) as a divine counterpart of the human matriarch seems to be established. When society changed from a matriarchate to a patriarchate, either a male deity was exalted to the chief place, and 'Ashtar(t) became his consort, as in Canaan, or her sex was changed, as in South Arabia and Moab. This could be done the more readily since her name had originally no feminine ending.

3. **Etymology of name.**—The original character of 'Ashtar(t) must guide us in the effort to find an etymology and a meaning for her name. If it is primitive Semitic, it must be derived from the root *'ashar*, Heb. עָשַׁר, Arab. عثر, Aram. ʾḥṯ.

The *t* is infixed after the analogy of the Arab. VIII. stem *iqtatala* and Assyr. *kitshudu*, and is transposed with the sibilant after the analogy of Heb. *hishtaḥăwāh* and Assyr. *qashdu* for *qadshu*. In Heb. and Aram. עשׁר means 'to be rich,' which represents Arab. غثر rather than عثر, and therefore throws no light on the primitive meaning of عثر.

In Arab. the common meaning for *'athara* is 'stumble,' but *'athr* and *'athar*, or *'aththar*, are used of palm-trees or seed-produce which are watered naturally; and *'athûr* means 'a channel to irrigate a palm tree such as is termed *ba'l*' (Lane, *Lex. s.v.*). If these words are primitive and not loan-words, the root may mean 'to be watered.' The parallelism in Ps 65^{10} suggests the possibility of a similar meaning for עשׁר. If so, *'ashtar* in a reflexive sense may mean 'the self-watering,' *i.e.* 'the spring,' and in a passive sense 'the watered' or 'fertilized,' as in the Heb. *'ashtārôth*='offspring' or 'lambs.' All this, however, is very uncertain.

It does not seem unnatural that the primitive Semites should have regarded the numen of a spring as a divine matriarch, such as we have seen 'Ashtar(t) to be. To the spring, man and beast owed their lives in the arid desert. It formed the oasis about which as a centre the tribe rallied. It nourished the date palm, which furnished food, and which emphasized sex by its distinction of male and female trees, and its need of artificial cross-pollination. Everywhere throughout the Semitic world springs were holy (cf. Baudissin, *Studien*, ii. 148–184), and the same is true even in modern Arabia and Syria (Curtiss, *Ursem. Rel.*, 94–96, 113–115). In the Sabæan inscriptions 'Athtar is entitled 'Lord of the water-supply' (*CIS* iv. i. 41; *ZDMG* liv. 245), and is described as the giver of harvests (*CIS* iv. ii. 104, 105). *Al-'Uzzā*, 'the mighty,' a title of the fem. 'Athtar, was connected with the sacred spring Zemzem at Mecca (Wellhausen, *Reste*^{2},

34–45, 103). In a Bab. hymn (Haupt, *Akkadische und sumerische Keilschriftexte*, 116 f.) Ishtar is described as 'the one who causes verdure to spring forth, . . . creatrix of everything.' Of Atargatis, Plutarch says, 'She is the divinity who out of moisture produces the seeds of all things.' Her chief sanctuary Hierapolis bore the native name of *Mabbog* (Bambyce; *i.e.* מַבּוּעַ 'spring'), and had a lake full of sacred fishes. At Askalon also she had a lake and sacred fishes, and was represented as a mermaid with a fish's tail (see art. ATARGATIS). One of the chief sanctuaries of the Phœn. 'Ashtart was at Aphaka (= אֲפִיק, 'water-course'), at the point where the Adonis River bursts out of a cave in the side of Mt. Lebanon. Many nymphs of fountains and streams in Phœn. settlements may be only variant forms of 'Ashtart. On the whole, therefore, the etymology which connects 'Ashtart with a root meaning 'to be watered,' and interprets it as the numen of a spring, cannot be regarded as unreasonable (see W. R. Smith, *Semites*², 100; Wellhausen, *Reste*², 146; Lagarde, *Ges. Abh.* 14; Halévy, *REJ* ix. 182 f.; Hoffmann, *Phœn. Ins.* 21 f.; Baudissin, *Jahve et Moloch*, 23 f.; Schlottmann, *ZDMG* xxiv. 657 ff.; Nöldeke, *ZDMG* xl. 742; Barton, *Sem. Origins*, 102 f.; Haupt, *ZDMG* xxxiv. 758).

4. **Primitive worship.** — As to the manner in which 'Ashtar(t) was worshipped in primitive times, we can only conjecture that those rites which are most ancient and most prevalent among the Semites were originally consecrated to her. Some offerings were cast into the sacred spring, as in Arabia (Wellhausen, *Reste*², 76), and in modern Syria (Curtiss, *Ursem. Rel.* 114, 270); but in other cases, such as bloody sacrifices, this was impracticable, and another point of contact with the goddess was needed. This was found in the *maṣṣēbāh*, or 'standing stone,' which was erected as a *beth-el*, or 'abode of deity,' near the spring. On this victims might be slain and offerings might be poured without contaminating the sacred waters. This was the form of the goddess at Petra (Epiphanius, *Panarion*, li.). Down to the latest times the 'Ashtart-Aphrodite of Paphos was identified with such a stone (Tacitus, *Hist.* ii. 3; Serv. *Aen.* i. 720; Head, *Hist. Num.* 628). The *Ba'alat* of Gebal was similarly represented, to judge from a coin of this city (Pietschmann, *Phönizier*, 200). In Canaanite temples in general *maṣṣēbôth* rather than images seem to have embodied the mother-goddess. This is alluded to apparently in Jer 2²⁷ 'who say to the stone, Thou hast brought me forth' (see art. MASSEBAH). The sacred precinct around the *maṣṣēbāh* was enclosed with *'ăshērîm*, or 'totem posts,' which also received religious reverence and were early identified with 'Ashtar(t) (see art. POLES). Offerings were made of the fruits of the earth and of the increase of the flocks and herds. The first-born of animals were sacred. Circumcision was practised as a consecration of the reproductive powers, and the first-born child was sacrificed in order to secure increased fertility. In Gezer, where the cult of the mother-goddess is everywhere in evidence, the remains of hundreds of new-born infants have been discovered around the standing stones of the high place (for the existence of this custom among the Arabs, see Isaac of Antioch, ed. Bickell, 220). A spring feast was celebrated at the time when the lambs were born, and an autumnal festival at the time of the gathering of the date harvest. These occasions were marked by great sexual licence (see W. R. Smith, *Semites*², 469 ff.; Wellhausen, *Reste*², 94–101; Barton, *Sem. Origins*, 108–115; and art. SEMITES).

5. **History of cult.**—If 'Ashtart was a primitive Semitic deity, she must have been brought into Canaan by the first Semitic settlers. Her name first appears in the annals of Thothmes III. (B.C. 1478) in the name of the city *'A-s-ti-ra-tu* (Müller, *Asien*, 162, 313). In the Amarna Letters (*c.* B.C. 1400) this city is mentioned (*KIB* v., Let. 142. 10 237. 21). In the treaty of peace between Rameses II. and Khetasar (*c.* B.C. 1270) the 'Ashtart of the land of the Hittites is named (Breasted, *Egyp. Records*, iii. 172). Evidently the Canaanite mother-deity was so well known to the Egyptians that her name served as a general designation for foreign goddesses (Müller, *Asien*, 313 f.). In the mound of Gezer a large number of plaques have been discovered in pre-Israelite levels, representing a nude deity who is doubtless 'Ashtart. No other images, except of Egyptian origin, are found in these levels, and this indicates that 'Ashtart remained the principal, if not the exclusive, deity of the ancient Canaanites as of the primitive Semites (see art. CANAANITES).

In the OT 'Ashtart appears as a survival in the city-name *'Ashtārôth* (Dt 1⁴, Jos 9¹⁰ 12⁴ 13¹²· ³¹, 1 Ch 6⁵⁶(⁷¹)). In Jos 21²⁷ = 1 Ch 6⁵⁶(⁷¹) this is called Be'eshtera, i.e. *Beth-'Ashtart*, 'house of 'Ashtart.' The plural vocalization is not confirmed by the spelling in the Amarna Letters, and can hardly be due to the fact that several 'Ashtarts were worshipped at this shrine. It may perhaps be a plural of majesty like *'Elohim*. 'Ashtaroth-Qarnaim (Gn 14⁵, 1 Mac 5²⁶, 2 Mac 12²¹) is perhaps to be distinguished from 'Ashtaroth. In Jg 2¹³ 10⁶, 1 S 7³ᵗ· 12¹⁰—all from a late Elohistic or Deuteronomic hand—it is stated that the Israelites in the period of the Judges worshipped the Ba'alim and the 'Ashtaroth of the land of Canaan. Here *'Ashtaroth* means no more than 'goddesses,' as in the Bab.-Assyr. formula *ilâni u-ishtarâti*, 'gods and goddesses'—a usage that occurs as early as the time of Ḫammurabi (L. W. King, *Ḫammurabi*, ii. 34). Since 'Ashtart was known to the Canaanites, and also probably to the pre-Mosaic Hebrews, there is no reason to doubt that she was worshipped by Israel after the conquest of Canaan. According to 1 S 31¹⁰, the Philistines, who also were newcomers in Palestine, had adopted the cult of the Semitic mother-goddess (read the sing. with LXX *τὸ Ἀσταρτεῖον*). In 1 K 11⁵· ³³, 2 K 23¹³ 'Ashtart is called the 'goddess' (or 'loathsome object') of the Sidonians, and her worship is said to have been favoured by Solomon. In the latter passages *'Ashtart* is construed as a proper name without the article. The same is true in the Phœn. inscriptions. We do not read of the 'Ashtart of Tyre and the 'Ashtart of Sidon, as of the Ba'al of Tyre and the Ba'al of Sidon. In עשתרת ארך of *CIS* 135, ארך is probably an epithet and not the name of the city Eryx. In spite of this, different 'Ashtarts were worshipped in different cities, and the plural, as noted above, could have the general sense of 'goddesses.' The use as a proper name, accordingly, is due, as in the case of *'Amm*, *'Ammi* (*q.v.*) to loss of the primitive meaning.

The worship of 'Ashtart in Phœnicia and the Phœn. colonies is well attested by inscriptions and statements in classical writers: at Sidon, by *Tabnith Ins.* 1, 2, 6; *CIS* I. i. 3. 15, 16, 18; 4. 5; Lucian, *Dea Syr.* 4; Achil. Tat. i. 1; Lydus, *de Mens.* iv. 44; Malalas, *Chron.* ed. Dind. p. 31; at Tyre, by Sanchoniathon (Philo Bybl. in Müller, *Fragmenta Hist. Græc.* iii. 569, fr. 24), Menander (in Josephus, *Ant.* VIII. v. 3, *c. Ap.* i. 18); at Um el-'Awamîd near Tyre, by *CIS* 8; at Ma'ṣûb, by the *Ma'ṣûb Ins.* 4; in Cyprus, by *CIS* 11. 3; 86A. 4 (cf. 46, 72), *CIA* ii. 168; at Gul near Malta, by *CIS* 132. 3; at Eryx in Sicily, by *CIS* 135; 140. 1; at Carthage, by *CIS* 255. 4 f.; 263. 4, *C. R. Acad. Ins.* 7, Dec. 1894, Augustine, *Quæst. in Jud.* 16, *Heptat.* vii. 16 (Migne, iii. 797). It is probable that Ba'alat, 'mistress,' the goddess of Gebal and other Phœn. towns (*CIS* 1. 2 ff.; 177; Philo Byb. in Müller, *Fragmenta Hist. Græc.* iii. 569; Melito in Cureton, *Spic.* 44), is only a title of 'Ashtart. Her cult was the same as that of 'Ashtart, and she is identified with Astarte by Plutarch, *de Iside et Osiride*, 15 (cf. Cicero, *de Nat. Deor.* iii. 59). Tanith also and other Phœn. goddesses may be only local forms of 'Ashtart (see PHŒNICIANS). In Phœnicia, Cyprus, and most of the islands of the Ægean, statuettes have been found representing a nude female holding a dove. These are similar

in type to the plaques discovered at Gezer, and are generally believed to represent the Phœn. goddess (see Perrot and Chipiez, fig. 381 f.). On Phœn. coins she is represented standing on the prow of a galley with a mural crown on her head or in her hand.

Into Syria proper the cult of 'Ashtart seems never to have spread, on account of the strength of the native goddess Atargatis. Although 'Attar was originally the same as 'Ashtar, the two goddesses had diverged so far that they were never identified. Lucian (*Dea Syr.*) carefully distinguishes them. There was even a temple of Atargatis at Askalon alongside of that of Astarte, and Atargatis elsewhere invaded the territory of 'Ashtart. Accordingly, when Tertullian (*Apol.* 24), Artemidorus (*Oneirocrit.* i. 8), and Lydus (*de Mens.* iii. 35, iv. 44) call Astarte the goddess of Syria, this only shows a loose usage of the name Syria.

From the Phœnicians the cult of 'Ashtart spread to the Greeks and to the Romans. One inscription (*CIG* 6807) shows that her worship was carried, probably by Roman soldiers, as far as Corbridge in England. Hommel (*Neue Jahrb. f. Phil.* cxxv. [1882] 176; *Aufs. u. Abh.* 34) attempts to show that Aphrodite is etymologically the same as 'Ashtart; but this is doubtful. It is certain, however, that the Greeks identified 'Ashtart with Aphrodite (cf. the inscription from Delos in *Bulletin de Corresp. Hellénique*, vi. 1882, p. 473). Aphrodite often bears the title of *Urania* or *Cœlestis*, but this is also a title of 'Ashtart (Jer 7^{18} $44^{17f.\ 25}$; Sanchoniathon in Müller, *Fragmenta Hist. Græc.* iii. 569). Many of the seats of Aphrodite worship were originally old Phœn. sanctuaries. The temple of Urania Aphrodite at Askalon (Herod. i. 105) must be the same as the 'house of 'Ashtart' (1 S 31^{10}). The Aphrodite whose rites at Aphaka are described by Lucian (*Dea Syr.* 6) and Eusebius (*Vit. Const.* iii. 55), and whom Sozomen (*HE* ii. 5) calls *Urania*, can have been no other than the Ba'alat of Gebal whose identity with 'Ashtart has already been discussed. The shrines of Aphrodite in Cyprus also were certainly Phœn. foundations, and when Homer calls her Κύπρις and Κυθέρεια (*Il.* v. 330; *Od.* viii. 283, xviii. 193), he shows that she was derived by the Greeks from the Phœnicians. In like manner Venus Erycina of the Romans is identical with the old Phœn. 'Ashtart of Eryx, and Cicero says expressly (*de Nat. Deor.* iii. 59; cf. Lydus, *de Mens.* iv. 44) that there are four Venuses, one originating in Syria and Cyprus, who is called Astarte and is recorded to have wedded Adonis. Compare also what Lucretius says of 'Æneadum genetrix' in the opening lines of *de Rerum Natura*. It is clear, accordingly, that much information in regard to the cult of 'Ashtart may be gained from a careful sifting of the statements of classical authors concerning Aphrodite and Venus (see art. GREEK RELIGION). It is even possible that Rhea, Cybele, and other mother-goddesses of the ancient world may be ultimately derived from the Semitic 'Ashtart, or at least may be modified by her influence (see ATARGATIS, ISHTAR).

LITERATURE.—In addition to the discussions mentioned above, see E. Meyer, art. 'Astarte' in Roscher (1884); Cumont, art. 'Astarte' in Pauly-Wissowa (1896); Baudissin, 'Astarte und Aschera' (with full bibliography of earlier writers) in *PRE*^{3} (1896); Driver, 'Ashtoreth' in Hastings' *DB* (1898); Farnell, *CGS*, chs. xxi.-xxiii. (vol. ii. 1896); Moore, 'Ashtoreth' in *EBi* (1899); Barton, 'Ashtoreth and her Influence in the OT,' *JBL* x. 73 ff., 'The Semitic Ishtar Cult' in *Hebraica*, ix. (1893) 133–166, x. LEWIS BAYLES PATON.

ASIA (Ethnology, Religions, and Ethics).—**The distinctive title of *officina gentium*, formerly** awarded to Asia by common consent, was based mainly on her vast population, which greatly exceeded that of all the rest of the known world. Now it may be taken in a more literal sense, as indicating that this continent is really the *officina*, the true cradle of the human species. In art. ETHNOLOGY it is shown that man was specialized most probably in Malaysia during Pliocene times, that is, while that insular region still formed part of the Asiatic mainland.

From this centre of origin and dispersion the first migratory routes, still in the late Pliocene or early Pleistocene Age, may now be followed almost step by step through the Malay Peninsula, Indo-China, and India to the Tibetan plateau, which was not yet so sharply cut off from those lands as it afterwards was by the continuous upheaval of the Himalayan system. Recently a very old station on this route was revealed in the Pahang district, north of Johore (Malay Peninsula), where a rudely worked stone implement was found resting on limestone rock 45 feet below the surface, among some river gravel, above which was a bed of clay 43 feet thick, derived from the decomposition of the greenstone hills skirting the Tui river valley. These hills had been overlaid by the limestone deposit, and it was only when the limestone had been sufficiently denuded to allow the greenstone to emerge that the latter rock began to yield its clay. 'The amount of denudation since this emergence has been at least 300 feet' (*Straits Times*, 14th Feb. 1902). Farther north, Dr. Noetling discovered (1894) another palæolithic station in the Yenangyaung district, Upper Burma, where some chipped flints were found *in situ* in a Pliocene bed associated with *Hipparion antelopinum* and other long extinct fauna (*Natural Science*, April, 1897). In India, palæoliths are yielded, often in great abundance, by the Pleistocene beds and drift gravels of the Mirzāpur, Arcot, Orissa, Hyderābād, Narbadā, Gangetic, and other districts. Many of the objects are of the same type as those of the European Drift, and are certainly contemporaneous or even of earlier date (*JAI* xvii. 57 f.).

These primitive Indo-Malayan wanderers may thus easily have converged both from India and Indo-China on the Tibetan tableland, which, under conditions far more favourable than at present, would almost inevitably have become a new centre of specialization and dispersion for the human, as it has for so many other mammalian, species. Here was ample space, such as seems needed for the evolution of all new varieties; a different and cooler climate than that of the Torrid Zone, though, owing to its then lower altitude, more genial than at present; boundless plains intersected by ranges of moderate height, and diversified by a lacustrine and fluvial system far more extensive than that revealed by modern exploration. Here, therefore, the Indo-Malayan Pleistocene precursor must necessarily have become modified in the process of adaptation to his changed environment, and thus gradually have acquired the physical features characteristic of the Mongol division of mankind. Neither colour of the skin, texture of the hair, nor stature could present any difficulty, since in all these respects the Mongol type stands actually nearer than does the Negro to that of the generalized Quaternary ancestor (de Quatrefages). Taken as a whole, the Mongol archetype differs from the other divisions—black, white, red—mainly in the general yellowish complexion, the broad flat features, with prominent cheek-bones, small mesorrhine nose, mesognathous jaws, brachycephalous (short) head, somewhat sunken eyes, with a narrow almond-shaped aperture between the lids, a vertical fold of skin over the inner canthus, and the outer angle slightly raised; lastly, the highly

characteristic dark blue spot in the lower sacral region peculiar to all true-born Mongols, but disappearing in infancy, and said to be common also to the Simian young (Dr. Bälz, quoted by Dr. O. Nachod, *Gesch. von Japan*, 1906, p. 35). The oblique eye with its fold is also a distinct racial mark, whereas the black, lank, and rather coarse hair, round in transverse section, though constant is not exclusive, being common also to the American aborigines, and forming the most marked somatic link between the Mongol and American Indian divisions.

From the central Tibetan plateau this *Homo asiaticus fuscus*, as he has been named by Linné, radiated during the Stone Ages over the greater part of the continent, northwards to Mongolia, Siberia, and the Amur basin, eastwards to China and Indo-China, westwards to the Tarim basin, the Aralo-Caspian depression, and Mesopotamia, southwards to India as far as the Vindhyan uplands. Most of the Asiatic mainland was thus first occupied by peoples of proto-Mongol stock, who in their several new environments developed a number of sub-groups distinguished by more or less marked physical, mental, and linguistic characters. Such are the so-called *Hyperboreans*, comprising the now nearly extinct Yukaghirs, Chukchis, Koryaks, and Kamchadales of the Arctic region east of the Lena basin; the wide-spread *Mongolo-Turki* family, whose chief branches are the Mongols proper, the Tunguses with the Manchus, Koreans, Japanese, and Liu-Kiu Islanders, in the east, the Turks or Tatars, the Yakuts, Kirghizes, Samoyeds, and Ugro-Finns, in the north and west, ranging from the Lena basin to Lapland and Hungary, and loosely connected by their common agglutinating Ural-Altaic speech, of which Korean and Japanese appear to be aberrant members; the *Tibeto-Chinese* section, including the Tibetans, the Chinese, the Indo-Chinese, and several south Himalayan groups, all of more or less monosyllabic isolating speech; the extinct or absorbed *Akkado-Sumerians* of Babylonia, whose highly agglutinating pre-Semitic language is by many affiliated to the Ural-Altaic family (details in art. ETHNOLOGY, 'Conspectus).'

This first Mongol settlement of Asia left free the southern and south-western regions—a great part of India, Irania, Caucasia, Asia Minor, Syria, Canaan, and Arabia, *i.e.*, about one-fourth of the whole continent. During the early Stone Ages, most of the south-western section was occupied by various branches of the Caucasic division, ranging eastwards from North Africa, where that division appears to have been specialized (see art. AFRICA). Amongst the first arrivals were the *Semites*, who ramified from the common Hamito-Semitic stock, and occupied the Arabian Peninsula, of which they have always held exclusive possession, and whence they migrated later into Mesopotamia, Syria, and Asia Minor, becoming differentiated in their new homes as Himyarites, Arabs, Phœnicians, Canaanites (Israelites, Amorites, and others), Aramæans (Syro-Chaldæans), Assyrians, and perhaps Hittites. Other early streams of migration from Africa are now represented by the *Georgians*, *Circassians*, *Lesghians*, and others of the Caucasus, where they are distinguished by a surprising diversity of speech (whence the expression 'mountain of languages' of the mediæval Arab writers), and often by an almost ideally perfect physical type, owing to which 'Caucasic' was adopted by Blumenbach as a suitable conventional name of the white division, that is, of Linné's *Homo europæus albus*. Then came the Caucasians of Aryan speech, commonly called *Aryans* or *Indo-Europeans*, whose provenance and centres of dispersion are still moot questions, but whose various Asiatic branches are found at the dawn of history already settled in Asia Minor (Hellenes, Phrygians, Lydians, Armenians, and others), in Irania (Medes, Persians, Kurds, Afghans, Baluchi, and others), in the Hindu-Kush, Pamirs, and North India (Siah-Posh, Dards, Galchas, Vedic Aryans).

In India these Aryans were probably preceded by a now submerged *Negrito* element from Malaysia, by the *Kolarians* of the Vindhyan uplands, and by the *Dravidians* of the Deccan and Ceylon. There is no certain clue to the origin of the last two, who present mixed physical characters and speak two radically distinct agglutinating languages, Kolarian especially being of an extreme type. In its morphology it remotely resembles the Finno-Turki branch of the Ural-Altaic family, but, like Dravidian, in other respects differs profoundly from all other known forms of speech. But it is generally, and perhaps rightly, assumed that the Kolarians entered India from the north or north-east, and the Dravidians from the north-west, and that both may have been offshoots of the Mongol stock afterwards greatly modified in their new tropical homes.

This first occupation of Asia mainly by the Mongols, but also largely by the Caucasians, has undergone great changes and shiftings, brought about by the ceaseless migratory movements and racial struggles which, beginning in remote prehistoric times, were continued throughout the historic period, and are still in progress. Evidence is now available to show that the Mongol domain was encroached upon and traversed north and south by neolithic whites penetrating from Europe across Siberia and Mongolia to Manchuria, Korea, and Japan, and apparently from Africa through Syria, Caucasia, Irania, and north India to Indo-China and Malaysia. The strain of white blood is very marked amongst the Manchus and Koreans, while the Ainus, the true aborigines of Japan, are now definitely declared by Nachod to be neolithic Caucasians (*Gesch. von Japan*, 1906, I. i.). The route followed seems indicated by the station near Tomsk, West Siberia, where, in 1896, numerous worked flints and some human remains were found by Prof. Kashchenko in association with those of a mammoth. Farther east, A. P. Mositz explored (1895) five pre-historic stations in Transbaikalia, in one of which he found two highly dolichocephalic pre-Mongol skulls of the early European type (*L'Anthropologie*, 1896, p. 82). In Korea, where the evidence accumulates, H. S. Saunderson remarks on 'the frequency with which features almost European in refinement and Caucasian in cast are met with.' Here the numerous flint implements and dolmens, like those of Britain and North Africa, must be accredited to the San-San aborigines who occupied the peninsula long before its conquest by the Mongoloid Sien-pi from Manchuria.

The southern highway may similarly be traced from Africa through Syria, where Prof. Zumoffen describes seven stations of the early and later Stone Ages (*L'Anthropologie*, 1897, pp. 272, 426), and thence through Caucasia, India, and the Khāsi Hills to Indo-China, where the evidence again abounds. Here are numerous Caucasic groups intermingled or associated with the Mongol substratum, and conspicuous especially amongst the Kahyens of North Burma, the Cambodians of the Lower Mekhong, the Mosso, Lolo, Man-tse, and many other hillmen all along the Chinese borderlands from Assam to Annam. Mrs. Bishop (Miss Bird) describes the white Man-tse, visited by her in 1896, as 'quite Caucasian, both men and women being very handsome.' Prince Henri d'Orléans was reminded by the Kiu-tse (Khanungs, Lu-tsé) of some of his European acquaintances. Dr. Billet met some Nong people 'with light and even

red hair'; and M. R. Verneau tells us that the Mans and T'hai 'differ altogether from the Mongol group represented by the Chinese and Annamese. The Mans especially show striking affinities with the Aryan type' (*L'Anthropologie*, 1896, p. 602).

In the extreme west the racial movements resulted in Mesopotamia in the extinction of the Akkado-Sumerian Mongols by the Caucasic Semites over 4000 years ago. After the rise of Islām these and most other Semites became Arabized in speech and religion, while in Asia Minor nearly all the early Caucasic peoples were displaced by the Muhammadan Turki hordes from Central Asia. Anatolia has thus become by conquest a part of the Mongol domain, which has also encroached on a considerable section of North Irania, that is, the hilly district between Herāt and Kābul, now occupied by numerous Aimak and Hazara tribes, who are ethnically Mongolo-Turks, Muhammadans in religion, and now of Aryan (Persian) speech.

In Irania and the Aralo-Caspian steppe, that is, the *Irān*, or 'land of light,' and *Turān*, the 'land of night,' of the Persian poet-chroniclers, a perpetual struggle for the ascendancy has been maintained throughout the historic period between the nomad predatory hordes of the northern wastes and the cultured agricultural populations of the fertile southern lands. These southern Aryans were dominant under the old Persian empire of the Achæmenians, which extended from the Ægean to the Oxus and Indus, and fostered the growth of flourishing settled communities throughout Central Asia. Thus it was that Irān interpenetrated Turān, expanded its higher culture by the very enlargement of its own borders, and, when further stimulated by Hellenic influences, invaded the wilderness itself. In the Tarim basin, at that time a fertile well-watered region, there arose a great centre of Iranian and Græco-Bactrian civilization, the remains of which, after lying buried for some two thousand years under the advancing sands of the Takla-Makan Desert, have again been brought to light by the Sven Hedin expeditions of 1895 and 1900, and more fully explored by Dr. M. A. Stein, who in 1901 recovered great quantities of hidden treasures, now deposited in the British Museum (*Sand-buried Ruins of Khotan*, 1903).

Later, the Caucasian ascendancy in Central Asia disappeared before the repeated invasions of Huns, Finns, Turks, and other Mongol hordes, but has been again restored, at least politically, by the spread of the Russian power over the trans-Caspian region in recent times. To these incessant ethnical movements, dislocations, and interminglings are due those intermediate Mongolo-Caucasic populations, such as the Ugrians and other Finns, the Uzbegs, Turkomans, Hazaras, and other Turki groups, who in their physical characteristics present every shade of transition between the typical white and yellow races.

In many places the cultures and social and religious institutions are similarly intermingled, although in Asia the dominant religions are in great measure distributed according to race. Thus the Tunguses and most other Siberian aborigines are pronounced shamanists; the Hindus extreme polytheists; the Tibetans, Sinhalese, Indo-Chinese, Chinese, Japanese, and Mongols proper all nominal Buddhists; the Arabs, Kurds, Afghans, Turkomans, Uzbegs, Kirghizes, and Turks generally Sunnites ('orthodox' Muhammadans); the Persians, the Moors of Ceylon, and the Hazaras mostly Shī'ites ('separatist' Muhammadans). Thus is seen the curious spectacle of a nomad Turki group (Kirghizes) and a nomad Mongol group (Kalmuks) encamped side by side on the Lower Volga plains, both intruders from Asia, but the former strict Sunnites, the latter Buddhists like all their Eastern kindred. This distribution, however, is purely superficial, since below the outward forms, often merely official, as in Tibet, Siam, Annam, and China, the old primitive beliefs still everywhere survive in their full vigour. In Asia these beliefs represent all the earliest developments of the religious sentiment—pure animism, personification of the powers of nature, and ancestor-worship (art. ETHNOLOGY, § 9)—not merely in juxtaposition, but often in the closest possible association. Thus ancestor-worship, characteristic of Africa, and animal-cult, dominant in America, are both prevalent in China, jointly with the belief in good and bad aerial and water spirits, and an outward adherence to the three recognized national religions—the three 'State Churches,' as they have been called—*fo-kiao* (Buddhism), *tao-kiao* (Taoism), and *ju-kiao* (Confucianism).

> 'In every district are practised diverse forms of worship between which no clear dividing line can be drawn, and, as in Annam, the same persons may be at once followers of Confucius, Lao-tse, and Buddha. In fact, such is the position of the emperor, who belongs *ex officio* to all three of these State religions, and scrupulously takes part in their various observances. There is even some truth in the Chinese view that "all three make but one religion," the first appealing to man's moral nature, the second to the instinct of self-preservation, the third to the higher sphere of thought and contemplation. But behind, one might say above, it all, the old animism still prevails, manifested in a multitude of superstitious practices, whose purport is to appease the evil and secure the favour of the good spirits, the *Feng-shui*, or *Fung-shui*, air and water genii who have to be reckoned with in all the weightiest as well as the most trivial occurrences of daily life. These, with the ghosts of their ancestors, by whom the whole land is haunted, are the bane of the Chinaman's existence. Everything depends on maintaining a perfect balance between the two principles represented by the 'White Tiger' and the 'Azure Dragon,' who guard the approaches of every dwelling, and whose opposing influences have to be nicely adjusted by the well-paid professors of the magic arts' (Keane, *Man Past and Present*, p. 223).

The 'professors' here referred to correspond in China to the *shamans* who control the religious world in Siberia. Shamanism will be separately dealt with, and here it may suffice to say that it is not a particular system of belief, but rather a peculiar phase of thought, which is widely distributed, and appears to be a necessary stage in the progress of all religious development. Thus the shaman belongs to no special form of belief, but holds a position somewhat intermediate between the medicine-man and wizard of the lower, and the marabout and true priest of the higher, religious systems. Although in its more advanced state the office tends to become hereditary and thus to crystallize into a regular hierarchy, in Siberia any one may become a shaman who has sufficient will-power to enforce belief in his claim to supernatural virtues, and to exercise them as intercessor between the invisible and otherwise inaccessible deities and their votaries. Hence in Siberia beneath the general shaman-craft there are all kinds of animistic beliefs, practices, and superstitions, in which animal-cult, as in North America, plays a much larger part than ancestor- or nature-worship. Wer-wolf notions are wide-spread, and the *Tatars* of the Minusinsk district about the Abakan affluent of the Yenisei although baptized Christians, are still under the influence of the shamans, and credit the *Ainas*, that is, the invisible spirits of evil, with the power of assuming the form of dogs, foxes, birds, snakes, and other animals. These Ainas dwell in the underground regions, and are ruled by the *Irle-Khan*, who is also the familiar spirit and patron of the shamans.

So also the *Yakuts* of the Lena basin have a subordinate deity, the *Vekhsyt*, or 'Advocate,' who from time to time visits the abodes of mortals in the form of a white horse, an eagle, a cuckoo, or some other bird, and carries messages to and fro between them and the 'Merciful Chief,' creator of the world, who with his wife, 'Shining in Glory,'

is all-powerful. These are beneficent beings, but nearly all the rest appear to be devils, and amongst the Yakuts demonolatry is certainly carried to its extreme limits. The malevolent aerial spirits form twenty-seven tribes ruled by a kind of Satan, who with his wife has a numerous progeny, all hostile to man. *Sugai-toyon*, the Yakut *Juppiter Tonans*, is the instrument of his vengeance, while in the underground *Mung-tar*, abode of 'Everlasting Woe,' there dwell eight other hosts of demons under *Asharay-bioho*, the 'Mighty,' supreme in Hades. These hosts have all their female consorts, and are joined by the shamans after death. Another potent divinity is *Enakhsys*, the 'Cow-herdess,' who is much dreaded because of her power to harm their cattle, strike them with murrain, and destroy the calves; hence her wrath has to be turned aside by many costly offerings (Ovarovsky).

Despite their veneer of Russian Orthodoxy, the neighbouring *Samoyeds* still cling tenaciously to their old pagan beliefs. 'As long as things go well with him [the Samoyed], he is a Christian; but should his reindeer die, or other catastrophe happen, he immediately returns to his old god *Num* or *Chaddi*. . . . He conducts his heathen services by night and in secret, and carefully screens from sight any image of Chaddi' (F. G. Jackson, *The Great Frozen Land*, 1895, p. 84). Several instances are here mentioned of this compromise between the old and the new—a subject more fully dealt with in art. ABORIGINES. Thus on the Samoyed graves the wooden cross is supplemented by an inverted sledge, which is intended to convey the dead safely over the snows of the under world. They also hold in awe the rings of stones within which human sacrifices appear to have been formerly offered to propitiate Chaddi; and although these practices have ceased, 'it is only a few years ago that a Samoyed living on Novaia Zemlia sacrificed a young girl' (*ib.*). Many of these aborigines hold that death is the end of everything, that good and evil deeds receive their deserts in this life, and that immortality is reserved only for the *tatibé*, that is, the Samoyed magicians or shamans, who either remain quietly in their graves or else wander about at night seeking an opportunity to benefit their friends or harm their enemies. Despite this limited measure of immortality, in the graves are deposited all kinds of useful objects, such as clothing, cooking-pots, knives, horns filled with tobacco, guns, bows and arrows for the men, needles, thread, or sinews for sewing, and scraping-knives for the women, everything being damaged to prevent it from being stolen. The explanation of this seeming inconsistency is that the departed do not die at once, but survive for some time in the grave, where they will require the same objects that they needed in this life.

The above-mentioned Num is an aerial god who dwells in the sky, where he generates thunder and lightning, sends down rain and snow, and rules the winds and storms. The sky itself, also called Num (cf. *Diespiter*), is his visible embodiment, and to his essence also belong the moon and stars through which he manifests himself at night, the rainbow (*munbano*) which forms the hem of his mantle, and the sun in which he is chiefly personified, and which is greeted at its rising and setting with suitable invocations. Some even hold that the earth, the sea, and all visible nature form part of the same divine system, thus anticipating the monistic and pantheistic concepts of more advanced theosophies. Num knows and sees all that happens upon earth; if men are good and benevolent, he prospers all their doings, increases their reindeer herds (one of his epithets is *Jilibeam-baertie*, 'cattle-ward'), blesses their hunting expeditions, and endows them with many days. But if they lead wicked lives, they fall into poverty and misery, and die prematurely. There is even a sort of moral code containing the precepts by which all should be guided who wish to stand well with Num: 'Believe in Num. Believe in the spirit of evil, and that he can be appeased by sacrifices, that no misfortune befall thee, or thy family, or thy herds, that he may save thee from sickness and assist thee in thy labours. Believe in the spirits that they may do thee no evil. Do not jump over the sledge in which the gods are placed; honour thy parents; reverence thy elders; kill not, quarrel not, speak no evil, tend the herds, help the poor, and Num will reward thee. Speak not of what thou hast seen, that no one may know from thee what has happened.'

Yet beneath this outward display of lofty religious and ethical notions, most of the Samoyeds are still mainly nature-worshippers and animists. They show great respect especially for the bear, which with the wolf is held in the highest veneration in Siberia. Nevertheless the Samoyeds, like the Ainus and other Eastern peoples, will capture and kill it whenever they can. When it is dead, the claws of its forepaws are usually amputated, the object being, by a strange confusion of ideas, to protect themselves from harm when next they venture to attack one of the species.

Like the Samoyeds, the *Ostyaks* of the Yenisei region have a god of the sky, *Turm* or *Urt*, who sends thunder and storms, but is also credited with a high sense of honour and rectitude. He mingles amongst mortals, accompanying them wherever they go, and judging them according to their deserts, for no act, good or evil, can escape his notice. He is inaccessible even to the shamans; no appeals can bend his will; and he controls human destinies and the course of events according to the eternal laws of justice. No sacrifices can secure his favour, since he looks only to merit in the disposal of his gifts, without the least regard to prayers or offerings. Hence in times of distress and trouble it is useless to seek his aid. It is the lesser deities and the demons alone that can be swayed by the mediation of the shamans, and, as amongst the Ugrian Finns, they are generally represented by rude stone or wooden effigies, often of extremely fantastic form. Thus Ortik, the patron of the hunt, is figured as a legless horse stuffed with hair and skins, with two linen sleeves for arms, a linen skirt, and a face made of a hammered metal plate nailed to a block of wood. A log arrayed in beaver skins stands for Meig, a peculiarly malignant goblin, who plays mischievous pranks with people, leading them astray in the woods, and overwhelming them in snowstorms. In this strange pantheon a place is also found for both the wolf and the bear, and when one of these animals is bagged in the hunt it is regarded as a stroke of luck celebrated with much feasting and revelry.

'The skin is stuffed with hay, and the people collect from all quarters to jeer, mock, and spit upon the helpless enemy. They sing songs of triumph expressed in words of insult and defiance. After their spirit of merriment is exhausted, they set up on its hind legs in the corner of the hut the now harmless effigy of the ferocious beast, and bestow upon it, for a considerable time, the veneration of a tutelar god' (A. Featherman, *Races of Mankind*, 1891, iv. 564).

But it is in the extreme east, amongst the *Gilyaks* and *Ainus*, that this animal-cult has acquired its highest development. The *kohr* (bear), who represents the *Kur*, or Lord of the heavens, is one of the chief Gilyak divinities, although under certain circumstances he is occasionally captured and eaten. When taken in his lair while hibernating in winter, he is secured by a leathern noose and dragged along with shouts and cries intended to stupefy the still half-dozing victim. He is then kept in confinement, fed and fattened on fish, and at last slain on his feast-day, after a fight in which the villagers are required to attack him without arms. Similar strange practices prevail amongst the Ainus of Yezo, North Japan, as described by the late Mrs. Bishop:
